**Her′pes** (*herpo*, to creep, because it creeps and spreads about the skin). Tetter, fret. Vesicular disease, which, in most of its forms, passes through a regular course of increase, maturation, decline, and termination in from ten to fourteen days. Vesicles arise in distinct but irregular clusters, commonly appearing in quick succession and near together, on a more or less inflamed base. The name has been applied to a large number of dissimilar diseases. The ancients had three varieties: the miliary, vesicular, and eroding. The following varieties are usually described: 1. *Herpes phlyctænodes*, herpes miliaris, ecphlysis herpes miliaris, nirles, in which the vesicles are millet-sized; pellucid clusters commencing on an uncertain part of the body and being progressively strewed over the rest of the surface; succeeded by fresh crops. 2. *Herpes zoster*, zoster, zona, ignis persicus, cingulum, herpes periscelis, shingles, in which the vesicles are pearl-sized, the clusters spreading round the body like a girdle, at times confluent, and occasionally preceded by constitutional irritation. A form of this affection seen on the side of the nose, the upper eyelid, and the forehead is called herpes zoster frontalis or ophthalmicus, brow-shingles. 3. *Herpes circinatus*, formica ambulatoria, annulus repens, herpes serpigo, tinea circinata, ringworm, vesicular ringworm, consisting of vesicles with a reddish base, uniting in rings, the area of the rings slightly discolored; often followed by fresh crops. 4. *Herpes labialis*, and 5, *Herpes præputialis*, aphthæ præputii, appearing, respectively, on the lips and prepuce. 6. *Herpes iris*, occurring in small, circular patches on the skin, each composed of concentric rings of different colors. To these may be added *herpes exedens*, forms of which are h. esthiomenus or depascens or ferus or estiomenus or ferox, ecphlysis herpes exedens, darta excoriativa or maligna, lupus non exedens, vitiligo, leuce, formica corrosiva, formix, papula fera, ulcerative ringworm, agria, in which the vesicles are hard; clusters thronged; fluid dense, yellow, or reddish. **H. auricula′ris,** zoster auricularis. **Bilat′eral h.,** zoster attacking both sides of the body at once. **Black h.,** hemorrhagic h. **H. cervi′cis,** vesicular eruption on cervix uteri. **H. chron′icus,** lichen planus. **H. circina′tus,** see *Herpes*. **H. c. bullo′sus,** dermatitis herpetiformis. **H. colla′ris,** eruption on neck of those who wear dyed goods around their necks. **Con′fluent h.,** a form of h. zoster, with neuralgia and general disturbance of the system. **H. conjuncti′væ,** conjunctivitis phlyctænulosa. **H. cor′neæ,** phlyctenular corneitis or keratitis; inflammation of the cornea, accompanied with the appearance of vesicles. When the latter are numerous and occupy considerable expanse of the cornea, the affection is known as pannus scrofulosus; see *Ophthalmia* and *Corneitis*. **H. crusta′ceus,** impetigo; eczema impetiginosum. **H. depas′cens,** h. exedens; lupus; see *Herpes*. **H. des′quamans,** tinea imbricata. **H. devas′tans,** lupus vulgaris. **H. epizoöt′icus contagio′sus,** contagious herpetoid affection of throat and other parts of the body, said to be derived from foot-and-mouth disease of cattle; aphtha epizoötica. **H. ero′dens,** herpetic eruption with destruction of tissue. **H. esthiom′enus** or **estiom′enus,** h. exedens; see *Herpes*. **H. exe′dens,** see *Herpes* and *Lupus*. **H. facia′lis,** herpes of the face. **H. farino′sus,** eczema papulosum; pityriasis. **H. febri′lis,** h. labialis, fever blisters, cold sores. **H. fe′rox** or **fe′rus,** h. exedens; lupus; see *Herpes*. **H. figura′tus,** herpes. **H. furfura′ceus,** pityriasis. **H. furfura′ceus circina′tus,** lepra; h. exedens. **H. gangræno′sus,** multiple hysterical gangrene. **H. genita′lis,** acute h. of genital organs of male. **H. gestatio′nis,** chronic herpetic eruption in latter stages of pregnancy; impetigo herpetiformis; pemphigus. **Gut′tural h.,** diphtheritic pharyngitis. **Hemorrha′gic h.,** herpes with exudation of blood into the vesicles; a serious condition. **H. hu′midus exul′cerans,** impetigo. **H. impetiginifor′mis** or **impetigino′sus,** impetigo herpetiformis. **H. i′ris,** eczema impetiginosum; tinea circinata; t. tonsurans; see *Herpes*. **H. labia′lis,** see *Herpes*. **H. maculo′sus,** h. attended with loss of hair; h. tonsurans maculosus; tinea tonsurans. **H. malig′nus,** lupus. **H. milia′ris,** h. phlyctænoides; miliaria; see *Herpes*. **H. mor′dax,** lupus. **H. neurit′icus,** zoster. **H. ophthal′micus,** see *Herpes*. **H. peris′celis,** h. zoster. **H. phagedæ′nicus,** lupus exedens. **H. phlyctænoi′des,** see *Herpes*. **H. præputia′lis,** see *Herpes*. **H. progenita′lis,** acute h. of the male genital organs. **H. pseudosyph′ilis,** h. progenitalis. **H. pudenda′lis,** acute h. of female genital organs. **H. pustulo′sus,** impetigo; acne; sycosis. **H. pyæ′micus,** impetigo herpetiformis. **H. ro′dens,** lupus. **H. scrophulo′sus,** psoriasis. **H. serpi′go** or **serpigino′sus,** h. circinatus; lupus; eczema impetiginosum. **H. siccus,** h. furfuraceus. **H. squamo′sus,** psoriasis; eczema squamosum. **H. squamo′sus mad′idans,** eczema rubrum. **H. ton′dens** or **ton′surans,** ringworm; porrigo decalvans; mycosis trichophytina; tinea tonsurans; t. trichophytina; t. circinata. **H. unilatera′lis,** zoster. **H. uteri′na,** h. cervicis. **H. veg′etans,** impetigo herpetiformis. **H. vesiculo′sus,** tinea tonsurans. **H. vo′rax,** lupus vorax. **H. vulva′ris,** h. pudendalis. **H. zos′ter,** see *Herpes*. **H. zos′ter ophthal′micus,** severe form of zoster on the nose and supraorbital regions.

**Herpesthiom′enus** (*herpes* + *esthio*, to eat). Lupus exedens.

**Herpes′tis cuneifo′lia** or **monie′ria** or **monnie′ra.** Species of *Scrophularineæ*, of the United States and India; antipyretic, aperient, diuretic.

**Herpet′ic.** Of nature of herpes; relating to herpes. **H. i′ris,** term applied to erythema iris, a variety of multiform erythema resulting from successive new erythematous concentric lesions, forming at times shaded concentric rings; also hydroa. **H. neural′gia,** neuralgia attending herpes zoster.

**Herpet′iform.** Resembling herpes.

**Her′petism.** Dartrous diathesis; chronic constitutional condition inducing disease of the skin; tendency or liability to eruptions of herpes.

**Herpetol′ogy.** Treatise on herpes. Treatise on reptiles (*herpeton*, reptile).

**Her′pylos.** Thymus serpyllum.

**Herx′heimer's spi′ral fi′bres.** These run from line of union of corium and epidermis in a spiral direction between the cells; they are supposed to be part of canal system for distribution of juices sent to the rete.

**Her′yng's benign ul′cer.** Ulcer on anterior pillar of fauces, having appearance of vesicle of herpes. **H.'s sign,** dark appearance noticed below the eyes in antral empyema when an electric light is introduced into the mouth.

**Hesperetin′.** $C_{16}H_{14}O_6$. When hesperidin is acted on by dilute acids it is converted into hesperetin and glucose.

**Hesperidin′.** $C_{22}H_{26}O_{12}$. Glucose from bitter orange and lemon-peel; also derived from shaddock.

**Hes′peris allia′ria.** Alliaria. **H. matrona′lis,** dame's violet; European plant, used in dysuria, colds, etc.

**Hes′selbach's hernia.** Crural hernia wth multilocular sac; see *Merocele.* **H.'s lig′ament,** fibrous band passing from fascia transversalis to the pubic bone and Gimbernat's ligament. **H.'s tri′angle,** see *Triangle.*

**Hetæ′rocol′ica** (*hetaira,* prostitute, *kolikos,* affected with colic). Colica scortorum or colic of prostitutes.

**Heteraceph′alus** (*heteros,* other, *kephale,* head). Monstrosity with two dissimilar heads.

**Heteradel′phia.** Double monstrosity, of which one portion may be regarded as the stem or trunk to which another organized part, less developed than itself, is affixed as a parasite.

**Heteradel′phus** (*heteros,* other, *adelphos,* brother). Monster in condition of heteradelphia.

**Heterade′nia** (*heteros,* other, *aden,* gland). Accidental tissue having glandular structure, but occurring in parts devoid of glands.

**Heteraden′ic** or **Heterad′enoid.** Relating to heteradenia or abnormal gland-structure.

**Heteradeno′ma.** Glandiform tumor in an unusual locality.

**Heteral′icus.** Parasite consisting of a head or head and rudimentary trunk connected with head of the principal subject.

**Hetere′cious.** Heterœcious.

**Hetero-** (*heteros,* other). In composition, other.

**Heteroal′bumose.** Form of albumose resembling globulin, insoluble in distilled water, coagulable by heat.

**Heteroaut′oplasty.** Plastic surgery in which the skin or other tissue is transplanted from another part.

**Heteroblas′tic** (*heteros,* other, *blastos,* formative). Producing different kind of tissue or structure.

**Heterocen′tric.** A term relating to rays of light which do not meet in a common centre.

**Heteroceph′alous.** Monster having two dissimilar heads.

**Heterochiral,** het-er-o-ki′ral (*heteros,* other, *cheir,* hand). Term to express motion of a horse, as in trotting, when the hind and fore feet act together.

**Heterochro′ic** or **Heterochro′mous** (*heteros,* other, *chroia,* color). Having different color or colors.

**Heterochromato′sis** or **Heterochro′mia** (*heteros,* other, *chroma,* color). Variety of color in a part which is normally of but one color. Specifically, a condition in which the two irides are of different colors, or in which there is more than one color in the same iris.

**Heterochron′ia** or **Heteroch′ronism** (*heteros,* other, *chronos,* time). Deviation as to time in the formation or action of parts.

**Heterochron′ic** or **Heteroch′ronus.** Relating to difference of time, or occurring irregularly or at unusual times; a *heterochronic pulse* is one of varying rhythm, an irregular or intermittent pulse.

**Heteroc′litous.** Abnormally or unnaturally bent or distorted.

**Heterocra′nia.** Hemicrania; unsymmetrical condition of two sides of the skull.

**Heterocri′sis.** Abnormal or unnatural crisis of disease.

**Heterodermot′rophy** (*heteros,* other, *derma,* skin, *trophe,* nourishment). Change or impairment of nutrition of skin.

**Heterodesmot′ic** (*heteros,* other, *desmos,* bond). Binding other parts. **H. fi′bres,** fibres of nerves associating nervous centres with other parts of the nervous system or with external organs.

**Heterodidym′ia** or **Heterodym′ia** (*heteros,* other, *didymos,* twin). Heteradelphia.

**Heterodid′ymus, Het′erodyme,** or **Heterod′ymus.** Monstrosity in which supernumerary fœtus has an imperfectly developed head connected by the neck or an incomplete thorax.

**Het′erodont** (*heteros,* another, *odous,* tooth). Having teeth divisible into classes, as incisors, premolars, and molars.

**Heterœ′cious** (*oikos,* dwelling). Term applied to parasites that dwell in different habitations in different generations.

**Heteroganglion′ic.** Relating to different ganglia, as certain nerve-fibres connecting two or more ganglia.

**Heteroge′neous** (*heteros,* other, *genos,* kind). Of a different kind.

**Heterogene′sia** (*heteros,* other, *genesis,* generation). Want of power of fecundation, as sometimes occurs in crossing breeds of animals.

**Heterogen′esis.** Anomaly in organic formation; abrogenesis. Formation and development of offspring, which pass through a different form of existence from that of the parent. See *Generation.*

**Heterogenet′ic.** Relating to heterogenesis; resulting from external causes.

**Heterogeny,** het-er-oj′en-e. Alternate generation; non-sexual generation; heterogenesis.

**Heteroglob′ulose.** Result of digestive action on globulin.

**Heteroinfec′tion.** Infection from without, not originating in the body. Infection through one who is not himself infected.

**Heteroinoc′ulable.** Capable of being inoculated from one person to another.

**Heteroinocula′tion.** Inoculation from one individual to another.

**Heterolal′ia** (*heteros,* other, *laleo,* to speak). Using words not intended; heterophonia.

**Heterol′ogous.** Different in shape or structure from that which is natural or usual. **H. tis′sues,** see *Tissues.*

**Heterol′ogy.** Formation of structure or tissue different from that in which it is developed or from some structure or tissue taken as a standard.

**Heterolysin′.** The active agent of hæmolytic serum in a case of heterolysis. See *Lysin.*

**Heterol′ysis.** Hæmolytic action of the serum of one animal upon the red corpuscles of an animal of another species.

**Heteromer′ic** (*heteros,* other, *meros,* side). A term applied to nerve-cells in one lateral portion of the spinal cord which send processes to the other side.

**Heterom′erous.** Differing in chemical composition.

**Heteromor′phic.** Heteromorphous.

**Heteromor′phism** (*heteros,* other, *morphe,* shape). Deviation from the natural shape of parts. Existence in a different shape at different stages of existence. Crystallization in different forms.

**Heteromorpho′sis** (*heteros,* other, *morphe,* shape). Malformation.

**Heteromor′phous.** Of different form; heterologous or polymorphous. Undergoing complete metamorphosis. See *Homology.*

**Heteron′omous** (*heteros,* other, *nomos,* law). Governed by laws which regulate other bodies. Abnormal.

**Heteron′ymous** (*heteros,* other, *onyma,* name). Of a different name. In optics, crossed. **H. diplo′pia,** double vision in which each image is in the eye of the opposite side.

**Heteropa′gia** (*heteros,* other, *pago,* to unite). Double monstrosity in which the accessory subject is very small and imperfect, but provided with a distinct head and at least rudimental lower limbs, its body being implanted on the anterior surface of the body of the principal subject. The monster is called *heterop′agus.*

**Heterop′athy** (*heteros,* other, *pathos,* affection). Counterirritation. Allopathy.

**Heteropha′sia** (*phasis,* speech). Heterolalia; heterophonia.

**Heterophe′mia** or **Heteroph′emy** (*heteros,* other, *phemi,* to speak). Using an opposite or a different word or expression from that intended.

**Heterophlegma′sia** (*heteros,* other, *phlegmasia,* inflammation). Counterirritation.

**Heteropho′nia** (*heteros,* other, *phone,* voice). Cracked or broken voice; abnormality in voice or speech; speaking words not intended.

**Heterophoral′gia** (*algos,* pain). Painful symptoms associated with heterophoria.

**Heterophor′ia** (*heteros,* other, *phoros,* carrying). Departure of lines of vision from the parallel, as exophoria, esophoria, hyperphoria, according as the lines tend outward, inward, or one above the other.

**Heterophthal′mia** or **Heterophthal′mos** (*heteros,* other, *ophthalmos,* eye). Difference in the two eyes, as when one squints or is of a different color or size.

**Heterophthon′gia** (*phthongia,* utterance). Heterophonia.

**Heteropla′sia** (*plasso,* to form). Formation of a heteroplasm or abnormal tissue or structure.

**Het′eroplasm.** Morbid formation foreign to the economy, composed of elements different from those found in it in the normal condition.

**Heteroplas′tic.** Relating to or having the nature of a heteroplasm; heterologous.

**Heteroplas′tid.** An animal or zoöplastic graft. Organ whose cells are divided in their duties in maintaining the life of the individual and of the species.

**Het′eroplasty.** Irregular plastic or formative action or operation; plastic operation in which the lost surface is filled by drafts upon other persons, as in the transference of grafts of skin in loss of superficial soft parts.

**Heteropo′dia** or **Heterop′ody** (*pous,* foot). Condition in which the feet differ in size. See *Heteropus.*

**Heteropros′opus** (*heteros,* other, *prosopon,* countenance). Monster having two faces, usually dissimilar.

**Heteropro′teose.** A result of digestion of syntonin in the stomach.

**Heterop′tics.** Heteroscopy; abnormal use of the eyes.

**Het′eropus** (*heteros,* other, *pous,* foot). One who has one foot different from the other.

**Heterorex′ia** (*heteros,* other, *rexis,* appetite). Perversion of appetite.

**Het′erorrhythm** (*heteros,* other, *rhythmos,* rhythm). Having another rhythm, as the pulse when it is such as is usually felt at a different age.

**Heterosarco′ses** (*heteros,* other, *sarx,* flesh). Class of diseases which consist in the formation of accidental or heterologous tissues.

**Heteros′celous** (*heteros,* other, *skelos,* leg). Having legs of unlike appearance or unsymmetrical.

**Heteros′copy** (*heteros,* other, *skopeo,* to see). Unnatural vision; dissimilar vision of the two eyes.

**Heterosexual′ity.** Sexual feeling excited by one of the opposite sex.

**Heteros′tomy** (*stoma,* mouth). Want of symmetry of the two sides of the mouth.

**Heterotax′ia, Heterotax′is,** or **Het′erotaxy** (*heteros,* other, *taxis,* order). Malformation consisting in the general transposition of organs; change in the relation of organs, as of the viscera.

**Heterother′mal** (*heteros,* other, *therme,* heat). Of different temperature; cold-blooded.

**Heterotop′ia** or **Heterot′opy** (*heteros,* other, *topos,* place). Deviation from the natural position of parts, objective heterotopia. Subjective heterotopia is a sensation of displacement or approximation, such as is experienced in the stump of an amputated limb. Plastic heterotopia is formation of tissue in unusual localities. **Troph′ic h.,** heteroplasia.

**Heterotop′ic.** Relating to heterotopy.

**Heterotricho′sis** (*heteros,* other, *thrix,* hair). Having hair of different shades or colors.

**Heterot′ropa asaroi′des.** Species of asarum, having carminative, diaphoretic, and diuretic properties.

**Heterotroph′ia** (*heteros,* other, *trophe,* nourishment). Abnormal or disordered nutrition, from whatever cause.

**Heterotrop′ia** (*heteros,* other, *trepo,* to turn). Act of turning in a wrong direction. Strabismus.

**Heterot′ropous.** Turned in an unusual or abnormal direction.

**Heterotyp′ic** (*heteros,* other, *typos,* type). Term referring to a double monster in which the parasite is attached to the front part of the main individual.

**Heteroxan′thin.** $C_6H_6N_4O_2$. Leucomain discovered in urine.

**Hetocre′sol.** Cinnamic acid metacresol ester; used in tuberculosis. Non-toxic, and employed externally as a dressing, even for open wounds and exposed surfaces.

**He′tol.** Sodium cinnamate; employed in tuberculosis.

**Hettocyrto′sis** (*hetton,* slight, *kyrtosis,* curvature). Slight curvature.

**Heub′ner's disease′.** Syphilitic affection of the arteries of the encephalon.

**Heuche′ra** (after Prof. Heucher, botanist at Wittemberg). A genus of plants of the order *Saxafragaceæ.* **H. acerifo′lia** or **cortu′sa,** alum root, American sanicle, groundmaple, cliffweed, splitrock. The root is a powerful astringent. The American Indians apply the powdered root to wounds, ulcers, and cancers. **H. cortu′sa, H. cylin′drica, H. micran′tha, H. parviflo′ra,** and **H. pubes′cens,** all growing in U. S., are astringent. **H. richardso′nii,** used medicinally by the Indians, who chew its astringent root, and apply it as a vulnerary to wounds and sores. **H. villo′sa,** indigenous; properties like those of H. cortusa. **H. vis′cida,** H. cortusa.

**Heudelo′tia africa′na** (after Heudelot, garden director on the Senegal). See *Bdellium, Balsamodendron africanum.*

**He′vea brasilien′sis.** Tree of Brazil, a source of caoutchouc. **H. guianen′sis,** Siphonia elastica; see *Caoutchouc.*

**Hex′ad** (*hex,* six). In chemistry, sexvalent.

**Hexadac′tylous** (*hexa,* six, *daktylos,* finger). Having six fingers or toes.

**Hex′agon** (*hex,* six, *gonia,* angle). Having six sides or angles. **Arte′rial h.,** circle of Willis.

**Hexameth′ylene-tetramin′.** See *Urotropin.* **H. brometh′ylate,** bromalin. **H. iod′oform,** iodoformin. **H. sal′icylate,** saliformin.

**Hexathyrid′ium pinguic′ola** (*hex,* six, *thyridion,* a little door). Species of trematode worms; see *Parasites.* **H. vena′rum,** trematode worms found in veins and sputa; see *Parasites.*

**Hexchloreth′ene.** Trichloride of carbon.

**Hexicol′ogy** (*hexis,* habit, *logos,* discourse, description). Discourse on or description of habits or constitution.

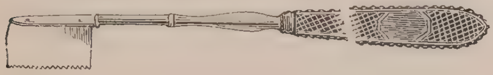
**Hex′is.** Habit of body, constitution; hence hectic, cachectic, etc.

**Hex′ose.** Sugar in which there are six atoms of carbon.

**Hex′yl.** $C_6H_{13}$. Caproyl. Hydrocarbon homologous with methyl. **H. chlo′ral,** $C_6H_9Cl_3O$; obtained by distillation from butyl chloral. Hypnotic.

**Hexylamin′.** $C_6H_{15}N$. Ptomain occurring in the putrefaction of yeast; also found in cod-liver oil. Caproylamin.

**Hey's amputa′tion** (after Mr. William Hey, surgeon, Leeds, England). Amputation of the foot by disarticulation of metatarsal from tarsal bones, the internal cuneiform bone being sawn across. **H.'s in′fantile her′nia,** encysted hernia of the tunica vaginalis. **H.'s lig′ament,** falciform process of fascia lata. **H.'s saw,** saw for extraction of fragments of the cranium after fractures.



Hey's saw.

**Hey′dia hor′rida.** Malabar tree, seeds of which are used in mania, the bark in affections of the bowels and dropsy.

**Hi′ant** (*hio,* to be opening). Gaping, yawning; having a fissure.

**Hia′tus** (*hio,* to gape). Foramen or aperture. Mouth. Vulva. Yawning. See *Helicotrema, Coloboma.* **H. aor′ticus diaphrag′matis,** aortic foramen, opening in the diaphragm for the passage of the abdominal aorta. **H. cana′lis facia′lis** or **Fallo′pii,** opening in aquæductus Fallopii. **H. cana′lis sacra′lis,** h. sacralis. **H. Fallo′pii,** opening into aquæductus Fallopii. **H. femora′lis,** crural ring. **H. interos′seus antibra′chii,** space between oblique ligament of radius and interosseous ligament. **H. Magen′dii,** foramen of Magendie. **H. maxilla′ris,** opening between middle meatus of nose and antrum of Highmore. **H. obturato′rius,** aperture of obturator canal in the pelvis. **H. occip′itopetro′sus,** foramen lacerus posterius. **H. œsophage′us,** opening for œsophagus in diaphragm; foramen œsophageum. **H. pel′vicus latera′lis,** aperture for departure of vessels from the pelvis below h. obturatorius. **H. sacra′lis,** opening at lower extremity of sacral canal made by want of completion of laminæ of last sacral vertebra. **H. of Scar′pa,** h. of Winslow. **H. semiluna′ris,** opening on external wall of middle meatus of the nose; opening of brachial fascia. **H. sphenopetro′sus,** foramen lacerum medius. **H. spina′lis congen′ita,** spina bifida. **H. subarcua′tus,** fossa on posterior surface of petrous portion of temporal bone, lodging flocculus of cerebellum. **H. ve′næ saphe′næ par′væ,** aperture for external saphenous vein as it passes into deep fascia of leg. **H. of Wins′low,** foramen of Winslow; opening behind the lesser omentum and the vessels and nerves of the liver, forming communication between the peritoneal cavity and that of the omentum.

**Hiberna′tion** (*hiberno,* to winter). Winter-sleep. State of torpidity in which certain animals pass the winter, the organic actions being reduced so low that animation seems suspended.

**Hibis′ci cap′sulæ.** Unripe capsules of Hibiscus esculentus, having demulcent and diuretic properties.

**Hibis′cus** or **Hibis′cum.** Althæa. **H. abelmos′chus,** ord. *Malvaceæ.* Name of the plant whose seeds are called grana moschi or muskseed. Indigenous in Egypt and the Indies. The seeds are chiefly used as perfumes. **H. esculen′tus,** okra, gumbo; plant, the green pods of which abound in mucilage, and are used for soups. In the East the root is employed as a demulcent like althæa. **H. moscha′tus,** marsh hibiscus; indigenous; properties like those of marshmallow. **H. popule′us,** balimbago; small Molucca tree; fruit is full of a juice similar to camboge; root is emetic; used in chronic diarrhœa, colic, dyspepsia, etc. **H. ro′sa sinen′sis,** rose of China; astringent and demulcent. **H. tilia′ceus,** corkwood; mucilaginous and emollient; properties belonging also to **H. trio′num**—Venice mallow, flower of an hour—of the United States and Southern Europe, and **H. vitifo′lius,** of E. Indies.

**Hic′cup** or **Hiccough,** hik′kup. See *Singultus.*

**Hick's sign (Brax′ton Hick's sign).** Intermittent contractions of the uterus at and after the third month of pregnancy.

**Hick′ory.** Name of several American trees of the genus *Carya,* ord. *Juglandaceæ.* The leaves are usually aromatic, and are reputed antispasmodic; the bark of the species having bitter nuts, as Carya amara and C. porcina, is astringent. The fruit of Carya olivæformis is pecan or peccan nut, and of C. sulcata and C. alba, shellbark or shagbark. The hickory nut is called also kiskitomas nut.

**Hid′den seiz′ures.** Obscure encephalic and spinal attacks of an epileptoid character.

**Hide′bound.** Having tightness of skin, as in scleroderma.

**Hidradeni′tis** or **Hydroadeni′tis.** Inflammation of sweat glands.

**Hidradeno′ma.** Cutaneous affection probably having its origin in the sweat glands of the embryo.

**Hidro′a** (*hidros,* sweat). Hydroa; sudamina.

**Hidroadeni′tis** (*hidros,* sweat, *aden,* gland). Inflammation of sweat glands.

**Hidrocrypto′ses** (*hidros,* sweat, *kryptos,* concealed). Cutaneous diseases involving the apparatus of perspiration.

**Hidrocysto′ma** (*hidros,* sweat). Eruption of deep-seated shiny, clear vesicles on the face, from dilatation of excretory duct of sweat gland at some point within the corium.

**Hidron′osus** (*nosos,* disease). Disease accompanied by violent sweats; sudor anglicus; disease of the sweat apparatus.

**Hidropede′sis** (*hidros,* sweat, *pedao,* to bound). Excessive or colliquative sweating.

**Hidroph′orous** (*hidros,* sweat, *phero,* to carry). Sweat-producing; sudoriferous.

**Hidroplan′ia** (*hidros,* sweat, *plane,* wandering). Sweating in an unusual location; vicarious sweating.

**Hidropoie′sis.** Production of sweat.

**Hidropoiet′ic** (*hidros,* sweat, *poieo,* to make). Sweat-producing; sudoriferous.

**Hidrorrhœa,** hid-ror-re′ah (*hidros,* sweat, *rheo,* to flow). Excessive or colliquative sweating.

**Hidrosadeni′tis.** Inflammation of sweat glands.

**Hidroschesis** (hid-ros′kes-is) or **Hidris′chesis** (*hidros,* sweat, *ischo,* to restrain). Suppression of perspiration; anhidrosis.

**Hi′drose.** Relating to sweat.

**Hidro′sis.** Cutaneous disease accompanied with disturbance of the functions of the sudoriferous apparatus. Sweating; hidrotic fever. **H. malig′na,** miliaria; sudor anglicus. **H. sim′plex,** hyperhidrosis.

**Hidrot′ic.** Sudorific; agent increasing the secretion of sweat. **H. fe′ver,** form of puerperal fever attended with excessive sweating.

**Hidrotopoie′sis.** Production or secretion of perspiration.

**Hidrotopoiet′ic.** Sudorific.

**Hi′era** (*hieros,* holy). Old name for medicine. **H. of col′ocynth** or **H. diacolocyn′thidos,** electuary composed of colocynth, agaric, germander, white horehound, stæchas, sagapenum, parsley, round birthwort root, white pepper, spikenard, cinnamon, myrrh, saffron, and honey. **H. loga′dii,** hiera picra. **H. no′sos,** epilepsy. **H. pic′ra** (*hieros,* holy, *pikros,* bitter), holy bitter, formerly called *hiera logadii* when made into electuary with honey; mixture of Socotrine aloes and Canella alba; see *Pulvis aloës cum canellâ.* **H. syr′inx,** holy tube; vertebral column.

**Hiera′cium.** A genus of plants of the order *Compositæ.* **H. auric′ula,** orange mouse-ear of Europe; laxative. **H. grono′vii,** hairy hawkweed; herb of N. America, ord. *Compositæ;* used as application for toothache and warts. **H. lachena′lii,** H. murorum. **H. muro′rum,** golden lungwort, French lungwort, wall hawkweed; plant of Europe and Asia; astringent, tonic, and expectorant. **H. olera′ceum,** Sonchus oleraceus. **H. pelletiera′num** or **H. pilosel′la,** mouse-ear; mouse-ear hawk-weed. This plant contains a bitter, lactescent juice having a slight astringency; the herbs and flowers are expectorant and astringent, and the root is antiperiodic. **H. veno′sum,** rattlesnake weed, veiny hawkweed, bloodwort; indigenous; has similar properties; said to be a remedy for snake-bite.

**Hieroma′nia** (*hieros*, holy). Religious insanity.

**Hierop′yra** (*hieros*, holy, *pyr*, fever). Erysipelas.

**High mal′low.** Malva sylvestris. **H. opera′tion for stone,** suprapubic lithotomy.

**High′more, an′trum of.** See *Antrum.* **Bod′y of H.,** mediastinum testis. **Si′nus of H.,** see *Antrum of Highmore.*

**Hik′ry pik′ry** (*hiera picra*). Pulvus aloës et canellæ.

**Hil′denbrand's ty′phus.** Typhus fever.

**Hill′-berry.** Gaultheria.

**Hill-fe′ver.** Jungle fever; modified remittent occurring in hilly districts of India.

**Hil′ton's** (after Hilton, English surgeon of the nineteenth century) **law.** The nerve to a joint supplies also the muscles and skin about the joint. **H.'s line,** a pale line indicating the point at which the skin of the perineum joins the mucous membrane of the anus. **H.'s mus′cle,** compressor sacculi laryngis. **H.'s sac,** pouch directed upward from the anterior part of the ventricle of the larynx.

**Hi′lum.** Small, blackish tumor formed by the protrusion of the iris through an opening in the transparent cornea, so called from its comparison with the hile or black mark on one extremity of the Vicia faba. Fissure or space through which vessels, nerves, etc., enter an organ, as the kidney, spleen, etc. **H. of cor′pus denta′tum,** space in which white fibres enter the corpus dentatum. **H. of fas′cia denta′ta,** portion of fascia dentata through which the pyramidal cells of the hippocampus major pass. **H. hep′atis,** transverse fissure of the liver; see *Liver.* **H. of kid′ney,** internal concave edge of the kidney. **H. liena′lis** or **lie′nis,** concave part of the spleen. **H. of lung,** h. pulmonis. **H. nu′clei denta′ti,** h. of the olivary body; h. olivæ. **H. oli′væ,** portion of the olivary body through which the white fibres make their exit. **H. of the o′vary,** concave edge of that organ. **H. placen′tæ,** point of union of placenta and umbilical cord. **H. pulmo′nis,** space for the entrance of blood-vessels and tubes into the lung at its root. **H. rena′lis,** hilum of the kidney. **H. of spleen,** h. lienis.

**Hil′wort.** Mentha pulegium.

**Himanto′ma** or **Himanto′sis.** Himas.

**Hi′mas** (*himas*, thong of leather). Uvula; likewise elongation of it. Staphylœdema.

**Hind′berries.** See *Rubus idæus.*

**Hind-brain.** Posterior cerebral vesicle. After-brain in the fœtus; including in the adult the cerebellum, pons Varolii, and the upper portion of the floor of the fourth ventricle. Epencephalon.

**Hind′gut.** Posterior part of the embryonic intestine enclosed in the caudal fold. The middle third of the rectum and the allantois are developed from it.

**Hind-head.** Occiput.

**Hind-kid′ney.** Posterior segment of the kidney of fetal life; metanephros.

**Hinge-joint.** Ginglymus.

**Hin′gra.** Inferior variety of asafœtida.

**Hip.** Haunch; hypochondriasis. **H. bone,** ilium. **H. disease′,** morbus coxæ. **H. gir′dle,** pelvic arch. **H. gout,** neuralgia femoropoplitæa. **H. joint,** coxofemoral articulation. **H. tree,** Rosa canina.

**Hippan′thropy** (*hippos*, horse, *anthropos*, man; Hippanthropos was the fabulous centaur). Melancholy in which the patient believes himself changed to a horse.

**Hipped.** Hypochondriac.

**Hippia′ter** (*hippos*, horse, *iatros*, physician). One who treats diseases of domestic animals; veterinary surgeon.

**Hippiat′ria.** Veterinary art.

**Hip′picus** (*hippos*, horse, because used in getting on horseback). Tibialis anticus muscle.

**Hip′po** (*hippos*, horse). Arrow poison of Africa, probably made from strychnos. Ipecacuanha; corruption, in Ireland, of ipecacuanha, hence applied at times in the United States to Euphorbia corollata or American ipecacuanha. In composition, horse. **In′dian h.,** Gillenia trifoliata.

**Hippocam′pal fis′sure.** Transverse fissure of the brain; groove separating the hippocampal convolution from the crus cerebri, dipping into the hippocampus and extending from the internal part of the gyrus fornicatus, behind the corpus callosum, to the unciform process. **H. gy′rus,** uncinate gyrus or convolution; continuation of the gyrus fornicatus. **H. re′gion,** region which includes the hippocampus and the hippocampal gyrus.

**Hippocam′pus ma′jor.** Cornu ammonis. **H. mi′nor,** unciform eminence; medullary tubercle or projection observed in the posterior cornu of the lateral ventricle of the brain.

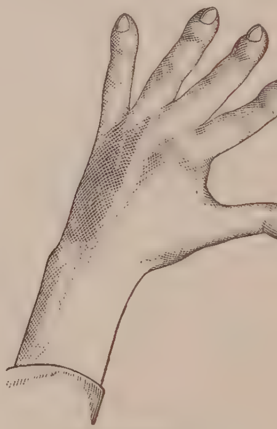
**Hippocas′tanum.** Horse-chestnut; rind is astringent and febrifuge. See *Æsculus.* **H. vulga′re,** Æsculus hippocastanum.

**Hippocentau′rea centau′rium.** Chironia centaurium.

**Hippocory′za.** Coryza of horses, symptom of glanders.

**Hippoc′rates's cap.** Double-headed roller bandage enveloping the head like a cap. **H.'s cord,** tendo Achillis. **H.'s fa′cies,** see *Face, Hippocratic.* **H.'s sa′cred disease′,** epilepsy. **H.'s sleeve,** conical flannel bag for straining liquids.

**Hippocrat′ic.** Relating to Hippocrates or concerning his doctrine. **H. deform′ity of fin′gers,** H. fingers. **H. fa′cies,** peculiar corpse-like face observed in cholera and general peritonitis. **H. fin′gers,** an enlargement, with dorsal rounding, of the last phalanges of the fingers; present in many cases of imperfect hæmatosis and in pulmonary tuberculosis. **H. sound** or **succus′sion,** a splashing sound elicited by succussion in pleurisy with effusion and pneumothorax, and in pyopneumothorax.



Hippocratic fingers.

**Hippoc′ratism.** Doctrine of Hippocrates, consisting in observing and following nature, as indicated by her presumed efforts and the crises set up by her.

**Hippoglos′sum.** Globularia alypum; Ruscus hypoglossum.

**Hippolap′athum.** Rumex patientia.

**Hippol′ithus** (*hippos*, horse, *lithos*, stone). Bezoard of the horse.

**Hippom′ane mancinel′la** or **manzanil′lo.** Manchineel, ord. *Euphorbiaceæ.* Poisonous tree of tropical America, with milky juice which the Indians use to poison their arrows. Fruit is highly poisonous. Externally, juice is used for the removal of fungous growths.

**Hip′pomane** or **Hippom′anes.** Secretion from the vagina of a mare in a state of heat. Brownish-green body in the allantoic fluid of the mare. Used anciently in the preparation of philters.

**Hippomelanin′.** Dark pigment from melanotic tumor of horse.

**Hippomyx'a** (*hippos*, horse, *myxa*, mucus). Hippocoryza. *Hippomyxoma* is a swelling following hippocoryza.

**Hippomyzo'sis.** Glanders.

**Hippopathol'ogy** (*hippos*, horse, *pathos*, disease, *logos*, discourse). Pathology of the horse.

**Hippophæs'.** Sea buckthorn; sallow thorn; used in Norway in arthritic affections and as a diaphoretic in skin diseases.

**Hippoph'agous** (*hippos*, horse, *phago*, to eat). Feeding or subsisting on horseflesh.

**Hippoph'agy.** Feeding or subsisting on horseflesh.

**Hip'popus** (*hippos*, horse, *pous*, foot). Talipes equinus.

**Hipposeli'num.** Smyrnium olusatrum.

**Hippot'omy.** Anatomy of the horse.

**Hippu'ria.** Excretion of hippuric acid in the urine.

**Hippu'ric acid.** Acid found in urine of graminivorous animals. $C_9H_9NO_3$. It is contained in small quantities in human urine, and its amount is increased by taking into the stomach substances containing benzoic acid.

**Hippu'ris** (*hippouris*, horse's tail). Cauda equina. Genus of plants, ord. *Halorageæ*. **H. commu'nis, flu'itans,** or **vulgar'is,** mare's-tail or bottle-thrush of Europe and America; astringent used as tea in diarrhœa and hemorrhage.

**Hippurop'athy** (*hippouris*, cauda equina, *pathos*, disease). Disease of the cauda equina.

**Hip'pus.** A tremulous condition of the iris, occasioning repeated alternations of contraction and dilatation of the pupil. It is generally allied with nystagmus.

**Hips.** Fruit of Rosa canina; chiefly used as a confection.

**Hi'ra.** Jejunum; intestines.

**Hir'ci bar'bula.** Hircus; hairs of tragus. **H. pi'li,** hairs of axilla.

**Hircin'** (*hircus*, goat). Glyceril compound of hircic acid; an oil without color, with strong, goat-like smell.

**Hircis'mus** (*hircus*, goat). Smelling like a goat; applied especially to the odor of the secretions of the axilla.

**Hirsch'berg's test.** Test for amount of strabismus by means of corneal reflection of the flame of a candle.

**Hirsch'feld's disease'.** Rapidly fatal form of diabetes. **H.'s gan'glion,** hippocampal gyrus.

**Hirsch'sprung's disease'.** Congenital dilatation of the colon.

**Hir'sute** (*hirtus*, hairy). Hairy.

**Hirsu'ties** (*hirtus*, hairy). Hairiness; growth of hairs on extraneous parts, or superfluous growth of hair, as in cases of bearded women; hypertrichosis. **H. adna'ta,** congenital hirsuties.

**Hir'tate.** Hirsute.

**Hirtz's râle.** Metallic moist subcrepitant râle, indicating the stage of softening in tuberculosis.

**Hiru'do.** The leech. In medicine, Hirudo or Sanguisuga or Bdella medicinalis and officinalis, order of aquatic worms, *Gnathobbellidæ*, are generally employed. In the United States H. decora is also used. The leech lives in fresh water, and feeds on the blood of animals, which it sucks, after having pierced the skin with its sharp teeth—a habit taken advantage of to produce local bloodletting. A good English leech will take about half an ounce of blood, including that which flows by fomenting the part subsequently; the American leech takes less. **H. artificia'lis,** antlia sanguisuga. **H. dec'ora,** see *Hirudo*. **H. mechan'ica,** artificial leech. **H. medicina'lis,** German leech. **H. officina'lis.** Hungarian leech. **H. provincia'lis,** Sanguisuga officinalis. **H. troc'tina,** species of leech from Algiers.

**Hirundina'ria.** Asclepias vincetoxicum; Lysimachia nummularia; Chelidonium majus.

**Hirun'do.** The swallow, the nests of which were once employed as rubefacients, boiled in vinegar. Edible bird's nests of the Hirundo esculenta of the Indian Archipelago are highly prized, especially by the Chinese, as an article of diet. They are of a mucilaginous character.

**His's canal'.** Canal in fetal life between the thyroid gland and the tongue. **H.'s perivas'cular spa'ces,** lymph-spaces around the blood-vessels of the brain and spinal cord. **H. stro'ma,** fibrous foundation-tissue of the mammary gland.

**Hispid'itas** (*hispidus*, hairy). Irregular position of eyelashes; distichiasis; phalangosis.

**Hispid'ula.** Antennaria dioica.

**His'sing respira'tion.** Slight, prolonged whistling sound, from presence of mucus obstructing the smaller bronchial ramifications.

**His'tic** (*histos*, tissue). Relating to tissues.

**Histidin'.** $C_6H_9N_3O_2$. Base derived from the spermatozoa of fish.

**His'tin.** Fibrin.

**Histiogen'esis.** Histogenesis.

**His'tioid.** Histoid.

**His'toblast** (*histos*, tissue, *blastos*, cell). A cell concerned in tissue-formation.

**Histochem'istry.** Chemistry of tissues.

**Histodial'ysis** (*histos*, tissue, *dialysis*, dissolution). Breaking down of the tissues.

**Histogen'esis** or **Histogeny,** his-toj'en-e (*histos*, tissue, *genesis*, formation). Tissue-formation; formation and development of the organic textures. **H. of bone,** osteogeny. **H. of car'tilage,** chondrogenesis.

**Histogenet'ic** or **Histogen'ic.** Tissue-making; relating or appertaining to histogeny or the formation and development of the organic textures. **H. el'ements of nutri'tion,** see *Plastic element*. **H. mol'ecules,** see *Plastic element*.

**Histog'eny.** Histogenesis.

**Histohæmatin'.** One of a group of pigments detected in tissues of animals of different species, probably concerned in respiration.

**His'toid** (*histos*, tissue, *eidos*, resemblance). Resembling or made up of connective tissue. Term applied to tumors made up of tissues which closely resemble the normal structure of the body, as fat, hair, teeth, skin, etc. **H. tu'mor,** tumor of connective tissue.

**Histological,** his-to-loj'i-kal. Relating to histology.

**Histol'ogist.** One who is versed in histology.

**Histol'ogy** (*histos*, tissue, *logos*, description). Minute or microscopic anatomy. *Normal* histology is the study of the structure of healthy tissues. *Pathological* histology is the morbid anatomy of the tissues.

**Histol'ysis** (*lysis*, solution). Histodialysis.

**Histolyt'ic.** Relating to histolysis. **H. mol'ecules,** see *Plastic elements*.

**His'tone** (*histos*, tissue). Nucleohistone. Albuminous body first discovered in red corpuscles of the goose.

**Histon'omy** (*histos*, tissue, *nomos*, law). Aggregate of laws presiding over the formation and arrangement of the organic tissues.

**Histonu'ria.** Presence of histone in the urine.

**Histopathol'ogy.** Pathological histology.

**Histophysiol'ogy.** Physiology of tissues; histology applied to study of physiological processes.

**His'tory, med'ical.** Narration of the chief circumstances and persons connected with them in the progress of medicine.

**His'tos** (web or tissue). Organic texture.

**Histother'apy.** The treatment of disease by means of animal tissues or organs; opotherapy; organotherapy.

**His'totome.** Microtome.

**Histot'omy.** Minute anatomy.

**His'totripsy** (*tripsis*, crushing). Ecrasement.

**Histotroph'ic** (*histos*, tissue, *trophe*, nourishment). Relating to nutrition of tissues.

**His'tozyme** (*histos*, tissue, *zyme*, ferment). Soluble ferment presumed to be capable of disintegrating nitrogenous tissues and causing their decomposition.

**His'tricism.** Erect state of the hairs.

**Histrion'ic** (*histrio,* actor). Exaggerated in expression of emotions. **H. paral'ysis,** paralysis of the facial muscles, causing emotional appearance of the face. **H. spasm,** similar spasm of the facial muscles.

**Hit'zig's zone.** A zone of impaired sensation around the trunk in tabes dorsalis; anæsthetic or paræsthetic girdle.

**Hive syr'up.** Syrupus scillæ compositus.

**Hives.** In Scotland, any eruption proceeding from an internal cause; in the United States it is employed most frequently for urticaria. **Bold h.,** cynanche trachealis; urticaria. **Eat'ing h.,** rupia escharotica.

**Hoang'-nan.** Bark of Strychnos gaultheriana, from which strychnine and brucine may be obtained; employed in leprosy and various cutaneous affections; tonic, stimulant, antiparasitic; used in scrofula, leprosy, paralysis, etc.

**Hoar'hound.** Marrubium.

**Hoar'iness.** Canities.

**Hoarse'ness.** Change in voice, which loses its smoothness and becomes rough and husky.

**Hoar'y pea.** Tephrosia virginiana; root is tonic and anthelmintic.

**Hobo'ken's valves.** Valve-like arrangement of lining membrane of vessels of the umbilical cord.

**Hob'nail liv'er.** Cirrhosis of the liver; nutmeg liver.

**Hoc** or **Hocks.** Alcea rosea.

**Hoch'singer's sign.** The presence of indican in the urine in tuberculosis of children.

**Hock.** Tarsus of horse or ox. **Capped' h.,** thickened serous cyst over the seat of the calcaneum in the horse.

**Hoda'ra's disease'.** Infectious trichorrhexis nodosa, caused by Bacillus multiformis.

**Hodge's pes'sary.** Peculiar U-shaped pessary, usually of rubber. **H.'s plane,** plane parallel to that of the pelvic inlet.

**Hodg'kin's disease'** (after Dr. Hodgkin, of London). Glandular sarcoma, lymphadenoma, pseudoleukæmia. A chronic disease mainly characterized by the enormous enlargement of the lymphatic glands of the body, along with a peculiar deposit in the spleen, and accompanied by a pernicious anæmia. Iron and cod-liver oil seem to be the best remedies. The prognosis is unfavorable.

**Hodg'son's disease'.** Aneurysm or atheroma of the aorta. **H.'s opera'tion,** ligation of axillary artery under the clavicle.

**Hod'ograph** (*hodos,* way, *grapho,* to write). Instrument for registering locomotor movements.

**Hof'fa's opera'tion.** An operation for the cure of congenital dislocation of the hip. The cotyloid cavity is hollowed out and the head of the femur, being freed of its attachments, is brought down and retained in the deepened acetabulum by means of a plaster-of-Paris splint.

**Hoff'man's an'odyne.** Spiritus ætheris compositus. **H.'s symp'tom,** easily excited tingling of the skin in tetany. **H.'s type,** Charcot-Marie type of progressive muscular atrophy.

**Hog chol'era.** Disease of swine, symptoms of which are inflammation of the bowels, with ulceration, ecchymoses, nephritis, etc. Several affections have received this name. The disease is produced by a special microorganism. See also *Swine.* **H. erysip'elas,** rouget; an infectious and fatal disease of swine, due to the Bacillus rhusiopathiæ suis; see also *Swine.* **H. gum,** doctor gum; glutinous substance from Rhus metopium of Jamaica, or Moronobea coccinea, flowing from incisions in the bark; emetic properties; used in Jamaica for the same purposes as Burgundy pitch. **H. lice,** onisci aselli.

**Hog's lard.** Adeps præparatus.

**Hog'weed.** Ambrosia artemisiæfolia.

**Hog'wort.** Heptallon graveolens.

**Hoit'zia coccin'ea** or **mexica'na.** Polemoniaceous plant of Mexico; diuretic, cathartic, emetic.

**Hol'agogue** (*holos,* whole, *agogos,* driving). Capable of driving away every morbid humor. Catholicon; panacea.

**Holanencepha'lia** (*holos,* whole + *anencephalia*). Entire absence of brain; same as anencephalia.

**Holarthri'tis** (*holos,* whole + *arthritis*). Polyarthritis.

**Hol'cus sor'gum.** Panicum italicum.

**Hol'den's line.** Groove or furrow in the groin below Poupart's ligament, used as a guiding line in amputations.

**Hol'der.** Tenaculum.

**Hol'der's horizon'tal plane.** Plane of cranium made by lines projected from superior portion of auricular foramen to inferior border of the orbit.

**Holes, burnt.** Rupia escharotica; noma; pemphigus gangrænosus.

**Holigar'na longifo'lia.** Species of *Anacardiaceæ,* juice of which is used externally for sores, warts, etc.

**Hol'lands.** Gin.

**Hollarrhe'na antidysenter'ica.** A plant of the E. Indies; ord. *Apocynaceæ;* tonic, astringent, anthelmintic; Wrightia antidysenterica. **H. pubes'cens,** plant of India, seeds of which are used in diarrhœa and dysentery.

**Hol'low back.** Lordosis.

**Hol'ly.** A plant of the order *Ilicineæ.* **Amer'ican h.,** ilex. **Com'mon h.,** Ilex aquifolium. **Dahoon' h.,** Ilex vomitoria. **Emet'ic h.,** Ilex vomitoria. **Europe'an h.,** Ilex aquifolium. **Ground h.,** Chimaphila umbellata; Gaultheria procumbens; Pyrola maculata; Pyrola umbellata. **Sea h.,** Eryngium maritimum. **South Amer'ican h.,** Ilex paraguaiensis.

**Hol'lyhock, com'mon.** Alcea rosea.

**Holmes weed.** Scrophularia nodosa.

**Holmgren's' test.** Examination for color-blindness by means of H.'s wools. **H.'s wools** or **wors'teds,** differently colored skeins of wool, used as tests for color-blindness.

**Holo-** (*holos,* whole). In composition, the whole.

**Holoblas'tic** (*holos,* whole, *blastos,* germ). Term applied to the ova of viviparous animals, in which all, or almost all, of the yolk is directly formative, and but little or none is nutritive.

**Holocaïne'.** Crystallized substance produced by the union of phenacetin and paraphenetidin. The hydrochlorate is usually employed; used in opthalmic practice as a substitute for cocaine, in a 1 per cent. solution.

**Holo'cyron.** Teucrium chamæpitys.

**Hologanglii'tis** (*holos,* all, *ganglion*). Cholera.

**Holonarco'sis** (*holos,* all, *narcosis,* stupor). Complete narcosis.

**Holop'athy** (*holos,* whole, *pathos,* affection). Doctrine which teaches that diseases are but phases or "episodes" of a general affection of the organism.

**Holophlyc'tides.** Tumor formed by accumulation of serous fluid under the epidermis.

**Holorrhachischisis,** ho-lo-rak-is'kis-is (*holos,* whole, *rhachis,* spine, *schisis,* separation). Fissure of the whole spinal cord.

**Holoschisis,** ho-los'kis-is (*holos,* whole, *schisis,* splitting). Segmentation of a nucleus.

**Holosteosclero'sis** (*holos,* all, *osteon,* bone, *sclerosis,* hardening). General sclerosis of bones.

**Holos'teum alsi'ne.** Alsine media.

**Holos'teus** (*holos,* all, *osteon,* bone). Osteocolla.

**Holos'tomum** (*holos,* all, *stoma,* mouth). Amphistoma hominis. **H. ala'tum,** entozoon in intestine of the dog.

**Holosym'physis** (*holos,* whole, *symphysis,* union). Perfect union.

**Holosys'tole.** The entire systole.

**Holotet'anus.** General tetanus affecting the whole system of the muscles.

**Holot'omy** (*holos,* whole, *tome,* incision). Complete excision.

**Holoto'nia** or **Holot'ony** (*holos,* all, *teino,* to stretch). Spasm or tetanus of the whole body.

**Hol'stein disease'.** Endemic syphilitic disease.

**Holt'house's her'nia.** A form of oblique inguinal hernia in which there is protrusion of the bowel along the fold of the groin.

**Ho'ly bit'ter.** Hiera picra.

**Homag'ra** (*homos*, shoulder, *agra*, seizure). Gout in the shoulder.

**Homa'lium racemo'sum.** Astringent plant growing in the W. Indies; used in diarrhœa. **H. racon'bea** or **spica'tum**, root of this plant of Guiana is astringent and used in gonorrhœa.

**Homaloceph'alus** (*homalos*, level, *kephale*, head). Flat-headed.

**Homalocor'yphus** (*homalos*, level or like, *koryphe*, head or vertex). Term for crania in which the parietal angle of Lissauer (that is, between lines projected in the median plane of the skull from the most prominent part of the parietal bone to the bregma and lambda) is from 132° to 142°.

**Homaloder'matous** or **Homaloderm'ous** (*homalos*, level, *derma*, skin). Smooth-skinned.

**Homalograph'ic meth'od** (*homalos*, level, *grapho*, to write). Representation by plans or sections—by flat, frozen sections, for example.

**Homalomet'opus** (*homalos*, level, *metopon*, countenance). Term applied to crania in which the angle between the lines drawn from the metopion to the bregma and nasion is from 141° to 130.5°.

**Homalopisthocra'nius** (*homalos*, level, *opisthen*, behind, *kranion*, skull). Term applied to crania in which the angulus summi occipitis (angle between lines projected in the median plane from the most prominent part of the supraoccipital bone to the lambda and inion) is from 140° to 154°.

**Homalu'ranus** (*homalos*, level, *ouranos*, roof). Term applied to skulls in which the angulus summi palati is from 147.5° to 163.5°.

**Homatropine'.** $C_{16}H_{21}NO_3$. White, crystalline alkaloid resulting from heating a solution of tropine and toluic acid in muriatic acid; used as a rapid and transient mydriatic; also internally in night-sweats of phthisis. It is also called oxytoluyltropeine. **H. hydrobro'mate** or **hydrobro'mide**, crystallizable soluble salt, official in the Ph. Br.; used in ophthalmic practice to dilate the pupil. **H. hydrochlo'rate** or **hydrochlo'ride**, a crystallizable salt of hydrochloric acid and homatropine. **H. sal'icylate** is also employed. **H. sul'phate**, combination of homatropine and sulphuric acid.

**Homax'ial** or **Homaxon'ic.** Having all the axes alike.

**Home's lobe.** Small gland, accessory prostate or third lobe of this gland, occasionally found between the caput gallinaginis and sphincter vesicæ.

**Homeop'athy.** Homœopathy.

**Home'ria colli'na.** Cape tulip; poisonous S. African plant, the bulb of which acts as a violent acronarcotic, speedily producing fatal results.

**Homeria'na.** Polygonum aviculare.

**Home'sickness.** Nostalgia or intense desire to return to one's own home, amounting often almost to melancholy, and leading sometimes to suicide.

**Home'wort.** Sempervivum tectorum.

**Homici'dal** (*homo*, man, *cædo*, to kill). Pertaining to homicide or the killing of man. **H. insan'ity** or **monoma'nia**, insanity, with irresistible impulse to destroy life.

**Hominisec'tion** (*homo*, man, *seco*, to cut). Dissection of the human body.

**Hominiv'orous** (*homo*, man, *voro*, to eat). Man-eating; parasitic on man.

**Homio'sis.** Homoiosis.

**Ho'mo.** See *Man*. **H. ala'tus** (winged man), see *Alatus*. **H. cauda'tus** (tailed man), fabulous tailed variety of the human species. **H. fat'uus**, idiot.

**Homoarecolin'.** Ethyl ether of arecoloidin, obtained from arecolin, for which last this is used as a substitute.

**Homoblas'tic** (*homos*, same, *blastos*, germ). Forming similar tissue.

**Homocen'tric.** Having one centre; concentric.

**Homocerebrin'** (*homos*, like). Substance like cerebrin derived from brain-tissue by the action of baryta and alcohol.

**Homoch'ronous** (*homos*, same, *chronos*, time). Homœochronous.

**Homocinchonicine'.** $C_{19}H_{22}N_2O$. Alkaloid resulting from exposing homocinchonidine sulphate to heat.

**Homocinchonidine'.** $C_{19}H_{22}N_2O$. Alkaloid derived from Cinchona rosulenta.

**Homocinchonine'.** $C_{19}H_{22}N_2O$. Alkaloid having a similar source to homocinchonidine.

**Homoder'matous** (*homos*, same, *derma*, skin). Having the whole skin alike.

**Homodesmot'ic** (*homos*, same, *desmos*, bond). Term applied to nerve-fibres associating similar masses of gray matter.

**Homoëd'rus** (*homos*, alike, *hedra*, seat). Having the same seat. *Morbi homoëdri* are diseases that affect the same tissues.

**Homœo-** (*homoios*, like). In composition, like.

**Homœobiot'ic** (*homoios*, like, *bios*, life). Having similar life.

**Homœoblas'tic.** Homoblastic.

**Homœoch'ronous** (*homoios*, like, *chronos*, time). Coming in regular order as to time.

**Homœomor'phous** (*homoios*, like, *morphe*, shape). Having similar shape. See *Homology*.

**Ho'mœopath.** Homœopathist.

**Homœopath'ic.** Relating to homœopathy.

**Homœop'athist.** A believer in or practitioner of homœopathy.

**Homœop'athy** (*homoios*, similar, *pathos*, affection). Hahnemannism. A system of medicine which maintains that disordered actions in the human body are to be cured by inducing other disordered actions of a like kind (*similia similibus curantur*); this is to be accomplished often by infinitesimally small doses of a remedy which, in larger dose, will produce symptoms resembling those of the disease under observation. Associated with this belief is the theory that the therapeutic force of a remedy is increased by its trituration with an inert substance, such as sugar of milk, or dilution with agitation in water. The basic theory of homœopathy is much older than Hahnemann, founder of the system so called, as is shown by the following quotation from the writings of Gregory the Great: "Mos medicinæ est ut aliquando similia similibus, aliquando contraria contrariis curet. Nam sæpe calida calidis, frigida frigidis, sæpe autem frigida calidis, calida frigidis sanare consuevit."

**Homœopla'sia** (*homoios*, like, *plasso*, to form). Formation of tissues similar to the normal; the opposite of heteroplasia.

**Homœoplas'tic.** Forming tissues similar to normal tissue; the opposite of heteroplastic.

**Ho'mœoplasty.** Transplantation of tissue, as of bone, from one part of an individual to another, or from another individual of the same species.

**Homœo'sis.** Assimilation.

**Homœother'mal** or **Homœother'mic** (*homoios*, like, *therme*, heat). Having or retaining even temperature; warm-blooded.

**Homœoz'ygy** (*homoios*, like, *zygoo*, to join). Law of association of organs, by which like parts adhere to like parts, as in monstrosities.

**Homogene'ity.** State of being homogeneous.

**Homoge'neous** (*homos*, same, *genos*, kind). Having a descent from the same race or family. Of the same kind throughout, as structures or tissues, or derived from the same source.

**Homogen'esis** (*homos*, equal, *genesis*, generation). Univocal or regular generation. See *Generation*.

**Homogentis'ic** or **Homogentisin'ic acid.** Acid resulting from the decomposition of tyrosin, and occasionally found in the urine.

**Homogeny**, ho-moj'en-e. Homogenesis.

**Homog'onous** (*homos*, same, *gonos*, seed). Having like or similar offspring.

**Homoguai'acol.** See *Creosol*.

**Homoio'sis** (*homoioo*, to assimilate). Elaboration of the ingested food, making it proper for assimilation.

**Homolog'ical.** Relating to homology.

**Homol'ogous** (*homos*, like, *logos*, condition). Like in structure or other characteristics. See *Homology* and *Homotype*. **H. tis'sues,** tissues having like organization or structure. **H. tu'mors,** those made up of like structures or of regular tissues.

**Ho'mologue.** Term applied to the same organ in different animals, whatever its form and function.

**Homol'ogy.** Similarity of structure and development, as of two sides of the body. Doctrine or study of the relations of the parts of animal bodies. Homologous, homomorphous, or homœomorphous tissues are those that resemble others; in opposition to heterologous, heteroclite, or heteromorphous, which are new formations. **Se'rial h.**, see *Homotype*.

**Homolysin'** (*homos*, same). See *Lysin*.

**Homomor'phous** (*homos*, same, *morphe*, shape). See *Homology*.

**Homon'omous** (*homos*, same, *nomos*, law). Being under the same law.

**Hom'onym** (*homos*, same, *onyma*, name). Having the same designation.

**Homon'ymous** (*homos*, like, *onyma*, name). Having the same name. **H. diplo'pia,** double vision in which each image is on the same side of the eye as the eye is of the body. **H. hemianop'sia,** defective visual field on the same side in the two eyes.

**Homopiperidin'ic acid.** $C_5H_{11}NO_2$. Amidovalerianic acid, resulting from decomposition of meat and fibrin, and having properties of an acid and a base.

**Ho'moplast** (*homos*, same, *plasso*, to form). Structure or tissue resembling another in development. Element of simple tissue.

**Homoplas'tic.** Similar in structural development.

**Homoplas'tid.** Structure, each cell of which is endowed with reproductive power.

**Ho'moplasty** (*homos*, like, *plasso*, to form). Formation of homologous tissues.

**Homopla'ta** (*homos*, shoulder, *platys*, broad). Scapula.

**Homoquinine'.** $C_{19}H_{22}N_2O_2$. Alkaloid from cuprea bark, obtained from Remijia purdieana and R. pedunculata triana.

**Homosalicyl'ic acid.** Creosotic acid.

**Homosexual'ity.** Sexual impulse toward one of the same sex.

**Homother'mal** or **Homother'mic.** Homœothermic.

**Homotolu'ic acid.** Hydrocinnamic acid.

**Homoton'ic** or **Homot'onous** (*homos*, like, *tonos*, tone). That which has the same tension or tone; as continued fever, whose symptoms have equal intensity during its whole course.

**Ho'motype** (*homos*, like, *typos*, type). Repetition of the same essential part in the series—of the vertebral segments, for example. Parts thus similarly related are homotypic or serially homologous.

**Homun'cio.** Human fœtus.

**Homun'culus.** A diminutive, debilitated man; mannikin.

**Hondu'ras bark.** Cascara amarga. **H. sarsapa-ril'la,** variety of sarsaparilla from Belize.

**Hon'esty.** Lunaria, Clematis vitalba.

**Hone'wort, field.** Sison amomum.

**Hon'ey.** Mel. **H. bloom,** Apocynum androsæmifolium. **H. lo'cust,** Geditschia triacanthos. **H. wa'ter,** hydromel.

**Hon'eycomb bag.** Reticulum. **H. ring'worm,** favus.

**Hon'eysuckle.** Lonicera; Cornus succica; Trifolium pratense; Rhinanthus crista galli. **H. bush,** Diervilla trifida. **Scar'let** or **trum'pet h.,** Lonicera sempervirens.

**Honey-sugar.** Glucose.

**Honora'rium.** A physician's fee or compensation.

**Hood.** Caul. **Caud'al h.,** caudal fold of embryo. **Cephal'ic h.,** cephalic fold of embryo.

**Hood'wort.** Scutellaria lateriflora.

**Hoof'bound.** Deformative contraction and dryness of the back part of the hoof of the horse.

**Hook.** Instrument with one or both extremities crooked and sometimes pointed; used by anatomists and surgeons to lay hold of and raise up certain parts in delicate dissection or when the parts would slip from the fingers. The tenaculum is a variety of hook. See *Hamus, Hamulus, Uncus*. **Blunt h.,** instrument for passing over flexures of joints to assist in bringing down the fœtus in parturition. **Echinococ'cus h.,** one of a circle of hook-like bodies forming a crown on the head of the echinococcus; the presence of these hooks in fluid removed from a cyst is diagnostic of hydatids. (See also cut under *Echinococcus*.) **Malgaigne's' h., Tyr'rel's h.,** etc., see these names.

Hooklets from Tænia echinococcus. × 350.

**Hook'let.** A small hook. Term usually designating echinococcus hook.

**Hoop'er's pills.** Pilulæ aloes et myrrhæ.

**Hoop'ing-cough.** Pertussis.

**Hoop'tree.** Melia azedarach.

**Hoose.** Bronchial and pulmonary disease of calves and lambs caused by a parasite.

**Hoove.** Acute tympanites of cattle and sheep.

**Hop.** Humulus lupulus; Bryonia dioica. **H. plant,** Humulus lupulus. **H. tree,** Ptelea trifoliata. **H. vine,** Humulus lupulus.

**Ho'pea splen'dida.** Tree of Sunda yielding a fatty substance used as a base for ointments. **H. ternifo'lia** or **tincto'ria,** sweet leaf; indigenous in Southern States; stomachic tonic.

**Hope's cam'phor mix'ture.** Mixture of nitrous acid, camphor-water, and laudanum, employed in diarrhœa, dysentery, etc. **H.'s sign,** double beat of the heart in aortic aneurysm.

**Hop'-hornbeam.** Ironwood; Ostrya virginica.

**Hop'mann's pol'yp.** Papilloma-like appearance of mucous membrane of the nose.

**Hop'pe-Gold'flam's symp'tom-com'plex.** Pseudoparalytic myasthenia; asthenic bulbar paralysis.

**Hops.** Humulus lupulus.

**Horæ'a.** Menses.

**Hor'dea.** Small, rounded prominence on the floor of the fourth ventricle.

**Hordea'tion** (*hordeum*, barley). Foundering of horses from eating too much barley.

**Horde'iform** (*hordeum*, barley, *forma*, shape). Having the shape of barley.

**Hordeïn'** (*hordeum*, barley). Powder obtained from barley, analogous to starch.

**Horde'olum** (dim. of hordeum). Sty or stye. Small inflammatory tumor, of the nature of a boil, exhibiting itself near the free edge of the eyelids, particularly near the inner angle of the eye.

**Hordeozy'mose** (*hordeum*, barley, *zymosis*, fermentation). Diastase.

**Hor'deum.** Seeds of Hordeum vulgare or Scotch barley, ord. *Gramineæ*, affording a mucilaginous decoction, diluent and antiphlogistic. Formerly official in the Ph. U. S.

**Hore'hound.** Marrubium vulgare; Ballota nigra. **Black h.,** Ballota fœtida. **German'der-leaved h.,** Eupatorium teucrifolium. **Stink'ing h.,** Ballota fœtida. **Water h.**, Lycopus sinuatus; Lycopus virginicus. **Wild h.**, Eupatorium rotundifolium; E. teucrifolium.

**Horizocar′dia** (*horizon* + *kardia*, heart). Horizontal position of that organ on the diaphragm in the centre of the cavity of the thorax, in some forms of hypertrophy or dilatation.

**Horizon′tal.** Term to denote, when used anatomically, parallelism to the plane of the horizon when a person is standing erect. **H. circum′ference,** distance measured on exterior of skull through ophryon (point at which supraorbital line intersects median line) and occipital point. **H. lines of demarca′tion,** lines made in retina by planes through horizontal axis perpendicular to line of sight at crossing point of lines of direction. **H. merid′ian,** that described on eyeball or retina by plane of regard passing through centre of retina. **H. plane,** plane through centres of rotation of the eyes when the head is erect. **H. plate,** part of palate-bone going to make up hard palate. **H. ra′mus,** horizontal bony portion passing backward and inward from the body of the pubis toward the acetabulum. **H. semicir′cular canal′,** external semicircular canal. **H. sul′cus of cerebel′lum,** fusion between anterior and middle lobes of cerebellum.

**Hor′me.** Instinct.

**Hormi′num.** Salvia horminum. **H. colora′tum** or **sati′vum,** Salvia horminum.

**Hor′mion.** Point of junction in middle line of vomer and sphenoid bone.

**Hormis′cium cerevis′iæ** and **H. vi′ni.** See *Saccharomyces mycoderma.*

**Hor′mon.** Vital principle.

**Horn.** Cornu. See also *Horns.* **H. ail,** anæmia of horned cattle. **Ante′rior h.,** prolongation of lateral ventricle into the frontal lobe; anterior gray cornu of spinal cord. **Cuta′neous h.,** cornu cutaneum. **Descend′ing h.,** portion of lateral ventricle, chiefly formed by hippocampus major. **Exter′nal h.,** posterior cornu of medulla oblongata. **Inter′nal h.,** gray matter in medulla oblongata corresponding to lateral horn of spinal cord. **H. mad,** see *Mania.* **Pap′illary h.,** cornu cutaneum with hypertrophied papillæ. **H. pop′py,** Glaucium luteum. **Poste′rior h.,** part of lateral ventricle projecting into the occipital lobe. **H. quick′silver,** mercury protochloride; horn silver; silver chloride.

**Horn′bean.** Carpinus betulus.

**Hor′ner's disease′.** A lesion of the sympathetic system in the cervical region, the symptoms of which are drooping of the eyelid, marked contraction of the pupils, flushing of the face, and retraction of the eyeball. **H.'s mus′cle,** tensor tarsi. **H.'s pto′sis,** H.'s disease. **H.'s teeth,** horizontally grooved incisor teeth from insufficient enamel.

**Horn′pox.** See *Varicella.*

**Horns.** Cornua. See also *Horn.* **Poste′rior acces′sory h.,** extensions from central gray matter of medulla oblongata into cuneate fasciculus. **H. of spi′nal cord,** semilunar muscles of nerve-matter observed in transverse sections of gray columns of spinal cord. **H. of ven′tricles,** cornua ventriculi.

**Horn′seed.** Ergot. **H. sil′ver,** silver chloride.

**Horn′wort.** Ceratophyllum demersum, demulcent plant.

**Horn′y.** Corneous. **H. epithe′lium,** corneous or horny granulations occurring in trachoma or granular lids. **H. excres′cences,** excrescences occasionally formed on some part of the skin, resembling in shape the horns of an animal. **H. haired,** superficial layers of epidermic cells. **H. lay′er,** stratum corneum or outer epidermic layer. **H. sub′stance,** see *Tooth.*

**Horop′ito.** Drimys axillaris.

**Horop′ter** (*horos,* limit, *opter,* beholder). Line representing curve along which both eyes can unite in vision. The entire field of binocular vision.

**Horren′tia** (*horreo,* to shudder). Horripilation.

**Hor′rida cu′tis** (rough skin). Goose-flesh, goose-skin; a state of the skin produced by cold or fear, or accompanying the rigor of an intermittent; produced essentially by the contraction of microscopic muscular fibres—the arrectores pilorum. The projections are sometimes called goose-pimples.

**Horripila′tion** (*horreo,* to bristle, *pilus,* hair). General chilliness preceding fever, and accompanied with bristling of the hairs over the body. See *Horrida cutis.*

**Horripilato′res.** Arrectores pilorum.

**Hor′ror** (*horreo,* to shudder). Horripilation. **H. cibo′rum,** disgust for food.

**Hor′rors.** Delirium tremens.

**Horse.** A quadruped of the family *Equinæ.* The word is often employed as a qualification to denote size, as in the following examples. **H. al′oes,** caballine aloes. **H. balm,** Collinsonia canadensis. **H. cane,** Ambrosia trifida. **H. cas′sia,** Cassia grandis. **H. chest′nut,** Æsculus hippocastanum. **H. crust,** crusta genu equinæ. **H. distem′per,** influenza. **H. doc′tor,** veterinary surgeon.

**Horse′fly.** An insect of the family *Tabanidæ,* gadfly or breeze; see *Tabanus.* Also an insect of the family *Œstridae,* bot-fly. **H. weed,** Sophora tinctoria.

**Horse′foot.** Talipes. **H. gen′tian,** Triosteum perfoliatum.

**Horse′leech.** Horse-doctor; veterinary surgeon.

**Horse′mint.** Ambrosia trifida, Monarda coccinea, M. fistulosa, and M. punctata. **Sweet h.,** Cunila mariana.

**Horse′nettle.** Solanum carolinense.

**Horse′pox.** Disease of horses, similar to cowpox in cattle.

**Horse′radish.** Cochlearia armoracia. **H. tree,** Moringa pterygosperma.

**Horse′shoe com′missure.** Fibres of the deep layer of lemniscus. **H. fis′tula,** fistula partially encircling the anus. **H. head,** old name for condition of the skull in children in which the sutures are too open; the coronal suture presenting the form of a horseshoe. **H. kid′ney,** double kidney of horseshoe conformation, in which the lower ends of the kidneys are united by a transverse portion across the spine. **H. mag′net,** magnet having the shape of a horseshoe, thus bringing the poles near one another; these are connected by a bar or armature.

**Horse′tail.** Hippuris vulgaris; Equisetum hyemale. Cauda equina.

**Horse′weed.** Ambrosia trifida; Collinsonia canadensis; Erigeron canadense.

**Hors′ley's test.** A test for glucose, which latter when boiled with caustic potash and potassium chromate yields a green color.

**Hor′tia brasilia′na.** Species of S. American plant, bark of which, antiperiodic, is used as a substitute for quinine.

**Hor′tulus** (dim. of hortus) **cupid′inis.** Vulva.

**Hor′tus.** Garden. **H. sic′cus,** herbarium.

**Hos′pital** (primarily from *hospes,* guest). Infirmary; establishment for the reception, care, and treatment of the sick and wounded. Hospitals were first instituted about the end of the fourth century, at which period the word *nosokomeion* was employed, for the first time, by St. Jerome. Hospitals may be general, receiving all cases, or special, admitting cases of certain diseases only. **H. at′mosphere,** see *Hospitalism.* **Cot′tage h.,** small hospital, with a few beds, manageable at a small expense. **H. fe′ver,** typhus fever. **Field h.,** hospital composed of canvas or wooden tents to be used by an army in the field. **H. gan′grene,** putrid or malignant ulcer, hospital sore; gangrene occurring in wounds or ulcers in hospitals; become rare since the adoption of antiseptic surgery. **In′sane h.,** institution for the care and treatment of insane. **Le′per h.,** hospital for the care and treatment of leprous patients. **Lock h.,** hospital for venereal cases. **H. sore throat,** pharyngitis ulcerosa. **State h.,** name given to hospitals for the insane under the control of the state government.

**Hos′pitalism.** Bad influence exerted by the air of a hospital, impressions on the special senses, confinement, etc., on the physical and mental health of the inmates (non-patients).

**Hospitaliza′tion.** Act of placing a person under hospital treatment.

**Host.** Organism on which a parasite lives.

**Hot.** Containing a high degree of sensible heat. **H. drops,** mixture of the tinctures of capsicum and myrrh. **H. eye,** gouty congestion of the conjunctiva.

**Hot′house.** See *Achicolum.*

**Hot′tentot a′pron.** Condition of hypertrophied nymphæ, seen among Hottentots, in whom an apron-like flap hangs down on the thighs. **H. deform′ity,** condition of fat buttocks, such as seen in Hottentot women.

**Hot′tentotism.** Severe stuttering, sometimes from oral malformation.

**Hough.** Ham; hock.

**Hound's tongue.** Cynoglossum.

**Hour′glass contrac′tion of the u′terus.** Irregular contraction of the uterus like that of an hourglass, retaining the placenta after the birth of the child. **H. her′nia,** variety of oblique inguinal hernia, having a constriction of the hernial sac at some point between the position of the testis and that of the external abdominal ring.

**House-green.** Sempervivum tectorum.

**House′leek.** Sempervivum tectorum. **Small h.,** sedum.

**House′maid's knee.** Inflammation of the bursa of the patella, with enlargement and effusion from pressure.

**House physi′cian.** The senior resident physician in a hospital.

**House staff.** The resident physicians and surgeons in a hospital; corresponding to the French *internes;* usually recent graduates in medicine.

**House sur′geon.** Resident surgeon in a hospital.

**Hous′ton's folds.** Folds of the rectum. **H.'s mus′cle,** compressor venæ dorsalis penis. **H.'s valve,** H.'s folds.

**Ho′ven.** Acute tympanites of the first stomach of cattle, usually from retained food.

**Ho′vius's canal′.** Canal of Fontana. **H.'s mem′brane,** tunica ruyschiana. **H.'s plex′us,** plexus of small veins in front of Schlemm's canal. **H.'s vas′cular cir′cle,** H.'s plexus.

**How′ard's meth′od.** See *Drowning, resuscitation from,* and *Artificial respiration.*

**How′ship's fave′olæ** or **lacu′næ.** Condition in rarefying osteitis in which the edge of melting bone-tissue is broken by shallow curves or deeper semicircular excavations, the concavity being outward; between every two of these there is an angular projection of an intervening portion of bone.

**How′ship-Rom′berg's sign.** See *Romberg's sign.*

**Ho′ya corona′ria** (after Hoy, English horticulturist). Species of *Asclepidaceæ,* growing in Sumatra, Borneo, etc., milky juice of which is used internally in gonorrhœa.

**Huamil′ies bark.** Bark of Cinchona micrantha, C. nitida, and C. peruviana.

**Huanokine′.** $C_{20}H_{24}N_2O$. Alkaloid obtained from cinchona growing near Huanuco; antipyretic.

**Huchard's** (ue-shars′) **disease′.** Arterial tension caused by spasm of vasoconstrictor muscles. **H.'s sign,** an evidence of a high degree of arterial tension exhibited by the number of pulse-beats being diminished when the patient is in a recumbent position.

**Huck′le** or **Huck′lebone.** Ischium; coccyx.

**Huck′leberry.** See *Gaylussacia* and *Vaccinium.* **Dwarf h.,** Gaylussacia humosa.

**Huck′shouldered.** One who has a hump.

**Hu′echys sanguin′ea** or **vesicato′ria.** Blistering fly of China.

**Hueck's lig′ament.** Pectinate ligament.

**Huep′pe's bacil′lus.** Bacillus butyricus.

**Hue′ter's sign.** Cessation of vibration through the bony structure when ligamentous union occurs.

**Hugo′nia mys′tax.** Tree of Malabar, root of which is considered tonic, diuretic, and vermifuge.

**Huguier's** (ue-gue-ays′) **canal′.** Small canal at the inner side of the fissure of Glaser, through which the chorda tympani nerve leaves the cavity of the tympanum. **H.'s cir′cle,** circle formed by anastomosis of branches of uterine arteries, surrounding the uterus at the point at which the body and the cervix come together. **H.'s disease′,** lupus; hypertrophy and abnormal protrusion of the neck of the uterus into the vagina; uterine fibromyoma. **H.'s gland,** Bartholin's gland. **H.'s opera′tion,** conoidal amputation of the neck of the uterus.

**Huin′gan.** The seed of this plant, indigenous in the Andes, is used in urinary diseases.

**Hul′ver.** Ilex aquifolium.

**Hum.** Continuous low murmur. **Ve′nous h.,** sound heard in auscultating over a vein.

**Hu′manized vi′rus.** Vaccine virus which has passed through at least one human being.

**Humec′tant** (*humecto,* to moisten). Imparting moisture; augmenting the fluidity, as of the blood; diluent.

**Humecta′tion** (*humecto,* to moisten). Act of moistening.

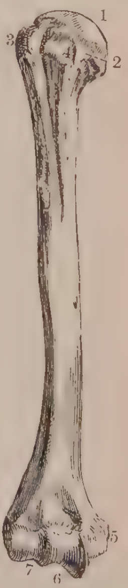
**Hu′meral.** Belonging to or connected with the arm or humerus. **H. ar′tery,** brachial artery; descending branch of acromiothoracic artery. **H. mus′cle,** deltoid muscle. **H. nerve,** circumflex nerve of the arm. **Transverse′ h. ar′tery,** suprascapular artery.

**Humera′lis.** Humeral portion of the dletoid.

**Humero-.** In composition, humerus.

**Humerobicip′ital.** Relating to humerus and biceps, as humerobicipital bursa, bursa over tendon of long head of biceps in groove of humerus.

**Humerocapsula′ris mus′cle.** Occasional muscle from internal surface of shaft of humerus, inserted in capsular ligament of shoulder.



Anterior view of humerus of right side. 1, head; 2, anatomical neck; 3, greater tuberosity; 4, lesser tuberosity; 5, internal condyle; 6, articular face for ulna; 7, articular face for head of radius; 8, external condyle.

**Humerocorona′rius.** Epitrochleophalangeus.

**Humerocu′bital articula′tion.** Articulation of humerus and ulna at elbow-joint. **H. mus′cle,** brachialis anticus muscle; humeroradialis muscle.

**Humerometacarpe′us.** Muscle of horse, analogue of long and short extensor carpi radialis muscles in man.

**Hu′mero-olec′ranal mus′cle.** Triceps brachialis muscle.

**Humerophalange′us.** In the horse, analogue of flexor perforatus of man.

**Humerora′dial in′dex.** See *Index.* **H. mus′cle,** see *Humeroradialis.*

**Humeroradia′lis.** Supinator longus muscle; anconæus. Muscle of lower animals, analogue of brachialis anticus in man.

**Humerora′diophalange′us.** Muscle in the horse, analogue of flexor perforans in man.

**Humerosupracarpe′us.** Muscle attached to humerus and carpal bones.

**Hu′merus.** Cylindrical, irregular bone of the arm, the upper extremity of which has a hemispherical head connected with the scapula, and two tuberosities or tubercles, a greater and a lesser, for the attachment of muscles, between which is the bicipital groove or fossa. At the inferior extremity are the inner and outer condyles; the small head articulated with the radius; the trochlea articulated with the ulna, etc. **An′gles of the h.,** lower borders of the humerus; supracondylar ridges. **H. sum′mus,** top of the humerus; acromion.

**Hu′mid.** Damp, moist. **H. gan′grene,** a form of gangrene accompanied with abundant exudation of serum. **H. tet′ter of scalp,** vulgar name for eczema.

**Humid′ity.** Moisture. **Ab′solute h.,** the actual number of grains of moisture in a cubic foot of air. **Rel′ative h.,** percentage of moisture in the air.

**Hu′midum.** Moisture. **H. nati′vum,** h. radicale. **H. nati′vum articulo′rum,** synovia. **H. primige′nium** or **radica′le** or **semina′le,** radical moisture; liquid conceived to give flexibility and proper consistence to the different organic textures; seminal fluid. **H. vit′reum,** vitreous body.

**Hu′milis** (humble). Rectus inferior oculi muscle.

**Hum′ming-top mur′mur.** Venous hum heard on auscultating over a vein.

**Hu′mor** (*humeo,* to be moist). Every fluid substance of the organized body, as the blood, chyle, lymph, etc. The ancients regarded the humors as most important not only in regard to health and disease, but in respect to the disposition as well; they reduced them to four, which they called cardinal humors—the blood, phlegm, yellow bile, and atrabilis or black bile. The term signifies also in popular language a chronic skin disease from disordered state of blood. **Albugin′eous h.,** aqueous humor; vitreous humor. **H. albumin′eus,** aqueous humor. **H. am′nii,** liquor amnii. **A′queous h.,** the clear fluid of the eye anterior to the crystalline lens. **H. articula′ris,** synovia. **Corro′ding h.,** atrabilis. **H. Cotugn′ii,** perilymph. **Crys′talline h.,** crystalline lens. **H. glacia′lis,** vitreous h. **H. hyali′nus** or **hyaloi′des,** vitreous h. **H. of Meibo′mius,** secretion of Meibomian glands. **H. of Morgagn′i,** see *Morgagni.* **H. mucilagino′sus,** synovia. **H. ova′tus** or **ovifor′mis,** aqueous humor. **H. purulen′tus,** pus. **H. Scar′pæ,** endolymph. **H. semina′lis,** sperm. **H. vene′reus,** sperm. **Vit′reous h.,** corpus vitreum; gelatinous fluid filling the eyeball behind the crystalline lens.

**Hu′moral.** Proceeding from or connected with humors. **H. her′nia,** inflammation and swelling of the testicle; see *Hernia humoralis.* **H. pathol′ogy,** humoralism, humorism.

**Hu′moralism.** Theory of agency of humors in health and disease; the latter being humoral pathology or humorism.

**Hu′moralists.** Humorists.

**Hu′morism.** Theory of disease founded on the part which the humors were supposed to play in its production. See *Humor.*

**Hu′morists** or **Hu′moralists.** Galenical and other physicians who attributed all diseases to the depraved state of the humors or to vicious juices collected in the body.

**Hump** (*umbo,* boss of a buckler). Hunch, bunch, boss. Prominence formed by a deviation of the bones of the trunk; commonly formed by the spine or sternum, and seated at the posterior or anterior part of the trunk. It may also be produced by deviation of the ribs or pelvis. The spine may be curved in three principal directions: 1. backward, the most common case, *kyphosis, gibbosity;* 2, forward, *lordosis;* and, 3, laterally, *scoliosis.*

**Hump′backed.** Kyphotic or scoliotic.

**Humulin′.** Lupulin. See *Humulus lupulus.*

**Hu′mulotan′nic acid.** Tannic acid derived from hops.

**Hu′mulus.** A genus of plants of the order *Urticaceæ.* The official name (Ph. U. S.) of the cones or strobiles of H. lupulus, or hop-plant. These have a fragrant odor, a bitter, aromatic taste, depending on a peculiar principle, named lupulin (humulin would be a more correct term), extractive and essential oil, extracted equally by water and spirit from the dried strobiles. The hop is employed as a tonic and hypnotic and a diaphoretic; it enters into the composition of ale and beer. The hop-pillow is used for producing sleep. The official preparation is *Tinctu′ra hu′muli,* tincture; dose, ʒj–iv (4.0–16). The other preparations of the Ph. U. S. are made from *lupulin,* which see.

**Hu′mus.** A blackish-brown vegetable mold. The dark, earthy looking residue left after the action of acids and other agents upon carbohydrates.

**Hunch.** Hump.

**Hunch′backed.** Kyphotic or scoliotic.

**Hun′dred-leaved rose.** Rosa centifolia.

**Hunga′rian bal′sam.** H. turpentine. **H. disease′,** angina pectoris. **H. fe′ver,** typhus fever. **H. leech,** Hirudo officinalis. **H. tur′pentine,** thin turpentine obtained by exudation from Pinus pumilis. **H. valo′nia,** acorn-cups of European white oak, Quercus robur.

**Hung′er.** Necessity for taking food; internal sensation, dictated by the wants of the system, which some have attributed to the friction between the sides of the stomach in its empty state; others, to compression of the nerves when the organ is contracted; others, to the action of the gastric juice, etc. See *Appetite.* **H. cure,** treatment of disease, as syphilis, by semistarvation. **H. e′vil,** a neurosis of the horse, marked by the occurrence of sudden ravenous hunger; a similar condition is sometimes seen as a phenomenon of epilepsy in man. **H. plague** or **ty′phus,** relapsing fever. **H. weed,** Ranunculus arvensis; Alopecurus agrestis.

**Hung′ry.** Affected with hunger.

**Hun′ter's canal′.** An aponeurotic membrane extends upward from the opening for the femoral vessels in the adductor magnus muscles, enclosing between the several muscles of the thigh a passage, Hunter's canal, containing the femoral artery and vein and the saphenous nerve. **H.'s chan′cre,** see *Hunterian.* **H.'s gubernac′ulum,** gubernaculum testis. **H.'s lig′ament,** round ligament of the uterus. **H.'s line,** linea alba. **H.'s membra′na cadu′ca,** membrana decidua. **H.'s opera′tion for an′eurysm,** ligature of an artery in its continuity, on the proximal side and at a distance from the sac.

**Hunte′rian chan′cre,** (from John Hunter, English surgeon). Hard or indurated chancre; true syphilitic ulcer, followed by constitutional symptoms.

**Hunt′ingdon's chore′a.** Hereditary chorea of adult life. See *Chorea.*

**Hunts′man's cup.** Rhizome of Sarracenia flava of S. United States; used in diarrhœa.

**Hun′yadi Janos** yan′osh. Bitter Hungarian natural water, strongly purgative, from large amount of sulphate of sodium and magnesium contained in it.

**Hu′ra brasilien′sis.** Assacou. Brazilian tree, which, in the extract of the bark, is esteemed in leprosy; also given in elephantiasis and as an anthelmintic; bark, juice, and seeds are cathartic and emetic. **H. crep′itans,** sand-box tree of Africa and South America; used in leprosy; seeds are emetocathartic.

**Hurin′.** Principle found in juice of Hura crepitans.

**Hurt.** Injury. See *Trauma.*

**Hur′tleberry.** Vaccinium myrtillus.

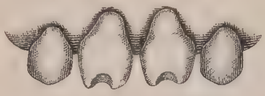
**Husch′ke's canal′.** Canal formed during ossification of the temporal bone, between the tubercles on the two arms of the tympanic ring. **H.'s car′tilage,** see *Jacobson's cartilage.* **H.'s fora′men,** foramen in the tympanic plate near the internal extremity. **H.'s teeth,** denticulate processes of spiral crest of cochlea. **H.'s valve,** semilunar mucous fold in the lacrymal sac.

**Husk.** Disease of sheep caused by the Strongylus filaria.

**Husk′y.** Rough, hoarse, said of the voice.

**Hutch′inson's disease′.** Senile degeneration of the retina around the yellow spot. **H.'s fa′cies,** sleepy appearance of the face caused by fixedness of the eyeball and drooping of the lids in progressive ophthalmoplegia. **H.'s patch,** reddish patch of the cornea in syphilitic keratitis. **H.'s pruri′go,** prurigo occurring at the period of dentition. **H.'s pu′pil,**

preternatural dilatation of the pupil of one eye after meningeal hemorrhage, noted on the same side as the lesion. **H.'s teeth,** semilunar and notched condition of the free border of the incisor teeth of the upper jaw in inherited syphilis. **H.'s tri′ad,** syphilitic teeth, otitis, and interstitial keratitis.



Hutchinson's teeth.

**Hux′ham's tinc′ture.** Tinctura cinchonæ composita.

**Hux′ley's lay′er, mem′brane,** or **sheath.** Inner layer of the inner root-sheath of the hair, the outer layer being the inner root-sheath of Henle.

**Huy′gen's prin′ciple.** See *Wave.*

**Hy′acinth, wild.** Scilla nutans; S. esculenta.

**Hyænan′che capen′sis** or **globo′sa.** Shrub of S. Africa, the fruit of which is used to poison wild animals.

**Hyalin′.** Albuminoid substance, like amyloid matter, found in certain kinds of morbid growths, as miliary tubercle; wall of hydatid cysts.

**Hy′aline.** Vitreous; glassy; resembling glass. **H. canal′,** hyaloid canal. **H. car′tilage,** clear, homogeneous type of cartilage, such as articular cartilages. **H. cast,** clear, homogeneous urinary tube-cast. **H. coat,** thin layer of dermic coat of hair follicle. **H. cyl′inder,** h. cast. **H. degenera′tion,** degeneration by conversion into hyalin. **H. sub′stance,** cytoblastema.

**Hyalino′sis.** Hyaline waxy degeneration.

**Hyalinu′ria.** Presence of hyalin in the urine.

**Hyalis′tos** or **Hyalis′tus.** Vitreous body.

**Hyali′tis.** Inflammation of the hyaloid membrane of the eye or vitreous humor. **Punc′tate h.,** inflammation of the vitreous marked by the presence of numerous minute opacities. **Pu′rulent** or **sup′purative h.,** inflammation of the vitreous going on to pus formation.

**Hyalodeomala′cia** (*hyalodes,* vitreous, *malakia,* softness). Softening of the vitreous humor.

**Hyalodeopropto′sis** (*hyalodes,* vitreous, *proptosis,* falling forward). Prolapse of the vitreous.

**Hyal′ogen** (*hyalos,* glass, *gennao,* to engender). Albuminous substance in cartilage and elsewhere, convertible into hyalin.

**Hy′aloid** (*hyalos,* glass, *eidos,* resemblance). Vitriform; resembling glass; relating or appertaining to the hyaloid body, hyaloid membrane, etc. **H. ar′tery,** branch of central artery of retina passing to capsule of lens. **H. bod′y,** vitreous body. **H. canal′,** see *H. membrane.* **H. car′tilage,** see *Cartilage.* **H. fos′sa,** see *H. membrane.* **H. hu′mor,** vitreous body. **H. mem′brane,** extremely delicate membrane forming the exterior covering of the vitreous humor, and transmitting within it prolongations dividing it into cells. Fallopius discovered it and called it hyaloid. On a level with the entrance of the optic nerve into the eye, the hyaloid membrane forms by reflection a cylindrical canal, *hyaloid canal,* which pierces the vitreous humor from behind to forward. It transmits the capsular artery of the eye in fetal life. **H. sub′stance,** vitreous body.

**Hyaloidei′tis** or **Hyaloidi′tis.** Hyalitis.

**Hyaloid′ia pro′pria.** Hyaloid membrane.

**Hyalo′ma.** Alteration of the eye into a glass-like mass.

**Hyalomen′inx** (*meninx,* membrane). Hyaloid membrane.

**Hyalonyx′is** (*nysso,* to push). Puncture of the vitreous body; depression of the lens in cataract by incision through the sclerotic.

**Hyalopha′gia** (*hyalos,* glass, *phago,* to eat). Glass-eating; mania for eating glass.

**Hy′aloplasm** (*hyalos,* glass, *plasso,* to form). Transparent formative material or plasma. See also *Spongioplasm.*

**Hyanche,** hi-an′ke (*hys,* swine, *ancho,* to choke). Cynanche tonsillaris.

**Hyban′thus ipecacuan′ha.** Ionidium ipecacuanha; plant of S. America, from which a false variety of ipecacuanha is obtained.

**Hy′bodont** (*hybos,* curved or humped, *odous,* tooth). Having teeth with knobbed or branched crowns, as those of fossil sharks.

**Hybo′ma** (*hyboo,* to make convex). Humpback; gibbosity.

**Hybo′sis.** Gibbosity; production of hyboma or humpback.

**Hy′brid** (*hybris,* mongrel). Cross-bred; born of two different species, as the mule. Term applied to plants as well as to animals; also to mixture of two different diseases. The result is termed *hybridity* or *hybridism.* Hybrid is also used to designate words made up from two different languages, as *serotherapy* in place of *orrhotherapy.*

**Hybrida′tion** or **Hybridiza′tion.** Production of a hybrid or of a hybrid state.

**Hy′bridism** or **Hybrid′ity.** See *Hybrid.*

**Hydantoïn′.** $C_3H_4N_2O_2$. A crystalline substance related to urea, derived from allantoin.

**Hydaten′terocele** (*hydor,* water, *enteron,* intestine, *kele,* tumor). Hernia complicated with hydrocele.

**Hy′datid** (*hydor,* water). Echinococcus hominis or the encysted tumor containing aqueous fluid with this parasite. Subsequently applied to vesicles more or less transparent, developed within organs, but without adhering to their tissues. They are found in various parts of the body; sometimes in the uterus, occasioning signs nearly similar to those of pregnancy, but being sooner or later expelled. Expulsion is generally attended with more or less hemorrhage. See *Acephalocyst.* **Alve′olar h.,** nerve-sac at root of tooth. **H. cyst,** hydatid. **H. of epidid′ymis,** corpora Morgagnii. **H. frem′itus,** a vibratory thrill felt on palpation of tumors containing hydatids. **H. mole,** formation of a cyst-like character, included by Virchow in the class of mucous tumors forming in the hypertrophied villi of the chorion. **H. of Morgagn′i,** corpora Morgagnii. **Pill-box h.,** see *Acephalocyst.* **H. preg′nancy,** pregnancy in which the uterus contains an hydatid mole. **H. res′onance,** the sound obtained by percussion over an hydatid cyst. **H. thrill,** h. fremitus. **Ut′erine h.,** hydatid mole; Nabothian glands.

**Hydatid′iform.** Hydatiform.

**Hydat′idocele** or **Hydat′ocele.** Hydatid tumor, of the scrotum particularly.

**Hydatido′ma.** Tumor caused by hydatids.

**Hydatidos′cheocele** (*oscheon,* scrotum, *kele,* tumor). Hydatidocele.

**Hydatido′sis.** Condition of one affected with hydatids.

**Hydat′iform.** Resembling an hydatid. **H. mole,** collection of watery cysts or tumors resulting from degeneration of the chorion.

**Hy′datis.** Hydatid or hydatid cyst.

**Hyd′atism.** Noise caused by the fluctuation of pus in an abscess, hydrothorax, etc.

**Hydat′ocele.** Hydrocele.

**Hydatogen′esis.** Production or collection of watery fluid in the body.

**Hyd′atoid.** Watery; resembling water. Name given to the membrane of the aqueous humor and to the aqueous humor itself. Hyaloid.

**Hydaton′cus** (*hydor,* water, *onkos,* tumor). Anasarca; œdema; cyst.

**Hydatorrhœ′a** (*hydor,* water, *rheo,* to flow). Watery flow or evacuation; hydrorrhœa.

**Hydato′sis.** Formation of or tendency to dropsy.

**Hydatother′apy.** Hydrotherapy.

**Hydat′ula cerebra′lis.** Cænurus cerebralis. **H. solita′ria,** cysticercus.

**Hyderi′asis.** Dropsy.

**Hyderon′cus.** Anasarca; œdema; cyst.

**Hydnocar′pus anthelmin′ticus.** Tree of Cochin China; seed is used as a substitute for St. Ignatius's beans. **H. ine′brians,** H. venenata. **H. odora′ta,**

Gynocardia odorata. **H. venena′ta,** of Ceylon; seeds are sometimes sold for those of Gynocardia odorata, chaulmugra seeds. **H. wightia′na,** of India; seeds have similar properties to those of H. odoratus.

**Hydracetin′.** Pyrodin. Colorless, odorless, nearly tasteless substance obtained by heating together phenylhydrazin and acetic anhydride, or by the action of glacial acetic acid on phenylhydrazin. Antipyretic in doses of gr. $\frac{1}{6}$ (0.01) or a little more, but even in these doses caution must be used and the medicine employed only for a day or two, as it is a cumulative blood poison; externally it is used in skin diseases, especially in psoriasis.

**Hydrach′nis** (*hydor,* water, *achna,* foam). Conoidal chickenpox in which the vesicles are generally acuminated and fluid pellucid throughout.

**Hydracid,** hi-dras′id. A halogen or hydrogen acid, as hydrochloric or hydrocyanic acid.

**Hydracryl′ic acid.** Acid isomeric with lactic acid.

**Hydrad′en.** Conglobate or lymphatic gland.

**Hydradeni′tis.** Inflammation of a lymphatic gland or sweat gland. **H. des′truens suppurati′va,** diffuse inflammation of coil glands and periglandular tissue, resulting in necrotic suppuration and destruction of glands. Also synonym of necrotic granuloma. See *Granuloma.* **H. suppurati′va,** hydradenitis destruens suppurativa.

**Hydræmat′ocele.** Hæmatocele supervening on hydrocele.

**Hydræ′mia** (*hydor,* water, *haima,* blood). Watery condition of the blood, the serum being greatly in excess of the normal.

**Hydræ′mic.** Relating to or suffering from hydræmia. **H. œde′ma,** see *Œdema.*

**Hydraëroperitone′um.** Collection of watery fluid and gaseous matter in the cavity of the peritoneum.

**Hy′dragogue** (*hydor,* water, *ago,* to expel). Causing watery evacuations; generally referring to a cathartic medicine. **Boyle's h.,** nitrate of silver.

**Hydram′ide.** Amide obtained from subjecting an aldehyde to the action of ammonia.

**Hydram′nion** or **Hydram′nios.** Excessive quantity of the liquor amnii; dropsy of the amnion.

**Hydram′yl.** Amyl hydride. **H. e′ther,** a mixture of equal parts of hydramyl and anhydrous ether. Local anæsthetic.

**Hydran′gea arbores′cens.** Sevenbark, wild hydrangea, bissum. Indigenous plant of Middle and Western States, leaves of which are tonic, sialagogue, cathartic, diuretic, and antilithic. **H. thumber′gii,** species, leaves of which are employed by the Japanese to make a tea called tea of heaven. **H. vulga′ris,** H. arborescens.

**Hydran′geion.** Lymphatic vessel.

**Hydrangeï′tis.** Inflammation of lymphatic vessels; lymphangeitis.

**Hydrangin′.** Crystalline glucoside from the root of Hydrangea arborescens.

**Hydrangiol′ogy** (*hydrangeion,* lymphatic vessel, *logos,* discourse). Treatise on lymphatic vessels.

**Hydran′gion** (*hydōr,* water, *angeion,* vessel). Lymphatic vessel.

**Hydrargyra′lia.** Mercurials.

**Hydrar′gyrate.** Relating to or containing mercury.

**Hydrar′gyri** (gen. of hydrargyrum). See *Mercury.* **H. amida′tobichlo′ridum, H. et ammo′niichlo′ridum, H. ammo′niochlo′ridum,** or **H. ammoniure′tum,** hydrargyrum ammoniatum. **H. bichlore′tum** or **bichlo′ridum,** h. chloridum corrosivum. **H. bicyan′idum** or **bicyanure′tum,** h. cyanidum. **H. binio′didum,** h. iodidum rubrum. **H. binox′idum,** h. oxidum rubrum. **H. bo′ras,** combination of calomel and borax, formerly used. **H. borus′sias,** h. cyanidum. **H. bro′midum,** bromide of mercury; protobromide and bibromide are analogous in composition and medicinal properties to the corresponding iodides of mercury, but have peculiar properties of bromides; dose of the former is gr. j (0.065); of the latter, gr. $\frac{1}{16}$ (0.004). **H. calx al′ba,** hydrargyrum ammoniatum. **H. chlore′tum** or **chlo′ridum,** h. chloridum mite. **H. chlo′ridum corrosi′vum** (Ph. U. S.), h. perchloridum (Ph. Br.), bichloride, perchloride, or oxymuriate, or corrosive chloride or muriate of mercury, corrosive sublimate, mercuric chloride; in colorless, crystalline masses of acrid taste, soluble in water and alcohol; alterative, antiseptic, antisyphilitic, eutrophic in venereal complaints, old cutaneous affections, etc.; externally escharotic and antiseptic, usually in proportion of 1 part of the bichloride to 2000 parts of water; dose, gr. $\frac{1}{32}$–$\frac{1}{16}$ (0.002–0.004), three times a day, in pill. It is an irritant poison; white of egg is the best antidote to it when taken in an overdose. *Yellow wash,* phagedenic wash, made by adding corrosive sublimate to lime-water, is a common application to syphilitic sores. **H. chlo′ridum mi′te** (Ph. U. S.), h. subchloridum (Ph. Br.), mild chloride, protochloride, submuriate, subchloride, or mild muriate of mercury, calomel, mercurous chloride; white, insoluble powder; alterative, antisyphilitic, and sialagogue; in large doses purgative; dose, gr. $\frac{1}{8}$–x (0.008–0.65). *Black wash,* formed of calomel and lime-water, is used for syphilitic sores. **H. cyan′idum** (Ph. U. S.), cyanuret, cyanide, or prussiate of mercury, mercuric cyanide; colorless salt, with strong metallic taste, soluble in water and alcohol; may be made by dissolving mercuric oxide in hydrocyanic acid; antisyphilitic; dose, gr. $\frac{1}{30}$–$\frac{1}{20}$ (0.0022–0.0032). **H. deutochlo′ridum,** h. chloridum corrosivum. **H. deutoio′didum,** h. iodidum rubrum. **H. io′didum fla′vum** (Ph. U. S.), formerly h. iodidum viride; iodide, protiodide, yellow or green iodide of mercury, mercurous iodide; greenish, tasteless powder, scarcely soluble in water, insoluble in alcohol; alterative in scrofula and syphilis; dose, gr. $\frac{1}{6}$–$\frac{1}{2}$ (0.01–0.032), gradually increased. **H. io′didum ru′brum,** (Ph. U. S. and Br.), red iodide, biniodide, deutiodide, or periodide of mercury, mercuric iodide; scarlet, tasteless powder, almost insoluble in water, soluble in 120 parts of alcohol at 60° F.; made by double decomposition of mercuric chloride and potassium iodide; irritant poison, but used therapeutically as an antisyphilitic; dose, gr. $\frac{1}{30}$–$\frac{1}{20}$ (0.0022–0.0032). **H. io′didum vir′ide,** the former Ph. U. S. name for mercurous iodide, now called h. iodidum flavum. **H. mu′rias,** h. chloridum. **H. ni′tras,** nitrate of mercury, mercurous nitrate; colorless salt prepared by dissolving mercury in nitric acid and water; it is employed in syphilis, and externally in fungus, obstinate ulcers, and in ringworm. *Acid nitrate of mercury,* mercuric nitrate, solution of supernitrate of mercury, is made by dissolving mercury in nitric acid and distilled water; has been used as a caustic in malignant ulcerations and cancerous affections; see *Liquor hydrargyri nitrici.* **H. nit′rico-ox′idum,** h. oxidum rubrum. **H. ox′idi mu′rias ammoniaca′lis,** hydrargyrum præcipitatum. **H. oxid′ulum ni′grum,** h. oxidum cinereum. **H. ox′idum cine′reum,** gray or black oxide of mercury, mercurous oxide; it may be formed by boiling mild chloride of mercury in lime-water; dose of powdered oxide, gr. ij–x (0.13–0.65). *Mercurius solubilis* of Hahnemann is formed from a black oxide of mercury; it is the oxydum hydrargyri nigri mediante ammoniâ ex protonitrate hydrargyri præcipitatum, azotas hydrargyroso-ammonicus, considered in Germany and France antisyphilitic. **H. ox′idum fla′vum** (Ph. U. S. and Br.), yellow oxide of mercury, yellow mercuric oxide; orange-yellow powder, without taste or odor, insoluble in water or alcohol; obtained by precipitation from corrosive chloride of mercury solution by means of a solution of soda or potassa; used externally in affections of the skin, but chiefly in those of the eyelids. **H. ox′idum ni′grum,** h. oxidum cinereum. **H. o. ni′tricum,** h. nitrico-oxidum. **H. o. ru′brum** (Ph. U. S. and Br.), nitric oxide of mercury, red oxide of mercury, mercuric oxide, red precipitate; insoluble scales or powder, made by decomposing mercuric nitrate by heat; used externally as stimulant and escharotic in foul ulcers, being sprinkled on the part in fine powder or united with lard into an ointment; dose for internal use, gr. $\frac{1}{50}$–$\frac{1}{10}$ (0.0013–0.0065). **H. ox′idum sacchara′tum**, hydrargyrum saccharatum. **H. o. sulphu′ricum**, hydrargyri subsulphas flava. **H. oxymu′rias**, h. chloridum mite. **H. perchlor′idi li′quor** (Ph. Br.), mercuric chloride 1, distilled water 875; dose, ʒss–j (2.0–4.0); intended as a substitute for Van Swieten's solution. **H. perchlo′ridum** (Ph. Br.), h. bichloridum. **H. perio′didum**, h. iodidum rubrum. **H. persul′phas**, mercuric sulphate; white powder made by heating mercury with sulphuric acid; used in preparation of other salts. **H. præcipita′tum al′bum**, hydrargyrum ammoniatum. **H. protoio′didum**, h. iodidum flavum. **H. prus′sias**, h. cyanidum. **H. et quini′næ chlo′ridum**, combination of corrosive sublimate and quinine, used in obstinate skin diseases. **H. et q. protochlo′ridum**, protochloride of mercury and quinine, combination of mild chloride of mercury and quinine, administered in obstinate cutaneous diseases. **H. sac′charum vermif′ugum**, hydrargyrum saccharatum. **H. sal′icylas**, mercuric salicylate, a white, amorphous powder; dose, gr. $\frac{1}{60}$–$\frac{1}{8}$ (0.001–0.008). **H. subchlo′ridum** (Ph. Br.), h. chloridum mite. **H. subio′didum**, h. iodidum flavum. **H. submu′rias**, h. chloridum mite. **H. s. ammonia′tum**, hydrargyrum ammoniatum. **H. subsul′phas fla′vus** (Ph. U. S.), basic mercuric sulphate, yellow subsulphate of mercury, oxymercuric sulphate, turpeth mineral, subsulphate of mercury; yellow, odorless powder, with metallic taste, not soluble in water or alcohol; formed by the action of boiling water on mercuric sulphate; alterative, errhine, and emetic; irritant poison; dose, gr. iij–v (0.2–0.32). **H. sul′phidum** or **sulphure′tum ni′grum**, black sulphuret of mercury, sulphuret of mercury with sulphur, æthiops mineral; made by treating equal parts of sulphur and mercury until the metallic globules disappear; used chiefly in scrofulous and cutaneous affections; dose, gr. x–xxx (0.65–2.0). **H. sul′phidum** or **sulphure′tum ru′brum**, h. sulphidum rubrum, bisulphuret or red sulphuret of mercury, mercuric sulphide, cinnabar, vermilion; insoluble scarlet powder, without taste or odor, made by heating together sulphur and mercury, and afterward subliming; antisyphilitic, but chiefly used in fumigation against venereal ulcers of the nose, mouth, and throat, ʒss (2.0) being thrown on a red-hot iron. **H. tar′tras** or **protot ar′tras**, tartrate of mercury; antisyphilitic; dose, gr. j–ij (0.065–0.13), twice a day.

**Hydrargy′ria, Hydrargyri′asis**, or **Hydrargyro′sis.** Morbid phenomena produced by the action of mercury on the organism, mercurialism.

**Hydrar′gyrism.** Hydrargyria.

**Hydrar′gyrol.** Paraphenylthionate of mercury; antiseptic; used externally as a substitute for corrosive sublimate.

**Hydrargyroma′nia.** Insanity from use of mercury.

**Hydrargyrophthal′mia.** Ophthalmia from use of mercury.

**Hydrar′gyrosep′tol.** Combination of chinosol mercury with sodium chloride; antisyphilitic.

**Hydrargyrosialorrhœ′a** (*hydrargyrum*, mercury, *sialon*, saliva, *rheo*, to flow). Mercurial salivation.

**Hydrargyro′sis.** Eczema mercuriale; hydrargyria.

**Hydrargyrostomati′tis.** Mercurial stomatitis.

**Hydrargyrotrip′sis** (*hydrargyrum*, mercury, *tripsis*, rubbing). Mercurial inunction.

**Hydrar′gyrum** (*hydor*, water, *argyros*, silver). Mercury; quicksilver; chemical symbol, Hg. Fluid, brilliant metal, of a slightly bluish-white color; fluid above —39° of F. and under 662°. Sp. gr. when liquid, 13.5; easily oxidized. Official in the Ph. U. S. and Br. Metallic quicksilver does not act on the body when taken into the stomach, but if oxidized and combined with acids it acts powerfully. It has been exhibited in cases of constriction of the bowels and intussusception, from a notion that it must certainly pass through the bowels by force of gravity. When the crude metal is distilled in an iron retort it forms hydrargyrum purificatum. See also *Hydrargyri* and *Mercury.* **H. ammonia′tum** (Ph. U. S.), ammoniochloride of mercury, ammoniated mercury, amidochloride of mercury, white precipitate; white, insoluble powder, devoid of odor or taste, made by precipitation from solution of mercuric chloride with water of ammonia. A peroxide, combined with muriatic acid and ammonia, forming a triple salt. Used in powder to destroy vermin; and, united with lard, for the same purpose, as well as in scabies and other cutaneous affections. **H. cum cre′tâ**, mercury with chalk, gray powder, protoxide of mercury; formed by trituration with carbonate of lime. It may be advantageously exhibited in diarrhœa dependent upon acidity and vitiated secretions in children; dose, gr. j–x (0.065–0.65) in any viscid substance. **H. formamida′tum**, mercury formamidate; salt introduced for hypodermic injection in syphilis, being a solution of mercuric formamide, made by adding caustic soda to corrosive sublimate, washing the precipitate, dissolving in formamide and water at 30° to 48° C. **H. cum magne′siâ**, mercury with magnesia, resembles h. cum cretâ in properties. **H. oxyda′tum**, hydrargyri oxidum rubrum. **H. oxyda′tum fla′vum**, hydrargyri oxidum flavum. **H. oxyda′tum præcipita′tum**, hydrargyri oxidum flavum. **H. oxyda′tum ru′brum**, hydrargyri oxidum rubrum. **H. præcipita′tum** or **præcipita′tum al′bum**, h. ammoniatum (Ph. U. S.). **H. præcipita′tum per se**, mercuric oxide; made by heating mercury to near boiling point, until oxidized to red powder. **H. sacchara′tum**, mild mercurial formula in several European pharmacopœias; formed by triturating mercury with white sugar; used in worms and venereal affections of children.

**Hydrar′thron, Hydrar′thros, Hydrarthro′sis**, or **Hydrar′thrus** (*hydor*, water, *arthron*, joint). White swelling; dropsy of the articulations. White swelling is a tuberculous joint disease; it may attack any joint, but is commonly met with in the knee, hip, foot, and elbow; generally in scrofulous children. It consists, at times, in tumefaction and softening of soft parts and ligaments surrounding the joints; at others, in swelling and caries of the articular extremities of bones; or both states may exist at the same time.

**Hy′dras.** Hydrate.

**Hydras′tia** or **Hydrastine′.** $C_{22}H_{23}NO_6$. White, prismatic alkaloid in Hydrastis canadensis; causes constriction of vessels in small doses and increase of blood pressure; in large doses, vasomotor paralysis and diminution of blood pressure. Given in chronic. catarrhal affections of urinary organs in typhoid and other fevers, and as an injection in gonorrhœa. Dose of the hydrochlorate, *hydrasti′næ hydrochloras* (Ph. U. S.), gr. $\frac{1}{4}$–j (0.016–0.065). When hydrastine is oxidized with nitric acid a white, crystalline alkaloid, *hydrastinine*, is obtained, $C_{11}H_{13}NO_3$, used as substitute for ergot in metrorrhagia, congestive dysmenorrhœa, etc. See *Hydrastis canadensis.*

**Hydrastinine′.** See *Hydrastia.*

**Hydras′tis** (Ph. U. S.), **H. rhizo′ma** (Ph. Br.), the official name of the rhizome and roots of golden seal, or **H. canaden′sis.** Canadian hydrastis, yellow root, orange root, yellow puccoon, ground raspberry, yellow paint, Indian paint, eyebalm, ord. *Ranunculaceæ.* The rhizome and rootlets are used in infusion as a tonic and as a "mouth-water" and outward application in wounds and local inflammations. The official preparations are: *Extrac′tum hydras′tis flu′idum*, fluid extract; dose, ʒss–j (2.0–4.0). *Glyceri′tum hydrastis*, glycerite; dose, ʒj–ij (4.0–8.0). *Tinctu′ra hydrastis*, tincture; dose, ʒss–ij (2.0–8.0).

**Hy′drate.** Compound of an element with water.

**Hy′drated.** Containing water; forming hydrate.

**Hydra′tion** (*hydor*, water). Impregnation or moistening with water.

**Hydrazin′** or **Hydrazine′.** $N_2H_4$. Diamide or diamine; an active poison, fatal to animals and vegetables, to bacteria, etc. **H. sul′phate,** diamine sulphate; a powerful toxic agent to all forms of life; germicide and bactericide.

**Hydrede′ma.** Œdema.

**Hydrel′ytron.** Watery collection in the vagina.

**Hydrem′esis.** Vomiting of watery liquid.

**Hydre′mia.** Hydræmia.

**Hydrencephal′ic.** Hydrocephalic.

**Hydrencephali′tis.** Hydrocephalus internus.

**Hydrencephal′ium** or **Hydrocephal′ion.** Hydrocephalus internus.

**Hydrenceph′alocele** (*hydor*, water, *encephalon*, brain, *kele*, protrusion). Monstrosity in which there is a fissure of the cranium, the integument of the head being present and forming a hernial sac in which the brain lies outside the skull, the sac containing a large quantity of serous fluid. **Ante′rior** or **fron′tal h.,** proencephalus.

**Hydrenceph′aloid** (*eidos*, resemblance). Resembling hydrencephalus.

**Hydrenceph′alus.** Hydrocephalus internus.

**Hydren′terocele.** Intestinal hernia, the sac of which contains fluid.

**Hydrepip′loon.** Dropsy of the omentum.

**Hydre′tron** (*hydor*, water, *etron*, lower belly). Ascites.

**Hydri′asis** (*hydor*, water). Hydrotherapy.

**Hydri′ater.** Hydropathic physician.

**Hydriat′rics.** Hydrotherapy.

**Hydriat′ry.** Hydrotherapy.

**Hy′dric.** Containing water or combined with hydrogen. **H. e′ther,** ether.

**Hy′dride.** Combination of an element or radical with hydrogen.

**Hydri′odate** or **Hydri′odide.** Compound formed by the addition of hydriodic acid, or of hydrogen and iodine, to bases or alkaloids.

**Hydriod′ic acid.** Made by the action of iodine on phosphorus in the presence of water; alterative, used to meet the indications of iodine in general. The official preparation is the syrup, *syr′upus ac′idi hydriod′ici*, containing 1 per cent. by weight of absolute hydriodic acid; dose, ʒss–iv (2.0–16.0). **H. e′ther,** æther hydriodicus; ethyl odide.

**Hydro-.** In composition, water.

**Hydro′a** (*hydor*, water). Affection of the skin consisting in a collection of vesicles or irregular reddish patches, and accompanied by itching and constitutional symptoms. An old term for sudamina, pemphigus, herpes iris, cysticercus, and miliary fever. **H. æstiva′le,** h. vacciniforme occurring during hot weather. **H. bullo′sum,** dermatitis herpetiformis. **H. febri′lis,** facial herpes. **H. gestatio′nis,** impetigo herpetiformis; pemphigus gravidarum. **H. herpetifor′me,** vesicles grouped as in herpes. **H. pemphigoi′des,** herpetiform dermatitis. **H. prurigino′sum,** form of hydroa attended with vesicles or bullæ, which when they empty and dry leave red papules. **H. puero′rum,** h. vacciniforme. **H. vaccinifor′me,** vesicular eruption which becomes umbilicated. **H. vesiculo′sum,** simple hydroa, often associated with erythema; herpes iris.

**Hydroabdo′men.** Ascites.

**Hydroadeni′tis.** Inflammatory state of the perspiratory follicles ending usually in suppuration.

**Hydroæ′mia.** Hydræmia; state of the blood in which the watery constituents are in excess.

**Hy′droaër′ic** (*hydor*, water, *aer*, air). Epithet for the sound rendered on percussing or auscultating cavities containing water and air.

**Hydroappen′dix.** Distention of the appendix with a serous fluid.

**Hydroar′ion** (*hydor*, water, *oarion*, ovarium). Dropsy or cystoma of the ovarium.

**Hydro′ata.** Sudamina.

**Hydrobenzam′ide.** $C_{21}H_{18}N_2$. A crystalline substance; azobenzoyl hydride.

**Hydrobenzoin′.** $C_{14}H_{14}O_2$. A crystallized substance derived from the action of sodium amalgam on benzoin.

**Hydrobiliru′bin.** $C_{31}H_{40}N_4O_7$. Derivative of bilirubin, coloring-matter in fæces and urine.

**Hydrobleph′aron** (*hydor*, water, *blepharon*, eyelid). Œdema or watery swelling of the eyelids; blepharœdema.

**Hydrobro′mate** or **Hydrobro′mide.** Salt of a base with hydrobromic acid.

**Hydrobro′mic acid.** HBr. Pungent gas formed by the action of phosphorus upon bromine. Ten per cent. solution in water constitutes *dilute hydrobromic acid*, acidum hydrobromicum dilutum (Ph. U. S.), which is given internally to produce the effect of the bromides in doses of ʒss–ij (2.0–8.0). **H. e′ther,** ethyl bromide.

**Hydrocachex′ia.** Dropsical habit.

**Hydrocamphor′ic acid.** $C_{10}H_{18}O_4$. Acid formed by heating camphoric acid with hydriodic acid.

**Hydrocar′bons.** Substances whose component parts are hydrogen and carbon, such as fats, essential oils, products of decomposition of organic matter, etc. Several hundred are known; they are solids, liquids, or gases.

**Hydrocar′dia** (*hydor*, water, *kardia*, heart). Serous secretion of the pericardium; hydropericardium.

**Hy′drocele** (*hydor*, water, *kele*, tumor). Collection of serous fluid in the areolar texture of the scrotum or in the coverings of the testicle or spermatic cord. The first of these varieties is called external hydrocele; the second, internal hydrocele. When the collection occurs in the envelope of the testicle it is called hydrocele of the tunica vaginalis, and the epithet congenital is added when the interior of the membrane in which it is situated still communicates freely with the cavity of the abdomen. When it exists in the spermatic cord it is called encysted or diffused hydrocele of the spermatic cord, as the case may be. The tumor of the distended scrotum is oblong, greater below than above, indolent, and semitransparent. When inconveniently large the fluid may be evacuated by puncturing with a trocar, but as it collects again this is only palliative. Radical cure consists usually in injecting irritating liquid, as iodine, through the cannula of the trocar, which has been left in after puncturing. This is kept in the tunica vaginalis a few minutes, and then withdrawn. The coat inflames, adhesion takes place, and the cavity is obliterated. **Acute′ h.,** dropsical effusion during acute orchitis or as a direct result of injury. **Anasar′cous h.,** œdema of the scrotum. **H. of canal′ of Nuck,** hydrocele of the round ligament. **Chy′lous h.,** chylocele. **Congen′ital h.,** see *Hydrocele*. **Cys′tic h.,** encysted h. **Dupuytren's′ h.,** h. with constriction separating it in two. **Encyst′ed h.,** cyst of the spermatic cord, epididymis, or testicle, or tunica vaginalis. **Endem′ic h. of Mal′abar,** elephantiasis Arabum. **Exter′nal h.,** see *Hydrocele*. **H. fœm′inæ** or **fœmine′a,** h. of labium pudendi. **Funic′ular h.,** form in which the tunica vaginalis of the cord is closed at the end toward the testicle, but open above. **Her′nial h.,** accumulation of fluid in the hernial sac; dropsical condition of the sac of an old scrotal hernia after obliteration of the neck. **Inter′nal h.,** see *Hydrocele*. **H. intra-abdomina′lis,** h. of the upper portion of the inguinal canal. **H. of Mal′abar,** endemic hydrocele. **Milk′y h.,** chylocele. **H. mulie′bris,** h. fœminea. **H. of the neck,** a tumor filled with watery fluid, occupying some portion of the neck. **Œdem′atous h.,** external hydrocele, see *Hydrocele*. **H. peritonæ′i,** ascites. **H. of the round lig′ament,** h. of the canal of Nuck; an uncommon affection, being a cystic growth of those parts. **Spermat′ic h.,** see *Hydrocele*. **H. spina′lis,** hydrorrhachis. **H. tes′tis,** form of cystic tumor beneath the tunica albuginea. **Vag′inal h.,** h. of the tunica vaginalis.

**Hydroce′lic.** Relating to hydrocele.

**Hydroceno′sis** (*hydor*, water, *kenosis*, evacuation). Evacuation of water from the body, by drugs or operation.

**Hydrocephal'ic.** Relating to hydrocephalus. **H. cry,** peculiar shriek emitted at times by the hydrocephalic infant.

**Hydrocephali'tis.** Hydrocephalus internus.

**Hydroceph'alocele.** Hydrencephalocele.

**Hydrocephalocente'sis** (*kentesis*, act of puncturing). Puncturing the head in hydrocephalus.

**Hydrocephaloëc'tasis** (*hydrocephalus + ektasis*, extension). Hydrocephalus chronicus.

**Hydroceph'aloid** (*eidos*, resemblance). Resembling hydrocephalus. **H. state,** comatose state from anæmia of the brain in very young children exhausted from any disease, diarrhœa for instance.

**Hydroceph'alus** (*hydor*, water, *kephale*, head). Water or dropsy of the head, water or dropsy on the brain. A collection of water within the head. It may be internal or external. **H. acu'tus,** h. internus, tuberculous meningitis. **H. acu'tus se'num,** serous apoplexy. **H. adna'tus,** congenital h. **Arach'noid h.,** h. with effusion into arachnoid cavity. **Chron'ic h.** may exist at birth; if not, it commences at an early period, the accumulation of fluid gradually producing distention of the brain and skull, with separation of the sutures; it commonly proves fatal before puberty. **Congen'ital h.,** h. in the child at birth; it may be a cause of dystocia. **H. exter'nus,** infiltration into the subcutaneous cellular tissue of the cranium. **H. inter'nus,** water brain fever, Whytt's disease; generally seated in the meninges and surface of the encephalon; a tuberculous meningitis, observed particularly in childhood; extremely acute and often very rapid, sometimes destroying in two or three days, at others extending to two or three weeks. On dissection water is generally found in the ventricles or at the base of the brain, or there are evidences of previous vascular excitement, as effusions of coagulable lymph, etc. When effusion occurs suddenly, either primarily or secondarily in the course of some other disease, it has been termed water-stroke. **H. lon'gus,** chronic hydrocephalus. **H. meninge'us,** h. internus. **Spu'rious h.,** hydrencephaloid disease. **Tuber'culous h.,** tuberculous meningitis. **H. ventricula'ris** or **ve'rus,** h. internus.

**Hydroche'zia** (*hydor*, water, *chezo*, to go to stool). Serous or watery diarrohœa.

**Hydrochinidine'.** Hydroquinidine.

**Hydrochinine'.** Hydroquinine.

**Hydrochin'one.** Hydroquinone.

**Hydrochlo'rate** or **Hydrochlo'ride.** Salt of hydrochloric acid.

**Hydrochlo'ric acid.** Acidum hydrochloricum. **H. e'ther,** ethyl chloride.

**Hydrocholecys'tis** (*hydor*, water, *chole*, bile, *kystis*, bladder). Distention of gall-bladder by bile or dropsical fluid.

**Hydrocholecysti'tis.** Dropsy of gall-bladder attended with inflammation.

**Hydrocinchonidine'.** $C_{19}H_{24}N_2O$. Alkaloid derived from cinchona.

**Hydrocinchonine'.** $C_9H_{22}N_2O$. Alkaloid made by action of potassium permanganate on cinchonine.

**Hydrocinnam'ic acid.** See *Phenylpropionic acid.*

**Hydrocir'socele** (*kirsos*, varix, *kele*, tumor). Tumor formed by the varicose distention of the veins of the spermatic cord, and by the accumulation of serous fluid in the areolar texture of the scrotum.

**Hydrocœ'lia** (*koilia*, abdomen). Ascites.

**Hydrocollidin'.** Oily liquid ptomain obtained from putrefying mackerel and horse-flesh or ox-flesh, etc. Very poisonous, resembling strychnine in action.

**Hydrocol'pocele** (*kolpos*, vagina, *kele*, tumor). Watery or serous tumor of the vagina.

**Hydroconchinine'.** Hydroquinidine.

**Hydroco'nium** (*hydor*, water, *konis*, dust). Spray producer.

**Hydrocotarnine'.** $C_{12}H_{15}NO_3$. Alkaloid obtained from mother-liquor of opium, after morphine and codeine have been separated.

**Hydrocotoïn'.** $C_{22}H_{16}O_5$. Crystallizable principle in coto bark; action is similar to that of cotoin.

**Hydrocot'yle.** A genus of plants, ord. *Umbelliferæ.* **H. asiat'ica,** Asiatic or Midian pennywort, of India, Cape of Good Hope, and Jamaica, possessed of astringent, febrifuge, and diuretic properties. The leaves are applied to bruised parts to prevent inflammation. In India hydrocotyle has been used as a remedy for leprosy. **H. bonarien'sis,** plant growing in Brazil, having diuretic properties. **H. contel'la,** S. African plant, the roots and stalks of which are astringent; used in diarrhœa and dysentery. **H. umbella'tum,** acaricoba. **H. vulga'ris,** marsh pennywort; aperient.

**Hydrocra'nia** or **Hydrocra'nium.** Hydrocephalus.

**Hydrocy'anate** or **Hydrocy'anide.** Compound of hydrocyanic acid, with an alkaloid or base.

**Hydrocyan'ic acid.** HCN. Prussic acid; cyanohydric or cyanhydric acid. This acid exists in a great variety of native combinations in the vegetable kingdom, and imparts to them certain properties long known and esteemed; as in the bitter almond, cherry-laurel, leaves of the peach tree, kernels of fruit, pips of apples, etc. When concentrated it is liquid, colorless, of a strong smell and taste, at first cooling, afterward burning. Its specific gravity as a liquid, at 18° C., is 0.6969. It is very volatile and speedily undergoes decomposition; it consists of a peculiar gaseous and highly inflammable compound of carbon and nitrogen, cyanogen, and of hydrogen, which acts as the acidifying principle; hence its name, hydrocyanic acid. Great caution is necessary in its use, on account of its extremely poisonous properties. It has been advised in pulmonary inflammation, dyspepsia, uterine affections, hectic cough, cancer, chronic rheumatism, and mania, and as a local remedy in impetiginous affections. It is so unmanageable, and the preparation so uncertain, that it is not much used. The dose of medicinal prussic acid, *acidum hydrocyanicum dilutum* (Ph. U. S.), containing 2 per cent. of the acid, is from a quarter of a drop to two drops. **H. e'ther,** $C_2H_5CN$, ethyl cyanide, propionitrite; very poisonous liquid, formed by the action of ethyl iodide on potassium cyanide in closed tubes at temperature of 180° C.; properties like those of hydrocyanic acid.

**Hydrocyan'ogen.** Hydrocyanic acid.

**Hy'drocyst** (*hydor*, water, *kystis*, bladder). Cyst containing a watery or serous fluid; hydatid; saccated ascites.

**Hydrocysto'ma.** Cyst of a coil-duct. See *Hidrocystoma.*

**Hydrodiarrhœ'a.** Serous diarrhœa.

**Hydrodictiot'omy** (*hydor*, water, *diktyon*, retina, *tome*, incision). Operation by incision for the relief of œdema of the retina.

**Hydrodiffu'sion.** The intermingling of two liquids.

**Hydrodiure'sis.** Passage of watery urine.

**Hydrodynam'ics** (*dynamis*, power). Branch of mechanics relating to liquids in motion.

**Hydrœde'ma.** Œdema.

**Hydroelaterin'.** Amorphous substance derived from Momordica elaterium.

**Hydroëlec'tric bath.** Bath in which electricity is conveyed to the patient through the medium of the water.

**Hydroëlectriza'tion.** Employment of water as an electrode in electrization.

**Hydroenceph'alocele.** Hydrencephalocele.

**Hydroencephalorrhœ'a** (*hydor*, water, *encephalon*, brain, *rheo*, to flow). Serous apoplexy.

**Hydrofluor'ic acid.** Thin liquid, soluble in water, and used in such solution in goitre, and inhaled in phthisis and diphtheria. It is also antiseptic. Salts of this acid are excellent antiseptics and preservatives, being microbicidal. Fluorides of calcium, potassium, sodium, barium, aluminum, magnesium, and iron are the compounds usually employed.

**Hydrog'ala** (*hydor*, water, *gala*, milk). Mixture of water and milk.

**Hydrogas'ter** (*hydor*, water, *gaster*, belly). Ascites.

**Hy'drogen** (*hydor*, water, *gennao*, to produce). A gaseous element, symbol H, atomic weight 1, sp.

gr. 0.069; this gas when diluted with two-thirds of atmospheric air occasions diminution of muscular power and sensibility, and a reduction of the force of the circulation. It has been respired in catarrh, hæmoptysis, and phthisis. **Antimo′niated h.**, gaseous substance prepared at the moment of administration, by adding muriatic acid to a mixture of antimony and zinc, with tartar emetic or chloride of antimony, and inhaled in cases of pneumonia and capillary bronchitis. **H. binox′ide** or **perox′ide**, prepared by acting on barium dioxide with dilute sulphuric acid; a colorless, transparent liquid, very prone to decomposition; a powerful oxidizing agent, given as an excitant in asphyxia, cholera, and narcotic poisoning; and in cachectic affections—cancer, diabetes, etc.; and externally antiseptic in ulcers, sinuses, diphtheritic sores, etc., by reason of its oxidizing powers. **H. bro′mide**, hydrobromic acid. **H. bu′tylate**, butyl alcohol. **Car′bureted h.**, methane, methyl hydrate; inflammable air, fire-damp, of miners, marsh gas; obtained by passing the vapor of water over charcoal, at the temperature of ignition, in an iron tube; has been found possessed of properties like hydrogen and been used, diluted, in like cases. After the explosion of fire-damp in mines there remains the after-damp, choke-damp, or black-damp, consisting of carbonic acid and nitrogen, which occasions a greater loss of life, perhaps, than the explosion. **H. chlo′ride**, hydrochloric acid. **H. cy′anide**, hydrocyanic acid. **H. deutox′ide**, h. binoxide. **H. diox′ide**, h. binoxide. **H. eth′ylate**, ethyl alcohol. **H. flu′oride**, hydrofluoric acid. **H. i′odide**, hydriodic acid. **H. meth′ylate**, methylic alcohol. **H. ni′trate**, nitric acid. **H. ox′ide**, water. **H. perox′ide**, h. binoxide. **H. persul′phide**, $H_2S_2$, oily liquid, powerful antiseptic. **H. protox′ide**, water. **H. subox′ide**, water. **H. sul′phate**, $H_2SO_4$, absolute sulphuric acid. **H. sul′phide**, sulphureted h., h. persulphide. **Sul′phureted h.**, hydrosulphuric, sulphydric, sulphohydric, or hydrothionic acid, may be disengaged from any of the sulphurets by the addition of a strong acid. It is a violent poison, but has been used by injection *per anum*, in phthisis. **H. test**, test for intestinal perforation; hydrogen, being injected into the lower bowel, passes through the seat of perforation, and makes its appearance externally, where it is readily ignited.

**Hydrogen′esis.** Formation or accumulation of watery fluid.

**Hydroglos′sa** (*hydor*, water, *glossa*, tongue). Ranula.

**Hydrohæmat′ocele.** Hæmatocele complicated with hydrocele.

**Hydrohæ′mia.** Hydræmia.

**Hydrohæmotho′rax.** Presence of serous fluid and blood in the cavity of the pleura; hydrothorax combined with hæmatothorax.

**Hydrohymeni′tis** (*hydor*, water, *hymen*, a membrane). Inflammation of a serous membrane.

**Hydrohys′tera** (*hystera*, uterus). Hydrometra.

**Hy′droid** (*eidos*, resemblance). Resembling water.

**Hydrokinet′ic** (*kineo*, to move). Relating to the motion of liquids. The study or science of the laws controlling such motion is called *hydrokinet′ics*.

**Hydrolactom′eter** (*hydor*, water, *lac*, milk, *metron*, measure). Instrument for determining the quantity of water in milk.

**Hydrolap′athum.** Rumex hydrolapathum.

**Hydrola′tum.** Medicated water.

**Hydro′lea zeylan′ica.** Plant of E. Indies, pulp of leaves being employed for ulcers.

**Hydroleïn′.** An emulsion of cod-liver oil with pancreatin and borax.

**Hydrol′ogy** (*hydor*, water, *logos*, a discourse). Science relating to water or water-supplies. Medical hydrology is that part of physics whose object is the study of water as it respects medicine; mineral waters, for example.

**Hy′drolymph** (*hydor*, water, *lympha*, lymph). Thin, watery blood observed in some animals, the blood corpuscles being markedly deficient. Corpusculated circulating fluid or chyle of some of the lower forms of animals.

**Hydrol′ysis** (*hydor*, water, *lysis*, solution). Decomposition by taking up water, or hydration.

**Hy′drolyst.** A ferment that produces elimination of water.

**Hydrolyt′ic.** Relating to hydrolysis.

**Hy′drolyze.** To submit to hydrolysis.

**Hydro′ma.** Œdema; cyst or cystic tumor; abnormal growth consisting chiefly of water.

**Hydroma′nia.** Morbid impulse to drown one's self.

**Hydromediasti′num.** Effusion of serous fluid into the mediastinum.

**Hy′dromel** (*hydor*, water, *meli*, honey). A liquid medicine prepared with honey and tepid water; demulcent and laxative

**Hydromeningi′tis.** Meningitis with effusion; hydrocephalus internus. Serous iritis; dotted or punctate keratitis.

**Hydromenin′gocele.** Protrusion of the membranes of the brain containing fluid but no cerebral substance. Variety of spina bifida in which the spinal cord does not form part of the sac.

**Hydromen′inx** (*hydor*, water, *meninx*, membrane). Dropsy of meninges or membranes of the brain.

**Hydromenorrhœ′a.** Sanguinolent serous discharge from the vagina sometimes observed in pregnant women. Discharge of a thin menstrual fluid.

**Hydrom′eter** (*hydor*, water, *metron*, measure). Instrument for determining the density of liquids.

**Hydrome′tra** (*hydor*, water, *metra*, womb). Dropsy of the uterus; collection of the catarrhal secretions of the mucous membrane behind an abnormally contracted os.

**Hydromicrenceph′aly** (*hydor*, water, *mikros*, small, *encephalon*, brain). Atrophy of the brain in a microcephalic subject, with serous effusion into the cavities.

**Hydromicroceph′alus** (*hydor*, water, *mikros*, small, *kephale*, head). Hydrocephalus or serous effusion in a small or microcephalic brain.

**Hydrom′phalocele** (*hydor*, water, *omphalos*, navel, *kele*, hernia). Umbilical hernia, the sac of which contains fluid.

**Hydrom′phalus.** A tumor formed by the accumulation of serum in the sac of an umbilical hernia or by distention of the navel in ascites.

**Hydromye′lia** (*hydor*, water, *myelos*, marrow). Collection of fluid in the spinal cord; hydrorrhachis.

**Hydromyeli′tis.** Hydrorrhachis.

**Hydromy′elocele** (*hydor*, water, *myelos*, marrow, *kele*, tumor). Collection of fluid in the central canal of the spinal cord; variety of spina bifida, outer covering of which is made up of remains of the spinal cord. Hydromyelia.

**Hydromyrin′ga** or **Hydromy′rinx** (*hydor*, water, *myrinx*, membrana tympani). Dropsy of the drum of the ear or its membrane.

**Hydronaph′thol.** Derivative of beta-naphthol; antiseptic and disinfectant; employed in tinea tonsurans, diarrhœa, typhoid fever. It is also antiseptic when applied externally in solution, especially in alcohol and glycerin.

**Hydron′cus** (*onkos*, tumor). Anasarca, œdema.

**Hydronephrecta′sia** (*hydor*, water, *nephros*, kidney, *ektasis*, dilatation). Dropsical distention of the kidney.

**Hydroneph′ros.** Dropsy of the kidney.

**Hydronephro′sis.** Accumulation of urine in the pelvis of the kidney, eventually converting it into a cyst.

**Hydronephrot′ic.** Relating to or affected with hydronephrosis.

**Hydro-oligocythæ′mia** (*hydor*, water, *oligos*, few, *kytos*, cell, *haima*, blood). Anæmia characterized by increase of serum and decrease in the number of erythrocytes.

**Hydroparasal′pinx** (*salpinx*, tube). Collection of watery fluid in the tissues of the oviduct.

**Hydroparo′tus.** Œdema or cyst of the parotid gland.

**Hy′dropath.** Hydropathist.

**Hydropath′ic** (*hydor*, water, *pathos*, affection). Relating to hydropathy or the water-cure.

**Hydrop′athist.** Hydropathic physician.

**Hydrop′athy.** Hydrotherapy, hydriatrics.

**Hydropede′sis** (*hydor*, water, *pedao*, to spring out). Excessive sweating.

**Hydropel′tis purpu′rea.** Brasenia hydropeltis.

**Hydropericardi′tis.** Pericarditis with dropsy. Hydropericardium.

**Hydropericar′dium** or **Hydropericar′dia.** Dropsy of the pericardium; disease attended with palpitations, irregular or intermitting pulse, excessive dyspnœa or orthopnœa, and dulness over a large space on percussion; all associated with the collection of serous fluid in the pericardium.

**Hydroper′ione** (*hydor*, water, *peri*, around, *oon*, ovum). Sero-albuminous substance secreted by the lining of the uterus prior to the arrival of the impregnated ovum in that cavity.

**Hydroperipneumo′nia** (*hydor*, water, *peri*, around, *pneumon*, lung). Pneumonia with pleural effusion.

**Hydroperitone′um.** Collection of serous fluid in the cavity of the peritoneum; ascites or abdominal dropsy.

**Hydroperitoni′tis.** Peritonitis with serous effusion.

**Hydrophal′lus.** Œdema of the male organ.

**Hydrophen′yl.** Benzole.

**Hydroph′ilous** (*phileo*, to love). Soaking up water readily; bibulous; hygroscopic.

**Hydrophlegma′sia.** Acute inflammation with serous effusion into the cellular tissue.

**Hydrophlogo′sis** (*phlogosis*, inflammation). Œdematous inflammation.

**Hydropho′bia** (*hydor*, water, *phobos*, dread). Rabies, lyssa. A morbid dread of water or other drinks, due to spasm of the muscles of deglutition; a symptom occasionally met with in other nervous affections than the disease so named; then called hysterical, nervous, or spontaneous hydrophobia. The term rabies is more appropriate for the aggregate of symptoms resulting from the bite of a rabid animal, as the dog. Rabies occurs in the dog, wolf, cat, and fox, and is by them transmitted to other quadrupeds or to man. The bitten part should always be excised when practicable, and cauterized.

**Hydropho′bic.** Fearing water. Relating to or affected with hydrophobia. **H. tet′anus,** tetanus with facial palsy and pharyngeal and respiratory convulsions.

**Hydrophobin′.** Virus of hydrophobia or rabies.

**Hydrophobopho′bia.** Lyssophobia; morbid dread of hydrophobia, with hysterical simulation of its symptoms.

**Hy′drophone** (*hydor*, water, *phone*, sound). Instrument used in auscultatory percussion, water being the medium for transmission of sound.

**Hydrophthal′mia** or **Hydrophthal′mus** (*hydor*, water, *ophthalmos*, eye). Dropsy of the eye. Affection caused at times by an increase in the quantity of the aqueous or of the vitreous humor; in the former case the iris is concave anteriorly and pushed backward; in the latter, convex and pushed forward. Commonly there seems to be an increase of both humors at the same time. When all other remedies, as hydragogues, fomentations, bloodletting, blisters, etc., fail, the fluid may be evacuated by a puncture with a cataract needle at the lower part of the transparent cornea. **Ante′rior h.,** keratoglobus; h. affecting the anterior portion of the eye; dropsy of the aqueous humor. **Con′ical h.,** staphyloma of the cornea; conical cornea. **H. cruen′ta,** hæmophthalmia. **H. poste′rior,** h. affecting the posterior segment of the eyeball behind the lens; dropsy of the vitreous. **H. tota′lis,** h. affecting the whole eye; the term hydrophthalmia is generally used to imply this form.

**Hydrophyl′lum canaden′se** or **ve′rum.** Species of water-leaf or bur-flower, used in snake-bites or poisoning by Rhus toxicodendron; Hydrastis canadensis.

**Hydrophymo′sis.** Phimosis with dropsical effusion of the prepuce.

**Hydrophy′socele** (*hydor*, water, *physa*, wind, *kele*, tumor). Hernia containing serous fluid and gas.

**Hydrophysome′tra** (*hydor*, water, *physao*, to inflate, *metra*, womb). Morbid condition of the womb in which both fluid and air are contained in it.

**Hydrop′ic** (*hydrops*, dropsy). Dropsical; one laboring under dropsy; dropsied; relating to dropsy. Also diuretic or hydragogue; hence antihydropic.

**Hydropi′per.** Polygonum or Elatine hydropiper.

**Hydrop′isin.** Form of albumin found in urine and ovarian cysts; metalbumin.

**Hydrop′isis** or **Hydropis′mus.** Dropsy.

**Hy′droplasm.** A fluid constituent of protoplasm.

**Hydropleu′ria** or **Hydropleuri′tis.** Pleurisy with effusion.

**Hydropneumat′ocele** (*hydor*, water, *pneuma*, air, *kele*, rupture). Hydrophysocele.

**Hydropneumatom′phalocele.** Umbilical hernia containing serum and gas.

**Hydropneumato′sis.** Abnormal accumulation of fluid and air in the tissues.

**Hydropneu′mon.** Œdema of the lungs.

**Hydropneumopericar′dium.** Effusion of fluid and air in the cavity of the pericardium.

**Hydropneumotho′rax.** Pneumothorax with effusion of blood into the chest. See *Pneumothorax.*

**Hy′dropoid** (*eidos*, likeness). Dropsical; resembling dropsy.

**Hydropoie′sis** (*hydor*, water, *poieo*, to make). Formation of serum or watery fluid.

**Hy′drops.** Dropsy. Abnormal collection of serous fluid in any cavity or in the areolar texture. When the areolar tissue of the whole body is more or less filled with fluid it is called anasarca or leucophlegmatia; when this is local or partial it is called œdema. In encysted dropsy fluid is enclosed in a sac or cyst—dropsy of the ovarium is an instance. Dropsy may be active, consisting in an exudation of much more fluid than can normally be absorbed; or passive, arising from atony of the absorbent vessels, allowing accumulation of fluid. It may be mechanical, produced by obstruction to the circulation, as in disease of the liver. Treatment consists in using remedies which act on the various secretions, so that the demand being increased the supply will have to be increased accordingly; and in this manner the collected fluid may be taken up by the absorbents. **H. abdom′inis,** ascites. **H. abdom′inis aë′reus,** tympanites. **H. abdom′inis sacca′tus,** see *Ascites.* **H. adipo′sus,** chylous or milky form of ascites; ascites, fluid contents of which are broken-down cells which have undergone fatty degeneration. **H. anasar′ca,** anasarca. **H. an′tri,** dropsy of antrum of Highmore. **H. arachnoide′æ,** hydrocephalus. **H. artic′uli** or **articulo′rum,** hydrarthrus; arthrœdema; effusion of serum in synovitis. **H. asci′tes,** ascites. **H. asthmat′icus,** beriberi. **H. bronchia′lis,** accumulation of water in the bronchial tubes, interfering with the breathing and inducing coldness of the surface of the body. **H. bul′la,** fever-blister. **H. bur′sæ muco′sæ,** synovial bursa. **H. cap′itis,** hydrocephalus; hydrocephalus chronicus. **H. cardi′acus,** cardiac dropsy; hydropericardium. **H. cavita′tis colum′næ vertebra′lis,** hydrorrhachis. **H. cellula′ris,** anasarca, œdema. **H. cellula′ris toti′us cor′poris,** anasarca. **H. cellulo′sus,** anasarca. **H. cer′ebri,** hydrocephalus. **H. chylo′sus,** h. lacteus; h. adiposus. **H. cuta′neus,** anasarca, œdema. **H. cys′ticus,** encysted dropsy, see *Ascites* and *Hydrops.* **H. cyst′idis fel′leæ,** dropsy of the gall-bladder. **H. fibrino′sus,** effusion of coagulable lymph. **H. flatulen′tus,** tympanites. **H. frig′idus,** passive dropsy. **H. glot′tidis,** œdema of the glottis. **H. hepat′icus,** hepatic dropsy. **H. hypodermat′icus,** anasarca. **H. hyster′icus,** œdema accompanying suppression of menstrual discharge or of urinary secretion in hysterical cases. **H. incarcera′tus,** encysted dropsy, see *Hydrops*. **H. inter′nus,** anasarca. **H. lac′teus,** chylous or milky ascites. **H. leucophlegma′tia,** leucophlegmatia. **H. matel′læ,** diabetes. **H. ad mat′ulam,** diabetes. **H. mediasti′ni,** hydromediastinum. **H. medul′læ spina′lis,** hydrorrhachis. **H. oc′uli,** hydrophthalmia. **H. ova′rii,** hydrovarion; dropsy or cystoma of the ovary. **H. pal′pebræ,** hydroblepharon; blepharœdema. **H. pec′toris,** hydrothorax. **H. pericar′dii,** hydropericardium. **H. peritonæ′i,** ascites. **H. pleu′ræ,** hydrothorax. **H. pulmo′nis** or **pulmo′num,** hydrothorax; hydropneumonia; œdema of the lungs. **H. pulmo′num cellulo′sus,** pulmonary œdema; hydropneumonia. **H. rena′lis** or **re′num,** hydronephrosis. **H. sacca′tus,** encysted dropsy, see *Hydrops*. **H. sac′ci lacryma′lis,** fistula lacrymalis; dropsy of lacrymal sac. **H. scro′ti,** hydrocele. **H. sic′cus,** emphysema. **H. sic′cus et flatulen′tus,** tympanites. **H. spi′næ** or **spi′næ vertebra′lis,** hydrorrhachis. **H. subcuta′neus,** anasarca. **H. te′læ cellulo′sæ,** anasarca. **H. testic′uli** or **testiculo′rum,** hydrocele. **H. thora′cis,** hydrothorax. **H. tu′bæ, tuba′rum,** or **tuba′lis,** hydrosalpinx. **H. tym′pani,** dropsy of the tympanum. **H. tympani′tes,** tympanites. **H. umbilica′lis,** hydromphalus. **H. u′teri,** hydrometra. **H. u′teri vesicula′ris,** vesicular mole. **H. ventric′uli** or **ventriculo′rum cer′ebri,** hydrocephalus. **H. ve′rus,** anasarca. **H. vesi′cæ fel′leæ,** distention of gall-bladder by bile; dropsy of gall-bladder.

**Hydrop′sia** or **Hy′dropsy.** Dropsy.

**Hydropyonephro′sis.** Distention of the pelvis of the kidney with purulent urine.

**Hydropyopneumotho′rax** (*hydor*, water, *pyon*, pus, *pneuma*, air, *thorax*, chest). Inflammation of the pleura, followed by effusion of purulent serum and the entrance of air.

**Hydropyosal′pinx** (*hydor*, water, *pyon*, pus, *salpinx*, tube). Purulent accumulation in the Fallopian tube.

**Hydropyret′ic.** Feverish with sweating. Relating to hydropyretos.

**Hydropyr′etos** (*hydor*, water, *pyretos*, fever). Sweating sickness; see *Sudor anglicus*. *Hidropyretos* would be more proper (*hidros*, sweat).

**Hydroquinidine′.** $C_{20}H_{26}N_2O_2$. Alkaloid derived from cinchona bark and cuprea bark.

**Hydroquinine′.** Isomeric with hydroquinidine, and derived from cinchona and cuprea barks; antipyretic.

**Hydroquin′one.** $C_6S_4O_2H_2$. Substance isomeric with resorcin, variously obtained; antipyretic, antiseptic, and antizymotic in typhoid fever, erysipelas, etc.

**Hydror′chis** (*orchis*, testicle). Hydrocele.

**Hydrorhe′ostat.** Rheostat in which the resistance is furnished by a column of water.

**Hydrorrhachiocente′sis** (*hydrorrhachis* + *kentesis*, puncture). Treatment of spina bifida or hydrorrhachis by puncture.

**Hydrorrha′chis** (*hydor*, water, *rhachis*, spine). Spinal dropsy; effusion of serum, often owing to inflammation of the spinal membranes, forming a soft, frequently transparent tumor, consisting of the membranes of the spinal marrow, distended and projecting backward from the vertebral canal, the posterior wall of which, when the affection is congenital, is wanting to a certain extent; variously called spina bifida, schistorrhachis. **H. congen′ita,** spina bifida. **H. dehis′cens,** spina bifida. **H. exter′na,** variety of hydrorrhachis in which serous effusion into the subarachnoid space occurs. **H. inter′na,** dropsy of central cavity of spinal cord; hydromyelia.

**Hydrorrhachi′tis.** Inflammatory hydrorrhachis.

**Hydrorrha′gia** (*hydor*, water, *rhegnymi*, to break forth). Serous apoplexy.

**Hydrorrhœ′a** (*hydor*, water, *rheo*, to flow). Copious watery discharge. **H. gravida′rum, puerpera′rum,** or **u′teri grav′idi,** discharge of water or serous fluid taking place at any time during pregnancy. It may be the liquor amnii, but is usually the result of rapid secretion from the uterine glands or from the cervical cavity.

**Hydrosac′charum.** Sugared water. Simple syrup.

**Hydrosadeni′tis.** Inflammation of the sweat glands.

**Hydrosal′pinx** (*salpinx*, a tube). Dropsy of the Fallopian tube.

**Hydrosar′ca** (*hydor*, water, *sarx*, flesh). Anasarca.

**Hydrosar′cocele** (*hydor*, water, *sarx*, flesh, *kele*, a tumor). Sarcocele, complicated with hydrocele.

**Hydros′cheocele** (*hydor*, water, *osche*, the scrotum, *kele*, rupture). Hydrocele. Scrotal hernia containing fluid.

**Hydros′copy** (*hydor*, water, *skopeo*, to see). Examination of water or watery fluids. Hydrometry.

**Hydroseli′num.** Apium graveolens.

**Hydro′sis.** Hidrosis; sweating.

**Hydrospermat′ic.** Relating to thin or watery semen.

**Hydrosphyg′mograph.** Sphygmograph registering arterial pulsations, the limb being surrounded with water enclosed in a tube.

**Hydrospirom′eter** (*hydor*, water, *spiro*, to breathe, *metron*, measure). Form of spirometer based on the effect of the act of breathing on a column of water.

**Hy′drostat** (*istemi*, to stand). Apparatus for carrying fluid of battery without spilling.

**Hydrostat′ic.** Relating to fluid in equilibrium. **H. bed,** water bed. **H. test,** see *Docimasia pulmonum*.

**Hydrostat′ics.** Science dealing with the properties of liquids in a condition of equilibrium.

**Hydrosul′phide.** Sulphydrate.

**Hydrosulphu′ric acid.** Sulphureted hydrogen.

**Hydrosul′phyl.** Sulphydryl.

**Hydrosyringomye′lia.** Combination of hydromyelia and syringomyelia.

**Hydrotherapeu′tics** or **Hydrother′apy** (*hydor*, water, *therapeuō*, to cure). Mode of treating diseases systematically by the internal or external use of water.

**Hydrother′mal** (*hydor*, water, *therme*, heat). Relating to warm water, as warm springs.

**Hydrother′mostat.** Apparatus for the retention of heat for use as a local application in disease.

**Hydrothi′on** (*theion*, sulphur). Sulphureted hydrogen.

**Hydrothionæ′mia.** Presence of hydrogen sulphide in the blood, the symptoms being those of poisoning by that gas.

**Hydrothionammonæ′mia.** A condition similar to hydrothionæmia, ammonium sulphide being the agent entering the blood, the symptoms being those of poisoning by that gas.

**Hydrothion′ic acid.** Hydrosulphuric acid.

**Hydrothionu′ria.** Hydrogen sulphide in urine.

**Hydrotho′rax** (*hydor*, water, *thorax*, the chest). Dropsy of the chest, idiopathic hydrothorax, dropsy of the pleuræ. Generally exists only on one side, which, if the fluid effused be considerable, projects more than the other. Dyspnœa and fluctuation perceptible to the ear are characteristic symptoms. When the chest is examined with the stethoscope, respiration is perceptible only at the root of the lung. The percussion note is dull. Treatment for dropsies in general must be adopted; diuretics are especially useful, probably on account of the great activity of pulmonary absorption. Paracentesis is rarely serviceable. **H. chylo′sus,** chylothorax. **H. purulen′tus,** empyema.

**Hydrot′ics.** Hydragogues.

**Hydro′tis** (*ous*, ear). Dropsy of the ear.

**Hydrot′omy** (*hydor*, water, *tome*, incision). Dissection by forcible injection of water, thus causing separation of the tissues or structures.

**Hydrot′ropism** (*hydor*, water, *trepo*, to turn). Effect of water in causing motion in particles of protoplasm in its immediate vicinity.

**Hydrotym′panum.** Dropsy of the tympanum.

**Hydro-u′reter.** Distention of a ureter with urine.

**Hy′drous.** Watery. **H. chlo′ral,** chloral hydrate.

**Hydrova′rium.** Hydroarion.

**Hydroxanthalin′.** $C_{37}H_{88}N_2O_9$. A derivative of xanthalin, through the action of nascent hydrogen. It is in hard, white crystals.

**Hydrox′ide.** Hydrate.

**Hydroxyac′ids.** Acid formed from other acids by the substitution of hydroxyl for hydrogen.

**Hydroxyantifebrin′.** Aceto-amido-phenol.

**Hydroxycholin′.** Muscarin.

**Hydrox′yl.** A univalent radical containing one atom of oxygen and one of hydrogen.

**Hydroxylam′ine.** Ammonium in which an atom of hydrogen is substituted by a molecule of hydrogen; employed in solution in certain parasitic diseases of the skin. **H. hydrochlo′ride,** combination of hydroxylamine and chlorohydric acid; soluble, colorless crystals like ammonium chloride; used in lieu of chrysarobin, anthrarobin, and pyrogallic acid in cutaneous affections, as lupus, psoriasis, mycosis, etc. Poisonous, and must be used cautiously.

**Hy′drozone.** A 30 volume aqueous solution of chemically pure peroxide of hydrogen. Employed as a bactericide and healing agent, having a powerful destructive influence on pathogenic microorganisms and being a stimulant to granulating surfaces.

**Hydrure′sis** or **Hydru′ria.** Increase in watery constituents of urine; diabetes.

**Hy′druret.** Compound of an element with hydrogen.

**Hydrymeni′tis** (*hydor*, water, *hymen*, membrane). Inflammation of serous membrane.

**Hyepiglot′tic.** Hyoepiglottic.

**Hy′geist.** Hygienist.

**Hygie′a** or **Hygiei′a.** Hygiene; health; goddess of health; medicine.

**Hygieioco′mium** (*hygeia*, health, *komeo*, to care for). Sanitarium to aid restoration of the sick to health.

**Hygieiol′ogy.** Hygiology.

**Hy′giene** (*hygeia*, health). Hygienics. Part of medicine whose object is the preservation of health, embracing a knowledge of healthy man, socially and individually, as well as of all influences bearing on his constitution and organs.

**Hygien′ic.** Relating to hygiene or health.

**Hygien′ics.** Hygiene.

**Hygien′ist.** One who understands or follows the principles of hygiene.

**Hygiol′ogy.** The art of preserving health.

**Hygra′sia.** Humor.

**Hygrechema,** hig-rek-e′mah (*hygros*, humid, *echema*, sound). Sound of fluid heard by auscultation or otherwise.

**Hygre′don.** Humor.

**Hygrine′.** Volatile oily liquid alkaloid existing in Erythroxylon coca.

**Hygro-** (*hygros*, humid). In composition, humid.

**Hygrobleph′aric** (*hygros*, humid, *blepharon*, eyelid). Relating to the excretory ducts of the lacrymal gland.

**Hygrobleph′arism.** Epiphora.

**Hygroblephari′tis.** Inflammation of the eyelids with excessive flow of tears.

**Hygrobleph′aron.** Watery eyelids; hydroblepharon.

**Hy′grocele.** Hydrocirsocele; hydrocele.

**Hygrocolly′ria.** Liquid application for the eye.

**Hygrocro′sis vandel′li** (Meneghi). Beggiatoa alba.

**Hy′grocyst.** Hydrocyst; hydatid.

**Hygroder′ma.** Cutaneous moisture.

**Hy′grograph** (*hygros*, moist, *grapho*, to write). Automatic instrument for determining the amount of moisture in the air.

**Hygrohæmat′ocele** (*hygros*, moist, *haima*, blood, *kele*, tumor). Hydrocele complicated with hæmatocele.

**Hygrol′ogy** (*hygros*, moist, *logos*, discourse). Anatomy or description of the fluids of the body.

**Hygro′ma** (*hygros*, moist). Serous cyst; simple cyst containing fluid like that of serous membranes. Effusion of serum in a bursa mucosa. **Cys′tic h.,** congenital cystic tumor containing serous fluid in a fibrous sac. **H. du′ræ ma′tris,** meningocele. **H. ganglio′des,** serous cyst situated between the external layers of sheaths of tendons. **H. of the neck,** congenital hydrocele of the neck. **H. of the or′bit,** dropsy of bursæ of tendons of several muscles of the eye. **H. patel′læ** or **præpatella′re,** housemaid's knee; painful enlarged bursa in front of the patella. **Sa′cral h.,** cystic tumor of the sacrococcygeal bursa.

**Hygrom′eter** (*hygros*, moist, *metron*, measure). Instrument for measuring the amount of moisture in the air.

**Hygromet′ric.** Relating to hygrometry. The hygrometric property of organized tissue is that by which it gives off to the air and receives from it moisture under varying conditions of that medium.

**Hygrom′etry.** Measurement of the humidity of the atmosphere. Diseases are frequently influenced by varying moisture of the atmosphere or by changes in its weight or temperature.

**Hygroph′ila spino′sa.** Asteracantha longifolia of E. Indies and Ceylon; seeds are diuretic; root and leaves tonic and diuretic.

**Hygropho′bia.** Hydrophobia.

**Hygrophthal′mia.** Ophthalmia with excessive lacrymation.

**Hygrorrhon′chus.** Moist râle.

**Hygrosar′ca** (*hygros*, moist, *sarx*, flesh). Œdema. Flabbiness of muscles.

**Hy′groscope** (*skopeo*, to see). Hygrometer.

**Hygroscop′ic.** Having the property of absorbing moisture from the air.

**Hygros′copy.** Hygrometry.

**Hygrosto′mia** (*hygros*, moist, *stoma*, mouth). Salivation, particularly of a chronic form.

**Hylepho′bia** (*hyle*, matter, *phobos*, fear). Morbid fear of materialistic doctrines.

**Hy′lic** (*hyle*, matter). A term proposed by Adami for primitive pulp tissue, in which the specific cells lie in and are separated by a definite stroma; these tissues are divided into epiblastic, hypoblastic, mesenchymatous, and mesothelial.

**Hylo′ma.** A term proposed by Adami for a tumor originating from one of the hylic or pulp tissues; subdivided into epihyloma, hypohyloma, mesohyloma; and the latter into mesenchymal hyloma and mesothelial hyloma, according as the growth originates from the epiblastic, hypoblastic, mesenchymatous, or mesothelial structures.

**Hylozo′ism** (*hyle*, matter, *zoe*, life). Materialism; doctrine that life is the result of matter or organization.

**Hy′men** (*hymen*, membrane). Any membrane, especially the virginal membrane; semilunar, parabolic, or circular fold of mucous membrane situated near the outer orifice of the vagina in virgins, especially during youth and prior to menstruation. It is ordinarily ruptured by the first venereal act, and is effaced by accouchement, irregular flaps remaining, to which the name carunculæ myrtiformes has been given from their resemblance to myrtle leaves. Circumstances of innocent character may occasion rupture or destruction of the hymen, it being often, indeed, found absent in children soon after birth; while it may remain entire after copulation. Hence its presence does not absolutely prove virginity, nor its absence incontinence, although its presence would be *primâ facie* evidence of continence. **H. annula′ris,** one having shape of a ring. **Bifenes′trate h.** or **H. biperfora′tus,** hymen with two apertures. **Bri′dled h.,** h. divided by muscular bridge in median line. **H. cotumera′tus,** bridled h. **Crib′riform h.,** h. perforated with numerous apertures. **Dentic′ular h.,** h. with crenated edges. **H. diaphrat′ton,** mediastinum. **H. fimbria′tus,** fringed hymen. **Horse′shoe h.,** h. divided into parts resembling a horseshoe. **H. imperfora′tus,** imperforate h.; atresia of hymen. **H. semiluna′ris,** hymen of semilunar shape.

**Hymenæ′a.** See *Copal*. **H. cour′baril,** see *Anime*.

**Hy′menal.** Relating to the hymen. **H. tu′bercles,** carunculæ myrtiformes.

**Hymeni′tis.** Inflammation of the hymen.

**Hymen′ium** (dim. of hymen). Delicate membrane.

**Hymenocal′lis.** A genus of plants; several species, indigenous in W. Indies and Southern United States, are used externally as emollients, and internally as a substitute for squills.

**Hymenochon′droid** (*hymen*, membrane, *chondros*, cartilage). Composed of cartilage and membrane.

**Hymenodic′tyon excel′sum.** Cinchona excelsa.

**Hymenodictyonine′.** $C_{24}H_{40}N_3$. Alkaloid from bark of Hymenodictyon excelsum or Cinchona excelsa; similar to quinoidine and berberine.

**Hymenogeny,** hy-men-oj′en-e (*hymen*, membrane, *gennao*, to engender). Production of membranes by the effect of simple contact of two liquids, as albumin and fat, when the former gives a coating to the globules of the latter. See *Haptogen*.

**Hymenog′raphy** (*hymen*, membrane, *grapho*, to describe). Treatise on or description of membranes.

**Hymenolip′sis.** Tænia nana.

**Hymenol′ogy** (*hymen*, membrane, *logos*, description). Treatise on or description of membranes.

**Hymenomala′cia** (*hymen*, membrane, *malakia*, softening). Softening of membranes.

**Hymenomyce′tes** (*mykes*, fungus). Fungi having hymenium or umbrella, including all edible mushrooms and many poisonous fungi.

**Hymenophthal′mia.** Ophthalmia membranarum.

**Hymenoptery′gium.** Membranous pterygium.

**Hymenor′rhaphy** (*hymen*, membrane, *rhaphe*, suture). Elytrorrhaphy performed in the natural situation of the hymen.

**Hymen′otome** (*hymen*, membrane, *tome*, incision). Instrument for excising membranes or the hymen.

**Hymenot′omy.** Incision of the hymen for imperforation of the vagina, to give exit to the blood retained in the uterine cavity.

**Hyo-.** In composition, hyoid bone.

**Hyoangula′ris.** Rare form of stylohyoid muscle arising from angle of the lower jaw.

**Hyobasioglos′sus.** Basioglossus.

**Hyocæruleïn′** (*hys*, hog, *cæruleus*, blue). Blue pigment from biliary calculi of hog.

**Hyoceratopharynge′us.** Ceratopharyngeus muscle. Hyopharyngeus.

**Hyocervica′lis.** Muscle passing from hyoid bone to cervical fascia. Hyofascialis muscle.

**Hyocholal′ic acid.** Hyocholic acid.

**Hyochol′ic acid** (*hys*, hog, *chole*, bile). Acid of bile of hog, $C_{25}H_{40}O_4$.

**Hyochondroglos′sus.** Hyoglossus.

**Hyodeoglos′sus.** Hyoglossus.

**Hyodeothyreo′des.** Thyreohyoideus.

**Hyodepiglot′tic.** Hyoepiglottic.

**Hyoepiglot′tic** or **Hyoepiglottid′ean.** Belonging to the os hyoides and epiglottis. **H. lig′ament,** a bundle of condensed areolar tissue passing from the posterior part of the body of the hyoid bone to the base of the epiglottic fibrocartilage. **H. mus′cle,** a muscle occasionally passing from the back part of the hyoid bone to the epiglottis.

**Hyoepiglot′ticus.** Hyoepiglottic muscle.

**Hyofascia′lis.** Hyocervicalis.

**Hyoglos′sal.** Relating to the hyoid bone and tongue. **H. mem′brane,** fibrous lamina connecting the under surface of the base of the tongue with the body of the hyoid bone. **H. mus′cle,** hyoglossus. **H. nerve** or **hyoglos′sian nerve,** hypoglossal nerve.

**Hyoglos′sus.** Large, thin, quadrilateral muscle situated at the anterior and superior part of the neck; formerly described as divided into three portions: *Ceratoglossus*, attached to the great cornu of the os hyoides; *basioglossus*, arising from the superior part of the body of the same bone; *chondroglossus*, arising from the lesser cornu and the cartilage situated between the body and the greater cornu. The fibres of these three bundles are inserted into the lateral and inferior parts of the tongue; this muscle depresses the base of the tongue, or raises the os hyoides when the tongue is fixed.

**Hyoglycochol′ic acid** (*hys*, hog, *glykys*, sweet, *chole*, bile). Resinous acid, $C_{27}H_{43}NO_4$, derived from bile of the hog.

**Hy′oid** (Greek Υ + *eidos*, shape). Shaped like the Greek letter *ypsilon;* relating to the hyoid bone. **H. arch,** second branchial arch or column of tissue separating branchial clefts. **H. ar′tery,** branch from superior thyroid. **H. bone,** very movable osseous arch, of a parabolic shape, convex before, and suspended horizontally in the substance of the soft parts of the neck, between the base of the tongue and the larynx. Separated entirely from the rest of the skeleton, it is composed of five distinct portions, susceptible of motion on each other: the central portion or the *body*, affording attachment to several muscles; two lateral *branches* or *greater cornua;* and two smaller, situated above the other, the *lesser cornua* or *styloid cornua*, corpora or corpuscula triticea.

**Hyoid′eal** or **Hyoid′ean.** Hyoid. **H. appara′tus,** collection of structures of the fetal skeleton in the third visceral arch. **H. arch,** hyoid arch.

**Hyoide′us.** Muscle connected with the hyoid bone. **H. pri′mus,** sternohyoideus. **H. quar′tus,** omohyoideus.

**Hyomandib′ular.** Relating to the hyoid bone and inferior maxilla. **H. arch,** hyoid arch.

**Hyomax′illary mus′cle.** Hyoangularis.

**Hyomen′tal.** Relating to the hyoid bone and chin.

**Hyopharynge′us.** Middle constrictor muscle of the pharynx or its first portion.

**Hyosci′amus.** Hyoscyamus.

**Hyoscine′.** Semisolid, poisonous alkaloid from Hyoscyamus niger; soporific, nervous sedative, and mydriatic; isomeric with hyoscyamine and atropine; $C_{17}H_{23}NO_3$. The dose of hydrobromate (Ph. U. S.) or hydrobromide (Ph. Br.) of hyoscine is gr. $\frac{1}{120}$–$\frac{1}{80}$ (0.00054–0.0008). The hydrochlorate or hydrochloride and the hydriodate or hydriodide of hyoscine are used with similar therapeutic effect.

**Hyoscin′ic acid.** Product of decomposition of hyoscyamine by caustic baryta.

**Hyoscipicrin′.** Hyoscypicrin.

**Hyoscyamine′.** $C_{17}H_{22}NO_3$. An alkaloid found in the seeds and leaves of Hyoscyamus niger, in the roots of Scopolia atropoides and S. japonica, and in the leaves of Duboisia myoporoides. It resembles atropine in therapeutic action, and is a hypnotic and antispasmodic in nervous diseases, asthma, epilepsy, etc. It is also employed as a mydriatic. The official salts are the hydrobromate, *hyoscyami′næ hydrobro′mas* (Ph. U. S.), a yellowish-white prismatic, crystalline, or amorphous mass; dose, gr. $\frac{1}{100}$–$\frac{1}{50}$ (0.0006–0.0013); and the sulphate, *hyoscyami′næ sul′phas* (Ph. U. S. and Br.), a white, crystalline powder; dose, gr. $\frac{1}{100}$–$\frac{1}{50}$ (0.0006–0.0013).

**Hyoscy′amus** (*hys*, swine, *kyamos*, bean). Official name (Ph. U. S. and Br.) of the leaves and tops of H. niger, plants of the second year's growth being selected. Henbane, poison tobacco, stinking nightshade, ord. *Solanaceæ*. Hyoscyamus is narcotic, anodyne, hypnotic, antispasmodic, mydriatic, and slightly stimulant. It is an active narcotic poison; therapeutic action similar to belladonna and stramonium; used as a substitute for opium when the latter disagrees; applied externally as a cataplasm in cancer and glandular swellings. The following preparations, in addition to salts of *hyoscine* and *hyoscyamine* (which see), are official: *Extrac′tum hyoscy′ami*, extract; dose, gr. ss–iij (0.032–0.2). *Extrac′tum hyoscy′ami flu′idum*, fluid extract; dose, ♏v–xxx (0.32–2.0). *Tinctu′ra hyoscy′ami*, tincture; dose, ʒss–j (2.0–4.0). **H. agres′tis,** hyoscyamus. **H. al′bus,** white henbane of Southern Europe, possesses similar virtues to H. niger; sometimes employed instead of H. niger. **H. in′dicus,** tobacco. **H. leaves,** see *Hyoscyamus*. **H. lu′teus,** Nicotiana rustica. **H. ni′ger,** hyoscyamus. **H. peruvia′nus,** Nicotiana tabacum. **H. physaloi′des,** kite-flower, purple-flowered henbane of N. Asia; narcotic; used in syphilis, dysentery, etc. **H. reticula′tus,** Egyptian henbane of S. Europe; properties similar to those of H. niger. **H. scopo′lia,** herb and root of this plant growing in central Europe are used in the same cases as belladonna.

**Hyoscypicrin′.** $C_{27}H_{52}O_{14}$. Bitter glucoside from seed of Hyoscyamus niger.

**Hyospondylot′omy** (*spondylos,* cervical vertebra, *tome,* incision). Incision or puncture of the laryngeal pouch (recess passing upward from the front part of the ventricle of the larynx) in the horse.

**Hyoster′nal.** Relating to hyoid bone and sternum.

**Hyotaurochol′ic acid** (*hys,* hog, *tauros,* bull, *chole,* bile). $C_{27}H_{45}NSO_6$. Acid found in moderate quantity in bile of pig.

**Hyothy′reoid** or **Hyothy′roid.** Thyrohyoid.

**Hyotrachea′lis.** Part of thyrohyoid muscle, occasionally passing from the hyoid bone to the trachea.

**Hyovertebrot′omy.** Hyospondylotomy.

**Hypacou′sia, Hypacu′sia,** or **Hypacu′sis** (*hypo,* under, *akousis,* hearing). Defective hearing.

**Hypac′tic** (*hypo,* under, *ago,* to drive). Cathartic.

**Hypæ′mia** (*hypo,* under, *haima,* blood). Deficiency of blood; anæmia. Extravasation of blood. **Intertrop′ical h.,** anæmia due to the presence of Anchylostomum duodenale. **H. oc′uli,** hæmophthalmia.

**Hypæ′othrix kuhnia′na.** Crinothrix kuhniana.

**Hypæsthe′sia** (*hypo,* under, *aisthesis,* sensation). Defective or diminished sensation; partial anæsthesia.

**Hyp′agogue.** Laxative.

**Hypalbumino′sis.** Deficiency of albumin in the blood.

**Hypalge′sia** (*hypo,* under, *algos,* pain). Deadened or diminished sensibility to pain.

**Hypal′gia** (*hypo,* under, *algos,* pain). Slight pain.

**Hypamauro′sis.** Imperfect amaurosis.

**Hypamblyo′pia.** Slight amblyopia.

**Hypapho′nia.** Partial dumbness.

**Hypaphorine′.** Alkaloid derived from Erythrina lithosperma.

**Hypapoph′ysis** (*hypo,* under, *apophysis,* process). Bony projection from the inferior part of a vertebra in some animals.

**Hyparte′rial.** Lying beneath an artery.

**Hypasthe′nia.** Slight debility.

**Hypato′nia.** Slight want of tone.

**Hypax′ial.** Beneath the axis of the body. **H. mus′cles,** muscles below the vertebral axis of early fetal life.

**Hypecta′sia** or **Hypec′tasis.** Slight dilatation.

**Hypenceph′alis.** Cerebellum.

**Hyper-** (above). In composition, to excess.

**Hyperacantho′sis** (*hyper,* above, *acantha,* thorn). Excessive development of the inner or prickle-cell layer of the epidermis, as in lichen planus.

**Hyperac′id.** Excessively or intensely acid.

**Hyperacid′ity.** Excess of acid.

**Hyperacou′sia, Hyperacu′sia,** or **Hyperacu′sis** (*hyper,* above, *akoe,* audition). Excessively acute hearing.

**Hyperadeno′ma** or **Hyperadeno′sis** (*aden,* gland). Hypertrophy of a gland.

**Hyperæmato′sis.** Plethora; hyperæmia.

**Hyperæ′mia** (*hyper,* over, *haima,* blood). Abnormal accumulation of blood in the capillary vessels, especially local plethora—*plethora partialis;* congestion. Hyperæmia may be active or sthenic; asthenic or passive; cadaveric or that which forms immediately before or after death; hypostatic, occurring in depending parts; and mechanical, produced by mechanical impediment. The term is, however, usually reserved to express an active increase of blood in a part, *congestion* being applied to the passive form dependent upon decreased outflow. **H. abdom′inis,** cœliæmia. **Cadav′eric h.,** livid discoloration occurring in cadavers. **Collat′eral** or **compen′satory h.,** h. either arterial or venous, in one part of the body, compensating for anæmia in another part. **Flux′ionary h.,** active hyperæmia through increased flow of blood to a part. **H. follicula′ris,** h. of glands; congestion of follicles, as of the throat. **Neuroparalyt′ic h.,** h. of paralysis from injury of nerve.

**Hyperæ′mic.** Congested; bloodshot; affected with hyperæmia; having excess of blood.

**Hyperæmo′sis.** Hyperæmia; increased blood pressure.

**Hyperæsthe′sia** or **Hyperæsthe′sis** (*hyper,* over, *aisthesis,* feeling). Excessive sensibility or impressibility. **Acous′tic** or **aud′itory h.,** painful or annoying sensation in the ear from excessive acuteness of hearing. **H. of car′diac plex′us,** angina pectoris. **Cer′ebral h.,** h. due to brain disease. **Epilep′tic h.,** epileptic aura, with excessive sensibility. **Gus′tatory h.,** excessive acuteness of taste. **H. lin′guæ,** gustatory h. or hypergeustia. **Mus′cular h.,** production of excessive fatigue upon slight muscular exertion. **Neur′al h.,** neuralgia. **Olfac′tory h.,** hyperosphresia, hyperosmia. **Op′tic h.,** photophobia of mild degree. **Psy′chical h.,** hypochondriasis. **Sex′ual h.,** hyperaphrodisia. **Spi′nal h.,** increase in the reflexes due to spinal disease. **Tac′tile h.,** hyperaphia.

**Hyperæsthet′ic.** Relating to or possessing hyperæsthesia; also an agent that augments general sensibility, as strychnine. **H. spots,** circumscribed patches of skin, intensely painful to the touch, with occasionally recurring attacks of burning pain.

**Hyperalbumino′sis.** Increase of albumin in the blood.

**Hyperalge′sia, Hyperalge′sis,** or **Hyperal′gia** (*hyper,* over, *algos,* pain). Excessive pain; increased sensitiveness to pain; sometimes employed as synonymous with hyperæsthesia. **Cuta′neous h.,** excessive sensibility of common sensations of the skin.

**Hyperalimenta′tion.** Excessive feeding.

**Hyperalimento′sis.** Disease due to overeating.

**Hyperanakine′sis** (*kinesis,* motion). Excessive movement of a part, as **H. ventric′uli,** exaggeration of the mechanical function of the stomach.

**Hyperan′thera morin′ga.** Guilandina moringa.

**Hyperaph′ia** (*hyper,* over, *aphe,* touch). Excessive acuteness of touch or of cutaneous sensibility.

**Hyperaphrodis′ia** (*Aphrodite,* Venus). Excessive venereal desire.

**Hyperar′thric** (*hyper,* over, *arthron,* joint). Having supernumerary joints or limbs.

**Hyperarthri′tis.** Intense arthritis.

**Hyperarthro′sis.** Condition in which superfluous joints exist.

**Hyperasthe′nia** (*hyper,* over, *astheneia,* weakness). Excessive debility.

**Hyperauxe′sis** (*hyper,* over, *auxesis,* augmentation). Excessive increase or enlargement of a part.

**Hyperazotu′ria.** Azoturia (increase of nitrogenous matter in the urine) of extreme degree.

**Hyperbol′ic** (*hyper,* over, *ballo,* to throw). Excessive or exaggerated. **H. at′titudes,** term by which Galen designated certain extraordinary attitudes in which the limbs and vertebral column are in a state of complete extension or flexion. **H. lens,** glass having shape of hyperbola for treatment of conical cornea.

**Hyperbrachycephal′ic** (*hyper,* over, *brachys,* short, *kephale,* head). Having an excessively short head, or having a cephalic index (relation of length to breadth of skull) of from 85° to 89°.

**Hyperbronchi′tis.** Suffocative catarrh.

**Hyperbu′lia** (*hyper,* over, *boule,* will). Ungovernable will or volition.

**Hypercar′dia.** Hypertrophy of the heart.

**Hypercardiæ′mia.** Cardiac plethora.

**Hypercardiodynam′ia** (*hyper,* over, *kardia,* heart, *dynamis,* power). Increased force of contractions of the heart.

**Hypercardiohæ′mia.** Cardiac plethora.

**Hypercardiot′rophy** (*hyper,* over, *kardia,* heart, *trophe,* nourishment). Hypertrophy of the heart.

**Hypercarpo′sis** (*hyper*, over, *karposis*, profit). Increase in number of blood corpuscles, the fibrin being decreased.

**Hypercatapino′sis** (*hyper*, over, *katapino*, to sip up). Excessive activity of absorption or of deglutition.

**Hypercathar′sis** (*hyper*, over, *katharsis*, purgation). Superpurgation. Menorrhagia.

**Hypercathar′tic.** Excessively purgative.

**Hypercedemo′nia** (*hyper*, over, *kedemonia*, anxiety). Excessive care; intense anxiety.

**Hypercemento′sis.** Inordinate growth or increase of cementum of tooth.

**Hyperceno′sis** (*kenosis*, evacuation). Excessive evacuation, as of blood, bile, etc.

**Hypercer′asis** or **Hypercerato′sis** (*keras*, cornea). Staphyloma of the cornea; thickening of the cornea.

**Hyperchlorhyd′ria.** Secretion of excessive amount of hydrochloric acid (more than 0.2 per cent.) in the gastric juice.

**Hypercho′lia** (*hyper*, over, *chole*, bile). Excessive secretion of bile.

**Hyperchondro′ma** or **Hyperchondro′sis** (*hyper*, over, *chondros*, cartilage). Hypertrophic development of cartilage; cartilaginous tumor.

**Hyperchro′ma** (*hyper*, over, *chroma*, color). Excessive secretion of cutaneous pigment. Red, fleshy excrescence at the inner angle of the eye, near the caruncula lacrymalis.

**Hyperchroma′sia.** Excess of pigment.

**Hyperchromat′ic** (*chroma*, color). Coloring or staining readily. Relating to hyperchromatosis.

**Hyperchro′matism.** Excessive coloration or pigmentation.

**Hyperchro′matopsy** (*hyper*, *chroma*, color, *opsis*, vision). Defect of vision, owing to which ideas of color are attached to objects which convey no such colored impressions to a healthy eye; antithesis to *achromatopsy*.

**Hyperchromato′sis** or **Hyperchro′mia** (*hyper*, *chroma*, color). Increased pigmentary formation in the skin. Diseases of the skin so characterized are called *hyperchromatoses*.

**Hypercine′sia** or **Hypercine′sis** (*kinesis*, motion). Excessive motion; spasm; spasmodic neurosis, as hysteria. **H. cor′dis**, palpitation of the heart. **H. of fa′cial nerve**, local and habitual convulsive motion of certain muscles, especially of those of the face; convulsive tic. **H. gas′trica**, hypochondriasis. **H. hyster′ica**, hysterical convulsions. **H. nervo′sa**, see *Irritable*. **H. uteri′na**, hysteria.

**Hypercorypho′sis** (*hyper*, over, *koryphe*, the vertex, the extreme point of anything). Protuberance.

**Hypercrin′ia** (*krino*, to separate). Morbid increase in the quantity of the secretions.

**Hypercri′sis.** Excessive crisis or evacuation.

**Hypercryalge′sia** (*kryos*, cold, *algos*, pain). Excessive sensitiveness to cold.

**Hypercu′sia.** Excessive sensibility of the organ of hearing.

**Hypercye′ma** (*hyper*, over, *kyo*, to conceive). Superfœtation.

**Hypercye′sis.** Rapidly successive conceptions.

**Hypercyrto′sis** (*hyper*, over, *kyrtosis*, curvature). Excessive curvature.

**Hypercythæ′mia** (*hyper*, over, *kytos*, cell, *haima*, blood). Increase in the number of blood corpuscles in comparison with the serum.

**Hyperdacryo′sis** (*hyper*, over, *dakryon*, tear). Excessive secretion of tears.

**Hyperdactyl′ia** (*hyper*, over, *daktylos*, finger). Excessive development of fingers or toes, as supernumerary digitis.

**Hyperdermato′ma** (*derma*, skin). Morbid growth, formed of hypertrophied skin.

**Hyperdermato′sis.** Hypertrophy of the skin.

**Hyperdesmo′sis** (*desmos*, bond). Excessive development or formation of connective tissue.

**Hyperdicrot′ic.** Excessively dicrotic.

**Hyperdic′rotism.** Very pronounced dicrotism.

**Hyperdisten′tion.** Overdistention.

**Hyperdiure′sis.** Polyuria. **H. gravida′rum**, polyuria of pregnancy.

**Hyperdontogeny,** hi-per-don-toj′en-e (*odous*, tooth). The occurrence of an additional dentition period—the third—at an advanced period of life.

**Hyperdynam′ia** (*dynamis*, strength). Hypersthenia; excessive muscular power. **H. u′teri**, excessive uterine exertion or pain in labor.

**Hyperdynam′ic.** Relating to hyperdynamia.

**Hyperem′esis** or **Hypereme′sia** (*hyper*, over, *emeo*, to vomit). Excessive vomiting. **H. gravida′rum**, vomiting of pregnancy.

**Hypere′mia.** Hyperæmia.

**Hyperencephal′ia.** Encephalocele or development of such a condition; hypertrophy of the brain.

**Hyperenceph′alus.** Monster whose brain is chiefly outside the skull, the roof of which is deficient.

**Hyperen′ergy** (*hyper*, over, *energia*, activity). Excessive activity, as of the nervous system.

**Hyperenteri′tis.** Acute inflammation of the bowel.

**Hyperentero′sis.** Hypertrophy of the intestines.

**Hyperephidro′sis** (*hidros*, sweat). Excessive sweating.

**Hyperepithym′ia** (*epithymia*, desire). Excessive or abnormal desire.

**Hyperer′ethism** (*erethizo*, to excite). Excessive irritability.

**Hypererythræmo′sis** or **Hypererythrocythæ′mia** (*erythros*, red, *kytos*, cell, *haima*, blood). Excessive quantity of red or arterial blood.

**Hyperesopho′ria** (*eso*, inward, *phoros*, bearing). Direction of visual line inward and upward.

**Hyperexopho′ria** (*exo*, outward, *phoros*, bearing). Direction of visual line outward and upward.

**Hyperexten′sion.** Extension, as of a limb, beyond the normal point.

**Hyperfecunda′tion.** Superfecundation.

**Hyperfecun′dity.** Giving birth to children at frequent intervals.

**Hyperfibrina′tion.** See *Hiperinosis*.

**Hyperflex′ion.** Excessive flexion, as of a limb.

**Hypergastri′tis.** Intensely acute gastritis.

**Hypergen′esis.** Excess of formative power, which may give occasion to monstrosities. Excessive production or development. See *Monster*.

**Hypergeusæsthe′sia**, **Hypergeusia** (hy-per-gu′sia), or **Hypergeu′sis** (*geusis*, taste). Excessive sensibility or delicacy of the organ of taste.

**Hyperglobu′lia** (*globulus*, globule). Plethoric condition with excess of red blood corpuscles.

**Hyperglot′tis.** Superior entrance to the larynx; the larynx itself.

**Hyperglycæ′mia** (*glykys*, sweet, *haima*, blood). Condition of the blood in which there is more than 0.2 per cent. of sugar.

**Hyperhæmato′sis.** Inflammation; plethora.

**Hyperhidro′sis** (*hidrosis*, sweating). Excessive sweating.

**Hyperhydræ′mia.** Excess of serum in the blood.

**Hyperhypno′sis** (*hypnos*, sleep). Sleep of exceedingly long duration.

**Hyper′icum.** A genus of plants, ord. *Hypericineæ*. **H. anagalloi′des**, of California, used as a medicine. **H. androsæ′mum**, androsæmum. **H. as′cyron**, St. Peter's wort, seeds of which are cathartic. **H. baccif′erum**, Brazilian tree whose bark, like that of H. guianense, emits a juice resembling gamboge. **H. canaden′se**, species of h. growing in Western United States; expectorant, styptic, etc.; used in croup, mania, bowel affections, etc. **H. conna′tum**, leaves of this Brazilian plant are astringent and used in decoction as a gargle in inflammation of the throat. **H. corymbo′sum**, spotted St. John's wort, fluxseed; grows in Indian Territory; used in dysentery and diarrhœa. **H. cris′pum**, species of S. Europe, used in dysmenorrhœa, leucorrhœa, etc. **H. delphinen′se**, St. Peter's wort; imperforate St. John's wort; used in hydrophobia in Eastern Europe; diuretic, astringent, vermifuge.

**H. guianen′se,** see *H. bacciferum.* **H. hirci′num,** goat-scented St. John's wort of Europe; used in dysuria and dysmenorrhœa. **H. laxius′culum,** allerim brabo, has been long used in Brazil against the bites of serpents. **H. ma′jus,** Arnica montana. **H. officina′le** or **officina′rum,** H. perforatum. **H. perfora′tum,** perforated or common St. John's wort, growing in America, Europe, and Africa; aromatic and astringent; enters into a number of aromatic preparations, and was at one time much used in dysentery, hemorrhages, etc., and as a diuretic. Oil of St. John's wort, red oil, linimentum or oleum hyperici, balsamum hyperici simplex, is made by infusing the flowers in olive oil; it is applied to recent bruises. **H. saro′thra,** orange-grass, bastard gentian, pineweed; indigenous; applied in domestic practice, boiled, to contusions and sprains. **H. virgin′icum,** growing in the United States and Canada, is expectorant and stomachic, the flowers being treated with alcohol. **H. vulga′re,** H. perforatum.

**Hyperidro′sis.** Excessive sweating. **H. oleo′sa cap′itis,** seborrhœa oleosa.

**Hyperinosæ′mia** or **Hyperino′sis** (*hyper*, over, *is*, fibre). Condition of the blood in which it contains increase in the proportion of fibrin and a decrease in the number of red corpuscles, as in inflammation.

**Hyperinot′ic.** Relating to hyperinosis.

**Hyperinvolu′tion.** Rapid involution of the uterus after parturition; atrophy of the uterus after labor.

**Hyperisoton′ic.** Containing a greater amount than is isotonic, as of salt in an isotonic solution.

**Hyperkeratomyco′sis.** Hyperkeratosis due to the action of a parasitic fungus.

**Hyperkerato′sis** (*hyper*, over, *keras*, horn). Anomalous horny development of the epidermis or its appendages. Hypertrophy of the cornea; conical cornea. **H. excen′trica,** porokeratosis excentrica.

**Hyperkine′sia** or **Hyperkine′sis.** Excessive motion or mobility. **Spi′nal h.,** exaggeration of spinal or automatic action, as in hysteria.

**Hyperkinet′ic.** Relating to hyperkinesia.

**Hyperlacta′tion.** Excessive secretion of milk; excessively prolonged lactation.

**Hyperleucocyto′sis.** Increase in the number of leucocytes in the blood.

**Hyperlith′ic.** Having an excess of lithic or uric acid.

**Hyperlithu′ria.** Discharge of urine having an excess of lithic or uric acid.

**Hyperlo′gia** (*logos*, discourse). Excessive talkativeness.

**Hyperlym′phia.** Excessive formation or accumulation of lymph.

**Hypermas′tia** (*mastos*, breast). Excessively large breasts.

**Hypermature′.** Overripe, as a cataract.

**Hypermedica′tion.** Overdrugging.

**Hypermega′lia** or **Hypermeg′aly** (*hyper*, over, *megalos*, great). Exaggerated development, as of the spleen in malaria.

**Hypermegasthen′ic** (*hyper*, over, *megas*, great, *sthenos*, strength). Having remarkable muscular power.

**Hypermesoticephal′ic** (*hyper*, over, *mesos*, mean, *kephale*, head). Having a mean cephalic index of 78° or 79°.

**Hy′permetrope.** One with hypermetropia.

**Hypermetro′pia** (*hyper*, over, *metron*, measure, *opsis*, vision). Far-sightedness, hyperopia; opposite condition of vision to myopia, the principal focus falling behind the retina, while in myopia it falls in front of it. **Ab′solute h.,** h. that accommodation does not entirely relieve. **Ax′ial h.,** h. caused by shortening of anteroposterior axis of the eye. **H. curv′ature,** h. caused by flattening of the cornea or crystalline. **Fac′ultative h.,** h. having near-point for both eyes at a fixed distance. **In′dex h.,** h. due to faulty refraction in the ocular media. **La′tent h.,** difference between manifest and total hypermetropia. **Man′ifest h.,** hypermetropia that can be overcome by attempt at accommodation or with convex glass. **To′tal h.,** whole amount of h., both latent and manifest.

**Hypermetrop′ic.** Relating to hypermetropia.

**Hypermne′sia** (*hyper*, over, *mnaomai* to recollect). Excessively acute memory.

**Hypermyelohæ′mia** (*hyper*, over, *myelos*, marrow, *haima*, blood). Hyperæmia of the spinal marrow.

**Hypermyo′pia.** Excessive myopia.

**Hypermyotroph′ia** or **Hypomyot′rophy** (*hyper*, over, *mys*, muscle, *trophe*, nourishment). Hypertrophy of muscular tissues.

**Hypermyx′ia** (*myxa*, mucus). A condition in which there is excessive secretion from the mucous membranes.

**Hypernephro′ma.** Hypertrophic growth of adrenal tissue; tumor of the adrenal body.

**Hypernephrot′rophy** (*hyper*, over, *nephros*, kidney, *trophe*, nourishment). Hypertrophy of the kidney.

**Hypernerv′ia** or **Hyperneu′ria** (*neuron*, nerve). Excessive nervous activity.

**Hyperneuro′ma.** Morbid development of the neurine or nervous masses. Fungous growth of nervous tissue.

**Hyperneuro′sis.** Hypertrophy of nervous tissue.

**Hypernida′tion** (*nidus*, nest). Excessive formation of menstrual deciduous membrane, sometimes producing dysmenorrhœa.

**Hypernœ′a** or **Hypernoi′a** (*hyper*, over, *nous*, mind). Excessive exercise of the mental powers.

**Hypernor′mal.** Beyond the normal.

**Hypernutri′tion.** Excessive nutrition.

**Hypero′a** (*hyperoon*, upper story). Palatine arch; base of cranium; hard palate; velum palati.

**Hyperodontogeny,** hi-per-o-don-toj-en-e (*odous*, tooth, *gennao*, to produce). Excessive growth of teeth.

**Hyperoi′tis.** Inflammation of the velum palati.

**Hyperonco′sis** (*hyper*, over, *onkos*, swelling). Excessive tumefaction. **H. i′ridis,** iridoncosis.

**Hyperonych′ia** or **Hyperonycho′sis** (*hyper*, over, *onyx*, nail). Excessive growth of the nails.

**Hyperoöchas′ma** (*hyperoa*, palate, *chasma*, opening). Fissure of the palate.

**Hy′perope.** Hypermetrope.

**Hyperopharynge′us.** Palatopharyngeus.

**Hypero′pia** (*hyper*, over, *ops*, eye). Hypermetropia, far-sightedness.

**Hyperop′sia** (*opsis*, vision). Great acuteness of vision.

**Hyperorex′ia** or **Hyperorex′is** (*orexis*, appetite). Excessive appetite.

**Hyperorthognath′us** (*hyper*, over, *orthos*, right, *gnathos*, jaw). Having profile line inclined to auriculoinfraorbital plane 91° or over.

**Hyperos′mia** (*osme*, smell). Excessive acuteness of smell.

**Hyperos′mic acid.** Osmium tetroxide.

**Hyperosphre′sia** or **Hyperosphre′sis** (*osphresis*, smell). Hyperosmia.

**Hyperosteogeny,** hi-per-os-te-oj′en-e (*hyper*, over, *osteon*, bone, *gennao*, to produce). Excessive growth of bone.

**Hyperosto′sis** (*hyper*, over, *osteon*, bone). Exostosis; hypertrophy of bone.

**Hyperpep′sia.** Indigestion caused by an excess of chloride in the gastric juice.

**Hyperpha′gia** (*phago*, to eat). Overeating.

**Hyperpha′sia** (*phasis*, talking). Excessive loquacity.

**Hyperphleboec′tasy** (*hyper*, over, *phleps*, vein, *ektasis*, swelling). Excessive venous dilatation.

**Hyperphlebo′sis** (*phleps*, vein). Too great development of the venous system; predominant venosity.

**Hyperphleg′ma.** Excessive secretion of phlegm.

**Hyperphlegma′sia.** Hyperphlogosis.

**Hyperphlogo′sis** (*hyper*, over, *phlogosis*, inflammation). A high degree of inflammatory action.

**Hyperpho′ria** (*hyper*, over, *phoreo*, to carry). Inclination of visual axis of one eye to a point above that of the other eye.

**Hyperphra'sia** (*phrasis*, speech). Exaggerated style of speech.

**Hyperphren'ia** (*phren*, mind). Great mental excitement; mania.

**Hyperpigmenta'tion.** Excessive amount of pigment.

**Hyperpla'sia** (*hyper*, over, *plasso*, to form). Excess of formative action. This relates to the formation of new elements, hypertrophy being an increase in bulk of pre-existing normal elements.

**Hyperplas'ma** (*plasso*, to form). Hyperinosis.

**Hyperplas'tic.** Relating to excess of formative action.

**Hyperplas'ty.** Hyperplasia; hypergenesis.

**Hyperplat'yrrhine** (*hyper*, over, *platys*, broad, *rhis*, nose). Having nasal index over 58°.

**Hyperplero'sis** (*plerosis*, filling up). Extreme repletion.

**Hyperpneu'sia, Hyperpneu'sis,** or **Hyperpneus'tia** (*pneo*, to blow). Excessive flatulence.

**Hyperpnœ'a** (*pnoe*, breathing). Abnormally rapid breathing due to deficiency of oxygen in the blood.

**Hyperporo'sis** (*porosis*, formation of callus). Excessive formation of callus.

**Hyperprax'ia** (*praxis*, action). Overaction, leading to listlessness or inaction; excessive movement of the limbs, as sometimes noticed in the insane.

**Hyperpresbyo'pia.** Extreme presbyopia; hypermetropia.

**Hyperpresby'tia.** Hyperpresbyopia.

**Hyperprochore'sis** (*hyper*, over, *prochoreo*, to go forward). Abnormally increased motor action of the stomach.

**Hyperpselaphe'sia** (*pselaphesis*, act of feeling). Excessively acute sense of touch.

**Hyperpyret'ic** (*pyretos*, feverish). Having an abnormally high body temperature.

**Hyperpyrex'ia** (*hyper*, over, *pyrexis*, fever). Excessively high fever.

**Hyperres'onance.** Excessive amount of resonance on percussion.

**Hyperrhinencepha'lia** (*hyper*, over, *rhis*, nose, *kephale*, head). Enlargement of the olfactory nerves with deformative prominence of the frontal bone.

**Hypersar'cia** (*hyper*, over, *sarx*, flesh). Obesity.

**Hypersarco'ma.** Fungosity.

**Hypersarco'sis.** Obesity. Excessive development of granulations. Hypertrophy of muscular tissue. **H. cor'dis,** cardiac hypertrophy. **H. testic'uli,** sarcocele.

**Hypersar'kia.** Obesity.

**Hypersecre'tion.** Excessive secretion.

**Hypersom'nia** (*hyper*, over, *somnus*, sleep). Excessive somnolence.

**Hyperspad'ias.** Epispadias.

**Hyperspas'mia** (*spasmos*, spasm). Convulsion.

**Hypersplenot'rophy.** Hypertrophy of the spleen.

**Hyperspon'gia** (*spongos*, fungus). Spina ventosa; fungosity.

**Hypersteato'sis** (*hyper*, over, *stear*, fat). Excessive secretion of fat or of sebaceous matter, as in seborrhœa.

**Hypersthe'nia** (*sthenos*, strength). Excessive strength; superexcitement.

**Hypersthen'ic.** Stimulant, active, violent.

**Hyperten'sion.** Excessive tension.

**Hyperthe'lic** (*hyper*, over, *thele*, nipple). Above the nipple. On mucous membrane.

**Hyperther'mal.** Excessively hot, as *hyperthermal springs*.

**Hyperthermalge'sia** or **Hyperthermal'gia.** Intense pain from contact with heat.

**Hyperther'mia** (*hyper*, over, *therme*, heat). Excessive heat; great increase in temperature.

**Hyperther'mic.** Relating to high temperature.

**Hyperthermoæsthe'sia.** Excessive sensibility or impressibility to heat.

**Hy'perthermy.** Hyperpyrexia.

**Hyperthym'ia** (*hyper*, over, *thymos*, vehemence). Mental disease characterized by cruelty or excessive passion or acts of folly.

**Hyperthy'rea.** Condition due to increased activity of the thyroid gland.

**Hyperthyroida'tion.** Increased action of the thyroid gland.

**Hyperto'nia** (*tonos*, tone). Hypertonicity; excessive irritability. Opposed to atony.

**Hyperton'ic.** Relating to or disposed to excessive tonicity or irritability.

**Hypertonicity** (to-nis'i-te) or **Hyper'tony.** Hypertonia.

**Hypertox'ic.** Exceedingly poisonous.

**Hypertricho'sis** or **Hypertrichi'asis** (*thrix*, hair). Excessive production of hair.

**Hypertrophæ'mia** (*trophe*, nourishment, *haima*, blood). State in which the plastic powers of the blood are increased.

**Hypertroph'ia** (*trophe*, nourishment). Hypertrophy.

**Hypertroph'iæ** (pl. of hypertrophia). An order of cutaneous diseases characterized by hypertrophy of the derma or epidermis, or both, or of the hair follicles.

**Hypertroph'ic.** Relating to or characterized by hypertrophy or enlargement.

**Hyper'trophied** or **Hyper'trophous.** See *Hypertrophy.*

**Hyper'trophy.** State of a part in which the nutrition is performed with greater activity, and which on that account at length acquires unusual bulk. A part thus affected is said to be hypertrophied or hypertrophous. See *Hyperplasia.* **Centrip'etal h.,** concentric hypertrophy of the heart. **Compen'satory h.,** h. of a part or organ by which it can perform additional work to compensate for defective condition or work of another part. **Concen'tric h.,** h. of the heart leading to diminution of its cavities. **Elemen'tary h.,** simple hypertrophy. **Excen'tric h.,** h. of the walls of a cavity, as ventricle of the heart, with dilatation. **False h.,** increased growth of one tissue of an organ. **Numer'ical h.,** hyperplasia. **Physiolog'ical h.,** h. caused by unusually active exercise of a part or organ. **Pseudomus'cular h.,** pseudohypertrophic muscular paralysis. **Quan'titative h.,** h. with increase in number of the elements or items composing a part or organ. **Sim'ple h.,** increased number of the component elements or items of a part or organ.

**Hypertro'pia** (*tropos*, turning). Strabismus sursumvergens, in which the axis of one eye is turned above that of the other.

**Hyperure'sis** or **Hyperurorrhœ'a** (*hyper*, over, *ouron*, urine, *rheo*, to flow). Excessive urination; polyuria; enuresis. **H. aquo'sa,** diabetes; polyuria. **H. sacchari'na,** diabetes mellitus.

**Hypervenos'ity.** Excessive development of the venous system generally or of individual veins.

**Hypesthe'sia.** Hypæsthesia.

**Hy'pha,** pl. hy'phæ (*hyphe*, a web). A fungous thread or filament, the aggregation of which constitutes mycelium. (See cut under *Aspergillus.*)

**Hyphæmato'sis** or **Hypohæmato'sis.** Morbidly diminished hæmatosis, or blood-formation, or vascular action. Condition like anæmia or chlorosis, with defective respiration.

**Hyphæ'mia** or **Hyphe'mia.** Deficiency of blood; oligæmia; ecchymosis. **H. oc'uli,** extravasation of blood in the anterior chamber.

**Hyphidro'sis** (*hypo*, under, *hidrosis*, sweating). Slight sweating; deficiency of perspiration.

**Hyphogen'ic** or **Hyphogenous,** hi-foj'en-us (*hyphe*, hypha, *gennao*, to produce). Hyphomycetic. **H. syco'sis,** see *Sycosis.*

**Hyphol'ogy** (*hyphe*, texture, *logos*, description). Histology.

**Hyphomyce'tes** (*hyphos*, tissue, *mykes*, fungus). A group of fungi formed of hyphæ, or filamentous fungi. Penicilium and the various molds are included in this group.

**Hyphomycet'ic** or **Hyphomyce'tous.** Relating to hyphomycetes.

**Hypino'sis** (*hypo*, under, *is*, fibre). Condition of the blood in which the quantity of fibrin or its proportion to the blood corpuscles is less than in health. The quantity of corpuscles is either absolutely increased or their proportion to the fibrin is larger than in healthy blood.

**Hypinot'ic.** Relating to hypinosis.

**Hypnacetin'.** Result of action of acetyl-para-amidophenol and acetophenone; antiseptic and hypnotic; dose, gr. iij (0.2).

**Hyp'nal.** Oily liquid of ethereal odor and taste of chloral; compound of chloral and antipyrin; sedative; analgesic, and hypnotic; chloral antipyrin.

**Hypnal'gia.** Pain recurring at night.

**Hyp'nic** (*hypnos*, sleep). Producing sleep; relating to sleep.

**Hypnogenet'ic** or **Hypnogen'ic** (*hypnos*, sleep, *gennao*, to produce). Producing sleep or hypnotism. **H. spots**, certain points on the cutaneous surface in the hysterical, touching of which causes sleep or a hypnoid state.

**Hyp'noid** (*hypnos*, sleep, *eidos*, resemblance). Resembling sleep.

**Hyp'nolepsy** (*hypnos*, sleep, *lepsis*, seizure). Morbid drowsiness. Narcolepsy. African sleep disease.

**Hypnol'ogy** (*hypnos*, sleep, *logos*, discourse). The science of sleep and hypnotism.

**Hyp'none.** $C_8H_8O$. Acetophenone, phenylmethylketone, methylphenylketone. Made by acting on zinc-methyl with chloride of benzyl, or distilling together a mixture of acetate and benzoate of calcium. Colorless, oily, liquid, with the odor of bitter almonds, soluble in alcohol, chloroform, and ether. Hypnotic in dose of one to four minims.

**Hypnopho'bia** (*hypnos*, sleep, *phobos*, dread). Morbid dread of sleep.

**Hypnophreno'sis** (*hypnos*, sleep, *phren*, mind). Disturbed sleep, as in somnambulism, nightmare, etc.

**Hypnopœ'us** (*hypnos*, sleep, *poieo*, to make). Producing sleep.

**Hyp'nos.** Sleep.

**Hypno'sia.** Morbid drowsiness.

**Hypno'sis.** Unnatural sleep; hypnotism; narcolepsy. The state just preceding slumber. Supervention or production of sleep or of an hypnotic condition.

**Hypnot'ic.** Somniferous. Agent producing sleep. Relating to hypnotism. **H. hallucina'tions,** phenomena of hypnotism; also hallucinations in the state between sleeping and waking. **H. sugges'tion,** effect produced in one who has been hypnotized, under influence of which suggestions of the operator are adopted by the patient as his own ideas.

**Hyp'notism.** An artificially produced neurotic condition or form of lethargy resulting from direct, patient attention to a second party. There is loss or suspension of sensation, consciousness, or will-power.

**Hypnotiza'tion.** Act of subjecting any one to hypnotic influence.

**Hyp'notize.** To subject to or put under the influence of hypnotism.

**Hypo-.** In composition, under.

**Hypoacid'ity.** Deficient acidity.

**Hypoæ'mia.** Hypæmia; suggillation.

**Hypoæsthe'sia.** Hypæsthesia.

**Hypoalbumino'sis.** Diminution in the quantity of albumin in the blood.

**Hypoalonæ'mia** (*hals*, salt, *haima*, blood). A reduced proportion of salts in the blood.

**Hypoazotu'ria** (*azote*, nitrogen, *ouron*, urine). Diminution in amount of urea passed in the urine.

**Hy'poblast** (*hypo*, under, *blastos*, germ). Entoderm or inner or mucous layer of blastoderm.

**Hypoblas'tic.** Relating to the hypoblast.

**Hypobleph'aron** (*hypo*, under, *blepharon*, eyelid). Tumefaction under one or both eyelids.

**Hypobran'chial groove.** Ventral groove in the œsophagus of the fœtus.

**Hypobro'mite.** Salt of hypobromous acid, HBrO. **H. test,** test for urea by sodium hypobromite extemporaneously prepared; gaseous nitrogen passes off and is measured.

**Hypobu'lia** (*boule*, will). Deficiency of will-power.

**Hypocar'dia** (*hypo*, under, *kardia*, heart). Displacement of the heart in a downward direction.

**Hypocat'alepsy.** Slight catalepsy or epilepsy.

**Hypocathar'sis.** Feeble purgation.

**Hypocathar'tic.** Laxative.

**Hypochlorhyd'ria.** Secretion of a deficient amount of free hydrochloric acid (less than 0.1 per cent.) in the gastric juice.

**Hypochlo'ric acid.** Chlorine peroxide, obtained by treating potassium chlorate with a strong sulphuric acid; it is very explosive.

**Hypochlo'rite.** Salt formed with hypochlorous acid, HClO.

**Hypochlo'rous acid.** Acid obtained by agitating mercuric oxide with chlorine-water; is a strong bleaching agent.

**Hypochœ'ris macula'ta.** Herb growing in Europe, ord. *Compositæ;* expectorant. **H. radica'ta,** Australian cape weed, long-rooted cat's ear, grows in Europe, having similar properties to H. maculata; used also in intestinal obstructions.

**Hypochon'dria.** Hypochondriasis.

**Hypochon'driac** or **Hypochondri'acal.** Relating to hypochondriasis. One suffering from hypochondriasis. **H. re'gion,** portion of the abdomen beneath the ribs.

**Hypochondri'acism.** Hypochondriasis.

**Hypochondrial'gia.** Pain in the hypochondrium.

**Hypochondri'asis.** Probably so called from the circumstance of some hypochondriacs having felt an uneasy sensation in the hypochondriac regions. Species of neurosis or of mental alienation observed in persons in other respects of sound judgment, who reason erroneously on whatever concerns their own health. It is characterized by disordered digestion, flatulence, borborygmi, extreme increase of sensibility, palpitations, illusions of the senses, a succession of morbid feelings appearing to simulate those of disease, exaggerated uneasiness of various kinds, chiefly as to what regards the health, etc. Indigestion is doubtless often a cause of hypochondriasis, but the seat of the affection is really, though functionally, in the brain. The disease almost always appears in adult life, most commonly in irritable individuals and in those exhausted by mental labor, domestic or public affairs, etc.

**Hypochon'driasm, Hypochon'dricism, Hypochon'drism,** or **Hypochon'dry.** Hypochondriasis.

**Hypochon'drium** (*hypo*, under, *chondros*, cartilage). Hypochondriac region. Each lateral and superior region of the abdomen is so called, because bounded by the cartilaginous margin of the false ribs, which forms the base of the chest. There is a right and left hypochondrium.

**Hypochro'mia** (*chroma*, color). Unusual pallor of the skin, or general deficiency in pigmentation.

**Hypochro'sis** (*chrosis*, color). Unnatural paleness. Want of color in red corpuscles of the blood.

**Hypochy'lia.** Deficiency of chyle.

**Hypocine'sia** or **Hypocine'sis.** Slight or defective motion; diminished muscular response to excitation.

**Hypocis'tis.** Cytinus.

**Hypocly'sis** or **Hypoclys'mus** (*hypo*, under, *klyzo*, to wash out). Purging by a clyster.

**Hypocœ'lium** (*hypo*, under, *koilia*, cavity). Abdomen.

**Hypocœ'lom.** The ventral portion of the cœlom.

**Hypocœ'lon** or **Hypocœ'lum.** Cavity under the lower eyelid or the lower eyelid itself.

**Hy'pocone** (*hypo*, under, *konos*, cone). Sixth cusp in molars of upper jaw.

**Hypocopho'sis** (*kophos*, deaf). Slight deafness.

**Hypocra'nium** (*hypo*, under, *kranion*, the cranium). Collection of pus betwen the cranium and dura mater.

**Hypocrin'ia** (*krino*, to secrete). Lessened secretion.

**Hypocystot'omy** (*kystis*, bladder, *tome*, section). Perineal cystotomy; lateral lithotomy.

**Hypocyto'sis** (*hypo*, under, *kytos*, cell). Form of anæmia in which there is diminution in the number of corpuscles.

**Hy'poderm** (*derma*, skin). Subcutaneous tissue.

**Hypoder'mal.** Hypodermic.

**Hypoderma'tic.** Hypodermic; subcutaneous.

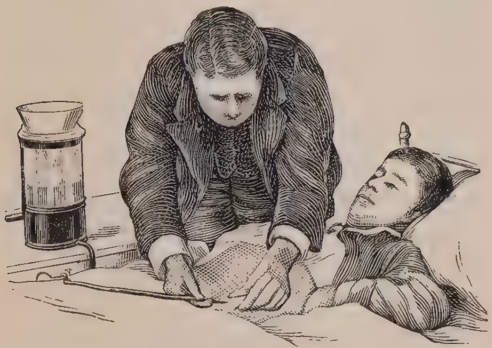
**Hypodermatoc'lysis.** Hypodermoclysis.

**Hypodermat'omy** (*hypo*, under, *derma*, skin, *tome*, incision). Subcutaneous operation.

**Hypoder'mic** (*hypo*, under, *derma*, skin). Under the skin; subcutaneous. **H. injec'tion,** injection of fluid into the subcutaneous cellular tissue; also the fluid injected. When blood is thus injected the process is called *h. transfusion*. **H. medica'tion,** the administration of remedies by injecting them under the skin. **H. syr'inge,** a syringe with hollow needle point for use in hypodermic medication.

**Hypoder'mis.** Hypoderm. Clitoris; nymphæ; prepuce of clitoris.

**Hypodermoc'lysis** (*hypo*, under, *derma*, skin, *klysis*, washing out). Subcutaneous injection of saline solutions, in quantity, as in the treatment of cholera.



The apparatus and method used in giving hypodermoclysis. The ordinary irrigator is attached to a small cannula, and this is passed into the loose tissues of the abdominal wall.

**Hypodermother'apy.** Hypodermic medication.

**Hypodiaphragmat'ic.** Below the diaphragm; subphrenic.

**Hypodic'rotous.** Term applied to the pulse-trace of the sphygmograph when indicating that dicrotism is slight or retarded. When the latter is blended with the line of ascent of the next pulsation it is said to be hypodicrotous.

**Hypod'yma.** Pleura; mediastinum.

**Hypodynam'ic** (*dynamis*, power). Adynamic.

**Hypodyn'ia** (*odyne*, pain). Slight pain.

**Hypoëcta'sia.** Hypectasia.

**Hypoesopho'ria.** Downward and inward strabismus.

**Hypoexopho'ria.** Downward and outward strabismus.

**Hypog'ala** (*hypo*, under, *gala*, milk). Effusion of milky fluid into the eye; hypopyon.

**Hypogas'ter.** Hypogastrium.

**Hypogastral'gia** (*hypogastrium* + *algos*, pain). Pain in the hypogastrium.

**Hypogastrecta'sia** (*hypogastrium* + *ektasis*, dilatation). Dilatation of the hypogastrium.

**Hypogastrial'gia.** Hypogastralgia.

**Hypogas'tric.** Relating to the hypogastrium. **H. ar'tery,** more internal of the two branches into which the primary iliac divides; it descends into the cavity of the pelvis, and gives off a number of branches, which arise at times separately, at others by common trunks; see *Umbilical arteries*. **H. folds,** peritoneal folds from the sides of the bladder to the umbilicus, in which are the obliterated umbilical arteries. **H. fos'sa,** fossa in the peritoneum caused by the hypogastric folds. **H. gan'glion,** large nervous ganglion on each side of the cervix uteri, immediately behind the ureter, which receives the greater number of the nerves of the hypogastric and sacral plexuses, and distributes branches to the uterus, vagina, bladder, and rectum. **H. glands,** lymphatic glands of the hypogastric region. **H. lithot'omy,** high or suprapubic lithotomy. **H. nerve,** branch of the iliohypogastric nerve to the skin. **H. plex'us,** this is situated at the lateral and posterior parts of the rectum and the *bas fond* of the bladder, and is formed by the sacral nerves and the inferior mesenteric plexus, giving off numerous filaments, which accompany the arteries passing to the rectum and genital organs. Also plexus of lymphatic vessels surrounding the internal iliac artery. **H. re'gion,** hypogastrium. **H. vein,** internal iliac vein.

**Hypogastriot'omy** (*hypogastrium*+*tome*, incision). Operation of opening the abdomen in the region of the hypogastrium.

**Hypogastri'tis.** Slight gastritis.

**Hypogas'trium** (*hypo*, under, *gaster*, belly). Lower part of the abdomen; the hypogastric region extending as high as three fingers' breadth beneath the umbilicus. It is divided into three secondary regions: one middle or pubic, and two lateral or inguinal.

**Hypogas'trocele** (*hypogastrium* + *kele*, tumor). Hernia in the hypogastric region, occurring through the separated fibres of the lower part of the linea alba.

**Hypogastrodid'ymus** (*hypogastrium* + *didymos*, twin). Monstrosity in which twins are united by the hypogastrium.

**Hypogastroecta'sia** (*hypogastrium*+*ektasis*, dilatation). Dilatation of the abdomen at the hypogastrium.

**Hypogastroneur'ia** (*hypo*, under, *gaster*, stomach, *neuron*, nerve). Deficient nervous action of the stomach.

**Hypogastrorrhex'is** (*hypogastrium*+*rhexis*, rupture). Rupture of the hypogastrium; eventration.

**Hypogastrosteno'sis** (*hypogastrium*+*stenosis*, narrowness). Narrowness or constriction of the hypogastrium.

**Hypogene'sia** or **Hypogen'esis** (*genesis*, formation). Defective development or formative power.

**Hypogeusia,** hi-po-gu'ze-ah (*geusis*, taste). Deadening or diminution of sense of taste.

**Hypoglobu'lia.** Diminution in the quantity of globules in the blood.

**Hypoglos'sal** (*hypo*, under, *glossa*, tongue). Under the tongue. **H. a'rea,** inferior end of round fasciculus, floor of fourth ventricle. **H. nerve,** lingual or gustatory nerve, ninth pair of nerves; it arises by ten or twelve very fine filaments from the grooves separating the corpora pyramidalia from the corpora olivaria, issues from the cranium by the foramen condyloideum anterius, and divides, near the angle of the jaw, into two branches: one, the cervicalis descendens or descendens noni; the other, the lingual branch, the continuation of the principal trunk, gives numerous filaments to the muscles of the tongue and pharynx. The ninth pair communicates motion to the muscles to which it is distributed. **H. nu'cleus,** nucleus of origin of the hypoglossal or twelfth cranial nerve in the medulla oblongata anterior to the central canal.

**Hypoglossiadeni'tis** (*hypo*, under, *glossa*, tongue, *aden*, gland). Inflammation of the sublingual gland.

**Hypoglos'sis, Hypoglot'tis,** or **Hypoglot'tia** (*hypo*, under, *glossa*, tongue). Under surface of the tongue. Ranula.

**Hypoglossi'tis.** Inflammation under the tongue.

**Hypoglos'sium.** Sublingual region. Ranula.

**Hypoglossocynan'che.** Angina Ludovici.

**Hypoglos'sum.** Ruscus hypoglossum. Ranula.

**Hypoglos'sus.** Hypoglossal nerve.

**Hypoglot'tis.** Hypoglossis. Ranula.

**Hypoglu'tis** (*hypo*, under, *gloutos*, breech). The lower and projecting part of the nates; gluteal fold.

**Hypognathadeni′tis** (*gnathos*, jaw, *aden*, gland). Inflammation of the submaxillary gland.

**Hypog′nathous.** Having the lower jaw more prominent than the upper.

**Hypog′nathus** (*hypo*, under, *gnathos*, jaw). Double monstrosity in which one fœtus is attached to another beneath its jaw.

**Hypohidro′sis** (*hypo*, under, *hidrosis*, sweat). Deficiency of perspiration.

**Hypohy′al.** Under the hyoid bone.

**Hypohydræ′mia** (*hypo*, under, *hydor*, water, *haima*, blood). Deficient amount of water in the blood.

**Hypohylo′ma.** A tumor derived from primitive pulp tissue of hypoblastic origin; see *Hyloma*.

**Hypohypno′sis** (*hypnos*, sleep). Insufficient or lessened amount of sleep.

**Hypoidro′sis.** Hypohidrosis.

**Hypoinosæ′mia** (*hypo*, under, *is*, fibrin, *haima*, blood). Diminution of the amount of fibrin in the blood, or of formative power as regards fibrin in the blood.

**Hypoïsoton′ic.** Less than isotonic. See *Isotonic*.

**Hypokine′sia** or **Hypokine′sis.** Diminished power of movement; slow motion or action; slight paralysis of motion; hypocinesia.

**Hypolem′mal** (*hypo*, under, *lemma*, husk). Having position on the ental side of a sheath; a portion of nerve in a motorial end-plate, for example.

**Hypolepido′ma.** A tumor originating in lining-membrane tissue of hypoblastic derivation; see *Lepidoma*.

**Hypolep′sis** (*lepsis*, seizure). Slight mania or monomania.

**Hypoleucocyto′sis.** Diminution in number of leucocytes in the blood.

**Hypoleukæ′mia.** Hypoleucocytosis.

**Hypolo′gia** (*hypo*, under, *logos*, discourse). General mental degeneration of the insane, in which words are improperly used to express thoughts.

**Hypolym′pha.** Plastic effusion into the anterior chamber of the eye.

**Hypolym′phia.** Deficiency of lymph.

**Hypol′ysis.** Slight paralysis.

**Hypoma′nia.** An abnormal mental state of temporary paroxysmal character, marked by excitement and disturbance of reasoning powers; nerve-storm.

**Hypomelancho′lia.** Slight melancholy.

**Hypom′enous.** Unattached to the part above.

**Hypometro′pia** (*hypo*, under, *metron*, measure, *ops*, eye). Myopia.

**Hypo′mia** (*hypo*, under, *homos*, shoulder). Axilla.

**Hypomne′sis** (*hypo*, under, *mnesis*, memory). Defective memory.

**Hypomnes′tic** Having defective memory.

**Hypomo′ria** (*moria*, folly). Slight imbecility of mind or slight delirium.

**Hypomyosthe′nia** (*mys*, muscle, *sthenos*, strength). Muscular debility.

**Hypomyoto′nia.** Diminished muscular tone. A slight degree of muscular spasm.

**Hypomyot′rophy** (*hypo*, under, *mys*, muscle, *trophe*, nourishment). Muscular atrophy.

**Hypomyx′ia** (*hypo*, under, *myxa*, mucus). A condition in which the secretion of mucus is diminished or absent.

**Hyponeu′ria** (*hypo*, under, *neuron*, nerve). Morbidly diminished nervous energy; partial paralysis.

**Hyponi′trous acid.** HNO, a monobasic acid; its salts are *hyponitrites*.

**Hyponomoder′ma** (*hyponomos*, burrowing under, *derma*, skin). Skin disease caused by the presence of creeping larvæ.

**Hyponychial**, hi-pon-ik′e-al (*hypo*, under, *onyx*, nail). Seated under the nail; relating to parts so situated.

**Hyponychium**, hip-on-ik′e-um. Embryonic nail; also the nail bed.

**Hypopep′sia.** Defective digestive power.

**Hypopharyn′geal.** Under the pharynx.

**Hypopha′sia** or **Hypoph′asis** (*hypo*, under, *phaino*, to appear). The state of the eyes in which the white only is seen between the eyelids; lagophthalmia.

**Hypophlegma′sia.** Slight inflammation.

**Hypoph′ora .** A fistulous ulcer. Purgation.

**Hypophos′phites.** A class of compounds formed by the union of hypophosphorous acid with oxides of iron, sodium, calcium, etc., and with quinine and strychnine, prescribed in the form of syrup to obviate their oxidation into phosphates. They are prescribed in debility, anæmia accompanied with nervous derangement, muscular weakness, nervous exhaustion, hysteria, insomnia, gastralgia, etc.

**Hypophos′phorous acid.** $H_3PO_2$. White, crystalline, monobasic acid, forming salts with bases. See *Hypophosphites*. Its therapeutic action is similar to that of phosphorous acid.

**Hypophra′sia** (*phrasis*, speech). Defective speech from loss of control, as in paresis, or from disinclination to speak, as in melancholia.

**Hypophrax′ia.** Disinclination to move from assumed or fixed position, as in melancholia.

**Hypophren′ic** (*phren*, diaphragm). Under the diaphragm.

**Hypophthal′mia.** Hypopyon.

**Hypophthal′mion** (*ophthalmos*, eye). Part under the eye where œdema generally commences in chronic diseases and in cachexiæ.

**Hypophys′ial.** Relating to an hypophysis.

**Hypoph′ysis** (*hypo*, under, *phyo*, to grow). Process of bone or other tissue; outgrowth. **H. cerebra′lis cer′ebri,** or **dienceph′ali,** pituitary gland.

**Hypop′itys languino′sa.** American pine-sap, false beech-drops, birds' nest. Powdered root is nervine. Remedy for cough of sheep.

**Hypop′ium.** Malar bone.

**Hypopla′sia** (*hypo*, under, *plasso*, to form). Defect in development or formative power.

**Hypoplas′ma** (*plasso*, to form). Hypinosis.

**Hypoplas′tia.** Hypoplastæmia.

**Hypoplas′tic** (*hypo*, under, *plastikos*, formative). Possessing impaired power of formation.

**Hypoplasticæ′mia** (*hypo*, under, *plastikos*, formative, *haima*, blood). Diminished plasticity of the blood.

**Hy′poplasty.** Hypoplastæmia; hypoplasia.

**Hypopselaphe′sia** or **Hypopselaphe′sis** (*pselaphesis*, act of feeling). Impaired or diminished tactile power.

**Hypopsophe′sis** (*hypopsopheo*, to make a slight noise). Noise of fluids in passage through the œsophagus.

**Hypopty′alism** (*ptyalon*, saliva). Diminished secretion of saliva.

**Hypop′yon** (*hypo*, under, *pyon*, pus). Collection of pus. Name given to small abscesses between the laminæ of the cornea, hypopyon of the cornea, as well as to purulent collections in the chambers of the eye, hypopyon of the chambers. Also effusion of blood under the eyelids and tunica conjunctiva or under the lower eyelid. **H. kerati′tis**, keratitis suppurans; h. of the cornea.

**Hypopyre′sis.** A subnormal body temperature.

**Hypoquebrachine′.** Yellowish alkaloid, $C_{21}H_{26}N_2O_2$, from white quebracho bark.

**Hyporrhachis**, hip-or′rak-is (*rhachis*, spine). Hollow in the small of the back.

**Hyporrhœ′a** (*rheo*, to flow). Slight discharge.

**Hyposar′ca** (*sarx*, flesh). Anasarca. Collection of fluid in muscular tissue. Pendulous abdomen; physconia.

**Hyposarco′sis** (*sarcosis*, fleshy growth). Small fleshy growth; wart.

**Hyposcheot′omy** (*oscheon*, scrotum, *tome*, incision). Treatment of hydrocele by puncturation at the lower part of the tunica vaginalis.

**Hyposi′agon** (*hypo*, under, *siagon*, jaw-bone). Inferior maxillary bone.

**Hyposial′aden** (*hypo*, under, *sialon*, saliva, *aden*, gland). Submaxillary gland.

**Hyposialadeni′tis.** Inflammation of submaxillary gland.

**Hyposkel′etal.** Below the vertebral axis of the embryo.

**Hypos′mia** (*osme*, smell). Diminished or defective sense of smell.

**Hypospa′dia, Hypospa′dias** (*hypo*, under, *spao*, to draw). Malformation in which the canal of the urethra, instead of opening at the apex of the glans, terminates at its base or beneath the penis at a greater or less distance from the symphysis pubis. When the orifice of the urethra is very near the root of the penis the scrotum is divided, as it were, into two great labia—a malformation often taken for hermaphrodism. The condition probably causes impotence; it certainly renders impregnation less probable. When the opening is in the glans penis it is called *glandular* or *balanic* hypospadias; between the glans and scrotum, *penile* h.; in the scrotum, *scrotal* h.; in the perineum, *perineal* h. Also retraction of glans from contracted frænum. In female, deficiency of urethra, the urine thus passing into the vagina.

**Hy′pospasm.** Slight spasmodic action.

**Hyposphe′nal bone.** Presphenoid or basisphenoid bone of fishes.

**Hypostaphyle,** hi-po-staf′il-e (*hypo*, under, *staphyle*, uvula). Relaxation and tumefaction of the uvula; staphylœdema.

**Hypostaphyli′tis.** Slight inflammation of the uvula.

**Hypos′tasis** (*hypostasis*, foundation). A morbid deposition. Sediment. Passive congestion or venous hyperæmia from dependent position. **Cadav′eric h.,** venous hyperæmia from gravity; noticed in the dead body. **Pul′monary h.,** hyperæmia or congestion of the dependent portion of the lungs.

**Hypostat′ic.** Relating to hypostases, sediments, or depositions. **H. conges′tion** or **hyperæ′mia,** congestion of blood in vessels of a part from dependent position. **H. pneumo′nia,** inflammation and passive congestion of the lungs at their lower portions.

**Hyposteno′sis.** Slight narrowness or contraction.

**Hyposter′nal.** Under the sternum. **H. bone,** epihyal bone of fishes.

**Hyposthe′nia** (*sthenos*, strength). Debility.

**Hyposthen′ic.** Debilitated. Contrastimulant or sedative; a medicine that reduces the action of the heart without disturbing its regular beat.

**Hyposthenu′ria.** Suppression of urine.

**Hypostro′ma.** Mycelium of certain fungi.

**Hypos′trophe** (*hypo*, under, *strepho*, to turn). Restlessness. Relapse or return of a disease. Retroversion.

**Hypostyp′sis** (*stypsis*, contraction). Mild astringency.

**Hypostyp′tic.** Feeble astringent.

**Hyposul′phite.** Salt formed by union of hyposulphurous acid with a base. See *Sulphurous acid.*

**Hyposyner′gia** (*hypo*, under, *synergia*, cooperation). Defective coordination.

**Hyposysto′lia.** Defective systole of the heart, noticed sometimes in advanced stages of heart disease.

**Hypotar′sus.** Calcaneum of some birds.

**Hypothalam′ic re′gion.** Hypothalamus.

**Hypothal′amus.** Region in tegmentum of crus cerebri under the thalamus.

**Hypoth′enar** (*thenar*, palm of hand) or **H. em′inence.** Fleshy projection of the palmar surface of the hand, corresponding with the little finger, and supported by the fifth metacarpal bone; it is formed of the palmaris brevis, adductor or flexor brevis minimi digiti, and opponens minimi digiti muscles. Name also given to different muscles of the hand; hypothenar minimi digiti includes abductor, flexor brevis, and opponens minimi digiti; hypothenar pollicis corresponds to the abductor and a portion of the flexor brevis pollicis. Eminence at ulnar edge of the palm. **H. auricula′re,** h. minimi digiti. **H. ma′jus,** h. eminence. **H. min′imi dig′iti,** flexor parvus minimi digiti. **H. mi′nor metacarpe′us,** abductor minimi digiti. **H. pol′licis,** abductor pollicis. **H. Riola′ni,** flexor parvus minimi digiti.

**Hypother′mal** or **Hypother′mic.** Relating to depression of temperature, as of the body.

**Hypother′mia** (*hypo*, under, *therme*, heat). Diminution of heat; lowering of temperature.

**Hypothermoæsthe′sia** (*therme*, heat, *aisthesis*, sensation). Greatly diminished sensitiveness to heat.

**Hypother′my.** Hypothermia.

**Hypoth′esis** (*hypo*, under, *tithemi*, to place). Supposition; theory.

**Hypothyreo′sis.** Reduction in function of the thyroid gland.

**Hypoto′nia, Hypoto′nus,** or **Hypot′ony** (*hypo*, under, *tonos*, tension). Diminished tone or tension, as within the eyeball.

**Hypotoxicity,** hi-po-toks-is′it-e. Diminution in the poisonous properties or action of any agent.

**Hypotricho′sis** (*thrix*, hair). Deficiency or loss of hair, usually from faulty nutrition causing imperfect development.

**Hypot′rope** (*trepo*, to turn). Hypostrope.

**Hypot′rophy** (*hypo*, under, *trophe*, nourishment). Scanty nourishment or nutrition; atrophy.

**Hypotrop′ic.** Relapsing.

**Hypotympan′ic.** Beneath the tympanum, as hypotympanic bone.

**Hypovenos′ity.** Defective venous supply, or defective development of the venous system.

**Hypoxæ′mia.** Deficient oxygenation of blood; asphyxia from defective oxygenation of blood.

**Hypoxanthin′.** $C_5H_4N_4O$. Leucomain of spleen, brain, muscles, marrow of bone, etc., occurring in leucocythæmia; also found in blood and urine, in nuclein of pus and red corpuscles, in plants, seeds, etc.

**Hypox′is** or **Hypox′ys erec′ta.** Stargrass; indigenous; root is eaten, and has been used as a vulnerary, and in chronic ulcers, ague, and low fevers.

**Hypseloglos′sus.** Basioglossus.

**Hypsiceph′aly** (*hypsos*, height, *kephale*, head). Having a high skull; having vertical index over 75.1°. Such head is said to be *hypsicephal′ic.*

**Hypsicra′nium** (*hypsos*, height, *kranion*, cranium). Hypsicephaly; also measurement of cranium having ratio of length to height of 82.5° to 90.4°.

**Hypsiloglos′sus.** Hyoglossus.

**Hyp′siloid.** Hyoid.

**Hypsoceph′aly.** Hypsicephaly.

**Hypson′osos** or **Hypson′osus** (*hypsos*, height, *nosos*, disease). Mountain sickness, especially of S. America; puna.

**Hypsopho′bia** (*hypsos*, height, *phobos*, fear). Dread of high places.

**Hypsoph′onous** (*hypsos*, height, *phone*, voice). Having a clear, high voice.

**Hypsopis′thius.** Term applied to crania in which a line projected from hormion to lambda makes an angle with the radius fixus of 33.5° to 41°.

**Hyptias′ma** (*hyptiazo*, to lie with the face upward). Supination.

**Hyp′tis.** Plant of Brazil and Uruguay, genus *Labiatæ.* **H. capita′ta,** of W. Indies, used as an aromatic, as are also *H. ebracteata*, *H. radiata*, and *H. suaveolens*, all having the same habitat.

**Hyra′ceum.** Evacuation from Klipdas or Hyrax capensis, or coney; in smell and medical properties resembling castor, and used in Cape Colony in nervous and spasmodic affections.

**Hy′rax capen′sis.** Cape rabbit or badger. See *Hyraceum.*

**Hyr′golum.** Colloid mercury, employed internally, hypodermically, and by inunction in skin diseases and syphilis.

**Hys′sop.** The leaves and top of Hyssopus officinalis. **Hedge h.,** Gratiola officinalis.

**Hyssopin′.** Salifiable base discovered in hyssop.

**Hysso′pus officinal′is.** Common hyssop; aromatic, stimulant, sudorific, and pectoral in the form of infusion.

**Hys′tera.** Uterus. **H. diadel′pha,** double uterus.

**Hysteral′gia** (*hystera,* uterus, *algos,* pain). Pain in the uterus; neuralgia of the uterus; irritable uterus. See *Metralgia.* **H. cancro′sa,** uterine pain due to cancer. **H. catarrha′lis,** h. from endometritis; metrorrheuma. **H. erethis′tica,** spasmodic uterine pain. **H. galac′tica,** phlegmasia alba dolens. **H. lochia′lis,** dyslochia. **H. menstrua′lis,** dysmenorrhœa. **H. rheumat′ica,** rheumatism of the uterus. **H. scirrho′sa,** h. cancrosa.

**Hysteran′esis** (*hystera,* uterus, *anesis,* relaxation). Relaxation of the uterus, especially of the fundus.

**Hysteratre′sia** (*hystera,* uterus, *atretos,* imperforate). Imperforation of the os uteri or cervix.

**Hysterec′tomy** (*hystera,* uterus, *ektome,* excision). Excision of the whole uterus; when through the abdominal wall, *abdominal hysterectomy;* when through the vagina, *vaginal hysterectomy.* **Cæsa′rean h.,** Porro's operation; oöphorohysterectomy or ovariohysterectomy. Modification of the cæsarean operation, the uterus and its contents and ovaries being removed, division being made through the cervix, and the stump clamped. In the Porro-Müller operation the uterus is drawn out through the abdominal incision, an elastic ligature placed around the cervix at the level of the internal os uteri, the uterus opened by incision, and the fœtus thus delivered.

**Hysterelco′sis** (*hystera,* uterus, *helkos,* ulcer). Ulceration of the uterus.

**Hysteremphyse′ma.** Uterine tympanites. See *Physometra.*

**Hyste′ria** (*hystera,* uterus). A neurosis, so called because reputed to have its seat in the uterus (hystera). It generally occurs in paroxysms, the chief characters of which consist in alternate fits of laughing and crying, with a sensation as if a ball—globus hystericus—is ascending from the hypogastrium toward the stomach, chest, and neck, producing a sense of strangulation. There are sometimes loss of consciousness (although the presence of consciousness generally distinguishes it from epilepsy) and convulsions. Hysteria appears to depend upon irregularity of nervous distribution in very impressionable persons, and is not confined to women, well-marked cases being occasionally met with in men. No lesion of the central nervous system has been discovered. During the fit dashing cold water on the face, stimulants applied to the nose or exhibited internally, and antispasmodics form the therapeutical agents. Exercise, tranquility of mind, and agreeable occupations are prophylactics. Chronic paroxysmal cough—hysterical cough—frequently occurs, seeming to be a convulsion of the muscles of the larynx and diaphragm, resembling the cough excited by inhalation of chlorine and other gases. **H. catalep′tica,** catalepsy. **Cer′ebral h.,** form of hysteria simulating cerebral disease or apoplexy. **Epilep′tiform** or **epilep′toid h.,** hysteroepilepsy. **H. ma′jor,** hysteroepilepsy. **H. mi′nor,** ordinary hysteria, in the attacks of which consciousness is not lost. **H. va′ga,** hysteria.

**Hyster′ic** or **Hyster′ical.** Relating to or affected with hysteria. **H. atax′ia,** an ataxic condition of hysterical origin, in which there is local anæsthesia of the skin and of the muscles of the leg. **H. au′ra,** aura accompanying hysteria. **H. breast,** painful tumefaction of the breast accompanying hysteria. **H. chore′a,** see *Chorea.* **H. cough,** see *Hysteria.* **H. glo′bus,** see *Hysteria* and *Globus hystericus.* **H. insan′ity,** hysterical mania. **H. nail,** clavus hystericus. **H. œde′ma,** phantom tumor. **H. pas′sion,** hysteria. **H. spasm,** hysteria.

**Hyster′icism.** Group of special physical and mental phenomena characteristic of hysteria.

**Hyster′ics.** Popular name for an attack of hysteria.

**Hysteriencephali′tis.** Form of inflammation of the brain thought to occur after repeated attacks of hysteria.

**Hyster′iform.** Resembling hysteria.

**Hyste′rioid.** Hysteriform.

**Hysterion′ica** or **Hysteron′ica.** Plant indigenous in Chile; used in affections of the stomach and bowels and of the air-passages, and in cystitis.

**Hysteriot′omy.** Hysterotomy.

**Hys′terism.** Hystericism; hysteria.

**Hysteri′tes.** Hydrometra.

**Hysteri′tis.** Inflammation of the womb, metritis.

**Hystero-.** In composition, uterus or hysteria.

**Hysterobubon′ocele** (*hystera,* uterus, *bubonocele,* inguinal hernia). Inguinal hernia involving the uterus.

**Hysterocarcino′ma.** Carcinoma of the uterus.

**Hysterocat′alepsy.** Hysteria complicated with catalepsy.

**Hys′terocele** (*hystera,* uterus, *kele,* hernia). Hernia of the uterus. The womb may protrude through the inguinal or the crural canal, or through the lower part of the linea alba. **H. nu′da,** prolapsus uteri.

**Hysterochloas′ma.** Chloasma dependent upon uterine disease.

**Hysteroclei′sis** (*hystera,* uterus, *kleisis,* occlusion). Jobert's operation for occlusion in vesicovaginal fistula by suture of the lips of the womb.

**Hysterocnes′mus** (*knesma,* itching). Pruritus of the uterus or genitals.

**Hysterocœliot′omy.** Hysterolaparotomy.

**Hysterocol′ic.** Uterine colic. See *Colica uterina.*

**Hysterocra′nium** (*hysteros,* behind, *kranion,* cranium). Occiput.

**Hysterocye′sis** (*hystera,* uterus, *kyo,* to be pregnant). Uterine pregnancy.

**Hysterocys′tic.** Relating to the uterus and bladder.

**Hysterocys′tocele** (*hystera,* uterus, *kystis,* bladder, *kele,* tumor). Hernia of the uterus complicated with displacement of the bladder.

**Hysterocystoclei′sis** (*hystera,* uterus, *kystis,* bladder, *kleisis,* occlusion). Bozeman's operation for turning the cervix of the uterus into the bladder in vesico-uterovaginal fistula.

**Hysterodemonop′athy.** Demonomania of hysterical women.

**Hysterodynamom′eter** (*hystera,* uterus, *dynamis,* power, *metron,* measure). Instrument or apparatus for measuring the force of uterine contractions.

**Hysterodyn′ia** (*odyne,* pain). Hysteralgia.

**Hysterœde′ma** (*oidema,* swelling). Hydrometra.

**Hys′teroephelko′sis** (*hystera,* uterus, *epi,* upon, *helko,* to draw). Bozeman's operation of drawing down the uterus to assist in closing fissures or ruptured septa.

**Hys′teroep′ilepsy.** Hysteria complicated with epileptiform convulsions and other nervous phenomena; oöphoroepilepsy.

**Hysteroepileptogenous,** his′ter-o-ep-e-lep-toj′-en-us. Producing hysteria and epilepsy. **H.-e. points,** foci of hyperæsthesia in hysteroepilepsy.

**Hysterogastror′rhaphy** (*hystera,* uterus, *gaster,* belly, *rhaphe,* suture). Hysteropexia.

**Hysterogen′ic** (*gennao,* to produce). Producing hysteria. In susceptible persons local pressure will sometimes produce hysterical symptoms. **H. zones,** foci of hyperæsthesia in hysteroepilepsy.

**Hys′teroid** or **Hysteroid′al** (*hysteria*+*eidos,* resemblance). Resembling hysteria.

**Hysteroklei′sis.** Hysterocleisis.

**Hysterolaparot′omy** (*hystera,* uterus, *lapara,* flanks, *tome,* incision). Removal of the uterus by incision through the abdomen; abdominal hysterectomy.

**Hys′terolith** (*lithos,* stone). Calculus of the uterus.

**Hysterolithi′asis.** Formation of uterine calculus.

**Hysterol′ogy.** Science relating to the uterus.

**Hysterolox′ia** (*loxos,* oblique). Oblique position of the uterus occurring during pregnancy; anteversion and retroversion of the uterus are varieties of it.

**Hystero'ma.** Fibrous tumor of the uterus.

**Hysteromala'cia** or **Hysteromalaco'ma** (*hystera*, uterus, *malakia*, softness). Softening of the uterus, especially during pregnancy, rendering it liable to rupture in labor.

**Hysteromalaco'sis.** Production of hysteromalacoma.

**Hysteroma'nia.** Hysterical mania dependent upon irritation of the uterus or ovaries; oöphoromania; nymphomania.

**Hysterom'eter** (*metron*, measure). Uterine sound.

**Hysterom'etry.** Measurement of the uterus.

**Hysteromor'phous** (*morphe*, shape). Having shape of the uterus.

**Hysteromyo'ma.** Myomatous tumor of the uterus.

**Hysteromyomec'tomy.** Excision of the whole or a considerable portion of the uterus above the vagina for myoma.

**Hysteromyot'omy.** Incision or excision of myomatous tumor of the uterus, or of the uterus for the removal of a solid tumor.

**Hys'teron** (*hysteros*, later). Placenta.

**Hysteron'cus** (*onkos*, tumor). Tumor or swelling of the uterus.

**Hysteroneurasthe'nia.** Mingled symptoms of neurasthenia and hysteria.

**Hysteroneuro'sis.** Neurosis or nervous affection dependent on uterine irritation.

**Hys'tero-oöphorec'tomy** or **Hys'tero-ovariot'omy** (*hystera*, uterus, *oöphoros*, egg-bearing, for *ovarium*, ovary, *ektome*, excision). Operation for excision of the uterus and ovaries. **Cæsa'rean h.-o.**, Porro or Porro-Müller operation; see *Hysterectomy*.

**Hysteroparal'ysis.** Paralysis of the uterus.

**Hysteropath'ia** or **Hysterop'athy** (*pathos*, affection). Disease of the uterus. Hysteria.

**Hysteropex'ia** or **Hys'teropexy** (*hystera*, uterus, *pexis*, fixation). Operation for fixation of the uterus by suture to the anterior wall of the abdomen.

**Hys'terophore** (*hystera*, uterus, *phero*, to bear). Form of pessary consisting of two oval metal plates united by a hinge and approximated by metallic rods.

**Hysterophy'ma** (*phyma*, swelling). Tumor of the uterus.

**Hysterophyse'ma** (*hystera*, uterus, *physe*, wind). Distention of the uterus with air; physometra.

**Hysteraple'gia.** Paralysis of the uterus.

**Hysteropol'ypus.** Polypus of the uterus.

**Hysteropso'phia** (*psophos*, sound). Physometra; escape of air from the uterus.

**Hysteropsycho'sis.** Disordered intellectual condition sympathetic with uterine irritation.

**Hysteropto'sis** (*hystera*, uterus, *ptosis*, fall). Prolapse of the uterus; inversion of the uterus. Protrusion of any part of the genital organs or of excrescences from them into the genital passages. Inversion of the uterus. Falling of the womb. **H. vagi'næ**, prolapsus vaginæ.

**Hysterorrha'gia.** Metrorrhagia.

**Hysteror'rhaphy** (*rhaphe*, suture). Closing an incision in, or rupture of the uterus with suture, as after cæsarean operation; also hysteropexy.

**Hysterorrhex'is** (*rhexis*, rupture). Rupture of the uterus.

**Hysterorrhœ'a.** Discharge from the uterus. See *Metrorrhagia*. **H. muco'sa**, leucorrhœa.

**Hysterorrhoïschesis**, his-ter-or-ro-isk'es-is (*hystera*, uterus, *rheo*, to flow, *schesis*, retention). Stoppage of uterine discharge.

**Hys'terosal'pingo-oöphorec'tomy.** Removal of uterus, tubes, and ovaries.

**Hysterosal'pinx** (*salpinx*, trumpet). Fallopian tube.

**Hysteroscirrhus**, his-ter-o-skir'rus. Scirrhus of the uterus.

**Hys'teroscope** (*skopeo*, to view). Metallic mirror for inspecting the state of the os uteri, throwing light to the bottom of a speculum uteri.

**Hys'terospasm.** Spasm of the uterus. Hysterical spasm.

**Hysterosto'ma** (*hystera*, uterus, *stoma*, mouth). External os uteri.

**Hysterosto'matome** (*hysterostoma*, external os uteri, *tome*, incision). Instrument for dividing the os or cervix uteri when it is important to deliver immediately, as in case of convulsions. The operation is called *hysterostomatot'omy* or *hysterostomot'omy*.

**Hysterostom'ium** (*hystera*, uterus, *stoma*, mouth). Os uteri.

**Hysterosynize'sis** (*hystera*, uterus, *synizesis*, sitting together). Adhesion of the uterus to a neighboring organ; occlusion of the uterus.

**Hysterotokot'omy** (*hystera*, uterus, *tokos*, parturition, *tome*, section). Cæsarean section.

**Hys'terotome.** Metrotome, uterotome; instrument for dividing the womb through the vagina; a kind of bistouri caché, intended to divide the cervix and os uteri. Hysterostomatome.

**Hysterotomoto'cia** or **Hysterotomoto'kia** (*hystera*, uterus, *tome*, section, *tokos*, parturition). Cæsarean section.

**Hysterot'omy.** Cæsarean section; dissection of the uterus; division of the cervix uteri. **Abdom'inal h.**, cæsarean section. **Cæsa'rean h.**, cæsarean section. **Vag'inal h.**, incision of the uterus through the vagina.

**Hysterotrachelor'rhaphy** (*hystera*, uterus, *trachelos*, neck, *rhaphe*, suture). Operation for laceration of the cervix by freshening the edges of the wound and bringing them in apposition; Emmet's operation.

**Hysterotrachelot'omy** (*hystera*, uterus, *trachelos*, neck, *tome*, incision). Incision of the cervix uteri.

**Hysterotraumat'ic.** Relating to hysterotraumatism.

**Hysterotrau'matism** (*trauma*, wound). Hysteria following injury; traumatic hysteria.

**Hysterotris'mus** (*hystera*, uterus, *trizo*, to gnash the teeth). Spasmodic contraction of the uterus.

**Hystremphyse'ma.** Physometra.

**Hystri'asis** or **Hystrici'asis** (*hystrix*, hedgehog or porcupine). Porcupine disease; disease of the hairs in which they stand erect like the quills of the porcupine; trichosis setosa; ichthyosis hystrix.

**Hys'tricism.** Ichthyosis hystrix.

**Hys'trix.** Ichthyosis hystrix.

# I.

**I.** Chemical symbol for iodine.

**Iam'a** (remedy). Medicament; cure.

**Iamatol'ogy** (*iama*, remedy, *logos*, discourse). Materia medica and therapeutics.

**Iat'er.** Physician.

**Iate'ria** or **Iato'ria** Therapeutics.

**Iatraleip'tic** or **Iatralip'tic** (*iatreia*, treatment, *aleipho*, to anoint). Pertaining to the method of treating disease by friction chiefly.

**Iatralep'tic.** Iatraleiptic.

**Iatralip'tics.** The iatraleiptic method.

**Iatrei'a.** Medical treatment.

**Iatreusiol'ogy** (*iatreusis*, exercise of art of healing, *logos*, description). Science of practical medicine.

**Iatreu'sis.** Exercise of the healing art.

**Iat'ric.** Medical. Fourth or ring-finger.

**Iatrochemi'a** or **Iatrochymi'a.** Iatrochemistry.

**Iatrochem'ical.** Relating to iatrochemistry. **I. school,** a former medical sect the members of which referred all physiological and pathological processes to chemical action.

**Iatrochem'ist.** Physician with preference for or special knowledge of chemistry. One of the iatrochemical school.

**Iatrochem'istry.** Medical chemistry. Application of chemistry to therapeutics.

**Iatrognomon'ica** (*gignosko*, to know). Knowledge of medicine.

**I'atrol.** Oxyiodolmethylanilid; antiseptic.

**Iatroleip'tic.** Iatraleiptic.

**Iatrol'ogy** (*iatros*, physician, *logos*, description). Science of medicine.

**Iatromathemat'ical.** Relating to the doctrine that mathematics is the basis of medicine, believers in which flourished about the middle of the seventeenth century. Borelli was the founder of the sect.

**Iatromechan'ical.** Iatromathematical; iatrophysical.

**Iatrophys'ical.** Relating to iatrophysics. **I. school,** a former sect the members of which explained all physiological and pathological processes by the laws of physics.

**Iatrophys'ics.** Application of physics to therapeutics.

**Iatros'.** Physician or surgeon.

**Iatrotech'nics.** Art of medicinal therapeutics.

**Ibe'ris.** Lepidium iberis. **I. ama'ra,** wild or bitter candytuft, clown's mustard, sciatica cress, from Iberia, where it is indigenous. Small herbaceous plant, indigenous in Europe; acronarcotic, and also employed in gout, rheumatism, etc. The seeds have been used in asthma, bronchitis, and dropsy. **I. bur'sa pasto'ris,** Thlaspi bursa. **I. campes'tris,** Thlaspi campestre. **I. semperflo'rens,** broad leaved and purple annual candytuft of S. Europe. Seeds are diuretic and expectorant. **I. sophi'a,** Cardamine pratensis.

**Ibicui'ba.** Becuiba nut. Brazilian nut, the emulsive kernel of which is balsamic.

**Ibischa** (ib-is'ka) **mismal'va** or **Ibis'cus.** Althæa.

**Ibixu'ma.** Saponaria.

**Ica'ja.** Ordeal poison of Africa, poisonous alkaloid from which, called *icajine'*, somewhat resembles brucine. See *Akazga.*

**Ice.** Frozen water. Iced water is much used internally as the best refrigerant in fever and to check nausea; also applied externally in internal inflammations in the form of the ice cap, ice cataplasm, ice compress, or ice poultice, formed by half filling a bladder or rubber bag with pounded ice, or in that of a coil of tubing through which iced water circulates, called Leiter's coil.

**Ice'land moss.** Lichen islandicus or Cetraria islandica.

**Ice'plant.** Mesembryanthemum crystallinum; Monotropa uniflora; tetragonia.

**Ichnocar'pus afzel'lii** or **frutes'cens.** Species of genus *Apocynaceæ*, growing in India and Ceylon; alterative and cathartic.

**Ichnos,** ik'nos. Foot; sole of the foot; heel.

**Ichor,** i'kor. Thin, aqueous, and acrid discharge from a broken surface or ulcer.

**Ichorhæmia** (ik-or-he'me-ah) or **Ichoræ'mia.** Ichorrhæmia.

**I'choroid** (*ichor* + *eidos*, resemblance). Ichorous.

**I'chorous.** Belonging to or resembling ichor.

**Ichorrhæ'mia** (*ichor* + *haima*, blood). Constitutional effects of absorption of septic matters in the circulation. See *Pyæmia* and *Septicæmia.*

**Ichorrhœ'a** (*ichor* + *rheo*, to flow). Ichorous discharge.

**Ichthalbin,** ik-thal-bin'. Combination of sulpho-ichthyolic acid and albumin; analgesic and antiphlogistic. Used internally in systemic diseases, such as syphilis, tuberculosis, rachitis, anæmia, etc., and in infectious diseases of the intestines.

**Ichthar'gon.** A compound of ichthyol and silver, a soluble, dark brown powder; astringent and antiseptic; employed in 0.05–0.2 per cent. aqueous solutions in the irrigation treatment of gonorrhœa.

**Ichthiasis,** ik-thi'as-is. Ichthyosis.

**Ichthin'** or **Ichthidin'.** Albuminous matter obtained from fishes.

**Ichthyis'mus.** Ichthysmus.

**Ichthyocolla,** ik-the-o-kol'lah (*ichthys*, fish, *kolla*, glue). Isinglass, fish glue. In the Ph. U. S. the dried swimming-bladder or sound of *Acipenser huso* and other species of acipenser, which is almost wholly composed of gelatin, and is employed in medicine in the formation of nutritive jellies, and occasionally in anatomical injections. English court-plaster is made with it. In Russia isinglass is also obtained from Siluris glanis.

**Ichthyoid,** ik'the-oid. Fish-like, as ichthyosis.

**Ichthyol,** ik'the-ol (*ichthys*, fish, *oleum*, oil). Ammonium sulpho-ichthyolate; clear, yellowish-brown to nearly black oily liquid or semisolid, obtained from a crude oil distilled from bituminous shale in which are semifossilized remains of fishes, in the Tyrol especially. It contains 3 to 10 per cent. of sulphur. It is anodyne, astringent, tonic to the stomach and kidneys, and resolvent; used externally in rheumatism, gynecology, skin diseases, erysipelas, ulcers, gout, etc., and as a discutient. It is combined, for external use, with lanolin, olive oil, glycerin, collodion, chloroform, etc. The dose internally is gr. j–x (0.065–0.65). Ammonium ichthyosulphate is ichthyol in liquid form; the semisolid ichthyol is a potassium ichthyosulphate. **I. albu'minate,** ichthalbin. **I. sulphon'ic acid,** $C_{28}H_{36}(SO,OH)_2$, an acid the ammonium salt of which constitutes ichthyol.

**Ichthyol'ogy** (*ichthys*, fish, *logos*, description). Description of fishes.

**Ichthyoph'agous** (*ichthys*, fish, *phago*, to eat). Fish-eating.

**Ichthyoph'agy.** Habitual eating of fish.

**Ichthyo'sis,** ik-the-o'sis (*ichthys*, fish, from resemblance of the scales to those of a fish). Porcupine disease, fish-skin disease; permanently harsh, dry, scaly, and in some cases almost horny texture of the integuments of the body from thickening of the epidermis and elongation of the papillæ, unconnected with internal disorder; it usually occurs in very early life. **I. congen'ita,** congenital form of the disease, with thickened corneous plates; usually soon fatal. **I. cor′nea,** i. with thick, horny scales. **I. facie′i,** seborrhœa oleosa; i. hystrix; cornu cutaneum. **I. fœta′lis,** i. congenita. **I. follicula′ris,** i. characterized by prominent adherent horny elevations, somewhat like lichen pilaris. **I. hys′trix,** true porcupine disease with horny spines; i. cornea. **Intra-u′terine i.,** i. congenita. **I. linear′is hypertroph′ica,** linear nævus. **I. lin′guæ,** fissured tongue, with hypertrophied papillæ, often syphilitic; leucoplakia buccalis. **I. ni′gricans,** form of ichthyosis with blackish scales. **I. nit′ida,** form of the disease having pearl-like scales. **I. palma′ris et planta′ris,** keratosis palmaris et plantaris; keratodermia. **I. pel′lagra,** pellagra. **I. sauroder′ma,** form of ichthyosis simplex like lizard skin. **I. seba′cea,** sebaceous ichthyosis; seborrhœa; morbid incrustation of a concrete sebaceous substance—seborrhœa—upon the surface of the epidermis, confounded with ichthyosis, to which it bears a close resemblance. **I. s. cor′neæ,** keratitis follicularis. **I. serpenti′na,** i. of the extremities particularly, resembling scales of a serpent. **I. sim′plex,** form of ichthyosis devoid of constitutional disturbance; xeroderma. **I. spino′sa,** i. hystrix. **I. spu′ria,** i. sebacea. **I. stria′ta,** form of ichthyosis with separation of large masses of scales. **I. ve′ra,** xeroderma ichthyoides. **I. vul′væ,** elephantiasis of the vulva.

**Ichthyos′ma** (*ichthys*, fish, *osme*, smell). Sarcophyte.

**Ichthyosul′phonate.** A salt of ichthyosulphonic acid. **I. of ammo′nium,** ichthyol. **I. of so′dium, lith′ium, mer′cury,** and **zinc** are used as substitutes for ichthyol when it is desirable to give the latter in pill form.

**Ichthyot′ic.** Relating to or affected with ichthyosis.

**Ichthyot′omy** (*ichthys*, fish, *tome*, incision). Anatomy of fishes.

**Ichthyotox′icum.** Fish poison.

**Ichthyotox′ism** or **Ichthys′mus.** Poisoning from eating fish. **I. exanthemat′icus,** i. accompanied by a red rash.

**Ici′ca aracouchi′ni.** Aracouchini balsam, extracted by incision from this tree in Guiana; used for healing wounds. **I. caran′na,** tree of New Granada yielding gum caranna. **I. heptaphyl′la,** incense-wood of Guiana, resin from which, called ashyana or hyawa, is used for dysentery, bronchitis, and gonorrhœa. **I. heterophyl′la,** Icica aracouchini. **I. icicari′ba,** see *Amyris elemifera*.

**I′cing liv′er.** Sugar-coated liver; a chronic inflammation of the serous coat of the liver resulting in the formation of a thick, smooth, white exudate resembling the icing on a cake.

**Icon′oscope** (*eikon*, an image, *skopeo*, to see). Instrument for checking binocular parallax: the reverse of a telestereoscope.

**Icterencephaloty′phus** (*ikteros*, jaundice, *enkephalos*, brain + *typhus*). Typhus fever with marked cerebral symptoms and jaundice.

**Icterepati′tis** or **Icterhepati′tis.** Inflammation of the liver complicated with jaundice.

**Icter′ic.** Relating to or resembling icterus; affected with jaundice; remedy for jaundice.

**Icteri′cia** or **Icteri′tia.** Icterus. **I. al′ba,** chlorosis. **I. fla′va,** icterus. **I. ru′bea** or **ru′bra,** erysipelas.

**Icteritious,** ik-ter-ish′us. Yellowish. Jaundiced.

**Icterogenet′ic** or **Icterogen′ic.** Causing jaundice.

**Icterohæmatu′ria.** Hæmaturia combined with jaundice.

**Icterohæmoglobinu′ria.** Jaundice associated with hæmoglobinuria.

**Ic′teroid.** Resembling jaundice.

**Ic′terus** (*ikteros*, jaundice). Bilious dyscrasy, jaundice, yellows. The principal symptom is yellowness of the skin and eyes, with white fæces and high-colored urine, caused by obstruction of the course of the bile, so that it is taken into the mass of the blood, producing the yellowness of surface. The bile being separated by the kidneys causes yellowness of urine, and its being prevented from reaching the intestine occasions the pale-colored fæces. The treatment of simple or catarrhal icterus consists in the occasional exhibition of an emetic or purgative, so as to solicit the return of the bile to its ordinary channels; light tonics; unirritating diet, etc. **I. al′bus,** chlorosis. **I. atax′icus,** severe and often fatal form, generally due to acute yellow atrophy of the liver. **Black i.,** jaundice with blackness of skin; melæna; melæmia. **Blood i.,** hæmatogenous i. **I. cæru′leus,** blue jaundice; cyanopathy. **Catar′rhal i.,** jaundice consequent on cholecystitis, catarrh of the gall-ducts from hyperæmia, irritation from abnormal bile, etc. **I. chol′icus,** hepatogenous i. **Fe′brile i.,** Weil's disease. **I. fla′vus,** jaundice. **I. gravida′rum,** jaundice of pregnant women; i. from puerperal septicæmia. **I. gra′vis,** i. ataxicus. **Hæmatogen′ic** or **hæmatog′enous i.,** jaundice due to abnormal secretion of bile or coloring-matter of bile in the blood, or to accumulation of reabsorbed bile. **Hepat′ic, hepatogen′ic,** or **hepatog′enous i.,** jaundice due to retention of bile, or its reabsorption in the liver from obstruction to its flow into the intestines. **I. infan′tum,** yellow gum, yellow gown; affection frequently dependent upon obstruction of the choledoch duct by the meconium; it requires time, and castor oil occasionally. **I. malig′nus,** i. ataxicus. **Mechan′ical i.,** hepatogenous i. **I. me′las,** black jaundice; melæna. **I. muco′sus,** i. from presence of inspissated mucus. **I. neonato′rum,** i. infantum. **I. ni′ger,** black i. **I. of obstruc′tion,** hepatogenous i. **Pernic′ious i.,** i. gravis. **Red i.,** erythema. **Relaps′ing fe′brile i.,** Weil's disease. **I. of reten′tion,** hepatogenous i. **I. saturni′nus,** lead jaundice; earthy-yellow hue in saturnine cachexia. **Traumat′ic i.,** i. due to injury of intestines. **Ty′phoid i.,** i. gravis. **I. typho′sus,** Weil's disease. **I. vir′idis,** green jaundice; icterus when the skin is of a green or olive hue.

**Icto′des fœt′idus.** Dracontium fœtidum; symplocarpus.

**Ic′tus.** Blow or stroke. Pulsation of an artery; sting of a bee or other insect; stab. **I. cor′dis,** impulse of the heart. **I. cor′dis et arteria′rum,** pulse. **I. epilep′ticus,** epileptic attack. **I. san′guinis,** apoplexy. **I. so′lis,** sunstroke.

**I′dant.** A chromosome assumed to be associated with heredity.

**Ide′a.** Mental conception or representation of an object. **Automat′ic i.,** idea arising without any provocation or suggestion from without. **I. chase,** mental state, as in acute mania, in which ideas come so rapidly that they seem to chase one another. **Dom′inant i.,** an i. which prevails over all others and influences the holder's thoughts and actions. **Fixed i.,** persistent monomania on one fixed subject.

**Ide′al.** Mental, notional, fancied. **I. diseas′es,** diseases of the imagination. **I. paraple′gia,** reflex paraplegia of an emotional type.

**Idea′tion.** Cerebration. Establishment of a distinct mental representation or idea of an object. *Ideational insanity* is unsoundness of mind exhibited in delusions and mental alienation.

**Iden′tical points.** Points in the retinæ of both eyes which correspond.

**Ident′ist.** A name formerly given to those who regarded the virus of gonorrhœa and those of hard and of soft chancre as one and the same.

**Ideodynam′ic.** Ideomotor.

**Ideoelec′tric.** Non-conductor of electricity.

**Ideol′ogy** (*idea* + *logos*, discourse). Science of the mind; intellectual philosophy.

**Ideomo′tion.** Motion in response to some engrossing idea.

**Ideomo′tor.** Muscular movement resulting from complete engrossment by an idea which is automatic, although originating in the cerebrum. **I. cen′tre,** portion of gray matter which originates movements.

**Ideopeg′ma** (*idea* + *pegnymi*, to fasten). Fixed idea.

**Ideophren′ia** (*idea* + *phren*, mind). Disordered intellect.

**Ideophren′ic.** Relating to ideophrenia. **I. insan′ity**, see *Ideation*.

**Ideoplas′tic.** Term to denote that stage of hypnotism when suggestion becomes action.

**Ideovas′cular.** Relating to an influence exerted upon the circulatory system by a mental concept.

**Idio-** (*idios*, peculiar, one's own, proper). In composition, proper, peculiar, self.

**Idiocra′sia** or **Idioc′rasis.** Idiosyncrasy.

**Idiocto′nia** (*idios*, own, *ktonos*, murder). Suicide.

**Id′iocy.** Idiotcy; fatuity. Species of unsound mind characterized by more or less complete obliteration of the intellect and moral faculties. It may supervene on mania and melancholia, when it is termed dementia, but commonly depends upon original conformation. It may be symptomatic of organic disease of the brain which has come on after birth. It may commence during fetal life, or result from wound or injury during or after birth; from chorea or epilepsy, from hydrocephalus, from faulty conformation, as hypertrophy or macrocephalia or microcephalia; or the head may be plagiocephalic or scaphocephalic. The physiognomy is usually vacant, step unsteady, articulation imperfect. It is present in congenital form in cretinism. Idiocy is almost always incurable, but may often be palliated. **Congen′ital i.**, idiocy dating from birth, and not due to any trauma or disease in earliest infancy. **Cre′tinoid i.**, cretinism. **Developmen′tal i.**, i. from arrest of brain-development. **Endem′ic i.**, cretinism. **Epilep′tic i.**, i. having epilepsy as its cause. **Gen′etous i.**, congenital i. **Hypertroph′ic i.**, i. due to hypertrophy of the brain. **Mongo′lian i.**, congenital i., not accompanied by any signs of cretinism; the subject has slanting eyes like the Chinese, a flattened skull, and short thumbs. **Plagiocephal′ic i.**, i. due to malposition or malformation of the bones of the face or skull. **Traumat′ic i.**, i. from external injury.

**Idiogen′esis.** The act of arising without external cause; the mode of origin of idiopathic disease.

**Idiometri′tis** (*idios*, own, *metra*, uterus). Parenchymatous inflammation of the uterus.

**Idiomus′cular.** Peculiar to muscular tissue. **I. contrac′tions**, muscular contraction due to direct blows on degenerated muscles, and not the result of nerve stimulus.

**Idioneuro′sis.** Simple neurosis without structural change.

**Idiopath′ia** (*idios*, proper, *pathos*, affection). Primary disease, one not depending on any other.

**Idiopath′ic.** Arising without obvious cause, or spontaneously.

**Idiop′athy.** Idiopathia.

**Idiophren′ic** (*idios*, proper, *phren*, mind). Term applied to that form of insanity which is a result of cerebral disease.

**Id′ioplasm.** That part of protoplasm which has the power of transmitting personal peculiarities to the offspring; the active portion of the cell contained in the chromosomes.

**Id′iopt** (*opsis*, vision). One who is color-blind.

**Id′iosome** (*soma*, body). The ultimate element of living tissue.

**Id′iospasm.** Localized spasm.

**Idiosyncra′sia.** Idiosyncrasy. **I. hæmorrhag′ica**, hæmatophilia. **I. olfacto′ria**, parosmia.

**Idiosyn′crasy** (*idios*, own, *syn*, with, *krasis*, mixture). Peculiarity of constitution in which one person is affected by an agent which in most others produces no effect. Thus, shellfish produce urticaria in some; others faint at the sight of blood, etc.

**Id′iot** (*idiotes*, ignorant person). One who is fatuous or does not possess sufficient intellectual faculties for the social condition. In law, one who has been without understanding from his birth, and whom the law presumes never to be likely to attain any. **Cre′tinoid i.**, cretin.

**Idiot′ic.** Affected with idiocy.

**Id′iotism.** Idiocy.

**Idiotro′pia** (*trepo*, to turn). Idiosyncrasy.

**Id′ros.** Sweating.

**Idrosadeni′tis.** Inflammation of the sweat glands.

**Idro′sis** (*hidros*, sweat). Ephidrosis.

**Igasu′ric acid.** Acid existing combined with strychnine in nux vomica and St. Ignatius's bean.

**Igasurine.′** Alkaloid from nux vomica, found in the mother-waters from which strychnine and brucine have been precipitated. It is less powerful than strychnine, but more so than brucine.

**Igazol′.** A powder composed of trioxymethylene, chloral hydrate, iodoform, and terpin, the vapor of which is inhaled in the treatment of pulmonary phthisis.

**Igna′tia ama′ra** (after St. Ignatius, the Jesuits having first carried it from the East to Europe). Ord. *Apocynaceæ*. Systematic name of the plant affording St. Ignatius's bean, Faba indica, F. Sancti Ignatii or febrifuga. The seeds of Strychnos ignatii, ignatia (formerly in the Ph. U. S.), are bitter and poisonous, containing a larger proportion of strychnine than is in nux vomica.

**Ignatian′a philippin′ica.** Strychnos ignatii.

**Ig′neous.** Relating to fire.

**Igniëxtirpa′tion.** Extirpation of the uterus—hysterectomy—by the galvanocautery.

**Ignipedi′tes** (*ignis*, fire, *pes*, foot). Hot-foot; burning sensation in the soles of feet of soldiers, rheumatics, the subjects of beriberi, and others.

**Ig′nipuncture** (*ignis*, fire + *puncture*). Cauterization and puncturation combined.

**Ig′nis.** Fire. **I. actua′lis**, actual cautery; see *Cauterium*. **I. cal′idus** (hot fire), violent inflammation preceding gangrene. **I. columel′læ**, erysipelas. **I. frig′idus** (cold fire), gangrene. **I. occult′us**, anthrax. **I. per′sicus**, anthrax; herpes zoster. **I. philosoph′icus**, phosphorus. **I potentia′lis**, potential cautery; see *Cauterium*. **I. sa′cer**, erysipelas; herpes zoster; aphthæ; ignis sylvaticus. **I. Sanc′ti Anto′nii**, erysipelas; anthrax. **I. Sanc′ti Igna′tii**, erysipelas. **I. sylvat′icus** or **sylves′tris**, wildfire rash; porrigo larvalis or crusta lactea or strophulus of infants; transient redness of the face and neck observed in hysterical and chlorotic females. **I. vola′grius** or **volat′icus**, i. sylvaticus.

**Iko′ta.** Form of religious insanity in women in Siberia.

**Ikshughan′da.** Tribulus terrestris.

**Il′aphis.** Arctium lappa.

**Il′eac pas′sion.** Ileus.

**Ileadel′phus.** Iliadelphus.

**Ileëc′tomy** (*ileum* + *ektome*, excision). Operation for the removal of a portion of the ileum.

**Ileïleos′tomy.** Ileoileostomy.

**Ileï′tis.** Inflammation of the ileum. **I. pustolo′sa**, typhoid fever.

**Ileo-.** In composition, ileum.

**Ileocæ′cal.** Relating to the ileum and cæcum. **I. folds**, duplicature of the peritoneum passing from the mesentery to the cæcum. **I. fos′sæ**, small pouches of the peritoneum where the ileum and cæcum unite. **I. recess′**, inferior ileocæcal fossa. **I. valve**, valve composed of folds of the mucous membrane at the opening of the ileum into the large intestine. (See cut under *Cæcum*).

**Ileocholo′sis** (*chole*, bile). Cholera morbus.

**Ileoclei′sis** (*ileum* + *kleisis*, occlusion). Occlusion of the ileum.

**Ileocol′ic.** Relating to the ileum and colon. **I. ar′tery**, branch of the superior mesenteric artery. **I. valve**, ileocæcal valve.

**Ileocoli′tis.** Inflammation of the ileum and colon.

**Ileocolos′tomy** (*ileum* + *colon* + *stoma*, mouth). Operation for establishing a direct communication between the ileum and colon.

**Ileocolot′omy** (*ileum* + *colon* + *tome*, incision). Operation upon the ileum and colon conjointly.

**Ileodiclidi′tis** (*ileum* + *diklis*, valve). Inflammation about the ileocæcal valve. Typhoid fever.

**Ileog′raphy** (*ileum+grapho,* to write). Description of the ileum.

**Ileoïleos′tomy** (*ileum+ileum+stoma,* mouth). Operation for establishing direct communication between two distant portions of the ileum, in order to exclude a diseased or obstructed segment.

**Ileol′ogy** (*ileum+logos,* discourse). Description of the ileum, from an anatomical or physiological standpoint.

**Il′eon.** Ileum.

**Ileoparasit′icus.** Parasite connected with the ileum.

**Ileoproctos′tomy** (*ileum+proktos,* rectum, *stoma,* mouth). Operation for making artificial communication between the ileum and rectum.

**Ileop′yra** (*ileum+pyr,* fever). Typhoid fever.

**Ileorectos′tomy.** Ileoproctostomy.

**Ileosigmoidos′tomy.** Operation of establishing an artificial communication between the ileum and the sigmoid flexure.

**Ileo′sis.** Ileus.

**Ileos′tomy** (*ileum+stoma,* mouth). Operation of establishing communication between the ileum and any other hollow viscus or between the ileum and the external surface.

**Ileot′omy** (*tome,* incision). Any operation upon the ileum.

**Ileoty′phus.** Typhoid fever.

**Il′eum** (*eileo,* to turn, to twist). Longest portion of the small intestine, extending from the jejunum to the cæcum. So called from its forming a number of convolutions.

**Il′eus** (*eileo,* to twist). Dangerous condition characterized by deep-seated pain in the abdomen and obstinate constipation; sometimes with stercoraceous vomiting. It is occasioned by hernia or other obstruction to the passage of the fæces. The term has been applied also to simple nervous colic, intussusception, and strangulation of the small intestine, etc.; volvulus. **I. fla′vus** or **icteroi′des,** colic with icterus. **I. inflammato′rius,** enteritis confined to the small intestine. **I. paralyt′icus,** obstipation due to paralysis of the intestinal muscle. **I. vol′vulus,** volvulus.

**I′lex.** A genus of trees, ord. *Ilicineæ.*. **I. aquifo′lium,** the common holly. The leaves are tonic, astringent, and antiseptic, and have been prescribed in atonic gout, intermittents, dyspepsia, etc. The active principle, *ilicin,* has also been used as an antiperiodic and antipyretic. **I. casse′na** or **cassi′ne,** Ilex vomitoria. **I. gla′bra,** ink-berry; N. American shrub, bark of which is tonic and antipyretic. **I. gongo′nha,** Brazilian shrub, leaves of which are diaphoretic and diuretic. **I. ma′jor,** from the berries of this tree juice may be expressed forming a slightly astringent emulsion with water, used by Spanish physicians in humid cough, hæmoptysis, etc. **I. ma′té,** Ilex paraguensis. **I. myrtifo′lia,** of Southern United States; diuretic. **I. opa′ca,** American holly, growing throughout the Atlantic portion of the United States; possesses the same properties as I. aquifolium. **I. paraguen′sis,** native of Paraguay; affords the celebrated mattee or maté, which is drunk in place of the Chinese tea by the people of Paraguay; Paraguay tea. **I. verticilla′ta,** black alder; winterberry of N. America; bark, prinos (formerly official in the Ph. U. S.), is tonic, antiperiodic, astringent; used externally as a wash or cataplasm in gangrene and cutaneous affections. **I. vomitor′ia,** dahoon, southsea tea, evergreen cassine, casseena; tree indigenous in Southern United States; leaves when dried are aromatic, stimulant, stomachic, and expectorant, and are used as a tea; when fresh they are emetic and cathartic.

**Ilexanthin′.** Yellow coloring-matter from Ilex aquifolium.

**Il′ia.** Flanks; iliac bones.

**Il′iac.** Relating to or connected with the flanks or the ilium. **I. ar′teries,** the primary iliacs arise from the bifurcation of the aorta, opposite the body of the fourth lumbar vertebra, and descend in a divergent manner until, opposite the sacro-iliac symphysis, they divide into two considerable trunks, the internal iliac or hypogastric and the external iliac. The latter proceeds from the sacro-iliac juncture as far as the crural arch, when it assumes the name femoral artery. **I. bone,** ilium. **I. bur′sa,** subiliac bursa. **I. co′lon,** sigmoid flexure. **I. crest,** upper margin of the ilium; thick and curved like the italic *S;* affords attachment to the broad muscles of the abdomen. **I. fas′cia,** fascia covering the iliopsoas muscle, passing under Poupart's ligament behind the femoral vessels under the name of iliopectineal fascia. **I. flex′ure,** sigmoid flexure. **I. fos′sæ** are two in number: the internal, the depression presented by the ilium on its interior, at the upper part of which the iliacus internus is lodged; and the external, an excavation on the outer surface of the same bone, occupied by the glutæi muscles. **I. fur′row,** groove on the surface of the body at position of the iliac crest. **I. groove,** furrow for the passage of the iliopsoas tendon over the margin of the pelvis. **I. mesoco′lon,** see *Mesocolon.* **I. mus′cle, inter′nal,** is situated in the iliac fossa and at the anterior and superior part of the thigh; it is broad, radiated, triangular, and attached above to the two upper thirds of the fossa iliaca and to the internal part of the iliac crest; below it terminates by a tendon common to it and the psoas magnus, and is fixed into the lesser trochanter. When this muscle contracts it bends the pelvis on the thigh, and conversely; it is also a rotator of the thigh outward, and prevents the trunk from falling backward. See *Iliopsoas.* **I. nerve,** external branch of the iliohypogastric nerve. **I. notch,** great sacrosciatic notch. **I. re′gions,** sides of the abdomen between the ribs and the hips. **I. spines,** spinous processes of the ilium, four in number, two anterior and two posterior. Of the anterior, one is superior, and affords origin to the sartorius muscle; the other, inferior, receives the tendinous origin of the rectus femoris. The posterior iliac spines are divided, like the anterior, into superior and inferior. They afford insertion to strong ligaments, uniting the ilium with the sacrum. **I. veins,** these correspond with the distribution of the iliac arteries.

**Ili′acofem′oral.** Relating to the ilium and thigh-bone.

**Iliacomus′cular.** Iliolumbar.

**Iliacopso′as.** Iliopsoas.

**Iliacotrochanter′icus.** Relating to the ilium and trochanter; iliacus internus muscle.

**Ili′acus.** Iliac; iliac muscle. **I. exter′nus,** glutæus medius; pyriformis. **I. inter′nus,** internal iliac muscle. **I. mi′nor,** small muscle from anterior inferior spine of ilium inserted along the anterior intratrochanteric line at its lower part, or into the iliofemoral ligament.

**Iliadel′phus** (*ilion,* ilium, *adelphos,* brother). Double monster separate above, but united at and below the pelvis.

**Il′ial.** Iliac.

**Ilic′ic acid.** Crystalline acid from leaves of Ilex aquifolium.

**Ilicin′.** Crystallizable principle from leaves of Ilex aquifolium; antiperiodic; used as substitute for quinine.

**Ilio-.** In composition, relating to the ilium.

**Il′ioabdom′inal.** Obliquus internus abdominis.

**Il′ioaponeuro′si-femora′lis.** Tensor vaginæ femoris.

**Il′ioaponeurot′ic.** Relating to the ilium and fascia lata. **I. mus′cle,** fascia lata muscle; tensor vaginæ femoris.

**Iliocapsula′ris** or **Iliocap′sulotrochanter′icus.** Obturator internus muscle.

**Iliocau′dal** (*ilium+cauda,* tail). Relating to the ilium and coccyx.

**Iliococcyg′eal.** Relating to the ilium and coccyx.

**Iliocolot′omy.** Colotomy in the iliac region or flanks.

**Iliocos′tal** (*ilium+costa*, rib). Relating to the ilium and the ribs. **I. mus′cle,** sacrolumbalis muscle; portion of quadratus lumborum between crest of ilium and twelfth rib.

**Iliocostocervica′lis.** Sacrolumbalis.

**Iliofem′oral.** Relating to ilium and femur; coxofemoral. **I. lig′aments,** see *Coxofemoral articulation*. **I. tri′angle,** triangle having its base between the upper part of the trochanter major and the anterior superior spine of the ilium, and its apex formed by lines projected posteriorly from the anterior superior spine and upward from the top of the trochanter major.

**Iliofemora′lis.** Iliofemoral muscle, between the ilium and femur.

**Iliohypogas′tric.** Relating to ilium and hypogastrium. **I. nerve,** superior musculocutaneous nerve.

**Il′ioin′guinal.** Relating to the ilium and groin. **I. nerve,** musculocutaneous nerve, inferior.

**Il′ioischiotrochanter′icus.** Glutæus minimus.

**Iliolumba′lis.** Iliolumbar.

**Iliolum′bar.** Belonging to the iliac and lumbar regions. **I. ar′tery** is given off by the hypogastric, opposite the base of the sacrum. It ascends behind the psoas muscle, and divides into two branches, ascending and transverse. **I. lig′ament,** iliolumbar or iliolumbovertebral ligament, vertebro-iliac ligament; broad, membraniform, triangular ligament, extending horizontally from the transverse process of the fifth lumbar vertebra to the upper and posterior part of the iliac crest, uniting the vertebral column with the pelvis.

**Iliolumbover′tebral lig′ament.** Iliolumbar ligament.

**Il′ion.** Ilium.

**Iliopatella′ris.** Rectus muscle of thigh.

**Iliopectin′eal.** Belonging to the ilium and pubic bone. **I. crest,** i. line. **I. em′inence,** formed by the junction of the ramus of the ilium with that of the pubis; affords attachment to the psoas minor muscle. **I. fas′cia,** iliopectineal ligament. **I. fos′sa,** Scarpa's triangle. **I. lig′ament,** continuation of iliac fossa from Poupart's ligament to iliopectineal line. **I. line,** prominence of bone separating true and false pelvis on inner surface of the ilium, terminating at the spine of the pubis. **I. tu′bercle,** iliopectineal eminence.

**Iliopel′vic.** Relating to ilium and pelvis, as iliopelvic abscess.

**Iliop erone′al mus′cle.** Occasional small fasciculus of biceps arising from the ilium.

**Iliopretibia′lis.** Sartorius.

**Ilioprotule′us.** Triceps cruris; rectus of thigh.

**Iliopso′as bur′sa.** Subiliac bursa. **I. mus′cle,** iliacus and psoas muscle considered as one.

**Iliopsoï′tis.** Inflammation of the iliopsoas muscle.

**Iliopu′beral** or **Iliopu′bic.** Relating to the ilium and region of pubes.

**Il′iopubicosto-abdom′inal.** Obliquus externus abdominis.

**Iliosa′cral.** Sacro-iliac.

**Iliosacrofem′oral.** Glutæus major.

**Ilioscapula′ris.** Iliacus minor.

**Iliosciat′ic.** Relating to ilium and ischium.

**Ilioscro′tal.** Relating to ilium and scrotum. **I. nerve,** ilioinguinal nerve; musculocutaneus superior.

**Iliospi′nal.** Relating to ilium and spine.

**Iliospina′lis.** Longissimus dorsi muscle. Name also given to combination of latter muscle and several other muscles of the back.

**Iliotib′ial.** Relating to the ilium and tibia. **I. band,** band of fascia from the forepart of the iliac crest to the outer tuberosity of the tibia.

**Iliotrochanter′ic.** Relating to the ilium and trochanter. **I. mus′cles,** gluteal muscles.

**Iliotrochanter′ius.** Iliacus muscle. **I. exter′nus,** i. medius. **I. mag′nus,** glutæus medius. **I. me′dius,** glutæus maximus. **I. par′vus,** glutæus minimus.

**Iliotrochantine′us.** Pyriformis muscle.

**Il′ium** (Gr., *ilion*). Haunch or hip-bone. Largest of the three bones constituting the os innominatum. The external surface is called the dorsum, the internal the venter. The upper semicircular edge is the crista or spine, at the anterior part of which are the two anterior superior spinous processes. At the back part of the spine are two spinous processes, the posterior superior, and posterior inferior. See *Iliac spines*.

**Ill.** Sick. Nauseated.

**Illacryma′tion** (*lacryma*, tear). Involuntary and constant flow of tears on the cheek; epiphora.

**Illaquea′tion** (*laqueo*, to ensnare). Operation for restoring an ingrowing eyelash to its proper position by means of puncturing the lid and drawing the eyelash through the puncture; or of drawing it outward and retaining it by a loop.

**Illecebrum** (il-les′eb-rum) **achyran′tha.** Mexican plant with astringent flowers. **I. polygonoi′des**, Achyranthes repens. **I. vermicula′re,** sedum.

**Illegit′imacy.** State of being illegitimate.

**Illegit′imate.** That which is contrary to law or which has not the conditions required by law, as an illegitimate birth—one out of wedlock. The term illegitimate or bastard is also applied to diseases, as fevers, whose progress is anomalous. See *False*.

**Illicium** (il-lis′e-um) **anisa′tum.** I. verum, yellow-flowered anise, star anise. The seeds are used, like aniseed, as stomachic and carminative. The same tree furnishes the aromatic bark called cortex anisi stellati, cortex lavola. The fruit is official under the name illicium (Ph. U. S.); it is a source of oil of anise. **I. florida′num,** Florida anise tree, poison bay, sweet laurel. Evergreen shrub, the bark, leaves, etc., of which have a spicy odor like anise. **I. parviflo′rum,** shrub of Southern United States, having the flavor and properties of sassafras root. **I. religio′sum,** Japanese tree, active principle of which causes vomiting and convulsions, and fatal effects in large doses. **I. ve′rum,** I. anisatum.

**Illini′tion.** Inunction.

**Ill′ness.** Disease. Nausea. **Month′ly i.,** menses.

**Illo′sis.** Distortion of the eyes. Strabismus.

**Illumina′tion.** Light derived from a luminous body. **Ax′ial i.,** light thrown upon an object in the direction of the axis of a microscope. **Direct′ i.,** light thrown directly upon an object. **Fo′cal i.,** light thrown upon an object by focusing. **Oblique′ i.,** light thrown upon an object from one side—that is, in an oblique direction. **Oc′ular i.,** lighting up of the interior of the eye, as in ophthalmic examination; or focusing pencil of rays of light obliquely on any part, as the cornea.

**Illu′sion.** Hallucination; delusion. It differs, however, from hallucination in being the false interpretation of a sensation actually perceived.

**Illu′sional.** Relating to or characterized by illusions.

**Im′age.** Representation of an object to the eye or mind. **Acous′tic i.,** see *Mental image* and *Sensory image*. **Aë′rial i.,** an image, seemingly in the air, due to the passage of rays of light through media of varying refractive power; such an image is a mirage; also the image of the fundus of the eye seen in indirect ophthalmoscopic examination. **Af′ter-i.,** the impression remaining on the retina after the eye is withdrawn from the object; in this the colors may be the same as those of the object viewed, but more commonly they are the complementary colors. **Appar′ent i.,** false image. **Aud′itory i.,** see *Mental image* and *Sensory image*. **Direct′ i.,** i. formed before the converging rays have been focussed. **Double i.,** the two images seen in strabismus before the mind learns to ignore one. **Erect′ i.,** direct image. **False i.,** the image formed in the divergent eye in strabismus. **Invert′ed i.,** real image. **Men′tal i.,** a concept formed in the mind by impressions conveyed to it by the special senses of hearing, touch, and vision; this includes *acoustic* or *auditory*, *tactile*, and *visual* images. **Op′tical i.,** i. formed by rays of light from an object refracted through a lens, or reflected from a mirror. **Purkin'je's i.**, intraretinal image of the blood-vessels of the retina, seen in one's own eye by moving a lighted candle in front of the organ, so that the light may enter it obliquely. **Purkin'je-San'son i.**, reflections from the surfaces of the cornea and crystalline lens when a light is held in front of the eye so as to shine obliquely upon it. **Real i.**, i. formed when the rays of light from an object are collected. **Ret'inal i.**, i. formed on the retina. **Sen'sory i.**, i. formed by one of the sense organs; i. upon which the *mental* image is based. **Subjec'tive i.**, visual hallucination. **Tac'tile i.**, see *Mental image* and *Sensory image*. **True i.**, the image formed in the adjusted eye in strabismus. **Vir'tual i.**, direct i. **Vis'ual i.**, see *Mental image* and *Sensory image*.

**Imagina'tion** (*imago*, image). Faculty of forming in the mind an assemblage of images and combination of ideas not always in direct connection with external objects.

**Ima'go.** Image. Perfect insect after having completed its metamorphoses.

**Imbal'ance.** Want of balance. Want of muscular balance in the eyes; heterophoria.

**Im'becile.** Weak-minded. A person is so called who was born mentally feeble or became so as a result of cerebral disease.

**Imbecil'ity.** Weakness of intellect; nearly allied to idiocy.

**Imbed'.** To fix an object in some hard but yielding substance, as for microscopic examination.

**Imber'bis** (*barba*, beard). Devoid of beard.

**Imbibi'tion** (*imbibo*, to drink in). Absorption; aspiration. Action by which a body becomes penetrated by a liquid or gas. Reverse action has been called exbibition. Many phenomena of absorption are owing to imbibition. **Doub'le i.** endosmose.

**Imbow'elling.** Operation of taking out the bowels.

**Im'brex** (a tile) **na'rium.** Septum narium.

**Imbrica'ria saxat'ilis.** Lichen saxatilis.

**Im'bricate** or **Im'bricated** (*imbrex*, tile). Placed over each other like the tiles of a roof.

**I'mide.** Compound in which, in the ammonia ingredient, two atoms of hydrogen are replaced by an acid radical.

**Imita'tion.** Effort to copy some other act, interesting as a cause of chorea, epilepsy, or even of insanity; a mental contagion.

**Im'lach's fat-plug.** Yellowish, fatty mass at the middle angle of the external inguinal ring; a guide to the surgeon in operations for hernia.

**Immature'.** Not mature or ripe.

**Imme'diate agglutina'tion.** Union by first intention. **I. ausculta'tion**, see *Auscultation*. **I. conta'gion**, contagion from personal contact. **I. percus'sion**, see *Percussion*. **I. u'nion**, see *Intention*.

**Immed'icable.** Incurable.

**Immersed'.** Word applied to a body which is depressed in another body, the surfaces being even.

**Immer'sion.** Variety of cold bath in which the body or a part is momentarily plunged at brief intervals, as a means of stimulation in fevers, mental and nervous diseases, etc. In microscopy, immersing of the objective (immersion lens) in liquid, so that the rays falling obliquely on the edges will not be wholly reflected. **Homoge'neous i.** is when the liquid employed is of nearly the same refractive power as the cover-glass. **I. lens**, see the prime. **Oil i.** or **wa'ter i.** is the use of oil or water for the immersion fluid.

**Immer'sus** (*immergo*, to dip). Subscapularis muscle.

**Immic'tio.** Enuresis.

**Im'minence** (*immineo*, to hang over). Impending condition. Period preceding and foretelling invasion of a disease.

**Immis'cible** (*in*, neg., *misceo*, to mix). Incapable of being mixed.

**Immis'sion** (*immitto*, to send in). Insertion.

**Immobil'ity** (*in*, neg., *moveo*, to move, *habilis*, able). Want of power to move; incapability of being moved; see *Akinesia*. Term applied to dull, stupid condition of horses, often caused by chronic internal hydrocephalus.

**Immobiliza'tion.** Act of making a part immovable, as in a splint.

**Immov'able appara'tus.** See *Apparatus*.

**Immune'** (*immunis*, safe). Protected from disease, as by inoculation or other agency, or by previous attack. **I.-bod'y**, the stable element in immune serum, the function of which is to anchor the complement to the erythrocyte; it is believed to possess two haptophore groups, one of which unites with the receptor, the other with the complement. (See cut under *Hæmolysin*.)

**Immu'nity.** Freedom from liability to infectious diseases through protection of the system by previous attack or other cause. **Acquired' i.**, i. which is not natural to the individual or race, but which is conferred by an attack of the disease in question or by a so-called protective inoculation. **Ac'tive** or **ac'tual i.**, i. conferred by an attack of the disease in question. **Artifi'cial i.**, i. acquired by a preventive inoculation. **Congen'ital i.**, i. which is inherent in the individual or race and not conferred by inoculation or a previous attack of disease. **Pas'sive i.**, artificial immunity.

**Immuniza'tion.** The act or means of rendering a person or animal immune.

**Im'munize.** To produce or to acquire immunity from disease.

**Im'munizing u'nit.** Antitoxic unit. See *Antitoxin*.

**Immunotoxin'.** Antitoxin.

**Impac'ted** (*impango*, to drive in). Wedged.

**Impac'tion.** Wedging; collision. Fracture of bone with depression of some fragments and projection of others. **I. of fil'lings**, adaptation, piece by piece, of a metallic dental filling. **I. of teeth**, fixation of teeth in such positions as prevent their eruption.

**Impal'pable** (*in*, not, *palpo*, to feel). Applied to powders which are so fine that the particles cannot be felt.

**Impaluda'tion** (*palus*, marsh). Supposed influence of marsh miasm, or predisposition of residents in malarial districts to malarial diseases.

**Impal'udism.** Malarial cachexia; impaludation.

**Im'par** (*impar*, unequal). Odd; azygous. **I. gan'glion**, small coccygeal ganglion. **I. pharyn'gis**, middle constrictor of the pharynx.

**Impa'tiens balsami'na.** Balsam weed, touch-me-not, ord. *Balsaminaceæ*. Resembles the other species in its properties. **I. ful'va** and **I. pal'lida**, touch-me-not, jewel weed, balsam weed, slippers, celandine, quick-in-the-hand, weathercocks, snapweed; indigenous plants found in low, moist ground in every part of the U. States. Ointment of leaves with lard used in hemorrhoids. Properties the same as those of **I. lu'tea**, **I. macula'ta**, or **I. no'li me tan'gere**, of Europe, common yellow balsam, which is emetic, cathartic, and diuretic.

**Imper'ative.** Obligatory, peremptory; dominating one's will.

**Imperato'ria.** False pellitory, yellow-grass, great masterwort, ord. *Umbelliferæ*. The roots are aromatic and bitter. Alkaloid derived from it is called *imperatorine'*. **I. ostruth'ium**, imperatoria. **I. sylves'tris**, Angelica sylvestris.

**Imper'forate** (*in*, not, *per*, through, *foro*, to bore). Term applied to openings that are unnaturally closed.

**Imperfora'tion.** Absence of a natural aperture, as of the mouth, anus, vulva, etc. It is congenital and dependent upon faulty conformation.

**Imper'meable.** Not passable, as a tight stricture; also water-tight, as certain textures.

**Imper'vious.** Not admitting of a passage through, as a membrane.

**Impetig'ines.** Superficial dermatoses; eczematoses.

**Impetiginous**, im-pet-ij′in-us. Having the nature of or relating to impetigo.

**Impeti′go** (*impeto*, to attack). Running scall or tetter, crusted, pustular, or humid tetter or scall. A word at one time used generically to comprise syphilis, scorbutus, rachitis, elephantiasis, itch, tinea, scrofula, etc. By some it was described as a humid or running tetter, consisting of small pustules denominated psydracia; others included under it various forms of eczema and psoriasis. Some included all chronic eruptions under the head of impetigo, the acute forms being called exanthemata; superficial forms of skin disease also received this name. At the present day i., or i. simplex, is considered as a pustular cutaneous affection, the inflammation being due to the presence of a staphylococcus, with itching, the pustules being small and grouped together, though not confluent, and the crusts subsequently formed yellowish and scaly; some writers regard it only as a pustular eczema, eczema impetiginosum. **I. a′chor**, impetiginous eczema of the scalp. **Bock′hart's i.**, see *Bockhart*. **I. cap′itis**, i. of the scalp. **I. contagio′sa**, acute vesicopustular eruption, in many cases apparently epidemic among children, generally appearing first on the face or hands in isolated vesicles, followed in a few days by characteristic scabs. **I. eczemato′des**, eczema impetiginosum. **I. erysipelato′des** or **erythemat′ica**, inflammatory form of impetiginous eczema, erysipelatoid in appearance. **I. excorticati′va** ichthyosis. **I. exe′dens**, i. rodens. **I. figura′ta**, figured scall; impetigo occurring in irregular clusters; porrigo lupinosa. **Herpet′ic** or **herpet′iform i.**, chronic cutaneous affection of later stages of pregnancy, frequently fatal; pustules are in groups; sometimes annular, yellowish scabs form, with surface beneath like that of eczema rubrum; herpes gestationis. **I. larva′lis**, impetiginous eczema covering the face like a mask. **I. parasita′ria**, i. contagiosa, under the view that it is of parasitic origin. **I. pel′lagra**, pellagra. **I. ro′dens**, chronic impetigo, especially of the face, accompanied with foul, rodent ulceration; often regarded as a form of cancer or syphilis. **I. sim′plex**, impetigo. **I. spar′sa**, i. irregularly and scatteringly diffused over the body; eczema impetiginodes. **I. staphylog′enes**, i. simplex. **I. sycosiform′is**, deep-seated impetiginous eczema of the upper lip, sometimes occurring after shaving. **I. syphilit′ica**, impetiginous syphiloderm. **I. ulcera′ta**, i. accompanied with ulcerations; i. rodens. **I. variolo′sa**, eruption of simple impetigo pustules among the pustules of smallpox, when the latter are drying up.

**Im′petum fa′ciens.** Vital principle.

**Im′petus.** Paroxysm; attack. **I. san′guinis**, congestion of blood.

**Implacen′tal.** Devoid of placenta.

**Implanta′tion** (*implanto*, to plant in). Surgical operation intended to unite a divided intestine by placing one divided end into the other and securing by means of a button or rings and sutures. Act of inserting or introducing anything into a part. Attachment, as of a ligament. Double monstrosity, one individual being developed on or at the expense of the other. Insertion of the root of a natural tooth in an artifical alveolus made for its reception. **Crescen′tic i.**, Burns's ligament; Gimbernat's ligament. **I. cyst**, cyst resulting from the accidental implantation of a foreign body, an eyelash for example.

**Implant′ed.** Attached; ingrafted; inserted.

**Im′plicated.** Affected. Term applied to fevers when two simultaneously attack a patient.

**Implica′tion.** Complication of morbid conditions; entwining, as in plexus of nerves.

**Impon′derable.** Without weight.

**Importa′tion.** Introduction from another region or foreign country of disease or causes of disease.

**Impost′em** or **Impost′hume.** Abscess.

**Im′potence** or **Im′potency** (*in*, neg., *potens*, able). Loss of power over one or more members; commonly want of sexual vigor, incapacity for copulation, chiefly on the part of the male; also used synonymously with sterility. It may be due to mental causes.

**Im′potent.** Affected with impotence.

**Impoten′tia.** Adynamia; impotence. **I. coëun′di**, impotence. **I. concipien′di**, sterility in the female. **I. generan′di**, sterility. **I. gestan′di**, sterility in the female, due to impossibility of going to full term of gestation. **I. parturien′di**, sterility, usually from anatomical causes, interfering with birth of child. **I. viri′lis**, impotence of the male.

**Impov′erished.** Epithet applied to humor deprived of part of its constitutents, and particularly to the blood, which is considered impoverished when pale, without the proper consistence, and abounding in serum.

**Impregna′tion.** Fecundation; fertilization.

**Impressibil′ity.** See *Sensibility* and *Hyperæsthesia*.

**Impres′sio.** Impression. Depression. **I. angular′is**, depression in occipital lobe where petrous portion of temporal bone projects into cavity of cranium. **I. cardi′aca** or **cor′dis**, depression on the liver where the heart presses against the diaphragm. **I. col′ica** or **co′li**, shallow impression on the under surface of the right lobe of the liver for the hepatic flexure of the colon; similar impression behind, *impressio renalis*, is for the right kidney and suprarenal capsule. **I. rena′lis**, see *Impressio colica*. **I. suprarena′lis**, depression in right lobe of the liver for reception of suprarenal capsule. **I. vesica′lis**, fissure for gall-bladder.

**Impres′sion** (*in*, *primo*, to press). Indentations made on certain organs by others. Inequalities on bones which appear to be made by adjacent organs. Mould of a mouth or denture, secured in some plastic material. **Del′toid i.**, triangular depression on shaft of humerus for insertion of deltoid muscle. **Dig′ital i.**, depressions observable at the inner surface of the cranium, looking as if made with fingers. **Mater′nal i.**, influence upon fetal development exerted by the mental processes of the mother. **Men′tal i.**, effect of external agents or bodies on the mind. **Rhom′boid i.**, depression on the clavicle. **Sens′ory i.**, effect of external agents or bodies on the senses.

**Impressu′ra.** Impression. Evidence of taint or contamination, as with syphilis, scrofula, etc.

**Impu′ber, Impu′bes**, or **Impu′bis** (*in*, not, *puber*, at age of puberty). One who has not attained that age.

**Impudi′cus** (*impudicus*, immodest). The middle finger.

**Im′pulse** (*impello*, to drive in). Force directly employed. Influence acting directly upon the mind, with a certain amount of determination or force. **Car′diac i.**, beat of apex of the heart; see *Heart*. **Diastol′ic i.**, back-stroke of the heart. Jog or stroke felt at the end of each pulsation, seeming to be owing to the refilling of the ventricles. **Expi′ratory i.**, i. from nervous centre of respiration, producing the movement of expiration when inspiration is suspended. **Heart i.**, cardiac i. **Inspi′ratory i.**, i. from nervous centre of respiration, giving rise to inspiratory movement when expiration is suspended. **Systol′ic i.**, apex i.

**Impul′sive.** Relating to an impulse, usually mental. **I. insan′ity**, see *Insanity*.

**Imputabil′ity** (*imputo*, to attribute). Soundness of mind that renders one responsible legally for his actions.

**Imputres′cible.** Resisting putrescence.

**Imubac′co** (Jap., *imu*, fear, *bacco*, old woman). A convulsive tic resembling myriachit.

**Inac′tion.** Quiescence; suspension of function; want of response to normal stimulus.

**Inactiv′ity.** Inaction.

**Inac′tose.** A form of non-polarizing sugar.

**Inac′tuate.** To put in action.

**Inad′equacy.** Insufficiency, as of the valves of the heart when affected with disease, or of the kidney, *renal inadequacy*, when it fails to secrete urine in sufficient quantity, and there is diminution of urea and other excrementitious products.

**Inalimen'tal** (*in*, neg., *alimentum*, food). Devoid of nourishment.

**Inanagen'esis** (*is*, muscle, *anagenesis*, regeneration). Muscular regeneration or reproduction.

**Inanaph'ysis** (*anaphysis*, growing again). Inanagenesis.

**Inan'ia** (emptiness). Iliac regions.

**Inan'imate.** Not possessed of life.

**Inani'tion.** Emptiness. Exhaustion for want of food.

**Inap'petence** or **Inap'petency** (*in*, neg., *appeto*, to desire). Loss of appetite.

**Inartic'ulate** (*in*, neg., *articulus*, joint). Without joint or articulation. Not distinct or intelligible, said of the voice.

**Inarticula'tion.** State of being inarticulate.

**Inassim'ilable.** Not capable of assimilation.

**Inax'on** (*is*, fibre). Neuron having a long axon.

**Incallo'sal.** Without corpus callosum.

**In'ca's bone.** Interparietal bone.

**Incandes'cence** (*incandesco*, to glow). The condition of a substance in a white heat.

**Incandes'cent.** Being in a white heat; glowing.

**Incapacity**, in-kap-as'it-e. Inefficiency; inability for certain duties or functions.

**Incar'cerated.** Constricted. Hernia is said to be "incarcerated" when, owing to constriction about the neck of the hernial sac or elsewhere, it cannot be readily reduced.

**Incarcera'tio** (*in*, in, *carcer*, prison). Incarceration. **I. intestino'rum**, inclusion of a portion of intestine in a sac, as in hernia. **I. placen'tæ**, see *Placenta*.

**Incarcera'tion.** Constriction; morbid imprisonment of a movable part; strangulation.

**Inca'rial bone.** Inca's bone.

**Incar'nant** (*caro*, flesh). Promoting the regeneration of flesh or granulations.

**Incarna'tio.** Incarnation. **I. un'guium**, ingrowing nail.

**Incarna'tion.** Growth of flesh or granulations; conversion into flesh. Formation and development of the germ in the ovum.

**Incar'native.** Incarnant.

**Incarnifica'tion.** Incarnation.

**Incas'sa.** Intensely poisonous ordeal bark of Africa; a cardiac sedative.

**Incep'tion.** Beginning, as of disease. Intussusception. Ingestion of food.

**In'cest** (*in*, neg., *castus*, chaste). Sexual intercourse between persons whose close relationship makes marriage illegal.

**In'cidence.** Direction in which a ray of light falls or is reflected.

**In'cident.** Falling upon or impinging. **I. nerve**, afferent nerve.

**Inciden'tia** (*incido*, to cut). An old term for medicines to which was attributed the property of cutting thick or coagulated humors, as fixed alkalies, acids, etc.

**Incile**, in'sil-e. Fourth ventricle of brain.

**Incinc'ta** (*cingo*, to gird). Pregnant.

**Incinera'tion** (*incinero*, to burn to ashes). Process by which substances are reduced to ashes. Cremation.

**Incip'ient.** Beginning, as the *incipient stage* of a disease.

**Inci'sal blade.** Chisel element of incisor teeth.

**Incised' wound.** Wound by cutting instrument.

**Incis'ion** (*incido*, to cut). Methodical division of soft parts with a cutting instrument. **Lang'enbach's i.**, see *Langenbach*.

**Inci'sive.** Relating or appertaining to the incisor teeth. **I. bone**, intermaxillary bone. **I. canal'**, see *Palatine canals*. **I. fos'sa**, depression in the superior maxillary bone above the incisor teeth. **I. nerve**, branch of the inferior dental nerve supplying the incisor teeth. **I. teeth**, incisor teeth; teeth occupying the anterior part of the upper and lower jaws, used for cutting food in the manner of cutting instruments. The two middle incisors of the upper jaw are at times called butter teeth.

**Incisi'vus.** Levator labii superioris proprius. **I. infe'rior**, levator labii inferioris; accessorius orbicularis oris. **I. latera'lis et pyramida'lis**, levator labii superioris alæque nasi. **I. me'dius**, depressor alæ nasi.

**Inci'sor teeth.** Incisive teeth.

**Incisu'ra.** Incision; notch; fissure. **I. acetab'uli**, acetabular notch. **I. astrag'ali**, i. tali. **I. auric'ulæ**, i. tragica. **I. aur'is**, fissure or groove of the auricle or pavilion, passing between the concha and tragus along the upper body of the cartilage of the concha. **I. cardi'aca**, notch on border of left lung for reception of apex of the heart. **I. cerebel'li**, see *Cerebellum* and *Vermiform processes*. **I. clavicula'ris**, depression on the upper extremity of the sternum for articulation with the clavicle. **I. costa'lis**, one of the notches on the side of the sternum for the reception of the costal cartilages. **I. crucia'lis**, crucial incision. **I. digas'trica**, digastric fossa. **I. ethmoida'lis**, excavation in the middle line of the os frontis, separating the two orbital plates. **I. falcifor'mis**, external crural ring. **I. fibula'ris**, depression on the tibia for reception of the fibula. **I. fronta'lis**, supraorbital notch. **I. incisi'va**, groove on inner surface of upper jaw, forming with its fellow the anterior palatine canal. **I. interarytænoide'a**, depression in larynx between arytenoid cartilages. **I. interclavicula'ris**, interclavicular notch. **I. interloba'ris** or **interlobula'ris**, one of the fissures by which the lung is divided into lobes. **I. inter tra'gem et scaph'am**, i. auris. **I. intertrag'ica**, i. tragica. **I. ischiad'ica**, sciatic notch. **I. jugula'ris**, jugular notch. **I. lacryma'lis**, see *Sulcus lacrymalis*. **I. of Lan'termann**, one of the oblique lines, looking like cuts, on a nerve sheath. **I. liena'lis**, hilus of spleen. **I. mandib'ulæ** or **maxil'læ inferio'ris**, sigmoid notch of inferior maxillary bone. **I. margina'lis**, i. cerebelli. **I. mastoide'a**, digastric fossa. **I. nasa'lis**, nasal notch of frontal bone. **I. palati'na**, sphenopalatine notch. **I. perone'a**, i. fibularis. **I. of Rivi'ni**, notch at upper border of internal extremity of external auditory meatus. **I. rena'lis**, concave part of the kidney. **I. Santori'ni** or **santorinia'na**, one of the fissures in cartilaginous part of external auditory meatus. **I. scap'ulæ** or **scapula'ris**, suprascapular notch. **I. of Schmidt**, i. of Lantermann. **I. semiluna'ris**, term applied, from the shape, to various notches or depressions, as i. cerebelli, i. clavicularis, i. fibularis, i. intertragica, i. mandibulæ, i. maxillæ inferioris. **I. sep'ti**, fifth ventricle of brain; see *Ventricles*. **I. tympan'ica**, i. of Rivini. **I. vertebra'lis**, intervertebral notch.

**Inci'sure.** Incisura.

**Incitabil'ity.** Irritability.

**Incitamen'tum.** Stimulus.

**Incita'tion.** Stimulation.

**Incitomo'tor.** Epithet applied to an action the reverse of excitomotor, as when a stimulus originates in the nervous centres and incites the muscles to contraction.

**Inclava'tio** (*clavus*, a nail). Gomphosis. See *Wedged*.

**Inclinom'eter.** An apparatus for measuring the diameter of the eye.

**Inclu'sion** (*includo*, to shut in). The act of inclosing. Monstrosity shut up within another body, as in the abdomen, brain, ovary, testicle, etc.; or condition of such monstrosity. **Fe'tal i.**, fœtus in fœtu, or fœtus inclusus. **I. of germs**, expressing the theory that different species of plants and animals are created independently.

**Incohe'rence** or **Incohe'rency** (*in*, neg., *cohæreo*, to stick). Want of dependence of one part on another; inconsequence. One of the mental manifestations in dementia, etc., such as confused language.

**Incohe′rent.** Without rational sequence, as speech, for example.

**Incombus′tible** (*in*, neg., *comburo*, to burn up). Incapable of being consumed by fire.

**Incompatibil′ity.** State of being incompatible. As referred to drugs or other therapeutic agents, it may be *chemical*, the mixture of two or more substances causing chemical decomposition in one or all; or *physiological*, the agents exerting opposite effects upon the system which counterbalance each other so that there is no action.

**Incompat′ible** (*in*, neg., *competo*, to agree, *habilis*, able). Epithet applied to a substance which cannot be prescribed with another without interfering with its chemical composition or medicinal activity. It may be physiologically or chemically incompatible. The following statement exhibits the most common and dangerous possibilities of error from this source (Hare):

1. An acid should never be combined with an alkali.

2. An acid should never be added in any quantity to a tincture, as in the following prescription:

| | |
|---|---|
| ℞. Potassii iodidi, | ʒij; |
| Acidi nitromuriatici, | fʒj; |
| Tinct. cinchonæ comp., | q. s. f℥iij.—M. |

The acid is incompatible with the iodide of potassium, forming a chloride and setting free iodine, and would also change part of the alcohol in the tincture into an ether.

3. Alkalies should not be combined with alkaloids. Thus:

| | |
|---|---|
| ℞. Strychninæ sulph., | gr. j; |
| Potassii iodidi, | ʒij; |
| Syr. sarsaparillæ comp., | f℥iij.—M. |

The strychnine would be precipitated by the potassium salt, and the patient would get nearly all the strychnine in the last dose.

4. Potassium chlorate should not be ordered to be rubbed up with tannic acid or any other organic substance capable of oxidation, as it will explode. Permanganate of potassium is subject to the same rule.

5. Chlorate of potassium and ammonium chloride when mixed together may take fire.

6. Iron is incompatible with tannic acid, as it forms a tannate of iron or ink. As all the vegetable astringents contain tannic acid, they should not be used with iron.

7. Tannic acid should never be added to solutions of alkaloids.

8. Gum arabic is not to be added to solutions of iron, lead, or the mineral acids.

9. Alcoholic solutions of camphor and similar resinous substances are incompatible with water.

10. Fluid extracts are incompatible with water, as the addition of water will precipitate them.

11. All salts of alkaline reaction are decomposed by acids.

12. All salts which are acid are decomposed by alkalies.

13. All vegetable acid salts are altered by mineral acids and are decomposed by alkalies.

14. Iodine and the iodides should not be given with alkaloids.

15. Corrosive sublimate, the salts of lead, iodide of potassium, and nitrate of silver should always be prescribed alone, except in the following instances: (*a*) Corrosive sublimate may be given with potassium iodide, since it will throw down a precipitate which redissolves and forms a double salt. (*b*) Nitrate of silver may be used with extract of opium or hyoscyamus.

16. Syrup of squill should not be given with ammonium carbonate, as it contains acetic acid. Ammonium chloride is not incompatible with it.

17. Cherry-laurel water should not be prescribed with morphine, as it may form the poisonous cyanide of morphine.

18. Chloral and potassium cyanide should never be placed in the same prescription, as they will decompose each other, setting free hydrocyanic acid.

19. Cocaine and borax when added together form an insoluble borate of cocaine. Boric acid and cocaine do not result in this formation.

20. Calomel and antipyrin are said to be incompatible, as are also sweet spirit of nitre and antipyrin.

21. Waters cannot be used in preparing saturated solutions of drugs, as they are already loaded with a volatile substance.

**Incom′petence** or **Incom′petency.** Inadequacy or insufficiency of an organ or function. **I. of the valves of the heart,** see *Insufficiency*. **Men′tal i.,** condition of the mind resulting in irresponsibility of the individual. **Pylor′ic i.,** inability of the pylorus to retain the food until gastric digestion is completed.

**Incomplete′.** Not finished; imperfect. Term applied to inguinal hernia when the protrusion is not large enough to follow the course of the entire canal and make its exit at the external ring.

**Incompressibil′ity** (*in*, neg., *comprimo*, to squeeze together). Not capable of being compressed.

**Incon′tinence.** Want of power to control certain functions or acts. Excess in eating or drinking, in the exercise of the sexual function, etc. **I. of fæ′ces,** loss of control over the fecal evacuations. **Sem′inal i.,** spermatorrhœa. **I. of u′rine,** loss of power to control micturition.

**Incoördina′tion.** Want of correspondence between mental and muscular action. Irregular muscular action, as in locomotor ataxia and other conditions. **Locomo′tor i.,** muscular incoördination of locomotor ataxia and alcoholic intoxication.

**Incorpora′tion** (*corpus*, a body). Thorough admixture of various substances.

**Incrassan′tia** (*crassus*, thick). An old term applied to medicines believed to possess the power of thickening the humors, as mucilaginous substances.

**Incrassa′tion.** Thickening; inspissation.

**In′crease** (*cresco*, to grow). Augmentation of the size or weight of a body, by the application of new molecules around those already existing.

**In′crement.** Growth, increase.

**Incremen′tal lines of Salt′er.** Concentric lines or marks on dentine representing its successive development.

**Incrucia′tion** (*crucio*, to cross). Decussation.

**Incrusta′tion** (*crusta*, crust). Act of forming a crust on the surface of a body. The crust itself. Calcareous or cartilaginous deposit in organs. Healing by scabbing or subcrustaceous cicatrization.

**Incuba′tion** (*incubo*, to lie upon). Word used in natural history for the sitting of birds upon their eggs or development of the fecundated ovum. Maintenance of temperature of warm air, say of 98° F., around a diseased part, or in a chamber containing a prematurely born infant. Employed figuratively in medicine for the period that elapses between the introduction of a morbific principle into the animal economy and the invasion of the disease. The following table (Vierordt) has been arranged to show the

Period of Incubation of the More Important Diseases.

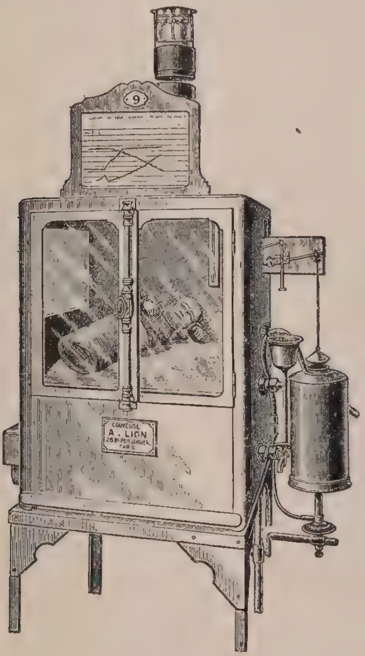
(See *Eruptive Fevers* for the period of incubation of diseases of that class.)

| | |
|---|---|
| Plague | 2–7 days. |
| Diphtheria | 2–3 " |
| Recurrent fever | 6–9 " |
| Epidemic cerebro-spinal meningitis | 4–5 " (S. Richter). |
| Malaria | About 14 days (6–20). |
| Asiatic cholera | 2–4 days (also less, 36–45 hours). |
| Dysentery | 3–8 days. |
| Yellow fever | 2–3 " |
| Mumps | 7–14 " |

| | |
|---|---|
| Pneumonia | Probably 4 days (2–7) (Caspar). |
| Influenza | Stated at 5–11 days (Kormann). |
| Syphilis | 3–4 weeks (up to appearance of local symptoms); most frequently 15–25, less frequently 20–30, days. |
| Second incubation | 6–7 weeks. |
| Total length of time up to general affection | 9–11 weeks. |
| Anthrax | 4–7 days (appearance of carbuncle). |
| Glanders | 3–5 days. |
| Erysipelas | 15 hours; very latest, 61 hours. |
| Hydrophobia | 20–59 days (Ph. Bauer). |

**In'cubative.** Relating to incubation, as the incubative period of a disease.

**In'cubator** (*incubo,* to hatch). Arrangement for hatching eggs artificially by preserving an equable temperature. An apparatus for developing and maintaining vitality in children prematurely born (*couveuse*) by keeping them in a well ventilated chamber in which the air is at a high but constant temperature. An incubator is also employed in bacteriological work for the development of certain forms of bacteria at a higher temperature than that of the laboratory.



Infant incubator.

**In'cubus.** Nightmare. Sensation of a distressing weight at the epigastrium during sleep, and of impossibility of motion, speech, or respiration; the patient awaking in terror after extreme anxiety. It often arises from difficult digestion or in consequence of severe emotions or uneasy position. The sensation of suffocation was formerly ascribed to the person being possessed; the male spirits were called *incubes,* the female *succubes.* **I. vigilan'tium,** day-mare; this is produced during wakefulness, the sense of pressure being severe and extending over the abdomen; respiration is frequent, laborious, and constricted; the eyes are fixed; sighing is deep and violent; the intellect is undisturbed.

**In'cudal.** Relating to the incus.

**Incudec'tomy.** Removal of the incus.

**Incude'us.** Laxator tympani muscle.

**Incu'diform.** Shaped like the incus or an anvil.

**Incudomal'leal.** Relating to incus and malleus.

**Incudostape'dial.** Relating to the incus and stapes.

**Incunea'tion** (*cuneus,* a wedge). Gomphosis. Impaction. See *Wedged.*

**Incur'able** (*in,* neg., *cura,* cure). Irremediable; not susceptible of cure (applied to patients and diseases).

**Incur'sus arteria'rum** (*curro,* to run). Pulse.

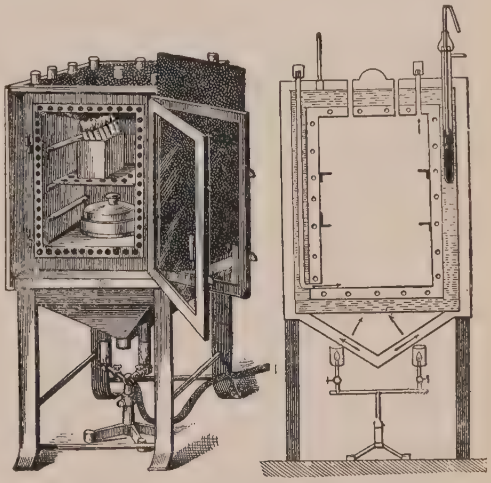
**Incur'vate.** Curved in an inward direction.

**Incurva'tion** (*incurvo,* to crook). Production of a curve; curved condition of a part.

**In'cus** (anvil). Small bone of the ear, so called from fancied resemblance to a smith's anvil; situated in the cavity of the tympanum between the malleus and orbicular bone.

**Indaga'tion** (*indago,* to trace out). Careful and painstaking examination.

**Indenta'tion.** Notched condition produced by pressure, as of the teeth on the tongue in glossitis.



Incubator used in bacteriological work.

**In'dex** (*indico,* to point out). Something that points as an indicator; forefinger, index finger. **Alve'olar i.,** ratio of basialveolar to basinasal length of skull, the latter being taken at 100°. **Auric'ular i.,** ratio of breadth to length of the auricle of the ear. **Bas'ilar i.,** ratio of prominence of skull, on plane surface anterior to basion, to prominence of whole skull. **Cephal'ic i.,** index of cranium, especially in regard to ratio of maximum length to maximum breadth; skulls with a breadth-index above 80 are brachycephalic; from 75 to 80, mesaticephalic; below 75, dolichocephalic. **Cephalofa'cial i.,** ratio of combined capacity of orbits and nasal fossæ to capacity of skull. **Cephalona'sal i.,** ratio of capacity of nasal fossæ to that of skull. **Ceph'alo-or'bital i.,** ratio of capacity of orbits to that of skull. **Cephalorachid'ian** or **cephalospi'nal i.,** ratio between area of occipital foramen and capacity of skull. **Cer'ebral i.,** ratio of largest diameters, or of transverse diameter of brain to anteroposterior. **Cerebrofa'cial i.,** cephalofacial i. **Cra'nial i.,** see *Cephalic i.* **I. of the ear,** ratio of breadth of ear to its length. **Fa'cial i.,** ratio of greatest width of face to greatest length. **Fron'tal i.,** ratio of smallest frontal diameter of skull to greatest transverse diameter. **Frontopari'etal i.,** ratio of smallest frontal diameter to greatest width of skull. **Gnath'ic i.,** alveolar i., see *Cranial i.* **I. of the head,** ratio of greatest height of face to greatest diameter. **Humerora'dial i.,** relative length of forearm to arm, latter being taken at 100; the index is higher in the fœtus and infant. **Length-breadth i.,** ratio of the breadth to the length of the skull. **Length-height i.**, ratio of the height to the length of the skull. **Or′bital i.**, ratio of vertical height of base of orbit to transverse width. **Pel′vic i.**, ratio of anteroposterior to transverse diameter of pelvis. **Refrac′tive i.**, ratio between sines of angles of incidence and refraction when a ray of light passing from one medium to another is refracted. **Rhinocephal′ic i.**, ratio of capacity of nasal fossæ to that of the skull. **Sa′cral i.**, ratio of maximum length of sacrum to maximum width. **Scap′ular i.**, ratio of maximum length and width of scapula. **Thorac′ic i.**, ratio of anteroposterior diameter of the thorax to its maximum transverse diameter at the inferior extremity of the sternum. **Ver′tical i.**, ratio of the vertical diameter of the skull to the greatest anteroposterior diameter, multiplied by 100.

**In′dex-move′ment.** Involuntary movement caused by lesion of the corpora quadrigemina. The motion of the person or animal affected is like that of the hands on a clock-dial.

**In′dian ar′row-wood.** See *Euonymus*. **I. bread,** see *Lycoperdon tuber*. **I. corn,** Zea mays. **I. cup,** Sarracenia purpurea. **I. hemp,** Cannabis indica. **I. loaf,** see *Lycoperdon tuber*. **I. mal′low,** Abutilon avicennæ. **I. paint,** Hydrastis canadensis. **I. phys′ic,** Gillenia trifoliata; small-flowered Gillenia stipulacea. **I. ring′worm,** tinea trichophytina cruris. **I. sage,** Eupatorium perfoliatum. **I. squill,** urginia. **I. tobac′co,** lobelia.

**India-rub′ber.** Caoutchouc.

**In′dican.** Yellow glucoside, vegetable indican, derived from Isatis tinctoria, by the decomposition of which indigo-blue is obtained. Also a substance, potassium indoxyl sulphate, animal indican, from bloody perspiration, urine, etc.; in the urine especially in wasting diseases, peritonitis, constipation, etc., and giving that fluid a bluish coloration by its spontaneous decomposition. Excessive excretion of indican in the urine is called *indicanu′ria*.

**In′dicant** (*indico*, to point out). Anything pointing out the means to be used for cure of disease.

**Indicanu′ria.** See *Indican*.

**In′dicating day.** The middle day of the septenary was so called because it was thought to give indications of the crisis to occur on the last day of the septenary.

**Indica′tion.** The object proposed in the employment of means for the cure of disease. Manifestation afforded by the disease of what is proper to be done for its removal or alleviation. **Caus′al i.**, suggestion as to the treatment derived from a knowledge of the cause of the disease. **Mor′bid** or **patholog′ical i.**, a guide to treatment furnished by the pathology of the malady. **Symptomat′ic i.**, therapeutic index offered by the symptoms of the disease.

**In′dicator.** Extensor proprius indicis.

**Indif′ferent.** Pointing neither one way nor the other; showing no preference; neutral; not differentiated or capable of differentiation (in embryology).

**Indigenous,** in-dij′en-us. Native in a country, in opposition to exotic.

**Indigest′ible.** Not capable of normal digestion.

**Indiges′tion.** Lack of or difficulty in digestive action; dyspepsia. **Acid i.**, i. due to hyperchlorhydria. **Al′kaline i.**, i. due to almost complete absence of the acid constituent of the gastric juice. **Gas′tric i.**, stomachal indigestion or dyspepsia. **Intes′tinal i.**, difficult digestion from causes acting in the intestine; it occurs usually two or three hours after eating. **Neu′tral i.**, i. due to hypochlorhydria.

**Indigita′tion** (*digitus*, finger). Intussusception; invagination.

**Indiglucin′.** A form of sugar produced, with indigo, when indican is decomposed.

**Indignabun′dus** or **Indignato′rius** (*indignari*, to be indignant). Rectus externus oculi.

**In′digo** (*indikos*, Indian). A dyestuff of a deep azure-blue color, obtained by a fermentative process from Indigofera anil (I. suffruticosa), I. argentea (I. articulata or tinctoria or glauca or colorata), and I. tinctoria or indica; sometimes used by the apothecary for coloring preparations. It is sometimes formed in the secretions or excretions by a splitting up of animal indican. It has been administered internally in spasmodic diseases, especially epilepsy, chorea, convulsions, etc. **Amer′ican wild i.**, Baptisia tinctoria. **False i.**, see *Sophora tinctoria, Galega officinalis*. **I. plant,** indigofera. **I. weed,** wild or yellow Sophora tinctoria.

**In′digo-blue.** Indigotin.

**In′digo-car′mine.** Sulphindigotate of potassium or sodium; a pigment used as a staining-agent in microscopy and as a test for glucose.

**Indigof′era** (*indigo*+*fero*, to bear). See *Indigo; Sophora tinctoria*. **I. angustifo′lia,** species of E. Indies, from which indigo is procured; root is tonic and antipyretic. **I. anil,** W. Indian species, important source of indigo; root is employed in calculus and syphilis; leaves are tonic and antipyretic, and externally emollient. **I. argente′a** or **articula′ta,** species of E. Indies and Asia; seeds are anthelmintic, root is used in gonorrhœa, and root and leaves have similar therapeutic action to I. anil. **I. aspalathifo′lia,** species of E. Indies, root of which is given in aphthous conditions of the mouth; other parts are used in cancer and elephantiasis. **I. enneaphyl′la,** species of E. Indies, infusion of which is diuretic; juice is given in scurvy, syphilis, etc. **I. gla′bra,** of E. Indies, resembles I. anil. **I. glau′ca,** I. argentea. **I. in′dica,** I. tinctoria. **I. oblongifo′lia,** of Arabia, is employed in colic. **I. paucifo′lia,** wild indigo, is employed in the E. Indies, the root being cathartic; stem is used for a gargle in mercurial sore mouth. **I. tincto′ria,** common indigo plant of E. Indies; leaves are alterative and employed in inflammation of the liver, as well as externally over the bladder to promote urination; the root is antilithic. **I. trifolia′ta,** leaves of this E. Indian tree are tonic, alterative, astringent, and demulcent.

**In′digogen.** $C_8H_6NO$. Substance derived from indigo-blue.

**Indigotin′.** $C_{16}H_{10}N_2O_2$. Indigo-blue; the coloring-matter of indigo, a blue, uncrystallizable powder.

**Indigou′ria.** When indican in urine becomes decomposed, indigo is formed; hence the name.

**Indirect′.** Not direct, circuitous, mediate. **I. cell-divis′ion,** karyokinesis. **I. vis′ion,** vision which occurs at some other point on the retina than the yellow spot.

**Indisposi′tion** (*in*, neg., *dispono*, to put in order). The state of being unwell; slight functional disturbance scarcely deserving the name of disease.

**Indissol′uble.** Insoluble.

**In′dium.** Very soft white metal; not important medically.

**In′dol.** $C_8H_7N$. Crystalline substance to which has been ascribed the characteristic odor of fæces; one of the results of digestion in the small intestines. **I. reac′tion,** production of a rose color when indol is acted upon with sulphuric acid in presence of nitrites; employed in bacteriological investigations.

**In′dolent** (*in*, neg., *doleo*, to be in pain). Exhibiting little or no pain. Slow in growth.

**Indoles,** in′dol-ees. Natural disposition or character. **I. an′imi,** natural disposition or character of mind. **I. mor′bi,** nature or character of a disease.

**Indosyn′clonus** (*Ind*, India, *synklonos*, tremor). Beriberi.

**Indox′yl.** An oxidation product of indol in the animal body. **I. sulphu′ric acid,** indican.

**Induced′.** Caused by induction, as induced or faradic electricity.

**Induc′tion** (*induco*, to lead in). Bringing on or causing to occur, as labor. The production of magnetic or electrical properties in a body brought near another which already possesses these properties. **I. coil,** see *Coil*. **Electrodynam′ic i.**, production of electricity in a body through the influence of an electric current passing through another body. **Electromagnet′ic i.**, the production of a current of electricity through the influence of a magnet, or the production of magnetic properties through the influence of a current of electricity. **Electrostat′ic i.,** production of electricity in a body through the influence of another body charged with static electricity. **I. machine′,** a machine for the generation of electricity (usually static electricity) by induction. **Magnet′ic i.,** the production of magnetic properties in a body, as a bar of soft iron, through the influence of a magnet held near it. **Stat′ical i.,** electrostatic i. **Volta′ic i.,** electrodynamic i.

**Inductom′eter** (*induco,* to induce, *metron,* measure). Instrument for determining the degree of electrical induction.

**Inducto′rium.** Induction coil. See *Coil.*

**Indumen′tum** (*induo,* to put on). Covering or surrounding of a part or organ. **I. cor′dis,** pericardium. **I. ner′vi** or **nervo′rum,** neurilemma; perineurium. **I. ventriculo′rum,** lining membrane of the ventricles of the brain. **I. vit′reum,** enamel.

**In′durated** (*durus,* hard). Hardened; applied to lesions with induration. Affected with induration or hardening, as indurated chancre.

**Indura′tio.** Induration. **I. cu′tis,** scleroderma, sclerema cutis. **I. glandula′rum,** scirrhous cancer of glandular structures. **I. Hunte′ri,** Hunterian or indurated chancre. **I. intestino′rum,** scirrhus of the intestines. **I. malig′na,** scirrhus. **I. re′num,** induration of the kidneys. **I. te′læ cellulo′sæ neonato′rum,** sclerema neonatorum; see *Induration.* **I. testic′uli** or **tes′tis,** inflammation and induration of the testicle. **I. thyroide′a,** goitre. **I. ventric′uli scirrho′sa,** scirrhus of the stomach.

**Indura′tion.** Hardening. Hardness supervening occasionally in an inflamed part; a termination of inflammation, and owing to change in the nutrition of the part. **I. of are′olar** or **cel′lular tis′sue,** compact œdema of infants, sclerosis, skinbound or hidebound disease. Disease attacking infants a few days after birth. Induration of the areolar tissue of the adult is a result of inflammation of the corium, chorionitis. Two forms have been described: acute, or sclerema elevatum, and chronic, or sclerema atrophicum. **Atroph′ic pig′mentary i.,** alterations in pigment of the mucous membrane of the stomach, with atrophy of the glandular structure, induration being due to hyperplasia of the fibrous connective tissue. **Black i.,** interstitial pneumonia in which the lungs are black from presence of foreign coloring-matter, as soot. **Brown i.,** condition in which, after the congestive stage of pneumonia and valvular obstruction, pigment from the circulation is deposited in the structure of the lung. **Cyanot′ic i.,** condition in which, after prolonged venous congestion, a hardened mass is formed of transuded blood and serum. **Den′tinal i.,** see *Dentine.* **Fi′broid i.,** sclerosis. **Fi′brous i.,** interstitial pneumonia. **Gray i.,** interstitial pneumonia in which the lungs are gray from hyperplasia of fibrous tissue. **Mi′tral i.,** thickening and hardening of the mitral valve, as in some forms of endocarditis. **Pig′ment i.,** brown i. **Pri′mary** or **prim′itive i.,** chancre. **Red i.,** interstitial pneumonia in which the lungs are red from engorgement with blood. **Specif′ic i.,** syphilitic chancre.

**In′durative.** Relating to or associated with induration.

**Indu′sium** (shirt, small tunic). Membranous covering or coat. Amnion. **I. gris′eum,** a thin layer of gray matter over the corpus callosum.

**Ine′briant** (*inebrio,* to intoxicate). Intoxicating.

**Inebria′tion.** Drunkenness.

**Inebri′ety.** Drunkenness; habitual intoxication.

**Iner′tia** (*iners,* inactive). Sluggishness, inactivity. **I. of the womb** or **I. u′teri,** diminution and even total cessation of the contractions of the uterus during labor.

**Inesine′.** Alkaloid from hairs of seeds of Strophanthus hispidus.

**In extre′mis** (at the extremity). Dying; moribund.

**In′fancy** (*in,* neg., *fans,* speaking). Early childhood. See *Age.*

**In′fant.** Baby, very young child. In law, one who has not attained the age of legal capacity, generally fixed at twenty-one years.

**Infan′ticide** (*infans,* child, *cædo,* to kill). Child-murder. Murder of a child newly born, or on the point of being born, by actual commission, or omission of cares necessary to its preservation.

**In′fantile.** Relating to infancy or to an infant. **I. her′nia,** see *Hernia.* **I. hy′drocele,** see *Hydrocele.* **I. pal′sy,** i. paralysis. **I. paral′ysis,** poliomyelitis anterior acuta. **I. scur′vy,** see *Scurvy.* **I. spi′nal at′rophy,** atrophy occurring after poliomyelitis anterior.

**Infan′tilism.** Faulty development producing in an adult the characteristics of a child in appearance, disposition, sexual relations, etc.

**Infarct′** (*infarcio,* to stuff). Plug or obstruction in a blood-vessel resulting in a thick deposit in the neighboring tissues. **Anæ′mic i.,** an area of necrosis due to obstruction in a terminal vessel supplying that part. **Calca′reous i.,** a localized deposit of lime salts in the parenchyma of an organ. **Embol′ic i.,** anæmic infarct. **Hemorrhag′ic i.,** condition dependent on hyperæmia or congestion from capillary embolism; rupture and extravasation resulting from pressure of the blood within circumscribed spaces. **Mam′mary** or **milk i.,** knotty tumor of the mammæ, owing to the accumulation and arrest of milk in the galactophorous ducts. **Red i.,** hemorrhagic infarct. **U′ric-acid i.,** obstruction in the renal tubules of the newborn by a deposit of uric acid. **White i.,** anæmic infarct.

**Infarc′tion** (*infarcio,* to stuff). Obstruction of the intestines by undigested masses of food. Obstruction of other tissues or organs by embolism, extravasation, or infiltration. Infarct, or formation of the same.

**Infarc′tus.** See *Infarct* and *Infarction.* Obstruction. **I. hæmopto′icus Laennec′ii,** see *Hæmoptysis.* **I. lac′tei extremita′tum,** phlegmasia dolens. **I. mam′mæ lac′teus,** mammary infarct. **I. rena′lis,** uric-acid infarct.

**Infect′.** To convey the germs of disease from the sick to the well.

**Infec′tant** (*inficio,* to taint). That which can taint or infect.

**Infec′ted.** Tainted with the virus of disease.

**Infec′tion.** Material essential to and concerned in the propagation and spread of communicable diseases. Process by which the germs of disease are communicated to a healthy individual from one diseased. This may be by immediate contact (contagion); through the medium of objects which themselves have been in relation with the sick, or of healthy individuals passing from the vicinity of the sick to that of the well, or of insects carrying the specific microorganisms; by effluvia carried through the atmosphere; by water convection. **Mixed i.,** i. with the germs of more than one disease. **Pu′rulent i.,** pyæmia. **Pu′trid** or **Sep′tic i.,** septicæmia.

**Infec′tious.** Capable of being transmitted by infection.

**Infecund′.** Sterile.

**Infecun′dity** (*in,* neg., *fecundus,* fruitful). Sterility.

**In′ferent.** See *Afferent.*

**Infe′rior.** Lower.

**Infibula′tion** (*fibula,* clasp). An operation, formerly practised, consisting in passing a ring through the prepuce after having drawn it over the glans, to prevent coition. In women, to preserve their chastity, the ring was passed through the labia majora.

**In′filtrated.** Affected with infiltration.

**Infiltra′tion** (*filtro,* to filter). Passage or effusion of a fluid into the areolæ of any texture, and particularly of the connective tissue. The fluid effused is ordinarily the liquor sanguinis, sometimes blood or pus, fæces, or urine. When infiltration of a serous fluid is general, it constitutes anasarca; when local, œdema. **Ad′ipose i.,** fatty infiltration, see *Fatty.* **Albu′minoid, albu′minous,** or **am′yloid i.,** amyloid degeneration; see *Lardaceous.* **I. an-**

**æsthe′sia** (Schleich), production of local anæsthesia by thorough infiltration of the field of operation with an indifferent fluid, which need not itself be anæsthetic. (See cut under *Anæsthesia*.) **Black i.,** anthracosis. **Calca′reous i.,** see *Cretifaction*. **Cel′lular i.,** intrusion of round cells between and among the elements of a tissue. **Choles′terine i.,** see *Lardaceous*. **Col′loid i.,** colloid degeneration. **Drop′sical i.,** œdema. **Fat′ty i.,** see *Fatty*. **Fi′brinous i.,** effusion of plastic lymph into the structure of inflamed tissue. **Gelat′inous i.,** effusion of jelly-like matter into the spaces between miliary tubercles. **Glycogen′ic i.,** deposit of glycogen in the cells. **Gray i.,** gray hepatization. **My′eloid i.,** infiltration of bones with characteristic cells of medullary tumors. **Œdem′atous i.,** œdema. **Pig′mentary i.,** see *Pigmentation*. **Pu′rulent i.,** see *Purulent* and *Hepatization*. **Sa′line i.,** deposit of salts, usually lime salts, in the tissues. **Sanguin′eous i.,** extravasation of blood; ecchymosis. **Se′rous i.,** œdema. **Tuber′culous i.,** i. with tubercle. **U′rinary** or **u′rinous i.,** extravasation of urine. **Wax′y i.,** see *Lardaceous*.

**In′finite.** Boundless, immeasurable. **I. dis′tance,** the distance an object must be in order that the rays of light from it may enter the eye practically parallel; this is about twenty feet.

**Infin′itovist.** One who believes that all organized bodies are the result of the development of germs encased one within the other *ad infinitum*.

**Infirm′.** Not sound; weak; feeble.

**Infir′mary.** Hospital.

**Infir′mity.** Disease which has become habitual, owing either to its chronic character or its numerous relapses. An enfeebled condition of body or mind.

**Inflamed′** (*flamma*, flame). Phlogosed. Affected with inflammation.

**Inflam′mable.** Liable to catch fire. **I. air,** carbureted hydrogen.

**Inflamma′tio.** Inflammation; phlegmon.

**Inflamma′tion** (*flamma*, flame). Inflammation is not easily defined, except by its symptoms and pathological changes. Simple accumulation of blood in the capillaries is hyperæmia, not inflammation. The latter requires, in addition, altered nutrition of the blood-vessels and of surrounding tissues. These may be thus described in an abstract (Green):

The process of inflammation comprises changes in the blood-vessels and circulation, exudation of fluid and of blood corpuscles from the vessels, and changes in the inflamed tissues. All these changes go on together.

1. *Changes in the Blood-vessels and Circulation.* Experiments on animals show that, as a rule, the first effect of injury is to cause dilatation of the arteries, which gradually extends to the veins and capillaries; this steadily and slowly increases for several hours, associated at the commencement of the process with acceleration in the flow of blood for a short time, followed by a considerable retardation in the circulation, the vessels still remaining dilated. Pulsation is now evident in the smallest arteries, and the stream is slow enough to allow of the distinction of individual corpuscles in the capillaries and smaller veins—perhaps even in the arterioles. The acceleration or determination of blood is not constant, and often subsides without the occurrence of any of the characteristic phenomena of inflammation. In some cases contraction occurs, after which dilatation with slowed stream commences. This dilatation with diminished velocity comes on slowly, is constant and permanent so long as the cause acts, and must be regarded as the essential vascular change of the inflammation. Narrowing of the veins by layers of leucocytes, among which there are no red corpuscles, now increases the obstruction to the circulation, which becomes slower and slower. The red corpuscles, with some white, accumulate in the capillaries, which appear as if distended by a red injection-mass. After a time all onward movement ceases in the capillaries, and their contents sway to and fro with the pulse. This is the stage of oscillation, and it is succeeded by that of stasis, in which no movement of any kind occurs. Finally, thrombosis or coagulation may take place.

2. *Escape of Fluid and of Blood Corpuscles from the Vessels.* In most inflammations the escape of white corpuscles from the vessels is far in excess of that of the red; but in the most severe, in which stagnation is induced in a large number of capillaries, the usual state of affairs may be reversed. From such capillaries red corpuscles pass out almost alone, occupy the interstices of the tissues, and give the exudation a hemorrhagic character; whereas if the blood is in motion, most red corpuscles pass through the vessels of the inflamed area, while the stickier white adhere to the walls. Intensity of injury and vascularity (*i. e.*, number of capillaries) determine the proportion of red corpuscles in an exudation. They pass out chiefly from the capillaries, and several often escape in quick succession from one spot, giving rise to a red spot visible to the naked eye as a punctiform hemorrhage. No rupture of vessels occurs, as may be shown by injection. Both red and white corpuscles at first remain near the vessels whence they have escaped, but they are pushed away by other corpuscles, washed away by the escaping fluid, and the white corpuscles move away by their individual power of locomotion.

One of the earliest effects of the vascular changes in inflammation is increased exudation of fluid. The composition of inflammatory effusion is not constant. In the most acute inflammations it contains a large number of red corpuscles; in less severe, white corpuscles are greatly in excess of the red. The more severe the process the more nearly does the fluid approach blood plasma in its composition and tendencies, while in the less severe it is more like the serous fluid exuded in mechanical hyperæmia.

3. *Changes in the Inflamed Tissues.* The tissues of an inflamed part are softer than natural, watery or solid-looking, and in either case the component elements are blurred or altogether indistinguishable. Microscopically, the tissue-elements are at first separated by fluid and obscured by leucocytes and fibrin filaments; the tissue-cells, when not obscured by leucocytes, are either structureless masses from coagulation-necrosis or are undergoing fatty degeneration; the tissue-fibres are swollen, less distinct, and ultimately degenerate. Red corpuscles are found in greater or smaller numbers in even moderately severe inflammations.

*The Clinical Signs of Inflammation* are redness (*rubor*), heat (*calor*), swelling (*tumor*), pain (*dolor*), and impaired function (*functio læsa*). *Redness* and *heat* may be taken together, as depending upon the quantity of blood passing through the part in a unit of time, which, as a rule, is greater than normal, the excess being most marked in the early stage of the process, when the part is bright red and hot. *Swelling*, beyond the most trivial due to dilated vessels, arises from exudation of fluid and corpuscles. It varies in amount with the distensibility of the part, being most marked in such as the scrotum and eyelids, least so in bone. When due to fluid (*œdema*), the affected part "pits" unless it is very tensely stretched. Swelling may be absent in cases of slight inflammation, in which the lymphatics suffice to carry away the increased exudation. *Pain* is due to pressure of the effusion on nerve-endings, perhaps also to chemical irritation of them. It is greater the more sensitive and the more rigid the part and the more rapid the effusion into it, as is seen in acute suppuration in a digital tendon sheath. It is often throbbing from the increase of tension with each heart stroke. *Impaired function* is due to the fact that every tissue is injured by inflammation.

Inflammations of the areolar and serous membranes greatly agree, and those of the mucous membrane and skin; the former being more active, and constituting the phlegmonous variety; the latter, the erythematic or erysipelatous. Inflammation may end by resolution, suppuration, gangrene, adhesion, effusion, or induration.

Examination of the blood drawn in inflammation exhibits increase of the fibrinous element—the average proportion of which, in healthy blood, is about three in the thousand. In inflammation it at times rises as high as ten. In fevers unaccompanied with inflammation the proportion is natural or below the average, but whenever inflammation supervenes it immediately rises. The number of leucocytes in the blood is also increased, both relatively and absolutely, in inflammation; and, as a general rule, to which there are some apparent exceptions, the more pronounced and sthenic is the inflammation the greater is the increase in number of the white cells (leucocytosis); it is also greater when suppuration or purulent exudation occurs than when the effusion is serous.

External inflammation is easily detected by the characters already mentioned—internal, by disturbance of function and pain upon pressure; but the last sign is often not available. The *cause* of inflammation is to be found in noxious influences originating within the organism or acting upon it from without. The latter are of mechanical, chemical, electrical, or thermal character, or, and most frequently, they are of the nature of infections.

Inflammation is not always active. There is a form, inflammatio debilis, occurring in low conditions of the system and in broken-down constitutions, which requires stimulant rather than sedative treatment.

**Inflamma′tion, adhe′sive.** Variety of inflammation in which union of cut surfaces takes place by exudation of plastic matter. **Adynam′ic i.,** asthenic i. **Aplas′tic i.,** i. in which there is exudation of lymph not capable of forming tissue. **Artic′ular i.,** arthritis. **Asthen′ic i.,** i., generally chronic, attacking parts of the body that are in an unhealthy or weakened condition. **I. of blad′der,** cystitis. **I. of brain,** see *Encephalitis* and *Phrenitis*. **I. of cæcum,** typhlitis. **Ca′seous i.,** i. in which, from loss of watery constituents, the exudation becomes yellowish and cheesy. **Catar′rhal i.,** catarrh. **Chees′y i.,** caseous i. **I. of co′lon,** colitis. **Conges′tive i.,** inflammation resulting from intense hyperæmia. **I. by contigu′ity,** i. extending to parts in the vicinity. **I. by continu′ity,** i. extending through continuous tissue or tissues. **Croup′ous i.,** i. accompanied with croupous or diphtheritic exudation. **Cryptogen′ic i.,** i. of an internal part in which no recognizable change has occurred at the point where the pathogenic microorganism entered the body. **Diffu′sive i.,** see *Inflammation*. **Diphtherit′ic i.,** inflammation accompanied with diphtheritic inflammation; diphtheritis. **Dry i.,** i. without exudation. **I. of the ear,** otitis. **Ectog′enous i.,** i. arising at a point in the skin or mucous membrane where the pathogenic microorganisms lodge and become active. **Embol′ic i.,** inflammation resulting from existence of septic embolus in a blood-vessel. **Erethit′ic i.,** inflammation with increased irritability of surface. **Excre′tory i.,** i. in which the pathogenic microorganism acts mainly upon the excretory organs and is eliminated by them. **I. of the eye,** ophthalmia. **Exu′dative i.,** i. with exudation of serum, mucus, fibrin, or pus. **Fi′brinous i.,** i. with increased exudation of fibrin. **Gen′eral i.,** synocha. **Hæmatog′enous i.,** metastatic i. in which the blood-vessels are the channels of dissemination. **Health′y i.,** inflammation leading to healthy union of parts. **I. of the heart,** carditis, myocarditis, pericarditis, endocarditis. **Hyperplas′tic i.,** inflammation attended with increased formation of connective tissue. **Hypostat′ic i.,** inflammation due to passive hyperæmia of a part or organ, as in hypostatic pneumonia, bedsores, etc. **Inter′nal i.,** inflammation deeply seated in the body. **Intersti′tial i.,** i. of connective tissue of any part or organ. **I. of intes′tines,** enteritis. **I. of i′ris,** iritis. **I. of kid′ney,** nephritis. **I. of lar′ynx,** laryngitis. **I. of liv′er,** hepatitis. **I. of lungs,** pneumonitis. **Lymphog′enous i.,** metastatic i. in which the lymphatic vessels are the channels of dissemination. **Mem′branous i.,** croupous or diphtheritic i. **Metastat′ic i.,** inflammation of a part conveyed from another inflamed part, perhaps at a distance, through the circulation. **I. of mouth,** stomatitis; aphthæ. **I. of mus′cles,** myositis. **Necrot′ic i.,** intense inflammation leading to necrosis or death of the part affected. **I. of nerves,** neuritis. **Neuroparalyt′ic** or **neuropath′ic i.,** inflammation resulting from weakened or lost nervous supply to a part. **I. of o′vary,** ovaritis. **Parenchym′atous i.,** i. of the parenchyma of an organ. **I. of parot′id,** parotiditis or parotitis. **Pellic′ular i.,** diphtheritic i. **I. of pericar′dium,** pericarditis. **I. of peritone′um,** peritonitis. **Phageden′ic i.,** phagedæna. **Phleg′monous i.,** cellulitis. **Plas′tic i.,** i. with production of fibrinous or plastic material and excess of colorless corpuscles. **I. of pleu′ra,** pleuritis. **Produc′tive** or **prolif′erous i.,** i. with new formations, hypertrophied outgrowths, etc. **Pseudomem′branous i.,** croupous i.; i. with formation of false membrane. **Pu′rulent i.,** i. leading to abscess. **Pu′trid i.,** i. attended with or followed by putrid discharge. **Re′flex i.,** i. in any organ, the result of wound or injury of another or distant organ. **Sep′tic i.,** i. from absorption or introduction of septic microorganisms. **Se′rous i.,** i. of serous membranes. **Specif′ic i.,** i. from specific cause. **Spon′goid i.,** medullary sarcoma; hæmatodes fungus; see *Encephaloid*. **Sthen′ic i.,** i. fully developed as to intensity of symptoms in strong and healthy individuals. **I. of stom′ach,** gastritis. **Stru′mous i.,** scrofulous i. **Sympathet′ic i.,** reflex i. **I. of tes′ticle,** orchitis; epididymitis. **I. of tongue,** glossitis. **I. of ton′sil,** tonsillitis; amygdalitis. **Tor′pid i.,** passive i. **Tox′ic i.,** i. from poisoning, local or systemic. **Traumat′ic i.,** i. resulting from wound or injury. **I. of u′terus,** metritis. **Vas′cular i.,** i. involving coats of vessels of any part or organ. **I. of vein,** phlebitis. **I. of womb,** metritis.

**Inflam′matory.** Phlogistic. Belonging to inflammation, as inflammatory fever, etc. Blood is said to be inflammatory when cupped or buffed. See *Corium phlogisticum*. **I. blush,** erythema.

**Inflatine′.** Alkaloid from seeds of Lobelia inflata.

**Infla′tion.** Distending or distention with gas or air; insufflation. **Tympanit′ic i.,** tympanites.

**Inflec′tion** or **Inflex′ion.** Bending or curving inward.

**Influen′za** (Italian for *influence*). Epidemic catarrh; grip or grippe. Severe form of catarrh, usually with marked constitutional symptoms, as great prostration, chills, excessive secretion from nose, larynx, and bronchial tubes, cough, headache, fever, cardiac oppression, etc. The disease is due to infection by a minute organism, the Pfeiffer bacillus or B. influenzæ. It usually occurs epidemically, and generally affects a large number of persons in a community. Its duration is from a few days to a week or more. It occurs under three main forms, the *cerebral*, *gastroenteric*, and *pulmonary*, named from the systems most severely attacked. The treatment consists of confinement to the house, especially in inclement weather, a light diet, laxatives, and the exhibition of drugs according to the indications furnished by the individual and his symptoms.

**Influen′zal.** Relating to influenza; grippal.

**Influen′zoid** (*eidos*, resemblance). Resembling influenza.

**In′flux.** Inward flow.

**Inform′itas** (*in*, neg., *forma*, form). Deformation or deformity.

**Infra-.** As a prefix, beneath.

**In′fra-acromiohumera′lis.** Deltoid muscle.

**In′fra-arytæ′no-aryglottidæ′us.** Epiglottideus inferior.

**Infra-atloidæ′us.** Subatloidæus; second cervical nerve.

**In′fra-ax′illary.** Below or beneath the axilla.

**Infra-axoidæ′us.** Subaxoidæus; third cervical nerve.

**Infrabran′chial.** Below the gills.

**Infraclavic′ular.** Situated beneath the clavicle, as the infraclavicular fossa.

**Infracom′missure.** Inferior commissure.

**Infraconstric′tor.** Inferior constrictor of pharynx.

**Infracor′tical.** Beneath the cortex, as of the brain or kidney.

**Infracos′tal.** Relating to inferior surface of the costa or rib. **I. mus′cle,** muscular tissue and fascia extending from the inferior surface of one rib to the inferior surface of a rib below.

**Infrac′tion.** Green-stick fracture.

**Infradiaphragmat′ic.** Situated under the diaphragm.

**Infragen′ual** (*infra,* beneath, *genu,* knee). Subpatellar.

**Infraglen′oid.** Situated below the glenoid cavity.

**Infraglot′tic.** Situated below the glottis.

**Infrahy′oid.** Situated below the hyoid bone.

**In′fra-in′guinal.** Situated below the groin.

**Inframam′mary.** Situated beneath the mamma.

**Inframandib′ular.** Beneath the mandible or maxillary bone.

**Inframar′ginal.** Beneath the free edge or margin of the fissure of Sylvius, as the *inframarginal gyrus.*

**Inframax′illary.** Submaxillary; relating to the lower jaw.

**Inframaxillosternodym′ia.** See *Cephalosomatodymia.*

**Infraobli′quus.** Inferior oblique muscle.

**Infraoccip′ital.** Below the occiput.

**Infraor′bital** or **Infraor′bitar.** Suborbital; below the orbit.

**Infrapu′bian.** Situated beneath the pubis. See *Subpubic.* **I. lig′ament,** triangular ligament.

**Infrarec′tus.** Rectus inferior oculi muscle.

**Infrascap′ular.** Beneath the scapula.

**Infrascapula′ris.** Subscapularis muscle.

**Infraspi′nal.** Infraspinous.

**Infraspina′lis.** Infraspinatus.

**Infraspina′tus.** Situated beneath the spine of the scapula. **Infraspina′ta fos′sa,** large excavation on the posterior surface of the scapula, beneath its spine, filled by the **Infraspina′tus mus′cle,** broad, flat, and triangular, attached by its base to the three inner quarters of the fossa, and inserted, by a long tendon, into the middle part of the great tuberosity of the os humeri. It turns the arm outward, and, when the arm is elevated, carries it backward. **I. accesso′rius, mi′nor,** or **secun′dus,** superior part of infraspinatus muscle arising from spine of scapula.

**Infraspi′nous.** Below the spine of the scapula.

**Infraster′nal.** Below the sternum. **I. depres′sion,** the depression of the ensiform appendix.

**Infratem′poral.** Below the temple.

**Infrathorac′ic.** Below the thorax.

**Infraton′sillar.** Below the tonsil.

**Infratrochanter′ic.** Below the trochanter.

**Infratroch′lear.** Below the trochlea.

**Infric′tion** (*frico,* to rub). Inunction.

**Infrigida′tion.** Refrigeration.

**Infring′ens** (*frango,* to break). Corrigent.

**Infundib′ula.** Plural of infundibulum. **I. of the lung,** terminal branches and lateral twigs given off from the respiratory cavities in which the smaller bronchial tubes terminate.

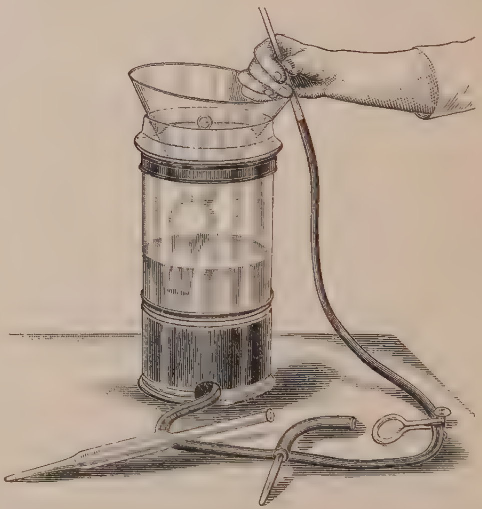
**Infundib′ular** or **Infundib′uliform.** Shaped like a funnel. **I. fas′cia,** funnel-shaped layer of membrane investing the spermatic cord. **I. proc′ess,** funnel-shaped layer of membrane investing the spermatic cord.

**Infundibulo-ova′rian.** Relating to ovary and Fallopian tube.

**Infundibulopel′vic.** Relating to pelvis and Fallopian tube, or pelvis and calices of the kidney.

**Infundib′ulum** (*fundo,* to pour in). Funnel. Name given to many parts resembling a funnel. **I. of the brain,** depression in the inferior wall of the middle ventricle, above the pituitary gland; anciently regarded as a canal by which fluid collected in the ventricles of the brain was evacuated and poured into the nasal fossæ. Funnel-shaped process forming prolongation of tuber cinereum and terminating in the pituitary body. **I. cer′ebri,** i. of the brain. **I. of the coch′lea,** this, with the modiolus, forms the nucleus around which the gyri of the cochlea pass; imperfect funnel, the apex of which is common with that of the modiolus, and the base is covered with the apex of the cochlea, termed cupola. **I. cor′dis,** conus arteriosus. **I. of the ear,** i. of the cochlea. **I. of eth′moid bone,** one of the anterior cells of that bone, broad and expanded above and narrow below; opening above into the frontal sinus; below into the anterior part of the middle meatus of the nasal fossæ. **I. of Fallo′pian tube,** see *Tube, Fallopian.* **I. of fron′tal si′nus,** i. of ethmoid bone. **I. of the heart,** conus arteriosus. **I. of the kid′ney,** see *Calix.* **I. lacryma′le,** lacrymal sac. **I. of the lungs,** see *Infundibula.* **I. of na′sal fos′sæ,** i. of ethmoid bone. **I. ova′ricum,** i. of Fallopian tube; see *Tube, Fallopian.* **I. tuba′rum Fallo′pii,** see *Tube, Fallopian.* **I. ventric′uli,** œsophagus. **I. ventric′uli ter′tii cer′ebri,** i. of the brain.

**Infu′sion** (*infundo, infusum,* to pour in). Pharmaceutical operation consisting in pouring a hot or cold fluid (the latter distinguished as *cold* infusion) upon a substance whose medical virtues it is desired to extract. Infusion (infusum) is also the official name for the product of this operation. In surgery, infusion is the act of introducing into the veins solutions of various substances, but especially a decinormal salt solution. For the official and other more important infusions, see *Infusum.*



Apparatus used for intravenous injection of saline solution. An ordinary glass irrigator has placed in it a glass funnel, the stem of which is dilated for the holding of some absorbent cotton. The sterile saline solution is formed in the funnel, and all foreign bodies filtered out by the cotton as the fluid runs into the glass container, which is graduated in half litres or pints. The pipette and vein cannula are also shown.

**Infusodecoc′tum.** Combination of an infusion and a decoction of the same substance.

**Infu′sor.** Instrument formerly used for injecting medicinal substances into the veins; it was of the shape of a funnel, the elongated apex of which was stopped by a metallic rod, which could be withdrawn when the apex was introduced into a vein.

**Infuso′ria** (said to be so called because noticed in infusions when left exposed to the air). Microscopic protozoa found in various fluids, and multiplying by gemmation. Some are pathogenic for man and other animals.

**Infu'sum.** Infusion. **I. aca'ciæ cat'echu,** i. catechu compositum. **I. alsto'niæ** (Ph. Br.), from A. scholaris and A. constricta, dita bark; used in dysentery and as a tonic; dose, ℥ss–j (16.0–32.0). **I. ama'rum vino'sum,** vinum gentianæ compositum. **I. andragraph'idis** (Ph. Br.), from A. paniculata, creyat, kariyat, or kreat; tonic; dose, ℥ss–j (16.0–32.0). **I. angustu'ræ,** I. cuspariæ. **I. anthem'idis,** infusion of chamomile; dose, ℥j–iss (32.0–48.0). **I. armora'ciæ, I. a. compos'itum,** compound infusion of horseradish; dose, ℥j–iij (32.0–96.0). **I. auran'tii** (Ph. Br.), infusion of orange-peel; dose, ℥j–ij (32.0–64.0). **I. a. compos'itum** (Ph. Br.), compound infusion of orange-peel, lemon-peel, and cloves; dose, ℥j–ij (32.0–64.0). **I. azadirach'tæ in'dicæ,** from Melia azadirachta, nrem or margosa bark; antiperiodic and tonic; dose, ℥ss–j (16.0–32.0). **I. bra'sii,** wort, infusion of malt, formerly used in scurvy. **I. bu'chu** (Ph. Br.), infusion of buchu or diosma; dose, ℥j–ij (32.0–64.0). **I. by'nes,** wort. **I. calum'bæ** (Ph. Br.), infusion of calumba or columba; dose, ℥iss–iij (48.0–96.0). **I. cap'sici,** infusion of capsicum or Cayenne pepper; dose, ℥iss (48.0). **I. caryophyl'li** (Ph. Br.), infusion of cloves; ℥ss–j (16.0–32.0). **I. cascaril'læ** (Ph. Br.), infusion of cascarilla; dose, ℥iss–ij (48.0–64.0). **I. cat'echu compos'itum, I. cat'echu,** or **I. aca'ciæ cat'echu,** compound infusion of catechu, catechu and cinnamon; dose, ℥ss–j (16.0–32.0). **I. chira'tæ** (Ph. Br.) or **I. chiret'tæ,** infusion of chiretta; tonic; dose, ℥ss–j (16.0–32.0). **I. cincho'næ** (Ph. U. S.), **I. c. ac'idum** (Ph. Br.), infusion of cinchona, infusion of bark; dose, ℥ss–ij (16.0–64.0). **I. cosci'nii** (Ph. Br.), from Coscinium fenestratum; tonic, like calumba; dose, ℥ss–j (16.0–32.0). **I. cuspa'riæ** (Ph. Br.), infusion of cusparia or angustura; dose, ℥ss–j (16.0–32.0). **I. digita'lis** (Ph. U. S. and Br.), infusion of foxglove, infusion of digitalis; digitalis, cinnamon, alcohol, and water; dose, ʒj–iv (4.0–16.0). **I. dios'mæ,** infusion of buchu. **I. dulcama'ræ,** infusion of dulcamara (dulcamara, aq. destill. bullient.); dose, f℥j–ij (32.0–64.0). **I. er'gotæ** (Ph. Br.), infusion of ergot; dose, as a parturifacient, ℥ij (64.0). **I. gentia'næ composit'um** (Ph. Br), compound infusion of gentian; bitter orange-peel, lemon-peel, and gentian root; dose, ℥ss–j (16.0–32.0). **I. hu'muli,** i. lupuli, infusion of hops; dose, ℥iss–iij (48.0–96.0). **I. krame'riæ** (Ph. Br.), infusion of krameria or rhatany; dose, ℥iss (48.0). **I. li'ni** (Ph. Br.), **I. l. compos'itum,** or **I. l. usitatis'simi,** compound infusion of linseed, flaxseed tea; linseed and licorice; dose, a teacupful, *ad libitum.* **I. lu'puli** (Ph. Br.), i. humuli. **I. mal'ti,** wort. **I. pru'ni virginia'næ** (Ph. U. S.), infusion of wild cherry or wild-cherry bark; dose, ℥ss–j (16.0–32.0). **I. quas'siæ** (Ph. Br.), infusion of quassia; dose, ℥ss–j (16.0–32.0). **I. rhe'i** (Ph. Br.), infusion of rhubarb; dose, ℥ss–j (16.0–32.0). **I. ro'sæ ac'idum** (Ph. Br.), acid infusion of roses, rose leaves, and dilute sulphuric acid; dose, ℥ss–j (16.0–32.0). **I. r. compos'itum** or **I. r. Gal'licæ,** compound infusion of rose; rose leaves, dilute sulphuric acid, and sugar; dose, ℥ss–j (16.0–32.0). **I. sal'viæ,** infusion of sage, sage tea; dose, a teacupful, *ad libitum.* **I. sarsaparil'læ,** infusion of sarsaparilla; dose, ʒij (8.0). **I. sassaf'ratis** or **I. s. medul'læ,** infusion of sassafras pith, mucilage of sassafras pith; dose, a teacupful, *ad libitum.* **I. scopa'rii** (Ph. Br.), infusion of broom, from Cytisus scoparius; a cardiac tonic; dose, ℥j–ij (32.0–64.0). **I. sen'egæ** (Ph. Br.), infusion of senega; dose, ℥ss–j (16.0–32.0). **I. sen'næ** (Ph. Br.), infusion of senna; made with ginger and senna; dose, ℥ss–ij (16.0–64.0). **I. s. compos'itum** (Ph. U. S.), compound infusion of senna; a form of senna tea, black draught, haustus niger, employed for its purgative action (senna, manna, sulphate of magnesium, fennel, boiling water); dose, ℥ij–viij (64.0–256.0). **I. serpenta'riæ** (Ph. Br.), infusion of Virginia snakeroot, serpentaria, or serpentary; dose, ℥ss–j (16.0–32.0). **I. tarax'aci,** infusion of dandelion or taraxacum; dose, ℥iss (48.0), as a diuretic, etc. **I. tinospo'ræ,** from Tinospora cordifolia, gulancha; tonic; dose, ℥ss–j (16.0–32.0). **I. todal'iæ,** from Todalia aculeata; an aromatic tonic; dose, ℥j–ij (32.0–64.0). **I. ul'mi,** infusion of ulmus or slippery elm, slippery elm tea, mucilage of slippery elm bark (an ounce of slippery elm bark in a pint of boiling water); to be taken *ad libitum.* **I. u'væ ur'si** (Ph. Br.), infusion of uva ursi or bearberry; dose, ℥ss–j (16.0–32.0). **I. zingib'eris,** infusion of ginger, ginger tea; dose, ℥iss–ij (48.0–64.0).

**In'ga.** Genus of plants, ord. *Leguminosæ,* of S. America, possessed of astringent properties. Inga bark is used in S. America as a tonic astringent in diarrhœa, gonorrhœa, etc.

**Ingen'ium.** Characteristics of child at birth, as natural mental qualities. **I. mor'bi,** nature of disease.

**Inges'ta** (*ingero,* to carry in). Substances introduced by the stomach as food, condiments, drinks, etc.

**Inges'tion.** Introduction of anything as food by the mouth. Appropriation of foreign matter by cells, as by the amœbæ, white corpuscles, etc.

**Ingluvia'tion.** Taking and retaining food in a cavity, as the crop, to be afterward digested.

**Inglu'vies.** Crop, or craw, or gorge of birds. First stomach or pouch of ruminant animals.

**Ingluvin'.** Preparation from the gizzard of a fowl, employed in vomiting, especially in vomiting of pregnancy, instead of pepsin.

**Ingras'sias** (after Ingrassias, Spanish physician), **apoph'yses, pro'cesses,** or **wings of.** Lesser alæ of the sphenoid bone.

**Ingraves'cence.** Stage of the disease in which the symptoms are becoming more severe.

**Ingraves'cent** (*gravesco,* to grow heavy). That which increases, as ingravescent apoplexy.

**Ingravida'tion** (*gravidus,* pregnant). Impregnation; fecundation; pregnancy.

**Ingre'dient** (*ingredior,* to enter in). One of the component parts, as of a prescription.

**Ingres'sus.** Entrance, as into a cavity. **I. supe'rior,** cardia.

**In'growing** or **In'grown nail.** Onyxis.

**In'growth.** Growth having its direction inward.

**In'guen.** Groin; oblique fold or depression separating the abdomen from the thigh; properly speaking, a line extending from the anterior and superior spinous process of the ilium to the middle part of the horizontal ramus of the pubis. Also bubo.

**In'guinal.** Belonging or relating to the groin; epithet given to various parts in the region of the groin. **I. ar'tery,** portion of the femoral artery situated immediately beneath the crural arch in the inguinal region. **I. canal',** canal about two inches in length, proceeding obliquely downward, inward, and forward at the lower part of the abdomen, through which passes the spermatic cord in men and the round ligament of the uterus in women. This canal is formed inferiorly and anteriorly by the aponeurosis of the greater oblique muscle; posteriorly by the fascia transversalis, which is joined to the preceding aponeurosis, and forms with it a deep channel into which are received the lesser oblique and transversalis muscles. The inguinal canal has two apertures: one, the lower and inner, called the inguinal or abdominal ring, bounded by two strong, tendinous pillars which fix it—the innermost to the symphysis, the outermost to the spine of the pubis. The upper and outer aperture, annulus abdominalis interior, apertura interior canalis inguinalis, is formed by the fascia transversalis. From the edge of this aperture arises a membranous funnel—a prolongation of the fascia transversalis—receiving the spermatic vessels, forming their proper sheath, and accompanying them as far as the testicle. On its inside lies the epigastric artery; above it is the lower edge of the transversalis muscle, and below it is bounded by the channel of the greater oblique. By following the oblique direction of this canal, and passing, consequently, on the outside of the epigastric artery, the viscera are displaced, so as to constitute internal inguinal hernia. **I. fos′sæ**, see *Urachal fossæ*. **I. glands**, lymphatic glands or ganglions of the groin; there are two sets, one superficial, the other deep-seated. The former are larger, and on the average there are eight or ten, which are placed irregularly about Poupart's ligament. The latter, or deep-seated, are situated behind the others, around the femoral artery and vein. **I. her′nia**, see *Bubonocele* and *Hernia*. **I. re′gion**, region of the groin. **I. ring**, abdominal ring; inferior aperture of the inguinal canal.

**In′guino-abdom′inal.** Relating to the groin and abdomen.

**Inguinocru′ral.** Relating to the groin and thigh.

**Inguinocuta′neous.** Relating to skin of the groin. Middle ramus of the anterior branch of the first lumbar nerve, because it sends numerous filaments to the groin, scrotum, and the skin of the superior part of the thigh.

**Inguinodyn′ia.** Pain in the groin.

**Inguinola′bial.** Relating to the groins and the labia.

**In′guinopreperitone′al her′nia.** Hernia with a peritoneal and an inguinal sac.

**Inguinoscro′tal.** Relating to the groins and the scrotum.

**Ingula′tion** (*gula*, throat). Introduction of anything into the throat.

**Ingurgita′tion.** Deglutition.

**Inhæ′rens.** Inherent.

**Inhala′tion** (*inhalo*, to breathe in). Act of drawing air or vapor, or remedial agent or anæsthetic in form of vapor, into the lungs. Absorption by the lungs. **I. diseas′es**, diseases due to inhaling dust or minute particles. **I. pneumo′nia**, *Schluck-Pneumonie*, deglutition-pneumonia, pneumonia supposed to be caused by the inhalation of matters vomited by a person under the influence of an anæsthetic.

**Inhale′.** To breathe in, to inspire.

**Inha′ler.** Apparatus for inhalation of the vapor of hot water, ether, chloroform, etc., in affections of the air-passages. Also a sieve-like apparatus held before the mouth and nose in order to prevent the breathing in of dust or to moderate the cold, damp air before it enters the air-passages.

**Inhe′rent** (*in* + *hæreo*, to stick). Adhering or joined to anything. Innate; existing naturally in anything. **I. cau′tery**, actual cautery, left in contact with a part until the latter is reduced to the state of a deep eschar.

**Inher′itance.** Qualities or possessions transmitted by heredity.

**Inher′ited** (*hæres*, an heir). Acquired by heredity, as disease. See *Heredity*.

**Inhib′it.** To restrain or suppress.

**Inhibi′tion** (*inhibeo*, to restrain). Action directed to restraint and prohibition, as of nervous influence acting upon the vascular system, etc. This may occur from a superior nerve-centre acting on an inferior one, or from influence carried to a particular region by an afferent nerve. See *Inhibitory*. **Vaso-mo′tor i.**, action causing dilatation of blood-vessels by diminishing their tonicity.

**Inhib′itory** (*inhibeo*, to restrain). Term applied to nerves which when methodically excited repress the action of muscles to which they are distributed. Disorders of the inhibitory nerves—cardiac, respiratory, intestinal, and reflex—have been termed inhibitory or restraint neuroses. The cardiac fibres of the vagus nerve are inhibitory in their action, the result of their stimulation being a diminution of the power and frequency of the action of the heart and dilatation of the vessels.

**Inhib′itrope.** One in whom a function is temporarily checked by stimuli.

**Inhuma′tion** (*inhumo*, to put in the ground). Sepulture of the dead in the earth. Digestion of substances in earth. Application of hot sand to the body.

**In′iac, In′ial, In′ian.** Relating to the inion.

**In′iad.** Toward the inion.

**In′ial.** Relating to the inion; term applied to an aspect toward the plane of the ridge of the occiput.

**Inienceph′alus** (*inion*+*encephalon*). Monster having the encephalon in great part in the cranium, and in part out of, behind, and a little beneath the cranium, which is open on its occipital portion. There may also be fissure of the vertebræ of the cervical and thoracic regions.

**Iniod′ymus** (*inion*+*dyo*, to sink in). Monster with one body and two heads joined at the back part. See *Diprosopus*.

**Iniofa′cial.** Relating to the inion and face.

**Inioglabel′lar.** Relating to inion and glabella.

**Iniome′sial.** Relating to inion and meson.

**In′ion.** Occiput or its ridge. Back part of the neck and the muscles of the occiput. Commencement of the spinal marrow. External occipital protuberance, which is taken as a guiding-point in craniometry.

**In′iops** or **In′iope** (*inion*+*ops*, the eye). Monster double above the umbilicus, having two ears very near each other, or only one median ear, and above it, at a greater or less distance, a median orbit and eye, more or less imperfect. The rudimental face appears to be directly opposite the principal face.

**Ini′tial** (*initium*, beginning). Relating to the beginning.

**Ini′tis** (*is*, a fibre). Inflammation of fibrous or muscular tissue. Muscular rheumatism.

**Init′ium.** Beginning.

**Injacula′tion** (*in*+*jaculor*, to shoot). Acute pain in the stomach, with rigidity and immobility of the body. Projection of sperm into the vagina.

**Inject′.** To put into the body by means of a syringe.

**Inject′ed** (*injicio*, to throw into). Thrown into the body by means of a syringe. Also a term used to denote redness of the face and other parts caused by the accumulation of blood in the capillaries. A cadaver is said to be injected when its vessels have been filled by the anatomist with a solidifying and often colored fluid.

**Injec′tio.** Injection. A term employed in the Ph. Br. to denote a solution for hypodermic injection; the following are official: *I. apomorphi′næ hypoder′mica* (apomorphine hydrochloride 1, diluted hydrochloric acid 1, distilled water to 100); dose, ♏v–x (0.32–0.65). *I. cocai′næ hypoder′mica* (cocaine hydrochloride 100, salicylic acid 1½, distilled water 1000); dose, ♏ij–v (0.13–0.32). *I. ergo′tæ hypoder′mica* (extract of ergot 10, phenol 0.3, distilled water 30); dose, ♏iij–x (0.2–0.65). *I. morphi′næ hypoder′mica* (morphine tartrate 5, distilled water 100); dose, ♏ij–v (0.13–0.32).

**Injec′tion.** The act of introducing, by means of a syringe or other instrument, a liquid into a cavity of the body or beneath the external integument. The liquid injected is also called an injection. Anatomists use injections (*anatomical injections*) for filling the blood-vessels so that they may be rendered more apparent and dissection be facilitated; when only the larger vessels are to be filled the process is called a *coarse injection*. **Hypodermat′ic** or **hypoder′mic i.**, the introduction of a medicinal solution, by means of a syringe with needle point, into the subcutaneous areolar tissue. **Intes′tinal** or **rec′tal i.**, enema, clyster. **Intravas′cular i.**, an i. directly into a blood-vessel; this is usually made into a vein and is then called **Intrave′nous i. Nu′trient i.**, rectal injection of nutritive fluids. **Parenchy′matous i.**, an i. made directly into the substance of a solid viscus. **Subcuta′neous i.**, hypodermic i.

**Injec′tor.** Instrument or apparatus for making injections.

**In′jury.** Trauma; wound.

**Ink′berry.** Prinos glaber.

**In-knee.** Knock-knee, genu valgum.

**In′lay.** A shaped piece of metal or porcelain formed to be inserted in the cavity of a tooth.

**In′let.** Entrance; opening of a canal or cavity. **I. of pel′vis,** superior strait of pelvis, through which the fœtus passes into the pelvic canal.

**In′man's disease.** Myalgia.

**Innata′tion** (*nato,* to swim). Looseness of an exfoliated piece of bone or a carious tooth.

**Innate′** (*nascor,* to be born). Inborn, congenital, indigenous, adnate. **I. diseas′es,** diseases with which the infant is born; they are not always hereditary.

**Innerva′tion** (*nervus,* nerve). The nervous influence necessary for the maintenance of life and the various functions.

**In′nocent.** Harmless, benign, innoxious.

**Innoda′tion** (*nodus,* knot). Knotting together, as of the bowels.

**Innomina′ta.** Fem. of innominatus. See *Innominate artery* and *I. vein.*

**Innomina′tal.** Relating to the innominate artery or bone.

**Innom′inate** (*innominatus,* unnamed). Having no name; a term applied to several anatomical structures. **I. an′eurysm,** aneurysm of the i. artery. **I. ar′tery,** brachiocephalic; the trunk common to the right primitive carotid and the subclavian, arising from the anterior part of the arch of the aorta, ascending obliquely to the right along the trachea, and, after a course of about an inch in length, dividing into two trunks, which go off at right angles; the external one, the right subclavian proper; the other, the superior or primitive carotid of the same side. **I. bone,** ache-bone; aitch-bone; large, flat bone forming the anterior and lateral parietes of the pelvis. In the first periods of life it is composed of three portions—the ilium, ischium, and pubis. **I. car′tilage,** cricoid. **I. cav′ity,** a cavity of the outer ear between the helix and anthelix. **I. fora′men,** foramen near the middle of the anterior surface of the pars petrosa of the temporal bone, for the passage of the Vidian nerve. **I. fos′sa,** navicular fossa. **I. line,** ilio-pectineal line. **I. nerve,** fifth nerve. **I. os′sicles,** lesser i. bones, cuneiform bones of the tarsus. **I. tu′nic of the eye,** sclerotic. **I. veins,** two or three veins arising on the anterior surface and right margin of the heart and opening into the auricle. Also the brachiocephalic veins, which correspond to the arteria innominata, being formed by the union of the internal jugular vein and the subclavian properly so called, corresponding to the common carotid and subclavian arteries.

**Innomina′tum.** Neut. of innominatus. See *Innominate bone* and *I. foramen.*

**Innomina′tus.** Anonymous. See *Innominate.*

**Innox′ious.** Not injurious.

**Innutri′tion.** Defective nutrition.

**Ino-** (*is,* fibre). In composition, fibre.

**I′noblast** (*is,* fibre, *blastos,* germ). Connective-tissue corpuscle; cell from which connective tissue is produced.

**Inocar′pus edu′lis.** South Sea chestnut; Fiji or Otaheite chestnut; the bark of this tree of the Indian Archipelago is astringent.

**Inochondri′tis** (*is,* fibre, *chondros,* cartilage). Combined inflammation of tendon and cartilage.

**Inoc′ulable** (*inoculo,* to ingraft). Capable of inoculation or of being communicated by inoculation.

**Inocula′tion.** Operation by which a disease may be artificially communicated by introducing its virus into the economy by puncture or scratch made in the skin, by subcutaneous injection, introduction into the peritoneal cavity, etc. **Jenne′rian i.,** vaccination.

**Inoc′ulator.** One who practises inoculation; instrument for performing inoculation.

**Inocys′tis** (*is,* fibre, *kystis,* bag). Fibrous cyst.

**Inodes′ma** (*is,* fibre, *desma,* band). Fibrous band.

**Inod′ular** (*inodes,* fibrous). Fibrous. **I. tis′sue,** fibrous tissue; cicatricial tissue.

**Inœ′a.** Substance obtained by pressure from the seeds of Strophanthus hispidus, possessing an action similar to that of digitalin.

**Inoëpithelio′ma.** Epithelioma associated with fibrous tissue. Epithelioma and fibroma combined.

**In′ogen.** Substance in muscular tissue thought to become decomposed during contraction, but to be the cause of energetic muscular action.

**Inogen′esis** (*is,* fibre, *genesis,* generation). Formation of fibres.

**Inohylo′ma** (*is,* fibre, *hyle,* matter). Fibrous tumor.

**Inohymeni′tis** (*is,* fibre, *hymen,* membrane). Inflammation of the fibrous tissue.

**Inoleiomyo′ma.** Myoma with non-striated muscular fibres.

**In′olith** (*is,* fibre, *lithos,* stone). Fibrinous calculus or concretion.

**Ino′ma** (*is,* fibre). Scirrhus; fibrous tumor.

**Inop′erable.** That cannot or should not be operated upon, as a cancer in an advanced stage involving the lymphatics.

**Inopex′ia** (*is,* fibre, *pexis,* coagulation). Increased coagulability of the fibrinogenous substance, especially in parturient women.

**Inophlogo′sis.** Inflammation of fibrous tissue.

**Inopol′ypus.** Fibrous polypus.

**Inorgan′ic.** Unorganized; term applied to bodies which have no organs, such as minerals. Parts of the body, like the epidermis, devoid of blood-vessels and nerves have been called anorganic. **I. chem′istry,** see *Chemistry.*

**Inosæ′mia.** The presence of inosite in the blood.

**Inosclero′ma** or **Inosclero′sis.** Induration of fibrous tissue.

**Inoscula′tion** (*osculum,* small mouth). Anastomosis.

**In′ose.** Inosite.

**Ino′sic** or **Inosin′ic acid.** A syrupy, non-crystallizable liquid existing in muscular substance.

**Inosin′.** Inosite.

**Ino′sis** (*is,* fibre). Hyperinosis; fibre-formation.

**In′osite** (*is,* fibre). $C_6H_{12}O_6$. Muscle-sugar. Unfermentable sugar in muscle-juice, the kidneys, brain, lungs, liver, etc., and in urine in some diseases; also in leaves of Juglans regia.

**Inositu′ria.** Inosuria.

**Inosteato′ma.** Tumor of a mixed fibrous and steatomatous character.

**Inosu′ria** (*inosite+ouron,* urine). Excretion of inosite in the urine.

**Inotag′ma** (*is,* fibre, *tagma,* arrangement). Arrangement of the muscular elements in elongated fibres.

**In′quest** (*inquiro,* to ask). See *Coroner.*

**Inquisi′tion.** Inquiry into the mental or other condition of an individual by commission appointed for that purpose.

**Insaliva′tion.** Mixture of the food with the saliva and other secretions of the mouth.

**Insalu′brious** (*in,* neg., *salubris,* healthy). That which is unhealthy or injures the health.

**Insanab′ilis** (*in,* neg., *sano,* to cure, *habilis,* able). Incurable.

**Insane′** (*in,* neg., *sanus,* sound). Crazy, mad, demented, deranged. One affected with mental aberration or of unsound mind. **I. ear,** hæmatoma auris. **Paral′ysis of the i.,** dementia paralytica.

**Insanio′la.** Eccentricity verging on insanity.

**Insan′itary.** Not favorable to health.

**Insan′itas.** Insanity.

**Insan′ity.** Mental alienation or derangement, unsound mind, deranged intellect, craziness, madness. Term including all the varieties of unsound mind—mania, melancholia, moral insanity, dementia, and idiocy. **Affec′tive i.,** form in which the passions or emotions are affected. **Alcohol′ic i.,** i. caused by the habitual abuse of alcohol. **Al′ternating i.,** periodical insanity. **Ambi′tious i.,** monomania of grandeur. **Anæ′mic i.**, i. due to impoverishment of the blood. **Antic′ipatory i.**, a form of hereditary insanity which appears in the offspring at an earlier age than it did in the parent. **Arthrit′ic i.**, i. associated with the gouty or rheumatic diathesis. **Cataton′ic i.**, see *Catatonia*. **Chore′ic i.**, i. in young people, with exaggerated choreic movements. **Cir′cular i.**, periodical insanity, with regular alternations of mania or melancholia. **Climacter′ic i.**, i. occurring at the menopause. **Commu′nicated i.**, i. occurring in those intimately and long associated with the insane. **Com′pound i.**, i. showing disturbance of several mental faculties. **Concur′rent i.**, i. associated with some physical disease. **Confu′sional i.**, rapidly developed fever, with mental confusion, incoherence, etc. **Congen′ital i.**, varieties of insanity noticed at birth, as idiocy or imbecility. **Cretin′ic i.**, cretinism. **Cy′clic i.**, circular insanity. **Delu′sional i.**, i. marked by delusions, such as monomania and paranoia. **Demonomani′acal i.**, demonomania. **Depres′sive i.**, melancholia. **Diabet′ic i.**, i. associated with diabetes, usually melancholia. **Diathet′ic i.**, i. connected with a diathesis such as the arthritic; usually hereditary. **Egres′sing i.**, i. developed from previous disease. **Emo′tional i.**, i. in which the emotions are partially or wholly deranged; see *Insanity, affective*. **Epilep′tic i.**, i. associated with or due to epilepsy. **Erot′ic i.**, i. with tendency to sexual excitement, as satyriasis; erotomania. **Hered′itary i.**, i. recurring in the descendants of the insane. **Homici′dal i.**, see *Homicidal*. **Homoch′ronous i.**, hereditary insanity appearing in the offspring at the same age that it did in the parents. **Homol′ogous i.**, hereditary insanity of the same type in both generations. **Idea′tional** or **ideophren′ic i.**, see *Ideation*. **Idiophren′ic i.**, see *Idiophrenic*. **Im′itative i.**, i. caused or characterized by imitation. **Impul′sive i.**, form of insanity in which there is a sudden brief, uncontrollable insane impulse after a continuous period of sanity. **Incohe′rent i.**, dementia. **Intellec′tual i.**, ideational insanity; monomania. **Intermit′tent i.**, periodical insanity. **Ischæ′mic i.**, i. caused by continuous cerebral anæmia. **Mani′acal i.**, mania. **Melanchol′ic i.**, melancholia. **Men′strual i.**, i. recurring at the menstrual periods. **Mor′al i.**, see *Pathomania*. **Paralyt′ic i.**, general paralysis of the insane. **Par′tial i.**, monomania. **Paroxys′mal i.**, i. recurring in paroxysms. **Percep′tional i.**, i. characterized by perverted perceptions or illusions. **Period′ical i.**, i. recurring at regular or almost regular intervals. **Postfe′brile i.**, i. occurring after a fever. **Prepartu′rient** or **prepuer′peral i.**, puerperal insanity occurring before delivery. **I. of pu′berty** or **Pubes′cent i.**, i. appearing for the first time at puberty, recovery sometimes occurring when this critical period is over. **Puer′peral i.**, i. occurring during childbirth or in the puerperium. **Recur′rent i.**, intermittent or periodical insanity. **Relig′ious i.**, demonomania; insanity from religious zeal or running into religious expression. **Scyth′ian i.**, see *Scythian disease*. **Se′nile i.**, i. due to structural degeneration in old people. **Stu′porous i.**, dementia with stupor. **Sur′gical i.**, acute symptoms of mental derangement following a surgical operation. **Sys′tematized i.**, delusional insanity. **Tox′ic i.**, i. due to the action of poisons upon the system; alcoholism is a type of this form. **Voli′tional i.**, i. in which the will-power is affected.

**Inscrip′tion.** See *Matriculate*.

**Inscriptio′nes tendin′eæ musculo′rum.** Tendinous insertions crossing several muscles, and especially the straight muscles of the abdomen.

**In′sect.** An invertebrate with many legs, sometimes with wings, having a segmented body. **I. wound**, wound made by an insect, as the bee, mosquito, etc.; usually a punctured, frequently a poisoned wound.

**Insec′ticide.** Destructive to insects.

**Insemina′tion** (*semen*, seed). Ejaculation. Fertilization of the ovum.

**Insenes′cence** (*insenesco*, to grow old). Act of attaining a green and vigorous old age.

**Insensibil′ity** (*in* neg., *sensus*, feeling, *habilis*, able). Loss or absence of sensibility; it is common in cerebral affections, and may extend to every part or be limited to one or more. Bones, cartilages, ligaments, etc., are insensible in health, but acutely sensible in disease. Anæsthesia, local or general.

**Insen′sible.** Devoid of sensibility; not appreciable to the senses.

**Insens′itive.** Not sensitive, as to light particularly.

**Inser′tion**, (*insero*, to ingraft). Attachment of one part to another, as bones, cartilages, and fibrous organs; of muscular fibres to a tendon or aponeurosis; of a tendon, aponeurosis, or ligament to a cartilage or bone. Act of inoculating or introducing a virus into the body. Graft.

**In′sident** (*insideo*, to sit in or upon). Term applied to a film or pellicle swimming on or in the urine.

**Insid′ious** (*insidia*, ambush). Progressing or occurring imperceptibly, so as not to be recognized until well developed.

**Insipien′tia** (*in*, neg., *sapiens*, wise). Silliness or simpleness; slight form of insanity. **I. ingen′ita**, imbecility.

**Insi′tio** (*insero*, to ingraft). Grafting; inoculation; vaccination. **I. cilio′rum**, operation for restoring the eyelashes. **I. den′tis**, act of transplanting a tooth from one person to another.

**Insola′tion** (*sol*, sun). Exposure to the sun, sometimes employed to arouse the vital forces when languishing or to produce irritation of the skin; sun-bath. Insolation is usually employed, however, in the same sense as sunstroke, or heat-prostration. **Asphyx′ial i.**, condition produced by excessive heat, in which there are coma, great feebleness of pulse, coldness of skin, and diminished temperature. **Hyperpyrex′ial i.**, in this condition, due to the same cause as the preceding, there is coma, with full, rapid pulse, hot skin, and a decidedly elevated temperature of the body.

**Insol′uble.** That cannot be dissolved.

**Insom′nia** (*in*, neg., *somnus*, sleep). Sleeplessness, vigilance. This may constitute a true disease, or it may be connected with some other affection.

**Inspec′tion.** Examination with the eye.

**Insperga′tion** or **Insper′sion** (*inspergo*, to sprinkle). Dusting by powder or sprinkling by spray.

**Inspira′tion** (*inspiro*, to breathe in). Action by which the air penetrates into the interior of the lungs, a movement opposed to expiration. The average quantity of air received into the lungs at each inspiration has been variously and diversely estimated by different observers as being from 6–100 cubic inches. From 20–25 cubic inches may be regarded as a fair average. **Crow′ing i.**, peculiar inspiration of spasmodic croup; see *Asthma thymicum*. **Mus′cles of i.**, see *Inspiratory*. **I. of ve′nous blood**, aspiration of blood toward the heart, occasioned by the approach to a vacuum produced by the dilatation of the thorax during inspiration.

**In′spirator.** Inhaler.

**Inspi′ratory.** Name given to muscles—for example, the diaphragm and intercostal muscles—which by their contraction augment the size of the chest, and thus produce inspiration. When deep inspirations are necessary, this action is aided by the contraction of the pectoralis major and pectoralis minor, subclavius, and other muscles. Most of them become inspiratory by taking their fixed point at the part which they ordinarily move, acting inversely and elevating the ribs.

**Inspis′sant** (*inspisso*, to thicken). Any remedial agent rendering the blood thicker; the opposite of diluent.

**Inspis′sated.** Thickened, dried, tenacious.

**Inspissa′tion.** Act of rendering thick.

**In′step.** Neck of the foot. Projection at the upper part of the foot near its articulation with the leg; the tarsus.

**Instilla'tion** (*in*, in, *stilla*, drop). Act of pouring a liquid drop by drop.

**In'stinct** (*instigo*, to impel). An innate principle residing in man and the lower animals impelling them to acts of seeming intelligence, but often outside the reasoning power believed to be possessed by the animal; these acts are usually such as tend to the preservation of the individual or the race. In man the reverse may hold, instinct sometimes impelling to acts contrary to reason.

**Instinc'tive.** Relating to or caused by instinct. Instinctive actions are impulsive in nature or excited by unconscious cerebration, and not based upon exercise of the reasoning faculties. Such actions of animals as are owing to impressions made on the sensory ganglia, exciting respondent motor influences that are propagated to the various muscles of the body, are termed *consensual*. Consensual movements accompanying voluntary efforts without our consciousness are termed *associated*.

**In'stitutes of med'icine** (*institutum*, principle). See *Theory of Medicine*.

**In'strument** (*instruo*, to put together). Tool or agent; implement for surgical work.

**Instrumenta'rium.** Collection of instruments.

**Insuffi'ciency** (*in*, neg., *sufficio*, to suffice). Inadequateness to any end or purpose, as insufficiency or incompetency of the valves of the heart, a condition in which they are not adapted, as in health, to close the apertures completely; as *aortic i.*, when the aortic valves are thus affected by endocarditis, valvular rupture, etc. (see *Corrigan's disease*); *mitral i.*, when the mitral valve is similarly affected; and *tricuspid i.*, when the defect is at the right auriculoventricular orifice. Sometimes there is *muscular insufficiency*, as of the muscles of the eyes from want of equilibrium in the power of the external and internal muscles of the two eyes (resulting in esophoria and exophoria, respectively), or of antagonizing muscles in other parts of the body. *Gastric i.* is that condition in which the stomach has lost the power of emptying itself at the proper time, while *pyloric i.*, is the reverse, the pylorus failing to retain the ingesta a sufficient time to permit of the completion of gastric digestion.

**Insuffla'tion.** Act of blowing a gas or vapor or powder into some cavity of the body, as air blown into the mouths of newborn children to excite the respiratory function, or of those asphyxiated by coal-gas, drowning, etc., or of those under the narcotic influence of opium.

**In'sufflator.** Apparatus for practising insufflation or the blowing of powder into a cavity.

**In'sula** (island). Insula cerebri. Lobule of liver. Acinus. **I. cer'ebri**, island or insula of Reil. Intermediate lobe of the brain, lobus intermedius cerebri; a remarkable group of convolutions—gyri operti—within the fissure of Sylvius, called by Cruveilhier lobule of the fissure of Sylvius, lobule of the corpus striatum. The island of Reil, with the substantia perforata, forms the base of the corpus striatum. **I. hepat'ica** or **hepa'tis**, lobule of the liver. **I. of Reil**, insula cerebri. **I. Pey'eri**, Peyer's patch. **I. san'guinis**, blood-clot; see *Blood*.

**In'sular.** Isolated. Relating to island of Reil. **I. sclero'sis**, sclerosis disseminated in isolated spots in the brain and spinal cord.

**In'sulated.** Term applied in electricity to effect produced by an insulator or non-conductor.

**Insula'tion.** The prevention of free escape of electricity by supporting or surrounding the electrical machine with non-conductor or a bad conductor, such as glass, rubber, shellac, etc.

**In'sulator.** Non-conductor of electricity, as glass or resin.

**In'sult.** Injury; trauma exciting a morbid process.

**Insusceptibil'ity.** Want of susceptibility. Immunity.

**Insymmet'ric.** Unsymmetrical.

**Intac'tus.** Untouched; employed in the term *virgo intacta*, a virgin.

**Integra'tion** (*integer*, whole). Union of several distinct parts into one. Assimilation.

**Integ'rity** (*integer*, whole). Entirety. Healthy exercise of all the functions. Virginity.

**Integ'ument** (*tego*, to cover). Anything serving to cover or envelop. The skin, including the cuticle, rete mucosum, and cutis vera, is the common integument or tegument of the body.

**Integumen'ta fœ'tûs.** Fetal membranes.

**Integumen'tary.** Relating to the skin.

**Integumen'tum** or **I. commu'ne.** Integument; skin. **I. ventriculo'rum**, velum interpositum.

**In'tellect** (*intelligo*, to understand, to know). Aggregate of the intellectual faculties—perception, formation of ideas, memory, and judgment. Their exercise constitutes *intellection*.

**Intellec'tion.** See *Intellect*.

**Intellecto'rium commu'ne.** Common centre of intelligence, mainly, in man at least, in the great hemispherical ganglia or cerebral hemispheres.

**Intem'perance** (*in*, neg., *tempero*, to temper). Immoderate use of food and drink, especially the latter, or over indulgence of the appetites generally.

**Intempe'ries.** Derangement in the constitution of the atmosphere and of the seasons; bad constitution; derangement in the humors of the body.

**Inten'tion** (*tendo*, to stretch). Object which one proposes. In surgery, a wound heals *by the first intention* when cicatrization occurs without suppuration; by the *second intention*, when it occurs after the surfaces have suppurated. To obtain union by the first intention the edges of a recent wound must be brought in apposition, and kept together by adhesive plasters and a proper bandage. Union by granulations has been called *third intention*. **I. tre'mor**, a tremor occurring when a voluntary movement is attempted.

**In'ter-.** In composition, between.

**Interaccess'orii.** See *Intertransversales lumborum*.

**Interacinous**, in-tur-as'in-us. Between the acini.

**Interan'nular** (*annulus*, a ring). Between rings or bands. **I. seg'ment**, portion of nerve-fibre between two nodes of Ranvier.

**Interartic'ular** (*articulus*, a joint). Terms applied to parts situated between the articulations, as cartilages, etc.

**Interaryt'enoid.** Between the arytenoid cartilages.

**Interauric'ular.** Between the auricles or external part of the ear; between the auricles of the heart.

**In'terbrain.** Thalamencephalon. See *Cerebrum*.

**Interca'dence** (*inter*, between, *cado*, to fall). Disorder of the arterial pulsations, a supernumerary pulsation occurring every now and then. Such pulse is said to be intercurrent or intercadent.

**Inter'calar** or **Inter'calary** (*intercalo*, to insert). Term applied to days which occur between those that are critical; also days of apyrexia in intermittent fevers. **I. staphylo'ma**, see *Staphyloma*.

**Inter'calated.** Intercalary.

**Intercala'tum.** Locus niger.

**Intercarot'ic.** Intercarotid.

**Intercarot'id.** Between the common carotids or between the external and internal carotids.

**Intercav'ernous.** Between the cavernous sinuses.

**Intercel'lular** (*inter*, between, *cellula*, a small cell). Between cells or cellules. **I. fluid**, liquor sanguinis. **I. pass'ages**, irregular passages through the substance of the lung, forming terminations of the bronchial tubes, and clustered with air-cells. **I. sub'stance**, see *Cytoblastema*.

**Intercen'tral.** Between nervous centres.

**Intercep'tion** (*intercipio*, to intercept). Retention; suppression.

**Intercer'ebral.** Between the two cerebral hemispheres.

**Intercer'vicals.** Intertransversales.

**Interchon'dral** (*inter*, between, *chondros*, cartilage). Intercartilaginous.

**Inter'cidence** (*inter*, between, *cado*, to fall). See *Intercalary* and *Intercadence*.

**Intercil′ium** (*inter*, between, *cilium*, eyelash). Part between the eyebrows.

**Interci′sio** (*inter*, between, *cædo*, to cut). Intermittence, as of pulse.

**Interci′sus.** Intermittent.

**Interclav′icle.** Osseous membrane or plate between the ends of the clavicle in some of the vertebrata.

**Interclavic′ular.** Between the clavicles. **I. lig′ament,** flat, fibrous bundle placed transversely above the extremity of the sternum, between the heads of the two clavicles. Its fibres are separated by small apertures traversed by vessels. It prevents the separation of the clavicles in the forced depression of the shoulder.

**Interclavicular′is.** Occasional muscle between the sternoclavicularis muscles of opposite sides.

**Interclu′sio** (*intercludo*, to exclude). Suppression or stoppage, as **I. an′imæ,** interrupted respiration; temporary asphyxia.

**Intercoccyg′eal** or **Intercoccyg′ean.** Between separate portions of the coccyx.

**Intercolum′nar fas′cia.** See *Fascia*.

**Intercon′dylar** or **Intercon′dyloid.** Between the condyles, as i. eminence, i. fossa, i. line, etc.

**Intercos′tal** (*inter*, between, *costa*, rib). Situated between the ribs. **I. ar′teries,** these vary in number. There is constantly, however, a superior, arteria intercostalis superior or intercostalis subclavia, given off from the posterior part of the subclavian, and sending branches into the first two or three intercostal spaces; and there are generally eight or nine inferior or aortic intercostals arising from the lateral and posterior parts of the pectoral aorta, and ascending obliquely in front of the vertebral column, to gain the intercostal spaces, where they divide into a dorsal and an intercostal branch. **I. mus′cles** are distinguished into internal and external, the former inserted into the inner lip, the latter into the outer lip of the edge of the ribs. The fibres of the external intercostals are directed obliquely downward and forward; those of the internal, downward and backward. Both are inspiratory and expiratory muscles, according as they take their origin on the upper or lower rib. Small, fleshy fibres, seen occasionally at the inner surface of the thorax, descending obliquely from one rib to another, have been called infracostales. **I. nerve,** trisplanchnic nerve. The intercostal, costal, or dorsal nerves proceed from the anterior branches of the dorsal nerves. They are twelve in number, and are distributed especially to the muscles of the parietes of the chest and abdomen. **I. space,** interval separating one rib from that immediately above or below it. **I. veins,** these are distinguished like the arteries; the right superior one is often wanting. When it exists it opens into the back part of the subclavian. The same vein of the left side is very large, and communicates with the demi-azygos, receives the left bronchial vein, and opens into the corresponding subclavian. The right inferior intercostal veins open into the vena azygos; the left into the demi-azygos.

**Intercosta′les exter′ni** and **inter′ni.** See *Intercostal muscles*. **I. lon′gi,** term to include infracostalis, iliocostalis lumborum, iliocostalis dorsi, and scaleni muscles.

**Intercosta′rii.** Intertransversales.

**Intercostobra′chial.** Relating to intercostal and brachial regions.

**Intercostohu′meral.** Intercostobrachial. **I. nerves,** cutaneous branches of the second and third intercostal nerves.

**In′tercourse, car′nal** or **sex′ual.** Copulation.

**Intercru′ral.** Between the legs or crura.

**Intercu′neal.** Between the cuneiform bones.

**Intercur′rent** (*inter*, between, *curro*, to run). Term applied to diseases which supervene at different seasons of the year, or do not belong to any particular season. Also applied to disease occurring in the course of another disease, as intercurrent pneumonia. See also *Intercadence*.

**Intercuta′neomu′cous.** Between skin and mucous membrane.

**Intercuta′neous.** Subcutaneous.

**Interdeferen′tial.** Between the vasa deferentia.

**Interden′tal.** Between the teeth. **I. splint,** splint for fractured jaw, arranged to be held by wires between the teeth.

**Interden′tium** (*inter*, between, *dens*, tooth). Interval between teeth of the same order.

**Interdigital,** in-ter-dij′it-al (*digitus*, finger). Between the fingers. **I. mem′brane,** membrane between the toes in web-footed animals. **I. space,** commissure between the fingers.

**Interdigita′tion.** Dovetailing of parts, as of the ends of some muscles with those of others.

**Interdigit′ium.** Corn or wart growing between the fingers or toes.

**Interfascic′ular.** Between the fasciculi of muscles, etc.

**Interfemin′eum** (*inter*, between, *femen*, thigh). Between the thighs. Perineum; vulva; vagina.

**Interfem′oral.** Between the thighs.

**Interfe′mus.** Interfemineum.

**Interfe′rence.** Act of interfering, as when rays of light or sound follow each other so rapidly as to produce darkness or silence. **Ner′vous i.,** inhibitory action of nerves.

**Interfe′ring.** A fault in the gait of horses in which the leg is cut or bruised by the opposite hoof.

**Interfi′brillary.** Between fibrils.

**Interfil′ary.** Between filaments. **I. mass,** paramitome.

**Interfin′ium** (*inter*, between, *finis*, boundary). Septum. **I. na′rium,** septum narium.

**Interfollic′ular.** Between the follicles.

**Interforamin′ium.** Perineum.

**Interganglion′ic.** Epithet for nervous cords placed between ganglia which they connect together.

**Intergland′ular.** Between glands.

**Interglob′ular.** Between globules. **I. spa′ces,** defined areas of faulty dentine formation.

**Interhemispher′ic.** Between hemispheres of the brain.

**Inter′itus** (*intero*, to perish). Death.

**Interjec′tional speech.** Use of inarticulate sounds mingled or not with ordinary utterances.

**Interju′gular.** Between jugular processes or jugular veins.

**Interla′bial.** Between the lips or the labia. **I. space,** vulva.

**Interlamel′lar.** Between the lamellæ of a part, as of the cornea.

**Interlam′inar.** Between laminæ. **I. plex′us,** whole series of absorbents between layers of muscular fibres of the intestines.

**Interligamen′tous.** Between ligaments.

**Interlo′bar.** Between lobes, as of the lungs.

**Interlob′ular.** Between lobules, as of the lungs. **I. fis′sures,** intervals between lobules of the liver: the narrower spaces are called fissuræ interlobulares, the wider, spatia interlobularia; see *Liver*. **I. plex′us of bil′iary ducts,** see *Liver*. **I. spa′ces,** angular interstices formed in the liver by apposition of several lobules. **I. tis′sue,** cellular tissue between pulmonary lobules. **I. veins,** see *Liver*.

**Intermax′illary** (*inter*, between, *maxilla*, jaw). Between the maxillary bones. **I. bone,** incisive, palatine, or labial bone; bony portion wedged in between the two superior maxillary bones and supporting the upper incisors, seen in some of the lower mammalia and also in the human fœtus.

**Interme′dia ligamenta′lia** or **ner′vea.** Tendinous portions which cross several muscles, and especially the straight muscles of the abdomen.

**Interme′diary.** Not immediate or late. In the middle. Near at hand. **I. amputa′tion,** amputation performed between occurrence of inflammation and suppuration. **I. bod′y,** immune body. **I. hem′orrhage,** h. occurring after primary hemorrhage.

**Interme′diate.** Situated or occurring between two extremes. Also a substance placed between the dental pulp and a veneer filling, to protect the former from shock.

**Interme′diolat′eral.** Intermediate and lateral, between the anterior and posterior cornua of gray matter, as the *i. tract of the cord.*

**Interme′dium.** In pharmacy, ingredient in a prescription aiding suspension of other articles in an emulsion.

**Intermem′branous.** Between membranes.

**Intermenin′geal.** Between the meninges or membranes, as of the brain.

**Intermen′strual.** Between menstrual periods or discharges.

**Inter′ment** (*terra,* earth). Burying underground.

**Intermesenter′ic.** Between the mesenteries.

**Interme′soblast.** Between layers of mesoblast.

**Intermetaca′rpal.** Between the metacarpal bones.

**Intermetatar′sal.** Between metatarsal bones. **I. lig′aments,** ligaments concerned in articulation of metatarsal bones with one another.

**Intermis′sion** (*inter,* between, *mitto,* to send). Interval. Interval occurring between two paroxysms of malarial or other disease, during which the patient is almost in his natural state. Intermission of the pulse is when in a given number of pulsations one or more may be wanting.

**Intermit′tent.** Having intermissions. **I. claudica′tion,** see *Claudication.* **I. fe′ver,** ague; fever and ague; paludal or periodic fever; fever consisting of paroxysms, with complete apyrexia in the intervals. The chief types are tertian, quartan, and æstivo-autumnal; the symptoms are those of a decided and completely marked cold stage or stage of concentration, paleness, collapse, impaired sensibility, and coldness, more or less diffused, followed by general rigors. After this occurs the hot stage or stage of expansion, the heat returning partially and irregularly, and at length becoming universal, and much above the standard of health; the pulse is now hard and strong, tongue white, urine high colored, thirst considerable. At length the sweating stage or stage of termination appears, the moisture usually beginning on the forehead, face, and neck, and soon extending universally, heat abating, thirst ceasing, the urine throwing down a sediment, and the functions being gradually restored to their wonted state. The tertian type is the most common; the æstivo-autumnal the most severe; the quotidian, or daily recurring fever, when analysed will generally be found to be a double tertian or a triple quartan; it more readily changes into remittent and continued fever; the quartan has, generally, the longest cold stage; the tertian the longest hot. The æstivo-autumnal form, usually tertian in type, is identical with the pernicious and tropical fevers, being caused by the same species of parasite. The cause of intermittent malarial fever is the presence in the red blood corpuscles of an amœboid parasite discovered by Laveran. The prognosis is, in general, favorable as far as regards life, but long-protracted intermittents may induce visceral obstructions and engorgements, which may end in dropsy. In some countries the disease is pernicious. The indications of treatment are to abate the violence of the paroxysm by the adoption of the general principles and remedies required in ordinary fever, and to prevent return of the paroxysm by the use of quinine. **I. cramp,** tetany. **I. lig′ature,** see *Ligature.* **I. limp′ing,** i. claudication. **Mask′ed i.,** dumb or masked ague. **I. pulse,** pulse having intermissions in its regular beat.

**Intermu′ral** (*inter,* between, *murus,* wall). Between the walls or coverings of an organ.

**Intermus′cular.** Between muscles. **I. aponeuro′ses,** aponeurotic laminæ or septa situate between muscles, to which they often give attachment.

**Inter′nal.** On the inside; epithet given to parts that look toward an imaginary central plane, dividing the body into two equal and symmetrical portions, as well as to those which correspond with a cavity, as the internal or inner surface of the arm, thigh, etc. **I. med′icine,** that branch of medicine which has to do with diseases of the body not amenable to operative treatment; medicine as contrasted with surgery. (For terms beginning with *Internal,* as i. carotid, etc., see *Carotid,* etc.)

**Interna′sal.** Between the nasal bones.

**Interne′** (Fr.). A member of the house-staff in a hospital.

**Interneuro′nal.** Between neurons or nerve-cells.

**Interno′dal.** Between nodes. **I. seg′ment,** internode of Ranvier.

**In′ternode.** Phalanx. **I. of Ranvier′,** portion of medullated nerve-fibre between nodes of Ranvier.

**Interno′dium.** Internode; phalanx.

**Internu′clear.** Between nuclei.

**Internun′cial** (*nuncius,* messenger). Relating to a messenger or communication between parties; term applied by Mr. Hunter to the function of the nervous system, the nerves being called by him chordæ internunciæ. **I. fi′bres,** fibres connecting nerve-cells.

**Inter′nus.** Internal. Internal rectus muscle of the eye. **I. au′ris** or **mal′lei,** tensor tympani.

**Interoc′ular.** Between the eyes.

**Interol′ivary lay′er** or **tract.** Layer of nerve-fibres connecting the two olivary nuclei of the medulla.

**Interor′bital.** Between the orbits.

**Interos′seal.** Interosseous. Relating to the interossei muscles. **I. flex′ion,** a condition caused by contraction of the interossei muscles, the proximal phalanx being in a state of flexion and the two terminal phalanges in extension.

**Interos′sei dorsa′les.** See *Interosseus manûs* and *I. pedis.* **I. palma′res,** see *Interosseus manûs* and *I. pedis.*

**Interos′seous** (*inter,* between, *os,* bone). Between the bones. **I. ar′teries of the fore′arm and hand,** of these there are several. The compressor interosseous artery arises from the posterior part of the ulnar, below the bicipital tuberosity of the radius, passes backward, and divides into two branches: the one called anterior interosseous descends vertically, anterior to the interosseous ligament; the other, called posterior interosseous, passes above the ligament, appears at the posterior part, and divides into two great branches—the posterior recurrent radial and the posterior interosseous, properly so called. In the hand: 1. The dorsal metacarpal interosseous arteries are given off by the dorsalis carpi, a division of the radial artery. 2. The palmar interosseous arteries, arising from the convexity of the deep palmar arch, give off the middle interosseous arteries. 3. The dorsal interosseous of the index, proceeding directly from the radial artery. In the foot are distinguished: 1. The dorsal interosseous arteries. three in number, which arise from the artery of the metatarsus, a branch of the dorsalis tarsi. 2. The plantar interosseous arteries, also three in number, and arising from the plantar arch. **I. lig′aments,** ligaments seated between certain bones, which they unite, as between the radius and ulna, and the tibia and fibula. **I. mus′cles,** these occupy the spaces between the bones of the metacarpus and metatarsus; see *Interosseus.* **I. nerve,** branch given off by the median nerve, which descends before the interosseous ligament, accompanying the artery of the same name. **I. veins,** these have the same arrangement as the arteries.

**Interos′seus inter′nus pri′mus.** See *Interosseus manûs.* **I. ma′nûs,** these muscles are seven in number—two for each of the three middle fingers, and one for the little finger. Four are situated on the back of the hand, and three only in the palm. They are inserted into the metacarpal bones, and send a tendon to the tendon of the extensor communis. The index has a dorsal abductor and a palmar one; the middle finger has two dorsal muscles for adduction and abduction, the ring finger has a dorsal adductor and a palmar abductor, and the little finger has only one interosseous abductor, which is palmar. These muscles produce abduction and adduction of the fingers, which they can also extend, owing to their connection with the extensor tendons. The first dorsal interosseous of the hand is sometimes called interosseous internus primus. **I. pe′dis,** the number, arrangement, shape, and uses of these muscles of the feet correspond exactly to those of the hand muscles. Four are dorsal, and three plantar; six belong to the three middle toes, and one to the little toe. The great toe is devoid of them. As in the hand, there is an abductor and an adductor for each toe. **I. quar′tus,** prior annularis. **I. secun′dus,** prior medii digiti.

**Interpari′etal.** Between the parietal bones. **I. bone,** bone found in the skulls of the children of the Peruvian races, lying in the upper angle of the occipital bone, where the parietal bones separate from each other; analogue of the interparietal bone of ruminants and carnivora. **I. fis′sure,** fissure between the parietal convolutions.

**Interparoxys′mal.** Between paroxysms, as of a fever.

**Interpedun′cular.** Between the peduncles of the encephalon; as *interpeduncular space,* a lozenge-shaped interval behind the diverging peduncles of the crura of the cerebrum, in which are found the posterior perforated space, corpora albicantia, tuber cinereum, and pituitary body.

**Interpel′lated** (*interpello,* to interrupt). Term applied to a disease whose progress is unequal and whose paroxysms are irregular.

**Interperios′teal frac′ture.** Greenstick fracture.

**Interphalan′geal.** Between the phalanges.

**Interpi′al.** Between the layers of the pia mater.

**Interpleuricos′tal.** Between the pleura and ribs. **I. mus′cles,** internal intercostal muscles.

**Interpo′lar.** Between the poles, as of an electric battery.

**Inter′polated** (*interpolo,* to give a new form to). Intercalary.

**Interpola′tion.** Plastic operation for insertion of new material, as skin-grafting, etc.

**Interprox′imal.** Between adjoining parts. **I. space,** space between adjoining teeth.

**Interpu′bic.** Between the pubic bones. **I. disk,** fibrocartilaginous symphysis of the pubis.

**Interra′dial.** Between rays or radii.

**Interra′mal.** Between the rami of the jaw.

**Interrup′ted.** Broken; intermittent; not continuous. **I. cur′rent,** faradic current. **I. respira′tion,** jerking respiration. **I. su′ture,** see *Suture.*

**Interrup′ter.** An arrangement for automatically interrupting an electric current.

**Interscapil′ium.** Interscapulum.

**Interscap′ular.** Between the shoulders or scapulæ, as the interscapular region. **I. cav′ities,** cavitates scapulares, depressions between the scapulæ and the spinous processes of the vertebræ. **I. re′flex,** reflex contraction of the muscles between the scapulæ when the skin over them is irritated.

**Interscap′ulum.** Space between the scapulæ.

**Intersec′tion.** Point where two lines meet and cut each other. **Aponeurot′ic i.,** fibrous bands which certain muscles present in their length, and by which they seem interrupted. They are found in the recti muscles of the abdomen, semimembranosus, complexus, sternothyroideus, etc. **I. of the op′tic nerves,** optic chiasm.

**Intersectio′nes tendin′eæ musculo′rum.** Lineæ transversæ; inscriptiones tendineæ musculorum.

**Intersegmen′tal.** Between segments.

**Intersepimen′tum** (*intersepio,* to fence about). Partition. **I. thora′cis,** mediastinum.

**Intersep′ta horizonta′lia Pacchio′ni.** Tentorium.

**Intersep′tum.** Uvula. Septum narium. Diaphragm. **I. virgina′le,** hymen.

**In′terspace.** In osteology, a bony mass occupying the space between contiguous Haversian systems.

**Interspi′nal.** Between the spinous processes. **I. lig′aments,** these ligaments occupy the intervals between the spinous processes in the back and loins. In the neck they are replaced by the muscles of the same name. They prevent the too great flexion of the spine, and keep the spinous processes *in situ.* The outermost thickened portions of these are sometimes termed ligamenta apicum. **I. mus′cles,** see *Interspinales.*

**Interspina′les.** Muscles connecting the vertebral spinous processes. **I. col′li,** these are twelve in number, and occupy, in two parallel rows, the intervals between the spinous processes of the cervical vertebræ, from the spinous process of the atlas and vertebra to that between the last cervical and first dorsal vertebra. They are flat, thin, and quadrilateral, and contribute to the extension of the neck and throwing the head backward. **I. dor′si et lumbo′rum,** these muscles are of two kinds: one representing fleshy bundles of different lengths, applied upon the lateral surfaces of the spinous processes, from the third dorsal to the second lumbar vertebra. The others are covered by the preceding. They are situated on each side of the interspinal ligament, in small, short, flat bundles, passing from one spinous process to the second, third, or fourth above it. These muscles aid in extending the vertebral column, and incline it a little to one side when they act on one side only.

**Interspi′nous.** Between the spinous processes.

**Inter′stices** (*inter,* between, *sisto,* to place). Name given to intervals between organs or parts; pores.

**Interstitial,** in-ter-stish′al. Occurring in the interstices of an organ; intercalary.

**Intersupercil′iary.** Between the superciliary ridges.

**Intertar′sal.** Between the contiguous tarsal bones.

**Intertinc′tus** (*inter,* between, *tingo,* to dye). Discrete.

**Intertrabec′ula.** Thick band of cartilage between the trabeculæ of the cranium.

**Intertrachelian,** in-ter-trak-e′le-an (*inter,* between, *trachelos,* throat). Between the cervical vertebræ.

**Intertrag′icus.** Muscle on front wall of cartilage of external auditory canal.

**Intertransversa′les.** Muscles passing between the transverse processes of contiguous vertebræ. **I. col′li,** small muscular bundles, quadrilateral, thin, and flat, situated in pairs in the intervals between the transverse processes of the neck, except between the first and second, where there is only one. They are distinguished into anterior and posterior intertransversales. The former are six in number; the latter five. These muscles bring the transverse processes of the neck nearer each other, and contribute to the lateral flexion of the neck. **I. lumbo′rum,** these are almost entirely fleshy, and ten in number, five on each side; are similar to the preceding in general arrangement, except that they are more marked and not placed in two rows. Each intertransverse space contains only one. They are quadrilateral and flat. The first occupies the space between the transverse processes of the first lumbar and the last dorsal vertebræ; the last is between that of the fourth and fifth lumbar vertebræ. These muscles incline the lumbar spine laterally. One set of these muscles, intertransversales mediales interaccessorii, passes from the accessory process of one vertebra to the mammillary process of the next.

**Intertransverse′.** Between transverse processes of vertebræ. **I. mus′cles,** see *Intertransversales.*

**Intertriginous,** in-ter-trij′in-us. Relating to intertrigo.

**Intertri′go** (*inter,* between, *tero,* to rub). Chafing of skin from friction of folds or surfaces. **I. a′ni** or **pod′icis,** chafing of the anus.

**Intertrochanter′ic.** Between the trochanters.

**Intertu′bular.** Between tubules. **I. stro′ma,** see *Kidney.* **I. sub′stance,** see *Tubule, dental.*

**Interure′teral** or **Interureter′ic.** Between the ureters or their orifices.

**In′terval** (*intervallum*, a rampart). Intermission; space between parts, time between paroxysms of fever, etc.; interstice.

**Interval′lary.** Between paroxysms of disease.

**Interval′lum.** Interval, intermission, interstice. **I. intercosta′le,** intercostal space.

**Interval′var** or **Interval′vular.** Between valves.

**Interve′nium** (*vena*, a vein). Space between two veins.

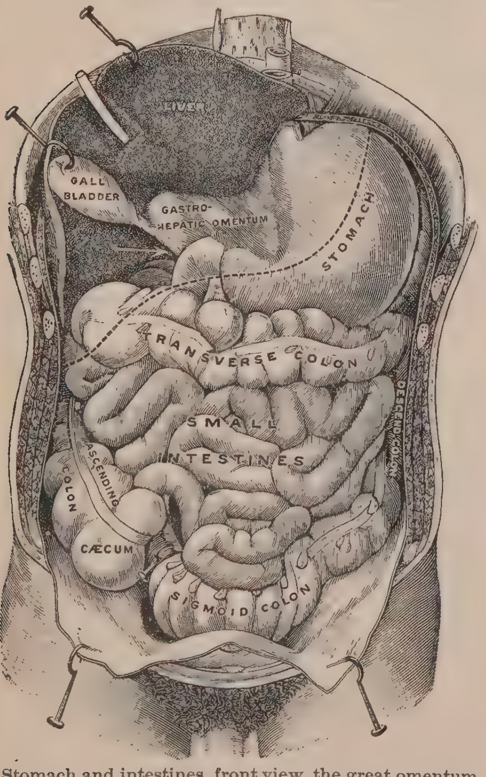
**Interventric′ular.** Between the ventricles of the heart or brain. **I. sep′tum,** fibrous partition between the ventricles of the heart.

**Interver′tebral.** Between the vertebræ. **I. car′tilages, fibrocar′tilages,** or **disks,** these are fibrocartilaginous sections of a cylinder, situated between the bodies of the vertebræ, from the space between the second and third as far as that between the last vertebra and sacrum. Their form is accommodated to that of the vertebræ with which they are in connection, so that in the neck and loins they are oval, in the dorsal region nearly circular. **I. disks,** intervertebral cartilages. **I. fibrocar′tilages,** intervertebral cartilages. **I. gan′glion,** see *Vertebral nerves.* **I. sub′stance,** i. cartilage.

**Intestin′.** Bismuth naphthalin benzoate; an intestinal antiseptic employed in diarrhœa and dysentery; dose, gr. vij–xv (0.5–1.0).

**Intes′tinal** (*intus*, within). Enteric. Relating or belonging to the intestines. **I. anastomo′sis, influen′za, obstruc′tion,** etc., see these words. **I. juice,** succus entericus. **I. tube** or **tract,** the canal formed by the intestines from the pyloric orifice of the stomach to the anus.

**Intes′tine.** Bowel. A musculomembranous canal, variously convoluted, extending from the stomach to the anus, and situated in the abdominal cavity, the greater part of which it fills. In man its length is six or eight times that of the body. It is divided into two principal portions, called small intestine and large intestine. The *small intestine*, intestinum tenue, gracile, or angustum, constituting nearly four-fifths of the whole length, begins at the stomach and terminates in the right iliac region. It is divided into duodenum, jejunum, and ileum. Some anatomists give the name small intestine to the last two only, jejunoileum, intestinum mesenteriale, which are kept in place by the mesentery and form a large mass, occupying the umbilical and epigastric regions, part of the flanks, of the iliac regions, and of the cavity of the pelvis. It is composed of: 1. A serous membrane, which is peritoneal. 2. Muscular coat, whose fibres are very pale, and are placed, in part, longitudinally, but the greater part transversely. 3. Whitish mucous membrane, villous and forming folds or valves—valvulæ conniventes—at its inner surface, and furnished with a number of mucous follicles called glands of Lieberkühn, crypts or follicles of Lieberkühn, and in the duodenum with the glands of Brunner. 4. Areolar or submucous coat, of loose texture, supporting the mucous membrane. The arteries of the small intestine proceed from the superior mesenteric; its veins open into the vena porta. Its nerves proceed from the superior mesenteric plexus.



Stomach and intestines, front view, the great omentum having been removed, and the liver turned up and to the right. The dotted line shows the normal position of the anterior border of the liver. The dart points to the foramen of Winslow. (Gerrish.)

The *large intestine*, intestinum crassum or amplum, megalocœlia, forms a sequence to the small. It is much shorter, and is solidly attached in the regions of the abdomen which it occupies. It begins in the right iliac region, ascends along the right flank until beneath the liver, when it crosses the upper part of the abodmen, descends into the left iliac fossa, and plunges into the pelvic cavity to gain the anus. The great intestine is usually divided into three portions—the cæcum, colon, and rectum It receives its arteries from the superior and inferior mesenterics. Its veins open into the vena porta. Its nerves are furnished by the mesenteric plexuses. Its lymphatic vessels, which are much less numerous than those of the small intestine, pass into the ganglions or glands seated between the different reflections of the peritoneum, which fix it to the abdominal parietes. The use of the intestines is, in the upper part, to effect the chylification of the food and the absorption of the chyle; in the lower, to serve as a reservoir, where the excrementitious portion of the food collects, and also as an excretory duct, which effects its expulsion. **Prim′itive i.,** protogaster.

**Intestin′ulum** (dim. of intestinum). Small intestine. Cerebral convolution. Umbilical cord. **I. Meibo′mii,** Meibomian gland.

**Intesti′num.** Intestine. **I. am′plum,** large intestine. **I. angus′tum,** small intestine. **I. cæ′cum,** cæcum. **I. cellula′tum,** colon. **I. circumvolu′tum,** ileum. **I. cras′sum,** large intestine. **I. glomerula′tum,** ileum. **I. gra′cile,** small intestine. **I. gran′de,** large intestine. **I. gyra′tum,** ileum. **I. il′eum** or **involu′tum,** ileum. **I. lax′um,** colon. **I. lon′gum,** ileum. **I. ma′jus,** large intestine. **I. me′dium,** mesentery. **I. mesenteria′le,** the combined jejunum and ileum. **I. pancreat′icum,** duodenum. **I. perforat′um,** perforation of the intestines. **I. ple′num,** colon. **I. rec′tum,** rectum. **I. ten′ue,** small intestine.

**In′tima** (fem. of *intimus*, inmost; *tunica*, coat, being understood). Innermost coat or endothelial lining of the blood-vessels.

**Intimi′tis.** Inflammation of the innermost coat of a vessel.

**In′timum un′guis** (*intimus*, inmost). Root of the nail. **I. vaso′rum,** lining membrane of blood-vessels.

**Intol′erance.** Inability to endure pain, light, etc.

**Intort′.** To move the cornea, so that its upper extremity points inward.

**Intor′ter.** A muscle that intorts.

**Intor′tion** (*torqueo*, to wrench). Distortion.

**Intoxica′tion.** Poisoning; temulence. **Sat′urnine i.**, lead poisoning. **Sep′tic i.**, septicæmia. **Uræ′mic i.**, uræmia.

**Intra-.** In composition, within..

**Intra-abdom′inal.** Within the abdomen.

**Intra-arach′noid.** Within the arachnoid cavity.

**In′tra-arte′rial.** Within an artery or arteries or system of arteries.

**Intra-artic′ular** (*intra*, within, *articulus*, joint). Relating to the interior of a joint.

**Intra-as′inous** Within an acinus or acini.

**Intrabron′chial.** Within a bronchial tube.

**Intracap′sular.** Within the capsule of a joint.

**Intracar′diac.** Within the heart.

**Intracartilag′inous.** Within a cartilage.

**Intracel′lular.** Within a cell or cells.

**Intracerebel′lar.** Within the cerebellum.

**Intracer′ebral.** Within the brain.

**Intracer′vical.** Within the cervix or cervical canal of the uterus..

**Intracosta′lis.** Internal intercostal muscle.

**Intracra′nial.** Within the cavity of the skull.

**Intracruræ′us.** Vastus internus.

**Intracuta′neous.** Within the skin.

**Intracys′tic.** Originating from the interior of a cyst or cysts. Intravesical.

**In′trad.** In an inward direction.

**Intrader′mal** or **Intrader′mic.** Intracutaneous.

**Intradu′ral.** Within the dura mater.

**Intraepithe′lial.** Within the epithelium.

**Intrafi′lar.** Within a reticulum. **I. mass,** fluid material between the cellmitomes.

**Intrafis′tular.** Within a fistula.

**Intrafœta′tion.** Fetal inclusion; fœtus in fœtû.

**Intragas′tric** (*gaster*, stomach). Within the stomach.

**Intrahepat′ic.** Within the liver.

**Intraju′gular.** Within the jugular vein or process.

**Intralaryn′geal.** Within the larynx.

**Intraligamen′tary.** Within a ligament, especially the broad ligament.

**Intraligamen′tous.** Within a ligament.

**Intralin′gual.** Within the tongue. **I. sal′ivary glands,** see *Lingual glands* and *Salivary glands.*

**Intralob′ular.** Within a lobule, as of the lung or liver.

**Intramat′rical.** Within the matrix.

**Intramed′ullary.** Within the medulla.

**Intramem′branous.** Within a membrane.

**Intramenin′geal.** Within the meninges.

**Intramu′ral** (*intra*, within, *murus*, wall.) Within the walls of an organ. See *Pregnancy, interstitial.* **I. inter′ment,** burial within city limits.

**Intramus′cular.** Within a muscle or fibres of a muscle.

**Intrana′sal.** Within the nares.

**Intranu′clear.** Within a nucleus.

**Intraoc′ular** (*oculus*, eye). Within the eye. **I. ten′sion,** increased hardness of the eyeball.

**Intraor′bital.** Within the orbit.

**Intraos′seous.** Within the substance of a bone.

**Intrapari′etal** (*paries*, wall). Within the walls of any organ or growth; intramural.

**Intrapel′vic.** Within the pelvis.

**Intraperitone′al.** Within the cavity of the peritoneum.

**Intraplacen′tal.** Within the placenta.

**Intrapleu′ral.** Within the cavity of the pleura.

**Intrapo′lar.** Between the poles, as of an axis or of a galvanic battery.

**Intrapon′tine.** Within the substance of the pons Varolii.

**Intrapul′monary.** Within the lung.

**Intrapyret′ic.** Within the period or stage of fever. **I. amputa′tion,** secondary amputation.

**Intrarec′tus.** Rectus oculi internus.

**Intrarrhachid′ian.** Within the spinal canal.

**Intraspi′nal.** Within the spinal column or canal.

**Intrathorac′ic.** Within the cavity of the thorax.

**Intraton′sillar.** Within the stroma of the tonsil.

**Intratra′cheal.** Within the trachea.

**Intratu′bal.** Within the Fallopian tube.

**Intratympan′ic.** Within the cavity of the tympanum.

**Intra-ure′thral.** Within the urethra.

**Intra-u′terine.** Within the womb.

**Intravaginal,** in-tra-vaj′i-nal. Within the vagina.

**Intravasa′tion** (*intra*, within, *vas*, vessel). Entrance into vessels of matters formed outside of them or in their parietes.

**Intravas′cular.** Within a vessel or vessels.

**Intrave′nous.** Within the veins. **I. infu′sion** or **injec′tion,** introduction of a fluid into a vein.

**Intraventric′ular.** Within a ventricle of the brain or heart.

**Intraver′tebral.** Intraspinal.

**Intraves′ical.** Within the bladder.

**Intravit′reous.** Within the vitreous humor.

**Intrin′sic** (*intra*, within, *secus*, by). Internal. Belonging exclusively to a body or part. Also applied to the internal muscles of certain organs, as those of the ear, tongue, and larynx.

**Introces′sion** (*introcedo*, to enter into). Depression or subsidence.

**In′troflexed** (*intro*, within, *flexus*, bent). Bent or curved inward.

**Intro′itus** (*intro*, in, *io*, to go). Entrance, as of a tube or cavity. **I. pel′vis,** pelvic inlet; see *Pelvis.* **I. vagi′næ,** external aperture of vagina.

**Intromis′sion** (*intro*, in, *mitto*, to send). Act of introducing one body into another.

**Intropelvim′eter.** Instrument to measure the diameters of the pelvis.

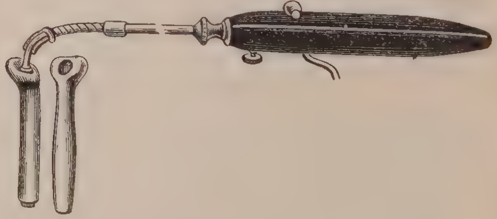
**Intror′sion.** Act of turning inward. Invagination of mesoderm and endoderm in the embryo.

**Introsuscep′tion** (*intro*, within, *suscipio*, to receive). Intussusception. **I. entro′pium,** entropion.

**Introver′sion.** Invagination; sunken or depressed condition of a part.

**In′tubate.** To perform intubation.

**Intuba′tion** (*tubus*, tube). Introduction of a tube; catheterism. **I. of the lar′ynx,** passage of a tube through the larynx to relieve obstruction to breathing, as in croup or diphtheria.



Intubation tube and introducer.

**In′tubator.** Instrument for the purpose of inserting a tube in intubation.

**In′tubum.** Cichorium endivia. **I. errat′icum,** Cichorium intybus.

**Intumes′cence** (*intumesco*, to swell). Augmentation of size in a part or in the whole of the body. *Intumescentiæ* formerly denoted an order of diseases, including polysarcia, pneumatosis, anasarca, œdema, physconia, and pregnancy.

**Intumes′cent.** Swollen.

**In′tus inver′sus** (*intus*, within, *inversus*, inverted). Transposition of the viscera.

**Intussuscep′tion** (*intus*, within, *suscipio*, to receive). In physiology, the mode of increase peculiar to organized bodies, as absorption, imbibition, etc. In pathology, the introduction of one part of the intestinal canal into another, which serves it as a sort of vagina or sheath; generally, the upper part of the small intestine is received into the lower. At times the invaginated portion separates and is voided per anum, the patient recovering. The disease is, however, very dangerous. **U′terine i.,** introversion of the uterus.

**Intussuscep′tum.** The part of the bowel, in intussusception, which is received into the other part.

**Intussuscip′iens.** The part of the bowel receiving the other part, in intussusception.

**In′tybum.** Cichorium intybus.

**In′tybus.** Cichorium intybus. **I. angus′tus,** Lactuca virosa. **I. horten′sis** or **sati′vus,** Cichorium endivia.

**In′ula.** (Ph. U. S.). The official name of the root of I. helenium, elecampane. Used in dyspepsia, cachexia, chronic pulmonary affections, etc.; dose, gr. xx–ʒj (1.3–4.0) in infusion or decoction. **I. britan′nica,** I. dysenterica. **I. chinen′sis,** tonic, stimulant, and antiperiodic, and externally applied to buboes, boils, etc. **Com′mon i.,** I. helenium. **I. conyzæ′a,** I. dysenterica. **I. dysenter′ica,** systematic name of the lesser inula; plant once considered antidysenteric. **I. helen′ium,** elecampane, common inula. **Less′er i.,** i. dysenterica. **I. squarro′sa,** Conyza squarrosa.

**In′ulase.** Ferment in Aspergillus niger and Penicillium glaucum. It changes inulin into levulose.

**In′ulic acid.** $C_{15}H_{20}O_2$. An acid found in combination with alanthol in Inula helenium.

**Inulin′.** Amyloid substance, a carbohydrate, in Inula helenium, Arnica montana, etc. White, soluble powder, stimulant expectorant; dose, gr. j–iij (0.065–0.2). Also a starch from elecampane which has been used in making inulin bread for diabetic patients, as it antagonizes the action of ferments.

**In′ulol.** $C_{20}H_{42}O$. Alanthol. A liquid stearoptene found in elecampane root, Inula helenium. Yellowish, oily liquid. Internally antiseptic, and employed in chronic bronchitis, phthisis, etc. Dose, gr. $\frac{1}{6}$ to $\frac{1}{3}$ (0.01-0.02). Recommended as a substitute for oil of turpentine in tuberculous disease.

**Inunc′tion.** Act of rubbing in an ointment or liniment—unction, infriction.

**Inunda′tion** (*inundo,* to flow over). Depuration.

**Inus′tion** (*uro,* to burn). Cauterization.

**Inus′tum.** Burn.

**Invaginated,** in-vaj′in-a-ted (*vagina,* a sheath). Received into another part, as into a sheath. **I. ban′dage** is one in which the strips or tails pass through appropriate slits or buttonholes.

**Invagina′tion.** Intussusception. Also operation which consists in introducing one end of a divided intestine into the other, with the view of restoring the continuity of the intestinal canal. See *Anastomosis, intestinal.* Operation for radical cure of crural hernia, consisting in introducing into the crural canal a thick tent of charpie, which by compression and adhesive inflammation obliterates the neck of the hernial sac.

**Invaginator,** in-vaj′in-a-tor. Instrument devised for the radical cure of hernia by invagination.

**In′valid** (*in,* neg., *validus,* strong). One out of health.

**In′validing.** Removal from the army of a soldier who has become, from infirmity, unfit for service.

**In′validism.** Condition of an invalid.

**Invalitu′do** (*in* neg., *valetudo,* health). Infirmity.

**Inva′sion** (*invado,* to go in). Beginning of an attack or paroxysm of disease.

**Invermina′tion** (*vermino,* to have worms). Condition attended with presence of intestinal worms; helminthiasis.

**Inver′sio** (*inverto,* to turn in). Inversion or turning inside out. **I. palpebra′rum,** entropion. **I. u′teri,** hysteroptosis, inversion of the uterus. **I. vagi′næ,** prolapse of vagina. **I. vesi′cæ,** inversion of the bladder. **I. vesi′cæ urina′riæ fis′sæ,** exstrophy of the bladder.

**Inver′sion.** See *Inversio.*

**Inver′sive.** Term applied to the inverting action of ferments which change cane-sugar to glucose.

**In′vert sugar.** Combination of dextrose and levulose; a variety of glucose which turns the polarized ray sinistrad.

**In′vertase.** Decomposition product of invertin.

**Invert′ebral** or **Invert′ebrate.** Devoid of vertebræ. Animals so arranged are called *invertebrata.*

**Invertin′.** Ferment of intestinal juice, changing cane-sugar into invert-sugar.

**Invet′erate** (*vetus,* old). Chronic; established.

**Inviril′ity.** Absence of virility.

**Invis′cant** (*viscum,* bird-lime). Thickening.

**Invisca′tio oc′uli.** Morbid adhesion of the eyelids to each other or to the globe of the eye. Gluing together of the eyelids by viscid secretion.

**In vit′ro.** In glass. Said of a chemical reaction effected in a test-tube.

**Involu′cre.** Involucrum.

**Involu′crum** (*involvo,* to fold in). Covering; hence, covering of new bone developed about a sequestrum in necrosis. **I. cer′ebri,** membrane of the brain. **I. cor′dis,** pericardium. **I. cor′poris commu′ne,** integument. **I. cor′poris vit′rei,** retina. **I. lin′guæ,** see *Tongue.* **I. membrana′ceum,** decidua reflexa. **I. nati′vum,** skin. **I. nervo′rum,** neurilemma; perineurium. **I. re′ti compara′tum,** retina.

**Involumen′tum.** Involucrum.

**Invol′untary** (*in,* neg., *voluntas,* will). Not under the influence of the will.

**Involu′tion** (*involvo,* to roll in or on). Return to a natural condition; as i. of the uterus, return to its normal state as it was before pregnancy. Regressive change in the tissues of the aged, katabolism. **I. forms of bacte′ria,** degenerated forms of bacteria, resulting from overcultivation in an unsuitable medium.

**Iodacetan′ilid.** Iodo-acetanilid.

**I′odal.** Hydride of triiodacetyl, $C_2I_3OH$, being similar in composition to chloral, $I_3$, being substituted for $Cl_3$. Substance prepared by treating iodine with alcohol and nitric acid; anæsthetic.

**Iodam′ylum.** An insoluble iodized starch; used in antiseptic dressings.

**Iodantifebrin′.** Iodo-acetanilid.

**Iodantipyrin′.** Iodopyrin.

**I′odate.** Salt of iodic acid. **I. of so′dium,** $NaIO_3$; employed as an application to ulcers, inflammation of the nose, chancres, etc. The chiefly employed iodate; externally in powder for ulcers, chancre, and chancroid, and by insufflation in nasal and laryngeal diseases; internally, in doses of 15 grains (1.0) daily, in scrofulous and glandular affections, bronchial asthma, etc.

**I′odated.** Iodized **I. milk,** see *Milk.*

**Iodcaffeine′.** Iodocaffeine.

**Iodeth′yl.** Ethyl iodide.

**Iode′tum.** Iodide.

**Iodhy′drate.** Hydriodate and hydriodide.

**Iodhy′dric.** Hydriodic. **I. acid,** hydriodic acid. **I. e′ther,** hydriodic ether; iodethyl.

**Iodhydrin′.** Product of action of muriatic acid on glycerin, in which a molecule or more of iodine replace one or more of hydroxyl.

**Io′dic.** Containing iodine; as iodic acid, produced by action of nitric acid on tincture of iodine.

**I′odide.** Saline combination of iodine with a simple body other than oxygen. The official (Ph. U. S.) iodides are those of ammonium, silver, arsenic, iron, mercury (red and yellow), lead, potassium, sodium, strontium, sulphur, and zinc.

**Iod′idum.** Iodide.

**Iodi′na rhombifo′lia.** Species of genus *Santalaceæ,* of S. America; bark and wood are astringent.

**I′odine** (*iodes,* of a violet color, from the violet vapor it exhales when volatilized). Iodum (Ph. U. S. and Br.). A non-metallic element, symbol I, of a bluish-gray color, of metallic brightness, and smell similar to that of chloride of sulphur. A solid crystalline body, occurring in the form of plates. When heated it becomes volatilized and affords the vapor which characterizes it. With oxygen it forms iodic acid, and with hydrogen hydriodic acid.

Iodine and the iodides have been employed with success in the treatment of goitre and of some scrofulous affections, in glandular hypertrophy, and in skin diseases; for injection into various diseased cavities, for inhalation in bronchial and catarrhal affections, etc. It is apt, however, to induce diarrhœa, signs of great nervous irritability, frontal headache, coryza, lacrymation, acne, pharyngitis, etc., and emaciation of the mammæ. When these symptoms, collectively termed *iodism, iodosis,* or *iodinia,* are urgent, the dose may be diminished, or wholly discontinued and afterward resumed. When exposed to the air in a room it is an effective deodorant. The Ph. Br. contains linimentum iodi, *iodine liniment.* Solution of iodine and iodide of potassium in glycerin forms *iodized glycerin,* a caustic application in lupus, ulcers, etc. **I. ac′ne,** cutaneous acneiform eruption associated with iodism. **I. bath,** see *Bath.* **I. cy′anide,** CNI, destructive to lower forms of animal life; useful for preserving collections of insects, etc. **I. green,** green coloring-matter composed of rosanilin and methyl iodide. **I. paint,** a tincture twice as strong as the official tincture, applied in cases in which more active counterirritation is needed. **I. tribro′mide,** $IBr_3$, antiparasitic, antiseptic, and solvent; used as a gargle in diphtheria, gtt. xx to ℥x of water. **I. trichlo′ride,** $ICl_3$, made by passing dry chlorine vapor over dry, warmed iodine; antiseptic and disinfectant to a marked degree.

**I′odined.** Iodized.

**Iodin′ia.** Iodism.

**Iodipin′.** Oil of sesame combined with iodine.

**I′odism.** The aggregate of symptoms resulting from the toxic action of iodine or the iodides; see *Iodine.*

**I′odized.** Iodined, iodated; impregnated or affected with iodine or its preparations. **I. glycerin′,** see *Iodine.* **I. hy′dride,** solution of iodine in amyl hydride; when applied to the skin, the latter vaporizes, leaving the iodine equally distributed on the surface. It is employed in open scrofulous sores, indolent bubo, fetid ulcerations, etc. It is also a deodorizer and a convenient method of administering iodine by inhalation.

**Iodoacetan′ilid.** Crystalline powder; product of action of iodine on acetanilid.

**Iodoalbu′min.** Combination of iodine and albuminoids; used in myxœdema, tetanus, etc.

**Iodoam′ylum.** Iodamylum

**Iodoantifebrin′.** Iodo-acetanilid.

**Iodoantipyrin′.** Iodopyrin.

**Iodocaffeine′.** A white, crystallized substance, derived from passing hydrogen sulphide through a solution of caffeine and potassium iodide; dose, gr. iij–v (0.2–0.32) in certain affections of the heart.

**Iodocarbol′ic acid.** Iodophenol.

**Iodoca′sein.** A yellow powder; antiseptic.

**Iodococ′cus.** Micrococcus detected in foul buccal secretions. It gives a blue color when added to iodine. **I. vagina′tus** (Miller), micrococcus detected in foul secretions of the mouth.

**Iodocre′sin** or **Iodocre′sol.** $C_7H_7IO$. Traumatol. Combination of iodine and cresol, used as substitute for iodoform.

**I′odocrol.** See *Carvacrol.*

**Ioododer′ma.** Skin affection, such as acne, caused by iodine or its preparations.

**Iodo-eu′genol.** Produced by action of iodine on eugenol-sodium. Yellow powder; antiseptic.

**Iod′oform.** Iodoformum (Ph. U. S. and Br.). Teriodide of formyl, triiodomethane, formerly called sesquiiodide of carbon—so called from its analogy to chloroform. $CHI_3$. Small lemon-yellow or citrine crystals of a disgusting odor, obtained by adding to an alcoholic solution of iodide of potassium, chlorinated lime, the resulting iodate of lime being separated from the iodoform by the addition of boiling alcohol. Besides the medical properties of iodine, which render it useful in scrofula, syphilis, etc., it is anodyne, anæsthetic, antiseptic, and disinfectant. It is used externally as an ointment. It is given internally in cirrhosis of the liver, consumption, diabetes, and other affections. It is used externally in ointments, and internally may be given in the same cases as iodine and the iodides; dose, gr. i–iij (0.065–0.2), three times a day. The ointment containing 10 per cent. of iodoform, is official. **I. cal′omel,** a mixture of the two ingredients, efficacious in the treatment of wound-surfaces and cavities difficult of disinfection, as in tuberculosis and in tracheotomy necessitated by diphtheritic invasion. **Ino′dorous i.,** anozol. **I. sal′ol,** mixture of iodoform and salol; external antiseptic for wounds, etc.

**Iodofor′mal.** Yellow powder, resulting from the action of ethyl iodide on iodoformin. Used as substitute for iodoform.

**Iod′oformin′.** A derivative of formaldehyde; employed as an antiseptic.

**Iod′oformism.** Poisoning or other annoying symptoms produced by iodoform.

**Iod′oformize.** To subject a part to thorough iodoform dressing.

**Iodoform′ogen.** Odorless preparation of albumin and iodoform. Used as a substitute for the latter.

**Iodofor′mum.** Iodoform.

**Iodogallicin′.** Bismuth-oxy-iodo-methyl-gallol. Product of treating gallicin with bismuth-oxyiodide. Used as a substitute for iodoform.

**Iodogenin′.** Mixture of charcoal and oxygen in combination with iodine. Disinfectant; liberates iodine when lighted.

**Iodoglobulin′.** Derivative from the thyroid gland.

**Iodohæmatin′.** Hematin hydriodide.

**Iodohæ′mol.** See *Hæmol.*

**Iodohydrar′gyrate of potas′sium.** See *Iodine.*

**Iodohy′drate.** Hydriodate.

**Iodoiod′oformin′.** Compound of iodine and iodoform; antiseptic.

**I′odol.** Tetraiodopyrrol. $C_4I_4NH$. Yellowish-white, odorless, and tasteless powder derived from action of iodine on pyrrol in alcoholic solution; antiseptic, antibromic, and anæsthetic; used externally in ulcers, surgical dressings, ozæna, abscesses, caries, etc., and for dusting; internally as substitute for iodine, in doses of gr. j–iij (0.065–0.2). **I. caffeine′,** see *Caffeine.*

**Iodom′ethe** (*iodum+methe,* drunkenness). Iodine poisoning.

**Iodonaph′thol.** See *Naphthol aristol.*

**I′odophen.** Nosophen.

**Iodophenacetin′.** Substance produced when a cold saturated solution of phenacetin, acidulated with hydrochloric acid, is treated with iodine. It is antiseptic.

**Iodophenin′.** A derivative of phenacetin and iodine; antiseptic, but irritating.

**Iodophenochlo′ral.** A mixture of equal parts of iodine tincture, carbolic acid, and chloral hydrate. Used as a parasiticide in dermatological practice.

**Iodophe′nol.** Mixture of iodine, carbolic acid, and glycerin; has therapeutic action of its ingredients.

**Iodophil′ia.** Affinity of the leucocytes for iodine, as shown by taking a pronounced stain in weak solutions. It occurs in several diseases, but especially in suppurative conditions.

**Iodophthi′sis** (*iodum+phthisis,* wasting). Loss of flesh and strength produced by iodine.

**Iodopyrin′.** Colorless, crystalline substance; substitutive product of antipyrin, one atom of hydrogen being replaced by one of iodine; antipyretic and antiarthritic.

**Iodosin′.** Compound of iodine and albumin, used as a substitute for iodothyrin.

**Iodo′sis.** Iodism.

**Iodospongin′.** Substance containing iodine, derived from sponge.

**Iodosul′phate.** Compound of a base with iodine and sulphuric acid, or with the latter in which hydrogen is replaced with iodine. **I. of cinchonine′,** aseptol; proposed as a substitute for iodoform, being made by precipitating a solution of sulphate of cinchonine by a solution of iodine and iodide of potassium. **I. of qui′nine,** herapathite.

**Iodotan′nin.** Solution of iodine in water, with the assistance of tannic acid.

**Iodoterpin′.** Combination of iodine and terpin; used as substitute for iodoform.

**Iodotheine′.** Combination of hydriodic acid and theine. A heart-tonic. See *Iodocaffeine.*

**Iodotheobromine′.** Prepared with theobromine, by a process analogous to that for iodocaffeine.

**Iodother′apy.** Treatment of disease with iodine.

**Iodothy′moform.** Iodothymol-formaldehyde.

**Iodothy′mol.** Aristol. **I.-formal′dehyde,** iodized formaldehyde, antiseptic.

**Iodothyrin′.** Thyroiodin. Organic compound of iodine produced by the thyroid gland from traces of iodine contained in food and carried into the blood. Antitoxic to those products of normal metabolism which produce cachexia and tetanus in thyroidectomized animals.

**Iodovas′ogen.** Vaselin oxidized and iodine added.

**Iod′ozone.** Compound of iodine and ozone; antiseptic.

**Io′dum.** (Ph. U. S. and Br.) Iodine. The official preparations are *li′quor io′di compos′itus* (Ph. U. S.), Lugol's solution, compound solution of iodine, contains five per cent. iodine and ten per cent, potassium iodide; dose, ♏v–xv (0.32–1.0). *Li′quor io′di for′tis* (Ph. Br.), strong solution of iodine, linimentum iodi, contains iodine five parts, potassium iodide three parts, distilled water five parts, and 90 per cent. alcohol thirty-six parts. *Tinctu′ra io′di* (Ph. U. S. and Br.), tincture of iodine; dose, ♏ij–v (0.13–0.32). *Unguen′tum io′di* (Ph. U. S. and Br.), iodine ointment.

**Iodure′tum.** Iodide.

**I′on** (*ion,* going). Viola; Vaccinium baccifera. Element which appears in electrolysis at the positive or negative plate—cation at the negative, anion at the positive plate.

**Io′nia.** Teucrium chamæpitys.

**Ionid′ion** or **Ionid′ium angustifo′lium,** Mexican plant of genus *Violaceæ,* used in dropsy. **I. brevicau′le,** S. American species, root of which is emetic. **I. calceola′ria,** species of S. America, resembling ipecacuanha and having similar therapeutic properties. **I. heterophyl′lum,** Chinese species; emetic, as is also **I. lana′tum,** a Brazilian plant. **I. marcuc′ci** or **marcu′tii,** cinchunchulli, S. American plant, said to be identical with I. microphyllum and I. parviflorum, said to be particularly efficacious in the mal de S. Lazaro of Colombia. **I. microphyl′lum** and **I. parviflo′rum,** two S. American species, the root of which is called huichunchulli; action is like that of ipecac. **I. poa′ya,** Brazilian plant; root is emetic, as is that of the W. Indian plant **I. stric′tum** and that of the Brazilian plant **I. urticæfo′lium.** The root of **I. suffrutico′sum,** of E. Indies, is demulcent in simple and specific urethritis and other urinary diseases.

**I′onone.** Odoriferous principle of orris root.

**Ion′thos** or **Ion′thus** (*ion,* the violet, *anthos,* flower). Violet eruption; non-suppurating tumor, occurring chiefly on the face. Disease of or connected with the hair folicles, as acne, sycosis, etc.

**Ip′ecac.** Ipecacuanha. **Amer′ican i.,** Apocynum androsæmifolium. **Bas′tard i.,** Asclepias curassavica, Triosteum perfoliatum. **Brown i.,** root of Cephaëlis ipecacuanha. **Caroli′na i.,** Podophyllum peltatum. **Ger′man i.,** vincetoxicum. **I. of the Isle of France,** Tylophora asthmatica. **White i.** is obtained from different species of Richardsonia and Inidium, and from Viola ipecacuanha or Pombalea ipecacuanha. **Wild i.,** Euphorbia ipecacuanha, Triosteum perfoliatum, Asclepias curassavica.

**Ipecacoan′ha.** Ipecacuanha.

**Ipecacuan′ha.** (Ph. U. S. and Br.) The root of Cephaëlis (Psychotria) ipecacuanha, ord. *Rubiaceæ,* obtained from Psychotria emetica of Peru. The odor of the root is faint and peculiar; taste bitter, subacrid, and mucilaginous; water and alcohol extract its virtues, which depend on a peculiar principle called emetia. It is emetic in large doses; expectorant and sudorific in smaller. Dose, as an emetic, gr. xv–xxx (1.0–2.0); as an expectorant, gr. ss–ij (0.032–0.13). The official preparations are: *Ace′tum ipecacuan′hæ* (Br.), vinegar of ipecac; dose, ♏v–xxx (0.32–2.0). *Extrac′tum i. flu′idum* (U. S.) or *li′quidum* (Br.); dose, ♏ss–ij (0.032–0.13), as an expectorant; ♏xv–xxx (1.0–2.0), as an emetic. *Pul′vis i. et o′pii* (U. S.), *P. i. compos′itus* (Br.), Dover's powder; dose, gr. j–xv (0.065–1.0). *Syr′upus i.* (U. S.), syrup; dose, ♏x–ʒj (0.65–4.0), as an expectorant; ʒij–iv (8.0–16.0), as an emetic. *Tinctu′ra i. et o′pii* (U. S.), tincture of ipecac and opium, liquid Dover's powder; dose, ♏v–xv (0.32–1.0). *Trochis′ci morphi′næ et i.* (U. S.), troches of morphine and ipecac; dose, one as required. *Trochis′ci i.* (U. S.), troches of ipecac; dose, one as required. *Vi′num i.* (U. S. and Br.), wine of ipecac; dose, ♏x–xxx (0.65–2.0), as an expectorant; ʒiv–vj (16.0–24.0), as an emetic.

**Ipecacuan′hic acid.** $C_{14}H_9O_7$. Brown acid derived from root of Cephaëlis ipecacuanha.

**I′po.** Resin derived from bark of Strychnos tieute. Upas. See *Antiaris toxicaria* and *Upas.* **I. toxica′ria,** see *Upas.*

**Ipomœ′a acetosæfo′lia.** Species of Convolvulaceæ of S. America and W. Indies, used externally in ascites and arthritis; sap is cathartic. **I. aquat′ica,** species of E. and W. Indies; cathartic, and used externally for abscesses. **I. bata′tas,** sweet potato. **I. batatoi′des,** see *Convolvulus jalapa.* **I. bo′na nox,** moon-flower, grows in E. and W. Indies; bark of root is cathartic. **I. cæru′lea,** E. Indian species; seeds are cathartic. **I. cathar′tica,** juice is drastic cathartic. **I. cymo′sa,** E. Indian species; leaves make an emollient application to suppurating surfaces; seeds are laxative. **I. digita′ta,** roots of this species from E. Indies, Africa, and S. America are cathartic. **I. fastigia′ta,** source of glucoside, ipomœin. **I. gemel′la,** E. Indian species; demulcent in aphthous stomatitis. **I. jala′pa** or **jalap′pa,** Convolvulus jalapa; see *Jalapa.* **I. macrorrhi′za,** Convolvulus jalapa. **I. mexitlan′ica,** see *Convolvulus jalapa.* **I. muricoi′des,** Mexican species, used for baths in cases of paralysis. **I. nil,** Convolvulus nil. **I. opercula′ta,** see *Batata de purga.* **I. orizaben′sis,** see *Convolvulus jalapa.* **I. pandura′ta,** wild jalap or potato, man-root; indigenous in United States; cathartic. **I. pur′ga,** see *Jalapa.* **I. renifor′mis,** E. Indian species; diuretic, alterative. **I. re′pens,** I. aquatica. **I. schiedea′na,** see *Convolvulus jalapa.* **I. sim′ulans,** a tree of Tampico, the source of Tampico jalap. **I. stans,** Mexican species, root of which is cathartic. **I. subtril′oba,** root of this Peruvian species is drastic cathartic. **I. turpe′thum,** E. Indian jalap; root and stems are purgative.

**Ipomœin′.** $C_{78}H_{132}O_{36}$. Glucoside from root of Ipomœa fastigiata.

**Ir.** Chemical symbol of iridium.

**I′ra.** Rage.

**Iracun′dus.** Rectus externus oculi.

**Iral′gia** or **Iridal′gia** (*iris+algos,* pain). Pain in the iris.

**I′rian.** Relating to the iris.

**Iriancis′tron, Iriankis′tron,** or **Iridancis′tron** (*iris +ankistron,* hook). Hooked instrument used in the formation of an artificial pupil.

**Ir′idal.** Relating to the iris.

**Iridal′gia.** Iralgia.

**Iridalloch′rosis** (*allos,* different, *chrosis,* coloration). Change in pigmentation of the iris.

**Iridancis′tron.** Iriancistron.

**Iridareo′sis** (*araiosis,* diminution). Atrophy of the iris.

**Iridaux′e** or **Iridauxe′sis** (*auxesis,* augmentation). Staphyloma of the iris; prolapse of the iris; hypertrophy of the iris from exudation of fibrin into its tissue.

**Iridec′tome.** Knife for performance of iridectomy.

**Iridectomedial′ysis** (*ektome,* excision, *dialysis,* separation). See *Coretomy.*

**Iridec′tomize.** To perform iridectomy.

**Iridec′tomy** (*iris+ektome,* excision). Excision of the iris and establishment of artificial pupil.

**Iridectro′pium** (*iris+ektropion,* eversion). Eversion of part of the iris.

**Iridelco′sis** (*iris+helcosis,* ulceration). Ulceration of the iris.

**Iridenclei′sis** (*en,* in, *kleio,* to close), **Iridencleis′mus,** or **Iridenklei′sis.** See *Coretomy.*

**Iridentro′pium** (*iris+entropion,* inversion). Inversion of the iris.

**Iridere′mia** (*iris+eremos,* deprived of). Absence of iris, either apparent or real, congenital or acquired.

**Irides′cent.** Shining with many changing colors. **I. vis′ion,** peculiar vision dependent on alterations in epithelium of the cornea from pressure. There are borders of various hues around artificial lights. Halo vision.

**Irid′esis** or **Iridod′esis** (*iris+deo,* to bind). Ligature of the iris; operation for artificial pupil, consisting in opening the cornea to admit the cannula forceps, and by it drawing out a portion of the iris near its ciliary attachment, and strangulating a piece of it by means of a thread of moistened silk.

**Irid′ian.** Iridal.

**Irid′ic.** Relating to the iris.

**Iridin′.** Cholagogue oleoresin procured from root of Iris versicolor.

**Iridi′tis.** Iritis.

**Irid′ium.** A silvery-white, very hard metal, symbol Ir, found in native platinum.

**Irido-.** In composition, iris.

**Iridoalloch′rosis.** Iridallochrosis.

**I′ridocele** (*iris+kele,* tumor). Prolapse of the iris through wound or lesion of the cornea.

**Iridochorioidi′tis.** Iridochoroiditis.

**Iridochoroi′dal.** Relating to iris and choroid.

**Iridochoroidi′tis.** Iridochorioiditis. Inflammation commencing with the iris and secondarily affecting the choroid. When the primary disease is in the choroid it is termed choroido-iritis; it may be primary or secondary, traumatic, plastic, purulent, sympathetic, or syphilitic. **Se′rous i.,** cyclitis.

**Iridocine′sis** (*iris+kinesis,* motion). Muscular movement of the iris.

**Iridocolobo′ma.** Coloboma iridis.

**Iridocycli′tis.** Inflammation of the iris and ciliary circle. **Fi′brinous** or **plas′tic i.,** i. with plastic effusion around the iris, ciliary body, and capsule of the lens.

**Iridocyclochoroidi′tis.** Inflammation of the iris, ciliary body, and choroid coat of the eye.

**Iridod′esis.** Iridesis.

**Iridodial′ysis** (*dialysis,* separation). Coretomy.

**Iridodone′sis** (*doneo,* to shake). Tremulousness of the iris from dislocation of the lens or other causes.

**Iridoenclei′sis.** Coretomy.

**Iridokine′sis.** Iridocinesis; the movements of the iris causing dilatation and contraction of the pupil.

**Ir′idol.** White, acicular hydrocarbon from wood-tar.

**Iridoleptyn′sis** (*leptynsis,* thinning). Atrophy and thinning of the iris.

**Iridomala′cia** (*malakia,* softness). Mollescence or softening of the iris, especially after rheumatic inflammation.

**Iridomedial′ysis.** Iridomesodialysis.

**Iridomelano′ma** or **Iridomelano′sis** (*melano,* to color black). Deposition of black pigment in the iris.

**Iridomesodial′ysis.** Detachment of adhesions of central borders of the iris.

**Iridomo′tor.** Concerned in movements of the iris.

**Iridonco′sis, Iridon′cus,** or **Ironco′sis** (*onkos,* swelling). Tumefaction or thickening of the iris; iridauxesis.

**Iridoparal′ysis.** Paralysis of the iris.

**Iridoparel′kysis** (*iris+parelkysis,* contraction). Artificial prolapse of the iris in order to produce a displacement of the pupil.

**Iridopar′esis** (*paresis,* paralysis). Partial paralysis of the iris.

**Iridoperiphaci′tis** or **Iridoperiphaki′tis** (*peri,* around, *phacitis,* inflammation of the lens). Inflammation of the anterior hemisphere of the capsule of the lens.

**Iridoperisphynx′is** (*peri,* around, *sphynxis,* constriction). Circular muscular fibres in vicinity of sphincter indis.

**Iridophlebocol′pus** (*phleps,* vein, *kolpos,* sinus). Venous sinus of the iris.

**Iridoplan′ia** (*plane,* wandering). Hippus.

**Iridople′gia** (*plege,* stroke). Iridoparalysis.

**Iridopto′sis.** Ptosis iridis; prolapse of the iris.

**Iridor′rhagas** or **Iridor′rhox** (*iris+rhox,* fissure). Fissure of the iris. See *Coloboma.*

**Iridorrhex′is** (*rhexis,* rupture). Rupture of the iris.

**Iridoschisma,** ir-id-o-sis′mah (*iris+schisma,* fissure). Coloboma iridis; iridorrhagas.

**Iridosclerot′omy.** Puncture of sclerotic coat of the eye, with division of the periphery of the iris, in glaucoma.

**Irido′sis.** Iridesis.

**Iridostere′sis** (*steresis,* privation). Irideremia.

**Iridotenclei′sis.** Iridencleisis.

**Ir′idotome.** Instrument for performing iridectomy.

**Iridotomedial′ysis** (*tome,* section, *dialysis,* separation). See *Coretomy.*

**Iridotomenclei′sis** (*tome,* section, *enkleio,* to include). Coretomy.

**Iridot′omy** (*iris+tome,* section). See *Coretomy.*

**Iridot′romus** (*tromos,* trembling). Iridodonesis; hippus.

**Irigen′ium.** Verbena officinalis.

**Irin′.** $C_8H_{16}O_2$. Camphoraceous substance from root of Iris florentina.

**Iriod′esis.** Iridodesis.

**I′ris** (so called from resembling the rainbow in its variety of colors). A membrane stretched vertically at the anterior part of the eye, in the midst of the aqueous humor, in which it forms a circular, flat partition separating the anterior from the posterior chamber. It is perforated by a circular opening called the pupil, which is constantly varying its dimensions, owing to the varying contractions of the fibres of the iris. Its posterior surface has been called uvea, from the thick black varnish, resembling the bloom of a grape, which covers it. The pigmentary stratum on its free surface appears to be bounded by a delicate but well defined line, which has been described as a special membrane—membrana pigmenti or limitans, or limitans Pacini or Jacobi Arnold or Zinnii. The greater circumference of the iris is adherent to the ciliary processes and circle. It has an external plane of radiated fibres, dilatator iridis, and an internal one of circular fibres, sphincter pupillæ or iridis, which serve the one to dilate, the other to contract, the aperture of the pupil. The iris receives the ciliary nerves. Its arteries are furnished by the long ciliary arteries, which form two circles by their anastomoses—the one very broad, near the great circumference, the other smaller and seated around the circumference of the pupil. The veins of the iris empty themselves into the vasa vorticosa and into the long ciliary veins. The iris regulates by its dilatation or contraction the quantity of luminous rays which are necessary for distinct vision. The different colors of the iris occasion the variety in the colors of the human eye. **I. bombé′** (Fr., bulging), a bulging forward of the iris in consequence of increase of aqueous humor in the posterior chamber. **Trem′ulous i.,** hippus.

A genus of plants, ord. *Irideæ;* flag. The official (Ph. U. S.) name of the rhizome and roots of I. versicolor, blue flag; dose, gr. v–x (0.32–0.65). The following preparations are official: *Extrac′tum ir′idis;* dose, gr. ij–iv (0.13–0.26). *Extrac′tum ir′idis flu′idum;* dose, ♏v–x (0.32–0.65). **Com′mon i.,** I. germanica. **I. florenti′na,** Florentine iris or orris; the rhizome of this plant is extremely acrid in its recent state, and when chewed excites a pungent heat in the mouth, continuing for several hours. When dried the acrimony is lost or nearly so, and the smell is very agreeable; it is expectorant. The orris root of the shops is said to consist of the rhizomes of three species—I. florentina, I. pallida, and I. germanica. **I. fœtidis′sima,** stinking iris; the root is antispasmodic and narcotic. **I. german′ica,** flower-de-luce, common iris or orris; the fresh roots are powerfully cathartic, and are given also in dropsies. **I. hexago′na,** I. versicolor. **I. lacus′tris,** dwarf flag, dwarf lake iris; has the properties of I. versicolor. **Lake i., dwarf,** I. lacustris. **I. lu′tea,** I. pseudacorus. **I. nos′tras,** I. germanica. **I. palus′tris,** I. pseudacorus. **I. pseudac′orus,** yellow waterflag; the root has an acrid, styptic taste. It is an errhine, sialagogue, and astringent. The expressed juice is diuretic, and used as an application to serpiginous and other cutaneous affections. Rubbed on the gums or chewed, it is said to cure toothache. **Stink′ing i.,** I. fœtidissima. **I. ver′na,** see *I. virginica.* **I. versic′olor,** blue flag; the rhizome is an active cathartic and diuretic. Iris (Ph. U. S.) is the rhizome and rootlets of this plant. **I. virgin′ica,** slender blue flag, and I. verna are said to have virtues like those of I. versicolor. **I. vulga′ris,** I. germanica.

**Irisa′tion.** Iridescence.

**Irish but′ton.** Syphilis. **I. moss,** see *Chondrus.*

**Irisin′.** Iridin.

**Irisi′tis.** Iritis.

**Irit′ic.** Relating to iritis.

**Iri′tis.** Inflammation of the iris. The chief symptoms are—change in the color of the iris; fibres less movable; teeth-like processes shooting into the pupil; pupil irregularly contracted, with the ordinary signs of inflammation of the eye. If the inflammation does not yield, suppuration takes place, and, although the matter may be absorbed, the iris remains immovable. When the iritis results from syphilis, gonorrhœa, rheumatism, gout, small-pox, or scrofula it requires specific treatment, according to its cause. Mercury is given freely in some forms of iritis, along with attention to other means advisable in ophthalmia. When the inflammation is seated in the serous covering it is termed *iritis serosa.* When the iritis is marked by a tendency to new formation, which may become developed into a pseudomembrane, it is called *plastic iritis.*

**Irit′omy.** Iridotomy.

**Iron.** Ferrum. A metal found abundantly throughout nature, and a necessary constituent of animal tissues. Symbol, Fe; atomic weight, 55.9. **I. bark,** Eucalyptus resinifera; see *Kino.* **Di′alyzed i.,** ferrum dialysatum. **I. lung,** siderosis. **Pow′dered i.** or **Pul′verized i.,** ferri pulvis. **I. pyri′tes,** ferri sulphas. **Quevenne′s′ i.,** ferri pulvis. **Reduced′ i.,** ferrum reductum. **I. rust,** ferri oxidum. **I. weed,** Vernonia noveboracensis. **I. wire,** ferri filum. **I. wood,** Carpinus betulus. **I. and alu′minum sul′phate,** ferri et alumini sulphas, **I. and ammo′nia** or **ammo′nium cit′rate,** ferri ammoniocitras. **Ammo′niated i.,** ferrum ammoniatum. **I. and ammo′nium tar′trate,** ferri ammoniotartras. **Ammo′niochlo′ride of i.,** ferrum-ammoniatum. **Ammo′niocit′rate of i.,** ferri ammoniocitras. **I. and ammo′nium sul′phate,** ferri et ammonii sulphas. **Ar′senate of i.,** ferri arsenas. **I. bark,** Eucalyptus resinifera; see *Kino.* **Black ox′ide of i.,** oxydum ferri nigrum. **Bro′mide of i.,** ferri bromidum. **Car′bonate of i., effer-ves′cing,** ferri carbonas effervescens. **C. of i., precip′itated,** ferri subcarbonas. **C. of i., sac′charated,** ferri protocarbonas. **Car′buret of i.,** graphites. **Chlo′ride of i.,** ferri chloridum. **Cit′rate of i.,** ferri citras. **Cit′rate of magnet′ic ox′ide of i.,** see *Ferri ammoniocitras.* **Ferrocyan′uret i. of,** Prussian blue. **Ferroprus′siate of i.,** Prussian blue. **I. fi′lings, pur′ified** ferri limatura purificata. **Hy′drated ox′ide of i.,** ferrum oxydatum hydratum. **H. perox′ide of i.,** ferrum oxydatum hydratum. **H. tritox′ide of i.,** ferrum oxydatum hydratum. **Hydri′odate of i.,** ferri iodidum. **Hydrobro′mate of i.,** ferri bromidum. **I. by hy′drogen,** ferri pulvis. **Hy′dro-ox′ide of i.,** ferrum oxydatum hydratum. **Hypophos′phite of i.,** ferri hypophosphis. **I′odide** or **io′duret of i.,** see *Iodine* and *Ferri iodidum.* **Lac′tate of i.,** ferri lactas. **I. li′quor,** ferri acetas. **I. lung,** siderosis. **I. and magne′sium cit′rate,** ferri et magnesii citras. **Magnet′ic ox′ide of i.,** oxydum ferri nigrum. **Mu′riate of i.,** ferri chloridum. **Ni′trate of i., solu′tion of,** see *Tinctura ferri muriatis.* **Ox′alate of i.,** ferri oxalas. **Ox′ide of i., sac′charated,** ferri oxidum saccharatum. **Perchlo′ride of i.,** ferri chloridum. **Perox′ide of i.,** ferri subcarbonas. **P. of i., moist,** ferrum oxydatum hydratum. **Persul′phate of i.,** see *Ferri sulphas.* **P. of i., solu′tion of,** see *Ferri sulphas.* **Phos′phate of i.,** ferri phosphas. **Pills of i., com′pound,** pilulæ ferri compositæ. **I. and potas′sium tar′trate,** ferrum tartarizatum. **Potas′siocit′rate of i.,** see *Ferri ammoniocitras.* **Pow′der of i.,** ferri pulvis. **Protocar′bonate of i.,** ferri protocarbonas. **Protox′ide of i., lac′tate of,** ferri lactas. **I. pyri′tes,** ferri sulphuretum. **Pyrophos′phate of i.,** ferri pyrophosphas. **Quevenne′s′ i.,** ferri pulvis. **I. and qui′nine cit′rate,** ferri et quininæ citras. **I. and q., hydri′odate of,** see *Quinia, iodide of, iodhydrate of.* **Reduced′ i.,** ferrum redactum. **Sesquichlo′ride of i.,** ferri chloridum. **I. sesquini′trate, solu′tion of,** see *Tinctura ferri muriatis.* **Sesquiox′ide of i.,** ferri subcarbonas. **Sodiocit′rate of i.,** see *Ferri ammoniocitras.* **Solu′tion of cit′rate of i.,** liquor ferri citratis. **I. and strych′nine cit′rate,** ferri et strychninæ citras. **Subcar′bonate of i.,** ferri subcarbonas. **Subsul′phate of i., solu′tion of,** see *Ferri sulphas.* **Suc′cinate of i.,** ferri succinas. **Sul′phate of i.,** ferri sulphas. **S. of i., gran′ulated,** ferri sulphas granulata. **Sul′phuret of i.,** ferri sulphuretum. **Tan′nate of i.,** ferri tannas. **Tar′tarized i.,** ferrum tartarizatum. **Terni′trate of i., solu′tion of,** see *Tinctura ferri muriatis.* **Tritohydroferrocy′anate of i.,** Prussian blue. **Vale′rianate of i.,** ferri valerianas. **I. weed,** Vernonia noveboracensis. **I. wire,** ferri filum. **I. wood,** Carpinus betulus.

**Ironco′sis.** Iridoncosis.

**Irone′.** $C_{13}H_{20}O$. Principle derived from orris root.

**Irra′diating.** Radiating from a central point or focus. Pain is often of this character.

**Irradia′tion** (*radius,* a ray). Shooting or proceeding from a centre. Direction in which rays of light pass outward from a single centre. Similar shape sometimes assumed by fractures. Diffusion of a nerve impulse over the boundaries of the pathway it usually travels.

**Irredu′cible.** Epithet given to fractures, luxations, herniæ, etc., when they cannot be reduced after use of all ordinary methods.

**Irreg′ular** (*regula,* a rule). Anomalous. Term applied to the type of a disease, and to the pulse when its beats are separated by unequal intervals.

**Irreme′diable.** Incurable.

**Irrespi′rable.** That cannot be breathed, as some gases, or that cannot maintain life when breathed.

**Irrhyth′mia** (*in,* neg., *rhythmos*). Want of rhythm, or irregularity, as of the heart's action.

**Irriga′tion** (*rigo,* to water). Act of watering or moistening. Methodical application of water to an affected part, to keep it constantly wet or for purposes of cleansing.

**Ir′rigator.** Apparatus for practising irrigation, as of wounds or cavities.

**Irritabil′ity.** Inherent power, contractility, excitability, etc. Power possessed by all living organized bodies of being acted upon by certain stimuli, and of moving responsive to such stimuli. Muscular and nervous irritability are of this kind. Mental condition characterized by petulence, impatience, etc.

**Ir′ritable** (*irrito,* to excite, *habilis,* capable). Endowed with irritability. Every living organized tissue is irritable; that is, capable of feeling an appropriate stimulus and of moving responsive to such stimulus. Impressible, as applied to persons, habit, or temper. **I. blad′der,** condition in which there is constant desire to pass water.

**Irrita′men.** Irritant; stimulus.

**Irritamen′tum.** Erethism; irritant; stimulus. **I. metal′licum,** galvanism.

**Ir′ritant.** That which causes irritation or pain, heat, and tension; mechanically, as puncture, acupuncture, or scarification; chemically, as the alkalies and acids; or in a specific manner, as cantharides. **Ner′vous i.,** irritant acting through the nerves.

**Irrita′tion.** State of a tissue or organ in which there is excess of vital movement, commonly manifested by increase of circulation and sensibility. It is a common precursor of inflammation. Erethism. **Mor′bid i.,** constitutional irritation, irritative fever, pseudofever; excitement after injuries done to the body or to any part thereof. **Spi′nal i.,** rhachialgia, principal symptom of which is pain in the back.

**Ir′ritative.** Causing or caused by irritation.

**Is.** Fibre.

**Isadel′phia** (*isos,* equal, *adelphos,* brother). Double monstrosity in which both bodies are equally and perfectly developed and possessed of independent vital organs, and united by parts of little significance.

**Isambert′s** (e-zom-bairs′) **disease′.** Tuberculous ulceration of the buccopharyngeal region.

**Isap′iol.** $C_{12}H_{14}O_4$. Substance isomeric with apiol, with similar physiological properties.

**Isatin′.** $C_8H_5NO_2$. Derivative from indigo by oxidation.

**Is′ca.** Boletus igniarius.

**Ischæmia,** is-ke′me-ah (*ischo,* to restrain, *haima,* blood). Local arterial anæmia, in which the blood is prevented from flowing into the parts for which it is destined. Cerebral ischæmia, for example, is produced in the nervous tissue of the brain by obliteration or obstruction of the arteries of the encephalon. **I. ret′inæ,** anæmic condition of the retina, with sudden and complete blindness of both eyes; ischæmia of the optic disks.

**Ischæ′mic.** Relating to or caused by ischæmia.

**Ischas,** is′kas (dried fig). See *Ficus.*

**Ischesis,** is′kes-is (*ischo,* to restrain). Suppression or retention of a discharge or secretion.

**Ischiac,** is′ke-ak. Ischiatic.

**Ischiadelphia,** is-ke-ad-el′fe-ah. Condition of an ischiadelphus or ischiopagus.

**Ischiadelphus,** is-ke-ad-el′fus (*ischion,* hip, *adelphos,* a brother). Ischiopages.

**Ischiadic,** is-ke-ad′ik. Ischiatic.

**Ischiad′ocele,** is-ke-ad′o-seel. Ischiocele.

**Ischiag′ra** (*ischion,* hip-joint, *agra,* a seizure). Ischiatic gout; femoropopliteal neuralgia.

**Ischial,** is′ke-al. Relating to the ischium.

**Ischial′gia.** Sciatica, femoropopliteal neuralgia.

**Is′chias,** is′ke-as. Ischiagra, sciatica. **I. infebrico′sum,** coxalgia. **I. nervo′sa anti′ca,** neuralgia femoroprætibialis. **I. n. Cotun′nii,** neuralgia femoropoplitæa. **I. n. digita′lis,** neuralgia cubitodigitalis. **I. n. posti′ca,** neuralgia femoropoplitæa. **I. rheumat′ica,** neuralgia femoropoplitæa. **I. à sparganо′si,** phlegmatia dolens.

**Ischiatic,** is-ke-at′ik. Sciatic; relating to the ischium or to parts connected with it. The ischiatic spine gives attachment to the small sacrosciatic ligament. The tuberosity of the ischium, os sedentarium, tuber ischii, is formed by it, receiving the insertions of different muscles of the thigh, and forming the projection on which the body rests when seated. **I. ar′tery,** sciatic artery; it arises singly from the hypogastric or with the gluteal, and seems to be really a continuation of the trunk of the hypogastric; it issues from the pelvis at the lower part of the great sciatic notch. **I. notches,** notches, greater and lesser, of the ischium. **I. re′gion,** sciatic region; region of the hip. **I. vein,** this presents the same arrangement as the artery.

**Ischiati′tis.** Inflammation of the sciatic nerve.

**Ischiat′ocele.** Ischiocele.

**Ischidro′sis,** is-kid-ro′sis (*ischo,* to restrain, *hidros,* sweat). Suppression of perspiration.

**Ischigalac′tic** (*ischo,* to restrain, *gala,* milk). Checking the secretion of milk.

**Ischioan′al.** Relating to ischium and anus.

**Ischiobul′bar.** Relating to the ischium and the bulb of the urethra.

**Ischiobulbo′sus.** Part of superficial transverse perineal muscle from ischium to bulb of urethra.

**Ischiocap′sular.** Relating to the capsule of the hip-joint.

**Ischiocaverno′sus.** Belonging to the ischium and corpus cavernosum. **I. mus′cle,** small, long, flat muscle surrounding the origin of the corpus cavernosum, fixed below to the inner side of the tuberosity of the ischium, and above to the root of the penis, where it is confounded with the fibrous membrane of the corpus cavernosum. It draws the root of the penis downward and backward. The ischiocavernosus of the *female* is arranged nearly as in the male, but is less bulky. It arises by aponeurosis from the tuberosity of the ischium and terminates by embracing the corpus cavernosum of the clitoris, contributing to the erection of the latter. It is the depressor clitoridis of Meckel. **I. ure′thræ,** bulbocavernosus.

**Ischiocele,** is′ke-o-seel (*ischion,* hip, *kele,* tumor). Ischiatic or sciatic hernia, in which the viscera issue by the great sciatic notch; a rare condition.

**Ischioclito′rian.** Connected with the ischium and clitoris. **I. ar′tery,** division of the internal pudic which furnishes the two arteries of the clitoris, the superficial and deep-seated. **I. mus′cle,** see *Ischiocavernosus* (in the female). **I. nerve,** superior branch of the pudic nerve distributed to the clitoris.

**Ischioclitorid′ian.** Relating to the ischium and clitoris.

**Ischiococcyge′us.** Relating to the ischium and coccyx. Muscle passing from the sacrosciatic ligament and crest of the ischium to the lateral portion of the last sacral and two upper coccygeal vertebræ. Part of the levator ani arising from the obturator fascia.

**Ischiodid′ymus** (*ischion,* hip, *didymos,* twin). Double monster united at the hip.

**Ischiodym′ia** (*ischion,* hip, *dyo,* to mingle). See *Somatodymia.*

**Ischiofem′oral.** Relating to ischium and femur.

**Ischiofemora′lis.** Adductor magnus of thigh. **I. mag′nus,** ischiotibialis internus. **I. par′vus,** gracilis internus.

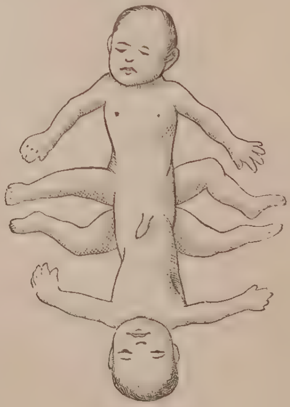
**Ischiofemoroperone′us.** Biceps flexor cruris.

**Is′chion.** Ischium.

**Ischioneural′gia.** Neuralgia femoropoplitæa; sciatica.

**Ischiopa′gia** (*ischion,* hip, *pago,* to fasten). Monstrous union of two fœtuses attached to each other by the ischia.

**Ischiopa′gus.** A double monster joined at the ischia. **I. tet′rapus,** monster with four legs. **I. tri′pus,** monster with three legs.



Ischiopagus.

**Ischioperine′al.** Relating to ischium and perineum. Transversus perinæi.

**Ischiophthi′sis,** is-ke-o-te′sis. Tuberculous suppuration of the hip-joint.

**Ischiopoplitifemora′lis.** Semimembranosus.

**Ischiopoplititibia′lis.** Semimembranosus.

**Ischiopretibia′lis.** Semitendinosus.

**Ischioprostat′ic.** Name given to fibres of transversus perinæi muscle which go to the prostate.

**Ischiopu′bic.** Relating to ischium and pubes.

**Ischiopu′bicus infe′rior.** Muscle arising from falciform ligament and inserted into symphysis pubis. **I. supe′rior,** muscular fibres occasionally found in tendinous arch of pelvic fascia.

**Ischiopubiot′omy** Operation of division of the rami of the ischium and pubis in labor.

**Ischiopubiprostat′icus.** Transversus perinæi.

**Ischiorec′tal.** Relating to ischium and rectum. **I. fos′sa,** perineal fossa.

**Ischiosa′cral.** Relating to ischium and sacrum.

**Ischioscambo′sis** (*skambosis,* bending). Bending or curvature of the ischium.

**Ischio′sis.** Femoropopliteal neuralgia.

**Ischiosubclitorid′ian.** Ischioclitorianus.

**Ischiotib′ial.** Relating to ischium and tibia.

**Ischiotibia′lis.** Ischiotibial. Muscles in some of the lower animals, analogues of human biceps flexor cruris and part of glutæus maximus muscles, and semimembranosus and semitendinosus muscles.

**Ischiotrochanterian′us** or **Ischiotrochante′rius.** Two small, fleshy bundles, long and flat, which arise, the superior on the outside of the sciatic spine, the inferior behind the tuberosity of the ischium. Both are attached to the tendon of the obturator internus, which they accompany into the fossa of the trochanter. They rotate the lower limb outward; they can also turn the pelvis on the femur in standing on one foot.

**Is′chio-urethra′lis.** Transversus perinæi.

**Ischium,** is′ke-um. Hucklebone, seatbone. Lowermost of the three portions composing the os innominatum of the fœtus and young individual. The inferior region of the same bone is called ischium in the adult, although the ancients designated by the word ischion the capsular ligament of the hip-joint, as well as the articulation itself. Haunch.

**Ischnogyria,** isk-no-jir′e-ah (*ischnos,* weak, *gyros,* circle). Imperfectly developed convolutions of the brain.

**Ischno′tia** or **Isch′notis.** Emaciation; consumption.

**Ischo-** (*ischo,* to restrain). In composition, arrest, retention.

**Ischocho′lia** (*ischo,* to restrain, *chole,* bile). Retention or suppression of the biliary secretion.

**Ischochy′mia** (*ischo,* to restrain, *chymos,* chyme). Retention of food in the stomach for a long period.

**Ischocop′ria** (*ischo,* to restrain, *kopros,* excrement). Constipation.

**Ischogalac′tia** (*ischo,* to restrain, *gala,* milk). Suppression of lacteal secretion.

**Ischolo′chia.** Suppression of the lochial discharge.

**Ischome′nia** (*ischo,* to restrain, *menes,* menses). Amenorrhœa.

**Ischopho′nia** (*phone,* voice). Impediment in speech; stammering.

**Ischosper′mia** (*ischo,* to restrain, *sperma,* sperm). Retention or suppression of the spermatic secretion.

**Ischuret′ic** (*ischo,* to restrain, *ouron,* urine). Relating to ischuria. Medicine that causes suppression of urine; also applied to medicine that relieves that condition.

**Ischu′ria.** Retention of or impossibility of discharging the urine. Suppression of the secretion. Ischuria vera is that in which, the urine having accumulated in the bladder, the patient is unable to pass it, notwithstanding the constant distressing inclination. In false ischuria, ischuria spuria, owing to disease of the kidney or ureters the urine cannot reach the bladder. Ischuria has received other names, according to the seat and character of the obstacle opposing the exit of the urine, as renal, ureteric, vesical, urethral, and calculous ischuria. Vesical ischuria is generally used synonymously with retention of urine. **I. aton′ica,** i. due to atony or paralysis of the bladder. **I. cystit′ica,** i. from inflammation of the bladder. **I. cystolith′ica,** i. caused by stone in the bladder. **I. cystople′gica,** i. from paralysis of the bladder. **I. cystospast′ica,** i. caused by spasm of the bladder. **I. gravida′rum,** i. of pregnancy and parturition. **I. nephrit′ica, nephrolith′ica, nephrople′gia,** suppression of urine from causes originating in the kidney, as from inflammation, calculus, or paralysis. **I. neurot′ica,** i. as a result of hysteria, chorea, or epilepsy. **I. paradox′a,** condition of overdistention of the bladder in which the urine dribbles away or may be discharged at will in small amount, but in which the bladder cannot be emptied. **I. perinea′lis,** obstruction to passage of urine through the urethra in the perineal region. **I. rena′lis,** i. nephritica. **I. spasmod′ica,** i. due to spasm of bladder. **I. spu′ria,** see *Ischuria.* **True i.,** i. vera. **I. ureter′ica, ureterit′ica, ureterolith′ica, ureteropy′ica,** suppression of the urine from causes in the ureters, as inflammation, calculus pus, etc. **I. urethra′lis,** ischuria from causes in the urethra, as inflammation, phymosis, calculus, or other concretions, etc. **I. ve′ra** or **vesica′lis,** retention of urine from causes seated in the bladder. See *Ischuria.*

**Ischu′ric.** Ischuretic.

**Is′chury** Ischuria.

**Iser′tia coccin′ea.** Tree of S. America, leaves of which are applied to tumors. Bark is febrifuge, and also employed in hepatic diseases.

**I′singlass.** Ichthyocolla. **Bengal′ i.,** agar-agar. **Japanese′ i.,** substance obtained from seaweed in China. **I. plas′ter,** emplastrum ichthyocollæ.

**I′sis nob′ilis.** See *Coral.*

**Isl′and of Reil.** Insula cerebri.

**Isnar′dia** (after D'Isnard, French botanist) **alternifo′lia.** Ludwigia alternifolia. **I. palus′tris,** Ludwigia palustris.

**Iso-** (*isos,* equal). In composition, equal.

**I′so-amylam′ine.** $C_5H_{13}N$. Ptomain from putrefaction of yeast in cod-liver oil; alkaline liquid, strong neurotic poison.

**Isoam′ylene.** Pental.

**Isoap′iol.** Substance obtained from apiol, affecting the vasomotor apparatus.

**Isobutylorthocre′sol i′odide.** Europhen.

**Isobutylphe′nol i′odide.** Cresol iodide.

**Isocamphol′ic acid.** $C_{10}H_{18}O_2$. Same composition as campholic acid; a colorless, oily fluid.

**Isocholesterin′.** A substance isomeric with cholesterin, found in lanolin.

**Isochromat′ic** (*isos,* equal, *chroma,* color). Having the same color.

**Isochronous,** is-ok′ron-us (*isos,* equal, *chronos,* time). That which takes place in the same time or in equal times, as pulsation of arteries in various parts of the body.

**Isococaine,** i-so-ko-kah-een′. Artificial alkaloid which resembles cocaine, but has an ethyl group in its composition, instead of the methyl of that substance. Local anæsthetic.

**Isoco′ria** (*isos,* equal, *kore,* pupil). Equality in diameter of the two pupils.

**Isocreatinin′.** Obtained from decomposing flesh. It is similar to creatinin, with which it is isomeric.

**Isodiamet′ric.** Having the same diameter throughout.

**Isod′romous** (*isos,* equal, *dromos,* course). Isochronous.

**Isodynam′ic** (*isos,* equal, *dynamis,* power). Equal in power or force.

**Isoelec′tric.** Having the same electric properties throughout.

**I′soeth′ylben′zoylecgonine′.** Isococaine.

**Isola′tion.** Insulation. Separating a person with an infectious disease from intercourse with the well.

**I′solator.** Insulator.

**Isolin′.** $C_{14}H_{17}N$. Substance found in quinolin.

**Isol′ogous.** Identical in composition.

**Isolusin′.** Bitter substance in Polygala virginiana. See *Polygala senega.*

**Isolysin′.** The active agent in the hæmolytic serum in cases of isolysis; see *Lysin.*

**Isol′ysis.** The hæmolytic action of the serum of an animal on the red corpuscles of another animal of the same species.

**Isomal′tose.** Substance isomeric with maltose resulting from the action of dextrinase on starch. It is changed by maltase into maltose.

**I′somer.** A limb or part of a limb in one animal corresponding to a limb or part of a limb in another. An isomeric body.

**Isomer′ic** (*isos,* equal, *meros,* part). Agreeing in composition, but differing in properties; the condition being termed *isom′erism;* applied to the replacing of one element in a crystalline salt by another, the form remaining unaltered. Relating to an isomer.

**Isom′eride.** Isomer.

**Isom′erism.** State of being isomeric.

**Isomet′ric** or **Isomet′rical.** Having the same measurement throughout, as *isometric crystal* or *i. muscle.*

**Isometro′pia** (*isos,* equal, *metron,* measure, *ops,* eye). Equal refraction of both eyes.

**Isomor′phous.** Having the same or similar crystalline form.

**Isonan′dra gut′ta.** See *Gutta-percha.*

**Isonaph′thol.** Naphthol.

**Isonitrosoantipyrin′.** Green compound produced by the action of acid nitrites on antipyrin.

**Isopath′ic.** Relating to isopathy. **I. rem′edy,** nosode.

**Isopathother′apy** (*isos,* equal, *pathos,* disease, *therapeuo,* to cure). Isopathy.

**Isop′athy** (*isos,* equal, *pathos,* disease). Doctrine that it is possible to cure disease by the disease itself or its products, under the hypothesis that every contagious disease contains in its virus the means for its cure; thus, that variola may be cured by minute doses of variolous matter; syphilis, by luetic matter, etc. Also that disease in an organ may be relieved by administration of a raw preparation of that same organ derived from a lower animal. A precursor of orrhotherapy and opotherapy.

**Isopelletierine.′** Liquid in pomegranate root-bark, isomeric with pelletierine. Anthelmintic.

**Isopep′sin.** Parapeptone.

**Isophloroglucin′.** Saccharine substance produced in the manufacture of acetic acid from Prunus cerasus.

**Isopho′ria** (*isos,* equal, *phoreo,* to carry). Equal tension of the muscles of each eye.

**Isopropylam′ine.** See *Propylamine.*

**Isop′ters** (*isos,* equal, *opter,* observer). Relative sharpness of vision of the retina at various distances from the macula.

**Isopyrine′.** Bitter alkaloid obtained from the root of *Isopyrum thalictroides,* plant of Southern Europe.

**Isoquinolin′.** $C_9H_7N$. Derivative of coal-tar.

**I′soscope** (*isos,* equal, *skopeo,* to see). Instrument for examining the position of vertical and horizontal lines in the movements of the eyes.

**Isosulphocyan′ic acid.** HNCS. A monobasic acid; its salts are *isosulphocyanates.*

**Isoterebin′thin.** $C_{10}H_{16}$. Hydrocarbon found in oil of turpentine from Pinus maritima.

**Isother′mal** (*isos,* equal, *therme,* heat). Of equal degrees of heat.

**Isothiocyan′ic acid.** Isosulphocyanic acid. Its salts are *isothiocyanates.*

**Isot′oma longiflo′ra.** W. Indian lobeliaceous plant; cathartic; in large doses irritant toxic purgative.

**Isoto′nia.** Equal or normal tension or resistance under the action of stimuli or propulsive forces.

**Isoton′ic** (*isos,* equal, *tonos,* tone). Having equal tone or tension. **I. coeffic′ient,** number expressing amount of salt required to be added to distilled water to prevent it from disintegrating the red corpuscles when it is added to the blood. **I. mus′cle,** muscle contracting when stimulated, its tension being unchanged. **I. solu′tion,** saline solution having the proper quantity of salt to maintain the shape of the red corpuscles.

**Isotonicity,** i-so-to-nis′i-e. Isotonia.

**Isotrop′ic** (*isos,* equal, *trope,* turning). Having equal powers, as of refraction, muscular contractility, etc.; the condition is called *isotropy.*

**Isot′ropous** (*isos,* equal, *trepo,* to turn). Having equal powers, as of refraction, muscular contractility, etc.

**Isot′ropy.** See *Isotropic.* **I. of the o′vum,** combination of nuclei of the two sexual elements in fecundation.

**Ispaghu′la** (Ph. Br.). Plantago ovata or P. ispaghul, plant of East Indies, having mucilaginous seeds; employed for the same purposes as linseed and barley.

**Is′sue** (*exeo,* to go out). Result, as of a disease. An artificial ulcer, produced and prevented from healing for therapeutic purposes; see *Fonticulus.* **I. pea,** Aurantia curassaventia.

**Istarin′.** Nitrogenous substance derived from brain matter.

**Isth′mian** or **Isth′mic.** Relating to the isthmus of the fauces, or other anatomical isthmus.

**Isth′mion.** Isthmus; pharynx.

**Isthmi′tis.** Inflammation of the isthmus of the fauces.

**Isthmocatar′rhus.** Catarrh of the fauces.

**Isthmodyn′ia** (*odyne,* pain). Pain in the fauces.

**Isthmopath′ia.** Disease of the isthmus of the fauces.

**Isthmople′gia** (*plege,* a stroke). Paralysis of the fauces.

**Isthmopol′ypus.** Polypus of the fauces.

**Isthmorrha′gia.** Hemorrhage from the fauces.

**Isth′mos.** Isthmus; pharynx.

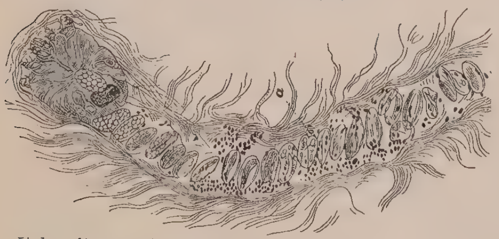
**Isth′mospasm.** Spasm of the isthmus of the fauces.

**Isthmoty′phus.** Gangrenous angina; cynanche maligna.

**Isth′mus.** Tongue of tissue or narrow passage connecting two larger parts, resembling a geographical isthmus. **I. of the au′ditory mea′tus,** narrowest part of the bony auditory canal. **I. of the brain** or **Cer′ebral i.,** encephalic isthmus. **Encephal′ic i.** or **I. of the enceph′alon,** narrowed and constricted portion of the encephalic mass between the cerebrum, the cerebellum, and the medulla oblongata, corresponding to the free margin of the tentorium cerebelli, and comprising the pons Varolii and middle peduncles of the cerebellum, the peduncles of the cerebrum, the tubercula quadrigemina, the superior peduncles of the cerebellum, and the valve of Vieussens. **I. of Eustach′ian tube,** i. tubæ Eustachii. **I. of Fallo′pian tube,** narrow part of that canal. **I. of the fau′ces,** strait separating the mouth from the pharynx; bounded above by the velum palati and uvula; at the sides by the pillars of the fauces and the tonsils; and below by the base of the tongue. The fauces. **I. of fos′sa ova′lis,** prominent arch formed above the fossa ovalis by the union of the two pillars which bound the cavity; annulus ovalis. **I. of Guyon′,** i. of the uterus. **Gy′ral i.,** junction of the precentral and procentral gyri in the brain. **I. gy′ri fornica′ti,** slight contraction at the back part of the gyrus fornicatus. **I. hep′atis,** pons hepatis; see *Lobulus anonymus.* **I. of Mül′ler,** internal os uteri. **I. of o′viduct,** i. of the Fallopian tube. **I. pharyn′gonasa′lis,** posterior isthmus of the fauces. **I. pharyn′go-ova′lis,** anterior isthmus of the fauces. **I. pros′tatæ,** middle lobe of prostate, see *Prostate.* **I. of thy′roid gland,** narrow band uniting the two chief lobules of the thyroid gland. **I. tu′bæ Eusta′chii,** narrow portion of the cartilaginous part of that canal. **I. tu′bæ Fallo′pii,** i. of the Fallopian tube. **I. ure′thræ,** membranous part of male urethra; more constricted part of female urethra; see *Urethra*. **I. u′teri,** see *Uterus*. **I. Vieussen′ii,** isthmus of the fossa ovalis.

**Ital′ian disease′.** Syphilis. **I. juice,** extractum glycyrrhizæ. **I. lep′rosy,** pellagra. **I. rhi′noplasty,** see *Rhinoplasty*..

**Itch.** Scabies. Psora. **I. animal′cule,** Acarus scabiei. **I. of an′imals,** scabies ferina. **Ar′my i.,** disease described by some as distinct from ordinary scabies, seeming to be engendered by the filth of camp-life, but supposed by others to be prurigo mixed with eczema and lichen. **Ba′kers′ i.,** see *Psoriasis*. **Bar′bers′ i.,** sycosis. **Bed′ouin i.,** lichen tropicus, with vesiculation. **Brick′layers′ i.,** eczema impetiginodes. **Coo′lie i.,** a pruritic affection of the tropics. **Cow′pox i.,** cutaneous eruption appearing after the fourteenth day from vaccination, and consisting of isolated vesicles, often filled with a puriform fluid. **Dho′bie i.,** tinea cruris. **Drunk′ards′ i.,** psora ebriorum. **Farm′ers′ i.,** itching cutaneous disease of farmers, either scabies or a form of winter itch, from irritation by coarse underclothing. **Frost i.,** pruritus hiemalis. **Gro′cers′ i.,** see *Psoriasis*. **Ground i.,** water itch. **I. in′sect,** Acarus scabiei. **Lumber′man′s i.,** prairie itch. **I. mite,** Acarus scabiei. **Norwe′gian i.,** see *Radzyge*. **Prai′rie i.,** pruritus hiemalis occurring in those engaged in agricultural pursuits and others wearing coarse, dyed clothes. **Su′gar-ba′kers′ i.,** eczema in workers in sugar refineries. **Swamp i.,** prairie itch. **Vene′real i.,** scherlievo. **Ware′houseman′s i.,** eczematous affection noted occasionally in men of this occupation. **Wash′erwoman′s i.,** eczema lotricum, see *Psoriasis*. **Wa′ter i.,** a superficial vesicular dermatitis of the feet, observed in coolies working barefooted in tea gardens; caused by the presence of an acarus, the Rhizoglyphus parasiticus. **Wa′tery i.,** scabies lymphatica. **I.-weed,** Veratrum viride. **Win′ter i.,** pruritus hiemalis.



Itch mite and furrow. The female acarus is visible at the terminal extremity of the furrow with ventral surface exposed, and containing a mature ovum; two ova, next her, have been laid during the day; the third exhibits traces of the embryo; the twelfth exhibits a mature larva (*a*); twelve empty shells are also seen; between these the fæces are represented by black points. (After Kaposi.)

**Itch′ing.** Pruritus. Sensation, more annoying than painful, seated especially at the surface of the body, and provoking the patient to scratch the part. It may be either an external or an internal sensation; that is, produced by an external body or due to some functional derangement of the cutaneous nerves.

**I′ter.** A way or passage. **I. chor′dæ ante′rius,** canal of Huguier; canal in external wall of cavity of tympanum for exit of chorda tympani. **I. chor′dæ poste′rius,** canal in external wall of cavity of tympanum for entrance of chorda tympani. **I. den′tis,** see *Gubernaculum dentis*. **I. femin′eum,** perineum. **I. ad infundib′ulum,** opening in floor of third ventricle leading to the infundibulum; vulva cerebri. **I. a pala′to ad au′rem,** Eustachian tube. **I. ad quar′tum ventric′ulum,** aquæductus Sylvii. **I. a ter′tio ad quar′tum ventric′ulum,** aquæductus Sylvii. **I. ad ter′tium ventric′ulum,** vulva cerebri. **I. uri′næ** or **urina′rium,** urethra.

**I′teral.** Relating to an iter, especially the aquæductus Sylvii.

**-itis.** Suffix, properly added only to words of Greek derivation, denoting inflammation; as encephalitis, inflammation of the encephalon.

**I′trol.** Citrate of silver. Antiseptic application to wounds and affections of the skin, especially in form of ointment; employed also in gonorrhœa, disinfection of surgical instruments, hands, etc., in gargles, etc.

**It′rosyl.** Concentrated sweet spirit of nitre.

**I′va.** Teucrium iva. **I. arthrit′ica** or **commu′ne,** Ajuga chamæpitys, Teucrium chamæpitys. **I. frutes′cens,** shrub of Mexico; febrifuge. **I. moscha′ta monspelien′sium,** Ajuga iva; Teucrium iva. **I. pecan′ga,** Smilax sarsaparilla.

**Ivaïn′.** Bitter substance from Achillea moschata.

**Iv′aol.** $C_{12}H_{29}O$. Volatile oil from Achillea moschata.

**I′vory.** Tusk of the elephant; chiefly composed of phosphate of lime, and used for the fabrication of pessaries, artificial teeth, handles of instruments, etc. Formerly, when calcined to whiteness, it entered into some pharmaceutical preparations, was regarded as astringent and anthelmintic, and was called *spodium*. Dentine is the ivory of the human tooth. See *Tooth*. **Black i.,** see *Carbo animalis*. **Veg′etable i.,** Phytelephas macrocarpa; Sagus amicarum.

**I′vy.** Hedera helix, Kalmia angustifolia. **Amer′ican i.,** Ampelopsis quinquefolia. **Ame′rican poi′son i.,** Rhus toxicodendron. **Bar′ren i.,** Hedera helix. **Big i.,** Kalmia latifolia, Hedera helix. **Black i.,** Hedera helix. **Climb′ing i.,** Rhus radicans. **Com′mon i.,** Hedera helix. **Creep′ing** or **Eng′lish i.,** Hedera helix. **Five-leaved i.,** Ampelopsis quinquefolia. **Gout i.,** Ajuga chamæpitys. **Ground i.,** Glecoma hederacea; Hedera helix; Convolvulus sepium; Ajuga chamæpitys; Vinca minor. **I. gum,** gum from Hedera helix; stimulant and emmenagogue. **Poi′son i.,** Rhus toxicodendron.

**Ix′ia.** Varix; Viscum album.

**Ixi′ne** (*ixos*, bird-lime). Atractylus gummifera; Carlina acaulis.

**Ixo′des** (*ixodes*, like bird-lime). Wood-tick. Several species are recognized, such as *Ixodes humanus*, *I. bovis* (cattle-tick), *I. americanus*, *I. marginatus*, *I. unipunctatus*, and *I. ricinus* (wood-beetle).

**Ixo′dic.** Relating to or caused by ticks. **I. anæ′mia,** Texas fever.

**Ixo′ra bandac′ca** or **bandhu′ca.** Rubiaceous plant of E. Indies; root is employed in malarial fevers, diarrhœa, and dysentery, and externally in cutaneous affections. **I. coccin′ea,** of Eastern and Southern Asia, has similar therapeutic action. **I. lanceola′ta,** root is used for toothache.

**Ix′us.** Viscum album.

**Ix′ya, Ix′ye,** or **Ix′ys.** The ilia, flanks, and loins; most frequently the last.

**Ixyomyeli′tis** (*ixya*, *myelos*, marrow). Inflammation of the spinal cord in the lumbar region.

**I′zal.** Product of distillation of coke. Powerful disinfectant.

# J.

**Ja′ba.** Hibiscus rosa sinensis.

**Jaboran′di, J. fo′lia.** (Ph. Br.) Leaves of several species of pilocarpus, and of other plants with similar therapeutic properties, have this name. See *Pilocarpus.* The following preparations are official in the Ph. Br.: *Extrac′tum j. liq′uidum,* liquor jaborandi; dose, ♏v–xv (0.32–1.0). *Tinctu′ra j.;* dose, ʒss–j (2.0–4.0).

**Jaborandine′.** Pilocarpine.

**Jabor′ic acid.** Substance obtained from pilocarpidine by precipitation with excess of nitrate of silver.

**Jaboridine′.** Amorphous substance derived from oxidation of pilocarpidine.

**Jaborine′.** Alkaloid, $C_{11}H_{16}N_2O_5$, resembling atropine, produced by exposing concentrated acid solution of pilocarpine to heat.

**Ja′ca in′dica.** Thymus mastichina.

**Jacaran′da** (Brazilian name) **caro′ba.** Caroba. **J. brazilia′na,** caroba. **J. lancifolia′ta,** leaves of this Colombian species are used in gonorrhœa, syphilis, and purulent cystitis. **J. proc′era,** caroba.

**Jaccoud's** (zhak-kooz′) **disso′ciated fe′ver.** Fever occurring in connection with tuberculous meningitis, the pulse being slow and irregular. **J.'s sign,** peculiar displacement and rotary movement in the chest-wall when the pericardium is adherent; more marked when there is adhesion also outside of the pericardium. Projection of the aorta in the suprasternal region when dilated.

**Jace′a ramosis′sima.** Centaurea calcitrapa. **J. tri′color,** Viola tricolor.

**Ja′cens,** (*jaceo,* to lie). Sick.

**Jack of the but′tery.** Sedum acre. **J. in the hedge,** alliaria. **J. screw,** orthodontic instrument used in the gradual but forcible moving of teeth. **J. weed,** Ranunculus arvensis.

**Jack′et, bark.** Quilted jacket containing cinchona, worn by those affected with malarial disease. See *Bark.* **Plas′ter j.,** plaster-of-Paris jacket employed as a support in spinal disease. **Strait j.,** a jacket with very long sleeves, which when the garment is on are tied behind the back; used to restrain the violently insane.

**Jackso′nian** (after J. Hughlings Jackson). Term applied to a form of epilepsy. See *Epilepsy.*

**Jack′son's pec′toral sy′rup.** Prescription of Prof. Samuel Jackson, of Philadelphia, at one time extensively prescribed, the ingredients of which were sassafras pith, gum arabic, sugar, muriate of morphine, and water. **J.'s syn′drome,** paralysis of the soft parts of the palate and the larynx, with paralysis of several of the larger muscles of the neck and half the tongue.

**Jacobœ′a.** Senecio jacobæa.

**Ja′cob's char′iot** (after Dr. Jacob, of Dublin). Aconitum napellus. **J.'s coat,** tunica Jacobi. **J.'s lad′der, false,** Polemonium reptans. **J.'s mem′brane,** tunica Jacobi. **J.'s staff,** Verbascum thapsus. **J.'s sword,** Iris pseudacorus. **J.'s ul′cer,** lupus; chancroid.

**Ja′cobson's anastomo′sis.** See *Petrosal ganglion.* **J.'s canal′,** canal in the petrous bone in which Jacobson's nerve lies. **J.'s car′tilage,** hyaline cartilage from nasal spine between nasal septum and vomer. **J.'s nerve,** the tympanic branch of the glossopharyngeal. **J.'s or′gan,** accessory olfactory organ, rudimentary in some animals, well developed in others, embedded in the cartilage of Jacobson. **J.'s retini′tis,** diffused retinitis, of a syphilitic character. **J.'s sul′cus,** sulcus or groove on promontory of the tympanum for the tympanic nerve. **J.'s ve′nous sys′tem,** see *Venous system.*

**Jacquemier's** (zhak-me-aze′) **sign.** Blue pigmentation of mucous membrane of the vagina about the end of the third month of pregnancy.

**Jacquin′ia** (from Jacquin, French botanist) **armilla′ris.** Bracelet-wood, W. Indian currant; used in dental caries and as a sudorific.

**Jacta′tion** or **Jactita′tion** (*jacto,* to toss about). Extreme anxiety or excessive restlessness, a symptom in serious diseases.

**Jacta′tor** (*jacto,* to throw). Vas deferens.

**Jactita′tion.** Inquietude; jactation.

**Jaculif′erous** (*jaculum,* dart, *fero,* to carry). Having spines or prickles.

**Jadelot's** (zhad-loze′) **fur′rows** or **lines.** Furrows noticed in the face in certain diseases, called, according to location, *genal* (in the cheek), and *nasal,* when abdominal disease exists; *labial,* in pulmonary affections; and *oculozygomatic* (from the eye down to the cheek-bone), in diseases of the brain or spine.

**Jaffe's sign.** If a tube be placed in a subdiaphragmatic abscess, the discharge of pus is greater during inspiration. If the abscess be supradiaphragmatic, the opposite is true, except in cases of paralysis of the diaphragm.

**Jag′gery.** Spirit (arrack). See *Toddy.*

**Jail fe′ver.** Typhus fever.

**Jaksch's disease′.** Lymphadenoma of young children.

**Jal′ap** (*Chalapa* or *Xalapa,* its native place). Exogonium purga; Convolvulus or Ipomœa jalapa; Phytolacca decandra. See *Jalapa.* **Black j.,** true jalap, Ipomœa purga. **Brazil′ian j.,** root of Ipomœa operculata. **J. can′cer root,** Phytolacca decandra. **Com′pound pow′der of j.,** pulvis jalapæ compositus. **Com′pound tinc′ture of j.,** tincture jalapæ composita. **East In′dian j.,** Ipomœa turpethum. **Ex′tract of j.,** extractum jalapæ. **Fu′siform j., light male,** see *Convolvulus jalapa.* **In′dian j.,** Ipomœa turpethum. **Male j.,** Orizaba root; root of Ipomœa turpethum. **Res′in of j.,** resina jalapæ. **Tampi′co j.,** root of Ipomœa simulans, purga de Sierra Gorda of Mexico. **Tinc′ture of j.,** tinctura jalapæ. **True j.,** Ipomœa purga. **Vera Cruz j.,** Ipomœa purga. **White j.,** root of Convolvulus mechoacanha. **Wild j.,** Convolvulus panduratus.

**Jala′pa.** The official (Ph. U. S. and Br.) name for the dried tuberous root of Ipomœa jalapa or I. purga, a plant of Mexico. It is of a nauseous odor and a sweetish and slightly pungent taste. Its operation is cathartic and griping, though the latter may be prevented by the addition of a drop or two of some essential oil. Two purgative glucosides have been obtained from jalap—jalapin or cathartin and convolvulin. The dose of powdered jalap is gr. xv–xxx (1.0–2.0). The following preparations are official: *Extrac′tum jala′pæ* (U. S. and Br.); dose, gr. ij–x (0.13–0.65). *Pul′vis j. compos′itus* (U. S. and Br.); dose, gr. xv–ʒj (1.0–4.0); see *Pulvis. Res′ina j.* (U. S. and Br.), containing the two glucosides; dose, gr. ij–v (0.13–0.32). *Tinctu′ra j.* (Br.) contains 1.5 per cent. of resin; dose, ʒss–j (2.0–4.0).

**Jalap′ic acid.** $C_{62}H_{106}O_{35}$. Result of the action of baryta on jalapin.

**Jalapin′.** $C_{34}H_{56}O_{16}$. Resinous glucoside derived from the root of Ipomœa orizabensis, homologous with convolvulin; drastic cathartic.

**Jalap′inol.** $C_{13}H_{24}O_3$. Crystalline substance resulting from the decomposition of jalapin.

**Jalap′pa.** Jalapa. **J. al′ba,** Convolvulus mechoacanha.

**Jamai'ca.** See *West Indies*. **J. bark tree,** Bursera gummifera. **J. chew'stick,** Gouania domingensis. **J. dog'wood,** Piscidia erythrina. **J. gin'ger,** Amomum zingiber.

**Jambo'sa.** Genus of *Myrtaceæ*, several species of which are edible. **J. vulga'ris,** rose-apple, is astringent in its leaves and bark, fruit is febrifuge, and seeds are used for diarrhœa and dysentery.

**Jambosin'.** Crystalline principle derived from jambosa.

**Jam'bul.** Remedy of recent introduction in the treatment of diabetes, derived from the bark of Eugenia jambolana or Syzygium jambolanum. Dose, gr. v–xxx (0.32–2.0); of the fluid extract, ♏x–xv (0.65–1.0).

**James's pow'der.** See *Antimonial powder*.

**James'town weed.** Datura stramonium.

**Jam'un.** Jambul.

**Jan'iceps** (*Janus*, divinity with two faces, *caput*, head). Double monster, the two bodies intimately united above a common umbilicus, and a double head, with the faces looking in opposite directions. **J. asym'etrus,** j. with one face more developed than the other.

**Jan'ipha man'ihot.** Jatropha manihot.

**Jan'itor** (*janua*, door). Pylorus.

**Janito'res marsu'pii.** Marsupial bones.

**Jan'itrix** (fem. of janitor). Portal vein.

**Ja'nus** (two-headed god). Dicephalus. See *Janiceps*.

**Japaconine'.** $C_{26}H_{41}N_2O_2$. Alkaloid very similar to aconine.

**Japaconitine'.** A powerful alkaloid derived from Japanese aconite.

**Jar'bot.** Dilatation of the œsophagus in the horse.

**Jarjavay's' mus'cle.** Depressor urethræ.

**Jas'mine.** Jasminum. **Yel'low j.,** see *Gelsemium*.

**Jas'minum angustifo'lium.** Narrow-leaved jasmine; bitter root is used in herpetic and other eruptions. **J. arab'icum,** Coffea arabum. **J. floribun'dum,** Abyssinian plant, leaves of which are anthelmintic. **J. nervo'sum,** species in Cochin China, parts of which are used as depurants. **J. officina'le,** jessamine, jasmine, ord. *Jasmineæ*. Plant is indigenous to India. The flowers have a fragrant smell and bitter taste. They afford by distillation an essential oil—oil of jasmine—much esteemed in Italy for rubbing paralytic limbs and the cure of rheumatic pains. **J. pubig'erum,** leaves of this plant of China and India are used in ophthalmia. **Revolu'tion j.,** root of this E. Indian species is used in ringworm. **Sam'bac j.,** an Arabian jasmine employed in eye affections and as a galactagogue.

**Jataman'si.** Sumbul.

**Jateorrhi'za palma'ta** and **J. calum'ba.** Plants native of Mozambique, considered by some as the source of calumba.

**Jat'ropha cur'cas.** Ord. *Euphorbiaceæ*. Seeds of this plant (Pinhones indicis, purging, physic, or Barbadoes nut) afford an oil—oleum infernale, O. ricini majoris—given like castor oil, to which it is nearly allied. The oil is used externally in chronic rheumatism and skin diseases. Leaves are rubefacient, juice is hæmostatic. They contain a peculiar acid, jatrophic or igasuric. **J. elas'tica,** see *Caoutchouc*. **J. glandulif'era** or **glau'ca,** Bombay plant, juice of which is used in opacity of the cornea, and oil of seeds externally in chronic rheumatism. **J. gossypifo'lia,** bellyache bush of S. America and W. Indies, oil and seeds of which are purgative. **J. man'ihot,** bitter cassava; plant affording cassada or cassava root, ricinus minor, manioc, mandioc, mandioca, magnoc, maniot, yucca, maniibar, aipi, Aipima coxera, apipoca, janipha. The juice of the root is extremely acrid and poisonous; after being fermented it becomes harmless, and is used for the intoxicating liquor tucupi. What remains after expressing is made into cakes or meal, farinha, of which the cassada or cassava bread is formed; the latter constitutes a principal food of the inhabitants of the parts where it grows. Fecula of the root forms tapioca. A factitious tapioca is met with, of small, smooth, spherical grains, supposed to be prepared from potato starch, and sold under the name of pearl tapioca. **J. multif'ida,** coral plant, tyleberry, of Brazil and W. Indies, resembles J. curcas; oil of the seeds, called purging nuts, is purgative. **J. oil,** oil of seeds of J. curcas, resembling croton oil. **J. opiif'era,** Brazilian species, emetocathartic. **J. pur'gans,** J. curcas. **J. tril'oba,** Aleurites triloba. **J. umbella'ta,** species from Surinam, tonic and emollient.

**Jaun'dice** (*jaune*, yellow). Icterus. **Acathes'tic j.,** a diffused form of jaundice, caused by the inability of the cells of the liver to hold their secretions. **J. ber'ry** or **tree,** Berberis vulgaris. **Black j.,** melæna. **Blue j.,** cyanopathy. **Car'diac j.,** j. from congestion of veins of liver, due to valvular insufficiency of the heart. **Catar'rhal j.,** see *Icterus*. **Conta'gious j.,** yellow fever. **Epidem'ic j.,** epidemic acute yellow atrophy of the liver. **False j.,** j. resulting from decomposition of blood and release of its coloring-matter. **Fa'tal j.,** diffused hepatitis. **Fe'brile j.,** Weil's disease. **Green j.,** icterus viridis. **Hæmatog'enous j.,** false jaundice. **Hæ'mohepatog'enous j.,** j. dependent on decomposition of red corpuscles with disintegration of liver-substance, or tumefaction and catarrhal inflammation of the bile-ducts. **Hepatog'enous** or **hepatogen'ic j.,** j. from obstruction to the bile in its natural channels, bile being absorbed into the blood. **Infec'tious j.,** Weil's disease. **Intermit'tent j.,** j. of malarial origin. **Lead j.,** icterus saturninus. **J. of new'-born,** icterus neonatorum. **Mala'rial j.,** intermittent jaundice. **Malig'nant j.,** icterus gravis. **Men'strual j.,** icterus menstrualis. **Obstruc'tive j.,** j. caused by obstruction of the biliary or hepatic canals. **Paradox'ical j.,** Addison's disease. **Red j.,** redness of the skin, without fever. **Reten'tive j.,** obstructive jaundice. **Sat'urnine j.,** lead jaundice. **Sim'ple j.,** catarrhal icterus. **Spring j.,** icterus vernalis. **Toxæ'mic j.,** hæmohepatogenous jaundice. **Urobilin' j.,** j. considered due to urobilin in the blood. **White j.,** chlorosis.

**Jaun'diced.** Affected with jaundice.

**Ja'va tea.** Leaves from Orthosyphon staminæus; diuretic.

**Javanine'.** Alkaloid derived from calisaya bark of Java.

**Jaw.** Maxillary bone. **Big j.,** actinomycosis. **J.-bone,** maxilla. **J. clo'nus** or **J. jerk,** a clonic contraction of the masticatory muscles, produced by tapping the jaw while the mouth is open. **Lock** or **locked j.,** trismus. **Lump'y j.,** big jaw. **Phos'sy j.,** necrosis of the jaw caused by phosphorus; see *Phosphorus*. **Pig j.,** a deformity in the horse marked by prominence of the upper jaw and enlarged teeth. **Wolf's j.,** deformative variety of harelip.

**Jawor'ski's cor'puscles.** Spiral mucous corpuscles in the secretions of the stomach in hyperchlorhydria or excess of hydrochloric acid.

**Jecole'ic acid.** $C_{19}H_{36}O_2$. An acid derived from cod-liver oil.

**Jec'oral.** Hepatic.

**Jecora'ria.** Marchantia polymorpha.

**Jecora'rius.** Bilious, said of diarrhœa or flux; hepatic.

**Jecorin'** (*jecur*, liver). Substance of unknown composition found in nerve tissue, in the liver, muscles, and possibly the blood.

**Jec'orose.** Hepatic.

**Je'cur** or **Je'cus.** Liver. **J. uteri'num,** placenta.

**Jefferso'nia barto'ni** or **diphyl'la** (after President Jefferson). Common twin-leaf, yellow root, rheumatism root, helmet pod, ground-squirrel pea. Indigenous plant, ord. *Berberideæ;* emetic, tonic, expectorant, antisyphilitic, and antirheumatic.

**Jeju'nal.** Relating or appertaining to the jejunum.

**Jejunec'tomy** (*jejunum*+*ektome*, excision). Excision of portion of the jejunum.

**Jejuni'tis.** Inflammation of the jejunum.

**Jeju′nity** (*jejunus*, empty). Hunger, fasting.

**Jejunocolos′tomy** (*jejunum+colon+stoma*, mouth). Operation for artificial communication between the jejunum and colon.

**Jeju′no-ilei′tis.** Inflammation of the jejunum and ileum.

**Jeju′no-ileos′tomy** (*jejunum + ileum + stoma*, mouth). Establishment of an artificial aperture between the jejunum and ileum.

**Jeju′no-il′eum.** Portion of small intestine between the duodenum and cæcum. See *Intestine*.

**Jejunos′tomy** (*jejunum+stoma*, mouth). Establishment of an aperture of communication from the exterior into the jejunum, for admission of food in cancer of the pylorus, etc.

**Jeju′num** (*jejunus*, empty). Part of the small intestine comprised between the duodenum and the ileum; so called because almost always found empty in the dead body.

**Jel′ly.** Substance of soft consistence, tremulous and transparent, obtained by appropriate treatment from animal or vegetable matters. **J. of the cord,** gelatin of Wharton. **Enam′el j.,** gelatinous matter in a young tooth between the epithelium and the calcifying cells. **Wa′ter j.,** Brasenia hydropeltis; Hydropeltis purpurea. **Whar′ton's j.,** gelatin of Wharton.

**Jendras′sik's manœu′vre.** Intensification of knee-jerk by interlocking the fingers and forcibly abducting the hands.

**Jenkinso′nia antidysenter′ica** (after Jenkinson, English botanist). Pelargonium antidysentericum.

**Jenne′rian.** Relating to Jenner, discoverer of vaccination, or to vaccination.

**Jenneriza′tion.** Repeated injection of cattle with human tubercle bacilli. These microorganisms are comparatively harmless to animals, but it is believed that they are sufficiently pathogenic to induce immunity against the virulent bovine tubercle bacilli.

**Jen′nerize.** To produce immunity against tuberculosis in cattle by the method of jennerization.

**Jen′sen's fis′sure.** Name given to a portion of the intermediate fissure near the fissure of Sylvius.

**Jequiritin′.** Principle derived from sprouting jequirity seeds, giving them their characteristic properties. An infusion is used by oculists in ophthalmia.

**Jequirity,** jek-ir′it-e. Abrus precatorius.

**Jer′gon.** See *Arrow poison*.

**Jerk.** Sudden and spasmodic muscular action; as *jaw-jerk* of muscles of mastication; *knee-jerk*, of quadriceps femoris muscle, etc. See *Reflex*. **J.-fin′ger,** trigger finger.

**Jerk′ing respira′tion.** See *Respiration*.

**Jerks.** Epidemic chorea. See *Mania, dancing*.

**Jeroffle′ris.** Dianthus caryophyllus.

**Jeru′salem oak of Amer′ica.** Chenopodium anthelminticum.

**Jer′vic acid.** $C_{14}H_{10}O_{12}$. Crystalline substance derived from white hellebore root.

**Jervine′.** $C_{27}H_{47}N_2O_3$. White alkaloid derived from different species of veratrum.

**Jes′samine.** Jasminum officinale. **Yel′low j.,** Gelsemium nitidum or sempervirens.

**Jes′uit's bark.** Cinchona. **J.'s tea,** maté.

**Jeticu′cu.** Name given in Brazil to various forms of ipomœa.

**Jew′bush.** Pedilanthus tithymaloides.

**Jew′el weed.** Impatiens balsamina; I. fulva.

**Jew's ear.** Peziza. **J.'s harp,** Trillium latifolium.

**Jig′ger.** Pulex penetrans.

**Jimp′son** or **Jim′son weed** (corr. from Jamestown). Datura stramonium.

**Jinked.** A veterinary term denoting sprained in the back.

**Jiqui′tiba.** Pyxidaria macrocarpa.

**Joanne′sia prin′ceps.** Anda.

**Jobert's** (zhob-airs′) **fos′sa.** Fossa in the popliteal region produced by the adductor magnus above and sartorius and gracilis below. **J.'s su′ture,** see *Suture*.

**Joe pye.** Eupatorium perfoliatum; E. purpureum.

**Jof′froy's symp′tom.** Twitching of the gluteal muscles on pressure over them in sciatica and spastic paralysis. Absence of contraction of facial muscles in Graves's disease, when the face is suddenly uplifted.

**Johanne′sia.** Joannesia.

**Johannesine′.** An alkaloid from anda.

**Johimbine′.** An alkaloid obtained from the bark of a tree in Africa; said to have aphrodisiac properties in doses of gr. $\frac{1}{20}-\frac{1}{10}$ (0.0032–0.0065).

**John′ny jump′er** or **jump-up.** Viola tricolor.

**John′ston's a′rea.** Alopecia areata; porrigo decalvans.

**Johns′wood** or **Johns′wort.** Hypericum.

**Joint.** Articulation; arthrosis. **Arthro′dial j.,** see *Arthrodial*. **Ball-and-sock′et j.,** enarthrosis. **Bro′dies j.,** see *Brodie*. **Charcot's′ j.,** see *Charcot*. **Chopart's′ j.,** see *Chopart*. **Con′dyloid j.,** articulation admitting of various movements with circumduction. **Dove′tail j.,** suture. **E′vil j.,** elephantiasis nodosa. **False j.,** pseudarthrosis. **Gin′glymoid j.,** ginglymus. **Gli′ding j.,** arthrodia. **Hinge j.,** ginglymus. **Immov′able j.,** diarthrosis. **Hyster′ical j.,** neuromimetic arthritis. **Ir′ritable j.,** violent knee-joint symptoms, sometimes long after injury of the part. **Mixed j.,** amphiarthrosis. **J. oil,** synovia. **Ro′tary j.,** lateral ginglymus. **Spi′ral** or **screw-hinged j.,** spiral form of ginglymus, as at the elbow. **Stiff j.,** ankylosis. **Syphilit′ic j.,** pulpy disease. **J. weed,** Polygonum articulatum.

**Joint′ed.** Articulated.

**Jol′ly's elec′tric reac′tion.** Seen in certain muscular-atrophic conditions, the muscles being voluntarily excitable after withdrawal of the faradic current.

**Jon′quil.** Term applied to various forms of narcissus.

**Jor′dan's amputa′tion.** Hip-joint amputation in which enucleation is first performed, and then the soft parts are cut through at any convenient level.

**Jorisseune's′ sign.** Non-elevation of pulse-rate in the early stage of pregnancy, when the woman's position is changed from horizontal to erect.

**Josseraud's** (jos-ser-oze′) **sign.** Very audible metallic sound over the lungs, in advance of friction sound in acute pericarditis.

**Joule.** Amount of energy employed in maintaining a current of one ampère for one second against a resistance of one ohm.

**Joule's equiv′alent.** The mechanical equivalent of heat, being the amount of mechanical work expended in raising 1 pound of water through 1° F. It is 772 foot-pounds.

**Jo′vis flos.** Crocus. **J. glans,** juglans.

**Ju′cato callel′oe.** Phytolacca decandra.

**Ju′das tree.** Red bud. Bark of Cercis canadensis; astringent in diarrhœa, leucorrhœa, etc.

**Judg′ment** (*judico*, to judge). Faculty of the intellect by which ideas are compared and their relative worth appreciated.

**Ju′ga** (pl. of *jugum*, yoke) **alveola′ria.** See *Alveolar arches*. **J. cerebra′lia,** prominences on the inner surface of the bones of the cranium between the digital impressions. **J. cervi′cis u′teri,** arbor vitæ uterina. **J. cru′rum medulla′rium,** optic thalami. **J. pe′nis,** spring forceps to compress the urethra in incontinence of urine.

**Ju′gal.** Zygomatic; relating to the cheek. **J. bone,** malar bone. **J. proc′ess,** zygoma. **J. re′gion,** region of the cheek-bone. **J. su′ture,** suture uniting the os malæ or os jugale with the superior maxillary bone; sagittal suture.

**Juglan′dic acid.** Juglandin; mucin.

**Juglandin′.** Resinoid substance from the bark of the root of Juglans cinerea; cathartic and antiperiodic.

**Ju′glans.** The official (Ph. U. S.) name for the bark of the root of J. cinerea, butternut, collected in the autumn. It is used in medicine in the form of extract, *extractum juglandis*, as an efficacious and mild laxative, in doses of gr. v–x (0.32–0.65), in cases of constipation. **J. cathar′tica, J. cine′rea,** butternut, white walnut; the source of the official juglans. **J. fraxinifo′lia,** species growing in W. Indies and Southern United States; bark is diaphoretic, parts of fruit are laxative, emetic, and anthelmintic. **J. ni′gra,** black juglans, black walnut; indigenous; rind of the unripe fruit is said to remove ringworm and tetter; decoction is anthelmintic. **J. re′gia,** juglans, walnut, French nut, bannut tree, Welsh nut; unripe fruit was formerly esteemed anthelmintic and vermifuge; used also in gout and chronic cutaneous affections; leaves are astringent, aromatic, and antistrumous; the oil of the seeds is laxative and anthelmintic, especially for tapeworm; the green rind of the walnut has been celebrated as an antisyphilitic and used as a diet drink.

**Jug′lone.** $C_{10}H_6O_3$. Principle from Juglans regia; sternutatory.

**Ju′gomax′illary.** Relating to the jugular vein and maxillary bone, as the masseter muscle.

**Ju′gular** (*jugulum*, yoke, throat). Relating to the throat or neck. **J. fora′men,** formed by the jugular fossa of the petrous bone with the jugular fossa of the occipital bone. **J. fos′sa,** cavity in the petro-occipital suture, formed by the petrous portion of the temporal bone and by the occipital bone, and lodging the origin of the internal jugular vein, sometimes called the *thimble-like cavity*. **J. gan′glion,** ganglion on the glossopharyngeal nerve, or on the root of the pneumogastric. **J. proc′ess,** process of the occipital bone behind the jugular foramen. **J. veins,** these are situated at the lateral and anterior parts of the neck, two on each side—one external, the other internal. 1. *External jugular vein* is of less size than the internal, descends almost vertically along the anterior and lateral part of the neck, from the cervix of the lower jaw to the subclavian vein, into which it opens a little above the internal jugular. It is formed by the internal maxillary, superficial temporal, and posterior auricular vains. This vein is commonly opened in bleeding in the neck. 2. *Internal jugular vein, vena apoplectica,* larger and more deeply seated than the preceding, descends vertically along the anterior and lateral part of the neck, from the posterior part of the foramen lacerum posterius as far as the subclavian vein. It commences at the sinus of the jugular vein, and receives the blood returning by the sinus of the dura mater and that of the facial, lingual, pharyngeal, superior thyroid, occipital, and diploic veins. **J. wall,** floor of the tympanum.

**Jugula′ris.** Jugular.

**Ju′gulate** (*jugulo*, to strangle). To cut the throat; hence, to check abruptly or suddenly, as by remedies directed to a disease.

**Jugula′tion.** Sudden cutting short of a disease by remedial agents.

**Ju′gulocephal′ic** (*jugulum*, throat, *kephale*, head). Relating to the throat and head; term applied to veins thus distributed.

**Ju′gulum** (dim. of *jugum*, a yoke). Clavicle; throat, see *Suprasternal*. **J. u′teri,** neck of the uterus.

**Ju′gum.** Yoke. See *Juga*. **J. pe′nis,** forceps or compressor of that organ, worn in incontinence of urine. **J. petro′sum,** eminentia arcuata.

**Juice.** Jus. **Alimen′tary j.,** gastric and intestinal juice, acting upon the food passing through the stomach and intestines. **J. canals′** or **chan′nels,** canals or spaces in connective tissue, origin of lymphatic vessels. **Can′cer j.,** see *Cancer*. **Diges′tive j.,** alimentary juice. **Enter′ic j.,** succus intestinalis. **Expressed′ j.,** fluid secreted by the gastric glands during digestion; see *Succus*. **Intes′tinal j.,** succus intestinalis. **Ital′ian j.,** extract of Italian licorice. **Joint j.,** synovia. **Mus′cle j.,** see *Muscle juice*. **Ner′vous j.,** nervous fluid. **Nu′clear j.,** nutrient juice. **Nu′trient j.,** plasma of blood. **Pancreat′ic j.,** secretion from the pancreas, acting particularly upon starchy food. **Span′ish j.,** extract of Spanish licorice.

**Ju′jube.** Fruit of Rhamnus zizyphus or Zizyphus vulgaris, ord. *Rhamneæ*, native of the south of Europe, formerly ranked among the pectoral fruits; has an agreeable, sweet taste. Fruits of two other species, Zizyphus jujuba, Rhamnus jujuba, Mansana arborea, native of the E. Indies, and Z. lotus, Rhamnus lotus, Zizyphus nitida or sativa or sylvestris of Africa, possess properties similar to those of Z. vulgaris. **J. paste,** paste of jujubes.

**Jula′pium.** Julep.

**Ju′lep.** Sweet drink; demulcent, acidulous, or mucilaginous mixture. **Cam′phor j.,** mistura camphoræ. **Chalk j.,** mistura cretæ. **Mint j.,** see *Mint julep*.

**Julia′na caryophylla′ta.** Grows in Mexico; antispasmodic.

**Ju′lus.** First down upon the chin.

**Jum′ble beads.** See *Abrus precatorius*.

**Jum′bul.** Jambul.

**Jumen′tous** (*jumentum*, beast of burden). Like a horse or other beast of burden; applied to the odor of urine.

**Jump′er.** One affected with the jumping disease.

**Jump′ing disease′.** A convulsive tic observed among the woodsmen in Maine, probably of the same nature as imubacco, lata, and myriachirt.

**Junc′tional.** Connective.

**Junctu′ra** (*jungo*, to join). Articulation; commissure of brain. **J. serrat′ilis,** articulation by suture.

**Junc′ture.** Junctura. Critical time.

**Jun′cus odora′tus.** Camel's hay, sweet rush, ord. *Gramineæ*. Dried plant, generally procured from Turkey and Arabia; has an agreeable smell and warm, bitterish taste; was formerly used as a stomachic and deobstruent.

**Jungbluth's** (yoong′bloots) **ves′sels.** Nutrient vessels situated under the amnion only in early fetal life.

**Jun′gle fe′ver.** Hill fever. Variety of remittent occurring in the jungle districts of India.

**Ju′niper.** Name of different varieties of Juniperus. **J. ber′ries** or **fruit,** fruit of Juniperus communis. **J. oil,** oleum juniperi. **J. tar,** oil of cade. **J. tree,** Juniperus communis.

**Junip′eri cacu′mina.** Tops of juniper.

**Juniperin′.** Resinous material obtained from juniper berries.

**Junip′erus commu′nis.** Juniper tree, family *Coniferæ*. Berries of the fruit, ethagh berries were formerly official in the Ph. U. S. under the name *juniperus*. Their odor is strong, but not unpleasant; taste warm, pungent; their stimulant diuretic properties dependent on essential oil, which they yield to both water and alcohol. Dose, ℥ss–j (16.0–32.0), in infusion. In Holland juniper berries are used for flavoring gin. The following preparations of juniper are official: *Ole′um junip′eri* (U. S. and Br.); dose, ♏j-v (0.065–0.32). *Spir′itus j.* (U. S. and Br.); dose, ♏x–ʒj (0.65–4.0). *S. j. compos′itus* (U. S.), contains caraway and fennel in addition to oil of juniper; dose, ʒj–iv (4.0–16.0). **J. ly′cia,** supposed to afford the true frankincense, olibanum; by some, however, this is believed to be the product of an amyris, and by others of Boswellia floribunda or papyrifera. Olibanum has a peculiar and aromatic odor, taste bitterish and slightly pungent, partly soluble in alcohol, and forming a milky emulsion when triturated with water; formerly used in dysentery and hæmoptysis, but is now employed only as a perfume in the sick-room. **J. oxyce′drus,** brown-berried juniper; cade-oil plant, prickly cedar; grows in south of Europe, Siberia, etc. By combustion of the wood, liquid tar, oleum cadinum, oleum juniperi empyreumaticum, oleum juniperi pyrolignici, oil of cade, is obtained; employed externally in chronic cutaneous and other diseases; the fruit is used in amenorrhœa, hysteria, and leucorrhœa. **J. sabi′na,** common or barren savin; covershame. Odor of savin tops, *sabina* (Ph. U. S.), is strong and disagreeable; taste hot, acrid, and bitter, depending on essential oil. They are stimulant, emmenagogue, anthelmintic, and abortive; externally irritant. Dose, internally, gr. v–x (0.32–0.65). As a local irritant they are applied in powder or formed into cerate. The fluid extract is given in doses of ♏v–xv (0.32–1.0). The essential oil, oil of savin, has the virtues of savin. Dose, ♏v–x (0.32–0.65). Ointment of savin is used as a stimulant application to blisters. **J. suec'ica**, J. communis. **J. virginia'na**, red cedar, known throughout the United States as savin; is often used for the same purposes.

**Junk** (*juncus*, bulrush). Pad or sling for a fractured limb.

**Junk'et.** Curds and whey.

**Ju'no's tears.** Verbena officinalis.

**Junod's** (zhue-noze') **boot.** Instrument which adapts itself to the leg and foot, and is furnished with suction-pump for exhausting the air; intended to draw blood away from the body.

**Jup'iter's beard.** Sempervivum tectorum.

**Juriba'li.** Tree in the forests of Pomeroon, ord. *Monogynia;* bark in powder or infusion is febrifuge.

**Jurinæ'a** or **Jurine'a cyanoi'des** or **pollich'ii** or **tomento'sa.** Plant of Siberia and Caucasus, leaves of which have been used in scarlatina.

**Juripe'ba.** Solanum paniculatum.

**Jurispru'dence, med'ical** (*jus*, law, *prudentia*, knowledge). Law in its bearings upon medicine, and medicine in its bearing on law; legal medicine.

**Jurube'ba.** Solanum paniculatum. Alkaloid resembling solanine, called *jurebebine*, is derived from it.

**Ju'ry of ma'trons.** Jury of women empanelled under a writ *de ventre inspiciendo*, to try the question whether a woman is with a child or not.

**Ju'ry-mast.** An attachment to the plaster-of-Paris jacket used in the treatment of Pott's disease of the upper dorsal and cervical regions. It is an iron bar, the lower extremity of which is incorporated in the jacket, while the upper end curves forward so that its extremity is over the centre of the head; from this depends a sling which supports the head by the chin and occiput.

**Jus.** Soup; broth; bouillon.

**Jusqui'amus.** Hyoscyamus.

**Jussiæ'a.** Several varieties of this plant, primrose-willow, are used as astringents, especially *J. repens* in N. America in diarrhœa, and *J. swartziana* in the W. Indies.

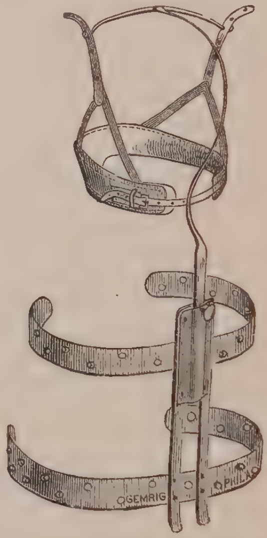
**Justi'cia adhato'da** (after Justice, Scotch botanist). Adhatoda. **J. bival'vis**, a small shrub of India used locally in gout. **J. ecbol'ium**, Malabar plant, the root of which and the leaves are considered lithontriptic. **J. gendarus'sa**, root is used in China and India in rheumatism and febrile affections, also in dysentery and dyspepsia; the leaves as emetic. **J. pector'alis**, West India plant, slightly astringent, aromatic, balsamic.

**Jus'to-ma'jor.** Unusually large. **Jus'to-mi'nor,** unusually small. Terms applied to pelvis so constituted.

**Jus'tus's test.** Mercury is given by subcutaneous or intravenous injection; this causes a diminution in the amount of hæmoglobin in the blood; the loss is rapidly replaced in the non-syphilitic individual, but is slowly made good in the syphilitic; the examination for hæmoglobin is instituted at the end of twenty-four hours. The test is not generally looked upon as reliable.

**Jute.** Fibre of different varieties of corchorus used externally in many surgical cases in which lint and sponges are generally employed. It is often used carbolized.

**Ju'vans**, pl. juvan'tia (*juvo*, to aid). A medicine or substance relieving a disorder; adjuvant.



Jury-mast with sling for the head.

**Ju'venis.** A youth. One at the period of adolescence.

**Juxta-artic'ular** (*juxta*, near, *articulus*, joint). Near a joint.

**Juxtaposi'tion** (*juxta*, near to, *pono*, to place). Situation near by; the successive application of new molecules upon those forming the primitive nucleus.

# K.

*Many of the terms under K, derived from the Greek, are found under the letter C.*

**K.** Letter formerly used to designate compound of gold; symbol of kalium, potassium. Abbr. for kathode or kathodic (also *Ka* and *Ca*).

**Kaa'wy.** Indian drink prepared from maize.

**Kab'ala.** Cabal.

**Kadsu'ra chinen'sis.** Magnoliaceous shrub of China; tonic and stomachic.

**Kæmpfer'ia galan'ga** (after Kämpfer, German naturalist). See *Maranta galanga.* **K. rotun'da,** zedoary, ord. *Zingiberaceæ.* Roots of this Ceylonese plant are stimulant and carminative. According to some, the *round zedoary* is furnished by Curcuma zerumbet; the long, *Zedoaria longa,* by Curcuma zedoaria.

**Kaes-Bechter'ew's lay'er.** See *Bechterew.*

**Kageneck'ia oblon'ga.** Lyday wood of Chile; antiperiodic.

**Kahin'cæ rad'ix.** Caincæ radix.

**Kahl'baum's disease'.** Catatonia.

**Kah'ler's disease'.** A rare affection, the symptoms of which are grave anæmia, osseous pains, spontaneous fractures, extreme debility, emaciation, and the excretion of heteroalbumose in the urine; the underlying lesion is a sarcoma-like growth in the ribs, sternum, and vertebral bodies, which destroys first the marrow and then the osseous substance; the disease is believed to be an albumose intoxication, albumosæmia, consequent upon the destruction of the bone-marrow.

**Kaif.** Languor after taking certain drugs.

**Kairin'.** $C_{10}H_{13}NO,HCl,H_{20}$. Hydrochlorate of artificial alkaloid prepared from chinolin; crystalline powder, of saline, bitter, nauseous taste, freely soluble in water, less soluble in alcohol, insoluble in ether. A very powerful antipyretic, producing diaphoresis and emesis, sometimes followed by collapse. Two forms are employed: *Kairin M.* (methyl kairin) and *kairine A.* (ethyl kairin), with similar properties. Dose, gr. ij–x (0.13–0.65).

**Kairolin'.** Antipyretic resembling kairin, but less efficient.

**Kakat'rophy** or **Kakot'rophy.** Cacotrophy.

**Kak'erlakism** (D., *kakkerlak,* cockroach, which comes out only in the dark). Albinism. See *Albino.*

**Kak'ke.** Japanese term for beriberi.

**Kak'odyl, Kak'odylate.** See *Cacodyl, Cacodylate.*

**Kakos'mia** (*kakos,* foul, *osme,* smell). Repugnant smell. **Subjec'tive k.,** disturbance of the olfactory nerve or centre, either from hysteria or from disease, giving rise to the perception of an offensive smell.

**Ka'la az'ar.** A disease of as yet undetermined nature, observed in India, characterized by two stages: in the first there is an irregular fever of intermittent or remittent type; in the second stage there is low fever of a continuous type.

**Kalada'na.** Pharbitis nil of India. The resin is purgative, resembling jalap, in doses of gr. ij–viij (0.13–0.5).

**Kalag'ua.** A remedy employed in South America in the treatment of tuberculosis.

**Kalan'choë glandulo'sa,** Fruit of this Abyssinian tree is used as a parturifacient. **K. lacinia'ta,** juice is used in E. Indies as an antipyretic. **K. pinna'ta,** leaves are employed as a poultice in the E. Indies.

**Ka'li.** Potash; potassium.

**Kalig'enous** (*gennao,* to beget). Producing potash.

**Kalim'eter.** Alkalimeter.

**Ka'lium.** Potassium.

**Kal'mia angustifo'lia** (after Kalm, the Swedish botanist). Ivy, narrow-leaved kalmia or laurel, dwarf laurel, sheep-laurel, lambkill, sheep poison; ord. *Ericaceæ;* same virtues as K. latifolia. So also have K. cuneata and K. hirsuta. **Broad-leaved k.,** K. latifolia. **K. glau'ca,** swamp laurel, pole laurel; virtues similar to those of K. latifolia. **K. latifo'lia,** broad-leaved kalmia, calico bush, laurel, mountain or rose or broad-leaved laurel, big ivy, spoonwood, calfkill, lambkill, sheep poison. This plant kills sheep and other animals. The Indians use it as a poison. The powdered leaves have been applied in tinea capitis, and a decoction for the itch; the powder, mixed with lard, in herpes. **Nar'row-leaved k.,** K. angustifolia.

**Kal'o.** Arum esculentum.

**Kama'la.** The official (Ph. U. S.) name of the glands and hairs from capsules of Mallotus philippiensis (Rottlera tinctoria); a vermifuge, in doses of ʒ j–ij (4.0–8.0). See *Rottlera tinctoria.*

**Kamalin'.** Substance derived from kamala, and identical with mallotoxin and rottlerin.

**Ka'mas root.** Camassia esculenta.

**Kamee'la.** See *Rottlera tinctoria.*

**Kan'adol.** Kandol.

**Kandahar' sore.** Delhi boil.

**Kan'dol.** Kanadol, candahol. A volatile constituent of coal-tar, proposed as a local anæsthetic. Possibly identical with rhigolene.

**Kangaroo'.** Australian marsupial animal. The tendon of its tail is used as a ligature.

**Kan'gri-burn can'cer.** Epithelioma on the thigh or abdomen, said to be due to the irritation produced by a portable charcoal fire basket carried under the clothing in contact with the body during the winter months in the elevated regions of Kashmir.

**Kaolin'.** (Ph. Br.) Bolus alba. Pure silicate of alumina, earth obtained from the decomposition of felspar; sometimes used as an absorbent, for coating pills, etc.

**Kaolino'sis.** Pneumonoconiosis of clay-workers.

**Kap'osi's disease'.** Atrophoderma pigmentosum, parchment skin.

**Karabi'tus.** Phrenitis.

**Kar'apat.** Castor oil.

**Kar'son-khayi.** Swietenia senegalensis.

**Kar'wah this'tle oil.** See *Argemone mexicana.*

**Kar'yochrome** (*karyon,* nucleus, *chroma,* color). Nerve-cell with a nucleus capable of rapid and thorough staining.

**Karyochyle'ma.** Achromatin, caryoplasm.

**Karyokine'sis** (*karyon,* nucleus, *kinesis,* motion). The process of indirect cell or nucleus division. First, increase in the chromatin fibres (chromosomes) from which is formed the wreath, rosette, or spirem, skein or mother-skein, followed by the aster (star-shaped); then pithos (barrel-form), followed by the diaster (double star); subsequently the protoplasm separates into two parts, in each of which the chromatin arranges itself into a coil (daughter-skein), the whole called dispirem. Two daughter (resting) nuclei are thus derived from one mother nucleus. See cuts under *Mitosis.*

**Karyol'ysis** (*karyon,* nut, *lyo,* to loose). Segmentation of the nucleus.

**Kar'yomite.** Chromosome.

**Karyo'mitome.** Nuclear plexus of chromatin.

**Karyom'iton.** Chromatin.

**Karyomito'sis** (*karyon,* nut, *mitos,* thread). Karyokinesis.

**Kar'yon** (*karyon,* nut). Nucleus of a cell.

**Kar'yophage** (*phago,* to devour). Intercellular parasitic protozoön.

**Kar'yoplasm.** Protoplasm of nucleus.

**Karyorrhex'is.** Decomposition of the chromatin of a nucleus.

**Karyoso′ma, Kar′ysome** (*karyon*, nut, *soma*, body). Irregular nucleolar body developed from the remains of a germinal vesicle.

**Karyosteno′sis.** Direct division of cell-nucleus.

**Karyothe′ca** (*karyon*, nucleus, *theca*, sheath). Membrane or sheath of nucleus.

**Kassa′der** or **Kassau′der.** Convolvulus panduratus.

**Kata-.** For words beginning thus, and not found here, see *Cata-*.

**Katab′olism.** The change in cells whereby their molecules are rendered less complex and contain less force; retrograde metamorphosis.

**Katadic′rotism** (*kata*, down, *dikrotos*, double beat). Term denoting a divided or double pulsation in the downward stroke of the sphygmograph.

**Katapha′sia.** Morbid repetition of words or syllables.

**Kataphrax′is** (*kataphrasso*, to cover). The fixation of an ectopic viscus by means of a metallic cage made of silver-wire sutures surrounding but not piercing the organ retained.

**Katato′nia** (*kata*, down, *tonos*, tension). Mental derangement progressing from melancholia and mania to imbecility and tonic spasms.

**Kathar′ophore** (*kathairo*, to purge or cleanse). Instrument employed for cleansing out the urethra.

**Kath′ode** (*kata*, down, *hodos*, way). The negative pole of a galvanic battery.

**Kathod′ic.** Cathodic.

**Kat′ion.** See *Cation.*

**Katopho′ria** or **Katotro′pia.** Catotropia.

**Kavaïn′.** A neutral principle derived from the root of kava-kava. Methysticin.

**Ka′va-ka′va.** The root and resin of a South American shrub, the Piper methysticum, similar in action to coca as a tonic, etc.; it is also diuretic.

**Kedan′i disease′.** Exanthematous disease of Japan, urticarious in character, with severe prodromic symptoms, bronchitis, hypertrophy of the spleen, anorexia, constipation, acute exudative nephritis, or acute degeneration of the kidneys; often fatal; due to a bacillus, Proteus hausseri.

**Keen's sign.** Increase of the diameter of the leg from inner to outer malleolus in Pott's fracture.

**Keep′er.** Armature of a magnet.

**Kefir′** or **Kephir′** or **Kefyr′.** Preparation made by fermentation of milk; used in various debilitating maladies. Nutritive, easily assimilated, and improving to the digestive powers. Several remedies are administered in this vehicle, such as guaiacol carbonate (guaiacol carbonate kefir), arsenic (arsenical kefir), sodium iodide (iodokefir), creosotal (creosotal-kefir).

**Keh′rer's opera′tion.** Transverse incision in cæsarean operation through the anterior convex surface of the uterus at the level of the os uteri internum. Also operation for raising a depressed nipple by establishing a cicatrix in the immediate vicinity.

**Kei′ta.** Monsonia ovata.

**Kek′ui, Keku′na,** or **Kek′une oil.** See *Aleurites triloba.*

**Kek′ulé's ben′zene hex′agon.** Benzol ring.

**Kel′ectome** (*kele*, tumor, *ektome*, excision). Instrument like a cutting punch, introduced through a trocar into a tumor to extract its solid contents.

**Ke′lene.** Chelene. Ethyl chloride.

**Ke′lis,** properly **Chelis** (*chele*, claw of crab). Keloid. Morphœa.

**Kel′lock's sign.** In cases of effusion into the pleura, the vibration of the ribs when percussed by the right hand, while the inferior portion of the chest is held down by the left hand, is increased.

**Ke′loid,** properly **Cheloid** (*chele*, claw of crab, *eidos*, resemblance). A rare variety of round or oval recurrent fibrous growth, usually on the chest, neck, or arms, the fibres growing in trabeculæ. Cancroid. **K. ac′ne,** disorder characterized by minute isolated or confluent elevations of the skin surface, with interspersed pustules, which finally form cicatriform plaques over which the hairs are clustered in tufts or are totally absent. It occurs on the nucha, occiput, and vertex. **K. of Ad′dison,** morphœa. **K. of Alibert′,** keloid. **Cicatri′cial** or **false k.,** neoplasm similar to keloid following a hypertrophied cicatrix.

**Kelol′ogy** (*kele*, hernia, *logos*, discourse). Description of hernia.

**Ke′los.** Keloid.

**Keloso′mus** (*kele*, hernia, *soma*, body). Monstrosity in which the sternum is absent or rudimentary, with hernia of the heart and lateral or median eventration.

**Keloto′mia.** Celotomy; herniotomy.

**Kelot′omy.** Celotomy.

**Kelp.** Impure mineral alkali obtained by burning certain marine plants. See *Soda.* Large dark seaweed.

**Keme.** Cucurbita citrullus.

**Ken′give.** Cucurbita citrullus.

**Ken′nel lame′ness.** Stiffness of kennelled dogs, usually a form of rheumatism.

**Ken′nelwort.** Scrophularia nodosa.

**Kenopho′bia** (*kenos*, empty, *phobos*, fear). Dread of open spaces.

**Keno′sis.** Evacuation; inanition.

**Kent′ish oint′ment.** Linimentum terebinthinæ.

**Keph′alins.** Radicals in brain-tissue, forming an amorphous mass.

**Kephalom′eter.** Cephalometer.

**Kephyr′.** Kefir.

**Kera-.** For words beginning thus, and not found here, see *Cera-*.

**Ker′acele** (*keras*, horn, *kele*, tumor). Hard tumor on the hoof of a horse.

**Keraphyl′ocele** (*keras*, horn, *phyllon*, leaf, *kele*, tumor). Hard tumor connected with hoof of horse.

**Kerasin′.** Substance found in cerebral tissue.

**Keratal′gia.** Pain in the cornea.

**Keratecta′sia** or **Keratec′tasis** (*keras*, horn, *ektasis*, dilatation). Prominence or protrusion of the cornea.

**Keratec′tomy** (*keras*, horn, *ektome*, excision). Excision of the cornea; extraction of cataract; incision into anterior chamber of the eye. Ceratotomy.

**Kerati′asis.** Ceratiasis.

**Keratin′.** Ceratin.

**Keratiniza′tion.** Hardening, as of the nails.

**Kerati′tis.** Ceratitis. Inflammation of the cornea. **K. bullo′sa,** non-suppurative, and, like *k. vesiculosa*, characterized by vesicles which rupture and result in small ulcers or even opacity. **Deep k.,** parenchymatous k. **Dot′ted k.,** punctate k. **Fascic′ular k.,** called also *phlyctenular k.;* ulcers form upon small phlyctenulæ near the edge of the cornea, especially in young, scrofulous patients. **Hypop′yon k.,** k. with abscess of the cornea. **Intersti′tial k.,** parenchymatous k. **K. e lagophthal′mo,** a form of k. occurring after lagophthalmus, the corneal surface becoming dry and disintegrated from atmospheric exposure. **Mycot′ic k.,** keratomycosis. **Neuroparalyt′ic k.** occurs after paralysis of fifth pair, with marked superficial corneal excoriation. **Non-sup′purative k.** includes a variety of forms of k. unattended with suppuration. **Oys′ter-shuck′er's k.,** suppurative k., caused by entrance of pieces of oyster-shell into the cornea. **Parenchy′matous k.,** chronic form of k., of congenital syphilitic origin, with deposits in the corneal system and slight opacities which become absorbed. **Phlycten′ular k.,** fascicular k. **Punc′tate k.,** serous iritis causing punctate opacities of the cornea. **Pu′rulent k.,** suppurative k. **Reap′er's k.,** suppurative k. caused by the entrance of particles of grain into the cornea. **Sclero′sing k.,** form of k. in which the deposits and opacities are associated with scleritis. **Sup′purative k.,** k. attended with suppuration, including a variety of forms. **Tracho′matous k.,** pannus. **K. vesiculo′sa,** the symptoms are described under k. bullosa. **K. xerot′ica,** name given to suppurative form of k., otherwise described as *keratomalacia* and *k. elagophthalmo*.

**Ker′atoangio′ma.** Angiokeratoma.

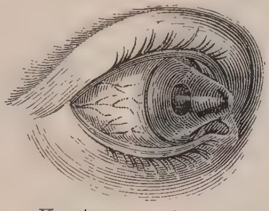
**Ker′atocele.** Ceratocele.

**Keratochromato′sis** (*keras*, horn, *chroma*, color). Discoloration of the cornea.

**Keratoconjunctivi′tis.** Inflammation of cornea and conjunctiva.

**Keratoconom′eter** (*keras*, horn, *konos*, cone, *metron*, measure). Instrument for determining amount of astigmatism by reflective power of the cornea.

**Keratoco′nus.** Staphyloma of cornea; ceratoglobus; conical cornea.



Keratoconus. (Bull.)

**Keratocri′coid.** Ceratocricoid; cricothyroid.

**Keratodeï′tis.** Keratitis.

**Keratod′eocele.** Ceratocele.

**Keratoder′ma** (*keras*, horn, *derma*, skin). Cornea.

**Keratodermati′tis.** Inflammation or proliferation of the horny layer of the epidermis. Keratitis.

**Keratodermat′ocele** (*keras*, horn, *derma*, skin, *kele*, tumor). Ceratocele.

**Keratoder′mia palma′ris, K. planta′ris, Symmet′rical k. of the extrem′ities,** names given to symmetrical and well-marked thickening of the palmar and plantar epidermis.

**Keratogen′ic.** Producing horny matter or becoming converted into it.

**Keratog′enous** (*keras*, horn, *gennao*, to engender). Causing or producing horny tissue or growth, as k. membrane of the skin.

**Keratoglo′bus.** Hydrophthalmia; buphthalmia.

**Keratoglos′sus.** Ceratoglossus.

**Ker′atohelco′sis** (*keras*, horn, *helkos*, ulcer). Ulceration of the cornea.

**Keratohy′al.** Forming or relating to cornu of hyoid bone.

**Keratohyoide′us.** Muscle of inferior mammalia, bringing near to one another the cornua of the hyoid bone.

**Ker′atoid.** Ceratoid. **K. degenera′tion,** transformation of the cytoplasm into a substance called keratin, which gives to horn, nails, etc., their peculiar character.

**Kerato-iri′tis.** Inflammation of the iris and cornea. See *Aquomembranitis*.

**Keratoleuco′ma.** Albugo; leucoma.

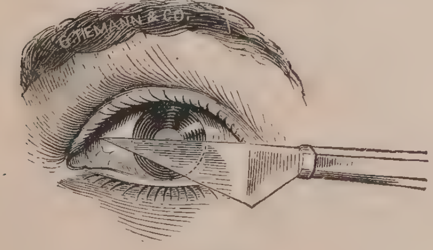
**Keratol′ysis** (*keras*, horn, *lysis*, loosening). Loosening of the cuticle. The class *keratoses* of skin diseases includes pityriasis and exfoliative dermatitis. **K. neonato′rum,** dermatitis exfoliativa neonatorum.

**Keratolyt′ic.** Relating to or causing keratolysis.

**Kerato′ma** (*keras*, horn). Excessive increase of horny tissue; callosity.

**Keratomala′cia.** Softening of the cornea.

**Ker′atome.** Ceratotomus; cataract knife; knife for incision of the cornea in iridectomy.



G. TIEMANN & CO.

Keratome.

**Keratomeningi′tis.** Ceratitis.

**Keratomen′inx** (*keras*, horn, *meninx*, membrane). Cornea.

**Keratom′eter** (*keras*, horn, *metron*, measure). Instrument to measure astigmatism of the cornea.

**Keratom′etry.** Measurement of form and curvature of the cornea and of the attendant astigmatism.

**Keratomyco′sis** (*keras*, horn, *mykes*, fungus). Chronic keratitis with fungoid growth on the cornea, probably due to a microbe. Mycotic keratitis.

**Keraton′osus** (*keras*, horn, *nosos*, disease). Disease of horny layer of skin, hair, nails, and secretory apparatus of the skin.

**Keratonyx′is.** Ceratonyxis.

**Keratopharynge′us.** Ceratopharyngeus.

**Keratopla′sia** (*keras*, horn, *plasis*, formation). Formation of horny layer of the epidermis.

**Ker′atoplasty** (*keras*, horn, *plasso*, to form). Plastic operation on the cornea; trephining of the cornea.

**Keratorrhex′is** (*keras*, horn, *rhexis*, rupture). Rupture of the cornea.

**Keratoscleri′tis.** Inflammation of the cornea and sclerotic coat.

**Ker′atoscope** (*keras*, horn, *skopeo*, to observe). Instrument for examining and testing meridians of curvature of the cornea by observing the images formed by reflection from its anterior surface. The process is called *keratos′copy*.

**Ker′atose.** Horny.

**Kerato′ses** (pl. of keratosis). Skin affections with hypertrophy of the epidermis and horny or warty growths.

**Kerato′sis.** Change to horny tissue; excessive growth or disease of horny tissue. **K. circumscrip′ta,** circumscribed growth. **Congen′ital k. of palms and soles,** keratodermia. **K. diffu′sa,** ichthyosis. **K. follicula′ris contagio′sa,** rare skin disease of children, the pathological symptoms of which are due to the retention or to the formation of horny plugs at the site of the follicle. **K. f. pila′ris** or **spinulo′sus,** papules resulting from the distention of hair follicles; ichthyosis follicularis. **K. ob′turans,** mass of horny scales acting as a plug to the external auditory canal. **K. palma′ris,** a form of keratosis affecting the palmar surfaces. **K. pigmento′sa,** verruca senilis. **K. pila′ris,** lichen pilaris. **K. planta′ris,** a form of keratosis affecting the soles. **K. seni′lis,** form of keratosis of older persons, in which the skin is unusually cornified, even leading to degenerative changes.

**Keratostaphyli′nus.** Ceratostaphylinus.

**Ker′atotome.** Ceratotomus; cataract knife; knife for incision of the cornea in iridectomy.

**Keratot′omy** (*keras*, horn, *tome*, incision). Incision of the cornea, used especially in cataract operation.

**Keraunoneuro′sis** (*keraunos*, lightning). Nervous condition developed in persons struck by lightning, such as palsy, tremor, disorders of sensation or of the senses, exaggerated reflexes, impaired vision, etc.

**Keraunopho′bia** (*keraunos*, lightning, *phobos*, fear). Excessive dread of lightning.

**Kerecta′sia** (*keras*, horn, *ektasis*, distention). Distention or bulging of the cornea, probably as a sequel of keratitis.

**Kerec′tomy.** Keratectomy.

**Ker′ion** or **Ke′rium** (honeycomb). Suppurative inflammation of the hair follicles of the scalp, destroying the hair pulp and causing the falling off of the hair. A form of parasitic sycosis. **K. Cel′si,** tinea trichophytina.

**Kerk′ring's os′sicle.** Ossified spot in the occipital bone, back of the occipital foramen. **K.'s valve,** valvulæ conniventes.

**Ker′mes.** One species of the genus *Kermes* lives on a green oak, Quercus cocifera, growing abundantly in Southern France, Spain, and islands of the Grecian Archipelago, and is called Coccus ilicis, kermes animal, Cocci granum, coccum, Coccum baphicum or infectorium or tinctorium or scarlatinum, etc. The kermes inhabiting it has the appearance of a small, spherical, inanimate shell; its color is reddish-brown, and it is covered with ash-colored dust. This is the kermes of the shops, now used only in dyeing, but formerly as an aphrodisiac, analeptic, and antiabortive. **Min′eral k.**, antimonii sulphuretum præcipitatum and sulphuretum rubrum

**Ker′nel.** Tubercle; enlarged lymphatic gland. **Wax** or **wax′ing k.**, enlarged lymphatic vessels. **Yolk k.**, nucleus of the yolk.

**Ker′nig's sign.** A phenomenon formerly believed to be found only in affections of the pia mater. If the patient be made to sit up, as on the edge of the bed, the thigh being at right angles to the body, it is found difficult to extend the leg because of the presence of a marked flexor contracture.

**Ker′osolene.** Liquid product of the destructive distillation of coal, of very low specific gravity. It possesses anæsthetic properties, but is not easily managed as a general anæsthetic; its chief application is locally in spray.

**Ker′vah.** Ricinus communis.

**Ket′mia ægyptia′ca.** Hibiscus abelmoschus.

**Ke′tol.** Indol.

**Ke′tones.** Organic compounds, a class of generally volatile liquids, products of first stage of oxidation of secondary alcohols, and corresponding to aldehydes, similar derivatives of the primary alcohols.

**Ke′tose.** Levulose.

**Key.** Instrument for extracting teeth, having a claw at right angles to its handle; tooth-key. Apparatus for making and breaking the electrical circuit.

**Key and Ret′zius's bod′ies.** Corpuscles in the bills of aquatic birds, resembling Pacinian corpuscles. **K. and R.'s foram′ina**, two minute openings in the pia mater covering the fourth ventricle of the brain, through which the choroid plexus passes.

**Key′ri chei′ri.** Cheiranthus cheiri.

**Kha′ya senegalen′sis.** Swietenia senegalensis.

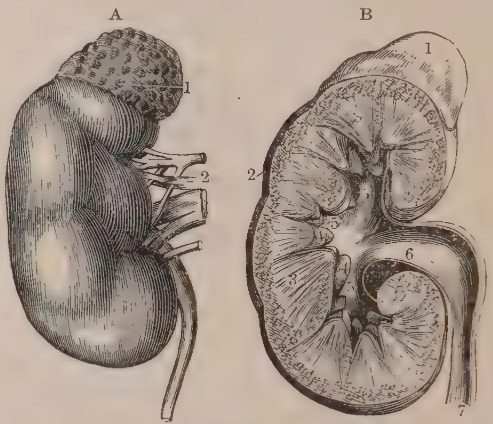
**Khus-khus.** Andropogon muriaticus.

**Kibe.** Chilblain.

**Kick′ia arbo′ria.** Milky juice of stem of this Javanese plant is purgative and anthelmintic.

**Kidin′ga** or **Kidin′go pe′po** (literally, a crampy pain caused by evil spirits). Exanthematous affection, similar to dengue, occurring in Zanzibar; scarlatinoid rash with rheumatic pains and fever, swelling of glands, etc.

**Kid′ney.** The kidneys or reins, the secretory organs of the urine, are two glands situated deeply, the one on the right, the other on the left, at the sides of the lumbar vertebræ, behind the peritoneum, and in the midst of an abundant fatty areolar tissue, *tunica* or *capsula adiposa*. The kidney is reddish-brown, oval in form, and flattened on two surfaces; has, at its internal margin, a deep fissure, by which the renal vessels and nerves enter or quit the organ, and the ureter issues. It resembles the haricot or kidney bean. Two parts are readily distinguishable in it: the outer, *cortical*, *glandular*, or *vascular*, which secretes the urine; and the inner, *tubular*, *medullary*, *uriniferous*, *conoidal*, or *radiated*, appearing under the form of small cones or unequal papillæ or mammillæ, each resulting from the union of small capillary tubes, adherent by one of their extremities to the cortical substance, and opening by the other at the summit of the cone into the calices, membranous tubes, more or less numerous, transmitting the urine of the papillæ to the pelvis of the kidney. Between the tubules and renal vessels is the intertubular stroma, especially abundant in the cortical substance, and toward the apices of the papillæ in very young human beings or in other animals. By the *pelvis* is meant a small, membranous sac of an irregularly oval shape, at the base of which are the orifices of the calices, and the other extremity of which is continuous with the ureter. The kidney is surrounded by a fibrous membrane proper to it, the capsule, perinephrus, tunica propria or albuginea. The renal artery is distributed to the corpora Malpighiana, forming a pellet of convolutions, which is received into a flask-like dilatation of the ureter, Bowman's capsule, and through which, it is conceived, the watery portion of the urine is separated. The blood then becomes venous, and is distributed by different veins—*portal veins* of the kidney—to the convoluted tubes through which the urine is secreted; thence the blood passes into the renal vein. The intermediate vessels between the Malpighian bodies and the convoluted tubes have been termed the portal system of the kidney. See *Ferrein's pyramids of Corpora malpighiana*, etc. The following weights and measurements of the kidneys have been given by Vierordt from various authorities:



The right kidney surmounted by the adrenal capsule. A, external surface, anterior face; 1, adrenal capsule; hilum with vessels. B, view on section; 1, adrenal capsule; 2, cortical portion; 3, 3, medullary or tubular portion; 4, 4, two of the calices receiving the apex of their corresponding cones; 5, 5, infundibula; 6, pelvis; 7, ureter.

| | |
|---|---|
| Weight, right kidney | 102 g. (E. Bischoff)–150 g. (Blosfeld). |
| " left kidney | 118 g. (E. Bischoff)–150 g. (Blosfeld). |
| Length | 108–114 mm. (Luschka). |
| Breadth, | 54–63, at upper part frequently 72. |
| Thickness | 34–45. |
| Tunica albuginea | 0.1–0.2 thick. |
| Cortical substance | 9 (Toldt)–10 thick. |
| Medullary substance | 16. |
| In the newborn | cortex 1.8 mm., medulla 8.31 thick. |
| Child, 3 months old | cortex 2.8, medulla 10.2 thick. |
| Tortuous uriniferous tubules | 0.05 diameter. |
| Straight uriniferous tubules | 0.045 mm. diameter. |
| Glomeruli | 0.2. |
| Pyramidal processes | 0.4 thick. |
| Uriniferous pores of the papillæ | 0.7 deep. |
| Pelvis of kidney | 140–180 wide. |
| Ureters | 320–340 long (Luschka 270), 5–6 wide. |

Orificium in the bladder 2 mm. long, separated 14 from one another and 180 from internal orifice of the urethra.

**Am′yloid k.**, lardaceous k; see table. **Atroph′ic k.**, contracted k. **K.-bean**, Phaseolus vulgaris. **Bran′ny k.**, appearance like bran in fatty infiltration of chronic inflammation of the kidneys. **Bright's disease of the k.**, albuminuria, nephritis. Bright's disease was formerly defined as a granular disease of the cortical part of the kidney, characterized by the secretion of urine which contains albumin and is of less specific gravity than natural, and which destroys by inducing other diseases. It was first described by Dr. Richard Bright, of London. By some it was made to include only one particular form of renal disease, in which the tubules are inflamed, *tubal nephritis;* by others it included parenchymatous nephritis, interstitial nephritis, and amyloid or lardaceous degeneration. Under the head of Bright's disease are comprised, according to recognized authority, all diseases of the kidney productive of albuminuria. Two forms have been described, the acute and chronic, different varieties of which have been referred to by writers on the subject.

*Acute Bright's disease,* variously called acute tubal, tubular, parenchymatous, catarrhal, or desquamative nephritis, acute albuminuria, acute renal dropsy, is an affection of the whole kidney, more or less, but especially the epithelial or gland-cells lining the urinary tubuli. The cells become atrophied and disintegrated, and by their desquamation block up the tubes; the renal circulation becomes obstructed, the kidneys are congested, serum and fibrin are effused, the former causing an albuminous condition of the urine, while the fibrin, having the broken-down cells entangled with it, passes off in the urine in epithelial tube-casts. When there is no such desquamative process it is called *non-desquamative disease of the kidney.* The chief symptoms are fever, usually moderate, dull pain in the loins, vomiting, dropsy, anæmia, and uræmic indications. The urine is scanty, with suppression, has a large amount of albumin, and deposits a thick sediment exhibiting the results of disintegration; its specific gravity is high.

*Chronic Bright's disease, chronic albuminuria,* includes several varieties: 1. *Chronic catarrhal nephritis,* large white kidney. The symptoms are loss of flesh, adynamia, anæmia, disturbance of the digestive organs, dropsy, increased arterial tension, uræmic symptoms. The urine is generally diminished in amount, but markedly albuminous, with a decided sediment; there is often dropsy, serous inflammation, valvular cardiac disease, albuminuric retinitis, etc. There are anæmia and fatty degeneration of the kidney, and the tubes are loaded with fatty epithelium and casts; the kidney contracts in size from the attendant destruction of epithelium. 2. *Granular* or *red granular kidney,* also called contracted granular, gouty, or cirrhotic kidney, chronic desquamative or interstitial nephritis, a disease characterized by albuminous urine, persistent desquamation of epithelium, atrophy of the kidney, granular epithelial casts, etc. It is more common in the male sex, and is usually due to syphilis, gouty diathesis, chronic alcoholism, etc. The kidneys are red, and often contain cysts or calcareous deposits, without thinning of the cortical substance. There may be fatty degeneration and desquamation of the epithelium, with fatty degeneration of arteries in various parts of the body. Palpitation, dyspnœa (cardiac or pulmonary), valvular disease, headache, dizziness, dimness of vision from albuminuric retinitis, may all be present. The urine is more plentiful, the specific gravity low, the amount of albumin scanty. 3. *Fatty kidney* or fatty degeneration of the kidney, seen either in its enlarged form as the *mottled kidney* or with contraction of the organ, may occur as the result of acute desquamative nephritis. 4. *Lardaceous, amyloid,* or *waxy kidney,* which usually occurs in connection with constitutional affections, such as phthisis, scrofulous abscess, constitutional syphilis, etc., and is characterized by the form of infiltration known as the lardaceous or waxy. The kidney is large and pale, the urine is increased in quantity, but pale, and there is a good deal of albumin.

The treatment adopted for these various conditions of Bright's disease cannot be summarized in the space of a single paragraph. (For tests for albumin in the urine, see *Urine, examination of.*)

The synoptical table on page 606 presents a clear exposition of the whole subject (J. M. Da Costa).

**Car′diac k.,** disease of the kidney accompanying heart disease. **Cirrhot′ic k.,** interstitial nephritis. **Consump′tion of k.,** tuberculosis of the kidney, accompanied usually with ulceration. **Contract′ed k.,** small kidney sometimes resulting from chronic nephritis. **Cys′tic k.,** cystic disease or degeneration of kidney. **Drop′sy of k.,** hydronephrosis. **Fat′ty k.,** see table. **Float′ing k.,** movable kidney. **Gout′y k.,** interstitial nephritis. **Gran′ular k.,** interstitial nephritis. **K. head,** see *Pronephros.* **Hepat′ic k.,** disease of the kidney consecutive to cirrhosis or other disabling affection of the liver. **Hob′nail k.,** granular k. **Horse′shoe k.,** faulty conformation in which the lower ends of the two kidneys are united by a transverse portion across the spine, thus forming a crescent or horseshoe. **Inflamma′tion of k.,** nephritis. **Larda′ceous degenera′tion of k.,** see table. **Large white k.,** a form of chronic Bright's disease; see above. **Mot′tled k.,** spotted k. **Mov′able** or **float′ing k.,** condition of the kidney, in which the elongated renal vessels permit the kidney to be moved in certain directions. **Pig-back k.,** large, congested kidney of abusers of alcohol. **K. plant,** Baccaris pilularis. **Primor′dial k.,** corpus Wolffianum; mesonephros. **Se′nile k.,** k. atrophied from old age. **Spot′ted k.,** mottled kidney; condition of the kidney resulting from the combination of shrivelling of that organ and fatty degeneration of the epithelia of the urinary tubuli. **Sur′gical k.,** surgical nephritis. **Tuber′culous disease of k.,** consumption of kidney. **Wan′dering k.,** movable k. **Wax′y k.,** see table. **White k.,** fatty or amyloid degeneration of that organ. **K. wort,** Cotyledon umbilicus; Saxifraga stellaris.

**Kier′nan's spa′ces.** Interlobular spaces of the liver.

**Kies′selbach's place.** Thinnest portion of the septum of the nose; hence more subject to injury or perforation.

**Kiesteïne′.** See *Kyestheïne.*

**Kile.** Ulcer.

**Kil′ian's line.** Line of the promontory of the sacrum. **K.'s pel′vis,** halesteretic pelvis—*i. e.,* deformed by loss of lime salts; similar to osteomalacia.

**Kill-lamb.** Andromeda mariana.

**Killbas′tard.** Juniperus sabina.

**Kill′herb.** Orobanche major

**Killo′sis.** Strabismus.

**Kil′ogramme** or **Kil′ogram** (*chilioi,* a thousand. One thousand grammes, equal to two pounds eight ounces one drachm and twenty-four grains Troy.

**Kil′olitre.** Measure containing a thousand litres.

**Kil′ometre.** Measure of one thousand metres.

**Ki′na ki′na.** Cinchona.

**Kinæsthe′sia** (*kineo,* to move, *aisthesis,* perception). Muscular sense; perception of motion.

**Kinæsthesiom′eter.** Instrument for testing muscular sense.

**Kinæsthe′sis.** Sense of movement, kinesthesia.

**Kinæsthet′ic** (*kineo,* to move, *aisthesis,* sensation). Relating to appreciation of muscular movements. **K. cen′tre,** nervous centre for receipt and coordination of impressions developed by muscular movements. **K. sense,** sense which appreciates muscular movements and their effects.

**Kin′cough** or **Kind′cough.** Whooping-cough.

**Kinemat′ics** (*kineo,* to move). Science which has reference to the movements of bodies.

**Kinesal′gia** (*kinesis,* motion, *algos,* pain). Painful muscular movement.

**Kine′sia** (*kineo,* to move). Motion. Illness caused by motion, as seasickness.

**Kinesial′gia** (*kinesis,* movement, *algos,* pain). Condition of a muscle in which contraction is followed by pain.

**Kinesiat′rics** (*kinesis,* motion, *iatros,* physician). Movement cure.

**Kine′sic.** Pertaining to movement.

**Kinesim′eter** or **Kinesiom′eter** (*kinesis,* motion, *metron,* measure). Apparatus to measure the extent of motion.

### TABLE EXHIBITING THE CLINICAL DIFFERENCES BETWEEN THE PRINCIPAL FORMS OF BRIGHT'S DISEASE.

*Acute Cases, in which Dropsy occurs quickly and is extensive.*

| | | | |
|---|---|---|---|
| ACUTE BRIGHT'S DISEASE; ACUTE DESQUAMATIVE OR TUBAL NEPHRITIS; ACUTE PARENCHYMATOUS NEPHRITIS; ACUTE RENAL DROPSY. | Caused mostly by exposure or scarlet fever.<br>Dropsy extensive, generally begins in the eyelids or in the feet; usually febrile symptoms; uræmia may be met with. Disease most common in childhood and among young adults.<br>Recoveries frequent, but disease may terminate in the large white kidney. | Urine usually scanty, deep-colored, of high specific gravity, containing much albumen, often blood; also blood-casts; casts, many of large size, covered with epithelium and a few hyaline casts; and free epithelial cells, cloudy and granular. | Kidneys enlarged, congested, or mottled, shedding epithelium; cortical substance increased; cones usually redder than cortical substance. Dilated convoluted tubes, distended with swollen, cloudy epithelium; at ends of tubules also blood or plugs of fibrin. Tubules darker and denser than normal. |

*Chronic Cases, in which Dropsy is variable in amount and may be absent.*

| | | | |
|---|---|---|---|
| CHRONIC INFLAMMATORY FORM; CHRONIC TUBAL NEPHRITIS; CHRONIC PARENCHYMATOUS NEPHRITIS; LARGE WHITE KIDNEY. | History often of antecedent acute inflammatory attack; dropsy a prominent symptom. Uræmic phenomena not uncommon; among them at times uræmic coma with its usual symptoms. Inflammations of serous membranes also not uncommon.<br>Hypertrophy of heart, especially of the left ventricle.<br>Recovery possible but doubtful; may pass into fatty kidney. | Urine in normal or in increased quantity; albumen generally in considerable amount; granular epithelial casts; some hyaline casts; at times compound granule cells and partially fatty epithelium; casts with fragments of epithelium or a little fat; no blood-casts. | Kidneys enlarged, capsules easily stripped off, cortical substance increased in volume; cones may be of natural color; tubes often irregularly distended, and filled with granular epithelium here and there slightly fatty, and with detritus. Thickening of intertubular matrix. |
| FATTY BRIGHT'S KIDNEY. | Persistent and obstinate dropsy, coming on gradually; face pale and puffed; hypertrophy of heart affecting often both sides.<br>Always fatal. | Urine contains much albumen, fatty casts, fatty epithelial cells, free oil.<br>Spec. grav. variable, usually from 1015 to 1030.<br>Quantity variable, generally moderate or diminished; urea diminished. | Kidneys enlarged and very fatty; sometimes have a mottled look.<br>The tubes, especially the convoluted ones, full of highly-fatty epithelium and free oil. |
| WAXY KIDNEY; LARDACEOUS OR AMYLOID DEGENERATION OF THE KIDNEY. | Follows usually exhausting and wasting diseases, syphilis, caries, and long-continued suppuration.<br>Rare in very early and in advanced age.<br>Dropsy trifling, except late in disease; great emaciation; striking sallowness of face; liver and spleen enlarged; diarrhœa; much thirst; heart not affected; nervous symptoms infrequent.<br>Unfavorable prognosis. | Urine increased, contains much albumen, but few casts, which are pale and transparent or highly refracting. The casts may or may not give the mahogany-red reaction with a watery solution of iodine.<br>Spec. grav. low, yet usually above 1010; urea normal or slightly diminished. | Kidneys enlarged, smooth, and waxy-looking; capsule easily detached; cortex pale, anæmic; reddish-brown discoloration on testing with watery solution of iodine; cones often dark and congested. Morbid process at first chiefly along renal vessels. |
| CHRONIC CONTRACTION OF THE KIDNEY; CIRRHOSIS OF THE KIDNEY; INTERSTITIAL NEPHRITIS; GRANULAR KIDNEY; GOUTY KIDNEY. | Dropsy slight, frequently absent; face sallow, yet not so much so as in the waxy disease; often headache and retention of urea, tendency to coma and to convulsions; impoverished blood; hypertrophy of the heart; epistaxis; liver may be cirrhosed; retinitis. Most common between forty and sixty years of age.<br>May exist for years unsuspected; is a very chronic disease and incurable; may lead to death by apoplexy. | Urine more copious than in health, yet extremely small amount of albumen, this at times temporarily absent; hyaline and large finely granular casts; altered epithelium; a little oil.<br>Spec. grav. low; rarely above 1010, much oftener below; urea not decreased until late in disease. | Kidneys waste slowly, become dense and contracted; capsule very adherent; surface often granular; thickness of the cortical substance diminished; cysts common. There is hypertrophy of connective tissue; compression and atrophy of gland-elements and of tubules. Cardio-vascular changes. Tissue-changes in renal ganglia. |

**Kinesiol'ogy** (*kinesis*, movement, *logos*, treatise). Science of movements of the body, employed for therapeutical or hygienic results.

**Kinesiomet'ric** (*kinesis*, movement, *metron*, measure). Relating to measurement of movements.

**Kinesioneuro'sis.** Nervous affection attended with abnormal movements. **Exter'nal k.**, k. affecting external muscles. **Inter'nal k.**, k. affecting the muscles of the viscera. **Vas'cular k.**, angioneurosis. **Vis'ceral k.**, k. affecting the muscles of the viscera.

**Kinesip'athy** (*kinesis*, motion, *pathos*, disease). Movement cure, motorpathy. A mode of treating diseases by gymnastics or appropriate movements proposed by Ling, a Swede; hence called *Lingism*.

**Kinesither'apy** (*kinesis*, motion, *therapeuo*, to cure). Exercise or movement applied to treatment of disease.

**Kinesod'ic** (*kinesis*, motion, *hodos*, way). Term to designate the nervous substance concerned in the conduction of motorial impulses.

**Kineth'mics.** The science of movements in general.

**Kinet'ic** (*kineo*, to move). Relating to motion.

**Kinet'oplasm** (*kineo*, to move, *plasma*, formation). Chromatic material of the cell-body.

**King'cure.** Pyrola maculata.

**King's e'vil.** Scrofula. **K.'s yel'low**, orpiment.

**Kings'hood.** Reticulum.

**Ki'nic acid.** $C_7H_{12}O_6$. It exists in various plants, but is usually prepared from kinate of calcium, which is left as a residue in the manufacture of sulphate of quinine. By heating kinic acid or a kinate with manganese dioxide and sulphuric acid, kinone or qiunone is obtained. Kinic acid acts on the system like other vegetable acids.

**Kink, dumb.** Form of whooping-cough complicated with gastroenteritis.

**Kinkel'ibah.** A plant growing in Africa, the leaves of which are prescribed in hæmoglobinuria.

**Kinki'na.** Cinchona.

**Ki′no** (Ind.). African, East Indian, or Amboyna kino; it is the inspissated juice of Pterocarpus marsupium (Ph. U. S. and Br.). On wounding the bark the kino flows drop by drop. A West India variety, Jamaica kino, is derived from Coccoloba uvifera or seaside grape; and a Botany Bay kino is the concrete juice of Eucalyptus resinifera or brown gum tree of New Holland, ord. *Myrtaceæ*. Kino consists chiefly of tannic and gallic acids, oxide of iron, and coloring-matter; it comes in fragments of a dark ruby-red color, easily pulverized; it is powerfully astringent, and used in diarrhœa, dysentery, hemorrhage, leucorrhœa, etc. Dose, gr. v–x (0.32–0.65) in powder. The tincture, *tinctu′ra ki′no*, is official in the Ph. U. S.; dose, ʒj-ij (4.0–8.0). **Amboy′na k.,** kino. **Amer′ican k.,** inspissated juice of Coccoloba uvifera or seaside grape. **Austra′lian k.,** astringent derived from eucalyptus. **Bengal′ k.,** astringent gum of several varieties of butea, containing kinotannic acid in large quantities. **Bu′tea** or **East In′dian k.,** Bengal k. **Eucalyp′tus k.,** Australian k. **K. gum,** kino. **West In′dian k.,** American k.

**Kinom′eter** (*kineo*, to put in motion, *metron*, measure). Instrument to estimate degree of uterine displacement dependent upon pelvic tumor or inflammation.

**Ki′none.** $C_6H_4O_2$. Substance derived from the decomposition of kinic acid.

**Ki′noplasm.** The part of the protoplasm from which the spindle fibres are formed.

**Kinotan′nic acid.** Most important constituent of kino; variety of tannic acid.

**Kino′va bit′ter** or **bit′ters.** Kinovic acid; kinovin.

**Kino′vic acid.** $C_{28}H_{34}O_4$. Found in kinova or chinova bark and bark of plants of the genus *Nauclea*. It is given in diarrhœa and dysentery, and as a febrifuge.

**Kinovin′.** Quinovin, kinovic bitter, $C_{30}H_{48}O_8$. Originally from Quinquina nova or new bark; also from calisaya bark and other cinchonas; bitter, white principle, giving bitter character to some barks.

**Kionorrhaph′ia** or **Kionor′rhaphy** (*kion*, uvula, *rhaphe*, suture). Staphylorrhaphy.

**Ki′otome** (*kion*, a pillar, *tome*, incision). Instrument invented by Desault to cut accidental bands or filaments in the rectum and bladder; used also for the removal of the uvula. It is composed of a flat silver sheath, open at one edge, provided with a cutting blade, which, forced through the opening, divides all the parts with which it comes in contact.

**Kiot′omy.** Amputation of the uvula.

**Kip′pernut.** Bunium bulbocastanum.

**Kiriaghu′ma.** Gymnema lactiferum.

**Kirsch′wasser.** Cherry-water; alcoholic liquor obtained from cherries, bruised with their stones, by distillation after fermentation.

**Kiskito′mas nut.** Hickory nut.

**Kis′singen.** At this resort in Bavaria are several tonic, laxative, and alterative springs, the Rakoczy being the most important, containing, besides carbonic acid, sodium chloride, carbonate of lime, magnesium sulphate, chlorides of potassium and magnesium, chloride of lithium, bromide and iodide of sodium, and carbonate of iron. This water quickens the circulation and stimulates the secretions of the mucous membranes generally, but especially those of the alimentary canal.

**Kitasa′to's bacil′lus.** Bacillus pestis bubonicæ. **K.'s spiril′lum,** Spirillum concentricum.

**Kite′tail plug.** Tampon made by tying pieces of cotton or cloth to a string at intervals, similar to a kite-tail, used to control uterine hemorrhage.

**Kiwisch's′ meth′od.** Use of hot vaginal injections to induce premature labor.

**Kleptoma′nia** (*klepto*, to steal). Form of mental alienation marked by an irresistible propensity to steal.

**Kleptopho′bia** (*klepto*, to steal, *phobos*, fear). Insane dread of becoming a thief.

**Klikusch′i.** Hysterical or hysteroepileptiform affection of women of Kursk and Orel, resembling acute mania.

**Klu′mene.** Acetylene.

**Klump′ke's paral′ysis.** Wasting and paralysis of some of the muscles of the forearm and hand, with anæsthesia in parts of the arm and forearm supplied by the ulnar nerve; with sluggish pupil and retraction of the eyeball. Due probably to neuritis or pressure-lesion of first dorsal root of brachial plexus and communicating branch of second dorsal.

**Knapp's an′gioid streak.** Streak of discoloration in the retina following hemorrhage. **K.'s test,** test for sugar in urine, the latter being heated with standard solution of mercuric cyanide and sodium hydrate; the cyanide is reduced and metallic mercury precipitated.

**Knead′ing.** Shampooing; a form of massage.

**Knee.** Genu. **Cham′bermaid's k.,** housemaid's knee. **K. of cor′pus callo′sum,** genu of corpus callosum. **Encir′cled hoof k.,** crusta genu equinæ. **House′maid's k.,** inflammation of the bursa in front of the patella; apt to occur in those in whom the bursa is subjected to much pressure; hence its name.

**Knee-cap.** Patella.

**Knee-clo′nus.** Knee-jerk; knee phenomenon; patellar reflex; patellar tendon reflex. See *Reflex*.

**Knee-el′bow post′ure.** Position upon the elbows and knees, resorted to for the purpose of facilitating rectal or vaginal examinations.

**Knee′holly.** Roscus.

**Knee-jerk.** Produced by tapping the quadriceps or patellar tendon while the leg is hanging loosely over the opposite knee; it is increased during certain conditions of the nervous system, and diminished or absent in others; knee-clonus.

**Knee-joint.** Genu.

**Knee-pan.** Patella.

**Knee-phenom′enon.** Knee-jerk.

**Knee-scab.** Crusta genu equinæ.

**Kneip′pism.** Treatment of disease by special forms of hydrotherapy.

**Knife.** Cutting instrument used in surgery to divide the soft parts, differing from the bistoury or scalpel in being usually larger. The most common knives are the following: **Ad′ams's k.,** k. for operation on the iris, with straight edge and oblique point. **Amputa′tion k.,** this is the largest knife used in surgery; formerly it was curved, now it is straight, and provided with one or two edges. **Beer's k.,** a triangular-shaped knife for use in cataract operations. **Cat′aract k.,** such a knife is intended to perform the section of the transparent cornea, and is so shaped as exactly to fill the small wound made by it, and thus to prevent the discharge of the aqueous humor until the section is completed; a cutting instrument—a picker or cystitome—is also employed for opening the capsule. **Ches′elden's k.,** k. with a fixed handle, very convex on its edge, concave on the back, used by Cheselden in lithotomy. **Cor′nea k.,** cataract knife used for section of the cornea. **Crook′ed k.,** a knife crooked and concave on its cutting edge; formerly employed in amputation of the limbs. **Crotch′et k.,** a steel instrument composed of a round staff, furnished with a handle at one extremity and at the other with a curved knife; formerly used to cut to pieces the fœtus in utero, or to open its head when necessary. **Double-edged k.,** catling; knife the blade of which is straight and sharp on both sides; used for disarticulating bones and for cutting the soft parts between the bones in amputation of the leg and forearm. **Fer′gusson's k.,** k. used in operation for cleft palate, having edge at acute angle. **Her′nia k.,** curved bistoury for division of constriction in strangulated hernia. **Iridec′tomy k.,** k. with triangular blade for incision of the cornea in this operation. **Lentic′ular k.,** instrument used in the operation of trepanning for removing inequalities in the inner table of the skull left by the crown of the trephine around the opening made by it. Is formed of a lenticular button fixed at the extremity of an iron staff; convex on one side, flat on the other; sharp at both edges, and mounted on a hard-wood or metal handle. **Lithot'omy k.**, large knife, the narrow blade of which, four inches in length, sharp in its whole extent, and at an obtuse angle with the handle, was used in the lateral operation. **Pol'ypus k.**, polypotome. **Root'-cutting k.**, in pharmacy a knife by which roots and other ligneous matters are divided in pharmaceutical processes. **K. en serpette'**, k. of the shape of a serpette or pruning-knife, invented by Desault for dividing the bony wall of the maxillary sinus to extract fungi from it. **Von Graefe's k.**, long, slender knife used by von Graefe, particularly in senile cataract.

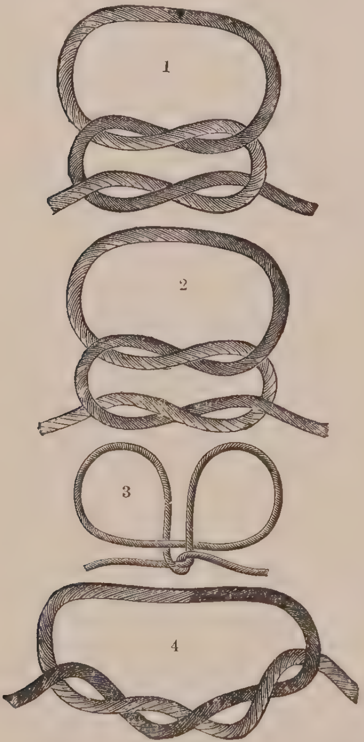
**Knife-rest crys'tals.** Crystals of triple phosphate found in the urine, and having this fancied resemblance.

**Knit'ting.** Process of repair of fractured bone.

**Knob'weed.** Collinsonia centaurea.

**Knock'-knee.** Genu valgum.

**Knot.** Tubercle. **Clove-hitch k.**, see *Clove-hitch.* **Flat k.**, square k. **Germ k.**, lymph k. **Gran'ny k.**, a knot so made that the ends do not come out parallel with the standing parts. **Lymph k.**, local enlargements in lymphatic glands, indicating increased cell-action. **Pack'ers' k.**, compressive bandage used for arresting hemorrhage from the temporal artery or its branches, made with a double-headed roller, about six yards long; is called by some surgeons *solar* or *oblique chevestre* or *capistrum.* **Reef k.**, square k. **Square k.**, a knot so made that the ends emerge parallel with the entering or standing portion of the cord. **Staf'fordshire k.**, knot for tying pedicles, a combination of loop and reef-knot. **Sur'geon's k.**, square k.; also double knot made by passing the thread twice through the same noose; used frequently in ligation of arteries, the umbilical cord, etc.



Knots. 1, granny knot; 2, square knot; 3, Staffordshire knot; 4, surgeon's knot.

**Knot'berries.** Rubus chamæmorus.

**Knot'grass.** Polygonum aviculare.

**Knot'root.** Collinsonia canadensis.

**Knot'weed.** Collinsonia canadensis, Polygonum aviculare.

**Knowltonia** (nole-ton'e-ah) **grac'ilis** (after Knowlton, of the botanic garden at Eltham, Eng.). Ord. *Ranunculaceæ.* Grows in S. Africa; has same properties as K. rigida, leaves and roots of which are used as substitute for cantharides.

**Knuck'le.** Prominence produced by the flexion of a finger; loop of intestine. Protuberance made upon a filling to preserve a normal space between adjoining teeth.

**Ko'belt's cyst.** Cyst of a Kobelt tube or upper duct of the Wolffian body.

**Koch's bacil'lus.** Bacillus tuberculosis; Spirillum choleræ asiaticæ. **K.'s com'ma bacil'lus**, Spirillum choleræ asiaticæ. **K.'s erup'tion**, eruption resembling measles which sometimes succeeds the hypodermic use of tuberculin. **K.'s law**, to be a specific bacillus, it must be always present, obtained from a pure culture, produce the disease, and be again procurable for cultivation. **K.'s lymph**, tuberculin.

**Koch-Ehr'lich solu'tion.** Stain used in bacteriological investigations, composed of anilin-oil, absolute alcohol, fuchsin, gentian-violet or methylene-blue.

**Koch'sin.** Tuberculin.

**Koch-Weeks bacil'lus.** Microorganism of acute conjunctivitis.

**Koeb'ner's mul'tiple pap'illary tu'mors.** Mycosis fungoides.

**Koel'liker's fi'brous lay'er.** Fibrous layer or substance of the iris. **K.'s glands**, Bowman's glands. **K.'s mus'cle buds**, spindle-shaped buds noticed at the point of entrance of the nerves into the fasciculi of the muscular tissue. **K.'s nu'cleus**, gray substance around the central canal of the spinal cord. **K.'s retic'ulum**, neuroglia. **K.'s tract-cells**, ganglia cells whose axes enter the white substance of the spinal cord.

**Koe'nig's manomet'ric flames.** Flame pictures characteristic of the vowels, and varying with the pitch of the voice, produced in a revolving mirror by vibrations of the voice against a membrane. **K.'s rods**, a row of steel bars arranged so that each one, when struck, produces a sound of a given pitch. **K.'s symp'tom-com'plex**, in tuberculous contraction of the cæcum, attacks of constipation or diarrhœa, colic, gurgling, and distended abdomen.

**Kohl'rausch's fold.** Crescentic duplication of mucous membrane of the rectum near the anus. **K.'s veins**, superficial veins on the inferior surface of the penis.

**Ko'kum.** Garcinia purpurea. **K. but'ter**, see *Garcinia purpurea.*

**Ko'la.** The mature seed or nut of Kola or Cola acuminata, a tree growing wild on the western coast of Africa and transplanted to other regions. It contains caffeine, theobromine, a glucoside kolanin, and an enzyme kolazyme. Kola is a nutritive tonic and systemic invigorator. It may be given in substance, or in wine, or with pepsin, etc. **K. tan'nin**, a compound of caffeine and tannin derived from kola.

**Kolanin'.** Glucoside from kola.

**Kollone'ma** (*kolla*, glue, *nema*, tissue). Myxoma.

**Kolotyph'us.** Typhoid fever.

**Kolp-.** For words beginning thus, see *Colp-*.

**Kol'to.** Plica.

**Kolysep'tic** (*kolyo*, to check). Checking septic or putrefactive action.

**Kooch'la-tree.** Strychnos nux vomica.

**Koor'chee.** See *Nerium antidysentericum.*

**Koos'so.** Hagenia abyssinica.

**Koo'yah root.** See *Valeriana.*

**Kophe'mia.** Word-deafness.

**Kopio'pia** or **Kopyo'pia.** Fatigue of vision; weakness of sight.

**Kop'lik's sign** or **spots.** Enanthem of measles;

small spots of a bluish-white color with a red areola on the mucous membrane of the lips and cheeks; pathognomonic forerunners, by three or four days, of the measles exanthem.

**Kopp's asth'ma.** Thymic asthma; spasm of the glottis.

**Kop'peschaar's solu'tion.** Decinormal solution of bromine, employed as a test.

**Kordelles'tris syphilit'ica.** Caroba.

**Kore-, Koro-** (*kore*, pupil). For words commencing with this prefix, see *Core-*, *Coro-*.

**Kor'is.** Cimex.

**Koro'nion.** Coronion; apex of coronoid process of the inferior maxillary bone.

**Koros'copy.** Retinoscopy.

**Kor'sakoff's psycho'sis.** Delirious condition in multiple neurosis.

**Kory'za.** Coryza.

**Kosin'.** Crystalline substance derived from kousso flowers; used as a tæniacide.

**Kos'mos.** See *Acosmia*.

**Ko'so.** Hagenia abyssinica.

**Kosotoxin'.** Active principle of the flowers of koso. Its toxic action is directed to the muscular system.

**Kosseïn'.** Yellowish, amorphous bitter powder from Hagenia abyssinica, used as a substitute for kousso.

**Kos'so.** Hagenia abyssinica.

**Kou'mis** or **Kou'myss.** Kumyss.

**Kous.** See *Valeriana*.

**Kousseïne'.** Brayerine. See *Hagenia abyssinica*.

**Koussine'.** See *Hagenia abyssinica*.

**Kous'so.** The official name in the Ph. Br. for brayera. An anthelmintic.

**Kowalew'sky's** (kaw-val-ev'skis) **canal'.** Neurentic canal.

**Koy'ter's mus'cle.** Corrugator supercilii.

**Krab'bea gran'dis.** Diplogonopholus grandis, a rare intestinal parasite resembling some of the bothriocephali.

**Krame'ria** (after Kramers, German botanists). Rhatany, ratanhy. Ord. *Polygaleæ;* is a native of Java; root has a bitter taste, and is astringent, diuretic, and detergent. Official (Ph. U. S.) name for the root of K. triandra and K. ixina. The following are the official preparations: *Extrac'tum krame'riæ;* dose, gr. v–x (0.32–0.65). *E. k. flu'idum;* dose, ♏x–ʒss (0.65–2.0). *Syr'upus k.;* dose, ʒss–ij (2.0–8.0). *Tinctu'ra k.;* dose, ʒj–ij (4.0–8.0). *Trochis'ci k.;* dose, one troche as required. **K. ixi'na,** rhatany of the Antilles; Savanilla rhatany is from the same plant. **K. trian'dra,** krameria.

**Kra'nia.** See *Cornu mas*.

**Kras'ke's opera'tion.** Removal of a portion of the sacrum and the coccyx, in order to permit of more easy exsection of the rectum.

**Krauro'sis** (*krauros*, dry). Atrophy, dryness, shrivelling, as of mucous membrane. **K. vul'væ,** peculiar shrinking, shrivelling, or atrophic change in the vulva, the mucous membrane of which is dry and shiny.

**Krause's cor'puscles.** Terminal nerve corpuscles, similar to those of Pacini, met with in the conjunctiva, genitals, etc. **K.'s disk,** dark line traversing transversely each alternating light band in a muscle fibrilla. **K.'s end-bulbs,** K.'s corpuscles. **K.'s glands,** small glands in the conjunctiva, near the point of its reflection upon the globe of the eye, particularly of the upper lid. **K.'s line,** K.'s disk. **K.'s mem'brane,** K.'s disk. **K.'s mus'cle,** coracocervicalis muscle. **K.'s nerve,** ulnar collateral branch of the musculospiral nerve. **K.'s opera'tion,** extirpation of the Gasserian ganglion. **K.'s respi'ratory tract,** solitary fasciculus of the medulla oblongata. **K.'s valve,** duplication of mucous membrane in the lacrymal sac. **K.'s ven'tricle,** last ventricle of the spinal cord.

**Kreat'ic nau'sea.** See *Nausea*.

**Kreatin'.** Creatin.

**Kreatinin'.** $C_4H_7N_3O$. See *Creatin*.

**Kreatoph'agous** (*kreas*, flesh, *phago*, to eat). Carnivorous.

**Kreatox'ism.** Meat poisoning.

**Kre'osal.** Tannosal; soluble powder made by union of tannic acid and creosote. In solution it is used in the treatment of inflammation of the mucous membrane of the throat and respiratory canal.

**Kre'osol.** $C_8H_{10}O_2$. Homoguaiacol.

**Kre'osotal.** Carbonate of creosote. See *Creosotal*.

**Kreotox'ism.** Meat poisoning.

**Kresam'ine.** Aqueous solution of ethylene diamine and tricresol. Antiseptic, and also a local application to skin diseases.

**Kres'apol.** A solution of crude cresol in potassium soap. Used as a surgical antiseptic.

**Kresin'.** A liquid preparation formed by mixing cresol and cresoxyacetate; a surgical antiseptic.

**Kresochin,** kres-o-kin'. A soluble preparation containing 30 per cent. of chinolin and 17 of tricresol. Used for disinfection of surgical instruments and also for gynecological applications.

**Kre'sol.** Substance found in urine in two forms, orthokresol and parakresol. See *Cresol*.

**Kres'olide.** Compound of creosote and magnesia, employed in tuberculosis.

**Kresyl'ic acid.** See *Carbolic acid, impure*.

**Kretsch'mann's space.** Depression in the attic of the middle ear.

**Kreys'sig's sign.** In pericardial adhesion, retraction of the epigastrium and region of false ribs at each systolic contraction.

**Krinosin'.** Nitrogenized fatty substance of the brain.

**Kris'haber's disease'.** Nervous cardiac disease due to pathological condition of the medulla oblongata and cortex cerebri; called also *Cerebrocardiac neuropathy*.

**Krisow'ski's sign.** Furrows about the mouth and face, indicative of congenital syphilis.

**Krön'lein's her'nia.** Preperitoneal inguinal hernia.

**Kryofin'.** Methoxyacetphenetidin. Derivative of phenetidin, acetic acid being substituted by methylglycollic acid. Antipyretic, hypnotic, and antineuralgic. Dose, gr. viij (0.5).

**Kryp'ton** (*kryptos*, concealed). Crypton. Gaseous element in atmospheric air.

**Kryptophan'ic acid.** Acid found in urine.

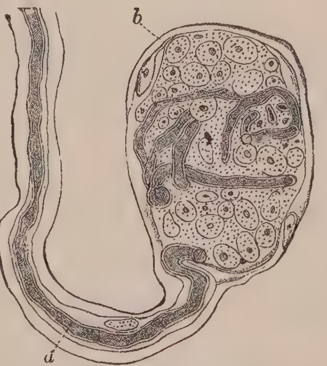
**Ku'a ka'ha.** Curcuma longa.

**Kubisaga'ri, Kubisga'ri.** Endemic paralytic vertigo of Japan.

**Kuech'enmailer's scis'sors.** Instrument with one probe-pointed and one sharp blade for division of the cervix.

**Kueh'ne's mus'cle-spin'dles.** See *Koelliker's muscle-buds*. **K.'s mus'cular phenom'enon,** see *Porret*.

**Kuem'mell's disease'.** Traumatic inflammation of a vertebra.



Krause's end-bulb. *a*, medullated nerve fibre; *b*, capsule of corpuscle.

**Kues'ter's sign.** If a cystic tumor be detected in the middle line in the anterior portion of the uterus, it is dermoid in character.

**Kuh′nia eupatorioi′des.** Hog-weed, fallow-weed, of the U. States, employed in diarrhœa, dysentery, colic, dyspepsia, etc.

**Kuhnt′s spa′ces.** Spaces containing aqueous humor, which communicate in front with the posterior chamber of the eye.

**Kuja′wah.** Conveyance in India for the transportation of the sick and wounded.

**Kuku′i oil.** See *Aleurites triloba*.

**Kumbecephal′ic** (*kumbe*, canoe, *kephale*, head). Having a boat-shaped head.

**Ku′myss.** Beverage resembling acidulous buttermilk; originally prepared in Tartary from mare's milk, allowed to stand for some days in a leathern churn until alcoholic fermentation has begun, when it is bottled for use. It is employed in complaints arising from feeble digestion, and is rather nutritious than exhilarating; but from the same material the Burats and the Kirghez prepare an intoxicating spirit called *aracu*, in which they indulge to excess. Kumyss is manufactured in the United States by fermenting cow's milk with yeast and grape-sugar, and is used as a food in wasting diseases and in affections of the kidney.

**Kunaree′.** Nerium odorum.

**Kup′fer's cells.** Star-shaped cells of the capillary vessels of the liver.

**Kuri′dah oil.** Purgative and anthelmintic oil, seeds of Carapa guianensis.

**Ku′rung oil.** Oil expressed from Pongamia glabra; used in parasitic diseases.

**Kussan′der.** Convolvulus panduratus.

**Kuss′maul's co′ma.** Coma, jactitation, rapid heart, and dyspnœa, occurring prior to death from diabetes. **K.'s disease′**, acute atrophic spinal paralysis. **K.'s paradox′ical pulse**, pulse which becomes very feeble or entirely absent during a deep inspiration, noticed in adhesion of the pericardium. **K'.s respira′tion**, respiration of a peculiar sighing character and accompanied by great exertion of all the respiratory muscles; inspiration is deep and prolonged, expiration is short and groaning; occurs in the air hunger of diabetic coma. **K.'s symp′tom**, coma and convulsions from the absorption of toxins in disease of the stomach.

**Kuss′maul-Lan′dry's paral′ysis.** See *Paralysis, acute ascending*.

**Ku′tubuth.** Arabic name for a species of melancholy in which the patient is never quiet.

**Kvass.** Fermented liquor made from oatmeal.

**Kwo′so.** Hagenia abyssinica.

**Ky′anal.** Anilin.

**Ky′anized.** Placed in bichloride of mercury for preservation; named after Kyan, the originator.

**Kyestheïne′** (*kyo*, to be pregnant, *esthes*, garment or pellicle). Peculiar albuminoid pellicle forming on the urine of a pregnant woman, when it is allowed to stand for a few days; whitish, opalescent, slightly granular, resembling the fatty substance that swims on the surface of cool soups. It is no longer considered of value in the diagnosis of early pregnancy.

**Kyesthin′ic.** Kiestinic.

**Kyllopo′dia** (*kyllos*, crooked, *pous*, foot). Clubfoot.

**Kyllo′sis** (*kyllos*, crooked, lame). Distortion of the feet, clubfoot, talipes.

**Ky′mograph** or **Kymograph′ion** (*kyma*, wave, *grapho*, to describe). Self-registering instrument exhibiting the relation between the waves of the pulse and the undulations produced by respiration.

**Ky′moscope** (*kyma*, wave, *skopeo*, to see). Apparatus for examining and registering pulsations.

**Ky′na.** Pastinaca opoponax.

**Kynoceph′alus** (*kyon*, dog, *kephale*, head). Having a head shaped like that of a dog.

**Kynopho′bia** (*kyon*, dog, *phobos*, fear). Morbid fear of a dog.

**Kynu′ric acid.** Acid found in dog's urine.

**Kypho′sis.** Posterior curvature of the spine.

**Kyphoskolio′sis** (*kyphos*, gibbous, *skolios*, crooked). Combined lateral and posterior curvature of the spine.

**Kyphot′ic.** Relating to kyphosis, or posterior curvature of the spine.

**Kysthi′tis** (*kysthos*, vagina). Inflammation of the vulva and of the mucous membrane of the vagina.

**Kysthopto′sis** or **Kysthopropto′sis** (*kysthos*, vagina, *pipto*, to fall). Prolapse or inversion of the vagina.

**Kys′tis.** Cyst.

**Kystot′omy.** Cystotomy.

**Kyto-** (*kytos*, cell). For words beginning thus, see *Cyto-*.

**Kyttarrha′gia** (*kyttarion*, alveolus, *rhago*, to break forth). Discharge of blood from an alveolus.

# L.

**L.** Abbreviation of left and of libra, pound; chemical symbol for lithium.

**Lab.** Ferment in the stomach which curdles milk. Rennin. **L. zy′mogen,** a substance which is transformed into lab by the gastric juice.

**Laba′rium.** Looseness of the teeth.

**Labarraque's′ solu′tion.** Solution of chlorinated soda.

**Lab′be's vein.** Anastomotic vein from lateral sinus.

**Lab′dacism.** Lallation.

**Labda′men** or **Labda′num.** Cistus creticus.

**La′bes.** Inflammatory swelling of the lips; macula.

**La′bia.** Plural of *labium,* lip. **L. cun′ni,** lips of the vulva. **L. exter′na,** labia majora. **L. inter′na,** nymphæ. **L. majo′ra,** outer lips of the vulva. **L. mino′ra,** nymphæ. **L. o′ris,** lips. **L. puden′di,** lips of the vulva. **L. ure′thræ,** lateral edges of the meatus urinarius; two folds of tissue meeting over the urethral orifice in women. **L. u′teri,** lips of the cervix uteri.

**La′bial** (*labium,* lip). Relating or appertaining to the lips or the labia. Name of a group of consonants, *p, b, m, f, v,* the sounds of which are made by the lips. **L. ar′tery,** the facial artery of the majority of anatomists, has had this name given to it. The labial arteries, properly so called, coronary arteries of the lips, are two in number: the superior arises from the facial, above and very close to the commissure of the lips, is large and tortuous, and distributed to the upper lip; the inferior arises from the facial, at a considerable distance from the commissure, and proceeds in a serpentine course into the substance of the lower lip, to which it is distributed. **L. bone,** small bone in the fœtus between the superior maxillary bone and the intermaxillary bone. **L. glands,** a multitude of muciparous follicles, round, prominent, and separate from each other, found on the inner surface of the lips below the mucous membrane. **L. mus′cle,** labialis. **L. sur′face,** the outer surface of a tooth against which the lip rests. **L. veins** are distinguished, like the arteries, into superior and inferior, which open into the facial vein, a division of the internal jugular.

**Labia′lis.** Orbicularis oris.

**La′bialism.** Form of speech in which labial sounds are prominent.

**Labidom′eter** or **Labim′eter** (*labis,* forceps, *metron,* measure). Scale adapted to the handles of the obstetrical forceps, indicating the distance of the blades from each other when applied to the head of the child in utero.

**La′bile** (*labilis,* apt to slip). Term used to designate a mode of application of electricity in which the active (usually negative) electrode is passed to and fro over the muscle or nerve trunk, strong muscular contractions being induced.

**Labiocer′vical.** Relating to the lips and the neck (of a tooth).

**Labiochore′a.** See *Labiochoreic stuttering.*

**Labiochore′ic stut′tering.** The lips are tightly pressed together so that the labial and the vowel following it are not connected.

**Labioden′tal** (*labium,* lip, *dens,* tooth). Relating to both lips and teeth. Name of a subgroup of labials, *f, v,* the sound of which is made by the action of both teeth and lips.

**Labioglossolaryn′geal.** Relating to or affecting the lips, tongue, and larynx, as the paralysis so designated, Duchenne's paralysis.

**Labioglossopharyn′geal.** Relating to or affecting the lips, tongue, and pharynx; a term applied to Duchenne's paralysis.

**La′biograph** (*grapho,* to write). An instrument for recording the motions of the lips in speaking.

**La′biomancy.** Lip-reading.

**Labiomen′tal.** Relating to lip and chin.

**Labiona′sal.** Relating to lip and nose; applied to sounds produced by them together.

**Labiopal′atine.** Relating to lips and palate.

**Labioplas′tic.** Relating to the formation of a new lip, as an operation for such purpose.

**La′bioplasty.** Operation for an artificial lip.

**Labiotenac′ulum.** Tenaculum for seizing the lip in harelip operation.

**Lab′is.** Forceps

**Lab′itome** (*labis,* forceps, *tome,* incision). Cutting forceps; cephalotome.

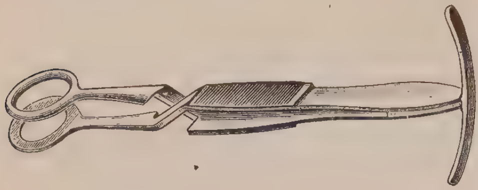
**La′bium** (pl. labia). Lip, especially the lower lip; see *Lip.* **L. cer′ebri,** border of each cerebral hemisphere which overlaps the corpus callosum. **L. lepori′num,** harelip. **L. ma′jus,** one of the *labia majora.* **L. mi′nus,** one of the *labia minora.* **L. tympan′icum,** free margin of the osseous lamina of the cochlea, the labium vestibulare being a sharp margin of the denticula lamina overhanging the labium tympanicum. **L. vestibula′re,** see *L. tympanicum.* **L. voca′le,** body formed by the vocal cords and their connections.

**Lab′lab.** Dolichos.

**La′bor.** Parturition. **Artific′ial l.,** labor in which the process is facilitated or accelerated by the use of forceps or other than the natural forces of the woman. **Breech l.,** labor in which breech presents. **L.-chair,** obstetric chair; chair in which a parturient woman is placed during delivery. **Com′plicated l.,** see *Parturition.* **Dif′ficult l.,** dystocia. **Dry l.,** labor neither preceded nor attended with discharge of liquor amnii. **Foot′ling l.,** labor in which the foot presents. **Forced l.,** see *Parturition.* **Imprac′ticable l.,** see *Parturition.* **Induced′ l.,** labor brought on by artificial means. **Inert′ l.,** dystocia due to uterine inertia. **Instrument′al l.,** labor assisted by instruments. **Metastat′ic l.,** labor in which the uterine and other muscular force is temporarily suspended, the nervous power seeming to be directed in other channels. **Missed l.,** uterogestation, in which, through want of parturient action, the fœtus is retained in utero beyond the ordinary term. **Mor′bid l.,** dystocia. **Mul′tiple l.,** labor at which two or more children are born. **Nat′ural** or **Nor′mal l.,** labor easily accomplished without accident or bad result. **Obstruct′ed l.,** dystocia owing to large size of fœtus or narrow parturient canal. **L. pains,** see *Pains.* **Physiolog′ical l.,** natural labor. **Postponed′ l.,** labor occurring after full term. **Pow′erless l.,** see *Parturition.* **Precip′itate l.,** see *Parturition.* **Premature′ l.,** see *Parturition.* **Preternat′ural l.,** see *Parturition.* **Protrac′ted l.,** labor extended beyond the usual time. **Show l.,** see *Parturition.* **Sponta′neous l.,** labor not requiring assistance from the attending physician. **Te′dious l.,** labor delayed beyond the usual term. **Twin l.,** labor in which there are two fœtuses. **Ver′tex l.,** labor in which the vertex presents.

**Lab′oratory** (*laboro,* to work). Workshop; place for preparing chemical or pharmaceutical products, or for making practical physiological, bacteriological, or other studies.

**Laborde's′ meth′od.** A method of stimulating the respiratory centre in cases of suspended animation by means of rhythmical traction of the tongue. A mouth gag is inserted, the tongue is grasped by the thumb and forefinger protected with a napkin, or by a specially constructed forceps (see cut), and the tongue is alternately pulled forward (in an upward direction and not so as to pass over the teeth of the lower jaw) and relaxed about eighteen times a minute. The procedure is continued, sometimes for half an hour, until respiration is re-established.



Laborde's forceps for tongue traction.

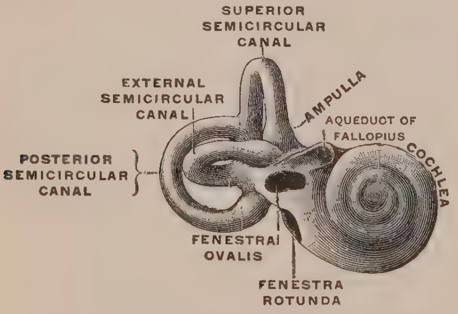
**Labrisul′cium** (*labrum*, lip, *sulcus*, furrow). See *Cheilocace* and *Stomacace*.

**La′brum.** Lip; upper lip of a mammal. **L. cer′ebri,** infundibulum of the brain.

**Labrus′ca.** Bryonia alba.

**Labur′num.** Cytisus laburnum.

**Lab′yrinth.** Place full of turnings, the exit of which is not easily discoverable. Aggregate of parts constituting the internal ear; it is situated between the tympanum and meatus auditorius internus, and is composed of several cavities communicating with each other in the dried bone, as the vestibule, cochlea, semicircular canals, etc. The *bony* or *osseous labyrinth* is lined by periosteum, and also by a pulpy membrane constituting the *membranous labyrinth*, on which the auditory nerve is regularly distributed. This membrane forms two sacs in the vestibule, called *sacculus vestibuli* and *sacculus*, respectively, resembling in shape that of the bony cavities containing them. Each sac contains calcareous matter, constituting the *otoliths* or *earstones* and *otoconia* or *eardust*. When the sac is laid open, upon the upper and outer part a partition appears, partaking of the nature of the sac, and called by Meckel *septum vestibuli nervoso-membranaceum*. The term *labyrinth* is also applied to the lateral portions of the ethmoid bone, formed of large, irregular cells. **Bo′ny l.,** see *Labyrinth*. **Cor′tical l.,** the collection of tubules and vessels in the cortex of the kidney. **Ethmoid′al l.,** lateral masses of ethmoid bone. **L. of kid′ney,** cortical substance around uriniferous tubules. **Mem′branous l.,** see *Labyrinth*. **Olfac′tory l.,** ethmoidal l. **Os′seous l.,** see *Labyrinth*.



SUPERIOR SEMICIRCULAR CANAL
EXTERNAL SEMICIRCULAR CANAL
AMPULLA
AQUEDUCT OF FALLOPIUS
COCHLEA
POSTERIOR SEMICIRCULAR CANAL
FENESTRA OVALIS
FENESTRA ROTUNDA

Osseous labyrinth isolated and viewed from the outer side. (Gerrish.)

**Labyrin′thal, Labyrin′thic,** or **Labyrin′thine.** Relating or appertaining to the labyrinth.

**Labyrinthi′tis.** Inflammation of the labyrinth or inner ear.

**Lac.** Milk. A milky fluid. A juice exuded from certain trees; see *Lacca*. **L. ammoni′aci,** mistura ammoniaci. **L. amyg′dalæ,** emulsio amygdalæ. **L. asafœt′idæ,** mistura asafœtidæ. **L. a′vis,** white of egg. **L. bovi′num** or **bu′bulum,** cow's milk. **L. cani′num,** dog's milk. **L. capri′num,** goat's milk. **L. concre′tum,** condensed milk. **L. equi′num,** mare's milk. **L. fermen′tans,** kumyss. **L. fœmin′eum,** woman's milk. **L. guai′aci,** mistura guaiaci. **Gum l.,** lacca. **L. hirci′num,** goat's milk. **L. ma′ris,** sperm. **L. plas′ter, antisep′tic,** see *Plaster, lac*. **L. pres′sum,** curd. **L. pri′mum puer′peræ,** colostrum. **Seed l.,** lacca. **Shell l.,** lacca. **Stick l.,** lacca. **L. sul′phuris,** sulphur præcipitatum. **L. ter′ræ,** magnesii carbonas. **L. virginia′le** or **vir′ginis,** virgin's milk.

**Lac′ca.** Substance formed by an insect, deposited on different species of tree, chiefly in the East Indies; for example, on Croton lacciferum and two species of ficus—F. religiosa and F. indica. When melted it is called *shellac*. Lac was at one time used as a tonic and astringent, and still forms part of dentifrices.

**Lac′case.** An oxidyzing ferment present in certain plant juices, capable of acting upon many aromatic substances which it turns black. See *Laccol*.

**Lac′col.** An aromatic substance, present in the juices of certain plants; it becomes oxidized, after exposure for a time to the air, through the action of laccase, and turns an intense black. It is by such a process that lacquers are produced.

**Lacerated,** las′er-a-ted (*lacero*, to tear). Torn, as a lacerated wound.

**Lacera′tion.** Rupture. Act of tearing or rending; breach made by tearing or rending, as a lacerated wound. Laceration is practised by surgeons in a special operation for cataract, in which the opening is widened by laceration of its sides. Laceration is also practised subcutaneously with a needle or tenotome applied to vascular growths.

**Lacerator,** las′er-a-tor. Instrument employed for laceration.

**Lacer′ta.** Lizard. **L. ag′ilis,** European sand-lizard, formerly used in skin diseases, cancerous and venereal affections. The powdered bones are now used in India, being regarded as a stimulant and aphrodisiac. **L. aquat′ica,** see *Ectozoa*.

**Lacer′ti** or **Lacer′tuli cor′dis.** Columnæ carneæ. **L. musculo′rum,** see *Muscular fibre*.

**Lacer′tulus** (dim. of lacertus). Small muscle.

**Lacer′tus.** Brachium; muscle. See *Muscular fibre*. **L. fibro′sus,** semilunar fascia.

**Lacerum,** las′er-um (*lacer*, torn). Anything torn or appearing as if torn. **L. fora′men ante′rius,** irregular opening formed by the sphenoid, occipital, and petrous portion of the temporal bone, closed by cartilage, and forming a kind of fontanelle, situated at the termination of the petro-occipital suture. **L. fora′men poste′rius** is formed by the occipital bone and the inferior edge of the petrous portion of the temporal bone. Through it the internal jugular vein, the eighth pair of nerves, and accessory nerve pass out of the cranium. **L. fora′men supe′rius** sphenoidal fissure.

**Lachanon,** lak′an-on (*lachaino*, to dig). Potherb; vegetable used as food.

**Lachesis,** lak′es-is. Genus of reptiles, *Viperinæ*. Greenish poison obtained from fangs of snake in Brazil, and having a place in the homœopathic materia medica. **L. pic′ta,** see *Arrow poison*. **L. rhombea′ta,** flammon; poisonous serpent common in the lower forests of Peru.

**Lachnan′thes tincto′ria.** Redroot; indigenous plant, astringent and tonic. Used in phthisis.

**Lach′rymal, Lachryma′tion,** etc. See *Lacrymal*.

**Lacin′ia.** Hem or fringe.

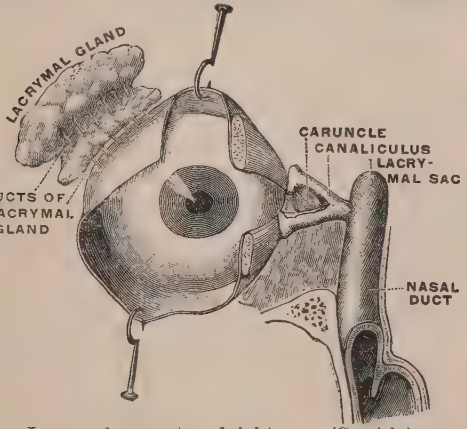
**Lacin′iated** (*lacinia*, fringe). Fringed, as the laciniated extremities of the Fallopian tubes.

**Lac′moid.** A compound of resorcin and sodium nitrate.

**Lac′mus.** Lichen roccella. **L. tincto′rius,** lichen roccella.

**Lac′rimal.** Lacrymal.

**Lac′rymal.** Relating to tears; lacrimal. **L. appara′tus,** see *Lacrymal passages*. **L. ar′tery** proceeds from the ophthalmic and distributes its principal branches to the lacrymal gland. **L. bone,** unguis os. **L. canal′ or duct,** nasal canal or duct, is formed by the superior maxillary bone, os unguis, and os turbinatum inferius, and is seated in the outer paries of the nasal fossæ. It transmits the tears which have been absorbed at the great angle of the eye by the puncta lacrymalia into the nasal fossæ. **L. car′uncle,** caruncula lacrymalis. **L. cyst,** see *Dacryops.* **L. duct,** lacrymal canal. **L. fos′sa,** slight depression at the upper part of the orbit, lodging the lacrymal gland. **L. gland,** this is seated in a depression of the frontal bone at the upper, anterior, and outer part of the orbit. It is about the size of an almond, of oval shape, flattened above and below, and composed of several small lobules; it consists of two distinct parts, the *orbital*—glandula lacrymalis superior or orbitaria—situated in the lacrymal fossa, and the *palpebral*—glandula lacrymalis inferior or accessoria or palpebralis—enclosed in the substance of the upper eyelid. This gland has seven or eight excretory ducts opening behind the upper eyelid. It secretes the tears and pours them on the globe of the eye by the excretory ducts. **L. groove,** bony channel lodging the lacrymal sac, seated at the anterior and inner part of the orbit, and formed by the os unguis and the ascending process of the upper jawbone. **L. her′nia** or **tu′mor** occurs when the tears enter the puncta, but cannot pass to the nose, and accumulate; by Anel called dropsy of the lacrymal sac. **L. mus′cle,** tensor tarsi. **L. nerve,** smallest of the three branches formed by the ophthalmic nerve, distributed particularly to the lacrymal gland and upper eyelid; in its course giving off a spheno-maxillary and a malar filament. **L. papill′a,** see *Lacrymal puncta.* **L. pass′ages,** organs concerned in the secretion of tears, in spreading them over the eye, and taking them up again to transmit them into the nasal fossæ. These are the *lacrymal gland, l. caruncle, l. puncta, l. ducts, l. sac,* and *nasal duct,* together forming the lacrymal apparatus. **L. points,** l. poncta. **L. punc′ta,** two small, round, and contractile openings situated in the centre of a tubercle or papilla, papilla lacrymalis, tuberculum lacrymale, near the inner commissure of the eyelids, and continuous with the lacrymal ducts. These ducts—lacrymales canaliculi, canales or ductus lacrymales, ductus lacrymales laterales or punctorum lacrymalium, cornua lacrymalia or limacum, colliciæ punctorum lacrymalium, canaliculi limacum—are two in number, a superior and an inferior, extending from the puncta to the lacrymal sac. They are formed by a delicate prolongation of the conjunctiva, which is continuous with the mucous membrane of the lacrymal sac, the saccus or sinus or lacus lacrymalis, dacryocystis, infundibulum lacrymale. **L. sac,** see *Lacrymal puncta.* **L. tu′bercle,** see *Lacrymal puncta.* **L. tu′mor,** l. hernia. **L. veins** accompany the artery of the same name, and open into the ophthalmic and palpebral veins.



Lacrymal apparatus of right eye. (Gerrish.)

**Lacryma′tion.** Epiphora. Profuse secretion of tears from any cause; weeping. **Sanguin′eous l.,** flow of bloody tears.

**Lac′rymatome** or **Lac′rymotome** (*lacryma,* tear, *tome,* incision). Instrument for cases of stricture or obstruction of the lacrymal duct.

**Lacrymine′.** Substance discovered in tears. See *Tears.*

**Lacrymot′omy.** Cutting operation on the lacrymal duct or sac.

**Lac′tagogue.** Promoting secretion of milk.

**Lactalbu′min** (*lac,* milk,+*albumin*). Casein.

**Lactam′id.** $C_3H_7NO_2$. A crystalline substance formed by the action of ethyl lactate on ammonia.

**Lac′tant** (*lacto,* to give milk). Nursing; suckling.

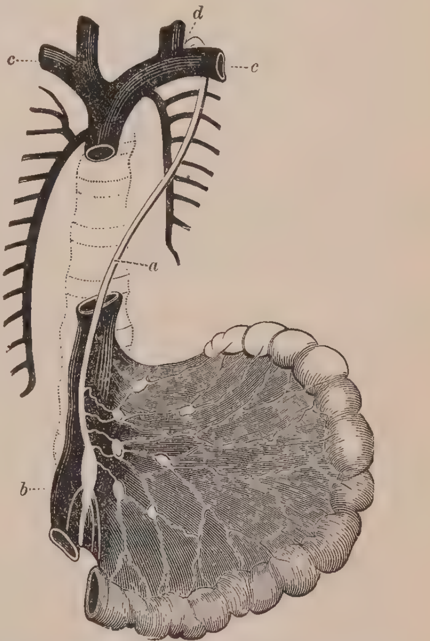
**Lac′tas.** Lactate, salt of lactic acid.

**Lac′tase.** Ferment causing decomposition of lactose into dextroglucose and dextrogalactose.

**Lactat′ic.** Influencing the secretion of milk.

**Lacta′tion** (*lacto,* to give milk). Production of milk. Suckling; including that by the mother, by another party, by hand, etc. **L. cal′culus,** see *Calculi.*

**Lac′teal.** Lactic; like milk. Lactiferous vessel. Chyliferous vessel. **L. sac,** see *Lactiferous vessels.* **L. swell′ing,** lactiferous swelling. **L. tu′mor,** galactocele.



Lacteals, thoracic duct, etc. (Schematic, after Dalton.) *a,* thoracic duct receiving the lacteals of the mesentery; *b,* vena cava inferior; *c, c,* right and left subclavian veins; *d,* point of opening of thoracic duct into left subclavian.

**Lactein′.** Milk, solidified or condensed.

**Lac′teous.** Lactic.

**Lactes′cence.** A condition of milkiness. A milky state.

**Lactes′cent.** Resembling milk.

**Lac′tic.** Lacteal, milky. Appertaining to or resembling or containing milk. **L. acid,** $C_3H_6O_3$, acidum lacticum (Ph. U. S. and Br.), acid of milk, caseic acid. It has been used in atonic dyspepsia, being considered one of the gastric acids secreted in health.

**Lac′tic fermenta′tion.** The changing of milk from sweet to sour through the action of a ferment or bacillus.

**Lactif′erous** (*lac,* milk, *fero,* to carry). Galactophorous or milk-conveying. **L. swell′ing,** tumefaction of the breast, supposed by Sir Astley Cooper to arise from a large collection of milk in a lactiferous tube, the result of chronic inflammation of the tube near the nipple, with closure of its aperture and obliteration of the canal for an inch or more. **L. ves'sels** or **ducts**, galactophorous ducts, excretory ducts of the mammary gland, each of which, running toward the nipple, dilates beneath the areola into an elongated sacculus, the *lacteal sac, receptacle,* or *sinus.*

**Lac'tifuge** (*lac,* milk, *fugo,* to drive away). Arresting the secretion of milk.

**Lactigen'ic** or **Lactig'enous.** Causing or favoring the production of milk.

**Lactig'erous** (*lac,* milk, *gero,* to carry). Producing or carrying milk.

**Lacti'go** (*lac,* milk). Porrigo larvalis; crusta lactea.

**Lactin'.** Sugar of milk.

**Lac'tinated.** Relating or appertaining to lactin or sugar of milk, which, being hard, is used for the division and dilution of substances by trituration. Powders thus formed have been called *lactinated powders.*

**Lactin'ia** (*lac,* milk). Food prepared with milk.

**Lactisu'gium** (*lac,* milk, *sugo,* to suck). Breast-pump.

**Lactiv'orous** (*lac,* milk, *voro,* to devour). Using a milk diet exclusively, or nearly so.

**Lactoalbu'min.** A proteid constituent of milk, the thin membrane which coagulates on the surface of milk when it is boiled.

**Lacto'biose.** Galactose.

**Lac'tocele** (*lac,* milk, *kele,* tumor). See *Galactocele.*

**Lac'tochrome** (*chroma,* color). $C_6H_{18}NO_6$. Alkaloid obtained from milk.

**Lactoglob'ulin** (*lac,* milk, *globulus,* a small ball). Lactalbumin.

**Lac'tol.** Lactonaphthol; lactic ester of beta-naphthol. Intestinal antiseptic; dose, gr. iv–viij (0.26–0.52).

**Lactolin'.** Milk, solidified or condensed.

**Lactom'eter** (*lac,* milk, *metron,* measure). Instrument for measuring the quantity of cream in milk.

**Lactonaph'thol.** Lactol.

**Lac'tone.** Inflammable fluid from dry distillation of lactic acid.

**Lactopep'sin.** Pepsin in combination with other ferments in sugar of milk.

**Lactopep'tine.** A digestive ferment; adult dose, gr. xv (1.0); said to contain peptone, milk-sugar, hydrochloric and lactic acids, pancreatin, and diastase.

**Lactophenacetin'.** Lactophenin.

**Lactophenin'.** Lactophenacetin; lactophenetidin; paralactophenetidin. Phenacetin in which the acetyl group is replaced by the lactyl group. Antipyretic in doses of gr. viij (0.52) or more; also antiseptic and hypnotic.

**Lactophos'phate.** A combination of lactate and phosphate of the same base.

**Lactopro'tein.** Albuminoid substance precipitated by a solution of nitrate of mercury after removing casein from milk by acetic acid, and the albumin by heat.

**Lac'toscope.** Galactoscope.

**Lac'tose** (*lac,* milk). Sugar of milk.

**Lactose'rum.** Whey. If a small quantity of milk is injected repeatedly into the peritoneal cavity of an animal, in time the blood serum of that animal will acquire the property of causing a precipitate when added to milk of the same kind as that which has been injected; the serum possessing this property is called lactoserum.

**Lactosine'.** Active principle of concrete juice of Lactuca virosa. Sedative and hypnotic; dose, gr. j–v (0.06–0.32).

**Lactoso'matose.** See *Somatose.*

**Lactosu'ria** (*lactose*+*ouron,* urine). Urine containing sugar of milk, observed occasionally in pregnant women.

**Lactu'ca.** Lettuce, ord. *Compositæ.* The leaves are eaten as a salad; the seeds possess a quantity of oil, which, in emulsion, has been advised in ardor urinæ, etc. **L. canaden'sis,** Canadian species; laxative. **L. elonga'ta,** wild lettuce, has been used as a substitute for lactucarium. **L. florida'na,** Mulgedium floridanum. **L. fœt'ida,** L. virosa. **L. grave'olens,** L. virosa. **L. mari'na,** Fucus vesiculosus. **L. sati'va,** lactuca. **L. scari'ola,** possesses a stronger degree of bitterness than L. sativa; it has similar virtues with L. virosa. **L. sylves'tris,** L. scariola. **L. villo'sa,** Mulgedium acuminatum. **L. viro'sa,** strong-scented lettuce; the odor of this plant, the leaves of which are used in medicine, is strongly narcotic, and the taste bitter. They are narcotic, diuretic, and aperient, and have been used in dropsies. The inspissated *lactucarium* (Ph. U. S.), lettuce opium, resembles opium in odor and appearance and is, like it, narcotic, but uncertain. Dose, gr. xv–xxx (1.0–2.0). Water distilled from lettuce is used in France as a mild sedative. An active principle, *lactucin,* has been derived from lactucarium.

**Lactucapicrin'** (*pikros,* bitter). Bitter principle in lactucarium.

**Lactucarin'.** Crystalline substance from lactucarium.

**Lactuca'rium.** (Ph. U. S.) Concrete milky juice of Lactuca virosa. See *Lactuca.* The following are the official preparations: *Syr'upus lactuca'rii;* dose, ʒj–iij (4.0–12.0). *Tinctu'ra l.;* dose, ʒss–j (2.0–4.0).

**Lactucerin'.** Lactucone.

**Lactu'cic acid.** Bitter acid principle in Lactucarium.

**Lactucin'.** An active principle from lactucarium.

**Lactu'cone.** $C_{16}H_{26}O$. Tasteless crystalline substance in lactucarium.

**Lactu'men** (*lac,* milk). Porrigo larvalis; strophulus.

**Lactu'mina.** Aphthæ.

**Lactylphenet'idene.** See *Lactophenin.*

**Lactyltropeïn'.** Soluble crystalline substance, obtained by action of lactic acid on tropein. Tonic to the heart and respiratory organs.

**Lacu'na** (dim. of *lacus,* lake or deep ditch). Fossa or ditch; small cavity in a mucous membrane, the parietes of which secrete a viscid humor; used synonymously with *crypt;* also the external opening of such cavity. Small cavity in bone substance. In embryology, space between vitellus and vitelline membrane; anterior fontanelle. See also *Lacunæ.* **L. cer'ebri,** infundibulum of the brain; pituitary gland. **L. cryp'ta,** fontanelle. **L. mag'na,** see *Urethra.* **L. pharyn'gis,** lacuna at the pharyngeal extremity of the Eustachian tube. **L. sul'cus** or **sul'culus la'bii superio'ris,** hollow of the upper lip under the nose.

**Lacu'næ** (pl. of lacuna). See *Lacuna* and *Urethra.* **Absorp'tion l.,** Howship's l. **Air l.,** cavities filled with air. **L. of bone,** dark stellate spots, with thread-like lines radiating from them, seen under high magnifying power; first believed to be solid *osseous* or *bone corpuscles* or *cells, corpuscles of Purkinje,* but now regarded as excavations in the bone, *sacculi chalicophori,* with minute tubes or canaliculi proceeding from them and communicating with the Haversian canals. Lacunæ and canaliculi are fibres concerned in the transit of nutrient fluid through osseous tissue. **L. graafia'næ,** mucous follicles of the vagina. **Haver'sian l.,** l. between Haversian lamellæ. **How'ship's l.,** condition in rarefying osteitis, in which the edge of the melting bone tissue is broken by shallow curves or deeper semicircular excavations, the concavity being outward, between every two of which there is an angular projection of the intervening portion of the bone. **Intervil'lous l.,** sinuses of maternal portions of the placenta, having free villi suspended in them. **L. of Morgagn'i,** see *Urethra.* **L. muco'sæ,** mucous follicles. **L. muco'sæ vul'væ,** l. graafianæ. **L. palpebra'rum,** Meibomian glands. **L. of the tongue,** foramen cæcum.

**Lacu'nar.** Relating to a lacuna. Roof of a chamber; hence l. orbitæ, roof of the orbit. **L. ventric'uli quar'ti supe'rior,** valvula Vieussenii.

**Lacu′nule.** Small lacuna.

**La′cus lacryma′lis.** Small space in the inner angle of the eye between the lids, toward which the tears flow, and at which the triangular canal formed between the closed lids terminates. **L. sanguin′eus,** uteroplacental sinus.

**Ladan′um.** See *Cistus creticus.*

**La′dies′ bed′straw.** Galium verum. **L. man′tle,** alchemilla. **L. slip′per, show′y,** Cypripedium spectabile. **L. s., stem′less,** Cypripedium acaule. **L. s., yel′low,** Cypripedium luteum. **L. smock,** Cardamine pratensis.

**La′dy Crespi′gny′s pills.** See *Pilulæ aloës et kinæ kinæ.* **L. Hes′keth′s pills,** see *Pilulæ aloës et kinæ kinæ.* **L. Web′ster′s pills,** see *Pilulæ aloës et kinæ kinæ* and *Pilulæ aloës et masticles.*

**La′dybird, La′dybug,** or **La′dycow.** Coccinella septempunctata.

**La′dy′s thumb.** Polygonum persicaria.

**Læmoparal′ysis** (*laimos,* throat). Paralysis of throat or œsophagus.

**Læmoscirrhus,** le-mo-skir′rhus (*laimos,* throat). Cancer of the pharynx or œsophagus.

**Læmosteno′sis** (*stenosis,* narrowness). Narrowness of the pharynx or œsophagus, from inflammation or from malignant disease. **L. scirrho′sa,** scirrhous constriction of the pharynx or œsophagus.

**Læ′mus.** Pharynx, œsophagus.

**Laënnec′s′ catarrh′.** Asthmatic bronchitis with scanty pearly sputa, called *Laennec′s* pearls (*perles*). **L.′s cirrho′sis,** atrophic form of cirrhosis. **L.′s disease′,** atrophic cirrhosis of the liver. **L.′s pearls,** see *L.′s catarrh.* **L.′s râle,** subcrepitant râle noted in emphysema of the lungs. **L.′s throm′bus,** thrombus found in the heart in some cases of fatty degeneration.

**Læ′sio** (*lædo,* to hurt). Lesion.

**Lævoduc′tion** (*lævus,* left, *duco,* to lead). Movement of one or the other eye to the left.

**Læ′vogyre** or **Lævogy′rous** (*lævus,* left, *gyrus,* turn). Possessing the property of turning the rays of polarized light to the left.

**Lævoro′tatory.** Lævogyre.

**Lævotor′sion** (*lævus,* left, *torqueo, torsum,* to twist). Leaning of the vertical meridian of the cornea to the left.

**Lævover′sion** (*lævus,* left, *verto,* to turn). Consentaneous turning of the eyes to the left.

**Lævulin′.** Synarthrose.

**Læ′vulose.** Levulose.

**Lævulosu′ria.** Condition of urine in which levulose is detected in it.

**La′fa to′kelan.** Tinea imbricata.

**La Fayette′ mix′ture.** Compound copaiba mixture, containing copaiba, cubebs, liquor potassæ, sweet spirit of nitre, etc.; used in gonorrhœa.

**Lag-teeth.** Molar teeth.

**Lag′avous.** Loose or lax.

**Lag′ena** (large earthen vessel). Cochlea of oviparous animals.

**Lagen′tomum** (*lagos,* hare, *tome,* section). Harelip.

**Lagerstræ′mia** or **Lagerstrœ′mia** (from Lagerstrœm, a Swede). Genus of Asiatic trees; crape myrtle; Indian lilac. Several species are used: L. hirsuta, in syphilis; L. reginæ (queen′s flower, bloodwood), as an astringent, narcotic, and purgative; L. speciosa, in stomatitis and as a diuretic.

**Lagne′sis** (*lagnes,* lustful). Nymphomania, satyriasis.

**Lagno′sis** (*lagnes,* lustful). Satyriasis.

**Lagoceph′alous** (*lagos,* hare, *kephale,* head). Having head like a hare.

**Lagochei′lus** (*lagos,* hare, *cheilos,* lip). Harelip.

**Lagophthal′mia, Lagophthal′mos,** or **Lagophthal′mus** (*lagos,* hare, *ophthalmos,* eye). Hare′s eye; vicious arrangement of the upper eyelid, which is so retracted that it cannot cover the globe of the eye during sleep, owing to paralysis of the orbicularis muscle; condition said to be natural in the hare when asleep. Also Geum urbanum.

**Lagosto′ma** (*lagos,* hare, *stoma,* mouth). Harelip.

**Laguncula′ria racemo′sa.** White mangrove; white buttonwood of America and Africa; astringent.

**La′ity** (*laos,* people). Formerly, the people as distinguished from the clergy; employed now in the sense of the people as distinguished from the members of the medical or any of the learned professions.

**Lake.** A coloring-matter formed by precipitating, by means of alkalies, a coal-tar pigment or one of animal or vegetable origin from its aqueous solution. As a verb, to cause to become laky; referring to the action of certain hæmolysins which destroy in part the erythrocytes, discharging their pigment into the serum.

**Lake′weed.** Polygonum hydropiper.

**La′ky blood.** Blood darkened by the destruction or decomposition of red corpuscles.

**Lal′ia** (speech). The voice articulated.

**Lalla′tion.** Lullaby speech; vicious pronunciation, especially that in which the letter *l* is improperly doubled or softened or substituted for *r;* baby talk.

**Lallemand′-Trousseau′s′ bod′ies.** Gelatinous corpuscles noticed in the secretions from the seminal vesicles.

**Lal′ling.** Lallation.

**Laloneuro′sis.** Neurosis or nervous affection of speech.

**Lalop′athy** (*lalia,* speech, *pathos,* disease). Defect in speech or in use of the voice.

**Lalopho′bia** (*lalia,* speech, *phobos,* fear). Stammering, as if from dread of using the voice.

**Lalople′gia** (*lalia,* speech, *plege,* stroke). Paralysis of the tongue interfering with articulated speech.

**Lalouette′s′ pyr′amid.** Projection of upper part of the thyroid gland.

**Lam′ac.** Acacia gummi.

**Lamarck′ism** (from Lamarck, French botanist). Theory of descent of animal life and of vegetation from a common stock.

**Lamb′da.** Greek letter Λ. Point of meeting of the sagittal and lambdoid sutures, a guiding point in some craniometrical examinations.

**Lamb′dacism** (from the Greek letter Λ, *lambda*). Lallation.

**Lamb′doid** or **Lambdoi′dal** (Λ, *lambda, eidos,* shape, resemblance). Anatomists have given the name **L. su′ture** to the suture formed by the parietal bones, and the occipital, because it resembles the letter Λ (*lambda*) of the Greeks; *occipitoparietal suture.* In this suture the ossa Wormiana are most frequently met with. The denticulations are distinctly marked.

**Lamb′kill.** Kalmia latifolia.

**Lamb′killer.** Andromeda mariana.

**Lamb′lia intestina′lis.** Circomonas intestinalis.

**Lamb′s quar′ters.** Chenopodium album.

**Lamel′la.** Small plate; scab; lamina; disk. **L. of bone,** osseous ring encircling an Haversian canal. **Bran′chial l.,** one of the mucous folds in the gills of fishes. **L. carno′sa,** portion of the parietal mesoblast. **L. cerati′na,** portion of the epiblast. **Cerebel′lar l.,** one of the laminæ of the cerebellum. **Circumferen′tial l**, l. of bone surrounding the medullary cavity and also forming a layer beneath the periosteum. **Concen′tric l.,** l. of bone. **L. coria′ria,** portion of the parietal mesoblast. **Crib′riform l.,** lamina cribrosa. **Haver′sian l.,** l. of bone. **Interme′diary l.,** l. of bone in the interstices between the Haversian systems. **Interme′diate l.,** a plate occupying the space between two concentric layers of bone. **Invest′ing l.,** l. of bone. **L. medulla′ris,** portion of the epiblast giving origin to the cerebrospinal axes and organs of senses; also one of the bony lamellæ constituting the wall of the medullary cavity in some bones. **L. mesenter′ica,** portion of the visceral mesoblast. **L. muco′sa,** portion of the hypoblast. **Os′seous l.,** l. of bone. **Perineu′ral l.,** l. of areolar tissue surrounding a nerve. **L. pla′na,** planum os. **L. rena′lis,** portion of the blastoderm giving origin to the kidneys and generative organs. **Trian′gular l.**, fibrous layer between the choroid plexuses of the third ventricle of the brain. **L. vasculo′sa**, portion of the visceral mesoblast. **Vit′reous l.**, basal lamina of the choroid.

**Lamel′læ.** Disks. The official (Ph. Br.) name for gelatin disks for ophthalmic use, containing alkaloids, as *l. atropinæ*, disks of atropine, each containing $\frac{1}{5000}$ gr. of sulphate of atropine; *l. cocainæ*, disks containing $\frac{1}{50}$ gr. of hydrochlorate of cocaine; *l. homatropinæ*, containing $\frac{1}{100}$ gr. of homatropine; *l. physostigminæ*, containing $\frac{1}{1000}$ gr. of physostigmine.

**Lamel′lar, Lam′ellate,** or **Lam′inated.** Composed of thin laminæ or leaves, as lamellar or laminated tissue; areolar tissue. **L. cat′aract**, opacity of several lamellæ of the lens, not of the whole lens itself; generally congenital.

**Lame′ness.** The act of halting or limping. **U′terine l.**, a condition of the lower extremity induced by pressure on the nerves situated within the pelvis.

**Lam′ina** (a plate). A thin, flat part of a bone, plate, or table, as the cribriform lamina or plate of the ethmoid bone. Lamina and lamella are generally used synonymously, although the latter is properly a diminutive of the former. See also *Laminæ*. **L. ax′ilis**, axial plate. **L. basila′ris**, internal table of the skull. **Bow′man's l.**, Bowman's layer. **L. centra′lis**, folium centrale. **L. choroide′a**, choroid plexus; septum lucidum. **L. cilia′ris**, ciliary zone; zonula of Zinn. **L. cine′rea**, thin layer of gray substance between the corpus callosum and the optic chiasm; striatum cinereum. **L. concha′rum**, inner portion of lateral masses of the ethmoid bones. **L. connec′tens**, posterior cerebral commissure. **L. cor′nea**, a yellowish band or a thickening of the lining membrane of the ventricle, by which the vena corporis striati is overlaid in the lateral ventricle of the brain; pons Tarini; tænia fornicis. **L. Cor′tii**, membrana tectoria. **L. cribrifor′mis**, cribriform plate of the ethmoid. **L. cribro′sa**, portion of the sclerotic coat of the eye for the passage of the optic nerve; anterior perforated space; anterior portion of the fossula inferior. **L. cribro′sa cer′ebri**, grayish-white lamina in front of the anterior extremity of the optic tract. **L. cribro′sa me′dia**, middle part of the fossula inferior. **L. c. oc′uli**, l. cribrosa. **Den′tal l.**, see *Dental*. **L. denta′ta**, fascia dentata. **L. denticula′ta**, a remarkable covering of the outer fifth of the vestibular surface of the osseous zone, called *denticulata* from a beautiful series of teeth forming its outer margin and projecting into the vestibular scala of the cochlea. The *membrane of Reissner, membrana vestibularis*, arises from the inner part of the limbus, and extends upward at a considerable angle with the osseous spiral lamina. **L. derma′lis**, l. gastralis. **Elas′tic l.**, Bowman describes an anterior and a posterior elastic lamina investing the fibrous part of the cornea, the former transparent, glossy, and structureless, the latter the membrane of Demours or Descemet; see *Aqueous humor*. **Fibrocuta′neous l.**, parietal mesoblast. **Fibrointes′tinal l.**, visceral mesoblast. **L. fus′ca**, see *Sclerotic*. **L. f. of cho′roid**, see *Choroidea tunica*. **L. gastra′lis**, epiblast previous to the development of mesoblast. **L. ge′nu**, small lamina from the genu of the corpus callosum forming the floor of the septum pellucidum; lamina to pituitary body. **Gray l.**, l. cinerea. **L. gris′ea**, gray column of the spinal cord. **L. mastoide′a**, basal plate of the mastoid process of the temporal bone. **L. medulla′ris**, layer of nerve-fibres in the embryo which afterward becomes the external layer of the cortex of the brain; medullary layer of the denticular nucleus; valve of Vieussens. **L. m. triangula′ris cer′ebri**, lyra. **L. modi′oli**, l. spiralis ossea. **L. neuroderma′lis**, epiblast. **Nu′clear l.**, nuclear layer. **Ob′turator l.**, l. cinerea. **Ol′ivary l.**, olivary body, **L. papyra′cea**, os planum. **L. perfora′ta ante′rior**, locus perforatus anticus. **L. p. poste′rior**, see *Tarini pons*. **L. peritonæ′i exter′na**, outer lamina or fold of the peritoneum. **L. p. inter′na**, visceral layer of peritoneum. **L. pigmen′ti**, fine membrane between the choroid and retina. **L. pri′ma cu′tis**, epidermis. **L. pro′pria**, middle or connective-tissue layer of the membrana tympani. **L. quadrigem′ina**, gray matter constituting the roof of the aqueduct of Sylvius. **L. reticula′ris** or **reticula′ta**, see *Corti*. **L. semicircula′ris**, white nervous layer between the thalamus opticus and corpus striatum. **L. spira′lis**, a partition between the scalæ of the cochlea. The largest part of this, next the modiolus, is formed of bone. The remainder, or part next the opposite side of the scalæ, is composed of a cartilaginous membrane called by Valsalva *zona* or *zonula cochleæ*. By some anatomists the lamina is divided into a zona ossea and zona mollis. By others it is considered to consist of four laminæ: Zona ossea next to the modiolus; zona coriacea or choriacea or mediana or nervia, on the outer side of this; zona vesicularis; and zona membranacea, which is, perhaps, the lining membrane of the cochlea. The middle portion of the membranous zone, between the inner and the outer clear belt, is the portio or zona or habenula pectinata. At the apex of the cochlea the lamina spiralis terminates by a pointed, hook-shaped process, hamulus or rostrum. The crista spiralis is the portion of the tympanal wall of the ductus cochlearis resting on the lamina spiralis, and is continuous with the membrana basilaris. **L. spira′lis membrana′cea**, see *Corti* and *Membrane, basilar*. **L. suprachoroide′a**, external layer of the choroid. **L. tecto′ria**, inferior lemniscus. **L. termina′lis**, l. cinerea. **L. transver′sa**, vermis superior posterior. **L. triangula′ris**, triangular portion of the great wing of the sphenoid. **L. tympan′ica**, anterior bony wall of the tympanum and external auditory meatus. **Vas′cular l.**, endochorion. **L. velamento′sa**, see *Corti, organ of*. **L. of a ver′tebra** is the broad, flat part of its arch. **L. vit′rea**, internal table of skull. **Vit′reous l.**, membrane lining the interior of the choroid coat of the eye.

**Lam′inæ.** Plural of lamina. **L. arcua′tæ**, arciform fibres. **L. of cerebel′lum**, laminæ of white matter covered with gray matter passing outward from the centre of white matter. **L. cra′nii**, tables of the skull. **L. dorsa′les**, dorsal laminæ; two oval masses on each side of the primitive groove in the embryo, which approach to form a groove in which are lodged the future brain and spinal marrow. **L. spongio′sæ na′si**, turbinated bones. **L. ventra′les** or **viscera′les**, thickened prolongations of the serous layer of the germinal membrane, by their union forming the anterior wall of the trunk of the new being. **L. vertebra′les**, vertebral plates.

**Laminage′** (Fr.). Compression of the fetal skull with a view to flattening the head for easy delivery.

**Lam′inar.** Compound of laminæ. **L. mem′brane**, see *Membrane*.

**Lamina′ria con′ica** or **digita′ta.** Tangle, sea tangle, sea girdle, sea wand, cairn-tangle, dead man's toe, oar weed. One of the algæ eaten in Scotland, and hawked about the streets with the pepper dulse. It contains a large amount of iodine. Tents and bougies are made of it, the tents being employed in stricure of the lacrymal passages and to dilate the neck of the uterus. The leaf of a seaweed—species of *Laminaria*—is employed in the Himalayas under the name of goitre leaf, because chewed by the inhabitants where goitre prevails.

**Lam′inated.** Lamellar or laminar.

**Lamina′tion.** Condition of being arranged in laminæ or layers. Cutting up the fetal skull in slices in embryotomy.

**Lamine′.** Alkaloid from Lamium album. Hæmostatic. Used hypodermically in the form of sulphate or hydrochlorate.

**Laminec′tomy** (*lamina* + *ektome*, excision). Excision or removal of the laminæ of a vertebra.

**Lamini′tis.** Inflammation of a lamina. Acute inflammation of the laminæ of the hoof of lower animals.

**La′mium al′bum.** Dead or white archangel nettle, ord. *Labiatæ*. Infusions of this plant have been used in uterine hemorrhage and leucorrhœa. **L. amplexicaul′e,** dead nettle, henbit; naturalized; flowering from May to October; tonic, diaphoretic, and laxative. **L. folio′sum,** L. album. **L. monta′num,** Melittis melissophyllum. **L. plin′ii,** Melittis melissophyllum. **L. ru′brum,** galeopsis.

**Lam′pyris noctil′uca.** Cicindela.

**Lanaïn′** (*lana*, wool). Purified wool-fat.

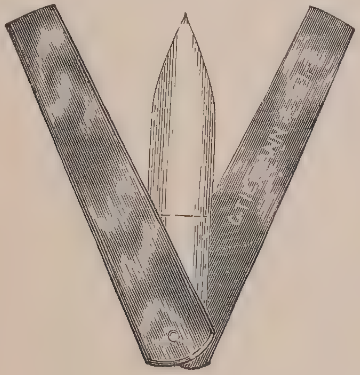
**Lana′ria.** Saponaria, Verbascum nigrum.

**Lance.** To incise with a lancet. A surgical knife or a lancet.

**Lan′ceolate** (*lanceola*, small spear). Having the shape of a small spear. **L. coc′cus** (Talamon), Bacillus septicus sputigenus.

**Lanceraux's** (lan-ser-oze′) **intersti′tial nephri′tis.** Interstitial nephritis associated with rheumatism.

**Lan′cet** (*lancea*, lance or spear). Surgical instrument used in phlebotomy, scarification, etc., composed of two parts—handle and blade. The handle is made of two small plates of ivory, bone, or shell movable on the blade for whose preservation they are intended. The blade is formed of well-polished steel. **L.-shaped,** lanceolate.



Lancet.

**Lan′cinating** (*lancino*, to strike or thrust through). Designating a shooting pain similar to that which would be produced by the introduction of a sharp instrument into the suffering part. In cancer especially this kind of pain is felt.

**Lancisi** (lan-che′se), **nerves of.** Striæ longitudinales. See *Corpus callosum*.

**Lan′dau's enteropto′sis.** Enteroptosis caused by relaxed condition of the walls of the abdomen and of the floor of the pelvis.

**Lan′dolt's bod′ies.** Small bodies in the retina between the rods and cones.

**Landou′zy's pur′pura.** Purpura attended with serious constitutional symptoms.

**Lan′dry's disease′** or **paral′ysis.** See *Paralysis, acute ascending*.

**Land′-scurvy.** Purpura hæmorrhagica.

**Land′zert's fos′sa.** Fossa in the cavity of the peritoneum, sometimes called the paraduodenal fossa or recessus venosus.

**Lane's amputa′tion.** Disarticulation at the knee-joint.

**Lanessin′.** Preparation similar to lanolin, derived from wool-fat.

**Lang's flu′id.** Hardening liquid used in microscopy, consisting of corrosive sublimate, acetic acid, chloride of sodium, and water.

**Lang′enbach's amputa′tion.** See *Amputation*. **L.'s incis′ion,** an incision for reaching the tail of the pancreas, spleen, or kidney, made through the linea semilunaris parallel with the fibres of the rectus abdominis.

**Lang′er's ax′illary arch.** Fascia forming an arch across the bicipital groove.

**Lang′erhans's bod′ies.** L.'s islands. **L.'s cells,** stellate cells in the rete Malpighii of the epidermis apparently related to the nerve terminations, but by some regarded simply as wandering cells. **L.'s gran′ular layer,** stratum granulosum. **L.'s isl′ands,** Renaut's follicular points, small collections of cells in the interstitial connective tissue of the pancreas, believed by some to be closed follicles concerned in the internal secretion of the gland, by others to be a mode of growth of the pancreas.

**Lang′hans's cells.** Epithelial cells, forming the inner cellular layer of the chorion, *L.'s layer*. **L.'s gi′ant cell,** giant cell of tuberculous granulation-tumor. **L.'s lay′er,** epithelium of the chorionic villi, arising from the fetal ectoderm, bounded externally by the syncytium.

**Langiers′ her′nia.** Hernia across Gimbernat's ligament.

**Lan′guage cen′tre.** See *Centre* and *Aphasia*.

**Lan′guor.** Faintness; depression or debility, generally coming on slowly.

**Lan′naiol.** A form of iodocresol, used as a substitute for iodoform.

**Lan′nelongue's tib′ia.** Deformed tibia of hereditary syphilis.

**Lan′oform** (*lana*, wool). Preparation containing 1 per cent. of formaldehyde; a gradual disinfectant, in form of thin ointment or cream and dusting-powder.

**Lanolin′** (*lana*, wool, *oleum*, oil). Cholesterin fat obtained from sheep's wool; whitish, odorless substance, forming an excellent basis for ointments; it readily passes through the skin.

**Lanta′na.** Sagetree, blueberry. Leaves of this indigenous plant form a fine-scented tea, like L. pseudothea, or Brazil tea; used as a diaphoretic; several species of lantana are employed for their diuretic and diaphoretic effects. From *L. braziliensis* the alkaloid *lantanine* has been obtained; used as an antipyretic.

**Lantanine′.** Alkaloid from Lantana brasiliensis, Yerba santa; antiperiodic and antipyretic.

**Lan′termann's inci′sures.** See *Incisura*. **L.'s seg′ments,** cylindrical segments of medullary sheath between L.'s incisures.

**Lan′tern-tests.** Experiments with colored lanterns to test the appreciation of colors.

**Lantha′num** or **Lantha′nium.** An uncommon metallic element.

**Lantho′pia** or **Lanthopine′** (*lanthano*, to remain concealed). Alkaloid, $C_{23}H_{25}NO_4$, homologous with papaverine, in white prism. See *Porphyroxin*.

**Lanu′go** (*lana*, wool). Soft, fine hair on different parts of the body, especially in the young, or in the fœtus from the fifth month; down. **L. sil′iquæ hirsu′tæ,** see *Dolichos pruriens*.

**Lapac′tic** (*lapazo*, to evacuate). Cathartic laxative.

**Lap′ara.** Flanks, loins, abdomen.

**Laparec′tomy** (*lapara*, loins, *ektome*, excision). Excision of part of the abdominal wall.

**Laparenterot′omy.** Laparoenterotomy.

**Lap′arocele** (*kele*, rupture). Lumbar hernia, through separation of the fibres of the quadratus lumborum, and protrusion of the aponeurosis of the transverse muscle on the outside of the mass common to the sacrolumbalis and longissimus dorsi; abdominal hernia.

**Laparocholecystot′omy** (*chole*, bile, *kystis*, bladder, *tome*, incision). Abdominal section to open the gall-bladder.

**Laparoc′lysis** (*lapara*, abdomen, *klysis*, washing out). Washing out the peritoneal cavity.

**Laparocolec′tomy** (*ektome*, excision). Colectomy through the abdominal wall.

**Laparocolos′tomy** (*colon*+*stoma*, mouth). Operation for establishment of an artificial anus in the colon.

**Laparocolot′omy** (*tome*, incision). Colotomy through the abdominal wall.

**Laparocolpot′omy** (*kolpos*, vagina, *tome*, incision). Laparoelytrotomy.

**Laparocystec′tomy** (*kystis*, cyst, *ektome*, excision). Operation by abdominal incision for removal of cystic tumor.

**Laparocystidot′omy.** Laparocystotomy.

**Laparocystot′omy.** Suprapubic lithotomy. Laparotomy for removal of a cyst or extra-uterine fœtus.

**Laparoelytrot′omy** (*elytron*, vagina, *tome*, section). Gastroelytrotomy. Operation for extraction of the fœtus by abdominal incision in cases of deformity. Cæsarean section.

**Laparoenterot′omy** (*enteron*, intestine, *tome*, incision). Operation of opening the abdomen and incising the intestinal canal.

**Laparogastrot′omy** (*gaster*, stomach, *tome*, incision). Gastrotomy.

**Laparohysterec′tomy** (*hystera*, uterus, *ektome*, excision). Operation for removal of the uterus through the abdominal wall.

**Laparohystero-oöphorec′tomy.** Porro's operation.

**Laparohys′teropexy** (*hystera*, uterus, *pexis*, fixation). Fixation of the uterus by operation, as in prolapsus uteri, that organ being attached anteriorly to the abdominal wall.

**Laparohysterot′omy.** Operation on the uterus through the abdominal wall.

**Laparo-ileot′omy.** Operation of opening the ileum by incision through the abdominal wall.

**Laparokelyphot′omy** (*kelyphos*, egg-shell, *tome*, incision). Laparocystotomy.

**Laparokolpot′omy** (*kolpos*, vagina). Laparoelytrotomy.

**Laparomyi′tis** (*mys*, muscle). Inflammation of the abdominal muscles.

**Laparomyomec′tomy** or **Laparomyomot′omy** (*ektome*, excision). Operation for removal of myoma or muscular tumor by incision through the abdominal wall.

**Laparonephrec′tomy** (*nephros*, kidney, *ektome*, excision). Excision of kidney by operation through the abdominal wall.

**Laparonephrot′omy** (*nephros*, kidney, *tome*, incision). Nephrotomy by operation through the abdominal wall.

**Laparosalpingec′tomy** (*salpinx*, tube, *tome*, incision). Operation by abdominal incision for removal of Fallopian tube.

**Laparosalpingot′omy.** Operation upon Fallopian tube through the abdominal wall. Laparosalpingectomy.

**Lap′aroscope** (*skopeo*, to see). Instrument for inspection or examination of the abdomen, *laparoscopy*.

**Laparosplenec′tomy.** Splenectomy; excision of the spleen by abdominal incision.

**Laparosplenot′omy.** Operation upon the spleen through the abdominal wall.

**Lap′arotome.** Instrument designed for laparotomy.

**Laparot′omist.** One who performs laparotomy.

**Laparot′omize.** To incise the abdomen.

**Laparot′omy.** Operation on any abdominal viscus or cavity through the abdominal wall. Gastrotomy; cœliotomy. The peritoneum may or may not be cut.

**Laparotyphlot′omy** (*typhlos*, blind, *tome*, incision). Typhlotomy or operation on the cæcum through the abdominal wall.

**Lapathin′.** Chrysophanic acid.

**Lap′athum acu′tum.** Rumex acutus. **L. aquat′icum**, Rumex hydrolapathum. **Chinese′ l.**, rheum. **L. horten′se**, Rumex patientia. **L. orienta′le**, rheum. **L. praten′se**, Rumex acetosus. **L. sanguin′eum**, Rumex sanguineus. **L. scuta′tum**, Rumex scutatus. **L. sylves′tre**, Rumex acutus, R. obtusifolius. **L. unctuo′sum**, Chenopodium bonus Henricus.

**Laph′a.** Arum maculatum.

**Lapil′li glan′dulæ pinea′lis.** See *Pineal gland.*

**Lapil′lus** (dim. of *lapis*, stone). Small stone; gravel; grain of sand.

**La′pis.** Calculus. **L. accip′itrum**, hieracites. **L. æro′sus**, calamina. **L. ammoni′aci**, see *Ammoniac gum.* **L. anima′lis**, blood. **L. arme′nius**, see *Melochitis.* **L. au′reus**, urine. **L. bezoar′dicus**, bezoar. **L. cæru′leus**, cupri sulphas. **L. calamina′ris**, calamina. **L. carne′olus**, cornelian. **L. caus′ticus**, potassa cum calce, potassa fusa. **L. col′lymus**, see *Ætites.* **L. contrayer′væ**, pulvis contrayervæ compositus. **L. cy′anus**, l. lazuli. **L. denta′lis**, salivary calculus. **L. divi′nus**, cuprum aluminatum; employed to make an eye-water. **L. fulmin′eus**, see *Ceraunion.* **L. hemati′tes**, hæmatites. **L. heracle′us**, magnet. **L. inferna′lis**, argenti nitras. **L. inferna′lis alkali′nus**, potassa fusa. **L. inferna′lis sep′ticus**, potassa cum calce. **L. juda′icus**, Judæus (lapis). **L. laz′uli**, stone of a beautiful blue color, opaque; composed of silex, alumina, carbonate and sulphate of lime, oxide of iron, and water; formerly regarded as purgative and emetic, and given in epilepsy. **L. malucen′sis**, bezoard of the Indian porcupine. **L. mitiga′tus**, nitrate of silver, mitigated or diluted with potassium nitrate. **L. nau′ticus**, magnet. **L. intra′tus**, mitigated nitrate of silver pencil; l. mitigatus. **L. ophthal′micus**, l. divinus. **L. o. Sanc′ti Ive′sii**, l. divinus. **L. phœnici′tes**, Judæus (lapis). **L. porci′nus**, bezoard of the Indian porcupine. **L. pu′micis**, pumex. **L. sar′dius**, cornelian. **L. sep′ticus**, causticum commune, potassa fusa. **L. specula′ris**, septum lucidum. **L. syderi′tis**, magnet. **L. syri′acus**, Judæus (lapis). **L. vi′ni**, potassæ supertartras impurus.

**Lap′pa.** The official name for the root of Arctium lappa and other species of arctium or burdock; dose, ʒss–j (2.0–4.0) in infusion. *Extractum lappæ fluidum*, the fluid extract, is official, dose, ʒss–j (2.0–4.0). **L. glab′ra** or **ma′jor**, burdock; root is diaphoretic and diuretic; used in syphilis, scrofula, and skin diseases. **L. mi′nor**, xanthium.

**Lap′pula hepat′ica.** Agrimony.

**Lap′sana.** Dockcresses, swine's cress, nipplewort. This plant is a lactescent bitter, and has been chiefly employed as an external application to sore nipples, skin diseases, etc.

**Lap′sus.** Falling. **L. pilo′rum**, falling of hairs; alopecia. **L. un′guium**, falling off of the nails, etc.

**Laq′uear** (arched roof or ceiling). Vault; fornix. **L. vagi′næ**, part of the vagina in which the cervix uteri terminates; see *Vagina.*

**Laquea′ria.** Corpus callosum.

**Laq′ueus** (noose, snare). Cord, ligature, or bandage, with running knots; a noose or loop; a fillet; bandage or fillet of any kind attached by means of a loop upon any part, with the view of fixing it, as in labor where a hand or foot presents, or to facilitate extension in luxations and fractures. A prominent band in the brain, *lemniscus*, behind the brachium posterius of the corpora quadrigemina, marking the course of the superior division of the fasciculus olivaris. **L. cer′ebri**, lemniscus; see *Laqueus.* **L. gut′turis** (noose of the throat), violent inflammation of the tonsils in which the patient appears as if suffocated by a noose; gangrenous cynanche. **L. pedun′culi**, lemniscus; see *Laqueus.* **L. umbilica′lis**, umbilical cord.

**Larch.** Pinus larix.

**Lard.** Adeps.

**Lardaceïn′.** An animal proteid occurring in amyloid degenerations of different organs.

**Larda′ceous.** Epithet given to certain organic alterations in the textures, whose aspect and consistence resemble lard or wax, constituting lardaceous or cholesterin disease, lardaceous, waxy, cellulose, colloid, hyaloid, vitreous, albuminoid or albuminous, and amyloid degeneration or infiltration; bacony disease. Virchow's degeneration, morbus lardaceus or amyloides or cereus; from the waxy appearance also called ceroma. It is found always intimately associated with the blood-vessels; the organs most apt to be affected are the liver, kidneys, spleen, and lymphatic glands, but it may occur in any soft part.

**Lar′diform.** Lardaceous.

**Largin′.** A soluble (1 in 10 of water) gray powder, a compound of silver and albumin. Employed locally as an astringent and microbicide in solutions of the strength of 1:500 to 1:75.

**Laric′ic acid** or **Laricin′.** Agaricin.

**Lar′icis cor′tex.** Bark of Pinus larix.

**Lar′inoid** (*larinos*, fat, *eidos*, resemblance). Resembling lard; lardaceous.

**Lar′ix.** Pinus larix. **L. america′na,** hackmatack, tamarack; the bark of this N. American tree is diuretic. **L. commu′nis,** Pinus larix. **L. decid′ua,** Pinus larix. **L. europæ′a,** Pinus larix. **L. pyramida′lis,** Pinus larix.

**Lark′spur, branch′ing.** Delphinium consolida.

**Lar′rea glutino′sa** or **mexica′na** (after J. A. de Larrea, Spanish savant). Creosote plant, ord. *Zygophyllaceæ*. A shrub growing in Southwestern United States and Northern Mexico, abounding in strong-scented resinous matter; used externally and internally in rheumatism and syphilitic and other pains.

**Lar′rey's amputa′tion.** See *Amputation*. **L.'s spa′ces,** interspaces in the diaphragm where it is attached to the ribs and sternum.

**Lar′va** (mask). Grub or vermiform condition of an insect; first change it experiences after leaving the ovum. Larvæ of insects are occasionally developed in the intestinal canal from ova swallowed. See *Ectozoa*. **L. mi′grans,** hyponomoderma.

**Larva′ceous.** Larval.

**Lar′val.** Masked; term applied to fevers, gout, etc. See *Masked*. Giving the face an appearance like a mask, as in some skin diseases.

**Larvip′arous.** Ovoviviparous.

**Laryngal′gia.** Neuralgia of the larynx.

**Laryn′geal.** Relating to or belonging to the larynx. **L. ar′teries** are given off from the thyroid arteries. The superior thyroid artery has also been called laryngeal artery. **L. cough,** cough, perhaps of nervous form, from the larynx, but not from lung disease. **L. cri′sis,** acute spasm of the larynx in tabes dorsalis; see *Crises*. **L. ep′ilepsy,** l. vertigo. **L. mir′ror,** laryngoscope. **L. nerves** are two in number—superior and inferior. The superior laryngeal nerve is given off from the trunk of the pneumogastric, at the upper and deep part of the neck; it passes downward and inward, behind the internal carotid artery, and divides into two secondary branches: one, external, distributing its filaments on the outside of the larynx to the sternothyroid, hyothyroid, constrictor inferior, cricothyroid muscles, etc.; the other, internal, crosses the thyrohyoid membrane and gives filaments to the epiglottis, the mucous membrane of the pharynx and larynx, to the arytenoid gland, the arytenoid and cricothyroid muscles, and ultimately intermingles with the inferior laryngeal nerve. The inferior laryngeal nerves or recurrents arise from the trunk of the pneumogastric within the thorax; ascend in the furrow separating the trachea from the œsophagus, to be distributed on the neck after having been reflected—the left around the arch of the aorta, the right around the corresponding subclavian. **L. paral′ysis,** paralysis of muscles connected with the larynx. **L. phthi′sis,** tuberculosis of the larynx. **L. pouch′es,** small *culs-de-sac* leading from the anterior part of each ventricle of the larynx upward, between the superior ligaments on the inner side and the thyroid cartilage on the outer, reaching as high as the upper border of that cartilage at the sides of the epiglottis. **L. sound,** sound heard in respiration through the larynx. **L. spa′ces,** the three cavities into which the larynx is divisible. **L. spasm,** l. vertigo. **L. syn′cope,** l. vertigo. **L. veins** open into the internal jugular. **L. ver′tigo,** a neurosis marked by coughing and an ill-defined, unpleasant sensation in the throat, followed by vertigo and sudden syncope; there may be also a slight convulsion. **L. voice,** see *Voice*.

**Laryngec′tomy** (*larynx*+*ektome*, excision). Operation for excision or extirpation of the larynx.

**Laryngemphrax′is** (*larynx* + *emphraxis*, obstruction). Obstruction of the larynx.

**Laryn′gic.** Laryngeal.

**Laryngis′mus.** Spasm of the glottis, giving occasion to contraction or closure of the opening. Laryngeal vertigo. **L. paralyt′icus,** paralysis of recurrent laryngeal nerve in horses; "roaring" results. **L. strid′ulus,** spurious croup or pseudocroup; asthma thymicum; laryngospasm.

**Laryngi′tis.** Inflammation of the larynx; inflammation of the mucous membrane of the larynx. Simple catarrhal laryngitis in some measure resembles croup, but is usually devoid of the peculiar sonorous inspiration of the latter. There is pain upon pressing the larynx, and while laryngitis is a disease of more advanced life, croup attacks children. Membraniform exudation is also absent, probably because the inflammation being seated above the glottis, the coagulable lymph is readily expectorated. It requires the most active treatment. Various forms of laryngitis have been described, such as catarrhal laryngitis, acute and chronic; chronic glandular laryngitis, or follicular disease of the larynx, dysphonia clericorum or clergymen's sore throat; phthisical laryngitis, or laryngeal phthisis, diffuse cellular laryngitis, acute œdematous laryngitis, gouty laryngitis, etc. Simple laryngitis is called by some mucous laryngitis, laryngitis acuta or mucosa acuta, to distinguish it from submucous laryngitis or œdema of the glottis. Chronic laryngitis may be a form of laryngeal phthisis, but may exist independently. **L. acu′ta,** laryngitis; see *Larynx, diseases of* (table). **Atroph′ic l.,** chronic laryngitis with glandular atrophy of part affected. **Catar′rhal l.,** see *Laryngitis*. **Chron′ic l.,** see *Phthisis laryngea* and *Larynx, diseases of* (table). **Chron′ic follic′ular l.,** see *Laryngitis*. **L. croupo′sa,** croup. **Des′iccative l.,** dry l. **Diffuse′ cel′lular l.,** diffuse inflammation of laryngeal cellular tissue, with effusion of lymph or pus into subjacent or adjacent tisues; a dangerous affection. **Diphthe′rial** or **diphtherit′ic l.,** croup; diphtheria of the larynx. **Dry l.,** laryngitis attended with cough, aphonia, and heat, but without increased secretion; dry, granular inflammation of the larynx. **L. exudati′va,** croup. **Fe′tid l.,** l. with croupy exudation on the mucous membrane. **Follic′ular** or **gland′ular l.,** l. affecting especially the follicles or glands. **Hypertroph′ic l.,** chronic laryngitis with glandular hypertrophy of part affected. **In′fantile l.,** croup. **L. membrana′cea,** croup. **Mock l.,** affection of the larynx due to hysteria. **L. muco′sa acu′ta,** laryngitis. **Mu′cous l.,** laryngitis (simple). **Œdem′atous l.,** œdema of the glottis. **Phleg′monous l.,** inflammation of the submucous connective tissue of the larynx, with œdema, abscess, etc. **Phthis′ical l.,** tuberculous l. **L. polypo′sa,** croup; l. with polypous growths. **L. pseudomembrana′cea,** croup. **L. seropurulen′ta,** œdema of the glottis. **Se′rous l.,** œdema of the larynx. **Sim′ple l.,** see *Laryngitis*. **L. spasmod′ica,** see *Cynanche trachealis*. **Subglot′tic l.,** inflammation of the vocal cords. **Submu′cous l.,** œdema of the glottis. **Suf′focative l.,** œdematous l.; croup; diphtheria of the larynx. **Syphilit′ic l.,** see *Larynx, diseases of* (table). **L. et tracheï′tis chron′ica,** see *Phthisis laryngea*. **L. et tracheï′tis infan′tilis,** croup. **Tuber′culous l.,** tuberculosis of the larynx, laryngeal phthisis, with characteristic local and constitutional symptoms of tuberculous infection; see *Larynx, diseases of* (table).

**Laryngo-.** In composition, larynx.

**Laryngocace,** lar-in-gok′a-se (*kakos*, bad). Croup; cynanche trachealis.

**Laryngocatar′rhus.** Catarrh of the larynx.

**Laryn′gocele.** Hernial or other dilatation of the larynx.

**Laryngocente′sis** (*kentesis*, puncturing). Operation of puncture of the larynx.

**Laryngofis′sion** or **Laryngofis′sure** (*findo, fissum*, to cleave). Operation of opening or separating the cartilages of the larynx for removal of large intralaryngeal growths, thus causing a *laryngofissure*.

**Laryn'gograph** (*grapho*, to write). Instrument for noting movements of the larynx.

**Laryngog'raphy** (*grapho*, to write). Anatomical or physiological description of the larynx.

**Laryngolog'ical.** Relating to laryngology.

**Laryngol'ogist.** One skilled in or devoted to the study of laryngology.

**Laryngol'ogy** (*logos*, discourse). The specialty in medicine which deals with the larynx and its diseases.

**Laryngom'etry.** Measurements of the larynx.

**Laryngonecro'sis.** Necrosis of the cartilages of the larynx.

**Laryngoparal'ysis.** Paralysis of the muscles of the larynx.

**Laryngop'athy** (*pathos*, disease). Disease of the larynx.

**Laryngophan'tom.** Papier-maché model of the larynx for practising examination of that organ.

**Laryngopharyn'geal.** Relating to larynx and pharynx.

**Laryngopharynge'us.** Constrictor pharyngis inferior muscle.

**Laryngophar'ynx.** The larynx and pharynx combined. Also the part of the pharynx above the larynx.

**Laryngoph'ony** (*phone*, voice). Laryngeal voice; tracheal voice. Sound heard in health, when the stethoscope is placed over the larynx when a person speaks. The voice appears to pass immediately up to the ear of the auscultator. Tracheophony—a sound similarly heard over the trachea—is more intense. See *Pectoriloquy*.

**Laryngophthi'sis.** Tuberculosis of the larynx.

**Laryn'goplasty.** Plastic operation on the larynx.

**Laryngople'gia** (*plege*, stroke). Paralysis of the larynx.

**Laryngorrha'gia.** Hemorrhage from the larynx.

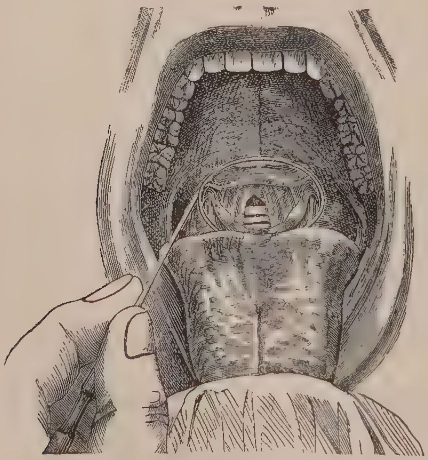
**Laryngorrhœ'a** (*rheo*, to flow). Abnormal mucous discharge from the larynx.

**Laryn'goscope.** Larynx speculum, speculum laryngis. Instrument which, by means of a mirror, enables the larynx to be inspected. Glottiscope.

**Laryngoscop'ic.** Relating to the laryngoscope or to examination of the larynx.

**Laryngos'copist.** One skilled in laryngoscopy.

**Laryngos'copy.** Use of the laryngoscope; inspection of the larynx. When self-examination is practised it is called autolaryngoscopy.



Laryngoscopy; the image seen in the laryngeal mirror. (Cohen.)

**Laryn'gospasm.** Spasm of the larynx. Asthma thymicum or laryngismus stridulus. Spasmodic croup.

**Laryngosteno'sis** (*stenosis* contraction). Contraction or narrowness of the larynx.

**Laryngostro'boscope.** Apparatus, like a zoetrope, for examining the vibrations of the vocal cords.

**Laryn'gotome** (*tome*, incision). Instrument for performance of laryngotomy.

**Laryngot'omy.** Operation of opening the larynx to extract a foreign body or to remedy obstruction of the glottis; sometimes erroneously called bronchotomy and tracheotomy. It is called *cricoid l.*, *thyroid l.*, when incision is made through the cricoid and thyroid cartilages, respectively. **Me'dian l.**, thyreotomy. **Supe'rior l.**, l. through the thyrohyoid membrane, *thyrohyoid laryngotomy*.

**Laryngotra'cheal.** Relating to larynx and trachea.

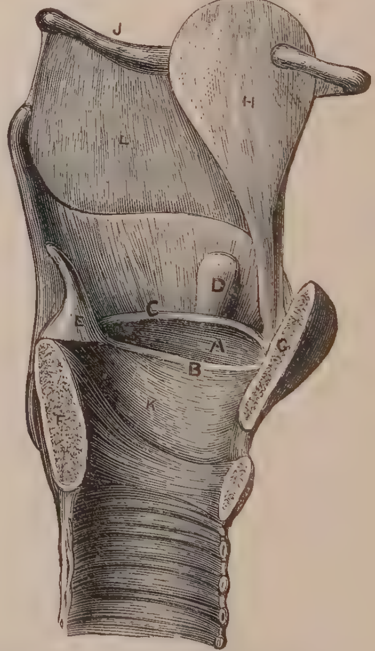
**Laryngotracheï'tis.** Inflammation of the larynx and trachea.

**Laryngotracheot'omy.** Laryngotomy extended to the trachea.

**Laryngoty'phoid.** Laryngeal complication of typhoid fever.

**Laryngoty'phus.** Laryngeal affection in typhus fever.

**Lar'ynx.** Apparatus of voice situated at the superior and anterior part of the neck, and at the top of the trachea, with which it communicates. It is composed of four cartilages—the thyroid, cricoid, and two arytenoid; is moved by a number of muscles and lined by mucous membrane, having certain membranous reflections, constituting the superior and inferior ligaments of the glottis, etc. Its superior or pharyngeal opening is called osteum pharyngeum or aditus laryngis, orificium superius laryngis, hyperglottis, rima hyperglottica, and fissura laryngea pharyngis. The larynx is destined to give passage to the air in respiration, and to impress upon it certain modifications which constitute voice. Its dimensions vary in different individuals; in men it is always larger and situated lower than in women. The weight of the larynx has been estimated at 28.5 grammes. **Artific'ial l.**, metal substitute for extirpated larynx. **Benign growths of l.**, see *Larynx, diseases of* (table). **Bronch'ial** or **bronchotra'cheal**



Vertical section of the larynx (Ellis): A, ventricle of the larynx; B, vocal cord; C, ventricular band; D, sacculus laryngis; E, arytenoid cartilage; F, cricoid cartilage; G, thyroid cartilage; H, epiglottis; J, hyoid bone; K, cricothyroid ligament; L, thyrohyoid membrane.

l., inferior l. in birds, one on each bronchus. **Diseas′es of l.**, the principal diseases of the larynx are exhibited in the table (see pp. 622–625), which includes the differential symptoms of each disease, prepared by G. M. Lefferts. **Pellic′ular** or **plas′tic inflamma′tion of l.**, cynanche trachealis; croup. **L. spec′ulum**, laryngoscope. **Tra′cheal l.**, bronchial l.

**Lasciv′ia** or **Lasciv′itas.** Satyriasis.

**Lasciv′ious.** Libidinous.

**Lasegue′s** (las-egs′) **law.** Slight lesions or disturbances of function develop reflexes, important ones check them. **L.′s ma′nia of persecu′tion,** paranoia in its most characteristic form. **L.′s sign,** inability of an hysterical person under the influence of an anæsthetic to move the arm or leg which he cannot see. In sciatica, bending the thigh upon the leg is without pain or easily effected.

**Laserpit′ium.** A genus of plants of the order *Umbelliferæ*. **L. as′perum,** L. latifolium. **L. latifo′lium,** white gentian; root is bitter and tonic. **L. monta′num,** L. siler. **L. si′ler,** heartwort, sermountain; seeds and roots are aromatic. **L. trifolia′tum,** L. siler.

**Lash.** Eyelash.

**Las′situde** (*lassus*, tired). Fatigue, during which the functions are performed with less vigor than usual.

**La′ta** or **La′tah.** Malay term for a convulsive tic of the same nature as myriachit.

**Lata′nia borbon′ica.** Bourbon palm; pulp is astringent.

**Lat′ebra** (hiding-place). Vitelline cavity. Spherical swelling formed in an impregnated egg by the dipping down of the white yolk into the centre of the yellow yolk.

**La′tency.** Condition of being latent or concealed. **Pe′riod of l.**, see *Latent period*.

**La′tens in o′re** (lying hid in the mouth). Pterygoideus internus.

**La′tent** (*lateo*, to lie hid). Epithet applied to certain diseases or states of disease in which the symptoms are so concealed and obscure as to escape observation, as latent inflammation, latent period of smallpox. **L. heat,** see *Heat*. **L. pe′riod,** period of incubation of diseases; in physiology, the time between the application of a stimulus and the beginning of muscular contraction.

**Lat′erad.** Toward the lateral aspect.

**Lat′eral** (*latus*, side). Relating to the side. **L. as′pect,** see *Mesial*. **L. car′tilages,** cartilages that prolong the os pedis or third phalanx into the heels of the hoof of the horse. **L. col′umn,** column of the spinal cord situated between the anterolateral and posterolateral fissures. **L. inci′sors,** incisor teeth lying between the central incisors and the cuspids. **L. opera′tion,** see *Lithotomy*. **L. plates,** portion of the mesoblast on the outside of the provertebræ. **L. si′nuses,** see *Sinuses*. **L. ven′tricle,** see *Ventricle*.

**Latera′lis.** Lateral. **L. na′si,** fasciculus of the compressor nasi; depressor alæ nasi. **L. ster′ni,** costosternalis.

**Lateral′ity.** Excess of development laterally.

**Lateriabdom′inal.** Relating to the side and to the abdomen.

**Lateriduc′tion** (*latus*, side, *duco*, to lead). Movement of the eye to one side or another.

**Lateriflex′ion.** Bending to one side.

**Lateripul′sion.** Abnormal impulse to lateral movement.

**Laterirec′tus.** Rectus capitis lateralis.

**Lateri′tious** (*later*, a brick). Epithet applied to brickdust-like sediment in urine. See *Urate*.

**Lateritor′sion** (*torqueo*, *torsum*, to twist). Turning of the vertical meridian of the cornea to one side or the other.

**Lateriver′sion.** Lateral deviation or displacement. Movement of both eyes to the same side.

**Lateroabdom′inal posi′tion.** Position on the side and the abdomen.

**Laterocer′vical.** At the side of the neck.

**Laterodor′sal.** At the side of the back.

**Lateroflex′ion** (*latus*, side, *flexus*, bending). Bending to one side, as of the uterus.

**Lateroposi′tion.** Displacement laterally.

**Lateropul′sion.** Abnormal impulse to lateral movement, as in paralysis agitans.

**Lateroretrover′sion.** Retroversion with lateral displacement, as of the uterus.

**Laterover′sion.** Lateral deviation or displacement.

**Latescen′tis chor′dæ mus′culus** (muscle of the hidden cord). Palmaris longus.

**Lath′yris.** Euphorbia lathyris.

**Lath′yrism.** Affection resembling beriberi, arising from the use of lathyrus as an article of diet.

**Lath′yrus.** Several varieties are known in Europe, Spain especially, the ripe seeds of which are narcotic. When young and tender they are an article of diet. See *Lathyrism*.

**Lat′ices lac′tei.** Receptaculum chyli.

**Latis′simocondyloide′us.** Epitrochleoanconæus.

**Latis′simus** (superlative of *latus*, broad) **col′li,** Platysma myoides. **L. dor′si,** flat, quadrilateral muscle situated at the posterior, lateral, and inferior region of the trunk; attached to the posterior half of the outer lip of the crest of the ilium, to the posterior surface of the sacrum, to the spinous processes of the six or seven last dorsal vertebræ, to all those of the loins, and to the last four false ribs, and inserted by a strong tendon at the posterior edge of the bicipital groove of the humerus. This muscle carries the arm backward, depressing it, and making it turn on its axis; it also draws backward and downward the prominence of the shoulder. When, suspended by an arm, we make an effort to raise ourselves, it draws the trunk toward the arm. It can also raise the ribs by assuming its fixed point on the humerus and become an inspiratory muscle—dorsohumeralis. **L. pec′toris,** pectoralis superficalis.

**Latitu′do hu′meri** (*latus*, broad). Scapula.

**Latour′ bark.** Bark of Strychnos nux vomica.

**Latrine′.** Receptacle for excrement.

**Lat′tice-work.** Cancelli.

**La′tus.** Broad. **L. a′ni,** levator ani.

**Lau′dable.** Healthy; normal; term formerly applied to thick, yellow, creamy pus.

**Laudanine′.** Base found in opium, $C_{20}H_{25}NO_4$, in colorless prisms.

**Laudanosine′.** $C_{21}H_{27}NO_4$. Alkaloid derived from opium, without therapeutic value.

**Laud′anum.** Formerly any anodyne. Every preparation of opium, solid or liquid, but particularly the extract and tincture; now entirely restricted to *tinctura opii* (which see). **L. Abba′tis Rousseau′,** Abbe Rousseau's drops; preparation made from opium, honey, beer-yeast, water, and alcohol. **Denar′cotized l.**, l. made of denarcotized opium. **Deo′dorized l.**, tinctura opii deodorata. **Ford′s l.**, vinum opii. **Liq′uid l.**, tinctura opii. **L. liq′uidum Hoffman′ni,** vinum opii. **L. l. Syden-ham′i,** vinum opii. **L. opia′tum,** extractum opii. **Rousseau′s′ l.**, l. Abbatis Rousseau. **L. sim′plex,** extractum opii. **Syd′enham′s l.**, vinum opii. **War′ner′s l.**, ammoniated tincture of opium.

**Laugh.** Risus. **Canine′** or **sardon′ic l.**, see *Canine*.

**Laugh′ing.** Risus. **L. gas,** nitrous oxide gas.

**Laugh′ter.** Risus.

**Laugier′s** (lo-zhyaze′) **her′nia.** Hernia piercing Gimbernat's ligament.

**Laumonier′s** (lo-mon-yaze′) **gan′glion.** Carotid ganglion.

**Lau′ra′s nu′cleus.** Deiter's nucleus.

**Laur′el.** Kalmia latifolia; laurus; Magnolia macrophylla. **Broad′-leaved l.**, Kalmia latifolia. **Cher′ry l.**, Prunus laurocerasus. **Cam′phor l.**, Cinnamomum camphora. **Com′mon l.**, Prunus laurocerasus. **Dwarf l.**, Kalmia angustifolia. **Great l.**, Rhododendron maximum. **Ground l.**, Epigæa repens. **Moun′tain l.**, Kalmia latifolia, rhododendron. **Nar′row-leaved l.**, Kalmia angustifolia. **Pale l.**, Kalmia glauca. **Poi′son l.**, Prunus laurocerasus.

## A DIFFERENTIAL TABLE OF THE SYMPTOMS

| | | ANÆMIA. | HYPERÆMIA. | LARYNGEAL HEMORRHAGE. | ACUTE LARYNGITIS. | CHRONIC LARYNGITIS. | TUBERCULOUS LARYNGITIS. |
|---|---|---|---|---|---|---|---|
| FUNCTIONAL OR SUBJECTIVE SYMPTOMS. | *Voice.* | Unreliable, easily fatigued, occasional failure, sometimes functional aphonia. | Generally somewhat hoarse. | Lost in hæmatoma of the vocal cord or cords.<br>Unaffected in hæmoptysis. | Hoarse, becoming aphonic. | Hoarse, uncertain, easily fatigued, often lost in laryngitis sicca, impaired in chorditis tuberosa. | Aphonic in earlier stages, completely lost in advanced disease. |
| | *Respiration.* | Unembarrassed, unless incipient pulmonary tuberculosis. | Unembarrassed. | Sometimes seriously affected in large hæmatoma of the arytæno-epiglottic fold or of the vocal cord.<br>Unaffected in hæmoptysis. | Not embarrassed, as a rule, in adults, unless œdema, then stridor, dyspnœa, and even apnœa.<br>In children, frequently, laryngismus stridulus. | Not embarrassed in ordinary cases, sometimes seriously in subglottic chronic laryngitis, may be in laryngitis sicca from accumulation of crusts. | Early hurried and short, greatly embarrassed with advance of pulmonary disease. If dyspnœa be laryngeal, it is due to chronic œdema. |
| | *Deglutition.* | Unaffected. | Some dryness, stiffness, perhaps slight soreness. | Some pain and interference in hæmatoma of the arytæno-epiglottic fold. | Painful from associated pharyngeal inflammation. | Unaffected. | Extremely difficult and painful, from the advent of infiltration and ulceration, to termination. If epiglottis is involved, pain greatly increased. |
| | *Pain.* | Occasionally slight tickling or sense of irritation. | Sensation of dryness or of a foreign body. | No localized pain. | Sensation of tightness and constriction, tender to external pressure. | Sense of laryngeal fatigue, in ordinary cases intense discomfort in laryngitis sicca. | Only experienced during functional acts. |
| | *Cough.* | Variable, slight, irritative. | Desire to clear the throat. | Sense of irritation, possible disposition to cough. | Dry, hard, shrill, metallic, aphonic, when exudation, moist.<br>In children, croupy. | Not usually present, frequent disposition to clear the throat.<br>In laryngitis sicca at times violent, the expectorated crusts being tinged with blood. | Greatly influenced by the stage and progress of the pulmonary tuberculosis. Secretion from laryngeal ulcers a thick, tenacious, semi-opaque, ropy mucus. |
| PHYSICAL OR OBJECTIVE SIGNS. | *Color.* | Abnormally pale and anæmic. | Bright red, diffuse, or partial congestion. | Rounded, deep-red, purplish tumor in hæmatoma.<br>Blood in small masses or streaks, unmixed with saliva or mucus, in hæmoptysis. | Intense, bright red, uniformly increasing, superficial hyperæmia.<br>Translucent if œdema occurs. | Deep red and injected, vocal cords show grayish discoloration or a yellowish red. | Dull gray with slightly yellowish tinge, solid and semi-opaque aspect. |
| | *Ulcer.* | None. | None. | Single, small point of erosion, vocal cords, ventricular bands, or anterior face of the arytænoid cartilages in hæmoptysis. | Slight erosion of edges, vocal cords occasionally in severe cases. | Indolent ulcers over processus vocali occasionally, are always flat or cone-shaped. | Grayish-yellow color, surface ragged and worm-eaten, edge irregular and flush with surrounding tissues, no areola, ulcers coalesce and form large superficial ones. |
| | *General appearance of Lesion.* | Anæmia, no hypertrophy nor inflammatory changes. | Bright red congestion and slight swelling of mucous membrane, vocal cords, interarytænoid commissure, ventricular bands. | Dependent upon the size, position, form of the hæmatoma.<br>In hæmoptysis a small, single, always superficial point of erosion. | Some inflammatory swelling, entire mucous membrane. In adults, but slight narrowing. In children, with subglottic laryngitis marked narrowing. If œdema, dangerous stenosis. | In old cases general hyperplastic thickening of the mucosa and permanent dilatation of blood-vessels. In chorditis tuberosa small, rounded nodules on the edges of vocal cords. In subglottic chronic laryngitis, considerable diminution in size of infraglottic space. | Tuberculous infiltration of membrane covering arytenoids, and their commissure, gives rise to club-shaped arytenoids. Infiltration of epiglottis gives the turban-shaped epiglottis. Chronic œdema will alter form of laryngeal parts, as will perichondritis and necrosis of cartilages. |

OF THE PRINCIPAL LARYNGEAL DISEASES.

| SECONDARY SYPHILITIC LARYNGITIS. | TERTIARY SYPHILITIC LARYNGITIS. | MALIGNANT GROWTHS. | NON-MALIGNANT GROWTHS. | NEUROSES (SENSATION). | NEUROSES (MOTION). |
|---|---|---|---|---|---|
| Impaired or temporarily lost if vocal cords are involved. | Impaired or lost by ulceration or destruction of vocal cords or cicatricial deformity. | Quickly lost in intrinsic, later in extrinsic. In intrinsic, in earlier stages, due to the immobility of affected side of the larynx. | Very variable, from slight hoarseness to complete aphonia, dependent upon location and size of the neoplasm. | Slightly hoarse, inability to produce high tones, vocal fatigue, due to unilateral or bilateral paralysis of the external tensors. | Voice completely lost in bilateral recurrent laryngeal paralysis, weakened in unilateral. In both bilateral and unilateral paralysis of the abductors, voice but little impaired. In paresis of the abductors, voice lost. In bilateral paralysis of the internal tensors, voice weakened. |
| Unembarrassed. | No interference with respiration in ulcerative stage, unless œdema occur. Severe dyspnœa, with perichondritis, and in stenosis due to cicatrization. | Early embarrassed in intrinsic, later in extrinsic, in both cases finally, urgent dyspnœa and tracheotomy. | Rarely embarrassed, only with large papillomata in adults. In children, small larynx and multiple papillomata, dyspnœa common. | No actual embarrassment, sometimes imaginary, in nervous or hysterical patients. | In bilateral paralysis of the abductors, inspiratory dyspnœa.<br>In the other forms of laryngeal paralysis, practically no interference with respiration. |
| Painful from associated pharyngeal lesions. | Sometimes difficult or painful from associated pharyngeal lesions, may be from destruction of epiglottis or cicatricial distortion of laryngeal parts. | Early affected in extrinsic, later intrinsic, finally impossible. | Only impaired in rare cases, in which epiglottis or aryepiglottic fold is involved. | Imperfect, owing to anæsthesia of the mucous membrane and paralysis of the depressor muscles of the epiglottis. | Unaffected. |
| No localized pain. | No localized pain. | Pain constant, sharp, lancinating, radiating to the ears. Is more characteristic and prominent in extrinsic than in intrinsic. | Characteristically absent. | In neuralgia of the throat intense, localized pain, usually unilateral, radiating to ear. | No localized pain. |
| None. | None. | Cough, with sputa tinged with blood, pus-cells, and necrotic tissue, characteristic odor, offensive and fetid. | In large or multiple growths, sense of irritation leading to slight cough. | In nervous laryngeal cough, shrill, metallic, or deep, vibrating, frequent paroxysmal, and continued, lasting days, weeks, and months. | None. |
| Erythema of a peculiar mottled appearance, and dusky, sombre hue, dark red or purplish. | Abnormal colored mucous membrane covers the smooth, rounded tumefaction or the diffuse, gummatous infiltration. Ulcer, deep red color. | Epithelioma, deep, angry red.<br>Sarcoma, generally grayish, semi-opaque, sometimes pinkish or reddish. | Papillomata, grayish-white or pinkish-white.<br>Fibromata, bright red.<br>Cystomata, a yellow or reddish-white, on vocal cords translucent. | Normal. | Usually slight hyperæmia of vocal cords. |
| Superficial, round, or ovoid bright-yellow color, no areola, slightly excavated, secretes yellow pus, has a few necrotic shreds of tissue. | Deep, with sharp-cut edges, dark-red areola, excavated surface, profuse purulent secretion, necrotic tissue, has a crater-like aspect. | A ragged, ulcerating mass, central portion depressed and fissured, yellowish-gray, dirty color. Notable inflammatory area of redness about it, dense, cartilaginous feeling to the touch in epithelioma. | None. | None. | None. |
| Mottled erythema, red or purplish color.<br>Some swelling of tissues, due to infiltration of the mucosa and venous turgescence. | Gummata and ulceration, as above. Vigorous and extensive cicatrization may destroy normal contour of larynx, distort its lumen, encroach upon the breathing space, impair vocal function, and generally alter its form. | Epithelioma, a broadly infiltrating, irregular mass, rapidly ulcerating.<br>Sarcoma, a rounded, reddish, soft, fleshy tumor, rarely ulcerating, developing insidiously, progressing slowly. | Varies with the pathological nature of the neoplasm. | Paralysis of external tensors will change normal form of glottis during phonation. | Position of the vocal cords varies with the form of paralysis. |

A DIFFERENTIAL TABLE OF THE SYMPTOMS OF

| | | ANÆMIA. | HYPERÆMIA. | LARYNGEAL HEMORRHAGE. | ACUTE LARYNGITIS. | CHRONIC LARYNGITIS. | TUBERCULOUS LARYNGITIS. |
|---|---|---|---|---|---|---|---|
| PHYSICAL OR OBJECTIVE SIGNS. | *Location of Lesion.* | Entire laryngeal mucous membrane. | Hyperæmia most active. I. ventricular bands. II. ventricles. III. vocal cords. IV. arytæno-epiglottic folds. | Hæmatoma. I. vocal cords. II. arytæno-epiglottic folds.<br>Hæmoptysis. I. erosion vocal cords. II. ventricular bands. III. anterior face of arytænoid cartilages. | Inflammatory process most active in those parts where mucous membrane is loosely attached, *i. e.* arytæno-epiglottic folds, arytænoid commissure, ventricular bands. | Hyperplasia. I. ventricular bands. II. interarytænoid commissure. III. vocal cords, rarely. | I. Inter-arytenoid commissure. II. arytenoid cartilages. III. aryteno-epiglottic folds. IV. vocal cords. V. epiglottis, in order of frequency of the infiltration and ulceration. |
| ACCESSORY, PHYSICAL, OR OBJECTIVE SIGNS. | *Pharynx.* | Abnormally pale and anæmic, except pillars of the fauces, which present line of redness. | In passive hyperæmia, engorgement of venous plexus, at base of tongue.<br>In active, bright, diffuse congestion. | Caution in diagnosis, hemorrhages may come from pharynx, gums, or tongue in hæmoptysis. | Perhaps a preceding or associated acute pharyngitis. | Probably chronic pharyngitis, chronic follicular pharyngitis, or elongated uvula. | In rare cases acute tuberculous infiltration and ulceration. |
| | *Naso-pharynx.* | Uninvolved. | Uninvolved. | Caution in diagnosis, hemorrhage frequently comes from nose or vault of the pharynx in hæmoptysis. | Ordinarily an accompanying acute naso pharyngitis. | Usually obstructive lesion of the nose, chronic naso-pharyngitis, perhaps hypertrophied pharyngeal or faucial tonsils. | In very rare cases acute tubercular infiltration and ulceration. |
| | *Lungs.* | Very often incipient tuberculosis. | Perhaps acute bronchitis. | Caution in diagnosis, if hemorrhage is from lungs, trachea coated with blood, auscultate lungs, use laryngoscope. | May follow acute bronchitis. | Possibly in old cases, co-existent chronic bronchitis. | In every case either primarily, synchronously, or subsequently involved. |
| | *Diathesis Cachexia.* | Very often the tubercular. | None. | Hemorrhagic diathesis, debility of phthisis, anæmia, malnutrition, vicarious menstruation, pregnancy. | Catarrhal. In children, struma, lymphatic habit. | Catarrhal. | Always the tuberculous diathesis. |
| MISCELLANEOUS. | | May occur with general anæmia, hemorrhagic loss, chlorosis, Bright's disease, diabetes. | Invariable accompaniment of the exanthemata. | Strain of the voice, violent vocal exercise are exciting causes of hæmatoma of vocal cords. Chronic laryngitis with erosion is a predisposing one in hæmoptysis. May be a result of traumatism, in hæmatoma. | Usually secondary to an inflammatory process, involving some portion of the air-tract above the larynx. | Probably never a primary disease, but result of a chronic rhinitis, chronic naso-pharyngitis, or nasal stenosis. | The occurrence of laryngeal lesions in pulmonary phthisis, serious complication. average duration of life after their advent eighteen months. If laryngeal disease is primary or simultaneous with pulmonary, the tuberculous infection is virulent and active. |

Rose l., Kalmia latifolia. **Sheep l.**, Kalmia angustifolia. **Swamp l.**, Kalmia glauca. **Sweet l.**, Illicium floridanum. **L. wa′ter**, aqua laurocerasi. **White l.**, Magnolia glauca.

**Laure′lia sempervir′ens.** Chile sassafras; Peruvian nutmeg; the seeds are aromatic.

**Lauren′tia pinnatif′ida.** Pepper dulse; species of algæ.

**Laure′ola.** Daphne laureola.

**Lau′ric** or **Laurostea′ric acid.** $C_{12}H_{24}O_2$. Glyceride derived from Laurus nobilis.

**Laurin′.** Compound of glyceril and lauric acid found in Laurus nobilis.

**Laurocer′asi fo′lia.** Cherry-laurel leaves; fresh leaves of Prunus laurocerasus.

**Laurocer′asus** (*laurus* and *cerasus*, cherry tree). Prunus laurocerasus.

**Lau′rus.** Daphne, laurel, sweet bay; ord. *Lauraceæ.* The leaves and berries have a sweet, fragrant smell and an aromatic, astringent taste. Sweet bay has been advised as a stomachic and carminative, sometimes employed as a fomentation and in clysters. Infusion of the fruit is employed in impetigo. **L. æstiva′lis,** l. benzoin. **L. alexandri′na angustifo′lia,** Ruscus hypoglossum. **L. apollo′nis,** laurus. **L. ben′zoin,** spice wood, spice bush, benjamin bush, allspice bush, wild allspice, spice berry, fever wood, fever bush. Indigenous shrub; all parts have a spicy, agreeable flavor, which is strongest in the bark and berries. Infusion or decoction of the small branches is said to be vermifuge and an agreeable drink in low fevers. The bark has been used in intermittents; the berries, dried and powdered, for allspice. The oil of the berries is excitant. **L. cam′phora** or **camphorif′era,** see *Camphor.* **L. canel′la,** L. cassia. **L. cas′sia,** species of Laurus yielding cassia, canella, wild cinnamon, Malabar cinnamon. Bark and leaves abound with the flavor of cinnamon, for which they may be substituted, but they are much weaker. The unopened flower-buds are used in the same manner. **L. cer′asus,** Prunus cinnamomoides. **L. cinnamomoi′des,** Nectandra cinnamomoides. **L. cinnamo′mum,** cinnamon bark, obtained also from *Cinnamomum aromaticum,* is stimulant and carminative, and is employed chiefly as a grateful aromatic to cover the taste of nauseous remedies; dose, gr. x–xx (0.65–1.3). The *flowers,* called *Cassiæ flores,* possess aromatic and astringent virtues, and may be used wherever cinnamon is required. Volatile oil of the bark—*oleum cinnamomi, oil of cinnamon*—is official in the Ph. U. S. and Br. **L. cube′ba,** Piper cubeba. **L. culil′aban** or **culil′-**

THE PRINCIPAL LARYNGEAL DISEASES (*Continued*).

| SECONDARY SYPHILITIC LARYNGITIS. | TERTIARY SYPHILITIC LARYNGITIS. | MALIGNANT GROWTHS. | NON-MALIGNANT GROWTHS. | NEUROSES (SENSATION). | NEUROSES (MOTION). |
|---|---|---|---|---|---|
| Erythema. I. vocal cords. II. ventricular bands. III. arytæno-epiglottic folds. Mucous patch. I. upper surface vocal cords. II. epiglottis. Ulcer at any point. | Ulceration occurs. I. epiglottis. II. vocal cords. III. ventricular bands. IV. inter-arytænoid commissure, in order of frequency. | Intrinsic, ventricular bands. Extrinsic, pharyngo-laryngeal orifice. | Usually at or near glottis. | Abnormal sensations, pain, localized sense of foreign body, etc., at any point in laryngeal cavity. | Vocal cords. |
| Symmetrical, dull red or purplish, erythema with sharp line of demarcation, soft palate, and pillars of fauces. Mucous patches and superficial ulcers, latter rare. | Aside from gummata or active ulceration, commonest deformity is from cicatricial adhesion of soft palate to pharyngeal wall. | In extrinsic or pharyngo-laryngeal carcinoma, lower pharynx involved with, usually, mouth of œsoph- | Uninvolved. | Anæsthesia, hyperæsthesia, paræsthesia, or neuralgia, as of larynx.<br>Hypertrophy of adenoid tissue at base of tongue, varix in same locality, chronic follicular pharyngitis, etc. | Uninvolved. |
| Uninvolved. | Occasionally ulceration at the vault of the pharynx. | Uninvolved. | Uninvolved. | Perhaps adenoid growths. | Uninvolved. |
| Uninvolved. | Uninvolved. | Uninvolved. | Uninvolved. | Uninvolved. | Possibly pleuritic adhesions at apex of lungs, specially right. |
| Secondary syphilitic, 4-6 months after infection, except ulcer. | Tertiary syphilitic, 5–15 years after infection, up to any period. | Cachexia a late manifestation, more delayed in intrinsic than in extrinsic. In some cases intrinsic absent. | None. | Neurasthenic, hysterical, hypochondriacal. | None. |
| A chancre of pharynx (usually tonsil) and of larynx (epiglottis) is rare, but not unknown, local induration, glandular involvement, and early (2 to 4 weeks) appearance of eruption aid diagnosis. | In vast majority of instances ulceration follows gummatous deposit so quickly that latter is never seen. | Little or no involvement of lymphatic glands of neck in intrinsic. Early and often extensive involvement in extrinsic. In extrinsic cancer marked displacement of larynx. | Cases of myxomata, adenomata, lipomata, angiomata, enchondromata, and mixed tumors are very rare. | Uterine disease, ovarian irritation, etc, a cause of paræsthesia, larynx or pharynx. | The central lesions, lesions of the trunk of the nerves, or the peripheral causes that may give rise to above paralyses, are many and varied. |

awan, tree affording cortex culilawan or culilaban, culilawan, culitlawan, cortex caryophylloides or caryophylloides amboinensis. Bark resembles sassafras in appearance and properties, and is used in Java as a condiment. **L. malabath'rum**, see *Malabathrum*. **L. no'bilis**, laurus. **L. parviflo'ra**, leather-leaved laurel of W. Indies. Leaves are aromatic and tonic. **L. per'sea**, Persea gratissima. **L. pseudo-ben'zoin**, L. benzoin. **L. sas'safras**, Persea sassafras, sassafras. Indigenous in the United States. Sassafras wood and root, *sassafras radix*, and especially the bark of the root, *sassafras radicis cortex*, *sassafras* (Ph. U. S.), have been considered stimulant, sudorific, and diuretic. Virtues depend upon the essential oil, oleum sassafras, the odor of which is not unlike that of fennel. It has been used in cutaneous diseases, chronic rheumatism, etc,, in infusion, which has also been taken as tea; see *Saloop*. The pith of the stems, *sassafras medulla*, abounds in gummy matter, which it readily imparts to water, forming a limpid mucilage, much employed as a collyrium in ophthalmia and as a drink in dysentery, catarrh, etc. (one drachm of the pith to a pint of boiling water).

**Lauth's canal'.** Schlemm's canal; called also the scleral sinus.

**Lavage',** lav-azh' (*lavo*, to wash). Washing; washing out of the stomach by repeated injection and ejection of water through a stomach-tube.

**Lavamen'tum** (*lavo*, to wash). Clyster.

**Lavan'dula.** Common lavender, ord. *Labiatæ*. Odor of lavender flowers is fragrant and agreeable; taste warm and bitterish—depending upon the essential oil. It has been used as a stimulant, particularly in the form of the oil, *o'leum lavan'dulæ* (Ph. U. S. and Br.); dose, ♏j–v (0.06–0.3). Other official (Ph. U. S. and Br.) preparations are *Spir'itus l.*; dose, ♏x–xxx (0.65–2.0); and *tinctu'ra l. compos'ita*, compound tincture of lavender, contains oil of lavender flowers, oil of rosemary, cinnamon, cloves, nutmeg, and red saunders; dose, ʒss–j (2.0–4.0). The dried leaves are errhine. **L. angustifo'lia**, lavandula. **L. latifo'lia**, lavandula; L. spica. **L. officina'lis**, lavandula. **L. spi'ca or ve'ra**, French lavender, yields oil of spike; used as a liniment in paralysis and in veterinary medicine. **L. stœ'chas**, cassidony; French lavender; flowers are expectorant and antispasmodic. **L. ve'ra**, true lavender; lavandula. **L. vulga'ris**, lavandula; L. spica.

**Lava'tion.** Lavage. **L. of the blood**, intravenous injection of salt solution.

**Lave'ment** (F.). Enema.

**Lav′ender, common.** Lavandula. **Fe′male l.,** Lavandula latifolia. **French l.,** Lavandula spica. **Sea l.,** Statice caroliniana; Statice limonium. **Spike l.** Lavandula spica.

**Lav′er.** Ulva latissima. **Broad green l.,** Ulva latissima. **L. german′icum**, Veronica beccabunga. **Lacin′iated pur′ple l.,** Ulva umbilicalis. **L. odora′tum,** Sisymbrium nasturtium. **Pur′ple l.,** Porphyria lacinata.

**Lavera′nia.** A genus of *Hæmosporidia* containing the human malarial parasite. **L. danilew′skii,** hæmoproteus; parasite of malaria in certain birds. **L. mala′riæ,** crescentic-shaped Plasmodium malariæ; Plasmodium malignum. **L. rana′rum,** Drepanidium princeps, parasite in the blood of the edible frog.

**Laville′s′ li′quid.** A gout nostrum said to contain the active principle of colocynth and cinchona, with unimportant salts of lime.

**Lavipe′dium** (*lavo,* to wash, *pes,* foot). Pediluvium.

**Law.** A formula expressing the rule of sequence of certain phenomena. **Ar′an′s l., Col′les′s l., Koch′s l.,** etc., see the qualifying words.

**Lawso′nia al′ba** (after Dr. J. Lawson) or **iner′mis.** Smooth lawsonia, henna; East Indian and African plant, the root of which is slightly astringent. In India the root of the *Lawsonia spinosa* is employed in lepra and other cutaneous affections.

**Lax** (*laxus*). Loose, referring to the stools.

**Lax′ative.** Medicine which gently opens the bowels; mild purgative. **L. spe′cies,** mixture of senna, anise, fennel, elder-flowers, potassium bitartrate and tartaric acid; an aromatic carminative laxative tea.

**Laxa′tor au′ris inter′nus** or **L. tym′pani ma′jor.** Muscle arising from the spine of the sphenoid bone and from the cartilage of the Eustachian tube, and inserted by a tendon into the apophysis of Rau. It relaxes the membrana tympani. **L. tym′pani mi′nor,** very small muscle extending from the upper part of the external auditory canal, and inserted at the inferior part of the process of the handle of the malleus. Its existence is denied by most anatomists.

**Lax′ity.** Laxness, atony. Condition of a tissue when loose or relaxed, or of one which wants tone.

**Lay′er.** Stratum; a single thickness of anything lying against another thickness of the same or, usually, another material. **An′imal germ l.,** epiblast. **Bac′illar l. of ret′ina,** tunica Jacobi or outermost layer of the retina. **Baillarger′s′ l.,** see *Baillarger.* **Base′ment l.,** membrana propria. **Bechter′ew′s l.,** see *Bechterew.* **Ber′nard′s l.,** see *Bernard.* **Blastoder′mic l.,** germ-layer; the three blastodermic layers are the epiblast, mesoblast, and hypoblast. **Bow′man′s l.,** anterior elastic layer of cornea beneath epithelial layer. **Bruch′s l.,** see *Bruch.* **Cell l.,** see *Cell.* **Cell′ular l.,** cellular coat. **Claus′tral l.,** see *Claustral* and *Spindle layer.* **Cor′neal l.,** stratum corneum; epiblast. **Cor′tical l.,** cortex of brain. **Cremaster′ic l.,** cremaster muscle; cremasteric fascia. **Cutic′ular l.,** cuticle; cuticular membrane; external limiting membrane; hyaline layer at free end of columnar cell; see *Operculum* and *Cell membrane.* **Der′mal l.,** epiblast. **Do′bie′s l.,** see *Krause′s membrane.* **Embryon′ic l.,** germ-layer. **Epithe′lial l.,** cellular coat. **Exter′nal blastoder′mic l.,** epiblast. **Floe′gel′s l.,** see *Floegel.* **Fundamen′tal l.,** primitive embryonic layer. **Ganglion′ic l.,** layer of large cells in the cerebral cortex. **Gelat′inous l.,** stratum gelatinosum. **Genna′ri′s l.,** see *Baillarger′s l.* **Germ** or **germ′inal l.** segments of blastoderm, as hypoblast, mesoblast, epiblast. **Gran′ular l.,** stratum granulosum; layer contiguous to cement of tooth; granular stratum of epidermis. **Hen′le′s l.,** Henle′s sheath, layer of cells forming external portion of inner root-sheath of hair, the inner portion being *Huxley′s layer.* **Horn′y l.,** stratum corneum. **Hux′ley′s l.** see *Henle′s l.* and *Huxley.* **In′ner germ l.,** hypoblast; stratum intermedium; mesoblast. **Intes′tinal l.,** hypoblast. **Koel′liker′s l.,** see *Koelliker.* **Lang′erhans′s l.,** see *Langerhans.* **Lang′hans′s l.,** see *Langhans.* **Lat′ticed l.,** reticular layer. **Malpigh′ian l.,** rete mucosum. **Mey′nert′s l.,** see *Meynert.* **Mid′dle germ l.,** mesoblast. **Mu′cous l.,** hypoblast. **Mus′cular l.,** layer characterized by presence of muscular fibres. **Ner′vous l.,** epiblast. **Neuroder′mal l.,** epiblast. **Nu′clear l.,** stratum granulosum. **Ol′lier′s l.,** the internal layer of the periosteum. **Oöph′orous l.,** external portion of ovary. **Osteogenet′ic l.,** portion of periosteum or of perichondrium contiguous to surface of bone or of cartilage, from which bone is to be developed. **Out′er germ l.,** epiblast. **Pap′illary l.,** thick portion of corium adjacent to epidermis. **Per′forated l.,** internal elastic coat. **Pigment′al l.,** pigment layer of retina; posterior layer of iris. **Plas′ma l.,** layer of blood corpuscles near wall of vessel, called *sluggish* or *still layer,* because they do not move as rapidly as those directly in the current. **Prick′le-cell l.,** stratum spinosum of epidermis. **Pri′mary germ′inal l.,** epiblast and mesoblast. **Prim′itive** or **primor′dial l.,** original epiblast and hypoblast. **Retic′ular l.,** corium, not including the papillæ or its deeper and innermost portion; second layer of iris; stratum lacunosum. **L. of rods,** bacillar layer of retina. **Sen′sory l.,** epiblast. **Se′rous l.,** epiblast; inner layer of pericardium. **Skin l.,** epiblast. **Slug′gish l.,** see *L., plasma.* **Spin′dle l.,** l. of vertical fusiform cells seen in section through a convolution of the brain. **Still l.,** plasma layer, see *Still layer.* **Subpap′illary l.,** l. under the papillary layer of the skin; stratum vasculosum cutis. **Superpap′illary l.,** rete mucosum. **Troph′ic l.,** hypoblast. **Un′na′s l.,** Langerhans′s layer. **Vas′cular l.,** third layer of the iris; deepest portion of the visceral plate of the mesoblast. **Veg′etative germ l.,** hypoblast. **Wal′deyer′s vas′cular l.,** see Waldeyer. **Zon′ular l.,** stratum zonale.

**Lay′man.** An individual belonging to none of the learned professions or to one other than that dominant in the thought of the speaker or under discussion for the moment.

**La′zar.** Leper.

**Lazaret′** or **Lazaret′to.** A pest-house or quarantine station where those ill with or who have been exposed to contagious diseases are detained. **L. fe′ver,** low fever formerly prevailing in crowded lazarettos, where no attention was paid to the elementary rules of hygiene.

**Leach.** Leech.

**Lead** (symbol, Pb). A metallic element having poisonous salts, some of which are used in medicine. See *Plumbum.* **Black l.,** graphites. **L. col′ic,** severe colic accompanied with retraction of the abdominal walls and obstinate constipation, one of the symptoms of chronic lead poisoning. **L. encephalop′athy,** cerebral symptoms accompanying the toxic effects of lead, prominent among which are convulsions and coma. **L. line,** blue line seen on the gums in chronic lead poisoning. **L. lo′tion,** lotion in which some salt of lead, as the subacetate, is an important ingredient. **L. neural′gia,** l. rheumatism. **L. pal′sy** or **L. paral′ysis,** paralysis saturnina. **L. plas′ter,** emplastrum plumbi. **L. poi′soning,** plumbism; morbid phenomena induced by lead received into the system. **L. rheu′matism,** neuralgic and spasmodic pains caused by the poison of lead. **Su′gar of l.,** plumbi acetas. **L. wa′ter,** liquor plumbi subacetatis dilutus. **White l.,** plumbi subcarbonas.

**Lea′der** (that which leads). Tendon.

**Lead′ing.** Familiar name for lead poisoning of those engaged in smelting.

**Lead-pipe contrac′tion.** A cataleptic condition in which any position given the limbs will be retained.

**Lead′wort.** Plumbago europæa. **Cape l.,** plumbago capensis.

**Leaf, sour.** Andromeda arborea.

**Lean′ness.** Emaciation.

**Leap** (bound, jump). Muscular movement or movements by which the body is detached from the ground by the forcible and sudden extension of the lower limbs, previously flexed upon the pelvis.

**Leap′ing a′gue.** A neurosis characterized by an irresistible propensity to dance and move about in a fantastic manner. See *Mania, dancing.*

**Leath′er flow′er.** Clematis viorna. **L. jack′et,** Eucalyptus. **L. wood,** Dirra palustris.

**Leav′en.** See *Leven.*

**Le′ber's cor′puscles.** See *Gierke's corpuscles.* **L.'s disease′,** hereditary neuritis, attacking the region posterior to each globe of the eye; the symptoms are central scotoma, color-blindness, and impaired vision. **L.'s plex′us,** plexus of small veins in front of Schlemm's canal.

**Lebetosteno′sis** (*lebes,* basin). Narrowing of the pelvic diameters.

**Lecan′ic.** Pelvic.

**Lecat's′ gulf.** Bulb of the urethra.

**Lec′ca gum.** See *Lacca.*

**Lechenei′on.** Torcular Herophili.

**Lech′erous.** Libidinous.

**Lecithalbu′min.** Compound of lecithin and albumin formed in a number of the important organs of the body.

**Lecithigenous,** les-e-thij′en-us (*lekithos,* yolk, *gennao,* to produce). Producing yolk.

**Lecithin′** (*lekithos,* yolk of egg). Substitution derivative of glycerin; waxy, crystallizable substance obtained from the yolk of egg, nervous and cerebral tissues, amniotic fluid, bile, etc.

**Lecithoid,** les′e-thoid. Resembling the yolk of an egg.

**Lecith′ophore** (*lekithos,* yolk of egg, *phoreo,* to bear). Cell-layer constituting the floor of the segmentation cavity in the human ovum and that of mammals generally.

**Lecithy′men** (*lekithos,* yolk, *hymen,* membrane). Vitelline membrane.

**Lecon′tia virgin′ica.** Peltandra virginica.

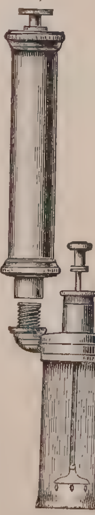
**Lec′tual** (*lectus,* bed). Relating to a bed; a term formerly applied to protracted disease.

**Ledoyen's′ disinfect′ing flu′id** or **liq′uid.** Solution of nitrate of lead (ʒj–℥j), used as an antiseptic and antibromic.

**Le′dum latifo′lium.** Labrador tea, ord. *Ericaceæ;* grows in damp places in Canada and the United States. Leaves have a pleasant odor and taste, and have been used as tea; they are also pectoral and tonic. **L. palus′tre,** marsh tea; this plant has a bitter, subastringent taste, and was formerly used in Switzerland in place of hops; the leaves have been chewed and applied to burns.

**Lee.** Feculence; lixivium; ley; lye; urine.

**Lee's amputa′tion.** See *Amputation.*



Mechanical leech.

**Lee′a macrophyl′la.** E. Indian plant; root has been prescribed in ringworm. **L. sambuci′na,** shrub of E. Indies; juice of leaves is stomachic and febrifuge, and used externally in inflammation of the eyes; the root in gastralgia. **L. staphyle′a,** root of this Malabar plant is used in colic; leaves are used in dyspepsia.

**Leech.** Leach. Hirudo; see *Ectozoa.* Physician. **Artifi′cial l.,** antlia; bdellometer. **Horse l.,** veterinary surgeon. **Mechan′ical l.,** artificial leech.

**Leech′craft.** Medicine; art of healing.

**Leech′es.** A parasitic fungous disease of cattle and mules.

**Leech′ing.** Drawing blood by the use of leeches.

**Leech′wort.** Plantago lanceolata.

**Leek.** Allium porrum.

**Lees.** The dregs of wine, feculence, urine. **Soap l.,** liquor potassæ.

**Lefort's′ amputa′tion.** See *Amputation.* **L.'s su′ture,** a suture for joining the ends of a divided tendon.

**Left-brained.** Having the power of speech centrally located in the left subfrontal convolution. **L.-hand′ed,** using the left hand and arm with greater ease and dexterity than the right. **L. lat′eral posi′tion,** Sims's position.

**Leg.** Portion of the lower extremity extending from the knee to the foot; it consists of three bones, tibia, fibula, and patella, and a great number of muscles, vessels, and nerves. The projection formed by the muscles at the back part of the leg has received the name of calf of the leg. **L. asleep′,** familiar name for the obtunding of sensation produced by pressure on the great nerve of the leg. As the nerve-fibres gradually recover from the effect of the pressure a pricking sensation is experienced, familarly known under the name *pins and needles.* **Bad′ger l.,** difference in size of the legs. **Ba′kers′ l.,** genu valgum. **Ban′dy l.,** genu varum or extrorsum. **Barba′does l.,** elephantiasis of the leg. **Bayonet′ l.,** dislocation of the bones of the leg backward. **Co′chin l.,** elephantiasis of the leg. **Black l.,** symptomatic anthrax. **Bow l.,** genu varum or extrorsum. **Do′ver's l.,** hypochondriasis. **L. fe′ver,** fever occurring in Africa with exanthematous eruption and pain in the legs. **Lawn-ten′nis l.,** rupture of muscle or muscles of the calf of the leg from overexercise in this game. **Milk, swell′ed,** or **white l.,** phlegmasia alba dolens. **Scis′sors l.,** condition in which the legs are crossed like scissors blades.

**Le′gal med′icine.** See *Jurisprudence.*

**Legal's′ disease′.** Pharyngotympanic headache, with catarrhal condition of the same region. **L.'s test,** see *Le Nobel's test.*

**Legen′dre's nodos′ities.** Nodes or enlargements of the second joints of the fingers; they occur with dilatation of the stomach.

**Legit′imate** (*lex,* law). Epithet applied to things which are according to rule or law; a legitimate child is one conceived or born during marriage. Legitimate diseases are those which follow a regular march.

**Legroux's′ remis′sions.** Occasional period of abatement occurring in the progress of tuberculosis of the lungs.

**Legumin′.** All kinds of pulse, as peas, beans, etc. See *Casein.*

**Leh′man's sign.** Continuous closure of the eyelids during the taking of chloroform as an anæsthetic indicates that it is going to be effective as such. In the other event it will probably not be successful.

**Leichen,** leik′en. Lichen.

**Leiman′thium virgin′icum.** Melanthium virginicum.

**Lei′ocome.** Dextrin.

**Leioder′mia** (*leios,* smooth, *derma,* skin). Glossy or smooth skin seen in some neuroses.

**Leiomyo′ma** (*leios,* smooth, *myoma*). Tumor mainly composed of smooth muscular tissue.

**Lei′opus** (*leios,* smooth, *pous,* foot). One affected with flat-foot, splay-footed (leiopodia, liopodia).

**Leiphæ′mia** (*leipo,* to fail, *haima,* blood). Poverty of the blood.

**Leipo-** (*leipo,* to want, be lacking). In composition denotes defect or absence; also written *Lipo-.*

**Leipoder′mia** (*leipo,* to fail, *derma,* skin). Absence of foreskin or prepuce.

**Leipome′ria** (*leipo,* to fail, *meros,* limb). Monstrosity characterized by absence of a limb.

**Leipophre′nia** (*leipo,* to fail, *phren,* mind). Weakening of the mental powers; incipient dementia.

**Leipopsych′ia** (*leipo,* to fail, *psyche,* breath of life). Syncope.

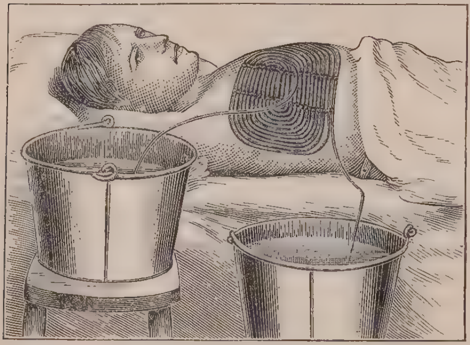
**Leiposar′cous** (*leipo,* to fail, *sarx,* flesh). Thin, slight of build.

**Leipothy′mia** (*leipo,* to fail, *thymos,* mind). Syncope.

**Leipox′enous** (*leipo,* to leave, *xenos,* host). Term applied to a parasite which does not remain constantly on its host, but leaves it after a time, being able to subsist alone.

**Lei′rion.** Lilium candidum.

**Lei'ter's coil.** Device by means of which water of any temperature is kept running through coils of metal or rubber, which can be adjusted to any part of the body.



Leiter's coil applied to the chest.

**Le'ma** or **Le'me.** Discharge from the eyes; drying up of natural glandular secretion from the eyelids; lippitudo.

**Lembert's** (lom-bares' or lem'berts) **su'ture.** See *Suture.*

**Lemithocor'ton.** Corallina corsicana; helminthocorton.

**Lem'ma.** Cortex. Feculence; furfur; sediment. Sheath, as neurilemma, sarcolemma, etc.

**Lem'nian earth.** Compound of aluminum coming from the island of Lemnos.

**Lemnis'cus.** A fillet. A bundle of nerve-fibres in the pons and crus cerebri, upward prolongation of interolivary tract. **Infe'rior** or **low'er l.,** layer of nerve-fasciculi in the tegmentum, proceeding from the inferior corpora quadrigemina. Its lateral portion is called *lateral lemniscus.* The portion terminating in the upper portion of the corpora quadrigemina is called *superior, upper,* or *median lemniscus.*

**Lem'on.** See *Citrus medica.* **L. balm,** melissa. **Ground l.,** Podophyllum montanum. **L. scur'vy-grass,** Cochlearia officinalis; possesses antiscorbutic properties. **Wild l.,** Podophyllum montanum.

**Lemonade'.** Lemon juice diluted with water and sweetened. **Dry l.,** citric or tartaric acid reduced to powder and mixed with sugar. **Magne'sian l.,** magnesii citras. **Nitric-ac'id l.,** nitric acid considerably diluted with water and sweetened. **Salt of l.,** oxalic acid. **Sulphuric-ac'id** and **tartaric-ac'id l.,** made with sulphuric and tartaric acids, respectively; the former is used in the prophylaxis of lead poisoning.

**Lemoparal'ysis,** etc. See *Læmoparalysis,* etc.

**Length.** Extent of time or space. **Den'tal l.,** the distance measured from the anterior face of the first premolar tooth to the posterior face of the last molar. **Fo'cal l.,** focal distance.

**Len'iceps.** Uterine forceps, consisting of two blades fastened to a horizontal handle, and made immovable when applied.

**Lenigal'lol.** Triacetate of pyrogallic acid. Mild, non-toxic astringent; used in ointment in acute and subacute eczema and in psoriasis.

**Lenirobin'.** Tetra-acetate of chrysarobin, resembling the latter in its therapeutic action, but less irritating.

**Len'itive.** That which allays irritation or palliates disease; laxative medicine; a lenitive electuary is one that purges gently.

**Le No'bel's test.** Test for acetone; a red color resulting when there is added a dilute alkaline solution of nitroprusside of sodium.

**Lenoir's' amputa'tion.** See *Amputation.*

**Le'nos.** Torcular Herophili.

**Lens.** Piece of glass or other translucent material made of such shape as to refract rays of light falling upon it. It is called *concave l., convex l.,* etc., according to its shape. Crystalline lens. **Ab'sence of l.,** aphakia. **Achromat'ic l.,** lens so made as to correct chromatic aberration. **Aplanat'ic l.,** rectilinear lens corrected for aberration. **Apochromat'ic l.,** l. having its aberrations, spherical and chromatic, as thoroughly corrected as possible. **Bicon'cave l.,** l. concave on both sides. **Bicon'vex l.,** l. convex on both sides. **Bifo'cal l.,** one made for presbyopic hypermetropia, the upper and lower surfaces being ground for distant and near objects, respectively. **Cicatric'ular l.,** mass in mature ovum produced by blending of germinal vesicle and peripheral layer of ovum. **Conca'vo-con'cave l.,** biconcave l. **Converg'ent** or **converg'ing l.,** lens of such shape as to cause rays of light to converge to a focus. **Convex'o-con'cave l.,** l. one surface of which is convex, the other concave. **Crys'talline l.,** see *Crystalline.* **Cylin'drical l.,** l. having surface in one axis plane, and a concave or convex surface in the axis at right angles to it. **Decen'tred l.,** l. with the optic centre at a point away from the pupil. **Disloca'tion of l.** may take place into the vitreous, the anterior chamber, or under the conjunctiva. **Dispers'ing, diverg'ent,** or **diverg'ing l.,** lens of such shape as to cause rays of light to diverge from a focus. **L. esculen'ta,** Ervum lens. **Orthoscop'ic l.,** l. with a correct field. **L.-pit,** small pit in the embryo produced by the depression of the epidermis over the disappearing optic vesicle. **L.-sac,** when the edges of this pit come together, a sac or vesicle results, which is afterward developed into the crystalline lens. **L.-star,** stellate figure produced by radiating fibres of the lens. **Spher'ical l.,** l. the curved surface of which is a segment of a sphere. **Stokes's l.,** a convex and a concave lens of same focal distance, movable upon each other, with which diagnosis of astigmatism may be made. **Suspen'sory lig'ament of l.,** see *Suspensory.* **L.-ves'icle,** l.-sac.

**Lent rose.** Narcissus pseudonarcissus.

**Lente's probe.** A probe tipped with fused nitrate of silver.

**Lentico'nus.** Cone-shaped protrusion from the surface of the crystalline lens.

**Lentic'ula** (dim. of lens). Freckle; eruption of lenticular fever; papula lenticularis; lentigo. See *Ephelides.*

**Lentic'ular.** Having the shape of a lens or lentil. **L. ar'teries,** branches of the middle cerebral arteries to the lenticular nucleus. **L. bone,** orbicular process of the incus. **L. fe'ver,** miliary fever. **L. gan'glion,** ophthalmic ganglion. **L. glands,** mucous follicles having the shape of a lentil observed especially toward the base of the tongue. **L. loop,** nerve-fibres passing from the lemniscus and red nucleus to the lenticular nucleus. **L. nu'cleus,** portion of the corpus striatum situated outside the ventricle. **L. papil'læ,** papillæ circumvallatæ of the tongue.

**Lentic'ulo-op'tic.** Relating to the lenticular nucleus.

**Lenticulostri'ate.** Relating to lenticulate nucleus and corpus striatum.

**Lenticulothal'amic.** Relating to the lenticulate nucleus and thalamus opticus.

**Lentic'ulus.** Orbicular bone.

**Lentig'inous** or **Lentig'inose.** Affected with an eruption of lentigo.

**Lenti'go.** Freckles; sun-spots. See *Ephelides.*

**Len'til.** Ervum lens.

**Lentis'cus vulga'ris.** Pistacia lentiscus.

**Lenti'tis.** Inflammation of the lens; phacitis.

**Lentitu'do.** Torpor.

**Len'tor** (*lentus,* clammy). Torpor; viscidity.

**Len'tous.** Tenacious.

**Le'num** or **Le'nus** (pool). Torcular Herophili.

**Le'o.** Leontiasis.

**Leono'tis leonu'rus.** Wild dagga; lion's tail; minaret flower, ord. *Labiatæ.* South African plant of a peculiar smell, nauseous taste, and narcotic effect, employed in chronic cutaneous diseases. It is smoked like tobacco, and its leaves are cathartic and emmenagogue. In some districts of Cape Colony

Leonotis ovata is used for the same purpose. **L. nepetefo′lia,** indigenous to Africa; ashes are used as an application to ringworm; in South America the plant is used for rheumatism, as a diaphoretic. **L. ova′ta,** see *Leonotis leonurus.*

**Leonti′asis.** Enlargement of the head, as in *leontiasis ossea,* which term is used as a substitute for *megalocephaly* when that condition of the head is caused by excess of development or growth of bony structure. Leprous lesions on the face, from the fancied resemblance to the face of the lion; *leonine* and *leontine leprosy* (see cut under *Leprosy, tubercular*); also multiple leprosy attacking various parts of the body.

**Leon′tice thalictroi′des.** Caulophyllum thalictroides.

**Leon′tion.** Leontiasis.

**Leontodin′.** Extract of root of Taraxacum officinale; tonic and aperient.

**Leon′todon tarax′acum.** Dandelion; pissabed, ord. *Compositæ.* The young leaves are sometimes eaten as salad. The roots are also roasted and used as a substitute for coffee. The root, *taraxacum* (Ph. U. S.), Taraxaci radix, is aperient and diuretic.

**Leontopo′dium.** Alchemilla.

**Leonu′rus cardi′aca.** Motherwort, throatwort, ord. *Labiatæ;* grows in America and Europe. Nauseous bitter, and hence used in hysteria and other nervous affections, also in amenorrhœa and bronchitis, etc. **L. lana′tus,** Ballota lanata.

**Leop′ard's bane.** Arnica montana; Doronicum pardalianches.

**Le′opold lip.** See *Lip, Leopold's.*

**Lep′er.** One suffering from leprosy.

**Lep′ia campes′tris.** Thlaspi campestre. **L. sati′va,** Lepidium iberis.

**Lepid′ic** (*lepis,* rind). A term proposed by Adami for the lining-membrane tissues, in which there is an absence of definite stroma between the individual cells, although such may be present between the groups of cells; these tissues are divided into epiblastic, hypoblastic, mesothelial, and endothelial.

**Lepidine′** (*lepis,* scale or husk). Base derived from coal-oil, $C_{28}H_{40}O$; also base, $C_{10}H_9N$, from quinoline; bitter principle from Lepidium iberis, used as an antipyretic.

**Lepid′ium.** Pepperwort, cress, peppergrass, ord. *Cruciferæ.* Antiscorbutic. **L. campes′tre,** Thlaspi campestre. **L. ibe′ris,** this plant possesses a warm, pungent taste, like other cresses, and is antiscorbutic, antiseptic, and stomachic. **L. latifo′lium, L. olera′ceum,** of New Zealand, **L. piscid′ium** of South Sea Islands, **L. procum′bens** of Southern Europe, **L. rudera′le** of Europe and America, have all been used for their antiscorbutic effect. **L. sati′vum,** green mustard; this plant possesses warm, stimulating properties, and is used like L. iberis. **L. squama′tum,** Cochlearia coronopus. **L. virgin′icum,** American wild peppergrass, has been used as antiscorbutic, and in diarrhœa, dropsy, etc.

**Lepido-** (*lepis,* scale). In composition, scale.

**Lep′idoid.** Squamous, scaly.

**Lepido′ma.** Term proposed by Adami for a tumor originating from one of the lining-membrane tissues, subdivided into epilepidoma, hypolepidoma, mesolepidoma, and endolepidoma, according as the growth originates from the epiblastic, hypoblastic, mesothelial, or endothelial structures.

**Lepidosarco′ma.** Fleshy tumor, covered with scales, occurring especially in the interior of the mouth.

**Lepidosin′.** Analogue in fishes of human dentine.

**Lepido′sis.** A scaly disease. **L. ichthyi′asis,** ichthyosis. **L. ichthyi′asis cornig′era,** horny excrescences. **L. lep′ra,** psoriasis. **L. lepri′asis,** lepra. **L. pityri′asis,** pityriasis. **L. psori′asis,** psoriasis; eczema squamosum.

**Lepido′tis clava′ta.** Lycopodium clavatum.

**Lep′is.** Scale.

**Lepis′ma.** Squamous portion.

**Lep′ocyte** (*lepos,* bark, *kytos,* cell). A cell having an investing membrane.

**Le′poid** (*lepos,* bark, *eidos,* resemblance). Rough, brownish crust sometimes seen on the countenances of elderly persons; probably a variety of epithelioma or lupus.

**Lepos′teophyte** (*lepis,* scale, *osteon,* bone, *phyton,* growth). Thin scale of bone, the result of a morbid growth.

**Lep′othrix** (*lepis,* scale, *thrix,* hair). Affection of the axilla and scrotum particularly, characterized by the presence of bacterial masses in the hairs of those parts.

**Lep′ra** (*lepros,* scaly). Term applied to various affections very different in character: 1. *Leprosy of the Jews, Eastern leprosy, leuce, lepidosis, lepriasis canescens, lepra mosaica, l. Judæorum, judaica,* or *Hebræorum*—a variety of *alphos* or *lepra alphoides.* The eruption was, generally, not scaly, but consisted of smooth, shining patches, on which the hair turned white and silky, and the skin, with the muscular tissue, lost its sensibility. It was incurable. 2. *Elephantiasis* or *lepra of the Arabs* (see *Elephantiasis*). 3. *Lepra of the Greeks,* which includes all the varieties of leprosy met with at the present day (see *Leprosy*); and 4. *Psoriasis.* The older pathologists described three forms of leprosy, as follows:

1. *Lepra alphoides, alba,* or *albida, lepidosis, lepriasis albida, alphos, morphœa alba, vitiligo alphus, Albaras alba, albaræs, albaros, white leprosy, alphous disease.* Affection characterized by white patches, surrounded by a rose-colored areola, appearing here and there on the surface; depressed in the middle. A blotchy and not dangerous form of the disease, common in Arabia, is termed *Baras.* Under a more hideous form, called *Djedam,* the joints swell, sluggish and spreading ulcers form, causing frightful sores on various parts, and death gradually supervenes.

2. *Lepra nigricans,* or *melas,* or *maculosa nigra, vitiligo melas* or *nigra, morphœa* or *albaras nigra, melas, lepidosis lepriasis nigricans, black leprosy,* in which the scales are livid, the size of half a dollar, and diffused over the body, but less widely than in lepra alphoides.

3. *Lepra vulgaris, lepidosis, lepriasis vulgaris, psoriasis,* characterized by glabrous scales, whitish, size of a silver dollar; preceded by smaller reddish and glossy elevations of the skin, encircled by a dry, red, and slightly elevated border, often confluent; sometimes covering the whole body except the face.

French pathologists formerly admitted three species of lepra—scaly, crustaceous, and tubercular.

**Lep′ra al′ba** or **al′bida.** See *Lepra.* **L. albo′ras,** psoriasis. **L. alope′cia,** alopecia following lepra or psoriasis. **L. alphoi′des,** l. vulgaris; psoriasis guttata, psoriasis nummulata. **L. alpho′sis,** psoriasis. **L. anæsthet′ica,** anæsthetic leprosy; elephantiasis anæsthetica. **L. Ar′abum,** elephantiasis arabica. **L. astu′rica,** see *Pellagra.* **L. bacil′lus,** B. lepræ, Hansen's bacillus. **Black l.,** mal del Pinto. **L. borea′lis,** radzyge. **L. circina′ta,** psoriasis, circinate form. **L. crusta′cea** or **crusto′sa,** psoriasis; black leprosy. **L. cu′tis,** leprosy of the skin. **L. diffu′sa,** psoriasis diffusa. **L. elephan′tia,** elephantiasis Græcorum. **L. elephanti′asis,** elephantiasis Arabum. **L. fungif′era** or **fungifor′mes,** elephantiasis papillaris; frambœsia. **L. gangræno′sa,** ngerengere, of New Zealand; cacubay of Jamaica. **L. glab′ra,** anæsthetic leprosy. **L. Græco′rum,** leprosy. **L. hebræo′rum,** see *Lepra.* **L. ichthyo′sis,** ichthyosis. **L. ital′ica,** pellagra. **L. of the Jews, L. Judæo′rum** or **juda′ica,** see *Lepra.* **L. junctura′rum,** l. mutilans. **Le′onine** or **leon′tine l.,** leontiasis. **L. leu′ce,** anæsthetic leprosy. **L. lombard′ica,** pellagra. **L. maculo′sa,** macular form of leprosy. **L. maculo′sa ni′gra,** l. nigricans. **L. malabar′ica,** leprosy of Malabar. **L. mediolanen′sis,** pellagra. **L. me′las,** black leprosy; l. nigricans. **L. mercuria′lis,**

eczema mercuriale. **L. morphœ′a,** macular form of leprosy. **L. mosa′ica,** see *Lepra.* **L. mu′tilans,** joint evil; form of anæsthetic leprosy, in advanced stages of which parts become deeply gangrenous and drop off. **L. nervo′rum,** anæsthetic leprosy; diffuse tumefaction of nerves. **L. ni′gricans,** black leprosy; also psoriasis with unusually dark patches. **L. nodo′sa** or **nod′ulated l.,** tubercular form of leprosy. **L. norve′gica,** radzyge and spedalskhed. **L. nummula′ris,** psoriasis nummularis. **L. occidenta′lis,** leprosy; elephantiasis Græcorum. **L. orienta′lis,** elephantiasis Arabum. **L. phlegmat′ica,** leprosy. **L. pso′rica,** psoriasis. **L. puncta′ta,** psoriasis guttata. **L. scabio′sa,** scabies crustosa. **L. septentriona′lis,** radzyge and spedalskhed. **L. squamo′sa,** impetigo. **L. syphilit′ica,** syphilitic form of psoriasis; see *Lepra.* **L. tau′rica,** leprosy of the Taurians, of the Crimea, or of the Cossacks, supposed to have been brought to the Crimea by troops on the march. **Tuber′culated l., L. tubero′sa,** or **L. tuberculo′sa,** tubercular form of leprosy. **L. umbro′sa,** black leprosy. **L. universa′lis,** general psoriasis. **L. ve′ra,** leprosy; elephantiasis Græcorum. **L. vulga′ris,** psoriasis in large patches; see *Lepra.* **L. of Wil′lan** psoriasis.

**Leprapho′bia** (*phobos,* fear). An insane dread of leprosy.

**Leprelco′sis** (*helkosis,* ulceration). Leprous ulceration.

**Lepri′asis.** Psoriasis; leprosy.

**Lep′ride.** A leprous lesion of the skin.

**Leprol′ogist.** One who has paid special attention to the study of leprosy.

**Lepro′ma.** One of the lesions of tubercular leprosy.

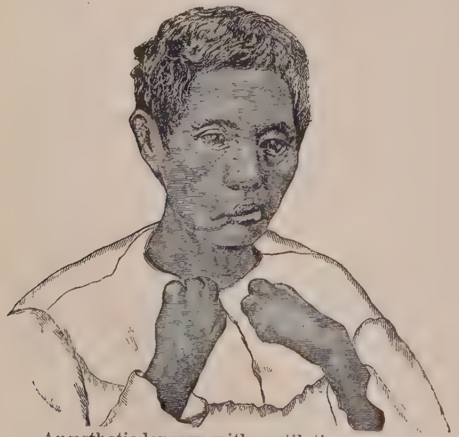
**Lepromor′phe** (*morphe,* form). Variety of leprosy involving the bones.

**Leprophthal′mia.** Leprous form of ophthalmia.

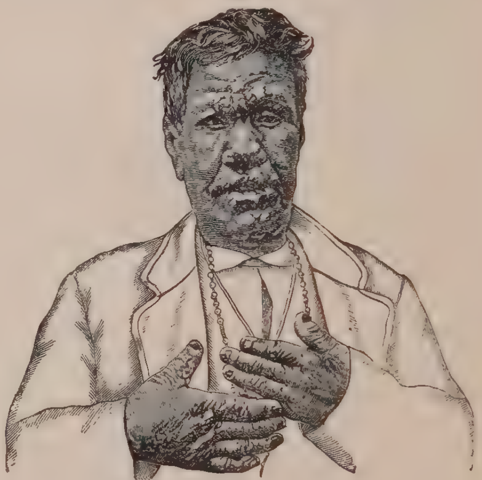
**Leprosa′rium** or **Lepro′sery.** Hospital for lepers.

**Lepro′sis** or **Lepros′itas.** Leprosy.

**Lep′rosy.** Lepra; a chronic endemic constitutional affection produced by infection with Bacillus lepræ, attended with infiltration, changes in the nutrition of parts, and the appearance of varying cutaneous eruptions in the different organs and tissues of the body, ending in wasting, intense diarrhœa, and death in almost all cases. The tubercular and anæsthetic forms of leprosy are those generally described. **Anæsthet′ic l.,** leprous disease implicating the nerves, so that from hyperæsthesia at first there soon supervenes entire loss of sensibility, occasionally with paralysis and disordered nutrition, ulceration, and mortification. Elephantiasis anæsthetica. See *Lepra* and *Lepra mutilans.* **Artic′ular l.,** lepra mutilans. **Black l.,** lepra nigricans. **L. of Cos′sacks,** lepra taurica. **L. of the Crime′a,** see *Lepra taurica.* **Cuta′neous l.,** tubercular leprosy; leprosy affecting tissues of the skin; pemphigus leprosus. **Dry l.,** leprous disease of hot climates, attended with circumscribed muscular atrophy of the hand; anæsthetic leprosy. **East′ern l.,** elephantiasis Arabum; see *Leprosy.* **Ital′ian l.,** pellagra; lepra mutilans; arthroleprosis. **Lombard′ian l.,** pellagra. **Mac′ular l.,** l. with spots of various degrees of discoloration. **L. of Mal′abar,** elephantiasis Arabum. **Nod′ular l.,** tubercular leprosy. **Scab′by l.,** psoriasis. **Trophoneurot′ic l.,** anæsthetic leprosy. **True l.,** elephantiasis Græcorum. **Tuber′cular l.,** l. attended with tubercular growths on the external or internal parts of the body, usually on the face, which it disfigures; ulceration and mortification with extensive destruction of parts usually occur. **White l.,** form of anæsthetic leprosy; macular form, the spots being white; lepra alphoides.



Anæsthetic leprosy with mutilating results. (Hyde.)



Tubercular leprosy. (Hyde.)

**Leprot′ic** or **Lep′rous.** Relating to or resembling or affected with leprosy.

**Lep′sis.** Attack of disease.

**Leptan′dra.** The official (Ph. U. S.) name of the rhizome and roots of L. virginica or Veronica virginica; physic root, black root, whorlywort, Culver's root, Brinton root, Bowman root. Root is bitter and nauseous, and when fresh emetic and cathartic; dose, gr. v–xxx (0.32–2.0) in powder. The official preparations are: *Extrac′tum leptan′dræ,* extract; dose, gr. j–viij (0.065–0.5). *E. l. flui′dum,* fluid extract; dose, ♏v–xxx (0.32–2.0).

**Leptandrin′.** Bitter, resinous matter from Leptandra virginica; cholagogue cathartic.

**Lepto-** (*leptos,* light). In composition, thin, light.

**Leptocephal′ia** (*leptos,* light, *kephale,* head). Monstrosity with an abnormally small head.

**Leptochasmus,** lep-to-kaz′mus (*leptos,* light, *chasme,* a gap). Having an angle of 94° to 114°, formed by the divergence at the punctum alæ vomeris of two lines projected from that point to the punctum spinæ nasalis posterioris and punctum foraminis magni anterius.

**Leptoch′roa** or **Lep′tochros** (*leptos,* thin, *chroa,* skin). Fineness or thinness of skin.

**Leptochy′mia** (*leptos,* light, *chymos,* juice). Watery condition of the digestive juices.

**Leptoder′mia** (*leptos,* thin, *derma,* skin). Thinness or fineness of skin.

**Leptohyme′nia** (*leptos,* thin, *hymen,* membrane). Thinness or delicacy of membrane.

**Leptomenin′ges** (*leptos,* thin, *meninx,* membrane). The thin membranes of the brain and spinal cord; the arachnoid and pia mater.

**Leptomeningi′tis.** Inflammation of the thin membranes of the brain and cord, as opposed to that of the dura mater, or pachymeningitis. **Exter′nal l.**, arachnitis.

**Leptomen′inx** (*leptos*, thin, *meninx*, membrane). Arachnoid, alone or with the pia mater.

**Leptome′ria** (*leptos*, thin, *meros*, part). Fineness or delicacy of bodily formation or build.

**Lepton′ema niv′eum.** Beggiatoa nivea.

**Leptopho′nia** (*leptos*, thin, *phone*, voice). Weakness or delicacy of voice.

**Leptoprosop′ic** (*leptos*, thin, *prosopon*, face). Having a narrow face.

**Lep′torrhine** (*leptos*, thin, *rhis*, nose). Having nasal index less than 48°.

**Leptosper′mum flaves′cens.** Australian plant; astringent. **L. leucaden′drum**, Melaleuca cajaputi. **L. scopa′rium**, antiscorbutic.

**Lep′tothrix** (*leptos*, thin, *thrix*, hair). Genus of microorganisms having thin, filamentous cells (Cohn). According to others, any filamentous bacterium. **L. autumna′lis**, Leptus autumnalis. **L. bucca′lis**, a microorganism developed in some forms of aphthous inflammation, but detected also in the buccal secretions of healthy persons, and said to produce caries of the teeth; and in discharges from the lacrymal duct, evacuations of typhus fever, etc.; Bacillus buccalis. **L. epiderm′idis** or **epiderma′lis**, variety of leptothrix detected in the epidermis, supposed to cause erythrasma; see *Bacillus epidermidis*. **L. gigan′tea** (Miller), in cases of pyorrhœa alveolaris in animals. **L. hyali′na** (Reinsch), in marine algæ. **L. innomina′ta**, L. buccalis. **L. kühnia′na**, Crenothrix kühniana. **L. lacryma′lis**, parasitic, cheesy growth in the lacrymal canals. **L. lanu′go** (Kützing), found in certain marine algæ. **L. max′ima bucca′lis**, large form of L. buccalis. **L. mura′lis** (Kützing), Leptothrix parasitica. **L. na′tans**, Sphærotilus natans. **L. ochra′cea** (Kützing), cladothrix colored with iron oxide. **L. parasit′ica** (Kützing), on fresh-water algæ in connection with L. muralis. **L. puerpera′lis** (Feltz), Bacillus puerperalis. **L. pulmona′lis**, L. buccalis. **L. pusil′la** (Rabenhorst), on fresh-water algæ and in buccal secretions. **L. symplacoi′des** (Dickie), on marine algæ. **L. vagina′lis**, in vaginal secretions. **L. variab′ilis** (Saccardo), in normal saliva.

**Leptotrich′ia.** Fineness of hair. Leptothrix.

**Lep′tus america′nus.** American harvest-mite, producing the same effects as L. autumnalis, with which it is identical, according to some. **L. autumna′lis** or **ir′ritans**, harvest-bug; a mite or tick causing irritation or even inflammation of the skin.

**Leptyn′sis** or **Leptys′mus** (*leptyno*, to make thin). Emaciation.

**Lere′ma** or **Lere′sis** (*lereo*, to speak foolishly). Foolish loquacity. See *Dementia*.

**Le′ros.** Delirium. See *Dementia*.

**Les′bian love.** Sexual intercourse between women.

**Le′sion** (*lædo*, *læsum*, to injure). Derangement, disorder; morbid change, either in exercise of functions or in the texture of organs. **L. of continu′ity**, see *Continuity*. **Dischar′ging l.**, l. of the brain leading to sudden motor actions. **Fo′cal l.**, l. limited in area, in the nervous system. **Init′ial l.**, chancre. **Ir′ritative l.**, l. causing irritation in the immediate locality in which it is situated. **Molec′ular l.**, a lesion too fine to be visible even under the microscope. **L. of nutri′tion**, morbid change in the process of nutrition. **Organ′ic l.**, a profound morbid change in the structure of a part; organic disease. **Periph′eral l.**, l. having its seat in the terminal trunks or nerves of the surface. **Struc′tural l.**, l. leading to change of structure. **System′ic l.**, l. affecting a system of organs. **Tox′ic l.**, l. due to poisonous influences. **Traumat′ic l.**, a wound. **Troph′ic l.**, a lesion dependent upon altered nutrition of the part.

**Les′ser′s tri′angle.** Space having the hypoglossal nerve for its upper side, and the bellies of the digastric muscle for the other two sides.

**Less′haft′s rhom′bus** or **space.** A rhombic space, bounded on the four sides by the external oblique, latissimus dorsi, serratus posticus inferior, and internal oblique muscles; a weak spot.

**Le′thal** (*lethum*, death). Mortal.

**Lethal′ity.** See *Mortal*.

**Lethar′gic** (*lethe*, oblivion, *argos*, inactive). Relating to or affected with lethargy.

**Leth′argy.** Constant stupor or torpor from which it is almost impossible to arouse the individual; if aroused, he speedily relapses into his former condition. **Af′rican l.**, negro lethargy. **Induced′ l.**, hypnotism. **Ne′gro l.**, African sleeping sickness.

**Lethe′a** (*lethe*, oblivion). Papaver.

**Le′theon** (*lethe*, oblivion). A name at first given to ether when inhaled as an anæsthetic.

**Lethif′erous** (*lethe*, oblivion, *fero*, to bear). Death-bearing; deadly.

**Let′ter-blind′ness.** Condition in which the brain sees but fails to appreciate the meaning of written or printed letters.

**Let′terwort.** Hellebore.

**Let′tuce.** Lactuca. **Blue l.**, Mulgedium acuminatum. **False l.**, Mulgedium floridanum. **In′dian l.**, see *Calumba*. **L.-o′pium**, lactucarium. **Strong-scent′ed l.**, Lactuca virosa. **White l.**, Nabalus albus. **Wild l.**, Lactuca elongata.

**Leucæmia**, lu-se′me-ah (*leukos*, white, *haima*, blood). See *Leucocythæmia* and *Leukæmia*.

**Leucæmic**, lu-se′mik. Leucocythæmic.

**Leucæthio′pia** (*leucos*, white, *Aithiops*, Ethiopian). Albinism.

**Leucangeii′tis** (*leukos*, white, *angeion*, vessel). Inflammation of the lymphatics.

**Leucan′themum.** Anthemis nobilis, Matricaria chamomilla. **L. vulga′re**, Chrysanthemum leucanthemum.

**Leucas′mus** (*leukos*, white). Whitening; blanching. Deficiency of pigment-formation in the skin. **L. cu′tis**, see *Achroma* and *Leucoderma*. **L. figura′tus**, circumscribed leucoderma; vitiligo; see *Achroma*. **L. universa′lis**, albinism; see *Albino*.

**Leuce**, lu′se. Herpes exedens, lepra alba.

**Leucelec′trum.** Succinum album.

**Leu′cic ac′id.** Acid obtained by subjecting leucin to action of nitric acid.

**Leu′cin** (*leukos*, white). White, crystalline substance resulting from the disintegration of albuminous substances well supplied with nitrogen; found in the pancreas, spleen, thymus, etc., produced in gangrene of the liver, spleen, lungs, etc., and is excreted in the urine of typhoid fever; in acute yellow atrophy of the liver (*leucinosis*), leucin is one of the chief products.

**Leucino′sis.** Acute yellow atrophy of the liver.

**Leucis′mus.** Albinism.

**Leuci′tis.** Sclerotitis.

**Leuco-** (*leukos*, white). In composition, white.

**Leu′co-alizarin′.** Anthrarobin.

**Leu′coblast** (*leukos*, white, *blastos*, shoot). A young and not fully developed leucocyte.

**Leucocidin′** (*cædo*, to kill). Toxin found in cultures of staphylococci, which destroys leucocytes.

**Leu′cocyte** (*leukos*, white, *kytos*, cell). Amœboid or lymphoid cell; white blood corpuscle. The leucocytes in the blood are pale, nucleated cells, larger than the red cells, but much less numerous, the proportion of white to red cells being from 1 : 450 to 1 : 1200; in size they vary from 7 to 12 microns. Several varieties of leucocytes are recognized, which are distinguished by their size, the number of their nuclei, the presence or absence of amœboid movements, their reaction to the different staining agents, etc. **Basophil′ic l.**, see *Basophilic*. **Eosinophil′ic l.**, see *Eosinophilic*. **Frac′tured l.**, an irregularly shaped, elongated leucocyte, with ragged edges. **Lymphogen′ic l.**, lymphocyte. **Mononu′clear l.**, l. with a single nucleus. **Multinu′clear l.**, polynuclear leucocyte. **Myelogen′ic l.**, myelocyte. **Neutrophil′ic l.**, see *Neutrophilic*. **Polymorphonu′clear** or **polynu′clear neutrophil′ic l.**, white cell filled with fine neutrophilic granules, the granules of Ehrlich; it represents a later stage in the development of the mononuclear cells. **Uninu′clear l.**, mononuclear leucocytes.

**Leucocythæ′mia** (*leukos* white, *kytos*, cell, *haima*, blood). Leukæmia.

**Leucocythæ′mic.** Leukæmic.

**Leucocytogen′esis.** Formation of leucocytes.

**Leucocytol′ysis** (*lysis*, solution). Degeneration and decomposition of white blood corpuscles.

**Leucocyto′ma.** Tumor, elements of which resemble white corpuscles or leucocytes.

**Leucocytom′eter** (*metron*, measure). A device for counting the white blood corpuscles.

**Leucocytope′nia.** Leucopenia.

**Leucocytopla′nia** (*plane*, wandering). Migration of the white blood corpuscles.

**Leucocyto′sis.** An increase in the number of white blood corpuscles of a temporary character; it occurs in various fevers and inflammatory conditions, in pregnancy, and during digestion.

**Leucocytot′ic.** Relating to leucocytosis.

**Leucocytozo′a.** Parasitic protozoa in leucocytes.

**Leucocytu′ria.** Presence of leucocytes in the urine.

**Leucoden′dron.** Melaleuca cajaputi.

**Leucoder′ma** or **Leucoder′mia** (*leukos*, white, *derma*, skin). See *Achroma, Albinism, Vitiligo.*

**Leucodex′trin.** Compound mass resulting from change of starch into sugar.

**Leucoinoi′tis** (*leukos*, white, *is*, fibre). Inflammation of white fibrous tissues.

**Leucoi′um.** Lunaria rediviva. **L. lu′teum**, Cheiranthus cheiri. **L. ver′num**, spring snowflake; bulb is applied to abscesses.

**Leucokerato′sis.** Leukoplakia. Leucoplasia. **L. bucca′lis**, affection of the mouth, sometimes called leucoplakia, psoriasis linguæ, ichthyosis linguæ, and smoker's patches; characterized by white patches on the mucous membrane of any part of the mouth, afterward peeling and cracking.

**Leu′col.** Quinolin.

**Leucolach′anum.** Valerian.

**Leucolein′.** Quinolin.

**Leucolysin′.** A cytolysin capable of agglutinating and destroying white blood corpuscles.

**Leucol′ysis.** Leucocytolysis.

**Leucolyt′ic.** Destructive to the white blood cells.

**Leuco′ma.** Leucoma and albugo are often used synonymously to denote white opacity of the cornea. Both are essentially different from nebula of the cornea, the latter being usually the result of chronic ophthalmia and an effusion of milky serum into the texture of the delicate continuation of the conjunctiva over the cornea; the others are the result of violent acute ophthalmia or keratitis. In this state thick, coagulable lymph is extravasated from the arteries into the substance of the cornea. On other occasions the disease consists of a firm, callous cicatrix on this membrane, the effect of a wound or ulcer with loss of substance. Also albumin; conjunctiva; leucoplakia buccalis. **L. adhæ′rens**, white opacity of the cornea, with adhesion of the iris to the back part of the cornea; anterior synechia. **L. al′bum**, albugo. **L. gerontotox′on**, arcus senilis. **L. margarita′ceum**, see *Margaritaceus.*

**Leucomain**, lu-ko-mah-in (*leucoma*, white of egg). Term variously applied, at first to cadaveric alkaloids (now called ptomains) detected in different forms of excreta; then to toxic alkaloids resulting from the action of bacterial ferments on albuminoid substances; latterly to animal alkaloids detected in the healthy living animal body, and described as entirely distinct from ptomains. The leucomains proper are divided into two distinct groups: 1. The *uric acid group*, because resembling that acid in chemical combination, including adenin, hypoxanthin, guanin, xanthin, heteroxanthin, paraxanthin, carnin, pseudoxanthin, gerontin, and spermin. 2. The *creatinin group*, because resembling it in chemical composition, including crusocreatinin, xanthocreatinin, amphicreatinin, and other yet unnamed bases. Several other bases are yet unstudied or not clearly understood. The table on the opposite page, by Vaughan and Novy, presents a useful list of the known leucomains.

**Leucomainæ′mia.** Presence of leucomains in the blood.

**Leucomato′sis.** Increase of albumin in a part. Amyloid degeneration.

**Leuco′matous.** Relating to, resembling, or affected with leucoma.

**Leucomel′anous** (*leukos*, white, *melas*, black). Epithet applied to those having pale skin and dark hair.

**Leucomo′ria** (*moria*, fatuity). Erratic melancholy.

**Leucomyco′sis** (*leukos*, white, *mykes*, fungus). Leucocythæmia, so called from belief that it is of germ origin.

**Leucomyeli′tis** (*leukos*, white, *myelos*, marrow). Inflammation of white matter of spinal cord.

**Leucomyelop′athy** (*leukos*, white, *myelos*, marrow *pathos*, disease). Disease of white matter of spinal cord.

**Leuconecro′sis.** Form of dry gangrene, the opposite in appearance to anthraconecrosis.

**Leuconos′toc.** Genus of family of *Coccaceæ* in chains or links surrounded with a gelatinous sheath. **L. mesenteroi′des** (Van Tieghem), a microorganism causing disintegrating processes in beet-sugar manufacture.

**Leuconu′clein.** Nuclein procured from nucleohiston of leucocytes by digestion with gastric juice.

**Leuconymphæ′a.** Nymphæa alba.

**Leucopath′ia** (*leukos*, white, *pathos*, affection). See *Albino, Chlorosis.* Achromatosis; leucoderma. **L. acquis′ita**, vitiligo. **L. congenita′lis**, albinism. **L. genera′lis**, albinism. **L. partia′lis**, l. limited as to space occupied. **L. un′guium**, condition of the nails in which numerous white spots appear upon them. **L. universa′lis**, albinism.

**Leucop′athy.** Leucopathia.

**Leucope′nia** (*penes*, poor). Decrease in the number of leucocytes.

**Leucope′nic.** Relating to or characterized by leucopenia.

**Leucophlegma′sia** or **Leucophlegma′tia** (*leukos*, white, *phlegma*, phlegm). Dropsical habit; hydrocachexia; anasarca; œdema. **L. Æthio′pum**, cachexia Africana; chthonophagia. **L. do′lens puerpera′rum**, phlegmasia alba dolens.

**Leucophlegmat′ic.** Having disposition to general dropsy.

**Leucophthal′mous** (*leukos*, white, *ophthalmos*, eye). Having unusual whiteness of eye.

**Leu′copin.** Visual white obtained from visual purple by the action of light.

**Leucop′iper.** Piper album.

**Leucopla′kia** (*leukos*, white, *plax*, surface). The formation of white patches. **L. bucca′lis** or **lingua′lis**, chronic inflammation of the tongue with whitish patches; ichthyosis of the tongue.

**Leucopla′sia.** Leucoplakia.

**Leu′coplast** (*plasso*, to form). Leucoblast.

**Leucoplas′tid.** White protoplasmic granule.

**Leucoplax′ia.** Leucoplakia.

**Leu′cops.** Leucophthalmus.

**Leucorrha′gia.** Excessive leucorrhœal discharge.

**Leucorrhœ′a** or **Leucorrhe′a** (*leukos*, white, *rhoia*, a flow). The whites, uterine catarrh; more or less abundant discharge of whitish, yellowish, or greenish mucus or mucopus from the vagina, resulting from acute or chronic inflammation or from congestion of the membrane lining the genital organs of the female. *Vaginal leucorrhœa* has been termed blennorrhœa or fluor albus vaginæ, leucorrhœa, medorrhœa vaginæ, vaginitis, elytroblennorrhœa, colporrhœa. *Uterine leucorrhœa* has received the names fluor albus uteri or metricalis, catarrhus uteri, leucorrhœa or medorrhœa uteri, metroblennorrhœa, blennometritis, blenmetrorrhœa, metroblennozemia, metrocatarrhus, TABLE OF LEUCOMAINS.

| Formula. | Name. | Discoverer. | Source. | Physiological action. |
|---|---|---|---|---|
| $C_5H_5N_5$ | Adenin | Kossel. | Nuclein and urine. | Poisonous. |
| $C_5H_4N_4O$ | Hypoxanthin | Scherer. | Nuclein and urine. | Non-poisonous, stimulant. |
| $C_5H_5N_5O$ | Guanin | Unger. | Nuclein and guano. | Non-poisonous, stimulant. |
| $C_6H_7N_5O$ | Epiguanin or 7-methyl guanin | Krüger and Wolff. | Urine. | |
| $C_5H_4N_4O_2$ | Xanthin | Marcet. | Nuclein and urine. | Non-poisonous, stimulant. |
| $C_6H_6N_4O_2$ | Heteroxanthin or 7-methyl xanthin | Salomon. | Urine. | Poisonous. |
| .............. | 1-methyl xanthin | Krüger and Salomon. | " | |
| .............. | 3-methyl xanthin | Albanesi. | " | |
| $C_7H_8N_4O_2$ | Paraxanthin or 1–7 dimethyl xanthin | Thudichum, Salomon. | " | Poisonous. |
| .............. | Theophyllin or 1–3 dimethyl xanthin | Kossel. | Tea-leaves and urine. | |
| .............. | Theobromin or 3–7 dimethyl xanthin | Woskresensky. | Cocoa and urine. | |
| $C_7H_8N_4O_3$ | Carnin | Weidel. | Meat extract; urine (?) | Non-poisonous, stimulant. |
| $C_9H_{14}N_4O_3$ | Carnosin | Gulewitsch and Amiradzibi. | Meat extract. | |
| $C_{21}H_{30}N_{16}O_4$ | Cytosin | Kossel and Neumann. | Thymus nucleinic acid. | |
| $C_4H_4N_2O_2$ | Uracil | Ascoli. | Nuclein. | |
| $C_5H_6N_2O_2$ | Thymin or 5-methyl uracil | Kossel and Neumann. | " | |
| $C_8H_6N_4O_4$ | Unnamed | Kutcher. | Yeast. | |
| $C_4H_6N_3O$ (?) | Episarkin | Balke. | Urine. | |
| $C_4H_5N_5O$ (?) | Pseudoxanthin | Gautier. | Muscle. | |
| $C_3H_8N_2O$ (?) | Unnamed | Baumstark. | Urine. | |
| $C_6H_{14}N_4O_2$ | Arginin | Schulze and Steiger. | Proteids. | |
| $C_6H_9N_3O_2$ | Histidin | Kossel. | " | |
| $C_6H_{14}N_2O_2$ | Lysin | Drechsel. | " | |
| $C_5H_{12}N_2O_2$ | Ornithin | Jaffé. | " and bird's urine. | |
| $C_5H_{14}N_2$ | Gerontin | Grandis | Liver of dog. | Poisonous. |
| $C_2H_5N$(?) | Spermin | Schreiner. | Sperma. | Non-poisonous. |
| $C_{10}H_9N$ | Methyl quinolin | Aldrich and Jones. | Secretion of skunk. | " " |
| $C_5H_8N_4O$ | Crusocreatinin | Gautier. | Muscle. | |
| $C_5H_{10}N_4O$ | Xanthocreatinin | " | " | Poisonous. |
| $C_9H_{19}N_7O_4$ | Amphicreatinin | " | " | |
| $C_{12}H_{25}N_{11}O_5$ | Unnamed | " | " | |
| $C_{11}H_{24}N_{10}O_5$ | " | " | " | |
| $C_7H_{12}N_4O_2$ | " | Pouchet. | Urine. | |
| $C_3H_5NO_2$ | " | " | " | |
| $C_{34}H_{60}N_2O_5$ | Samandarin | Zalesky. | Salamander. | Poisonous. |

metroleucorrhœa. It is often attended with pain and a sense of heaviness in the loins, abdomen, and thighs, disordered digestive functions, etc. There are few women not occasionally subject to moderate leucorrhœa. When the discharge is from simple congestion, and not of gonorrhœal nature, attention to the general health, change of air, the horizontal posture, etc., do more than pharmaceutical agents; the latter are almost entirely confined to astringent injections, which may be employed when the discharge is great. *Vulvar leucorrhœa* sometimes occurs in childhood especially; and *cervical leucorrhœa*, originating in the cervix uteri, chiefly mucous, at the childbearing period. **L. ana′lis**, see *Hæmorrhoids*. **In′fantile l.**, see *Leucorrhœa*. **L. masculi′na**, gonorrhœa. **Men′strual l.**, leucorrhœa in girls who do not menstruate properly, the discharge seeming to be a substitute for the healthy menstrual sanguineous flow. **L. Nabo′thi**, see *Parturition*.

**Leucorrhœ′al** or **Leucorrhe′al.** Relating to leucorrhœa.

**Leucosarco′ma.** Sarcoma devoid of pigment.

**Leuco′sis.** Leucoma. Paleness, anæmia. Albinism, achromatosis. Disease of the lymphatic system.

**Leucotin′.** $C_{21}H_{20}O_6$. Chief ingredient in paracoto bark.

**Leucotox′ic.** Leucolytic.

**Leucotoxin′.** A cytotoxin acting specifically on the white blood cells.

**Leucotrich′ia** (*leukos*, white, *thrix*, *trichos*, hair). Very light or blond hair. **L. annula′ris**, condition of hair in which the segments, being alternately light and dark, have the appearance of rings.

**Leu′cous.** White; applied to people with fair complexion and red or yellow hair.

**Leudet's bruit**, le(r)-daze′ brue-ee′. A slight but distinctly audible sound heard in some ear affections, caused by spasmodic action of the external peristaphylinus muscle.

**Leukæ′mia** (*leukos*, white, *haima*, blood). A disease of the blood marked by anæmia, with a great and permanent increase in the number of white blood corpuscles and changes in the blood-making organs, the bone-marrow, spleen, and lymphatic glands. It is divided usually into two clinical forms, the *lymphatic* and the *splenomedullary;* in the former there is marked enlargement of the lymphatic glands, with perhaps slight changes in the spleen; in the latter there are great enlargement of the spleen and proliferation of the bone-marrow, but no apparent change in the lymphatic glands; the lymphatic form is the commoner. **Ad′enoid l.**, lymphatic l. **Amyg′daline l.**, l. associated with disease of the tonsils. **Essen′tial l.**, lymphatic l. **Fran′kel's l.**, acute l. with mononuclear leucocytes. **Ganglion′ic l.**, lymphatic l. **Lienomyelog′enous l.**, splenomedullary l. **Lymphat′ic l.**, see *Leukæmia*. **Med′ullary l.**, l. with changes especially in the bone-marrow. **Myelogen′ic** or **Myelog′enous l.**, medullary l. **Progres′sive l.**, essential l. **Splen′ic l.**, l. with changes especially in the spleen. **Splenomed′ullary l.**, see *Leukæmia*.

**Leukas′mus.** Albinism.

**Leu′ke.** Leprosy.

**Leuko-.** See *Leuco-*.

**Leukoleïn′um** (*leukos*, white, *elaion*, oil). Leucolein, chinolein, chinolin, quinolin. The product of the dry distillation of coal, mixed with picolin, anilin, and other substances in mineral tar; procured also by heating quinine, cinchonine, and strychnine with a concentrated solution of potassa.

**Leu′kon.** White of egg.

**Leva′men** (*levo*, to raise). Palliative remedy; remission.

**Levant′ disease′.** Bubonic plague. **L. fe′ver,** a form of malarial fever prevailing in the Levant. **L. plague,** bubonic plague. **L. worm′seed,** Artemisia santonica.

**Leva′tor** (*levo*, to raise). Elevator; term applied to certain muscles; instrument to raise bone, etc. **L. a′læ na′rium** or **na′si,** dilator naris; nasal portion of l. labii superioris alæque nasi. **L. an′guli o′ris,** small, flat, long, quadrilateral muscle, arising from the fossa canina and inserted at the commissure of the lips, where it is confounded with the triangularis; it raises the corner of the mouth and draws it toward the ear. **L. an′guli scap′ulæ,** muscle passing from posterior tubercles of fourth or fifth cervical vertebræ to superior angle of scapula and vicinity. **L. a′ni,** muscle situated at the lower part of the pelvis; broad, flat, quadrilateral, and broader above than below. It represents a kind of membranous partition closing the outlet of the pelvis, and its upper concavity is opposed to that of the diaphragm. It is attached above to the posterior surface of the body of the pubis, to the upper part of the obturator foramen, and to the spine of the ischium, and is inserted into the coccyx, into an aponeurotic line common to it and its fellow, and into the lateral parts of the rectum. This muscle supports the rectum, raises it, and carries it upward during evacuation of excrement. It can also compress the bladder and vesiculæ seminales, and thus favor the expulsion of urine and sperm. **L. a′ni par′vus,** transversus perinæi. **L. auric′ulæ** or **au′ris,** attollens aurem. **L. cau′dæ bre′vis,** sacroccygeus superior. **L. clavic′ulæ,** muscle of lower animals (sometimes anomalous in man as slip of levator anguli scapulæ), arising from transverse processes of several cervical vertebræ, as from the second (*cleidoepistropheus*), the fourth and fifth (*scalenus anticus, accessorius*), and the sixth (*cleidocervicalis imus*), and passing to the clavicle. **L. coccy′gis,** coccygeus. **L. glan′dulæ thyroide′æ,** muscle occasionally found connected with the upper border or isthmus of the thyroid gland, and attached superiorly to the body of the os hyoides or to the thyroid cartilage. Several anomalous muscles are so named, slips from cricothyroideus, sternothyroideus, or thyrohyoideus muscles. **L. glot′tidis,** genioepiglotticus. **L. hu′meri,** mastoidohumeralis. **L. hu′meri inter′nus,** coracobrachialis. **L. intesti′ni rec′ti,** l. ani. **L. la′bii inferio′ris,** small muscle situated before the symphysis menti; attached by its apex to a fossette at the side of the symphysis in the inferior maxillary bone. Its fibres proceed, diverging and vanishing in the manner of a tuft on the skin of the chin; this muscle raises the chin and pushes upward the lower lip. **L. la′bii superio′ris alæ′que na′si,** fleshy, thin, triangular muscular bundle situated at the sides of the nose; arises from ascending process of the superior maxillary bone; its fibres descend divergingly, to be inserted into the ala of the nose and in the upper lip. This muscle raises the upper lip and ala nasi, which it draws a little outward. **L. la′bii superio′ris ma′jor** or **pro′prius,** thin, flat, quadrilateral muscle situated at the middle and inner part of the face; arising from os malæ and os maxillare superius, and inserted into the upper lip, which it raises, at the same time carrying it a little outward. **L. la′bii superio′ris mi′nor,** portion of l. labii superioris alæque nasi, inserted into the upper lip. **L. labio′rum commu′nis,** l. anguli oris. **L. lin′guæ,** styloglossus. **L. men′ti,** l. labii inferioris medius posterior. **L. na′si pro′prius,** anomalous muscular fibres beneath the compressor naris. **L. oc′uli,** rectus superior oculi. **L. œsoph′agi,** crico-œsophageus anterior. **L. pala′ti** or **pala′ti mol′lis,** long, narrow muscle arising from the lower surface of the pars petrosa and cartilage of the Eustachian tube, and inserted into the substance of the velum palati; its use is to raise the velum palati. **L. pal′pebræ superio′ris,** long, small, thin muscle, situated at the upper part of the orbit; by its posterior extremity inserted into the little ala of the sphenoid bone, immediately in front of the foramen opticum, and by its anterior expanded extremity terminating at the upper margin of the tarsal cartilage of the eyelid. It raises the upper eyelid, draws it backward, and sinks it into the orbit. **L. pe′nis,** compressor venæ dorsalis. **L. perinæ′i,** l. ani muscle; also vaginal speculum, like a Sims's speculum, intended to raise the perineum to facilitate uterine exploration. **L. pharyn′gis,** stylopharyngeus, palatopharyngeus. **L. pharyn′go-larynge′us,** stylopharyngeus. **L. pro′prius scap′ulæ,** l. anguli scapulæ. **L. pros′tatæ,** anterior fibres of the levator ani, embracing the prostate; compressor prostatæ. **L. pupil′læ,** rectus superior oculi. **L. quin′tus a′ni,** coccygeus. **L. scap′ulæ** or **an′guli scap′ulæ,** muscle so called because it is attached to the upper and internal angle of the scapula; situated at the posterior and lateral part of the neck, and at the upper part of the back. It is long, flat, and broader above than below; inserted into the superior internal angle of the scapula, and into the tops of the transverse processes of the first four cervical vertebræ. It depresses the prominence of the shoulder by raising the posterior angle of the scapula, on which it impresses a kind of rotary motion; it can also draw the head to one side. **L. scap′ulæ pro′prius,** levator scapulæ. **L. scro′ti,** cremaster. **L. ure′thræ,** portion of the transversus perinæi muscle; Wilson's muscle. **L. u′vulæ,** azygos muscle. **L. ve′li pala′ti,** peristaphylinus internus.

**Levato′res costa′rum bre′ves.** Muscles arising from the transverse processes of the seventh cervical and all the dorsal vertebræ except the last, and inserted each into two ribs. **L. c. lon′gi,** muscles, each of which passes to the outer surface of a rib from the transverse process of the second vertebra above; supracostales.

**Lev′en** (*levo*, to raise). Ferment.

**Le′ver** (*levo*, to raise). Inflexible rod turning round a fixed point and used for moving bodies, bearing burdens, or raising them. The point on which the lever moves is called the fulcrum, hypomochlion. Force moving the lever is called the power; weight to be moved, the resistance. There are three kinds of levers. A lever of the first kind has the fulcrum between the power and resistance, as motion of head or neck, the first cervical vertebra forming the fulcrum. A lever of the second kind has the resistance between the fulcrum and power, as in rising on tiptoe, the fulcrum being the ground under the toes. A lever of the third kind has the power between the fulcrum and resistance, as in flexion of the forearm or the arm, elevation of the arm, etc. In the human body the bones represent levers; the muscles of locomotion are powers; the weight of parts to be moved constitutes the resistance. The fulcra are, at times, the joints; at others, the ground. An obstetric lever, or vectis, is an instrument curved at the extremity, and having a fenestra; used to assist the extraction of the child's head when instrumental aid is necessary, either as a lever proper or as a tractor. Levers are also used by dentists for extracting stumps, etc. **Da′vy's l.,** a cylinder of wood passed into the rectum and used to make pressure on one of the larger arterial trunks given off from the abdominal aorta.

**Lev′igated.** Having the consistence of fine powder.

**Leviga′tion** (*lævigo*, to make smooth). Operation by which bodies are reduced to very fine powder, as by trituration, elutriation, etc.

**Levis′ticum.** Ligusticum levisticum.

**Levret′s′ law.** In placenta prævia the umbilical cord is attached to the edge.

**Levulin′.** Lævulin.

**Levulo′san.** $C_6H_{10}O_5$. Carbohydrate obtained from levulose by heating.

**Lev′ulose** (*lævus*, left) or **Læv′ulose.** $C_6O_{12}H_6$. Fruit-sugar, isomeric with dextrose; possesses the power of rotating the plane of polarized light to the left. Gummy substance associated with glucose in fruits, and pathologically excreted in the urine in diabetes.

**Levulosu′ria.** The presence of levulose in the urine.

**Lewin′s′ erythe′ma.** Syphilitic catarrh of the larynx.

**Lewinin′.** Resin obtained from kava; used as a local anæsthetic.

**Ley′den bat′tery.** Electrical battery containing a number of Leyden jars which are connected with one another on the inner and outer side. **L. jar,** jar coated inside and outside with tin-foil for the purpose of charging it with electricity.

**Ley′den's atax′ia.** A disease resembling locomotor ataxia. **L.'s cells,** large cells found in acute inflammation of the anterior cornua of the gray matter of the spinal cord, and also in other inflammations of the cord. **L.'s crys′tals,** see *Charcot's crystals.* **L.'s neuri′tis,** a form of neuritis in which the fibres of the nerves are destroyed and fatty tissue takes their place. **L.'s sign,** in cases of pneumothorax, complicated with suppuration in the region below the diaphragm, there is a rise of pressure in the suppurative cavity during inspiration, and a fall during expiration.

**Ley′den-Charcot′ crys′tals.** See *Charcot's crystals.*

**Ley′den-Moe′bius type.** A type of progressive muscular atrophy starting in the calves of the legs, and frequently developing symptoms of Duchenne's or myosclerotic paralysis.

**Leyden′ia gemmip′ara** (Schaudinn). A rhizopod believed by Leyden and Schaudinn to be pathogenic of cancer.

**Ley′dig's cells.** See *Henle's cells.* **L.'s duct,** the Wolffian duct.

**Leyse′ra gnaphaloi′des** (after Fr. W. von Leyser, of Halle). S. African plant, ord. *Compositæ*, emollient and used at the Cape in catarrh, bronchitis, and even in phthisis.

**Liat′ris odoratis′sima.** Dog tongue; herb, native of the Southern United States; leaves have an odor of vanilla. **L. scario′sa** and **L. squarro′sa,** throatwort, sowwort, backache root, devilsbite, blazing star, prairie pines, rough root, also called, from reputed powers in bites from rattlesnakes, rattlesnake's master. Roots bruised are applied to the wound; decoction in milk is given externally. **L. spica′ta,** gayfeather, button snakeroot, devil's bit, colicroot, ord. *Compositæ;* indigenous plant, in the Middle and Southern States, with purple compound flowers like a spike; root is diuretic; used in gonorrhœa and as a gargle in sore throat.

**Libano′tis an′nua** (frankincense tree). Athamanta cretensis. **L. corona′ria,** rosmarinus. **L. creten′sis,** Athamanta cretensis. **L. hirsu′ta,** Athamanta cretensis.

**Libano′tus** or **Lib′anus.** Frankincense.

**Libera′tion.** Setting free. **L. of the arms,** operation of bringing down arms of fœtus when in presenting they are placed against the side of the head.

**Libid′inous** (*libido*, lust). Lewd, lustful.

**Libi′do.** Desire; necessity, as l. urinæ, desire to evacuate the bladder; l. intestini, desire to evacuate the bowels; l. sexualis, sexual desire, etc. Prurigo. Salacitas.

**Libor′ius's bacil′lus.** B. butyricus.

**Li′bra.** Pound.

**Licen′tiate** (*licet*, it is permitted). One licensed to practise his profession.

**Lichanos,** lik′an-os. Index finger. See *Digitus.*

**Lichen,** li′ken. Diffuse, dry, red papular eruption, accompanied by a troublesome sense of tingling or pricking; some forms are varieties of eczema. Also (then more commonly pronounced litch′en) a plant growth of a dry, scaly form, often called moss; some, such as Iceland moss (cetraria), are used for food. **L. acumina′tus,** a form of lichen ruber in which the papules are pointed. **L. a′grius** or **fe′rox** or **fe′rus,** wild lichen, is distinguished by pimples in clusters or patches, surrounded by a red halo, the cuticle growing gradually harsh, thickened, and chappy; often preceded by general irritation, as itching, desquamation, fissures, etc. In addition to antiphlogistics, cooling applications may be used to allay itching. Eczema papulosum. **L. annula′tus,** circinate form of lichen on the trunk, generally chronic eczema folliculare. **L. aphtho′sus,** ord. *Lichenaceæ*, is cathartic and anthelmintic. **L. ar′borum,** L. pulmonarius. **Arthrit′ic l.,** see *L. circumscriptus, L. lividus, L. pilaris.* **L. barba′tus plica′tus,** L. plicatus. **L. cani′nus,** ash-colored ground liverwort; cryptogamous plant long considered capable of curing rabies canina; used also in mania and spasmodic asthma. **L. car′rageen,** Fucus crispus. **L. cetra′ria,** cetraria. **L. cine′reus terres′tris,** L. caninus. **L. circina′tus,** cutaneous affection with well-defined red, circular groups of acne-like papules; pityriasis rosea. **L. circumscrip′tus** is characterized by clusters or patches of papulæ, having a well-defined margin and an irregularly circular form, continuing for six or eight weeks. **L. coccif′erus,** L. pyxidatus. **L. cor′neus,** lichen with elevated, horny patches. **L. dissemina′tus,** a form of l. in which the lesions are scattered. **L. eczemato′des,** eczema lichenodes or papulosum. **Eczema′tous l.,** eczema. **L. eryngifo′lius,** L. islandicus. **L. exudati′vus ru′ber,** l. ruber. **L. fe′rox** or **fe′rus,** l. agrius. **L. flor′idus hir′tus,** L. plicatus. **L. gyra′tus,** coalescence of several circles of lichen circumscriptus. **L. hæmorrhag′icus,** purpuric papules or maculæ at the ends of follicles on the skin. **Herpet′ic l.,** l. agrius; l. herpetiformis. **L. hir′tus,** L. plicatus. **Hypertroph′ic l.,** condition of the skin in which there are flat, fungous vegetations; mycosis fungoides; lichen corneus. **L. of in′fants,** strophulus. **L. invetera′tus,** chronic obstinate form of l. agrius, in which the skin is rough and dense. **L. i′ris,** a form of tinea tonsurans. **L. irlan′dicus,** Irish moss; see *Chondrus.* **L. islan′dicus,** Iceland lichen, I. liverwort, I. moss; inodorous plant with bitter, mucilaginous taste; tonic, demulcent, nutrient. Before being eaten it is first steeped in water holding carbonate of potassium in solution to extract the bitter, and then boiled in milk. Bitter principle extracted from it is variously termed *cetrarin, cetrarinum, cetrarium.* **L. lacinia′tus,** L. saxatilis. **L. liv′idus,** papulæ are dark red or livid without fever, and quite permanent; the treatment calls for mineral acids and bark. **L. men′ti,** sycosis. **Net′tle l.,** l. urticatus; hair lichen. **L. obtu′sus,** form of l. ruber with round, flat, circumscribed patches. **L. parieti′nus,** Parmelia parietina. **L. pila′ris,** modification of nettle lichen, papulæ appearing at the roots of the hair. **L. pla′nus,** chronic eruption of crimson-red papules, flattened, smooth, occurring on the front of the forearm above the wrist, the waist, place of attachment of the garter, etc., with pruritus. **L. plica′tus,** plant applied by Laplanders as astringent to bleeding vessels and to excoriated parts. **L. prurigino′sus,** see *Strophulus.* **L. psori′asis,** l. ruber, l. r. acuminatus; pityriasis rubra pilaris. **L. pulmona′rius,** oak lungs, tree lungwort, hazel crottles, hazel raw; subastringent, somewhat acid plant, formerly used in lung diseases. **L. pyxida′tus,** cup-moss; subastringent; decoction used in whooping-cough. **L. reticula′tus,** L. pulmonarius. **L. rocel′la,** litmus, orchil, canary archell, chinny weed, herb archell, turnsole; used to allay cough in phthisis; the blue pigment, *litmus*, is used as delicate test for acid, in the urine for example, being reddened by acids. Its blue color is restored by alkalies. **L. ru′ber,** this includes l. ruber acuminatus and l. planus, and sometimes l. ruber obtusus. **L. r. acumina′tus** is a papulosquamous disease, the papules and scales gradually forming a rough, corneous crust. **L. r. monilifor′mis,** a form of lichen in which there are node-like masses arranged in lines and chains like a necklace. **L. r. pla′nus,** see *L. planus*. **L. saxat′ilis,** moss formerly held in high estimation in head affections. **L. scorbu′ticus,** acne scorbutica. **L. scrofulo′rum, scrofuloso′rum,** or **scrofulo′sus,** chronic papular eruption consisting of exudative infiltration of the pilosebaceous follicles and perifollicular tissue in young, tuberculous patients under twenty. **L. sim′plex,** eruption of red papulæ, appearing first on the face or arms, and afterward extending over the body, preceded by slight febrile irritation, which usually ceases when the eruption appears, with an unpleasant sense of tingling during the night. **L. spinulo′sus,** keratosis follicularis. **L. spu′rius,** L. caninus. **L. stella′tus,** Marchantia polymorpha. **L. tincto′rius,** L. saxatilis. **L. trop′icus,** prickly heat, summer rash. Pimples are bright red and of the size of a small pin-head, with heat, itching, and pricking, as if by needles. It is local, produced by excessive heat, and disappears when the weather becomes cooler or the individual is acclimated; an eczematous affection called chuna, produced by the same cause, is described by Tschudi as prevalent in the elevated parts of Peru. **L. urtica′tus,** or **net′tle l.,** consists of papulæ accompanied by wheals like those of nettle rash; a variety of this is said to be called, in America, blights. Urticaria papulosa. **Vac′cine l.,** see *Roseola*. **Ventric′ular l.,** see *Ventricular*. **Wall l.,** Parmelia parietina. **Wild l.,** lichen agrius.

**Licheni′asis adulto′rum.** Lichen. **L. stroph′ulus,** strophulus.

**Lichen′ic.** Pertaining to lichens.

**Lichenification,** li-ken-i-fi-ka′shun. Change in a circumscribed area of skin about the flexures of joints, as of the forearm, thighs, etc., symptomatic of a condition between chronic inflammation and a specialized dermatosis, and like lichen planus.

**Lichenin′.** $C_6H_{10}O_5$. Substance in colorless masses from cetraria and other lichens. It resembles granulose. See *Lichen islandicus*.

**Lichenoid,** li′ken-oid or litch′en-oid. Resembling lichen. Chronic spreading eruption on the tongue. Starchy substance from Iceland moss, more soluble than lichenin.

**Lichenous,** li′ken-us. Relating or appertaining to lichen.

**Lich′ens.** Order of perennial cryptogamic plants deriving their nourishment from the air.

**Lic′orice.** Glycyrrhiza. **L. bush** or **vine,** Abrus precatorius. **In′dian** or **Jamai′ca l.,** Abrus precatorius. **Stick l.,** extractum glycyrrhizæ. **Wild l.,** Abrus precatorius.

**Lic′ulmen.** Garum.

**Lid.** Covering; eyelid. **Gill l.,** operculum. **Gran′ular l.,** trachoma.

**Lie′ben's test.** Test for acetone in the urine; the urine is distilled and a solution added of iodine and potassium iodide with hydrate of potassium iodoform—yellow in color—is precipitated if there is acetone in the urine.

**Lie′berkühn.** An annular reflector for focusing the light on an opaque object under the microscope.

**Lie′berkühn's ampul′la.** Cavity in villus of intestine between the inner surface and a lacteal vessel. **L.'s crypts, fol′licles,** or **glands,** fine, columnar, blind sacs, the openings of which are from one-twentieth to one-thirtieth of a line in diameter, so closely placed over the whole of the small intestine as to give the mucous membrane a general sieve-like or perforated appearance; they secrete the succus entericus or intestinal juice. **L.'s jel′ly,** alkali-albumin from the action of strong caustic potash on the white of egg.

**Lie′bermeister's fur′rows.** Impressions of the ribs on the upper surface of the liver in women given to tight lacing.

**Li′en.** Spleen. **L. accesso′rius,** lienculus. **L. in′gens,** tumefaction of the spleen. **L. succentu-ria′tus,** lienculus.

**Li′enal** (*lien*, spleen). See *Splenic*.

**Lienculus,** le-en′ku-lus (dim. of lien). Small supernumerary, accessory, or supplementary spleen.

**Lieni′tis.** Inflammation of the spleen.

**Lien′ocele** (*kele*, hernia). Hernia of the spleen.

**Li′eno-intes′tinal.** Belonging to the spleen and intestine.

**Lienomala′cia** (*malakia*, softening). Softness or softening of the spleen.

**Lienomyelogenous,** mi-el-oj′en-us. Formed in the spleen and marrow of bone.

**Lienopancreat′ic.** Relating to the spleen and pancreas, as *l. ligament*. See *Ligamentum pancreatico lienale*.

**Lienore′nal.** Relating to the spleen and kidney. See *Ligamentum lienorenale*.

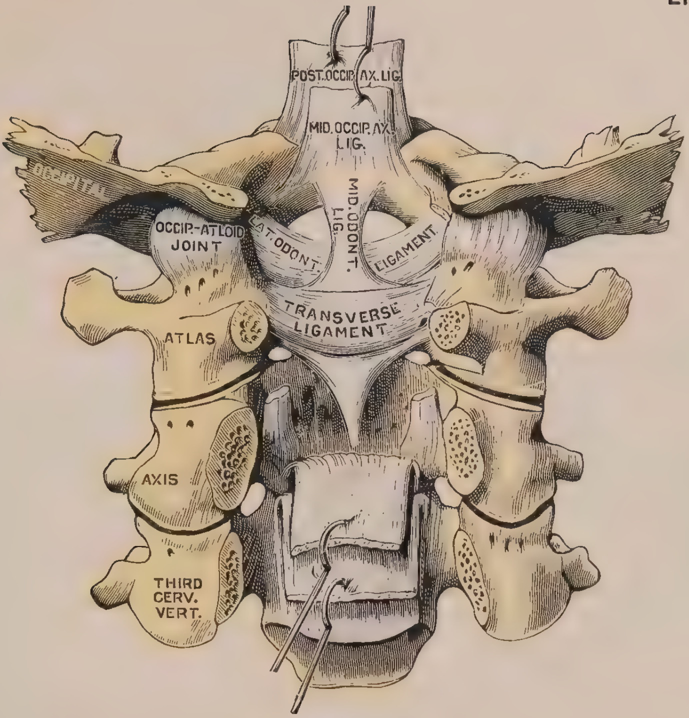
**Lienter′ic.** Relating to lientery.

**Li′entery** (*leios*, smooth, *enteron*, intestine). Lienteric diarrhœa. Frequent liquid evacuations, the food being only half digested; condition always symptomatic of great irritation in the intestinal canal, the sensibility of which is so much augmented that it cannot bear the sojourn of the food in it.

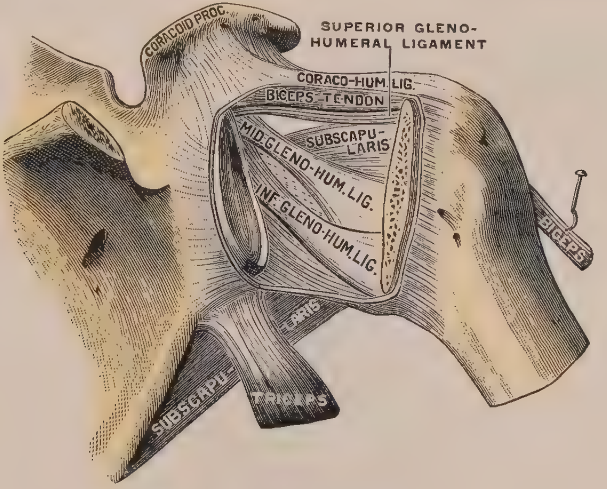
**Lieutaud's′ si′nus.** Straight sinus connecting the inferior longitudinal sinus with the lateral sinus. **L.'s tri′angle,** trigonum vesicæ.

**Life.** State of organized beings, during which, owing to the union of an unknown force with matter, they are capable of performing functions different from those that regulate other natural bodies. Life has only a limited duration, beyond which, the organic functions ceasing to be executed, the body is given up to the agency of chemical affinity. *Organic life* includes the functions inservient to composition and decomposition, as digestion, respiration, circulation, calorification, absorption, secretion, and nutrition. *Animal life* includes the functions which connect man and animals with external bodies, as the understanding, sensations, locomotion, and voice. **Change of l.,** menopause. **Dura′tion of l.,** see *Longevity*. **Extra-u′terine l.,** life after birth. **Fe′tal l.,** intra-uterine life. **Intra-u′terine l.,** life of the fœtus before birth. **L.-everlast′ing,** Gnaphalium margaritaceum. **Plan′tain l.-e.,** Antennaria plantaginifolia. **Reproduc′tive l.,** sexual l. **Sex′ual l.,** adult life, the period of life during which procreation of offspring is possible; in woman, the childbearing period, or interval between puberty and the menopause. **Sweet-scent′ed l.-e.,** Gnaphalium polycephalum. **Expecta′tion of l.,** see *Longevity*. **L. insur′ance,** contract entered into, usually by an incorporated company, to pay a certain sum of money on a person's death, on condition of his paying an annual sum, called the premium, during life. **Organ′ic l.,** term used to denote the phenomena of life, as digestion, respiration, etc. **L. root,** Senecio aureus. **L.-ta′ble,** statistics, arranged in tabular form, of the deaths occurring at different ages among a certain number of people, and also of the relative number living at the several ages. **Veg′etative l.,** organic l., the performance of the various functions necessary to the existence of the individual and propagation of the species, apart from the exercise of the intellectual faculties.

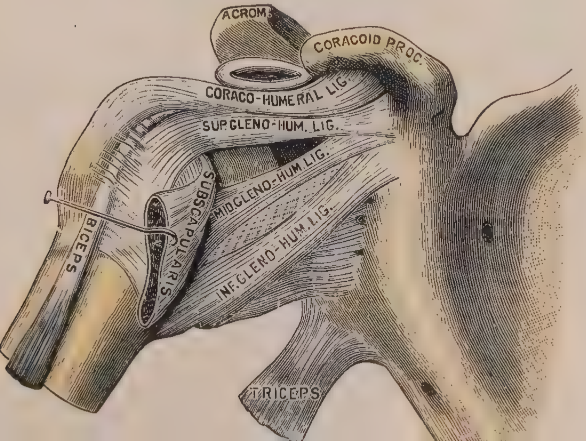
**Lig′ament** (*ligo*, to bind). Name given to fibrous structures which serve to unite bones and to form articulations, hence called interosseous and articular ligaments. They are of a white, close texture, are but little extensible, and difficult to break. See the *Table of Ligaments* below, also *Ligamenta* and *Ligamentum*. Also any membranous fold retaining an organ in its situation.



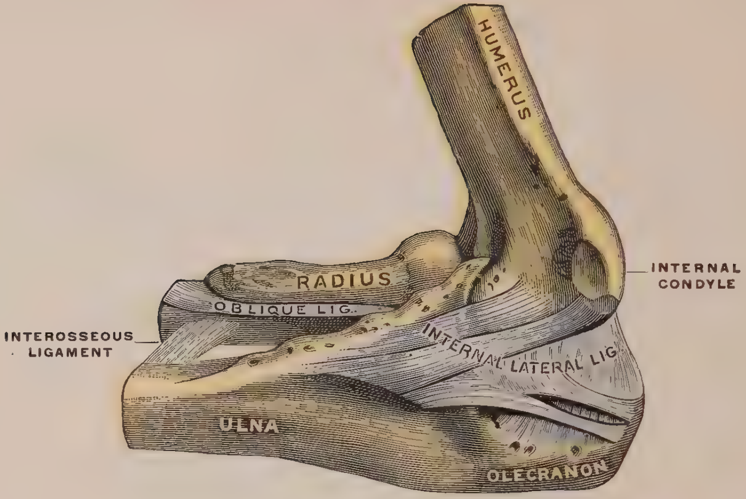
Articulations of the occipital bone with the upper cervical vertebræ. The arches have been removed, and the spinal canal is thus exposed. (Gerrish, after Testut.)



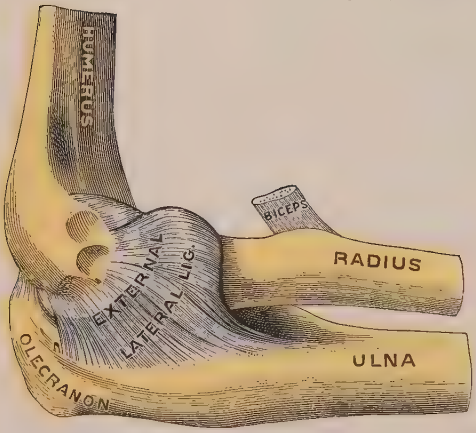
Shoulder-joint, rear view. The hind part of the capsular ligament and most of the head of the humerus have been removed. (Gerrish, after Testut.)



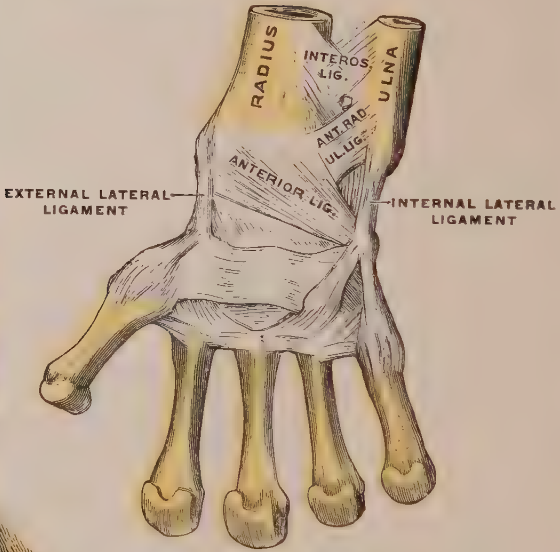
LIGAMENTS



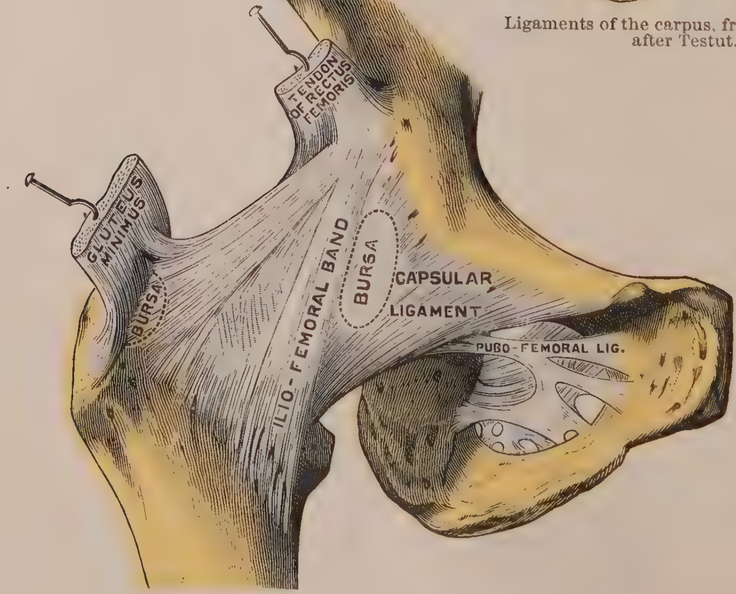
Elbow-joint, mesial view. (Gerrish, after Poirier.)



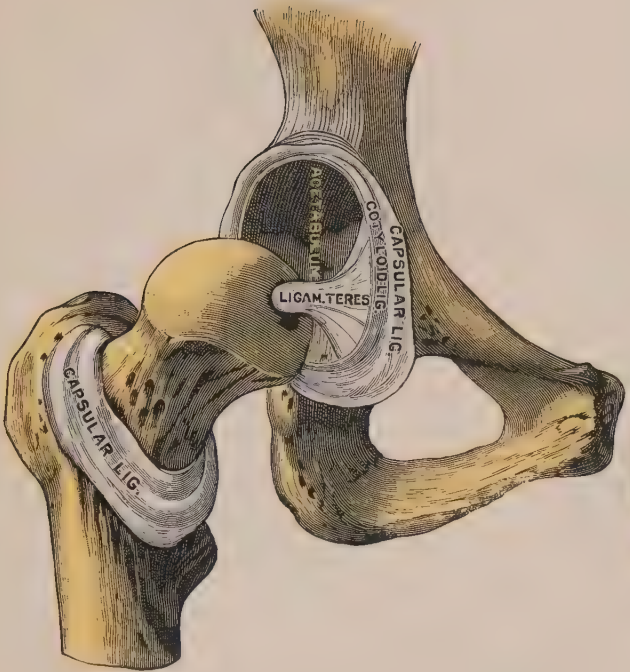
Elbow-joint, outer side. (Gerrish, after Testut.)



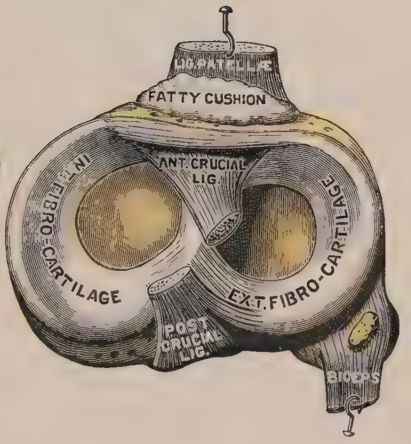
Ligaments of the carpus, front view. (Gerrish, after Testut.)



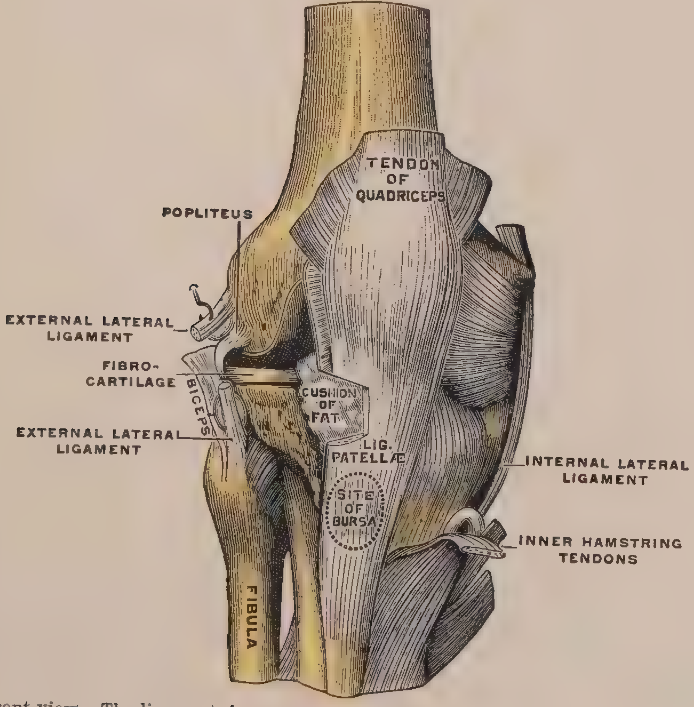
Hip-joint, front view. The cavity is distended artificially. (Gerrish, after Testut.)



Hip-joint, front view. The capsular ligament has been largely removed. (Gerrish, after Testut.)

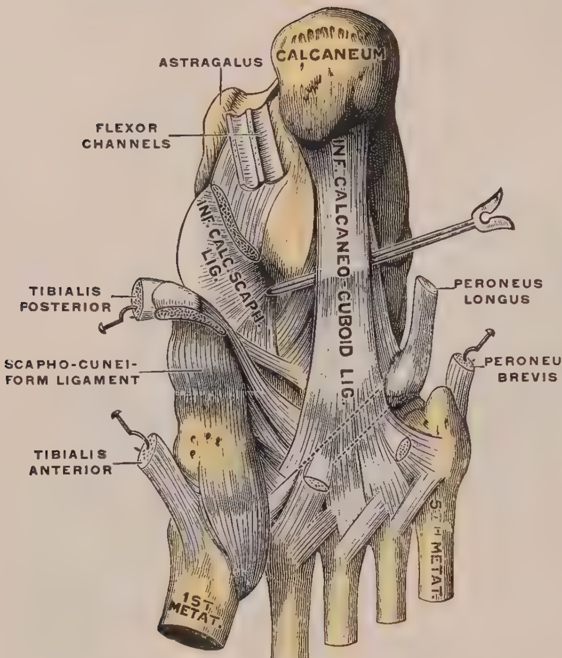


Semilunar cartilages of right knee-joint. (Gerrish, after Testut.)

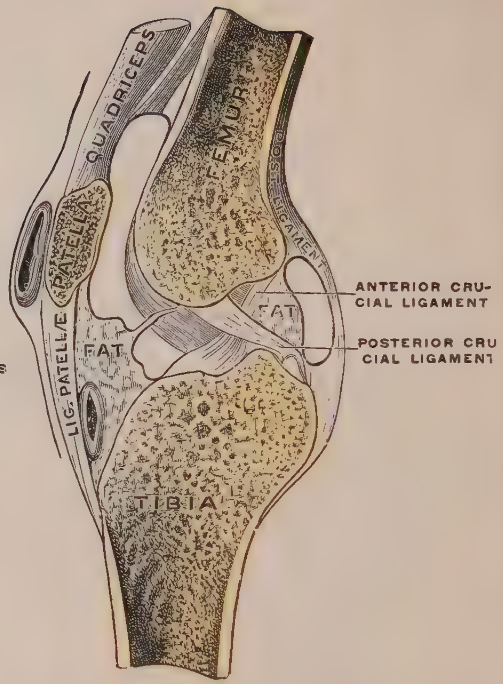


Knee-joint, front view. The ligaments have been in part removed on the right side. (Gerrish, after Testut.)

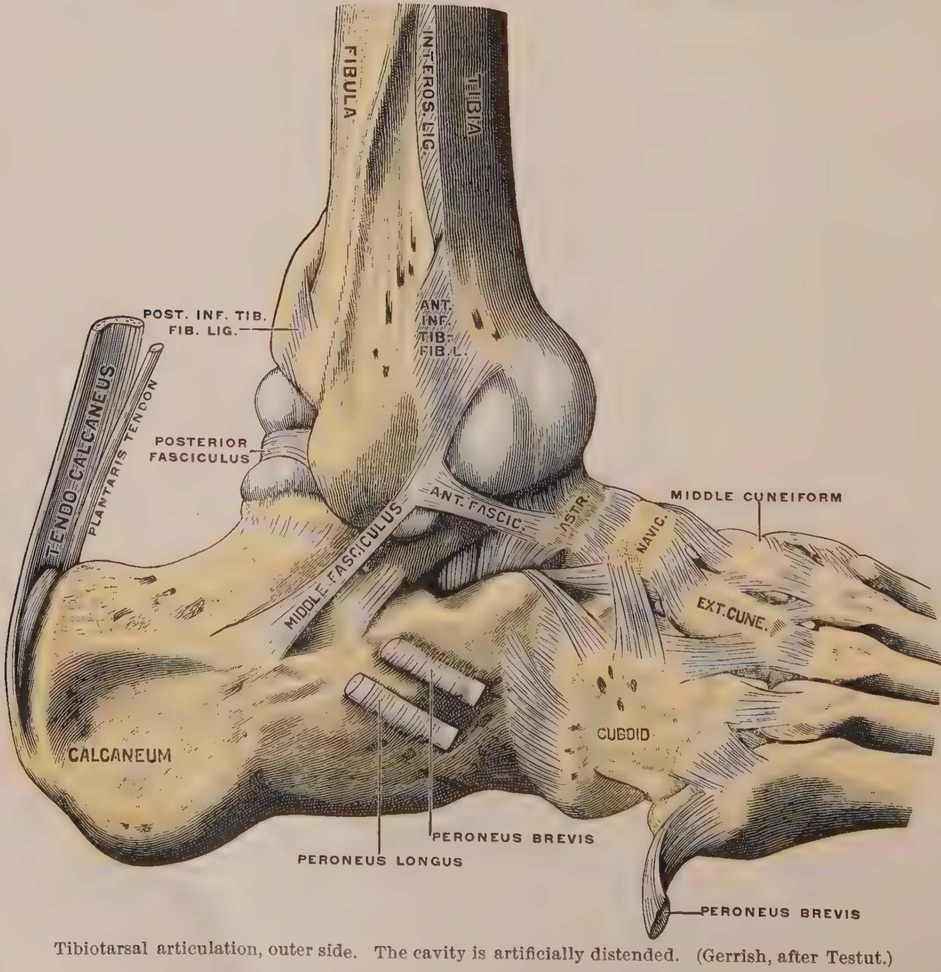
# LIGAMENTS



The plantar ligaments. (Gerrish, after Testut.)



Knee-joint, in sagittal section. (Gerrish, after Testut.)



Tibiotarsal articulation, outer side. The cavity is artificially distended. (Gerrish, after Testut.)

### TABLE OF THE PRINCIPAL LIGAMENTS.

| | |
|---|---|
| 1. *Of the Lower Jaw.* | Capsular ligament.<br>Suspensory ligament of the stylo-glossus.<br>Lateral ligament. |
| 2. *Connecting the Head with the first and second Vertebræ, and these with each other.* | Two capsular ligaments between atlas and head.<br>Circular ligament.<br>Two capsular between atlas and axis.<br>Perpendicular ligament.<br>Two lateral or moderator ligaments.<br>Transverse ligament and its appendices. |
| 3. *Of the other Vertebræ.* | Anterior common.<br>Crucial intervertebral.<br>Ligaments running from the edge of the bony arch and spinous process of one vertebra to that of the next.<br>Interspinous ligament.<br>Ligamentum nuchæ.<br>Intertransverse.<br>Capsular.<br>Posterior or internal common. |
| 4 *Of the Ribs, Sternum, etc.* | Capsular of the head of ribs.<br>Capsular of the tubercles.<br>Ligamenta transversaria interna.<br>Ligamenta transversaria externa.<br>Ligamenta cervicis costarum externa.<br>Ligamentous fibres running from the margins of the extremities of the ribs to the corresponding cartilages.<br>Radiated ligaments from cartilage of ribs to the sternum.<br>Capsular ligaments of the cartilages of the ribs.<br>Proper membrane of sternum.<br>L. of cartilago ensiformis.<br>Tendinous expansions over the intercostales, etc. |
| 5. *Of the Pelvis.* | Two transverse — one superior, one inferior.<br>Iliosacral.<br>Capsular of the sacroiliac synchondrosis.<br>Two sacroischiatic—posterior and anterior, with the superior and inferior appendices.<br>Longitudinal of os coccygis.<br>Inguinal ligament.<br>Capsular of symphysis pubis.<br>Ligament of foramen thyroideum. |
| 6. *Of the Clavicle.* | Radiated ligament.<br>Capsular.<br>Interclavicular.<br>Ligamentum rhomboideum.<br>Claviculo-acromial.<br>Conoid.<br>Trapezoid. |
| 7. *Of the Scapula.* | Anterior triangular.<br>Proper posterior. |
| 8. *Of the Shoulder-joint.* | Capsular. |
| 9. *Of the Elbow-joint.* | Capsular.<br>Brachio-ulnar.<br>Brachioradial.<br>Coronary of the radius.<br>Anterior and posterior accessory.<br>Intermuscular of the os humeri. |
| 10. *Carpal Extremity of Radius and Ulna, and between those bones.* | Interosseous ligament.<br>Oblique or chorda transversalis cubiti.<br>Capsular. |
| 11. *Between Forearm and Wrist.* | Capsular.<br>Two lateral.<br>Mucous. |
| 12. *Of the Carpus.* | Annular.<br>Capsular.<br>Short ligaments—oblique, transverse, capsular, and proper. |
| 13. *Between Carpal and Metacarpal Bones.* | Articular lateral.<br>Straight, perpendicular, etc. |
| 14. *Between the Extremities of the Metacarpal Bones.* | Interosseous, at the bases and heads—dorsal, lateral, palmar. |
| 15. *At the base of the Metacarpal Bone of the Thumb, and at the first joint of the Fingers.* | Capsular.<br>Lateral. |
| 16. *Of the first and second joints of the Thumb and second and third joints of the Fingers.* | Capsular.<br>Lateral. |
| 17. *Retaining the Tendons of the Muscles of the Hand and Fingers in situ.* | Annular.<br>Vaginal or flexor tendons.<br>Vaginal or crucial of the phalanges.<br>Accessory of the flexor tendons.<br>Posterior annular.<br>Vaginal of extensors.<br>Transverse of extensors. |

**Lig′ament, acces′sory.** One that strengthens or renders more perfect an articulation; the coracohumeral ligament is an accessory l. to the shoulder-joint. **Ad′ipose l.,** mucous ligament of the knee-joint. **A′lar l.,** odontoid ligaments; crescentic folds of synovial membrane at the knee-joint. **Al′len Burns's l.,** Hey's ligament. **An′nular l.,** see *Annular.* **Ante′rior l. of the blad′der,** a portion of the superior pelvic aponeurosis, which becomes attached to the front of the neck of the bladder. Many other ligaments in the body are designated as *anterior* from their position and relation to other parts. **Arc′uate l.,** ligamentum arcuatum of the diaphragm. **Arte′rial l.,** fibrous remains of the fetal ductus arteriosus. **Artic′ular l.,** capsular ligament; interspinous ligament. **Aryepiglot′tic l.,** arytenoepiglottic folds. **Atloax′oid l.,** see *Atloido-axoid ligaments.* **Auric′ular l.,** three ligaments supporting the concha of the ear. **L. of Bark′row,**

vertical fibres passing through a fatty pad in the upper part of the olecranon fossa. **L. of Ber′tin,** iliofemoral ligament. **L. of Big′elow,** part of the iliofemoral ligament. **Broad l. of the liv′er,** suspensory ligament of the liver. **B. l. of the lung,** see *Pleura*. **B. l. of the u′terus,** see *Uterus*. **L. of Burns,** see *Fascia lata*. **Cam′per′s l.,** perineal fascia. **Cap′sular l.,** see *Capsular*. **Car′bolized l.,** antiseptic ligature. **L. of Carcassone′,** the inferior layer of the middle perineal aponeurosis. **Car′pal l.,** ligaments uniting the carpal bones. **Cat′gut l.,** antiseptic ligature. **Caud′al l.,** fibrous bands connecting two lower coccygeal vertebræ with the skin above them. **Cen′tral l.,** terminal thread of the spinal cord. **Cer′vical l.,** see *Cervical*. **C. supraspi′nal l.,** see *Supraspinal*. **Check l.,** odontoid ligaments. **Cil′iary l.,** ligamentum pectinatum. **L. of Col′les,** triangular ligament; see *Gimbernat's ligament*. **Con′jugal l.,** l. uniting the heads of opposite ribs across the back of an intervertebral disk. **Co′noid l.,** see *Coracoclavicular* and *Conoid ligament*. **Coracoclavic′ular l.,** see *Coracoclavicular*. **Coracohu′meral l.,** l. connecting the coracoid process of the scapula with the region of the shoulder-joint and upper portion of the humerus. **Cor′acoid l.,** thin ligament extending from the coracoid process of the scapula to the internal edge of the suprascapular notch. **Cor′onary l. of liv′er,** a reflection formed by the peritoneum between the posterior margin of the liver and the lower surface of the diaphragm; see *Falx* and *Coronary*. **C. l. of ra′dio-ul′nar articula′tion,** ligaments uniting radius and ulna. **Costoxi′phoid l.,** xiphoid ligament. **Costocol′ic l.,** duplicature of the peritoneum connecting the diaphragm and the splenic flexure of the colon. **Costocor′acoid l.,** l. connecting the first rib with the coracoid process of the scapula. **Cot′yloid l.,** see *Cotyloid*. **Cru′cial l.,** see *Crucial*. **Cru′ciform l.,** see *Cruciform*. **Cru′ral l.,** Poupart's l. **Del′toid l.,** see *Deltoid*. **Den′tal l.,** see *Dental*. **Dentic′ulate l.,** ligamentum denticulatum. **Dorsolumbo-supraspi′nal l.,** see *Supraspinal*. **Doug′las's l.,** recto-uterine folds. **Fal′ciform l.,** see *Falciform*. **L. of Fallo′pius,** crural arch. **Fem′oral l.,** see *Fascia lata*. **Flood's l.,** reflection of fibres of the coracohumeral ligament through the capsular opening. **Fun′diform l.,** outer portion of the anterior annular ligament of the leg, forming a loop around the peroneus tertius and extensor longus digitorum muscles. **Gastrocol′ic l.,** greater omentum. **Gastrohepat′ic l.,** lesser omentum. **Gastroli′enal l.,** gastrosplenic ligament. **Gastropancreat′ic l.,** peritoneal fold connecting the pancreas and stomach. **Gastrophren′ic l.,** see *Gastrophrenic*. **Gastrosplen′ic l.,** peritoneal fold between the stomach and hilum of the spleen. **Gim′bernat's l.,** see *Gimbernat*. **Gle′noid l.,** see *Glenoid*. **Glenoideobra′chial l.,** three ligaments of the shoulder-joint are so called. **Glenoideohu′meral l.,** Flood's ligament. **Glos′soepiglot′tic l.,** see *Glossoepiglottic*. **Hepaticocol′ic l.,** peritoneal fold between the right lobe of the liver and ascending mesocolon. **Hey's l.,** falciform process of the fascia lata. **Hun′ter's l.,** round ligament of the uterus. **Iliofem′oral l.,** l. of Bertin, l. of Bigelow; firm, fibrous fasciculus descending from the anterior inferior spine of the ilium to strengthen the capsular ligament. **Iliolum′bar l.,** l. from the transverse process of the fifth lumbar vertebra to the crest of the ilium, sacroiliac articulation, and adjacent region. **Iliopectin′eal l.,** part of the pelvic fascia attached to the iliopectineal line and capsular ligament of the hip-joint. **Iliopu′bic l.,** Poupart's ligament. **Iliotrochanter′ic l.,** part of the iliofemoral ligament. **Infrapu′bian l.,** triangular ligament. **Infundibulopel′vic l.,** concave, rounded margin between the fimbriated extremity of the Fallopian tube and lower attachment of the broad ligament; see *Mesosalpinx*. **In′guinal l.,** Poupart's ligament. **Interclavic′ular l.,** see *Interclavicular ligament*. **Intercru′ral l.,** see *Ligamenta subflava*. **Interlob′ular l.,** processes of the pleura passing into the fissures of the lung. **Intermax′illary l.,** pterygomaxillary ligament. **Intermetatar′sal l.,** see *Intertarsal ligament*. **Interos′seous l.,** see *Interosseous ligament*. **Lat′eral l. of the liv′er,** fold of the peritoneum connecting the liver with the diaphragm. **Metacar′pal l.,** see *Metacarpal ligament*. **Mu′cous l.,** synovial fold of the knee-joint passing to point below the lower margin of the patella. **Ob′turator l.,** obturator membrane. **Odon′toid l.,** several ligaments are so named which are situated on the side of the odontoid process, and connect the atlas vertebra with the skull. **Orbic′ular l.,** annular ligament of the radius. **L. of o′vary,** see *Ovarium*. **Pal′mar infe′rior l.,** metacarpal ligament. **Pec′tinate l.,** ligamentum pectinatum. **Plan′tar l.,** see *Plantar ligament*. **Pou′part's l.,** crural arch. **Pterygomax′illary l.,** l. connecting the internal pterygoid plate of the sphenoid with the internal oblique line of the inferior maxillary bone. **Pu′bic l.,** posterior edge of the upper portion of the falciform process of the fascia lata attached to the crest of the pubes. **L. of Retz′ius,** fundiform ligament. **Rhom′boid l.,** costoclavicular ligament. **Round l.,** see *Round* and *Teres*. **Sacrosciat′ic l.,** see *Sacrosciatic*. **L. of Schlemm,** glenoideobrachial ligaments. **Spinogle′noid l.,** l. connecting the spine of the scapula with the glenoid cavity. **Splenophren′ic l.,** duplicature of peritoneum between the spleen and the diaphragm. **Spring l.,** l. connecting the os calcis and the scaphoid bone. **Stylohy′oid l.,** see *Stylohyoid*. **Stylomax′illary l.,** see *Stylomaxillary*. **Subova′rian l.** extends from ovary to the Fallopian tube. **Suspen′sory l.,** l. the use of which is to suspend any organ, as the crystalline lens, diaphragm, liver, penis, etc.; see *Suspensory*. **S. l. of blad′der,** see *Urachus*. **S. l. of lens,** ciliary zone. **S. l. of liv′er,** see *Suspensory*. **S. l. of tes′ticle,** gubernaculum testis. **S. l. of tooth,** odontoid ligaments. **S. vag′inal l.,** see *Ligamenta vaginalia*. **Su′tural l.,** thin layer of fibrous membrane interposed between the adjacent margins of the bones in immovable joints, as between the cranial and facial bones. **Tar′sal l.,** layer of fibrous membrane beneath the orbicularis muscle, seeming to support the eyelids and retain the tarsal cartilages in their position. **Thyrohy′oid l.,** see *Thyrohyoid*. **Transverse′ l.,** part of the cotyloid ligament of the hip-joint; coracoid ligament. **T. l. of at′las,** annular ligament; l. surrounding the odontoid process. **T. l. of knee,** l. from the anterior border of the external semilunar cartilage to the anterior extremity of the internal fibrocartilage. **L. of Treitz,** see *Treitz*. **Trap′ezoid l.,** see *Coracoclavicular* and *Trapezoid*. **Trian′gular l.,** see *Perineal fascia* and *Triangular*. **Uterosa′cral l.,** two strands of tissue from the sides of the sacrum to the lateral aspect of the supravaginal portion of the neck of the uterus. **Uteroves′ical l.,** fold of peritoneum between the uterus and bladder. **Ves′ico-umbil′ical l.,** urachus. **L. of Weit′brecht,** bundle of fibres on the anterior aspect of the interosseous ligament of the middle radiocubital articulation. **L. of Wins′low,** posterior ligament of the knee-joint; see *Genu*. **Y-shaped l. of Big′elow,** iliofemoral ligament. **L. of Zinn,** tendon of Zinn; tendon from which the inferior rectus muscle of the eye arises in common with the rectus internus and rectus externus.

**Ligamen′ta** (pl. of ligamentum). Ligaments. **L. ala′ria,** odontoid ligaments. **L. annula′ria,** annular ligaments. **L. ap′icum,** see *Interspinal ligaments*. **L. capitulo′rum dorsa′lia,** transverse dorsal bands between the fingers, between the ligamenta dorsalia. **L. c. vola′ria,** anterior accessory ligaments of the metacarpophalangeal articulations. **L. co′li,** see *Colon*. **L. interlobula′ria pulmo′num,** interlobular tissue. **L. intervertebra′lia,** intervertebral cartilages. **L. la′ta u′teri,** see *Uterus*. **L. Mauchar′ti,** odontoid ligaments. **L. rotun′da u′teri,** round ligaments of the uterus. **L. subfla′va,** ligaments interposed between the laminæ of the vertebræ from the axis to the sacrum. **L. suspenso′ria,** see *Suspensory*. **L. tar′sea la′ta,**

three ligaments extending from the edge of the orbit to the tarsal ligaments. **L. thy′roarytænoide′a,** thyroarytenoid ligaments. **L. vagina′lia,** annular ligaments. **L. voca′lia,** thyroarytenoid ligaments.

**Ligamentopex′is** (*pexis,* fixation). Operation for remedying uterine displacement by shortening the round ligaments.

**Ligamen′tous.** Having the character of or relating to a ligament. **L. cord of Weit′brecht,** ligament of Weitbrecht.

**Ligamen′tum.** Ligament. **L. arcua′tum exter′num,** thickened upper margin of the anterior lamella of the transversalis fascia. **L. a. inter′num,** the tendinous arch across the upper part of the psoas magnus muscle, on each side of the spine. **L. arterio′sum,** see *Arterial duct.* **L. bre′ve,** short, membranous structure behind each flexor tendon of the fingers near its insertion. **L. capsula′re,** capsular ligament. **L. cilia′re,** ciliary ligament. **L. co′li,** longitudinal band made up of longitudinal muscular fibres of the colon; there are three such ligaments. **L. col′icoliena′le,** process of peritoneum passing from basal surface of spleen downward to descending colon. **L. conoi′des,** conoid ligament. **L. coracoide′um,** see *Coracoid.* **L. crucia′tum cru′ris,** see *Ligamentum transversum cruris.* **L. cys′ticoduodena′le,** peritoneum from neck of gall-bladder to duodenum. **L. denta′tum** or **denticula′tum,** see *Denticulate.* **L. den′tis,** see *Dental.* **L. Fallo′pii,** crural arch. **L. gas′troliena′le,** duplicature of peritoneum from fundus of stomach to spleen; gastrosplenic omentum. **L. hepat′icocol′icum,** part of right edge of lower omentum passing to hepatic flexure of colon. **L. hep′atoduodena′le,** peritoneum passing from liver to duodenum. **L. hep′atogas′tricum,** peritoneum passing from liver to stomach. **L. hep′atorena′le,** thin layer of peritoneum passing beneath the gall-bladder to the right kidney. **L. iliopu′bicum,** crural arch. **L. infundib′ulo-ovar′icum,** see *Ovarium.* **L. infundib′ulopel′vicum,** see *Ovarium.* **L. inguina′le,** Poupart's l. **L. i′ridis,** ciliary ligament. **L. la′tum,** suspensory ligament of the liver. **L. la′tum pulmo′nis,** see *Pleura.* **L. li′enorena′le,** made up of a layer from the greater sac and another from the lesser sac of the peritoneum; it contains the splenic vessels. **L. membrana′ceum,** glossoepiglottic ligament. **L. mesenter′icomesocol′icum,** fold of peritoneum which on one side runs into the mesentery proper, and on the other into the mesocolon of the sigmoid flexure. **L. muco′sum,** triangular prolongation containing a few ligamentous fibres, and extending from the anterior part of the knee-joint below the patella to the front of the intercondyloid notch. **L. nu′chæ,** cervical ligament. **L. palpebra′le inter′num,** see *Orbicular muscles.* **L. pancreat′icoliena′le,** a short, inconstant band between the pancreas and spleen; a portion of the ligamentum lienorenale. **L. patel′læ,** see *Patella.* **L. pectina′tum,** festooned processes of the fibres of the iris, lying in an elastic, fibrous tissue continuous with the membrane of Demours. **L. phre′nocol′icum,** portion of peritoneum between the diaphragm and the splenic flexure of the colon; it supports the spleen. **L. phre′nogas′tricum,** peritoneum from diaphragm to cardia of stomach. **L. phre′noliena′le,** suspensory ligament formed by peritoneum between diaphragm and spleen. **L. pi′sohama′tum,** accessory ligament from the apex of pisiform bone to the hook of the unciform bone. **L. pi′sometacar′peum,** from pisiform bone to anterior surface of the base of the fifth, fourth, and third metacarpal bones. **L. posti′cum Winslow′ii,** see *Genu.* **L. Poupart′i,** crural arch. **L. pylo′ricum,** ligamentous band between muscular and serous coats of the stomach, and closely fused with the latter. **L. rotun′dum ova′rii,** see *Ovarium.* **Schlemm's l.,** glenoideobrachial ligament. **L. spira′le,** musculus cochlearis. **L. suspenso′rium den′tis,** see *Odontoid ligaments.* **L. suspenso′rium hep′atis,** suspensory ligament of the liver. **L. suspenso′rium len′tis,** ciliary zone. **L. suspenso′rium lie′nis,** l. phrenolienale. **L. suspenso′rium tes′tis,** gubernaculum testis. **L. suspenso′rium vesi′cæ,** see *Urachus.* **L. talocacane′um, L. talocrura′le, L. talofibula′re, L. talonavicula′re, L. talotibia′le,** accessory ligaments connecting the astragalus with the bones of the leg, with the os calcis, and with the scaphoid bone. **L. te′res,** round ligament of the hip-joint; a fibrous band extending from the coronoid process of the ulna to below the bicipital tubercle of the radius; round ligament of the uterus; round ligament of the liver, a fibrous cord resulting from atrophy of the umbilical vein. **L. transver′sum cru′ris,** the anterior annular ligament of the ankle includes an upper and lower band; the former, the *ligamentum transversum cruris;* the latter, the *ligamentum cruciatum cruris.* **L. trapezoi′des,** trapezoid ligament. **L. triangula′re,** triangular ligament. **L. u′rachi suspenso′rium,** see *Urachus.* **L. ventricula′re,** see *Ventricular.* **L. Vesa′lii,** crural arch.

**Li′gar's lines.** Imaginary line from posterior superior iliac spine to median point between the tuberosity of the ischium and the trochanter major. Also a line from the same point to intersection of lines between the points above mentioned. Surgically, they indicate the points at which the gluteal and sciatic arteries emerge.

**Li′gate.** To apply a ligature.

**Liga′tion.** Act of applying a ligature. When the artery alone is tied the ligation is said to be *immediate;* when surrounding parts are included, *mediate.* Ligation occasions obliteration or adhesion of the arterial parietes by cutting through the middle and internal coats; the adhesion being favored by the formation of a coagulum, which acts in some degree as a barrier against the impulse of the blood, and subsequently disappears by absorption. In aneurysm the ligature is applied between the enlargement and the heart, *proximal ligation,* or on the side farthest from the heart, *distal* ligation. **Anel's l.,** the ligature is applied close above the aneurysm, with no intervening branch. **Bras′dor's l.,** the ligature is applied just below the aneurysm. **Hun′ter's l.,** here the ligature is applied at some distance above the aneurysm, above the point of origin of an arterial branch. **War′drop's l.,** ligature is applied to the trunk a little below the first branch, or to the first branch a little below its origin from the trunk.

**Ligatu′ra.** Ligature; fascia. **L. glan′dis,** phimosis.

**Lig′ature.** This word has various acceptations: 1. The thread with which an artery or vein is tied to prevent or arrest hemorrhage. 2. Cord, thread, or wire used for removing a tumor by strangulation. 3. Bandage used for phlebotomy. *Ligature* is sometimes erroneously applied to the act of tying an artery or other vessel, *ligation* or *deligation* being the correct term. **Antisep′tic l.,** a ligature rendered aseptic by boiling or by soaking in carbolic acid or other antiseptic solution. **Asep′tic l.,** antiseptic l. **Dis′tal l.,** ligature applied to an artery beyond an aneurysm. **Double l.,** the application of two ligatures to a blood-vessel, division being made between them. **Elas′tic l.,** India-rubber ligature employed to strangulate foreign growths or for other purposes. **Intermit′tent l.,** application of a tourniquet above the seat of a poisoned wound to interrupt the current of blood, except when relaxed by the surgeon, so that as little as possible at a time of the poison shall pass into the circulation. **L. of i′ris,** iridesis. **Kangaroo′ l.,** see *Kangaroo.* **Lat′eral l.,** partial obliteration of the calibre of a vessel with a loosely applied ligature. **Provis′ional l.,** l. temporarily applied until the operation is completed. **Sol′uble l.,** animal ligature, as of catgut, that may be absorbed when introduced into the living tissues.

**Light.** A form of energy consisting of waves in the luminiferous ether emanating from luminous bodies, the action of which is to make objects from which they proceed visible. The rays of light pass through transparent bodies, which refract them;

they are arrested by opaque bodies, by which they are reflected at an angle equal to the angle of incidence. Light is the cause of color in bodies, being entirely reflected by white surfaces and absorbed by black; is decomposed in passing through a transparent prism into seven rays—red, orange, yellow, green, blue, indigo, and violet; see *Spectrum*. **L.-dif′ference**, the smallest variation in the intensity of light which can be perceived by the eye (abbreviated to L.-D.). **Fin′sen l.**, see *Finsen*. **L.-min′imum**, the smallest degree of light which the eye can appreciate (abbreviated to L.-M.). **L.-re′flex**, dilatation and contraction of the pupil under the influence of varying degrees of light. **L.-sense**, the ability to distinguish between the varying degrees of light. **L. ther′apy** or **treat′ment**, see *Finsen*.

**Light′ning.** A flash of light in the sky, due to a discharge of electricity; also the discharge itself. **L. blind′ness**, impairment of vision from momentary exposure to intense light, as of lightning. **L.** or **L.-like pains**, peculiar sharp lancinating pains, characteristic of locomotor ataxia.

**Lights.** Lungs.

**Lig′neous** (*lignum*, wood). Woody; having the character or appearance of wood.

**Lignifica′tion.** Amyloid degeneration.

**Lignin′.** Ligneous or woody fibre; the fibrous structure of vegetable substances; modification of cellulose.

**Lignosulphin′.** A product in the manufacture of sulphicellulose, containing free sulphurous acid, and combined with the volatile products of wood; used for purposes of house-disinfection. A similarly produced liquid substance is called *lignosulphite*.

**Lig′num.** Wood. **L. agal′lochi ve′ri**, Agallochum. **L. al′oës** (wood of aloes), agallochum. **L. aspal′athi**, agallochum. **L. benedic′tum**, guaiacum. **L. brasilia′num ru′brum**, hæmatoxylon campechianum. **L. cæru′leum**, hæmatoxylon campechianum. **L. campechen′se, campechia′num**, or **campes′canum**, hæmatoxylon campechianum. **L. colubri′num**, see *Strychnos*. **L. febrif′ugum**, quassia. **L. hæmatox′yli**, hæmatoxylon campechianum. **L. in′dicum**, guaiacum, hæmatoxylon campechianum. **L. infe′lix**, sambucus. **L. nephrit′icum**, Guilandina moringa (the wood). **L. pava′næ**, Croton tiglium. **L. quas′siæ**, see *Quassia*. **L. sanc′tum**, guaiacum. **L. sandali′num**, see *Pterocarpus santalinus*. **L. sap′pan**, hæmatoxylon campechianum. **L. serpen′tum**, Ophioxylum serpentinum. **L. vi′tæ**, guaiacum.

**Ligroin′.** Benzine.

**Lig′ula** or **Lin′gula** (small tongue). Clavicle. Epiglottis. Tænia or white matter in the fourth ventricle, from the lateral recess above nearly to the calamus scriptorius below. Measure containing three drachms and a scruple, or about half an ounce. Species of bandage or ligature.

**Ligus′ticum.** Lovage. **L. actæifo′lium**, white root; indigenous; ord. *Umbelliferæ*. Root is aromatic and carminative. **L. capilla′ceum**, Æthusa meum. **L. car′yi**, carum. **L. fœnic′ulum**, anethum. **L. levis′ticum**, lovage; ord. *Umbelliferæ;* stimulant, carminative, emmenagogue, etc. **L. me′um**, Æthusa meum. **L. phellan′drium**, Phellandrium aquaticum. **L. podagra′ria**, goutweed; British plant, used in gout. **L. sil′aüs**, Peucedanum silaüs.

**Ligustrin′.** Bitter principle from bark of Ligustrum vulgare.

**Ligus′trum ægypti′acum.** Lawsonia inermis. **L. vulga′re**, privet, prim, privy, prim-print; ord. *Oleaceæ;* shrub growing wild in Europe and the United States. Leaves are astringent, bitter, and antigalactic; flowers have been employed in decoction in sore throat and ulcerous stomatitis; berries are cathartic.

**Li′lac.** Syringa vulgaris.

**Lilacin′.** Syringin.

**Lilia′go** or **Lilias′trum.** Spiderwort; alexipharmic and carminative.

**Lil′ienthal's probe.** A bullet probe attached by wires to a copper and a zinc plate; the latter are placed on the tongue, and if the probe touches a bullet a current of electricity is established and a metallic taste is noticed.

**Lil′ium.** Lily. **L. can′didum**, white lily; ord. *Liliaceæ*. Infusion of the flowers in olive oil is emollient, and applied externally under the name of *lily oil*. Scales of the bulb roasted are employed as maturatives. **L. conval′lium**, Convallaria maialis.

**Li′ma denta′ria.** A dental file.

**Lima′cum cor′nua** (snails' horns). See *Lacrymal puncta*.

**Li′max.** Helix, snail; cochlea.

**Limb.** Member of body attached to the trunk; arm or leg, or any anatomical structure resembling it. **Pec′toral l.**, upper limb in man, anterior limb of other animals. **Pel′vic l.**, lower limb in man, posterior limb of other animals.

**Lim′bic** (*limbus*, a border). Bordering; on the edge. **L. lobe**, lobe formed by the gyrus fornicatus and anterior part of the gyrus uncinatus.

**Lim′bus.** A border. **L. acetab′uli**, cotyloid ligament. **L. alveola′ris**, alveolar border or process. **L. cer′ebri**, posterior portion of corpus callosum. **L. conjuncti′væ**, annulus conjunctivæ; arcus senilis. **L. cor′neæ**, see *Cornea*. **L. fos′sæ ova′lis**, see *Ovalis fossa*. **L. lam′inæ spira′lis**, lamina denticulata. **L. lu′teus**, macula lutea; see *Foramen centrale*. **L. poste′rior cor′poris stria′ti**, tænia semicircularis. **L. sphenoida′lis**, front edge of groove on sphenoid bone for optic commissure. **L. Syl′vii**, fissure of Sylvius.

**Lime.** Fruit like a small lemon, the juice of which is strongly acid; it is also antiscorbutic, etc.; the fruit of Citrus acida or C. limetta. Also calx, or calcium oxide, or calcium hydrate; see *Calcium*.

**Li′men** ("threshold") **na′si.** Line in nasal cavity forming a boundary between the part covered with cartilage and the cavity proper of the nose.

**Li′miç** (*limos*, hunger). Relating to hunger.

**Lim′inal** (*limen*, threshold). Within the limit, as of appreciation.

**Lim′itans.** Limiting; membrana limitans. **L. i′ridis**, epithelial portion of iris, formed originally from the secondary optic vesicle.

**Lim′itrophes** (*limes*, boundary, *trophe*, nourishment). Trisplanchnic nerve.

**Li′mo.** Lemon.

**Limocto′nia** (*limos*, hunger, *ktonos*, murder). Death from hunger.

**Limo′nis cor′tex** (Ph. U. S. and Br.). Outer portion of rind or pericarp of fresh fruit of Citrus limonum. Preparations made from it are: *O′lcum l.*, dose, ♏j–v (0.065–0.32). *Spir′itus l.*, dose, ʒss–j (2.0–4.0). **L. suc′cus** (Ph. U. S.), freshly expressed juice of ripe fruit of Citrus limonum. See *Acidum citricum*.

**Limo′nium.** Statice limonium. **L. ma′lum**, see *Citrus medica*.

**Limophthi′sis** (*limos*, hunger, *phthisis*, wasting). Wasting from privation of food.

**Limopsora**, le-mo-so′rah (*limos*, hunger, *psora*, itch). Cutaneous affection with itching, caused by fasting.

**Li′mos.** Hunger.

**Limo′sis.** Stomach disease; morbid appetite; bulimia. **L. a′vens**, insatiable hunger. **L. cardial′gia**, cardialgia; pyrosis. **L. dyspep′sia**, dyspepsia. **L. em′esis**, emesis. **L. ex′pers**, anorexia. **L. ex′pers protrac′ta**, fasting. **L. fla′tus**, flatulence. **L. helluo′num**, gluttony. **L. pi′ca**, malacia.

**Limother′apy.** Hunger-cure; treatment by fasting.

**Lim′pets′ eyes.** Artificial eyes so called from fancied resemblance to limpets, univalve shells found adhering to rocks.

**Limphoi′tos** (*limos*, hunger, *phoitos*, erratic insanity). Insanity from prolonged hunger.

**Linadin′.** Dark powder prepared from spleen of animals; contains a small amount of iron and iodine. Employed in malarial cachexia and enlarged spleen.

**Lin′agogue** (*linum,* thread, *ago,* to lead). Instrument with which to direct a suture or thread.

**Linalo′ol.** $C_{10}H_{18}O$. Liquid of pleasant odor derived from oils of linaloe, bergamot, and lavender.

**Lina′ria.** Antirhinum linaria.

**Linctua′rium** (*lingo,* to lick). Linctus.

**Linc′ture** or **Linc′tus.** Thick, syrupy preparation of medicine.

**Lind′en tree.** Tilia; T. americana.

**Line.** Extent in length. A linear measure, the twelfth part of an inch. Cord or thread. See also *Linea* and *Lineæ*. For lines not defined in the following list (Chéne's lines, Frommann's lines, Holden's lines, etc.) see the qualifying words. **Abdom′inal l.,** one of the lines on the wall of the abdomen, indicating muscle-tracings. **Alveolobas′ilar l.,** l. from basion to the alveolar point. **Alveolona′sal l.,** l. from nasal point to alveolar point. **Atro′pe l.,** l. normal to the plane of the rotary axes of the eye. **Auriculobregmat′ic l.,** l. from the auricular point to the bregma, in craniometry. **Ax′illary l.,** vertical line passing downward from the axilla of each side. **Base l.,** imaginary line from the infraorbital ridge through the centre of the external auditory meatus to the middle line of the occiput. **Basioalve′olar l.,** alveolobasilar line. **Basiobregmat′ic l.,** l. from the basion to the bregma. **Biauric′ular l.,** l. over the skull between the two auditory foramina. **Blue l.,** bluish line along the gums, indicating toxic action of lead. **Buc′cal l.,** ridge on the anterior border of the ramus of the lower jaw. **Cam′per's l.,** see *Camper, profile line of.* **Costoartic′ular l.,** imaginary line between the articulation of the sternum with the clavicle and the eleventh rib. **Costoclavic′ular l.,** imaginary median line between the border of the sternum and a line through the nipple. **Curved l.,** l. passing externally and anteriorly from the external occipital protuberance; also one of three lines on the ilium. **E′berth's l.,** irregular line indicating the points of meeting of the cells of cardiac muscle. **Embryon′ic l.,** primitive trace in the middle of the area germinativa. **Exter′nal oblique′ l.,** l. from the mental tubercle to the anterior margin of the ramus of the jaw. **Fa′cial l.,** Camper's line. **Ge′nal l.,** see *Jadelot.* **Gin′gival l.,** see *Gingivæ.* **Glu′teal l.,** one of the curved lines on the external or dorsal surface of the ilium. **Iliopectin′eal** or **innom′inate l.,** see *Iliopectinea.* **Incremen′tal l.,** l. in the dentinal structure believed to denote an increase of the laminar substance. **Jadelot's′ l.,** see *Jadelot.* **Interauric′ular l.,** l. between two auricular points. **Interju′gal l.,** l. between jugal points. **Interme′diate l.,** Krause's membrane. **Intertrochanter′ic l.,** one separates the neck of the femur from the shaft; the other is continuous with the posterior border of the trochanter. **Mam′mary l.,** l. between the two nipples. **Mam′millary l.,** vertical line through the middle of the nipple. **Monro's′ l.,** spino-umbilical line. **Mylohyoid′ean l.,** l. on the inner surface of the lower jaw. **Nasobas′ilar l.,** imaginary line through the basion and the nasal point. **Nélaton's′ l.,** diagnostic line for the posterior dislocation of the head of the femur, taken from the anterior superior spinous process of the ilium to the most prominent point of the tuber ischii; the trochanter in such dislocations is always above this line. **Nu′chal l.,** l. on the outside of the back part of the head. **Oculozygomat′ic l.,** see *Jadelot.* **Paraster′nal l.,** costoclavicular l. **Partu′rient l.,** axis of canal for the passage of child in childbirth. **Pectin′eal l.,** part of iliopectineal line formed by the pubic bone. **Poplit′eal l.,** l. on the shaft of the tibia giving origin to the soleus. **Prim′itive l.,** primitive streak. **Pro′file l.,** Camper's line. **Quad′rate l.,** see *Linea quadrati.* **Respi′ratory l.,** l. in a sphygmographic tracing joining the bases of the upward strokes. **Scap′ular l.,** l. downward in a vertical direction from the inferior angle of the scapula. **Semicir′cular l.,** inferior border of the inner aponeurotic layer of the internal oblique muscle of the abdomen. **Spi′noumbil′ical l.,** a line drawn from the anterior superior spine of the ilium to the umbilicus. **Ster′nal l.,** middle line of the sternum. **Sternomas′toid l.,** imaginary line between the mastoid process and a point between the two heads of the sternomastoid muscle. **Supraor′bital l.,** l. across the frontal bone above the external angular process. **Tem′poral l.,** one of two lines on the parietal bone, to which are attached the temporal fascia and the temporal muscle. **Trap′ezoid l.,** line along which the trapezoid ligament is attached to the clavicle. **Vir′chow's l.,** l. from the lambda to the root of the nose. **Vis′ual l.,** visual axis.

**Lin′ea.** Line. **L. al′ba,** tendinous, strong, and highly resisting cord, extending from the ensiform cartilage of the sternum to the symphysis pubis, with the umbilicus near its middle; formed by the decussation of the aponeurosis of the abdominal muscles. Its use is to limit the movement of the chest backward, to prevent it from separating too far from the pelvis, and to furnish a fixed point for the abdominal muscles in their contraction. Also the anterior peduncle of the pineal gland. **L. as′pera,** a rough ridge at the posterior surface of the femur. **L. candid′ula abdom′inis,** l. alba. **L. centra′lis,** l. alba. **L. Douglas′ii,** semilunar fold of Douglas, a lunated edge in the posterior wall of the sheath of the rectus abdominis muscle. **L. em′inens,** ridge on the posterior surface of the patella; spine from the top of the pyramid of the cerebellum; ridges on the cricoid cartilage, on the hyoid bone, and on the scapula. **L. fronta′lis,** temporal crest. **L. fus′ca,** brown line; deposit of brown pigment, generally in the last months of pregnancy, on the linea alba from the umbilicus down toward the symphysis pubis. **L. iliopectine′a,** see *Iliopectineal.* **L. innomina′ta,** iliopectineal line. **L. interme′dia,** Krause's membrane. **L. poplite′a,** oblique line of the tibia. **L. primiti′va,** primitive streak. **L. quadra′ti,** well-marked eminence on the back part of the shaft of the femur, giving attachment to the quadratus femoris muscle. **L. Spige′lii,** commencement of the anterior aponeurosis and conjoined tendon. **L. splen′dens,** longitudinal fibrous band extending along the middle line of the pia mater of the cord on its anterior surface. **L. tempora′lis,** line on the temporal bone forming a continuation of the posterior root of the zygoma.

**Lin′eæ** (pl. of linea) **albican′tes.** White lines left where the skin, as of the abdomen or mammæ, has been greatly stretched. **L. arcua′tæ,** curved lines. **L. atroph′icæ,** linear atrophy of the skin. **L. crucia′tæ,** four ridges on the internal surface of the occipital bone. **L. scalariform′es,** dark lines between the muscular cells of the heart, visible after staining with silver nitrate. **L. semicircula′res exter′næ,** curved lines. **L. semiluna′res,** lines bounding the outer margin of the recti muscles of abdomen, formed by the union of the abdominal tendons; the lines crossing these muscles are called lineæ transversæ. **L. semiluna′res Spige′lii,** semilunar notched inner edge of the fleshy portion of the transversalis abdominis, at the point where the muscular fibres connect with the tendinous or aponeurotic fibres, serving for the insertion of the muscle. **L. transver′sæ,** see *L. semilunares* and *Processus* or *Fasciculi teretes.*

**Lin′eament** (*linea,* line). Delicate trait observed on the countenance, constituting its special character, enabling one to preserve its image in the mind and to compare its resemblance to others; feature. First traces of organization in the embryo of man and animals.

**Lin′ear** or **Lin′eal** (*linea,* line). Relating to a line or having the direction of or resemblance to a line. **L. at′rophy,** see *Atrophy.* **L. crush′ing,** operation performed with an écraseur. **L. extrac′tion,** an operation for the removal of cataract; see *Cataract.* **L. frac′ture,** a fracture in a straight line, the fragments being scarcely separated.

**Line′ola** (dim. of linea). Small line.

**Line′olæ mammarum.** White lines on the breasts.

**Ling′ism** or **Ling's sys′tem** (after Ling, of Sweden, the proposer). Kinesipathy; Swedish movements.

**Lin′gua.** Tongue. **L. a′vis,** see *Fraxinus excelsior.* **L. bo′vis,** Anchusa officinalis. **L. cani′na,** cynoglossum. **L. cervi′na,** Asplenium scolopendrium. **L. exig′ua,** epiglottis. **L. fræna′ta,** tongue-tie, ankyloglossa. **L. geograph′ica,** geographical tongue; map-like appearance of the tongue from circumscribed desquamation of the epithelium, there being red, smooth patches denuded of epithelium, bounded by white margins. **L. propen′dula,** swollen or hypertrophied tongue. **L. serpenta′ria,** Ophioglossum vulgatum. **L. vit′uli,** swelling or hypertrophy of the tongue.

**Linguaden′tal.** Relating to the tongue and teeth.

**Lin′gual.** Relating to the tongue. **L. ar′tery** arises from the external carotid; after several tortuosities it reaches the base of the tongue, becomes horizontal, and under the name *ranine* advances to the tip, to anastomose with its fellow. **L. bone,** hyoid bone. **L. cav′ity,** the lower portion of the buccal cavity filled by the tongue. **L. glands,** intralingual glands. Conglomerate mucous glands collected about the posterior part of the dorsum of the tongue, into which the ducts of many of them open; others are found at the borders of the tongue, and a small group is on the under surface, called *glands of Bauhin* and *g. of Nuhn,* from which several ducts open separately on the mucous membrane. **L. mus′cle,** small, long fasciculus of fibres hidden beneath the sides of the tongue, between the hyloglossus and styloglossus muscles on the outside and the genioglossus within. This muscle passes from the base to the tip of the tongue; it shortens the tongue, depresses its point, and can carry it to the right or left side. **L. nerve,** name given to the ninth pair or hypoglossus; it is generally applied to a branch given off from the inferior maxillary, or third branch of the fifth pair. Some of the filaments from it are distributed to the tongue, and are said to have been traced as far as the papillæ; hence it has been regarded as the gustatory nerve. It is doubtless the nerve of general sensibility to the tongue. **L. ton′sil,** collection of lymphadenoid tissue at the base of the tongue. **L. vein** follows nearly the same distribution as the artery, and opens into the internal jugular vein.

**Lingua′lis.** Lingual; lingual muscle.

**Linguet′ta lamino′sa** (dim. of lingua). Lingula laminosa.

**Lin′guiform.** Shaped like a tongue.

**Lin′gula** (dim. of lingua). Spiculum of bone projecting backward from the posterior extremity of the carotid groove on the outer side of the internal carotid artery. See *Ligula.* **L. auric′ulæ,** small cartilaginous prominence at the upper part of the lobe of the ear. **L. cerebel′li,** l. laminosa. **L. fis′tulæ,** epiglottis. **L. lamino′sa,** thin, transversely grooved lobule of gray substance derived from the anterior border of the cerebellum, intimately blended with the valve of Vieussens. A depression in the cerebellum in front of the lingula is called *recessus.* **L. mandib′ulæ,** small, odontoid process on the front margin of the inferior dental foramen. **L. sphenoida′lis,** process of the body of the sphenoid bone next to the groove for the carotid artery. **L. of Wris′berg,** nerve-fibres connecting the motor and sensory roots of the fifth pair of nerves.

**Linguoden′tal.** Relating to the tongue and teeth.

**Lin′iment** (*lino,* to anoint). A preparation, usually containing oil or lard, employed externally in the form of friction. See *Linimentum.* **A. B. C. l.,** compound aconite l., so called after the initials of its ingredients—aconite, belladonna, and chloroform. **An′odyne l.,** linimentum opii. **Kent′ish l.,** linimentum terebinthinæ. **Saint John Long's l,.** counterirritant liniment used by a celebrated empiric at the commencement of the second quarter of the nineteenth century; said to have consisted of oil of turpentine and dilute acetic acid held in suspension by yolk of egg. **Vol′atile l.,** linimentum ammoniæ.

**Linimen′tum.** The official (Ph. U. S. and Br.) name for liniment. The following are the official linimenta: *L. aconi′ti* (Br.), aconite root 20, camphor 1, rectified spirit 30. *L. ammo′niæ* (U. S. and Br), volatile liniment, ammonia water 35, alcohol 5, oil 60. *L. belladon′næ* (U. S. and Br.), fluid extract of belladonna root 95, camphor 5. *L. cal′cis* (U. S. and Br.), Carron oil, lime liniment, equal parts of lime-water and linseed oil. *L. cam′phoræ* (U. S. and Br.), camphor 20, oil 80. *L. c. ammonia′tum* (Br.) contains one-half as much camphor as the preceding, but with ammonia added. *L. chloroform′i* (U. S. and Br.), chloroform 30, soap liniment 70. *L. hydrar′gyri* (Br.), strong solution of ammonia 10, camphor liniment 35; mercurial ointment 30, camphor liniment 15, the two liquids being then mixed. *L. o′pii* (Br.), anodyne liniment, tincture of opium and soap liniment, equal parts. *L. sapo′nis* (U. S. and Br.), soap liniment, soap 7, camphor 4.5, oil of rosemary 1, alcohol 75, water to make 100. *L. s. mol′lis* (U. S.), soft soap liniment, formerly tincture of green soap; soft soap 65, oil of lavender 2, alcohol 30, water to make 100. *L. sina′pis* (Br.), mustard liniment, camphor 3, volatile oil of mustard 2, castor oil 7, alcohol (90 per cent.) 43. *L. s. compos′itum* (U. S.), volatile oil of mustard 3, fluid extract of mezereum 20, camphor 6, castor oil 15, alcohol to make 100. *L. terebin′thinæ* (U. S.), turpentine liniment, resin cerate 65, oil of turpentine 35. *L. t.* (Br.), oil of turpentine 26, camphor 2, soft soap 3, distilled water to make 40. *L. t. acet′icum* (Br.), oil of turpentine 4, glacial acetic acid 1, camphor liniment 4.

**Linin′.** Drastic principle derived from Linum catharticum.

**Lini′tion.** Application of liniment.

**Lini′tis** (*linon,* web made from linen or flax). Term suggested by the late Dr. Brinton for inflammation of the filamentous network of areolar tissue ensheathing the vessels of the stomach. When characterized by purulent infiltration or by interstitial abscess it is called *suppurative linitis* or *phlegmonous gastritis.* When linitis is attended with hyperplasia of the connective tissue or hypertrophy of the muscular structure it is called *plastic linitis.*

**Linnæ′a** or **L. borea′lis** (after Linnæus). Ord. *Caprifoliaceæ.* This plant has a bitter, subastringent taste, and is used in fomentation in rheumatic pains. An infusion in milk is used in Switzerland for sciatica.

**Linole′ic acid.** $C_{16}H_{28}O_4$. Glyceride from linseed oil.

**Linolein′.** Linoleic acid.

**Lino′leum.** Name given to preparations of flaxseed oil, having physical properties adapted to some purposes for which caoutchouc is used.

**Linosper′mum.** Linseed.

**Lin′seed.** See *Linum usitatissimum.*

**Lint.** Linteum.

**Lin′teum** (*linum,* flax, linen). Linen cloth. Charpie. Soft, flocculent substance, made by scraping old linen cloth or by unravelling old linen cut into small pieces, formerly much employed in surgery as a dressing to wounds, ulcers, etc., either simply or covered with ointment. *Patent lint* or *sheet lint* is generally prepared out of cloth manufactured for the purpose, and is therefore more uniform in shape and consistence.

**Li′num.** The official (Ph. U. S.) name of flaxseed or linseed, from L. usitatissimum. **L. aquili′num,** plant growing in Chile, has antiseptic and stomachic properties. **L. arven′se,** L. usitatissimum. **L. cathart′icum,** fairy lint, dwarf flax, purging flax, mill mountain, ord. *Linaceæ.* This plant is possessed of cathartic properties, and has a bitterish, disagreeable taste. **L. contu′sum** (Ph. Br.), linseed meal. **L.**

**cru′dum,** see *Apolinosis*. **L. min′imum,** L. catharticum. **L. usitatis′simum,** common flax. The seeds, *linum* (Ph. U. S.), are inodorous and almost tasteless, yielding mucilage to warm water, and oil by expression. They are demulcent and emollient. Linseed when ground into powder, *linum contusum* (Ph. Br.), flaxseed meal, forms a good emollient poultice, the powder being stirred into boiling water. The oil, *oleum lini,* flaxseed or linseed oil, is emollient and demulcent.

**Lio-.** For words beginning thus, see *Leio-*.

**Li′on′s foot.** Nabalus albus, prenanthes. **L.′s tail,** leonurus.

**Liouville′s′ ic′terus** or **jaun′dice.** Icterus neonatorum.

**Lip.** One of two folds composed of different muscular fasciculi, nerves, and vessels, covered by the skin and mucous membrane of the mouth, the anterior aperture of which they circumscribe. They are inservient to mastication, pronunciation, etc., and are distinguished into *upper* and *lower*. They are placed in front of each jaw, forming between them the anterior aperture of the mouth. They unite at each side, forming the *angles* or *commissures* of the mouth, *chalini*. Their free edge is covered with a mucous membrane of a more or less livid red. They receive their arteries from the external carotid. Their veins open into the two jugulars. Their lymphatic vessels descend into the ganglions situated beneath the chin. Their nerves are derived from the infraorbitar, mental, and facial. See *Labium* and *Labrum*. Also one of the folds of tissue forming the external genital organs of the female: 1. *Labia pudendi,* two membranous folds, thicker above than below, limiting the vulva laterally and extending from the inferior part of the mons Veneris to the perineum. They unite anteriorly and posteriorly, forming commissures, the posterior of which is called *fourchette*. Their outer surface is convex, formed of skin and covered with hair; the inner surface is white and covered by a mucous membrane continuous with that lining the other parts of the vulva. The space between the skin and mucous membrane is filled with a fatty tissue and fibrous bands, fibres of the constrictor vaginæ muscle, vessels, and nerves. 2. *Labia pudendi minora,* see *Nymphæ*. Any anatomical structure resembling a lip. We speak also of the lips of a wound, ulcer, etc., when alluding to the edges of these solutions of continuity. **Le′opold′s l.,** form of erectile labial angioma with which the emperor Leopold of Germany was affected. It was pendulous, and it is said that whenever he was in a passion it would swell like a turkey-cock′s comb, so as to hang down on his chin. **L. read′ing,** system of instruction of the deaf, by which they are taught to understand spoken words by observing the lips of the speaker. **L. talk′ing,** system of instruction by which deaf-mutes are taught to talk.

**Lipacidæ′mia** (*lipos,* fat, *acidus,* acid, *haima,* blood). Presence of fatty acids in the blood.

**Lipacidu′ria.** Excess of volatile, fatty acid in urine.

**Lipæ′mia.** Presence of fat in the blood.

**Lipanine′.** A mixture of olive oil and oleic acid, suggested as a substitute for cod-liver oil.

**Lip′ara.** Plasters containing much oil or fat.

**Lipa′ria.** Polysarcia.

**Lip′arocele** (*liparos,* fat, *kele,* tumor). Fatty tumor, *lipoma;* or fatty tumor of the scrotum, *hernia pinguedinosa scroti*.

**Lip′aroid.** Fatty.

**Liparom′phalus** (*liparos,* fat, *omphalos,* navel). Fatty tumor situated at the navel; umbilical epiplocele.

**Liparoscir′rhus.** Fatty scirrhous tumor.

**Liparotrichia,** lip-ar-o-trik′e-ah (*liparos,* fat, *thrix,* hair). Oiliness of the hair; seborrhœa capillitii.

**Lip′arous.** Fatty.

**Lipas′ma.** Polysarcia. Unguent.

**Lip′ocele** (*lipos,* fat, *kele,* tumor). Fatty tumor.

**Lip′ochrin** (*lipos,* fat). Pigment in fat-globules in the pigment epithelium of the retina.

**Lip′ochrome** (*lipos,* fat, *chroma,* color). Pigmentary matter of fats and adipous tissues. See *Lutein*.

**Lipoder′mia.** Leipodermia.

**Lipofibro′ma** (*lipos,* fat). Fibrous form of lipoma; lipoma durum.

**Lipogenin′.** Mixture of fatty acids; employed as a base for ointments.

**Lipogenous,** lip-oj′en-us (*lipos,* fat, *gennao,* to generate). Relating or pertaining to fatty formation; developed in fat, as lipogenous angioma.

**Lipo′ma** (*lipos,* fat). Fatty tumor of an encysted or other character. When it contains cysts it is called *cystic lipoma*. **L. arbores′cens,** condition peculiar to serous and synovial membranes, the villous and polypoid appendages of which have undergone hyperplastic development. **L. colloi′des,** myxolipoma. **Cys′tic l.,** see *Lipoma*. **L. du′rum,** l. with hypertrophied fibrous substance. **Fi′brous l.,** a lipomatous tumor whose lobules are separated from one another by bands of fibrous tissue. **Her′nial l.,** fatty hernial tumor, as of the scrotum. **L. myxomato′des,** myxosarcoma; tumor containing adipose and mucous tissues. **Næ′void l.** or **L. telangiecto′des,** l. with increased vascular supply, like nævus.

**Lipo′matoid.** Lipomatous.

**Lipomato′sis.** Tendency or predisposition to the growth of lipomatous tumors. Fatty degeneration. **Myoatroph′ic l.,** pseudohypertrophic muscular paralysis. **L. universa′lis,** obesity.

**Lipo′matous.** Having the nature of lipoma. **L. mus′cular at′rophy,** pseudohypertrophic muscular paralysis.

**Lipome′ria.** Leipomeria.

**Lipom′phalus** (*lipos,* fat *omphalos,* navel). A fatty tumor at the umbilicus.

**Lipomyxo′ma.** Tumor containing adpiose and mucous tissues.

**Liporhodin′** (*rhodon,* rose). A lipochrome of a red color.

**Liposarco′ma.** Tumor with the blended characteristics of lipoma and scaroma.

**Liposar′cous.** Leiposarcous.

**Lipo′sis.** Lipomatosis. See *Polysarcia*.

**Lipospongo′sis** (*leipo, spongos,* sponge). Development of fatty and spongy growth.

**Lipoxan′thin** (*xanthos,* yellow). Lipochrome of a yellow color.

**Lipox′enous.** Leipoxenous.

**Lip′pa.** Lippitudo.

**Lip′pia grave′olens.** Shrub of Texas and Mexico; demulcent and emmenagogue. Same properties belong to **L. mexica′na,** which has the same habitat. **L. nodiflo′ra,** creeping vervain of E. and W. Indies, United States, etc.; leaves are used in dyspepsia and diarrhœa.

**Lippitu′do.** Chronic conjunctivitis, bleareye. Copious secretion of the sebaceous humor of the eyelids, rendering them gummy; chronic inflammation of the tarsal margins, the eyelids being red, tumefied, and painful. Blepharadenitis. **L. angula′ris,** blepharadenitis of the angle of the eye. **L. neonato′rum,** ophthalmia neonatorum. **L. prurigino′sa,** psorophthalmia.

**Lip′pus.** One affected with bleareye.

**Lipu′ria** (*lipos,* fat, *ouron,* urine). Fatty condition of the urine.

**Liquefa′cient** (*liqueo,* to be liquid, *facio,* to make). Turning solid into liquid; term applied to any agent which seems to have the power of liquefying solid depositions, as mercury, iodine, etc.

**Liquefac′tion.** Transformation of a solid substance into a liquid, especially metals and fatty bodies. See *Fusion*.

**Liquefac′tive degenera′tion.** Form of degeneration seen in the simple softening of certain organs, as the brain, and the liquefaction of inflammatory products in the suppurative process.

**Liqueur′.** Compound of water, alcohol, and sugar flavored with some aromatic extract. A cordial. Any alcoholic preparation flavored and made acceptable to the taste, as absinthe, kümmel, maraschino, curaçao, etc.

**Liq′uid.** The state between solid and gaseous. Flowing readily; a substance having this property in its natural state. **L. air,** see *Air.* **L. ex′tract,** fluid extract. **L. glass,** potassium silicate. **Haver′sian l.,** synovia.

**Liquidam′bar asplenifo′lia.** Comptonia asplenifolia. **L. officina′lis,** see *Styrax.* **Orien′tal l.,** liquid storax. **L. peregri′na,** Comptonia asplenifolia. **L. styracif′lua,** sweet gum, white gum, ord. *Balsamineæ.* Name of the tree affording liquidambar and storax liquida, styrax liquida, or liquid storax. The bark of the tree is used in diarrhœa and dysentery. Liquidambar is a resinous juice, at first of about the consistence of turpentine, by age hardening in a solid, brittle mass; it is obtained from this plant by boiling; it is used occasionally as a stomachic in the form of plaster.

**Liquiri′tia.** Glycyrrhiza.

**Li′quor** (*liqueo,* to be liquid). Name given in the Ph. U. S. to an aqueous solution of a solid salt or a hydrate; in the Ph. Br. also to aqueous solutions of gases and to alcoholic solutions of fixed substances. See also *L. concentratus.* In anatomy it is given to many of the fluids of the body, as l. Cotunnii, l. sanguinis, etc. In common parlance (pron. lik′or) it signifies one of the stronger alcoholic beverages, as whiskey, rum, brandy, or gin. The following are the liquors official in the pharmacopœias, also some of the more important non-official liquors, and the body fluids bearing this name: **L. ac′idi arseno′si** (U. S.), contains 5 parts of diluted hydrochloric acid and 1 part of arsenous acid; dose, ♏i–v (0.065–0.32). **L. a. chro′mici** (Br.), of the strength of 1 to 3 of water. **L. ammo′niæ** (Br.), same as aqua ammoniæ of the Ph. U. S. **L. ammo′nii aceta′tis** (U. S. and Br.), spiritus Mindereri, contains about 7 per cent. of ammonium acetate; dose, ʒj–℥j (4.0–32.0). **L. a. citra′tis** (Br.), prepared by neutralizing citric acid, 1 part, with ammonium carbonate in distilled water to make 8 parts; dose, ʒij–vj (8.0–24.0). **L. am′nii,** liquor of the amnion; fluid exhaled by the amnois and enveloping the fœtus during the whole period of uterogestation. It is often simply called *the waters.* In some women the quantity does not exceed five or six ounces; in others it amounts to pints. It is limpid, yellowish, or whitish, exhales a faint smell, and has a slightly saline taste. It facilitates the dilatation of the uterus, and aids delivery by acting as a soft wedge inclosed in its membranes, *bag of waters.* **False l. a.,** fluid contained between the amnion and chorion in the early periods of fetal existence. **L. andrograph′idis concentra′tus** (Br.), an alcoholic extract, 1 in 2, of andrographis paniculata, creoat or kariyat; a tonic resembling chiretta; dose, ʒss–j (2.0–4.0). **L. antisep′ticus** (Volkmann), 1 part of thymol in a mixture of 10 parts of alcohol, 200 parts of glycerin, and 100 parts of water. **L. aristolo′chiæ concentra′tus** (Br.), a concentrated solution, 1 in 2, of aristolochia indica; a tonic stimulant resembling serpentaria, which has also been used for snake-bites; dose, ʒss–ij (2.0–8.0). **L. arsenica′lis** (Br.), same as l. potassii arsenitis. **L. ar′seni et hydrar′gyri iod′idi** (U. S., **L. arsen′ii,** etc., Br.), Donovan's solution, contains arsenic iodide and mercuric iodide, each 1 per cent.; dose, ♏j–iij (0.065–0.2). **L. a. bro′midi** or **L. arsen′ici broma′tus** (first name American, second British—official in neither pharmacopœia), Clemen's solution, contains arsenic bromide, 1 per cent.; dose, ♏j–v (0.065–0.32). **L. arsen′ici hydrochlora′tus** (Br.), contains arsenous anhydride, 1 per cent., is three times the strength of the old De Valangin's mineral solvent; dose, ♏ij–viij (0.13–0.5). **L. atropi′næ sulpha′tis** (Br.), a 1 per cent. solution of atropine sulphate; dose, ♏ss–j (0.032–0.065). **L. Bellos′tii,** liquor hydrargyri nitratis, or l. h. n. acidus. **L. berberi′dis concentra′tus** (Br.), a concentrated solution, 1 in 2, of berberis aristata, rusot; tonic; dose, ʒss–j (2.0–4.0). **L. bismu′thi** or **L. b. et ammo′nii citra′tis** (Br.), contains 5 grains of citrate of bismuth to the drachm; dose, ʒss–j (2.0–4.0). **L. cal′cis** (U. S. and Br.), lime-water, contains 17 per cent. calcium hydrate; dose, ʒj–℥j (4.0–32.0). **L. c. sacchara′tus** (Br.), saccharated solution of lime, contains calcium hydroxide 1, sugar 2, distilled water 20; dose, ♏xx–ʒj (1.3–4.0). **L. calum′bæ concentra′tus** (Br.), strength of 1 in 2; dose, ʒss–j (2.0–4.0). **L. caout′chouc** (Br.), India rubber 1, benzol 10, carbon bisulphide 10; used for making charta sinapis or mustard leaves. **L. carbo′nis deter′gens,** an alcoholic solution of coal-tar, similar to l. picis carbonis. **L. chira′tæ concentra′tus** (Br.), strength of 1 to 2; dose, ʒss–j (2.0–4.0). **L. chlo′ri** (Br.), chlorine-water, aqua chlori of the Ph. U. S., contains about 0.4 per cent. of chlorine; dose, ♏x–xx (0.65–1.3), also used externally as a disinfectant. **L. concentra′tus,** concentrated solution, a class of official preparations in the Ph. Br. intended to replace the commercial concentrated infusions and decoctions; they are of the uniform strength of 1 in 2, except quassia, which is 1 in 10; the dose is ʒss–j (2.0–4.0); when diluted with nine volumes of water they are equivalent to the ordinary infusions and decoctions; alcohol is added to preserve them, in sufficient amount to make the menstruum about 20 per cent. alcohol. **L. coscin′ii concentra′tus** (Br.), from coscinium fenestratum, in the strength of 1 in 2; tonic, similar to calumba; dose, ʒss–j (2.0–4.0). **L. Cotun′nii,** fluid surrounding the membranous labyrinth; see *Cotunnius.* **L. cuspar′iæ concentra′tus,** strength 1 in 2; dose, ʒss–j (2.0–4.0). **L. enter′icus,** intestinal juice. **L. epispas′ticus** (Br.), blistering liquid, made of cantharides in powder 1, percolated with acetic ether to make 2. **L. e. mylab′ridis** (Br.), made like the preceding, with the substitution of the powdered beetle, Milabris phalerata. **L. eth′yl nitri′tis** (Br.), containing ethyl nitrite 3, glycerin 5, and absolute alcohol 95; dose, ♏xx–ʒj (1.3–4.0). **L. exci′tans,** spiritus ammoniæ succinatus, eau de luce, an obsolete preparation. **L. fer′ri aceta′tis** (U. S. and Br.), contains 31 per cent. ferric acetate; dose, ♏v–xv (0.32–1.0). **L. f. chlor′idi** (U. S.), contains 31 per cent. ferric chloride; dose, ♏v–xv (0.32–1.0). **L. f. citra′tis** (U. S.), contains between 7 and 8 per cent. of metallic iron; dose, ♏v–xv (0.32–1.0); used also to prepare the solid citrate. **L. f. et ammo′nii aceta′tis** (U. S.), formerly called mistura f. et a. acetatis, Basham's mixture; contains tincture of ferric chloride 2, diluted acetic acid 3, aromatic elixir 10, solution of ammonium acetate 20, water 65; dose, ʒij–℥j (8.0–32.0). **L. f. nitra′tis** (U. S.), contains a little over 6 per cent. ferric nitrate; dose, ♏j–v (0.065–0.32). **L. f. perchlor′idi** (Br.), equivalent to the l. f. chloridi of the Ph. U. S. **L. f. p. for′tis** (Br.), strong solution of ferric chloride, 5 parts of the salt (containing 12 molecules of water of crystallization) in 2 parts of distilled water; dose, ♏j–iv (0.065–0.26). **L. f. pernitra′tis** (Br.), equivalent to the l. f. nitratis of the Ph. U. S. **L. f. subsulpha′tis** (U. S.), solution of basic ferric sulphate, or ferric subsulphate, Monsel's solution; contains between 13 and 14 per cent. of metallic iron; dose, ♏v–x (0.32–0.65). **L. f. tersulpha′tis** (U. S.), solution of ferric sulphate, of which it contains nearly 29 per cent.; used for making the hydrated oxide of iron (arsenic antidote), which is precipitated from the solution on the addition of ammonia-water. **L. fu′mans Boyl′ii,** solution of ammonium sulphide; formerly employed in diabetes. **L. f. Liba′vii,** muriate of tin. **L. genita′lis,** semen. **L. gut′tæ per′chæ,** solution of gutta-percha in chloroform, 1 : 8; applied to cutaneous lesions, it forms an impermeable dressing. **L. hamamel′idis** (Br.), made by distillation from a maceration of witch-hazel leaves 5, water 10, 90 per cent. alcohol 1. **L. hollan′dicus,** Dutch liquid, ethylene chloride. **L. hydrar′gyri nitra′tis** (U. S., **L. h. n. ac′idus**, Br.), contains 11 per cent. nitric acid and 60 per cent. mercuric nitrate; used locally as a caustic. **L. h. perchlor′idi** (Br.), contains corrosive sublimate 1, distilled water 875; intended to take the place of van Swieten's solution, which contained corrosive sublimate 1, water 900, alcohol 100; dose, ʒss–j (2.0–4.0). **L. hydrogen′ii perox′idi** (Br.), equivalent to the aqua hydrogenii dioxidi of the Ph. U. S.; contains 10 volumes of available oxygen when decomposed; dose, ʒss–ij (2.0–8.0). **L. intestina′lis,** intestinal juice. **L. i′odi compos′itus** (U. S.), Lugol's solution, contains 5 per cent. iodine and 10 per cent. potassium iodide; dose, ♏v–xv (0.32–1.0). **L. i. for′tis** (Br.), strong solution of iodine, contains iodine 10, potassium iodide 6, distilled water 10, and 90 per cent. alcohol to make 100; formerly called linimentum iodi; used externally. **L. krame′riæ concentra′tus** (Br.), strength 1 in 2; dose, ʒss–j (2.0–4.0). **L. lac′tis,** the serum of milk. **L. lym′phæ,** the fluid portion of the lymph, analogous to l. sanguinis. **L. magne′sii carbona′tis** (Br.); dose, ℥j–ij (30.0–60.0). **L. m. citra′tis** (U. S.), effervescing solution; dose, ℥vj–xij (180.0–360.0). **L. Morgagn′ii,** the humor of Morgagni, between the crystalline lens and its capsule. **L. morphi′næ aceta′tis** (Br.), 1 per cent. strength; dose, ♏x–ʒj (0.65–4.0). **L. m. hydrochlor′idi** (Br.), 1 per cent. strength; dose, ♏x–ʒj (0.65–4.0). **L. m. tartra′tis** (Br.), 1 per-cent. strength; dose, ♏x–ʒj (0.65–4.0). **L. mu′ci,** the fluid portion of mucus. **L. nitroglyceri′ni,** l. trinitrini. **L. oleo′sus Syl′vii,** spiritus ammoniæ aromaticus. **L. o′pii sedati′vus,** Battley's solution of opium. Empirical preparation first made by a druggist of that name. An aqueous solution of opium, evaporated to dryness to get rid of the acid resin, redissolved in water, and a small portion of alcohol added to give it permanence; it is devoid of many of the narcotic effects of opium. **L. o′pii sedati′vus** (Haden's), tinctura opii. **L. o′vi al′bus,** albumen ovi. **L. pancrea′tis** (Br.), triturated fresh pancreas of the pig 1, 20 per cent. alcohol 4, macerated for 7 days, then filtered; dose, ʒj–ij (4.0–8.0). **L. pepsi′ni,** solution of pepsin; liquid pepsin (pepsini saccharati, gr. cccc; acidi hydrochlorici, ♏cx; glycerini, ℥vij; aquæ, ℥xij); dose, ʒss–ʒij (4.0-8.0). **L. pericard′ii,** see *Pericardium.* **L. pi′cis carbo′nis** (Br.), a solution of coal-tar 1 in tincture of quillaia 5. **L. plum′bi subaceta′tis** (U. S.), Goulard's extract, contains 25 per cent. of subacetate of lead. **L. p. s. dilu′tus** (U. S. and Br.), lead-water, contains 3 per cent. of the stronger solution of subacetate of lead. **L. p. s. for′tis** (Br.), same as l. p. s. (U. S.). **L. potas′sæ** (U. S. and Br.), contains 3 per cent. of potash or potassium hydrate; dose, ♏v–xxx (0.32–2.0). **L. potas′sii arseni′tis,** Fowler's solution, contains arsenous acid 1, potassium bicarbonate 2, and compound tincture of lavender 3, in 94 of the menstruum; dose, ♏j–v (0.065–0.32). **L. p. citra′tis** (U. S.), contains 9 per cent. anhydrous citrate of potassium; dose, ʒj–℥j (4.0–32.0). **L. p. permangana′tis** (Br.), contains 1 per cent. potassium permanganate; dose, gr. j–iij (0.065–0.2). **L. prostat′icus,** the prostatic fluid. **L. pu′ris,** the fluid portion of pus. **L. quas′siæ concentra′tus** (Br.), has a strength of 1 in 10, forming an exception to the rule of concentrated solutions; dose, ʒss–j (2.0–4.0). **L. rhe′i concentra′tus** (Br.), concentrated solution of rhubarb, strength 1 in 2; dose, ʒss–j (2.0–4.0). **L. san′guinis,** blood serum or plasma. **L. sar′sæ compos′itus concentra′tus** (Br.), contains sarsaparilla 20, sassafras 2, guaiacum 2, liquorice 2, and mezereon 1, in 20 per cent. alcohol, to make the strength of 1 in 2; dose, ʒij–℥j (8.0–32.0), in this forming an exception to the rule of dosage of concentrated solutions. **L. of Scar′pa,** endolymph of the labyrinth, or vitreous humor of the ear. **L. sem′inis,** the fluid portion of the semen. **L. sen′egæ concentra′tus** (Br.), strength 1 in 2; dose, ʒss–j (2.0–4.0). **L. sen′næ concentra′tus** (Br.), strength of 1 in 1, forming an exception to the rule of concentrated solutions; dose, ʒss–j (2.0–4.0). **L. serpentar′iæ concentra′tus** (Br.), strength of 1 in 2; dose, ʒss–j (2.0–4.0). **L. so′dæ** (U. S.), contains 5 per cent. of caustic soda; dose, ♏v–xxx (0.32–2.0). **L. s. chlora′tæ** (U. S.), **L. s. chlorina′tæ** (Br.), solution of chlorinated soda, Labarraque's solution, contains 2½ per cent. of chlorine; dose, ♏x–xxx (0.65–2.0). **L. so′dii arsena′tis** (U. S. and Br.), Pearson's solution, contains 1 per cent. sodium arsenate; dose, ♏j–v (0.065–0.32). **L. s. ethyla′tis** (Br.), prepared by dissolving 1 part of sodium in 20 parts of absolute alcohol; a syrupy, brownish liquid; an efficient and manageable caustic in the treatment of nævi and other vascular growths. **L. s. silica′tis** (U. S.), soluble glass, water glass, used to impregnate bandages in the treatment of fractures; it is also antiseptic. **L. strychni′næ hydrochlor′idi** (Br.), contains 1 per cent. strychnine hydrochloride; dose, ♏ij–viij (0.13–0.5). **L. styp′ticus,** l. ferri chloridi. **L. thyroide′i** (Br.), a solution made by macerating sheep's thyroid in glycerin and carbolic-acid solution; dose, ♏v–xv (0.32–1.0). **L. tinos′poræ concentra′tus** (Br.), concentrated solution of Tinospora cordifolia, gulancha, of the strength of 1 in 2; a tonic similar to calumba; dose, ʒss–j (2.0–4.0). **L. todda′liæ concentra′tus** (Br.), concentrated solution of the root-bark of Toddalia aculeata, of the strength of 1 in 2; an aromatic tonic similar to cusparia; dose, ʒss–j (2.0–4.0). **L. trinitri′ni** (Br.), a 1 per cent. solution of nitroglycerin; dose, ♏ss–ij (0.032–0.13). **L. of van Swie′ten,** see *L. hydrargyri perchloridi.* **L. ves′icans,** cantharidal collodion. **L. zin′ci chlor′idi** (U. S. and Br.), ♏iv of solution are equivalent to gr. iij of zinc chloride; used as a disinfectant; the commercial solution is practically the same as Sir W. Burnett's disinfecting fluid.

**Liquorice,** lik′o-ris. See *Glycyrrhiza.*

**Liriodendrin′.** Aromatic bitter from fresh bark of root of Liriodendron tulipifera; considered by some identical with piperine.

**Lirioden′dron** or **Lirioden′drum.** Tulip or poplar tree, tulip-bearing or American poplar, white wood, cypress tree (New England). Bark of the root of this tree, indigenous in the United States, is a strong aromatic, tonic bitter; active principle separated is *Liriodendrin.* It is employed in dysentery, dyspepsia, and in intermittent fevers.

**Lis′franc's amputa′tion.** Amputation at tarsometatarsal articulation; see *Amputation.* **L.'s joint,** articulation between the tarsus and metatarsus. **L.'s tu′bercle,** tubercle on first rib for attachment of scalenus anticus.

**Lisian′thus.** Shrub of genus *Gentianaceæ,* species of which have medical properties of gentian; several species are used medicinally.

**Lisp′ing.** Defective dental speech, the *s* being pronounced like th.

**Lis′sauer's an′gles.** Angle formed by lines in the median plane of the skull, radiating from a fixed base line, radius fixus, extending from occipital protuberance (inion) to junction of vomer and sphenoid (hormion). **L.'s col′umn,** L.'s tract. **L.'s tract,** tract of minute fibres where the lateral and posterior columns of the spinal cord meet. **L.'s zone,** zone of white nervous matter adjacent to tip of posterior cornu of gray matter in the spinal cord.

**Lissenceph′alous** (*lissos,* smooth, *enkephalos,* brain). Condition of the cerebrum in which the convolutions are smooth or of small number. Liencephalous.

**Lissoph′yton suspec′tum** (Hallier). Bacillus lyssæ.

**Lis′ter's amputa′tion.** See *Amputation.*

**Lis′terine.** Antiseptic solution containing, it is said, benzoic acid, boric acid, borax, oil of peppermint, thymol, alcohol, oil of wintergreen, and eucalyptol.

**Lis′terism.** Antiseptic or aseptic principles of surgery instituted by Sir Joseph (afterward Lord) Lister. See *Antiseptic.*

**Lis′ting's law.** Has reference to movement of the eyeball, the movement from position of rest resulting in the angle of rotation in the second position being the same as if the eye were rotated round a fixed axis perpendicular to the first and second positions of the line of vision. **L.'s plane,** a plane forming a right angle with the anteroposterior axis of the eye, and containing in itself the transverse and vertical axes of ocular movements.

**Lis′tol.** Antiseptic combination of thymol and iodine.

**Lis′ton's excis′ion of the jaw.** Operation effected by a curved incision through the cheek from the angle of the mouth to the malar bone. **L.'s i′sin-glass plas′ter,** sparadrapum adhæsivum. **L.'s splint,** splint for fracture of the thigh, reaching from the axilla to four inches beyond the foot.

**Li′te.** Plaster made of verdigris, wax, and resin.

**Li′ter.** Litre.

**Lithæ′mia** (*lithos,* stone, *haima,* blood). Gouty or other condition with excess of uric acid or urates in the blood.

**Lithæ′mic.** Relating to or affected with lithæmia.

**Lithagogecta′sia.** Lithectasy.

**Lith′agogue** (*lithos,* stone, *ago,* to expel). Remedy supposed to possess the power of expelling calculi.

**Lith′arge** (*lithos,* stone, *argyros,* silver). Plumbi oxidum semivitreum; impure lead oxide. **L. plas′ter,** lead plaster.

**Lithar′gyri ace′tum.** Liquor plumbi subacetatis.

**Lith′ate.** Compound of lithic acid with a base; urate.

**Lithec′boly** (*lithos,* stone, *ekbole,* throwing out). Forcing out or removal of a calculus, when the neck of the bladder is dilated.

**Lithec′tasy** (*lithos,* stone, *ektasis,* dilatation). Dilatation of the neck of the bladder and membranous urethra for extraction of calculus.

**Lithec′tomy** (*lithos,* stone, *ektome,* excision). Lithotomy.

**Lith′enate.** See *Urate.*

**Lithe′nic acid.** Uric or lithic acid.

**Lith′epsy** (*lithos,* stone, *epso,* to boil). Litho-dialysis.

**Lith′ia.** Lithium oxide. Lithiasis. **L. wa′ter,** see *Lithii carbonas.*

**Lithi′asis.** Uric-acid diathesis. The formation of concretions in the body. **L. appendicula′ris,** the formation of concretions in the vermiform appendix. **L. bilia′ris,** biliary calculus. **L. conjuncti′væ,** calcareous concretions in the Meibomian glands; chalazion. **L. cys′tica,** vesical calculi. **L. glan′-dulæ lacrima′lis,** lacrymal calculus. **L. nephrit′-ica,** gravel; nephrolithiasis. **L. palpebra′lis,** l. conjunctivæ. **L. præpu′tii,** formation of preputial calculus. **L. pulmo′num,** formation of concretions in the lungs, occasioning at times lithophthisis, phthisis calculosa. **L. rena′lis,** see *Calculus* and *Nephrolithiasis.* **L. rena′lis areno′sa,** gravel. **L. vesica′lis,** stone in the bladder.

**Lith′ic.** Belonging to lithic or uric acid or to stone; also an antilithic. **L. acid,** uric acid. **L. acid diath′esis,** lithuria. **L. cal′culi,** see *Calculi, urinary.* **L. diath′esis,** lithuria. **L. sed′iments,** see *Lithuria.*

**Lith′ica.** Correctives of the uric-acid diathesis.

**Lith′ii ben′zoas.** (Ph. U. S.) Benzoate of lithium, from decomposition of lithium carbonate with benzoic acid; antiarthritic; dose, gr. v–xxx (0.32–2.0). **L. bro′midum** (Ph. U. S.), lithium bromide; a white, deliquescent powder, possessing the peculiar virtues of the bromides; hypnotic, exerting a special influence in nervous irritability; dose, gr. x–xxx (0.65–2.0). **L. carbo′nas** (Ph. U. S. and Br.), lithium carbonate; a salt found in certain mineral waters which has been serviceable in lithuria by its power of dissolving uric acid and the urates; it may be obtained by decomposing chloride of lithium by means of carbonate of ammonium; dose, gr. v–x (0.32–0.65). It has also been injected into the bladder in cases of uric-acid or oxalic-acid gravel. Aërated lithia-water is an artificial preparation consisting of a solution of carbonate of lithium in water containing carbonic acid. **L. cit′ras** (Ph. U. S. and Br.), lithium citrate, is made by the action of citric acid on carbonate of lithium; it has been given in gout; dose, gr. x–xx (0.65–1.3). **L. cit′ras efferves′cens** (Ph. U. S. and Br.), is composed of lithium carbonate 70, sodium bicarbonate 280, citric acid 370, sugar to make 1000. **L. sal′icylas** (Ph. U. S.), salicylate of lithium; a mixture of 11 parts of salicylic acid and 3 parts of lithium carbonate in 25 parts of water; white, odorless powder, used in rheumatism and gout; dose, gr. x–xxx (0.65–2.0).

**Lithiopicrocar′min.** Stain for histological specimens.

**Lithiopiperazin′.** Combination of piperazin with lithium; antiarthritic; dose, gr. xv–xxx (1.0–2.0).

**Lithiotheobromine′ sal′icylate.** Made like diuretin, lithium being substituted for sodium; diuretic in cardiac dropsy.

**Lith′ium.** Reddish-white metal, symbol Li, lightest solid known (sp. gr. 0.594); valued in its combinations, which are believed to be solvents of uric acid. It is one of the series of metals forming alkalies, like sodium and potassium. **L. ben′zoate,** lithii benzoas. **L. bitar′trate,** tartar lithia; white, soluble powder; diuretic and laxative; dose, gr. v (0.32); used in rheumatism, inflammation of the gums, etc. **L. bro′mide,** lithii bromidum. **L. caf-feine′-sul′phonate,** a preparation employed in gout and rheumatism. **L. car′bonate,** lithii carbonas. **L. cit′rate,** lithii citras. **L. dithiosal′icylate** has been used in gout and rheumatism. **L. diuretin′,** a mixture of lithiated theobromine and lithium salicylate; diuretic, in dose of gr. xv (1.0). **L. for′mate,** a colorless, soluble salt, produced by neutralizing formic acid with lithium carbonate; used in rheumatism and gout; dose, gr. ij–iv (0.13–0.26). **L. glyceri′nophos′phate,** see *Glycerinophosphoric acid.* **L. guaiaca′tum,** employed in rheumatic and gouty affections; dose, gr. v (0.32). **L. hip′purate,** employed in uric-acid diathesis; dose, gr. v–xx (0.32–1.3). **L. i′odate,** employed hypodermically in dose of gr. jss (0.1), or internally in dose of gr. jss–iij (0.1–0.2), in renal colic, uric-acid diathesis or gout. **L. rho′donate,** l. sulphocyanate. **L. sal′icylate,** lithii salicylas. **L. sozoi′odolate,** antiseptic in ointment or dusting-powder. **L. sulphocy′anate,** white powder, having similar properties to other salts of lithium; dose, gr. iij–v (0.2–0.32). **L. sulphoich′thyolate,** prepared by neutralizing ichthyol-sulphonic acid with lithium carbonate; used in rheumatism in doses of gr. v–x (0.32–0.65). **L. theobromine′ sal′icylate,** a white, soluble powder; diuretic; dose, gr. xv (1.0).

**Lithobex′is** (*lithos,* stone, *bex,* cough). Cough with calculous expectoration.

**Lithocen′ope** (*lithos,* stone, *kenoo,* to evacuate). Instrument for extraction of calculus in lithotrity.

**Lithoceno′sis** (*lithos,* stone, *kenosis,* evacuation). Evacuation of fragments of calculi resulting from lithotrity.

**Lith′oclast** (*lithos,* stone; *klao,* to break). Instrument used in lithotrity; lithotrite.

**Lith′oclasty.** Lithotrity.

**Lithoclys′mia** or **Lith′oclysmy** (*lithos,* stone, *klysma,* clyster). Litholysis practised by injection of chemical solutions into the bladder.

**Lithocystot′omy** (*lithos,* stone, *kystis,* bladder, *tome,* incision). Lithotomy.

**Lithodial′ysis** (*lithos,* stone, *dialyo,* to dissolve). Dissolving of a stone in the bladder. Breaking up of a calculus into small pieces easy of extraction.

**Lithofel′lic** or **Lithofellin′ic.** Relating to biliary calculus. **L. acid,** acid found in intestinal concretions, $C_{20}H_{36}O_4$, from the bile.

**Lithofrac′tor.** Lithotrite.

**Lithoge′nia, Lithogen′esis,** or **Lithog′eny** (*lithos,* stone, *gennao,* to generate). Formation of calculi.

**Lithogenous,** lith-oj′en-us. Causing formation of calculus; relating to lithogeny.

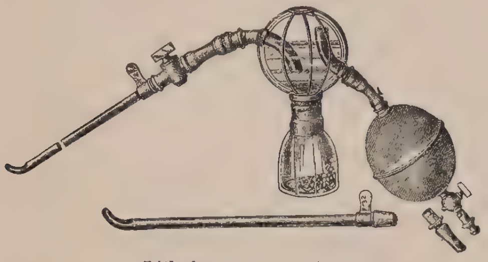
**Lith′oid** or **Lithoid′al** (*lithos,* stone, *eidos,* resemblance). Resembling stone.

**Lithokel′yphos** (*lithos,* stone, *kelyphos,* husk). Lithopædion encased by calcified fetal membranes.

**Lithoko′nion** (*lithos,* stone, *koniao,* to break into powder). Instrument for pulverizing calculi in the bladder.

**Lithol′abon** or **Lithol′abum.** Instrument used in extracting stone from the bladder; lithotomy forceps.

**Lith′olapaxy** (*lapaxis,* evacuation). Removal of calculous fragments by irrigation after lithotrity.



Litholapaxy apparatus.

**Litho′lein.** Mineral oil containing no fat.

**Lithol′ogy** (*lithos,* stone, *logos,* treatise). Discourse on or description of stone or calculus.

**Lithol′ysis** (*lithos,* stone, *lyo,* to dissolve). Lithodialysis.

**Lith′olyte.** Instrument for conveying solvents of calculi into the bladder.

**Litholyt′ic.** Lithotriptic.

**Lithomala′cia** (*lithos,* stone, *malakia,* softness). Softening of a calculus.

**Lithome′tra** (*lithos,* stone, *metra,* uterus). Osseous or other concretion of the uterus.

**Lithone′phria.** Kidney disease caused by stone.

**Lithonephri′tis.** Calculous nephritis.

**Lithonephrot′omy** (*nephros,* kidney, *tome,* incision). Removal of stone by incision into the kidney.

**Lithonthryp′tic** or **Lithontrip′tic.** Lithotriptic.

**Lithopæ′dion** (*lithos,* stone, *pais,* child). Petrified fœtus retained in the uterus or abdominal cavity.

**Lithoph′agus** (*lithos,* stone, *phago,* to eat). A stone-eater.

**Lith′ophone** (*lithos,* stone, *phone,* sound). Instrument with which to determine the presence of a stone in the bladder, a sound being made when the end of the instrument comes in contact with a calculus.

**Lithophthi′sis.** See *Calculi, pulmonary.*

**Lithoplat′omy** (*lithos,* stone, *platys,* wide). Operation of dilating the urethra for extraction of stone.

**Lith′oplaxy** (*lithos,* stone, *plasso,* to strike). Lithotrity.

**Lithop′riny** or **Lithop′risy** (*lithos,* stone, *prio,* to saw). Operation of sawing a calculus, the saw being called a lithoprion. Lithotrity.

**Lith′os** (*lithos,* stone). Calculus.

**Lith′oscope.** Instrument for the detection and examination of calculus.

**Lithosper′mum.** Plant of the genus *Boragineæ.* Seeds are stimulant diuretic. **L. officina′le,** gray millet, bastard alkanet, littlewale; seeds were formerly supposed, from their stony hardness, to be efficacious in calculous affections. They have also been considered diuretic. **L. villo′sum,** Anchusa tinctoria.

**Lithotec′nion** (*lithos,* stone, *teknon,* child). Lithopædion.

**Lithothlib′ia** (*lithos,* stone, *thlibo,* to crush). Crushing of a friable calculus between a finger passed by the rectum or vagina as far as the *bas-fond* of the bladder and a catheter introduced into the bladder.

**Lithothryp′sis** (*lithos,* stone, *thrypto,* to break in pieces). Lithotrity.

**Lithothryp′tor.** See *Lithotrite.*

**Lith′otome** (*lithos,* stone, *tome,* an incision). This name has been given to a number of instruments of different shapes and sizes which are used in the operation for stone, to cut the neck or body of the bladder. They ought with more propriety to be called *cystotomes.* The *lithotome caché* of Frère Côme is still occasionally used. It is composed of a handle and a flattened sheath, slightly curved; in this there is a cutting blade which can be forced out, by pressing upon a *bascule* or lever, to any extent that may be wished by the operator. A double lithotome was used by Dupuytren in his bilateral operation. See *Lithotomy.*

**Lithot′omist.** One who practises lithotomy or makes a specialty of such operations.

**Lithot′omy.** Lithocystotomy. Operation of incising the bladder for the removal of a calculus. The operation is much less frequently performed than formerly, owing to the general adoption of lithotrity and litholapaxy, a method applicable to the great majority of cases of vesical calculi. The methods of operation are reducible to five principal ones, each of which has experienced numerous modifications:

1. The *method of Celsus,* methodus celsiana, cystotomia cum apparatu parvo, apparatus minor, cutting on the gripe. This consisted in cutting upon the stone after having made it project at the perineum by means of the fingers introduced into the rectum. The method was attended with the difficulty of dividing the parts neatly, danger of injury to the bladder, as well as the occasional impossibility of drawing down the stone. It is sometimes called methodus guytoniana, from Guy de Chauliac having endeavored to remove from it the discredit into which it had fallen in his time. It was termed apparatus minor from the small number of instruments required in it.

2. *Apparatus major;* invented in 1520 by John de Romani, a surgeon of Cremona, and communicated by him to Mariano Santo di Barletta, whence it was long called Mariano's method. It was called also cystotomia or methodus cum apparatu magno, from the number of instruments required in it. An incision was made on the median line, but the neck of the bladder was not comprehended in it; it was merely dilated. The greater apparatus was liable to many inconveniences, as ecchymosis, contusion, inflammation of the neck of the bladder, abscesses, fistulæ, etc. A modification of this method, by Mr. George Allarton, of England, has been called the median or Allarton's operation. It consists in dividing the perineum and the membranous portion of the urethra, passing a probe down to the staff and into the bladder as a guide for the finger through the prostatic portion of the urethra into the bladder, thus dilating the passage so as to allow of the introduction of the forceps.

3. The *high* or *suprapubic operation,* hypogastric cystotomy, suprapubic lithotomy, laparocystotomy, epicystotomy, was first practised by Peter Franco in the sixteenth century. It consisted in pushing the stone above the pubis by the fingers introduced into the rectum. Rousset afterward proposed to make the bladder rise above the pubis by injecting it. The method had fallen into discredit when Frère Côme revived it. It is used when the calculus is very large. It was practised by opening first the membranous part of the urethra upon the catheter passed into the canal. Through this incision a catheter having a spear-pointed stilet was introduced into the bladder. An incision was then made into the linea alba, above the symphysis pubis, of about four or five fingers' breadth, and the peritoneum was detached to avoid wounding it. The stilet was pushed through the bladder, and used as a director for the knife, with which the bladder was divided anteriorly as far as the neck, and the stone was then extracted.

4. The *lateral operation,* hypocystotomy, lateral cystotomy, cystauchenotomy, cystotrachelotomy, urethrocystauchenotomy, urethrocystotrachelot-

omy, lateral section or apparatus, so named from the prostate gland and neck of the bladder being cut laterally, was probably invented by Peter Franco. It was introduced into France by Frère Jacques de Beaulieu. In England it received its earliest and most important improvements from the celebrated Cheselden. It is the method practised at the present day, according to different modes of procedure. In this method the patient is placed upon a table; his legs and thighs are bent and separated, the hands being tied to the feet. The perineum is then shaved and a staff is introduced into the bladder, the handle being turned toward the right groin of the patient. An oblique incision is now made from the raphe to the middle of a line drawn from the anus to the tuberosity of the ischium of the left side, and, taking the staff for a guide, the integuments, areolar tissue of the perineum, membranous portion of the urethra, transversus perinæi muscle, bulbocavernosus, some fibres of the levator ani, the prostate and neck of the bladder are successively divided. For this latter part of the operation the knife, the beaked bistoury, bistouri or lithotome caché, cutting gorget, or other instrument is used according to the particular preference. The forceps is now introduced into the bladder and the stone extracted. In the operation care must be taken not to injure the rectum or the great arterial vessels distributed to the perineum.

The method of *urethro-cysto-aneurysmatotomy* consists in dividing the prostate in part only, the enlargement of the wound being effected by a peculiar dilator.

The *bilateral operation* is founded on that of Celsus. It consists in making an incision posterior to the bulb of the urethra and anterior to the anus, involving both sides of the perineum by crossing the raphe at right angles; an incision is then made through the membranous part of the urethra, and the prostate may be cut bilaterally.

*Buchanan's operation.* Dr. Buchanan, of Glasgow, suggested the use of a rectangular staff, the angle being placed about three inches from the point, the portion beyond the angle being deeply grooved at the side. When introduced, the angle of the staff is made to correspond to the apex of the prostate. The surgeon, introducing his finger into the rectum, inserts a bistoury in front of the anus with the blade horizontal and its edge turning to the left, pushing it straight into and along the groove to the stop at its extremity. While slowly withdrawing the bistoury he makes a curved incision through the soft parts, about an inch and a half long, round the upper and left side of the rectum.

The *quadrilateral operation*, proposed by Vidal de Cassis, was a modification of the bilateral operation, to be employed when the calculus was unusually large, but it was quadrilateral only so far as the number of prostatic incisions was concerned, the external incision being bilateral.

5. *Lithotomy by the rectum*, rectovesical lithotomy, proctocystotomy, rectovesical section, rectal cystotomy, was proposed by Vegetius in the sixteenth century, but it was never practised until M. Sanson, in the year 1817, drew attention to it. It consists in penetrating the bladder through the wall corresponding with the rectum, by first cutting the sphincter ani and rectum about the root of the penis, and entering the bladder through the neck, dividing the prostate, or by its *bas-fond*.

Lithotomy *in women*, in consequence of the shortness of the urethra, is a comparatively insignificant operation. The majority of such calculi can be readily removed by urethral dilatation and extension, or by lithotrity. *Urethral lithotomy* is objectionable on account of the frequency of incontinence of urine as a result. *Vaginal* or *vesicovaginal lithotomy* is sometimes demanded, the stone being removed by an incision into the bladder through the vaginal septum, which is afterward closed by stitches. An operation now abandoned, practised by Celsus and revived by Lisfranc, was called the *vestibular operation*, because the incision was made across the centre of the vestibular space.

**Lithot′omy, Al′larton's.** See *Lithotomy*. **Bilat′eral l.**, see *Lithotomy*. **Buchan′an's l.**, see *Lithotomy*. **Cel′sian l.** or **L. of Cel′sus**, see *Lithotomy*. **Civiale's′ l.**, incision is made in the middle line of the perineum. **Dupuytren's′ l.**, a form of bilateral operation, with the incision made in front of the anus. **Hypogas′tric l.**, suprapubic cystotomy. **Lat′eral l.**, lateral cystotomy. **Mar′ian, me′dian,** or **prerec′tal l.**, see *Lithotomy* (apparatus major). **Perine′al l.**, perineal cystotomy. **L. posi′tion**, position in which the patient lies on his back, with the thighs and legs strongly flexed and the knees widely separated. **Quadrilat′eral l.**, see *Lithotomy* (lateral operation). **Rec′tal l.**, see *Lithotomy* (by the rectum). **Rectoperine′al** or **rectoves′ical l.**, see *Lithotomy* (by the rectum). **L. by the rec′tum**, see *Lithotomy*. **Re′nal l.**, nephrolithotomy. **Suprapu′bic l.**, suprapubic cystotomy; see *Lithotomy* (the high or suprapubic operation). **Ure′thral l.**, see *Lithotomy* (in women). **L. by the vagi′na** or **vag′inal l.**, see *Lithotomy* (in women). **Ves′icovag′inal l.**, see *Lithotomy* (in women). **Vestib′ular l.**, see *Lithotomy*.

**Lithot′ony** (*lithos*, stone, *teino*, to stretch). Puncture of the bladder above the pubes and formation of a fistula through which the calculus is extracted.

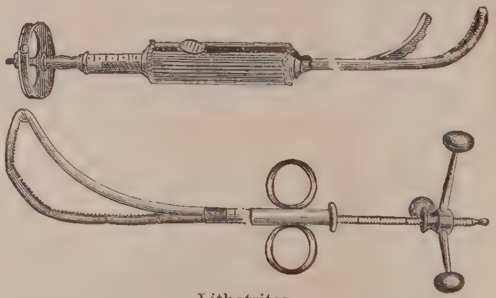
**Lithotre′sis** (*lithos*, stone, *tresis*, perforation). Lithotrity; perforating a vesical calculus.

**Lithotrip′sis** or **Lith′otripsy** (*lithos*, stone, *tribo*, to rub down). Lithotrity. Diminishing the size of a calculus with a lithotriptor.

**Lithotrip′tic.** An agent preventing the formation or promoting the solution of calculi.

**Lithotrip′tor.** Instrument for breaking calculi into fragments sufficiently small to be voided through the urethra.

**Lith′otrite.** An instrument for crushing a stone within the bladder, the fragments being subsequently removed by the operation of litholapaxy.



Lithotrites.

**Lithot′rity.** Lithotrypsy, lithotripsy, lithothripsy. Operation of comminution of calculus within the bladder with a lithotrite or lithoclast.

**Lith′ous.** Relating to a calculus.

**Lithoxidu′ria** (*ouron*, urine). Discharge of urine containing lithic or xanthic oxide.

**Lithure′sis** (*lithos*, stone, *ouresis*, making water). Passing small calculi or gravel with the urine.

**Lithu′ria.** Excretion of an excess of lithic acid and lithates in the urine. Lithæmia. See *Urine*.

**Lit′mus.** Lichen roccella. **L. milk**, milk colored blue with litmus; used as a culture medium for certain bacteria. **L. pa′per**, paper tinged with a blue pigment from Lichen roccella or Roccella tinctoria; used as a test for acids which change its color to red; alkalies then restore the blue color.

**Li′tre.** One thousand cubic centimetres, equivalent to 61.028 English cubic inches, or 1.056 quart, wine measure.

**Lit′sea.** A genus of plants, ord. *Laurineæ*. **L. cubeb′a**, Piper cubeba. **L. monopet′ala**, mild astringent bark of this E. Indian tree is used in diarrhœa and indigestion. **L. piperi′ta**, Piper cubeba. **L. zeylan′ica,** Ceylonese species, bark of which is stimulant, emmenagogue, and vermifuge.

**Lit′ten's di′aphragm phenom′enon** or **sign.** See *Diaphragm phenomenon.*

**Lit′ter.** Arrangement for the transportation of the sick or wounded.

**Lit′tle's disease′.** Muscular rigidity, of congenital type.

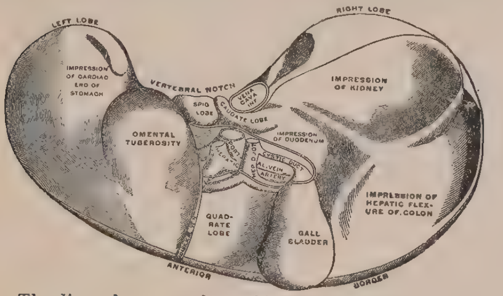
**Lit′tlewale.** Lithospermum officinale.

**Lit′toral** (*litus,* the seashore). On the seashore.

**Littré's′ colot′omy,** L.'s operation. **L.'s glands,** see *Urethra.* **L.'s her′nia,** strangulation of the bowel by adventitious bands or enteric diverticula; diverticular hernia. **L.'s opera′tion,** colotomy in the inguinal region.

**Live′do.** Cutaneous blueness due to cold (l. calor′ica) or mechanical causes (l. mechan′ica).

**Liv′er.** Largest gland in the body. An azygous, unsymmetrical, and very heavy organ, occupying the whole of the right hypochondrium and part of the epigastrium. Weighs about 50 ounces. *Above,* it corresponds to the diaphragm; *below,* to the stomach, transverse colon, and right kidney; *behind,* to the vertebral column, aorta, and vena cava; and *before,* to the base of the chest. Its upper surface is convex; the lower, irregularly convex and concave. It possesses five lobes: right lobe, left lobe, lobus quadratus, lobus caudatus, and lobus Spigelii; five ligaments: longitudinal, right and left lateral, coronary, and round; five fissures: the longitudinal, lodging (in the fœtus) the ductus venosus and umbilical vein, remains of which in the adult are called the round ligament; fissure of ductus venosus or back part of the longitudinal; transverse or portal fissure, which receives the sinus of the vena porta and the hepatic artery, hepatic duct, hepatic nerves, and lymphatics; fissure for the gall-bladder, and fissure for the vena cava. The blood-vessels of the liver are very numerous. The hepatic artery and vena porta furnish it with the blood necessary for its nutrition and the secretion of bile. The hepatic veins convey away the blood which has served those purposes. The lymphatic vessels are very numerous. The nerves are also numerous, and proceed from the pneumogastric, diaphragmatic, and hepatic plexuses.



The liver, lower surface. Drawn from the His cast. (Gerrish.)

The following are estimates of the dimensions and weights of the liver and its component parts:

| | |
|---|---|
| Weight, | 1617 gm. (Blosfeld)–1981 gm. (Dursy). |
| Average volume, | 1692 c. c. (Krause). |
| Length, | 320 mm. |
| Breadth (from obtuse to sharp margin), | 190–210 mm. |
| Greatest thickness (nearer obtuse margin), | 65–75 mm. |
| Incisura interlobularis, | 40 mm. deep. |
| Porta hepatis, | 50 mm. long. |
| Venæ intralobulares, | 0.027–0.07 (Krause). |
| " interlobulares, | 0.018–0.036. |
| Lobules, | 1.1–2.3 long, 0.8–1.5 broad. |
| Liver cells, | 0.022 long, 0.8–0.017 broad. |
| Interlobular cystic ducts, | 0.035–0.064 diameter. |
| Ligamentum teres, | 9 broad, 6 thick. |
| " ductus venosi, | about 3 broad, 30–40 long. |
| Ductus hepaticus, 25 long (Luschka), | 4.5–5.6 thick (Krause) |
| " cysticus, 35 " " | 2.3 wide |
| " choledochus, 68 " (Krause), | 5.6–7.5 wide |

The intimate structure of the liver consists of a number of lobules—*hepatic lobules*—composed of *intralobular* or *hepatic* veins which convey the blood back that has been inservient to the secretion of bile. The *interlobular* plexus of veins is formed by branches of the vena porta, which contain both the blood of the vena porta and the hepatic artery, both of which are considered to furnish the pabulum for the biliary secretion. The biliary ducts form an *interlobular plexus,* having an arrangement similar to the interlobular veins. The general opinion is that the blood of the vena porta furnishes the bile, while the hepatic artery affords blood for the nutrition of the liver. Besides bile, the liver forms urea and forms and stores glycogen. The word liver is applied to several substances having a brownish color analogous to that of the liver, and composed of sulphur and some other body. *Liver of sulphur* is potassium sulphide; *l. of antimony* is the semivitreous sulphuret. **Acces′sory l.,** extra or accessory part of the liver attached to its left extremity by a fold of the peritoneum. **Albu′minous l.,** amyloid, lardaceous, scrofulous, or waxy liver; altered nutrition of the liver, in which its substance is transformed so as to deserve those epithets. **Am′yloid l.,** albuminous liver. **Ap′oplexy of l.,** extravasation of blood in the hepatic tissue or beneath its capsule; hemorrhagic infarct. **At′rophy of l.,** condition dependent on chronic interstitial hepatitis. **Acute′ yel′low at′rophy of l.,** diffused hepatitis. **Ba′cony l.,** albuminous liver. **Bea′ver-tail l.,** l. in which the left lobe is flattened out and resembles somewhat the tail of a beaver. **Bil′iary cirrhot′ic l.,** l. in which there is chronic inflammation, with obstruction of the bile-ducts. **Car′diac l.,** chronic congestion of the liver, accompanied with pulsation, associated with disease of the right side of the heart. **Cirrho′sis of l.,** chronic inflammation with formation of fibrous material and progressive atrophy of the organ; the abuse of alcohol is believed to be the most frequent cause, but it is by no means the sole cause; called also hobnail liver and nutmeg liver. **Col′loid l.,** amyloid liver. **Degra′ded l.,** l. having a number of lobes smaller than normal. **L.-dex′trin,** carbohydrate like dextrin obtained from the liver. **Drunk′ard's l.,** cirrhotic liver from the abuse of alcohol; nutmeg liver; condition in which there are fatty deposits and degeneration of the liver-cells. **Fat′ty l.** or **fat′ty degenera′tion of l.,** adiposis hepatica. **Float′ing l.,** unnaturally movable liver, due to a relaxed condition of the hepatic ligaments. **L.-fluke,** Distoma hepaticum. **Gin** or **Gin′drinker's l.,** nutmeg liver. **Gran′ulated** or **gran′ular l.,** cirrhosis of the liver. **Hob′nail l.,** cirrhosis of the liver. **I′cing l.,** chronic inflammation of the serous covering of the liver, with the formation of a whitish layer resembling the icing on a cake. **Larda′ceous l.,** albuminous liver. **Left l.,** spleen. **Mam′millated l.,** cirrhosis of the liver. **Mov′able l.,** floating liver. **Nut′meg l.,** appearance of the liver when cut across, resembling that of the section of a nutmeg; supposed by some to be the result of intemperance in the use of alcoholic drinks, but occurring under other causes; the terms *whiskey liver, gindrinker's liver,* occasionally applied to it, are consequently not distinctive. **Pig′ment l.,** as it sometimes appears in those who die from the effects of malarious fevers, is of a steel-gray or blackish or, not unfrequently, chocolate color—a condition produced by an accumulation of pigment matter in the vascular apparatus of the gland. **Scrof′ulous l.,** albuminous liver. **Si′lex l.,** form of hard and elastic syphilitic liver in the child. **L.-spot,** chloasma. **L.-starch,** glycogenic matter. **L.-sugar,** see *Saccharum.* **Tight′lace l.,** l. whose shape has been affected by tight-lacing. **Tuber′culated l.,** cirrhosis of the liver. **Tu′beriform l.,** nutmeg liver. **Wan′dering l.,** floating liver. **Wax′y l.,** albuminous liver. **Whis′key l.,** nutmeg liver; interstitial hepatitis.

**Liv′erweed.** Hepatica triloba.

**Liv′erwort.** Hepatica triloba, Marchantia polymorpha. **Ground l.**, Lichen caninus. **Ice′land l.**, Lichen islandicus. **No′ble l.**, Hepatica triloba.

**Liv′id.** Discoloration dependent upon passive or active hyperæmia.

**Livid′ity.** State of being livid. *Cadaveric lividity* consists in a blueness of the surface a few hours after death, from subsidence and accumulation of the blood in dependent portions of the body.

**Liv′idus mus′culus.** Pectinalis.

**Liv′or.** Blue or livid spot; suggillation. **L. emortua′lis** or **mor′tis**, discoloration on the surface of a corpse preceding the approach of decomposition; see *Suggillation*. **L. sanguin′eus,** see *Ecchymoma*.

**Lix.** Lye obtained from wood-ashes.

**Lixiv′ial.** Term for salts obtained by washing vegetable ashes, as the fixed alkalies.

**Lixivia′tion.** The operation of washing wood-ashes with water to dissolve the soluble parts. The filtered liquor is the lye. Percolation.

**Lixiv′ium.** Product of lixiviation; lye; any solution containing potassa or soda. In domestic practice a lye is made from wood-ashes and mixed with the ordinary basis of a poultice, to form a *lye cataplasm* or *poultice*, which is applied to whitlow and similar local inflammations. **L. ace′ticum,** potassii acetas. **L. ammoniaca′le,** liquor ammoniæ. **L. caus′ticum,** liquor potassæ. **L. ka′li-vegetab′ilis,** watery solution of potassium carbonate. **L. magistra′le,** liquor potassæ. **L. sapona′rium,** liquor potassæ; caustic lye. **L. tar′tari,** liquor potassæ subcarbonatis. **L. vitriola′tum,** potassium sulphate.

**Lixi′vus ci′nis.** Lye ash. Potash of commerce.

**Llare′ta.** The abbreviated name of Haplopappus llareta, a plant growing abundantly in Chile; employed in gonorrhœa.

**Load′ed.** Coated or furred, as the tongue. Also applied to the bowels when full of undigested food or accumulated fæces.

**Load′stone.** Magnet.

**Loath′ing.** Disgust.

**Lo′bar.** Relating to a lobe or lobes.

**Loba′ria islan′dica.** Lichen islandicus. **L. pulmona′ria,** Lichen pulmonarius. **L. saxat′ilis,** Lichen saxatilis.

**Lo′bate.** Possessing lobes.

**Lo′bated.** Divided into lobes.

**Lobe.** A distinct part of an organ, as of the liver, lung, or brain, marked off from other parts by grooves or sulci. See also *Lobus*. **Amyg′daloid l.,** amygdaloid tubercle of the brain. **An′nular l.,** operculum. **Anon′ymous l.,** lobus quadratus of the liver. **Ante′rior l.,** frontal lobe of the brain; lobus quadratus. **Biven′tral l.,** wedge-shaped lobe of the cerebellum, situated behind the amygdala. **Cau′date l.,** lobus caudatus. **Cen′tral l.,** superior vermiform process of cerebellum. **L. of cerebel′lum,** lobus cerebelli. **L. of cer′ebrum,** these include the anterior, posterior, and middle lobes of the brain, and the hemispheres. **L. of cor′pus callo′sum,** gyrus fornicatus. **Cu′neiform l.,** biventral l.; cuneus. **Digas′tric l.,** biventral l. **Duod′enal l.,** lobus Spigelii; l. caudatus. **L. of the ear,** soft, rounded prominence terminating the circumference of the pavilion inferiorly, and pierced in those who wear earrings. **Fal′ciform l.,** lobe of the cerebrum, including fornix, dentate convolution, etc. **Fron′tal l.,** portion of hemisphere of cerebrum in front of central and Sylvian fissures. **Fu′siform l.,** subcollateral gyrus. **Hepat′ic l.,** l. of the liver. **Hid′den l.,** insula of Reil. **Home′s l.,** see *Home*. **Infe′rior l.,** biventral l. **Interme′diate l.,** insula. **L. of the kid′ney,** one of the pyramids of Malpighi. **Lim′bic l.,** lobe formed by the gyrus fornicatus and anterior part of gyrus uncinatus. **Lin′gual l.,** subcalcarine gyrus. **L. of the liv′er,** see *Liver*. **L. of the lung,** divisions of the lung containing minute terminal branches of bronchial tubes and pulmonary blood-vessels. **Me′dian l.,** upper and lateral portion of cerebral hemisphere; vermiform process of cerebellum. **L. of medul′la oblonga′ta,** amygdala; l. of pneumogastric nerve, flocculus. **Occip′ital l.,** lobe continuous with the parietal and temporal lobes. **Olfac′tory l.,** gray matter in each hemisphere of the cerebrum terminating in the olfactory bulb. **Op′tic l.,** corpora quadrigemina. **Or′bital l.,** portion of cerebrum above the orbit. **Pancreat′ic l.,** lobus caudatus; median lobe. **Pneumogas′tric l.,** flocculus. **Quad′rate l.,** large lobe on superior part of the cerebellum, divided into anterior and posterior crescentic lobes; lobus quadratus of liver. **Rolan′dic l.,** the portion of the cerebrum above the island of Reil. **Slen′der l.,** a narrow part of the posterior lobe of the cerebellum, which sometimes appears as a distinct lobe. **Spige′lian l.,** lobus Spigelii. **Spi′nal l.,** flocculus. **Square l.,** quadrate l. **Subpedunc′ular l.,** flocculus. **Supe′rior l.,** temporosphenoidal l.; quadrate l. of cerebellum. **Temporosphenoid′al l.,** part of cerebrum having posterior part of fissure of Sylvius in front and above it, and the occipital lobe behind it. **Un′cinate l.,** the inner portion of the occipitotemporal convolution.

**Lobelac′rin.** Acrid material from lobelia.

**Lobe′lia.** The official (Ph. U. S.) name for the leaves and tops of L. inflata or Indian tobacco. It is emetic and in small doses sedative, and a pectoral in croup, asthma, etc.; sudorific, cathartic, and an acronarcotic poison. Twenty grains act as an emetic. The active principle is *lobeline*, and an acrid extractive known as lobelacrin has been separated. Lobeline is a yellowish, syrupy liquid; its sulphate is a yellowish-white powder, and used, internally or subcutaneously, in dyspnœa and asthma. The pharmacopœial preparations are the fluid extract, *extrac′tum lobe′liæ flu′idum;* dose, ♏j–v (0.065–0.32) as an expectorant, and ♏xv–ʒj (1.0–4.0) as an emetic; and tincture, *tinctu′ra lobe′liæ;* dose, ♏v–xxx (0.32–2.0) as an expectorant, and ʒj–ij (4.0–8.0) as an emetic. **Blue l.,** L. syphilitica. **L. cardina′lis,** cardinal plant, cardinal flower, scarlet lobelia, ord. *Lobeliaceæ*. Indigenous. Has beautiful carmine flowers; antisyphilitic and anthelmintic. **L. coccin′ea,** L. cardinalis. **L. delissia′na,** Mexican species, used in nervous and pulmonary diseases. **L. infla′ta,** Indian or wild tobacco, puke weed, asthma weed, eyebright, emetic weed; the source of the official spigelia. **Pale-spiked l.,** L. spicata. **L. pinifo′lia,** S. African plant; root is exitant and diaphoretic, and sometimes used in Cape Colony as a domestic remedy in cutaneous affections, chronic rheumatism, and gout. **Scar′let l.,** L. cardinalis. **L. spica′ta,** pale-spiked lobelia; indigenous; is diuretic. **L. syphilit′ica,** blue lobelia, blue cardinal flower; root is an emetic and a drastic cathartic; has been used in syphilis.

**Lobelianin′.** Volatile principle obtained from lobelia.

**Lobe′lic acid.** Yellow acid from Lobelia inflata.

**Lobeline′.** See *Lobelia*.

**Loblol′ly.** Oatmeal gruel. Medicines. **L. boy,** attendant and aid to a ship's surgeon.

**Lobopneumo′nia.** Lobar pneumonia.

**Lob′stein's can′cer.** Retroperitoneal sarcoma. **L.'s disease,** excessive fragility of the bones. **L.'s gan′glion,** gangliform swelling of the great splanchnic nerve above the diaphragm.

**Lob′ular.** Relating to a lobule or lobules, as lobular pneumonia, pneumonia anatomically characterized by nuclei of red or gray hepatization disseminated in variable numbers in one or both lungs. **L. bil′iary plex′us,** plexus of lobular hepatic ducts derived chiefly from the interlobular; this plexus forms the principal part of the substance of the lobule. **L. ve′nous plex′us,** the plexus between the interlobular portal veins and intralobular hepatic vein.

**Lobula′ria marit′ima.** Small shrub of S. Europe; seeds are used in urinary diseases, scurvy, etc.

**Lob′ulate** or **Lob′ulated.** In small lobes.

**Lobula′tion.** Condition of being arranged in lobules. **L. of the kid′ney,** division of the kidney into lobules, as in the fœtus.

**Lob′ule** (dim. of lobus). Small lobe; convolution as of the brain; acinus. See also *Lobulus*. **L. of cor′pus stria′tum,** insula cerebri. **Cu′neate l.,** cuneus. **L. of the ear,** lobe of the ear. **L. of the fis′sure of Syl′vius,** insula cerebri. **Fron′tal l.,** frontal lobe. **Fu′siform l.,** subcollateral gyrus. **Hepat′ic l.,** see *Liver*. **L. of hippocam′pus,** uncinate gyrus. **L. of kid′ney,** pyramid of Malpighi. **Lin′gual l.,** subcalcarine gyrus. **L. of the liv′er,** see *Liver*. **L. of the lung,** see *Lung*. **Occip′ital l.,** cuneus. **Or′bital l.,** corpora quadrigemina. **O′val l.,** paracentral gyrus. **Pari′eto-occip′ital l.,** cuneus. **Pneumogas′tric l.,** flocculus. **Pul′monary l.,** l. of lung. **Spermat′ic l.,** one of the lobules of the testes. **Sphenoid′al** or **tem′poral l.,** temporosphenoidal lobe. **L. of the tes′tis,** see *Testicle*. **Trian′gular l.,** cuneus.

**Lob′ulet.** A minute lobule.

**Lobuliza′tion.** Lobulation.

**Lob′ulous.** Lobular.

**Lob′ulus.** Lobule. **L. accesso′rius ante′rior quadra′tus,** l. anonymus. **L. anon′ymus,** lobule in the liver between the passage for the round ligament and the gall-bladder, and less prominent but broader than the lobulus caudatus. From the lobulus anonymus a bridge runs across the passage for the round ligament, called pons or isthmus hepatis. **L. auric′ulæ,** lobe of the ear. **L. cauda′tus** (*cauda*, tail), root or an angle of the lobulus Spigelii, advancing toward the middle of the lower side of the great lobe, and representing a kind of tail. Also termination of the helix and anthelix of the ear, which is separated from the concha by an extensive fissure. **L. centra′lis,** small lobule or prominence of the superior vermiform process of the cerebellum, situated in the incisura anterior. **L. cerebel′li,** biventral lobe. **L. c. centra′lis,** superior vermiform process; see also *Flocculus* and *Cuneus*. **L. cer′ebri,** see *Cuneus, Subcollateral gyrus, Subcalcarine gyrus, Paracentral lobule, Præcuneus,* etc. **L. cor′poris stria′ti,** insula. **L. cunea′tus,** cuneus. **L. fornica′tus,** gyrus fornicatus. **L. fusifor′mis,** subcollateral gyrus. **L. infe′rior,** see *Prostate*. **L. lim′bicus,** lobe bounded by the gyrus fornicatus and anterior part of the gyrus uncinatus. **L. lingua′lis,** subcalcarine gyrus. **L. margina′lis,** marginal gyrus. **L. me′dius,** see *Prostate*. **L. na′si,** see *Nasus*. **L. patholog′icus,** see *Prostate*. **L. pneumogas′tricus,** flocculus. **L. poste′rior,** l. Spigelii. **L. posti′cus papilla′tus,** l. Spigelii. **L. quadra′tus,** l. anonymus; quadrate lobe of the cerebellum; præcuneus. **L. re′num,** pyramid of Ferrein. **L. Spige′lii,** situated upon the left side of the great lobe of the liver, near the spine, of a pyramidal shape, projecting, like a nipple, between the cardia and vena cava at the small curvature of the stomach. **L. va′gi,** flocculus.

**Lo′bus.** Lobe. See also *Lobulus*. **L. anon′ymus,** lobulus anonymus. **L. cauda′tus,** lobulus caudatus. **L. centra′lis,** insula. **L. fornica′tus,** gyrus fornicatus. **L. fronta′lis, lim′bicus, lingua′lis, quadra′tus,** etc., see *Lobulus frontalis, limbicus,* etc. **L. quadrangula′ris,** see *Cerebellum*. **L. semiluna′ris,** see *Cerebellum*. **L. supe′rior,** see *Cerebellum*.

**Lo′cal** (*locus*, a place). Topical; belonging to a place. Affections are called local—*morbi locales*—when confined to a part without implicating the general system. A local application is one used externally. **L. asphyx′ia,** Raynaud's disease.

**Localiza′tion.** Designation of a particular part as the centre of certain physiological functions. **Cer′ebral l.,** general disease exhibiting itself in brain symptoms. Usually, however, applied to localization of cerebral disease, post-mortem investigations and animal experimentation having shown that certain parts of the brain have special physiological functions, as in the following table (after Doubleday and Nagel):

| Locality. | Cerebral Localization, Lesions, and Functions. |
|---|---|
| Upper third of the central convolutions. | The middle third of the central convolutions contains the centres for the movements of the arm of the opposite side. The upper part of the lower third of the central convolutions contains the centre for the muscles of one-half of the face, and the lower part contains the centre of the muscles of the lips and tongue. |
| Frontal convolutions. | These do not contain any motor-centres in their upper two-thirds The lowest frontal convolution on the left side contains the centre of speech. |
| Parietal convolutions. | Have no motor-centres, but are said to contain the centres of the cutaneous and muscular sensations. |
| Occipital convolutions. | These (especially the cuneus) contain the cortical centre for visual sensations, a lesion here producing hemiopia (only one-half of the field of vision being perceived), and occasionally a loss of visual memory. |
| Temporal convolutions. | These (especially the uppermost) contain the centre of hearing of the opposite side. The anterior part of the lobe contains the centre of smell. |
| Centrum ovale. | Contains the fibres of the various cortical centres; consequently injury may cause analogous symptoms, as an injury of the cortical portions: hemianopia, word-deafness, aphasia, and monoplegia. |
| Central ganglia. | These (caudate nucleus, lenticular nucleus, and thalamus opticus), when injured, produce temporary hemiplegia or hemianæsthesia. The posterior portion of the thalamus also contains the centre for part of the optic nerve. |
| Internal capsule. | Contains in its posterior limb the pyramidal tract, and injury produces complete hemiplegia on the opposite side of the body. The posterior extremity of the internal capsule contains the sensory tract, and injury produces hemianæsthesia, and sometimes loss of the special senses. |
| Corpora quadrigemina, Crura cerebri. | The anterior pair contain the fibres of the optic nerve, and injury to both causes total blindness. These contain the pyramidal tracts, sensory fibres, and nucleus of the third nerve. |
| Pons Varolii. | Contains the motor-fibres of the opposite side of the face, arm, and leg, and the nuclei of the fifth, the sixth, and the third nerve of the same side. |
| Medulla oblongata. | Contains the cardiac and respiratory centres, the nuclei of the hypoglossal, spinal accessory, and glosso-pharyngeal nerves, and the motor fibres for the opposite side of the body. |
| Cerebellum. | Affection of the cerebellum produces uncertainty of gait (ataxia) and a marked vertigo. |
| Crura ad pontem. | Affection of the crura ad pontem produces forced positions and forced movements. |

**Loch.** Looch.

**Loch′ades.** Sclerotica.

**Lochadi′tis.** Sclerotitis.

**Lochia,** lo′ke-ah (*lochios*, relating to childbirth). The cleansings; serosanguineous discharge following delivery. During the first two or three days it is bloody, but afterward becomes whitish or greenish in color, and exhales a disagreeable and peculiar odor. The duration, quantity, and character of the discharge vary according to numerous circumstances. It continues usually from fourteen to twenty-one days. See *Parturition*. **L. al′ba,** l. lactea. **L. cruen′ta,** the reddish discharge of the first few days. **L. lac′tea,** the whitish discharge which succeeds the bloody one. **L. muco′sa,** l. lactea when it is thickish and greenish in color. **L. ru′bra,** l. cruenta. **L. sero′sa,** l. lactea when it is thin and ichorous.

**Lochial,** lo′ke-al. Pertaining to the lochia.

**Lochiocœlii′tis** (*koilia*, abdomen). Puerperal fever.

**Lochiome′tra** (*metra*, the uterus). Retained lochia.

**Lochiometri′tis.** Puerperal metritis.

**Lochion,** lok′e-on. Childbed.

**Lochiop′yra** (*pyr*, fever). Puerperal fever.

**Lochiorrha′gia** (*rhegnymi*, to break forth). Excessive lochial discharge.

**Lochiorrhœ′a** (*rheo*, to flow). Immoderate discharge of the lochia.

**Lochio′rum reten′tio.** Retention or suppression of the lochia; ischolochia.

**Lochioschesis**, lo-ke-os′kes-is (*schesis*, retention). Retention or suppression of the lochia.

**Loch′o** or **Loch′och.** Looch.

**Lock fin′ger.** Flexed, immovable position of the fingers from morbid growth in the metacarpophalangeal joint. **L. hos′pital**, hospital in England for gratuitous treatment of venereal diseases. **L.** or **locked jaw**, trismus.

**Lock′ing.** Act of fastening tightly together, said of the heads of twin children at birth when the two chins are caught one against the other, impeding labor. Term applied also to the coxofemoral articulation.

**Lock′wood′s lig′ament.** Suspensory ligament of the eyeball.

**Lo′co** or **Lo′co disease′.** Name of disease of cattle in Kansas and Texas, attributed to a poisonous plant of this name. **L. plant** or **L. weed**, name applied to varieties of Astragalus mollissimus.

**Locoed**, lo′kode. Affected with loco disease.

**Lo′coism.** Loco disease.

**Locomobil′ity** or **Locomotil′ity.** See *Locomotion.*

**Locomo′tion** (*locus*, place, *moveo*, *motum*, to move). An action, peculiar to animal bodies, by which they transport themselves from place to place. It, as well as *musculation*, has also been used for the function of animal movements. The faculty is sometimes called *locomotivity*, *locomobility*, or *locomotility*. **L. of an ar′tery** is the movement produced in vessels having a curvature by the impulse of the blood sent from the heart, which tends to straighten the artery and causes the movement in question.

**Locomo′tive.** Relating to locomotion.

**Locomotiv′ity.** See *Locomotion.*

**Locomo′tor** or **Locomo′tory.** Locomotive. **L. atax′ia**, tabes dorsalis.

**Locomoto′rium.** The motor apparatus.

**Loculamen′ta.** Compartments.

**Loc′ular.** Divided into small spaces or compartments; unilocular, bilocular, multilocular, according as there are one, two, or many such spaces.

**Loc′ulus** (dim. of locus). Compartment; small space; areola.

**Lo′cus.** Indefinite anatomical term meaning a place or spot. **L. cæru′leus**, a small eminence of dark gray substance, opposite the crus cerebelli, which presents a bluish tint through the thin stratum covering it; a thin streak of the same color, continued up from this on either side of the fasciculi teretes, is called the *tænia violacea*. **L. cine′reus**, substantia ferruginea. **L. ferrugin′eus**, l. cæruleus. **L. lu′teus**, the entire space covered by the mucous membrane connected with the sense of smell, of a yellow color in man. The term *regio olfactoria* designates only that region of the nasal mucous membrane where the nerves of smell split up and terminate. **L. mino′ris resisten′tiæ**, place of least resistance, said of the place of pointing of an abscess, protrusion of a hernia, etc. **L. ni′ger**, see *Peduncles of the brain.* **L. perfora′tus anti′cus** or **ante′rior**, a triangular, flat surface of the brain, corresponding to the posterior extremity of each olfactory process in front of the optic tract, and near the entrance of the fissure of Sylvius, substantia or lamina perforata anterior. **L. p. posti′cus** or **poste′rior**, see *Tarini pons.* **L. ru′ber**, red nucleus.

**Lo′cust, black.** Robinia pseudoacacia. **L. plant**, Cassia marilandica. **L. tree**, Robinia pseudoacacia. **Yel′low l.**, Cladrastis tinctoria.

**Lo′cust-eat′ers.** Acridophagi.

**Lodged.** Wedged.

**Loeb′isch′s for′mula.** See *Christison.*

**Loeff′ler′s bacil′lus.** Bacillus diphtheriæ. **L.′s solu′tion**, an application for the destruction of diphtheria germs, prepared as follows: Menthol 10 grammes; toluene q. s. to make 36 c.c.; then add creolin 2 c.c., iron-chloride solution 4 c.c., alcohol q. s. ad 100 c.c. **L.′s stain**, a weak solution of methylene blue employed for staining bacteria.

**Loeffle′ria.** Morbid condition in which Loeffler′s bacillus is present, but the disease itself—diphtheria—is not developed.

**Loeh′lein′s diam′eter.** Line between the middle part of the subpubic ligament and the anterior upper angle of the great sacrosciatic foramen.

**Lœ′mic.** Loimic, pertaining to the plague.

**Lœmocholo′sis** (*loimos*, plague, *chole*, bile). Yellow fever.

**Lœmoco′mium** (*loimos*, plague). A hospital for those affected with plague.

**Lœmog′raphy.** Loimography.

**Lœ′moid.** Relating to contagious diseases, the plague, etc.

**Lœmol′ogy** (*loimos*, plague, *logos*, description). Loimology.

**Lœm′poc.** Name applied to beriberi in Java.

**Loe′we′s ring.** See *Maxwell′s ring.*

**Loe′wenberg′s canal′.** Scala media of cochlea.

**Loe′wenthal′s tract.** Descending anterolateral column of the spinal cord.

**Loe′wit′s bod′y** and **L.′s gan′glion.** See *Löwit.*

**Logadec′tomy** (*logades*, sclerotic, *ektome*, excision). Excision of a part of the conjunctiva.

**Log′ades** (*logas*, white of the eye). Sclerotic.

**Logadi′tis.** Sclerotitis.

**Log′adoblennorrhœ′a.** Purulent conjunctivitis.

**Logagno′sis** (*logos*, word, *a*, priv., *gnosis*, knowledge). Forgetfulness of words, aphasia.

**Loganin′.** Glucoside, $C_{25}H_{34}O_{13}$, from seeds of strychnos.

**Logokopho′sis** (*logos*, word, *kophosis*, deafness). Word-deafness.

**Logoma′nia** or **Logomonoma′nia.** Monomania, chief symptom of which is talkativeness.

**Logoneuro′sis** (*logos*, word, *neuron*, nerve). Disease affecting speech.

**Logop′athy** (*logos*, word, *pathos*, disease). Disordered speech dependent upon cerebral disease; dyslogia.

**Logople′gia** (*logos*, word, *plege*, stroke). Form of aphasia in which words are remembered but cannot be pronounced.

**Logorrhœ′a** (*logos*, word, *rheo*, to flow). Morbid rapidity of speech.

**Log′os.** Reason.

**Log′wood.** Hæmatoxylon campechianum.

**Lo′hoch.** Looch.

**Loi′mic** (*loimos*, plague). Pertaining to plague.

**Loimocholo′sis** (*loimos*, plague, *chole*, bile). Yellow fever.

**Loimog′raphy** (*loimos*, plague, *grapho*, to describe). Description of the plague and pestilential diseases.

**Loimol′ogy** (*loimos*, plague, *logos*, a discourse). Treatise on contagious epidemic diseases.

**Loin.** The lateral lumbar region between the last rib and the crest of the ilium; commonly used in the plural to express the lumbar region in general; see *Lumbi.*

**Loiseleu′ria procum′bens.** Azalea procumbens; indigenous; ord. *Ericaceæ.* Astringent.

**Lolia′ceum radi′ce repen′te.** Triticum repens.

**Loliine′.** See *Lolium temulentum.*

**Lo′lium.** A genus of grasses. **L. an′nuum**, l. temulentum. **L. peren′ne**, ray darnel; red darnel; used in diarrhœa, amenorrhœa, etc. **L. temulen′tum**, cockgrass, jum, darnel; poisonous in large doses. *Loliine*, a volatile alkaloid derived from it, slows the action of the heart and reduces bodily temperature.

**Lom′bardy erysip′elas** or **L. lep′rosy.** Pellagra.

**Lo′mi-lo′mi.** Term given to a form of massage in the Sandwich Islands.

**Lonchadi′tis** (for *logaditis*). Sclerotitis.

**Lonchi′tis.** Polypodium filix mas.

**Lon'don paste.** Paste composed of equal proportions of caustic soda and lime.

**Long.** Greater in length than breadth, as the long bones. Also applied to several muscles to distinguish them from others of similar function which are shorter. We say, for instance, long flexors and long extensors, in opposition to short flexors and short extensors.

**Lon'ganon, Lon'gaon,** or **Lon'gas.** Rectum.

**Longev'ity** (*longus*, long, *ævum*, age). Prolongation of existence to an advanced age; also duration of life.

**Longhead'ed.** Macrocephalic.

**Longiduc'tor.** Adductor longus.

**Long'ings.** Peculiar and whimsical desires of pregnant women.

**Longiperone'us.** Peroneus longus.

**Longisec'tion.** Longitudinal section.

**Longis'simus** (superlative of longus). Term applied to parts which are very long in their relation to others. **L. cap'itis,** complexus minor. **L. cervi'cis,** transversalis colli; trachelomastoid. **L. dor'si,** muscle situated vertically at the posterior part of the trunk, filling in a great measure the vertebral furrows. It is attached to the posterior surface of the sacrum, to the transverse processes of all the lumbar and dorsal vertebræ, and inferior margin of the last seven or eight ribs; it maintains the vertebral column in a straight position, straightens it when bent forward, and can even carry it back. It also assists in the rotatory motion of the trunk. **L. fem'oris,** sartorius. **L. oc'uli,** obliquus superior oculi.

**Longitu'dinal.** Lengthwise. **L. si'nus,** subcranial sinus or canal from crista galli to tentorium.

**Longsight'edness.** Presbytia; presbyopia. See *Hypermetropia* and *Hyperopia.*

**Lon'gus.** Long; a term applied to various muscles. **L. atlan'tis,** see *Longus colli.* **L. cap'itis,** rectus capitis anticus major. **L. col'li** (long muscle of the neck), situated at the anterior and superior part of the vertebral column; is attached to the anterior surface of the bodies of the first three dorsal and last six cervical vertebræ, to the intervertebral ligaments, the anterior edge of the transverse processes of the last five cervical vertebræ, and the tubercle on the anterior arch of the first; it bends the cervical vertebræ upon each other and upon the dorsal vertebræ. If the upper portion acts on one side only it occasions the rotation of the atlas on the vertebra dentata, and consequently of the head on the neck. The upper and outer portion is called *longus atlantis,* and the upper oblique portion is called *obliquus colli superior* of Luschka.

**Loni'cera brachyp'oda.** Japanese plant. Ord. *Caprifoliaceæ.* Infusion or decoction of the leaves is possessed of diuretic properties. **L. caprifo'lium,** caprifole; white Italian honeysuckle. Laxative, diuretic, tonic, etc. **L. diervil'la,** Diervilla trifida. **L. etrus'ca,** fruit of species from S. Europe; emetic and cathartic. **L. german'ica,** L. periclymenum. **L. mariland'ica,** Spigelia marilandica. **L. pericly'menum,** common woodbine, honeysuckle; slightly astringent and tonic, and formerly much used in gargles. **L. sempervi'rens,** scarlet or trumpet honeysuckle; indigenous. Syrup of the leaves has been given in asthma and in tonsillitis.

**Looch,** lo'ok (Arabic). Linctus, electuary.

**Loodia'na disease'.** Term applied to anthrax in India.

**Loo'fah.** Luffa.

**Loop.** A folding or doubling in a cord-like anatomical structure. Ansa. A fine platinum wire formed into a loop at one extremity, the other being inserted in a glass handle; used for transferring bacteria from one culture medium to another. **Hen'le's l.,** narrow loop formed in the kidney, at the contiguous borders of the medullary and cortical portions, by the peculiar turning or looping of a urinary tubule. **Obstet'rical l.,** fillet. **L. stitch,** see *Suture.*

Platinum loop for bacteriological work.

**Loose.** Lax. See *Looseness.*

**Loose'ness of the bow'els.** Diarrhœa.

**Loose'strife.** Lythrum salicaria. **Creep'ing l.,** Lysimachia nummularia. **Four'leaved l.,** Lysimachia quadrifolia.

**Lo'pez rad'ix** or **root.** Root of an E. Indian tree, extolled in cases of colliquative diarrhœa.

**Lophad'ia** or **Loph'ia.** Back of the neck; upper part of the neck. The first vertebra of the back.

**Lophoco'mus.** Tufted or woolly state of the hair or scalp.

**Lo'phodont** (*lophos,* a crest, *odous,* a tooth). Molar tooth, surmounted by a crest or ridge.

**Lo'phos.** Ridge or crest.

**Lophotrichia,** lo-fo-trik'e-a. Lophotrichous bacteria.

**Lophot'richous** (*lophos,* tuft, *thrix,* hair). Having a tuft of vibratile filaments at one extremity, as *l. bacteria.*

**Lo'pima.** Fagus castanea.

**Loquacity,** lo-kwas'it-e (*loquor,* to speak). Act of speaking with volubility; sometimes a symptom of disease, and observable in hysteria, etc.

**Loque'lah** (*loquor,* to speak). Articulated voice. **L. aboli'ta,** aphonia. **L. blæ'sa,** stammering; balbuties. **L. impedi'ta,** speaking with difficulty or confusion.

**Lordo'ma.** Lordosis.

**Lordoscolio'sis.** Lordosis combined with scoliosis.

**Lordo'sis** (*lordos,* curved, bent). Name given to curvature of the bones in general; particularly to that of the vertebral column forward, giving rise to the projection of the sternum called chicken-breast or pigeon-breast; lordosis has been called *myopathic* or *osteopathic* according as the muscles or the bones are the pathological causes. **Lum'bar l.,** projection of the lumbar vertebræ forward. **L. valgo'rum,** genu valgum.

**Lordot'ic.** Pertaining to or affected with lordosis.

**Lorenz' opera'tion.** For congenital dislocation of the hip; the displacement is reduced by manipulation, the knife not being used, and the head of the os femoris is then held in the acetabulum by means of an immovable apparatus, until a new socket is formed for it.

**Lore'ta's method.** Treatment of aneurysm by introduction of a wire into the sac. **L.'s opera'tion,** pylorodiosis, or dilatation of a stenosed pylorus by the finger passed through an incision in the wall of the stomach.

**Loretin'.** $C_9H_6IO_4SN$. Metaiodoorthooxyquinoline-anasulphonic acid. An iodine preparation, from its composition possessing also the properties of phenol and the characteristic attributes of a chinolin derivative. Resembles iodoform in color and antiseptic action. **L. meth'yl,** in yellow needles or scales. Antiseptic.

**Lo'sophan.** $C_7H_5I_3O$. Triiodometacresol. A triiodocresol produced by action of iodine upon metacresol-oxytoluic acid in presence of an alkali. In white needles, soluble in ether, benzol, and chloroform. It contains 80 per cent. of iodine. Employed externally in solution and ointment in parasitic skin diseases, as sycosis, mycosis tonsurans, herpes tonsurans, pityriasis, acne, and parasitic skin diseases.

**Lostor'fer's cor'puscles.** Granular masses found in blood of syphilitics.

**Lo'tio** (*lavo, lotum,* to wash). Clyster; lotion. **L. adstrin'gens,** Warren's styptic. **L. fla'va, L. hydrar'gyri fla'va,** yellow wash. **L. hydrar'gyri ni'gra,** or **L. ni'gra,** black wash. **L. ru'bra,** red wash, made of corrosive sublimate, red sulphuret of mercury, creosote, and water; used like yellow wash. **L. sapona'cea,** see *Sapo.*

**Lo'tion.** Fluid external application, ordinarily applied by wetting linen in it, and keeping it on the part affected **Cam'phorated l. of Bates,** Bates's camphorated water; red wash of copper sulphate, camphor, and other ingredients; diluted it forms Bates's collyrium. **Goulard's′ l.**, liquor plumbi subacetatis dilutus; lead-water. **Gran′ville's antid′ynous** or **counterir′ritant l.**, the milder form is made of liq. ammon. fort., ℥j; sp. rosmarin., ʒvj; tinct. camphor., ʒij. M. The stronger form is made of liq. ammon. fort., ʒx; spir. rosmar., ℥ss; tinct. camphor., ʒij. M. The stronger lotion vesicates rapidly; a piece of linen folded six or seven times may be imbued with it and laid for a few minutes on the part to be irritated. **Hydrocyan′ic l.** (hydrocyanic acid., ʒiv; rectified spirit of wine, ℥j; distilled water, ℥vss); used with much success in impetigo, etc. **L. of potas′sium sul′phuret** (potassii sulphuret, ʒij; saponis, ʒiss; aquæ calcis, ℥viiss; alcohol. dilut., ℥ij); used in various chronic cutaneous diseases.

**Lotu′ra** (*lavo, lotum,* to wash). Lotion. **L. car′nium**, washings of flesh, said of dysenteric passages having such an appearance.

**Lo′tus sylves′tris.** Trifolium melilotus. **L. virginia′na**, Diospyros virginiana.

**Louis's an′gle.** An angle sometimes seen in tuberculosis between the upper part of the sternum and its body. **L.'s law**, when tubercles are present in other organs they will always be found in the lungs.

**Loup′ing ill.** Hydrorrhachitis in sheep, producing paraplegia.

**Louse.** Pediculus.

**Lou′siness** or **Lou′sy disease′.** Phtheiriasis.

**Lov′age.** Ligusticum levisticum.

**Love′apple plant.** Solanum lycopersicum. **L. pea**, Abrus precatorius.

**Lo′vi's beads.** Small hollow glass beads, constituting specific-gravity beads.

**Low spir′its.** Hypochondriasis.

**Lowd′ham's amputa′tion.** See *Amputation.*

**Löwe's ring.** See *Maxwell's ring.*

**Low′er po′lar cir′cle** (**Barnes's**). Inferior third of the uterine cavity.

**Low′er's tu′bercle.** Small projection, the existence of which is by no means constant, found in the sinus venosus between the superior and inferior cava.

**Lö′wit's bod′y.** Hæmamœba leukæmiæ parva (vivax). **L.'s gan′glion**, bulbus arteriosus.

**Lox′a bark.** Pale cinchona bark.

**Loxar′thron** (*loxos,* oblique, *arthron,* joint). Loxarthrosis.

**Loxarthro′sis** or **Loxar′thrus** (*loxos,* oblique, *arthron,* joint). Vicious deviation, distortion, or direction of the joints, without spasm or luxation, as in clubfoot.

**Loxauchenus**, loks-aw-ke′nus (*loxos,* oblique, *auchen,* neck). Name given to skulls in which the line joining the inion and basion describes an angle with the radius fixus varying from 14° to 26°.

**Lox′ia** (*loxos,* oblique). Wryneck.

**Lox′ic.** Distorted; oblique.

**Loxochor′dus** (*loxos,* oblique, *chorda,* cord). Angle formed by meeting of the line between the hormion and basion, with the radius fixus between 15.5° and 33°.

**Loxocor′yphus.** Name given to a skull in which the line joining the bregma and lambda describes an angle with the radius fixus at from 17° to 29°.

**Loxocye′sis.** Luxation or obliquity of the gravid uterus.

**Lox′odont** (*loxos,* slant, *odous,* tooth). Having teeth set at unusual angles to the jaw.

**Loxodon′tus.** Name given to a skull in which the line connecting the subnasal and alveolar points forms an angle of from 50° to 88° with the radius fixus.

**Loxomet′opus.** Name given to a skull in which the line joining the bregma with the nasal point describes an angle of from 33.5° to 47° with the radius fixus.

**Loxophthal′mus** (*loxos,* oblique, *ophthalmos,* eye). Strabismus.

**Loxopis′thius.** Name given to a skull in which a line projected through the lambda and inion describes an angle of from 95° to 106° with the radius fixus.

**Loxopisthocra′nius.** Term applied to a skull in which a line projected through the lambda and opisthion forms with the radius fixus an angle of from 119° to 130°.

**Loxopros′opus.** Term applied to a skull in which a line drawn from the alveolar point to the nasion forms with the radius fixus an angle of from 75° to 89.5°.

**Loxoptery′gium lorent′zii.** Red quebracho. The alkaloid *loxopterygine′,* obtained from the bark, is antiperiodic.

**Loxorrhi′nus.** Term applied to a skull in which a line projected from the nasion to the subnasal point forms with the radius fixus an angle of from 77° to 87.5°.

**Loxot′omy** (*loxos,* oblique, *tome,* incision). Amputation by oblique incision.

**Loy's disease′.** Horsepox.

**Loz′enge.** Troche.

**L. S. A.** Abbreviation for left sacroanterior position of the fœtus.

**L. S. P.** Abbreviation for left sacroposterior position of the fœtus.

**Lu′barsch's crys′tals.** Small crystals found after death in the epithelial cells of the testicle.

**Lub′be's vein.** Posterior anastomotic vein, between the cavernous and lateral sinuses.

**Lu′bricants** (*lubrico,* to make slippery). Demulcents, emollients.

**Lubrica′tion.** Application of oily matter to any part to give it smoothness or softness.

**Lubricity**, lu-bris′it-e. Lasciviousness.

**Lu′cæ's horizon′tal plane.** Plane passing through the axis of the zygomatic arches.

**Lu′cas's sign.** Tumefaction of the abdomen, an early symptom of rickets.

**Lu′cas-Championnière's′ disease′.** Chronic bronchitis, with a disposition to the formation of false membranes.

**Lu′cid** (*luceo,* to shine). In medicine, a word particularly applied to the intervals of apparent reason which occur in mental alienation; intervals of *lucidity.*

**Lucidifica′tion.** Clearing up of a previously turbid substance.

**Lucid′ity.** Clearness of intellect.

**Lu′cifer-match′makers′ disease′.** Phosphornecrosis.

**Lucif′ugus** (*lux,* light, *fugio,* to shun). Dreading light.

**Lucilline′.** A purified petroleum jelly.

**Lu′cium.** A recently discovered element.

**Luck′y-hood.** Caul.

**Lucu′lia gratis′sima.** E. Indian shrub; bark is antipyretic.

**Lucu′ma** (Sp.). Fruit of the southern provinces of the coast of Peru and the north of Chile. **L. caimi′to**, see *Abiaba.* **L. mammo′sa**, see *Mamme apple.* Other species are used as food or in confections. **L. salicifo′lia**, Mexican species; seeds are used in pleurisy; the bark is antiperiodic.

**Lucumin′.** Bitter principle from a Peruvian species of lucuma; tonic and antipyretic.

**Lu′dus Helmon′tii** or **Paracel′si.** Calcareous stone used by the ancients in calculous affections. Term also applied to calculous concretions.

**Ludwig′ia palus′tris diffu′sa.** E. Indian species; vermifuge, diuretic, astringent. **L. wa′ter pur′slane**, phthisis weed; indigenous; used as a pectoral in asthma and chronic cough.

**Lud′wig's angi′na.** Sublingual and submaxillary cellulitis. **L.'s gan′glion**, ganglion in wall of right auricle.

**Lu′es** (*luo,* to dissolve or melt away). Disease, plague; usually syphilis. **L. cel′tica**, syphilis. **L. deif′ica**, epilepsy. **L. divi′na**, epilepsy. **L. dysenter′ica**, dysentery. **L. gonorrho′ica**, gonorrhœa.

**L. in′dica**, frambœsia. **L. inguina′ria**, plague. **L. panno′niæ**, Hungary fever. **L. pestif′era**, plague. **L. polo′nica**, plica. **L. sarmat′ica**, plica. **L. scorbu′tica**, see *Purpura*. **L. seconda′ria**, secondary syphilis. **L. syphilo′des**, syphilis, pseudosyphilis. **L. trichomat′ica**, plica. **L. vene′rea**, syphilis.

**Luet′ic.** Syphilitic.

**Luf′fa.** Various species of this cucurbitaceous plant, growing chiefly in Asia and Africa, are used medicinally, particularly as drastic cathartics. **L. ægypti′aca**, towel-gourd, washing-rag or gourd, of Egypt and Arabia, is used for personal washing. **L. ama′ra** is diuretic and tonic. **L. echina′ta** has a poisonous fruit, which has been employed in cholera and colic.

**Lug.** Ear.

**Lug′dus.** Erysipelas.

**Lu′gol's caus′tic.** Solution of iodine and iodide of potassium, each ℥j in ℥ij of water; used in lupus, etc. **L.'s lo′tion**, weak solution of iodine, gr. ij–iv, and iodide of potassium, gr. iv–viij, in water, Oj; used in ozæna, scrofulous ophthalmia, etc. **L.'s solu′tion**, liquor iodi compositus.

**Lu′jula.** Oxalis acetosella.

**Lul′laby speech.** Lallation.

**Lumba′go** (*lumbi*, loins). Soreness and stiffness of the lumbar muscles and lumbodorsal fascia. **L. apostemato′sa, L. ab arthroc′ace, L. psoad′ica**, pain in the loins from abscess; psoadic lumbago may also be caused by inflammation of the psoas muscle. See *Psoitis*. **L. arthrit′ica**, l. of gouty origin, the periosteum of the spinal bones being affected. **L. a ni′su** (*nisus*, effort), pain in the loins from bearing too heavy a burden. **L. rheumat′ica**, l. due to rheumatism of the lumbar muscles. **L. scorbu′tica**, l. attending or following scurvy.

**Lum′bar** (*lumbi*, loins). Belonging to the loins. **L. ab′scess**, psoas abscess; abscess found on the side of the psoas muscle or between that and the iliacus internus. Between these muscles is a quantity of loose, areolar substance, and when an abscess forms it can find no outlet except by a distant course, generally descending along the psoas muscle, forming a swelling immediately beneath Poupart's ligament; at times, however, extending down the thigh under the fascia. Severe hectic follows the bursting of the abscess, and often death. The system must be supported under the great reparative efforts required of it. **L. aponeuro′sis**, lumbar fascia. **L. ar′teries** are four or five in number on each side. They arise from the sides of the abdominal aorta, and pass behind the muscles situated in front of the lumbar portion of the spine, to gain the broad muscles of the abdomen. They give off spinal branches and anterior, posterior, and external muscular branches. **L. co′lon**, ascending colon. **L. enlarge′ment**, portion of the spinal cord possessing a greater diameter, beginning at the tenth dorsal vertebra. **L. gan′glia**, ganglia of the sympathetic located in the lumbar region. **L. glands**, lymphatic glands located in the lumbar region. **L. her′nia**, hernia located in the lumbar region. **L. nerves** are five in number, and issue from the vertebral column by the spinal foramina. The first lumbar nerve gives off three branches: the external or ilioscrotal, the middle or inguinocutaneous, and the internal or infrapubian. Along with the three pairs below it, it forms the lumbar plexus. **L. plex′us**, plexus formed by the union of the communicating branches of the anterior branches of the first four lumbar nerves. It is situated behind the psoas muscle and before the transverse processes of the lumbar vertebræ. It furnishes, besides the branches which proceed from the first pair, several filaments that are distributed to the psoas muscle, to the iliacus, the integuments, and glands of the groin; and three great branches—the crural, obturator, and lumbosacral. **L. re′gion**, the loins; see *Lumbi*. **L. veins** have an arrangement analogous to that of the arteries of the same name. They communicate with the vertebral sinuses, azygous veins, etc., and pass into the vena cava inferior. **L. ver′tebræ**, the five vertebræ of the lumbar region.

**Lumba′ris.** Lumbar; any muscle of the lumbar region. **L. exter′nus**, quadratus lumborum. **L. inter′nus**, psoas magnus.

**Lum′bermen's itch.** Prairie itch; winter itch.

**Lum′bi** (pl. of lumbus). The loin or loins; lumbar region. The posterior regions of the abdomen, comprised between the base of the chest and the pelvis. The parts which enter into the formation of the lumbar regions are: the skin; a considerable quantity of areolar texture; broad and strong aponeuroses—the latissimus dorsi, obliquus externus, and obliquus internus abdominis, transversalis abdominis, quadratus lumborum, and the mass common to the sacrolumbalis, longissimus dorsi, and multifidus spinæ. These muscles surround the lumbar region of the vertebral column. The vessels, nerves, etc., of the loins are called lumbar.

**Lum′biplex.** Lumbar plexus.

**Lumbiplex′al.** Relating to the lumbar plexus.

**Lumbo-.** In composition, relating to the lumbar region.

**Lum′boabdom′inal.** Relating to the lumbar and abdominal regions; a term designating a muscle of inferior animals similar to the human transversalis abdominis.

**Lumbocolos′tomy** (*lumbus*, the loin, *colon*, *stoma*, mouth). The establishment of an artificial anus in the colon in the lumbar region.

**Lumbocolot′omy.** Colotomy in the lumbar region.

**Lumbocos′tal.** Relating to the loins and ribs; superficialis costarum muscle of lower animals, like the human serratus posticus; sacrospinalis.

**Lumbodor′sal.** Relating to the loins and back.

**Lumbodyn′ia** (*odyne*, pain). Lumbago.

**Lumbofemora′lis.** Psoas magnus.

**Lum′bo-ili′acus.** Psoas parvus.

**Lum′bo-in′guinal.** Relating to the loins and groin.

**Lum′bo-ova′rian.** Relating to the loins and the ovary conjointly.

**Lumbosa′cral.** Belonging to the lumbar and sacral regions or to the lumbar vertebræ and the sacrum. Large nerve given off from the anterior branch of the fifth lumbar pair, which descends into the pelvis before the sacrum to join the sciatic plexus.

**Lum′brical.** Relating to the lumbricus.

**Lumbrica′lis.** Resembling a lumbricus or earthworm; lumbricoid. Name given to small muscles in the palm of the hand and sole of the foot. **L. ma′nûs**, one of four small, fleshy, thin, round, long, fusiform fasciculi situated in the palm of the hand. They arise from the tendons of the flexor communis digitorum, and are inserted at the outer and posterior side of the superior extremity of the first phalanges of the last four fingers. These muscles bend the fingers on the metacarpus and fix the tendons of the flexor digitorum communis. **L. pe′dis**, one of the lumbricales in the foot, analogous to those of the hand in form, number, and arrangement.

**Lum′bricide** (*lumbricus*, worm, *cædo*, to kill). Anthelmintic especially destructive to Ascarides lumbricoides.

**Lumbricid′ia anthelmint′ica.** Andira anthelmintica. **L. lega′lis**, Andira stipulacea.

**Lum′briciform.** Like a lumbricus.

**Lum′bricoid.** Resembling an earth-worm; see *Ascaris*. **L. mus′cle**, lumbricalis.

**Lum′bricus** (earth-worm). Round worm parasitic in the intestine; see *Ascaris*. **L. la′tus**, Bothriocephalus latus, Tænia solium. **L. rena′lis**, Eustrongylus gigas. **L. te′res hom′inis**, Ascaris lumbricoides.

**Lum′bus.** The loin. **L. ven′eris**, Achillea millefolium.

**Lu′men.** Light, pupil; also employed in the same sense as foramen and spiramentum (air-hole), and hence extended to denote the calibre of a tube or vessel. **L. con′stans**, phosphorus.

**Luminif′erous.** Producing light.

**Luminos′ity.** Condition of being luminous; phosphorescence.

**Lu′minous.** Affording light; shining.

**Lump′y jaw.** Actinomycosis.

**Lu′na** (moon). Silver; the moon. **L. Albi′ni,** lesser sciatic notch. **L. cor′nea,** silver chloride. **L. imperfec′ta,** bismuth. **L. philosopho′rum,** mercury. **L. potab′ilis,** silver nitrate.

**Lu′nacy.** Insanity. See *Lunatic*.

**Lu′nar** (*luna,* moon, silver). Relating to the moon (see *Lunatic*), or to silver, as lunar caustic. **L. bone,** semilunar bone; the second bone in the upper row of the carpus. **L. caus′tic,** silver nitrate.

**Luna′ria** (*luna,* moon). Menses. **L. peren′nis** or **redivi′va,** moonwort, satin honesty; diuretic, laxative, antiseptic.

**Lu′natic.** Relating to the moon; epithet given to diseases supposed to appear at certain phases of the moon, or to persons affected by them. A lunatic, at the present day, may be defined as one laboring under lunacy or mental alienation, *dementia accidentalis* or *adventitia;* that is, under any form of unsoundness of mind, except idiocy. In law, a lunatic is one who has had understanding, but has lost the use of his reason and become *non compos mentis.*

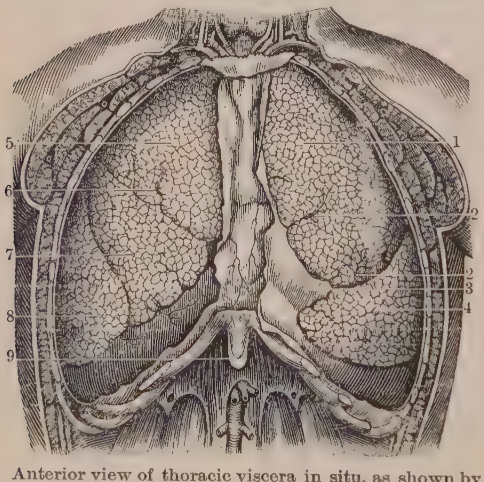
**Lunat′icus.** Insane; lunatic. A writ *de lunatico inquirendo* is one granted for inqury into the mental condition of one supposed to be insane.

**Lu′natism.** Periodical conjunctivitis; somnambulism, especially in the moonlight.

**Luna′tum.** Cuneiform bone.

**Lunel′la** (dim. of *luna,* moon). Hypopyon.

**Lung.** Essential organ of respiration, which is double and occupies the two sides of the chest. The lungs, which are of a spongy, soft, flexible, compressible, and dilatable structure, fill exactly the two cavities of the thorax, and are separated from each other by the mediastinum and the heart. The right lung, which is shorter and broader than the left, is divided by two oblique fissures into three unequal lobes, *lobi* or *alæ pulmonum.* The left has only two lobes, and consequently only one fissure. At the internal surface of these organs, which is slightly concave, there is about the middle a pedicle formed by the bronchia and pulmonary vessels, and called by anatomists the *root of the lungs.* Essentially, the lungs are composed of prolongations and ramifications of the bronchia and of the pulmonary arteries and veins, the divisions of which are supported by a fine areolar tissue.



Anterior view of thoracic viscera in situ, as shown by the removal of the anterior chest wall: 1, upper lobe of left lung; 2, 2, interlobular fissures; 3, pericardium; 4, lower lobe of left lung; 5, upper lobe of right lung; 6, lobular fissures; 7, middle lobe of right lung; 8, lower lobe of right lung; 9, xiphoid cartilage.

When the surface of the lungs is examined in a clear light, we may see, even through the pleura, that their parenchyma is formed by the aggregation of a multitude of small vesicles, of an irregularly spheroid or ovoid shape, full of air, and separated by white and opaque septa, constituting lozenge-shaped spaces, which are called *lobules—lobuli* or *insulæ pulmonales*—and which are separated by interlobular areolar tissue. These lobules do not communicate with each other. The series of air-sacs connected with the extremity of each bronchial twig has been called a *lobulette.* The vesicles are called air-cells, air-vesicles or lung-vesicles, spiramenta or spiramina, or cellulæ pulmonum. They who regard the bronchial tubes as terminating in elongated cavities have termed those cavities air-sacs, infundibula, Malpighian vesicles, terminal cavities, etc., and the cup-like cavities observed in these have been called *alveoli.* They are the air-cells.

Along the partitions or septa is deposited in greater or less quantity *black pulmonary matter,* as it has been called, which seems to be normal. Sometimes it is seen in points, at other times in spots. The color of the lungs varies according to age and other circumstances. In youth it is more red, and afterward grayish or bluish, often as if marbled. The pleura pulmonalis is their investing membrane. The air is carried to the lungs by means of the trachea and bronchi. The black, venous blood which requires oxygenation is conveyed to the lungs from the heart by the pulmonary artery, and when it has undergone this change it is returned to the heart by the pulmonary veins. The blood-vessels inservient to the nutrition of the lungs are the bronchial arteries. The pulmonary lymphatics are very numerous. Some are superficial, others deep-seated. They pass for the most part into the bronchial ganglions or glands. Nerves are furnished by the pulmonary plexus. The lungs are respiratory organs in which venous blood is oxygenated.

The following estimates have been made of the measurements, weights, etc., of the lungs (Krause):

Dimensions, Weight, and Volume of the Lungs.

| | Men. | | Women. | |
|---|---|---|---|---|
| | *Right.* | *Left.* | *Right.* | *Left.* |
| | Mm. | Mm. | Mm. | Mm. |
| Height at external surface . . . | 271 | 298 | 216 | 230 |
| " internal surface . . . . | 162 | 176 | 135 | 156 |
| Anteroposterior diameter . . . . | 203 | 176 | 176 | 162 |
| Transverse diameter at root of lung | 95 | 81 | 88 | 74 |
| " " " base of lung | 135 | 129 | 122 | 108 |

Weight of lung (containing a moderate amount of blood):
Men . . . . . . . . 1300 g. (right, 682; left, 618).
Women . . . . . . 1023 g. ( " 541; " 482).

Volume of lung free from air, 793–1230 cm. (right, 516–624; left, 456–585) (1023–1300 absolute gravity and 1056 specific gravity).

Lung in the cadaver, moderately filled with air—right, 1377–1990; left, 1408–1805

Filled to utmost capacity . . . . . right, 5157; left, 4364

Weight of right lung 247 g. (E. Bischoff)–718 g. (Dursy).

Weight of left lung 228 g. (E. Bischoff)–619 g. (Krause).

Lumen of the smallest bronchioles . . . . . . . 0.18–022

Smallest lobules of the lung . . . . 1 mm. in diameter.

Alveoli . . . . . . . . . . 0.12–0.38 mm. in diameter.

When half filled . . . . . . . . . . . about 0.2 mm.

Number of pulmonary vesicles, 1700–1800 million (Huschke).

**Black l.,** anthracosis. **L. capac′ity,** breathing capacity. **Coal m′iner's** or **col′lier's l.,** anthracosis. **L. fe′ver,** pneumonia. **L. flow′er,** Gentiana pneumonanthe. **L. fluke,** bronchial fluke, Distoma ringeri. **Ma′son's lung,** pneumokoniosis. **L. plague,** contagious pleuropneumonia of cattle. **L. proof,** docimasia pulmonum. **L. stones,** pulmonary calculi. **L. test,** l. proof. **L. test′er,** cylindrical bag of India rubber so arranged as to measure the quantity of air expelled by the lungs; form of spirometer.

**Lung′wort.** Medicinal plant, Pulmonaria officinalis; demulcent; a fluid extract of the leaves is used in ʒj (4.0) doses. **Cow's l.**, Verbascum nigrum. **L. tree**, Lichen pulmonarius.

**Lu'nula** (dim. of *luna*, moon). One of the two thin, semilunar surfaces on either side of the corpus Arantii of the semilunar valves of the heart. **L. of Gianuz'zi**, demilune. **L. scap'ulæ**, scapular or suprascapular notch. **L. un'guium**, white, semilunar space on the nails near the root.

**Lu'nule.** Lunula.

**Lu'pani.** Frambœsia.

**Lupanine'.** $C_{15}H_{23}N_2O$. Base from Lupinus angustifolius, causing paralysis of the brain and augmenting reflex irritability of the medulla.

**Lupa'ria.** Aconitum lycoctonum.

**Lu'pia** (*lupus*, a wolf). Wen; phagedenic ulcer; fungoid growth. **L. junctu'ræ**, spina ventosa. **L. scrofulo'sa**, scrofuloderma tuberculosum.

**Lu'piform.** Having the character or appearance of lupus.

**Lupigenin'.** A derivative of lupinine.

**Lupiin'.** Bitter glucoside from Lupinus luteus; not important medically. An alkaloid, lupinidine, a liquid, has also been obtained from the same plant.

**Lu'pine.** Lupinus.

**Lupinine'.** Alkaloid, $C_{21}H_{40}N_2O_2$, from the seeds of Lupinus luteus. Also alkaloid from seeds of Lupinus albus, and an independent amorphous mass from the same plant. They are paralyzants of the sensory and motor nervous apparatus.

**Lupino'sis.** Morbid affection of cattle, supposed to be from eating lupinus or fungoid growths on plants resulting from fermentation; the symptoms are fever, abdominal tumefaction, great debility, jaundice, etc.

**Lupino'sus.** Having the appearance of lupinus or lupine or its seeds.

**Lupinotoxin'.** Resinous principle from different species of lupinus, causing lupinosis.

**Lupi'nus.** Under this term the white lupine, Lupinus albus, ord. *Leguminosæ*, is often meant. The meal is occasionally used as an anthelmintic and as a cataplasm. Other species of lupinus are employed therapeutically, but their action is similar to that of L. albus. Its alkaloid is somewhat similar to atropine in action, and its seeds are diuretic, emmenagogue, and anthelmintic, and are externally applied to wounds, ulcers, etc.

**Lu'poid** (*eidos*, resemblance). Resembling lupus. **L. syco'sis**, follicular inflammation in which the cicatrices take on cheloid degeneration. **L. ul'cer**, rodent ulcer.

**Lupo'ma.** The primary raised efflorescence of lupus vulgaris.

**Lupoma'nia** (*lupus*, wolf). Hydrophobia, rabies.

**Lu'pous.** Relating to lupus. **L. nod'ule**, the characteristic lesion of lupus vulgaris. **L. ul'cer**, the lesion remaining after breaking down of the l. nodule in lupus exulcerans.

**Lupulin'.** Lupulinum (Ph. U. S. and Br.). Substance which exists in Humulus lupulus or hop. It is in the form of small, shining, yellowish grains or granular powder separated from the strobiles of Humulus lupulus; pulverulent and of aromatic odor. It contains resin, volatile oil, and a bitter principle; aromatic and tonic, and, according to some, narcotic.

**Lupulin'ic acid.** $C_{48}H_{82}O_{19}$. Obtained by the action of dilute sulphuric acid on lupulin; lupulirrhetin accompanies it. **L. glands**, lupulin.

**Lupuli'num.** The official (Ph. U. S. and Br.) name for the glandular powder separated from the strobiles of the hop, *Humulus lupulus;* employed in insomnia and alcoholism; dose, gr. v–x (0.32–0.65), in pill or infusion. The official preparations are: *Extrac'tum lupuli'ni flu'idum* (U. S.); dose, ♏x–xv (0.65–1.0). *Oleores'ina l.* (U. S.); dose, ♏ij–v (0.13–0.32). *Tinctu'ra lupuli* (Br.); dose, ʒss–j (2.0–4.0).

**Lupulirrhetin'.** Amorphous substance, $C_{10}H_{16}O_4$, derived from lupulin.

**Lu'pulus.** Humulus lupulus, hops.

**Lu'pus** (wolf). Jacob's ulcer, erosive ulcer of the derma, eating tetter. A term applied to several skin diseases, but chiefly to two, called *l. erythematosus* and *l. vulgaris*, which are distinct and unrelated diseases, resembling each other but superficially and in the fact that both have their usual seat on the face. **L. acneïfor'mis**, a form of lupus erythematosus. **L. anatom'icus**, verruca necrogenica. **L. cancro'sus**, cancer. **Caz'enave's l.**, l. erythematodes. **L. cornu'tus**, l. exuberans. **L. dev'orans**, l. vorax. **L. discre'tus**, l. vulgaris in which the nodules are separated. **L. dissemina'tus**, l. vulgaris in which the nodules are relatively few, but involve extensive surface. **L. ec'zema**, l. erythematosus resembling eczema. **L. erythemato'sus** or **erythemato'des**, erythematous lupus; disease of the skin characterized by small, bright red spots, elevated, and having in their centre the enlarged outlet of a sebaceous gland filled with yellow rows of dried-up epithelial cells and thickened sebaceous secretion. It is not attended with ulceration, and generally attacks the nose and cheeks. It is not of a tuberculous nature. **L. erythemato'sus discoi'des**, type occurring early, in which the first efflorescences slowly increase by peripheral growth. **L. erythemato'sus dissemina'tus**, numerous patches occur after primary efflorescence, having no tendency toward peripheral growth; some writers regard this as a form of l. erythematosus, others as a tuberculide distinct from l. vulgaris. **L. ex'edens**, l. vulgaris accompanied with ulceration. **L. exfoliati'vus**, l. vulgaris in which the nodules slowly disappear, leaving the atrophied surface smooth and shining. **L. exu'berans**, l. with various forms of excrescences, independent of or accompanying l. exulcerans. **L. exul'cerans**, type of l. vulgaris, characterized by ulceration of infiltrated skin. **L. frambœsioi'des**, l. exuberans. **Fun'gous l.**, l. exuberans. **L. hæmorrhag'icus**, a variety of l. erythematosus in which hemorrhage occurs in the vesicles, etc. **L. hypertroph'icus**, form possessing extensive warty enlargements superimposed upon a thickened skin. **L. impetigino'sus**, variety of l. erythematosus in which crusts take the place of scales. **L. lymphat'icus**, lymphangioma circumscriptum. **L. maculo'sus**, form of lupus having small, non-elevated spots or patches. **L. milia'ris**, l. acneiformis. **L. nodo'sus**, l. tuberosus. **L. non-ex'edens**, in this form the tubercles spread, but do not become ulcerated. **L. papilla'ris** or **papillomato'sus**, l. exuberans. **L. per'nio**, affection of the face and extremities, suggestive at first of chilblain, and in some instances of Raynaud's disease. **L. prom'inens**, l. tuberosus. **Pus'tular l.**, l. with tubercles covered with persistent dark crusts. **L. ro'dens**, l. exulcerans. **L. scrofulo'sus**, scrofuloderma tuberculosum. **L. seba'ceus**, l. erythematosus, with marked involvement of the sebaceous glands. **L. serpigino'sus**, a later stage of l. erythematosus than the preceding, in which the morbid process extends from the periphery. **L. syphilit'icus**, a syphilitic eruption resembling lupus. **L. tuberculo'sus**, a form of l. vulgaris characterized by the aggregating tendency of the papules. **L. tu'midus**, l. vulgaris in which there is considerable doughy infiltration of the skin. **L. varico'sus**, nævus. **L. veg'etans**, type characterized by proliferation. **L. verruco'sus**, form in which papillary development occurs; tuberculosis verrucosa cutis. **L. vo'rax**, a form of l. vulgaris which extends deeply as well as superficially. **L. vulga'ris**, a form of tuberculosis of the skin characterized by the presence of nodules or papules of a reddish-brown color situated in the corium; these are of soft consistence and thereby distinguished from the papules of syphilis and of leprosy. These nodules may disappear by absorption or may ulcerate, but the constant tendency is to recur and to invade new portions of skin. **Wil'lard's l.**, l. vulgaris.

**Lu'ra** (mouth of a bag). The contracted orifice of the infundibulum of the brain seen after the removal of the hypophysis.

**Lu'ral.** Relating to the lura.

**Lu'rid.** Pale-yellow, sallow, as applied to the complexion.

**Lur'keydish.** Mentha pulegium.

**Lu'ror.** Paleness.

**Lusch'ka's arachnoi'dal vil'li.** Pacchionian bodies. **L.'s bur'sa,** pharyngeal bursa. **L.'s car'tilage,** small, elastic, cartilaginous nodule in the anterior portion of the vocal cord. **L.'s fold,** ileocolic fold. **L.'s foram'ina,** openings in the pia mater for the passage of the choroid plexus. **L.'s fos'sa,** ileocolic fossa. **L.'s gland,** coccygeal gland; carotid or intercarotid gland. **L.'s line,** line drawn from the internal palpebral ligament to the space between the first and second molars; the direction of the nasal duct and lacrymal sac is thus shown. **L.'s mus'cle,** the muscular fibres contained in the utero-sacral ligaments. **L.'s subpharyn'geal car'tilage,** small, hyaline, cartilaginous body in the areolar tissue of the tonsil. **L.'s ton'sil,** adenoid tissue in the roof of the pharynx; pharyngeal tonsil.

**Luscios'itas.** Strabismus; obliquity of vision; myopia.

**Luscio'sus.** Blind, either totally or of one eye; short-sighted.

**Lusci'tas** (*lusciosus*, dim-sighted). Strabismus. The term has also been given to any case of obliquity in which the eye is fixed in an unnatural position.

**Lus'cus** (one-eyed). Lusciosus.

**Lu'sis.** Washing.

**Lust'garten's bacil'lus.** Supposed bacillus of syphilis.

**Lu'sus natu'ræ.** A monstrosity or variation from the abnormal conformation.

**Lute.** Composition employed either for closing apertures or joints in vessels or pipes. It is made of linseed meal and starch, or of clay and drying oil, or white of egg and lime, and that for use in vessels intended to be strongly heated is made of clay, sifted sand, and water.

**Lutein'.** Yellow principle found in corpora lutea, yolk of eggs, and clotted blood; lipochrome. **L. se'rum,** crystalline coloring-matter in blood-serum.

**Lute'ola** (dim. of luteus). Reseda luteola.

**Lu'teum o'vi.** Yolk of egg.

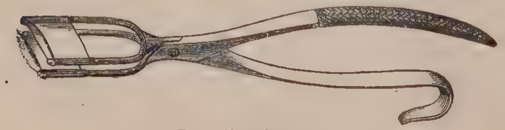
**Lu'teus.** Yellow.

**Lutidin'.** Colorless liquid derived from tar by distillation. $C_7H_9N$.

**Lux.** Light.

**Luxa'tio.** Luxation; dislocation. **L. erec'ta,** peculiar dislocation at the shoulder-joint, in which the arm can be raised straight above the head. **L. imperfec'ta,** sprain. **L. incomple'ta,** partial dislocation. **L. len'tis,** luxation of the crystalline lens. **L. perinea'lis,** see *Perineal*.

**Luxa'tion** (*luxo*, to put out of place). Dislocation. Displacement of two or more bones whose articular surfaces have lost, wholly or in part, their natural connection, owing either to external violence (*accidental luxation*) or to disease of some of the parts about the joint (*spontaneous luxation*). Luxation is *complete* when the bones have entirely lost their natural connection; *incomplete*—*luxatio imperfecta*, *subluxation*—when they partly preserve it; and *compound* when a wound communicates with the luxated joint. The general indications of treatment are: 1. To reduce the protruded bone to its original place. 2. To retain it in situ. 3. To obviate any attendant or consequent symptoms. To reduce requires extension, counterextension, and coaptation. Anæsthetics frequently assist the efforts of the surgeon by inducing more complete relaxation of the muscles. **L.-for'ceps,** a device for grasping a finger in order to facilitate traction in dislocation of a digit. **L. of the lens,** dislocation of the crystalline lens into the anterior chamber or into the vitreous humor.



Luxation-forceps.

**Luxatu'ra.** Dislocation.

**Lux'us consump'tion** (*luxus*, excess). Consumption of an excess of food, especially albuminoids, beyond the needs of the body. **L. heart,** dilatation with hypertrophy of the left ventricle of the heart.

**Luys's bod'y** or **nu'cleus.** Subthalamus.

**Lu'zula campes'tris.** Field rush, crowfeet, black gross, God's grace, and **L. pilo'sa,** hairy wood-rush, of this country and Europe. They have been used in calculous cases.

**Lycaconine'.** Obtained by decomposing lycaconitine with boiling water.

**Lycaconitine'.** Alkaloid from Aconitum lycoctonum, with poisonous effects like those of curare.

**Lyc'anthrope.** See *Lycanthropia*.

**Lycanthro'pia** (*lykos*, wolf, *anthropos*, man). Lycanthropy. Lycomania. Variety of melancholy in which the person believes himself to be changed into a wolf, and imitates the voice and habits of that animal. One so circumstanced is called a *lycanthrope*.

**Ly'cetol.** Dipropylenediamine; dimethylpiperazine tartrate. Produced by distillation of glycerin with bromide of ammonium, and reduction with metallic sodium. Used as a uric-acid solvent and antiarthritic; dose, gr. jss–iij (0.1–0.2).

**Lychnidium,** lik-nid'e-um (dim. of *lychnos*, light). Innate vital or animal heat.

**Lychnis** (lik'nis) **chalcedon'ica.** Scarlet lychnis, sweet-william. **L. githa'go,** corn cockle, rose campion; naturalized European plant, ord. *Caryophyllaceæ*. The seeds are somewhat acrid, but not poisonous. At one time employed in cutaneous diseases and in hemorrhage, and as a topical application to ulcers and fistulæ. **L. officina'lis,** saponaria. **L. sapona'ria** or **sylves'tris,** saponaria.

**Lychnium,** lik'ne-um (*lychnos*, light). Innate vital or animal heat.

**Lycium,** lis'e-um (*lykion*). Medicinal substance obtained from the roots and branches of a thorny shrub growing in Lycia; astringent, and used in dysentery, ulcers of the gums, etc. By some it has been considered to be catechu.

**Lycoctonine'.** $C_{27}H_{37}NO_5(OH)_4$. Alkaloid of Aconitum lycoctonum; a cardiac poison and paralyzant of the nervous system.

**Lycodon'tes** (*lykos*, wolf, *odous*, a tooth). Canine teeth.

**Lycoma'nia.** Lycanthropia.

**Lycoper'don** (*lykos*, wolf, *perdomai*, to break wind). Puffball, bullfists, mollipuffs; ord. *Fungi*. Puffball dries into a very fine, light brownish dust, which is sometimes used as a mechanical styptic to arrest hemorrhage. **L. arrhi'zon,** lycoperdon. **L. cervi'num,** Elaphomyces granulatus. **L. gigan'teum,** puffball, used as a hæmostatic. **L. globo'sum,** lycoperdon. **L. guloso'rum,** L. tuber. **L. pro'teus,** common puffball. **L. tu'ber,** trubs, truffle; fleshy, firm body, unknown in its mode of reproduction, which is found underground in different parts of France and Italy. Is much esteemed as an aliment. It seems to belong to the champignons, and has a particular perfume. Aphrodisiac virtues have been ascribed to it. A Virginia truffle is called *tuckaho*. It is the *Scleretium giganteum*, and is sometimes named Indian bread and Indian loaf.

**Lycoper'sicum esculen'tum.** Solanum lycopersicum. **L. po'mum amo'ris,** Solanum lycopersicum. **L. tubero'sum,** Solanum tuberosum.

**Lycopin'.** Concentrated extract from Lycopus virginicus.

**Lycopodine'.** $C_{32}H_{52}N_2O_3$. Alkaloid from Lycopodium clavatum and L. complanatum.

**Lycopo'dium** (*lykos*, wolf, *pous*, foot). Clubmoss, wolfsclaw, witchmeal; ord. *Lycopodiaceæ*. Largest of European mosses. The dust or sporules of L.

clavatum and other species of lycopodium (Ph. U. S.), which fills the capsules of its spikes; it is unctuous to the touch, and also very inflammable, and hence has been called vegetable sulphur and also farina or pulvis, or semen, or sulphur lycopodii. It is used to roll pills in, and in medicine as a dusting-powder. **L. clava′tum,** the source of the official lycopodium. **L. complana′tum,** common clubmoss, ground pine; indigenous; same properties as Lycopodium selago. **L. officina′le,** L. clavatum. **L. recur′vum,** L. selago. **L. sela′go,** upright clubmoss, fir clubmoss, upright firmoss. Decoction of this plant acts violently as an emetic and purgative, and was formerly, on this account, used as an abortive. It is employed to kill vermin.

**Lyc′opus.** Bugleweed, water bugle, water horehound, gypsyweed, Paul's betony. This indigenous herb, ord. *Labiatæ*, grows throughout the greater part of the United States. The whole herb is said to be slightly narcotic; is given in infusion (℥j : Oj); dose, Oss–Oj (250.0–500.0). **L. pu′mila,** lycopus. **L. sinua′tus,** indigenous, has similar properties. **L. uniflo′rus,** L. pumila. **L. virgin′icus,** lycopus.

**Lycorex′ia** (*lykos*, wolf, *orexis*, appetite). Hunger, especially of intense form.

**Lyco′sa taren′tula.** See *Tarentula*.

**Lycosto′ma** (*lykos*, wolf, *stoma*, mouth). Fissure of the palate.

**Ly′dus.** Blistering beetle.

**Lye.** Lixivium.

**Lyenceph′ala** (*lyo*, to loosen, *kephale*, head). Low type of cerebral development in which the hemispheres, which are without folds, are connected only by a round commissure and the hippocampal commissure.

**Lygis′mus** (*lygizo*, to bend). Luxation.

**Lyg′mus** (*lygmos*). Singultus.

**Lying-down′ state.** Parturient state.

**Lying-in′.** Puerperal or the puerperium.

**Lymph** (*lympha*, water). Name given to the fluid contained in the lymphatic vessels and thoracic duct. The properties and composition of lymph vary somewhat according to the part whence the lymphatic vessels obtain it. Generally, it is under the form of a transparent, slightly alkaline fluid, sometimes of a madder-red or yellowish color; of a spermatic odor and saline taste; soluble in water, the solution becoming turbid when mixed with alcohol. It coagulates, the clot becoming of a scarlet red if put in contact with oxygen, and of a purple red if placed in carbonic acid. Like the blood, the lymph consists of a fluid, *liquor lymphæ*, in which *lymph corpuscles* are suspended; these are entirely similar in appearance to the white blood corpuscles, being granular amœboid cells about 10$\mu$ in diameter. The liquor resembles closely the liquor sanguinis, containing more water, less albumin, and about the same amount of fibrin and salts. Lymph flows along the lymphatic vessels, uniting with the chyle, and is poured into the veins. The term is applied also to vaccine and, like serum, to any watery fluid which resembles it in appearance. **An′imal l.,** bovine l. **Aplas′tic l.,** corpuscular l. **Blood l.,** a vaccine obtained by transudation from the blood. **Bo′vine l.,** vaccine lymph taken from the heifer. **Calf l.,** bovine l. **L. cham′bers,** serous membranes or sacs, which may be regarded as greatly expanded lymph spaces. **L. chan′nel,** see *Lymph sinus*. **Coag′ulable l.,** fibrin; liquor sanguinis. **L. cor′puscles,** see *Lymph*. **Corpus′cular l.,** inflammatory form of lymph, with colorless corpuscles. **Crou′pous l.,** exudation occurring in croup. **Euplas′tic l.,** plastic l. **Fi′brinous** or **fibrinoplas′tic l.,** tenacious form, speedily coagulable. **L. fis′tula,** see *Fistula*. **L. fol′licles,** term applied to lymphoid structures, as Peyer's patches, tonsils, etc. **L. gland,** a collection of l. follicles; l. node. **L. glob′ules,** see *Lymph*. **Glyc′erin l.,** vaccine mixed with glycerin. **L. hearts,** lymphatic hearts. **Hu′manized l.,** vaccine lymph from the human subject. **Inflam′matory l.,** clear, coagulable liquid thrown out in inflammation. **L. knot,** a group of leucocytes in a lymph follicle. **Koch's l.,** tuberculin. **L. node,** small round or ovoid body situated in the course of a lymph vessel; its pulp is a mass of leucocytes held together by a fine reticulum; there are about 700 of these nodes in the body. **L. plas′ma,** fluid portion of lymph suspending the corpuscular elements. **Plas′tic l.,** lymph thrown out in inflammation, with tendency to coagulate and become organized. **L. rad′icle** or **root′let,** irregular connective-tissue space lined with endothelioid plates, through which lymph capillaries convey the lymph. **L. scro′tum,** elephantiasis of the scrotal tissues. **L. se′rum,** lymph minus corpuscles and clot. **L. si′nus,** l. channel; a channel for passage of lymph. **L. spa′ces,** open spaces in connective tissue, including serous cavities, cavities in the intestinal villi, etc. **Tis′sue l.,** lymph derived from the tissues rather than from the blood. **Vac′cine l.,** see *Vaccine*.

**Lymph′aden.** A lymphatic gland.

**Lymphadenec′tasis** (*ektasis*, dilatation). Dilatation of lymphatic gland.

**Lymphade′nia** or **Lymphad′enism.** Enlargement of the lymphatic glands.

**Lymphadeni′tis.** Inflammation of the lymphatic glands.

**Lymphad′enoid.** Resembling a lymphatic gland.

**Lymphadeno′ma.** Neoplasm histologically composed of lymphoid elements; lymphosarcoma; lymphoma. Hodgkin's disease, in which there are numerous growths of this kind in various parts of the body. **Anæ′mic l.,** pseudoleucocythæmia. **L. caverno′sum,** lymphangeioma. **Mul′tiple l.,** general lymphadenoma. **L. splen′icum,** splenic anæmia.

**Lymphadeno′sis.** Hodgkin's disease.

**Lymphæduc′tus** (*ductus*, duct). Lymphatic vessels.

**Lymphæ′mia** (*haima*, blood). A variety of leucocythæmia in which the lymphocytes are unusually numerous.

**Lymph′agogue** (*ago*, to drive). Any agent assisting in the production of lymph.

**Lymphangeio′ma.** Lymphangioma.

**Lymphangeii′tis.** Angioleucitis.

**Lymphan′gia** (pl. of lymphangion) (*angeion*, vessel). Lymphatic vessels.

**Lymphangiec′tasis** (*ektasis*, dilatation). Dilatation of the lymphatic vessels.

**Lymphangiecto′des.** Type of cutaneous hypertrophy affecting the subcutaneous areolar tissue, in which are formed dendritic vegetations possessing new blood-vessels and associated with dilated lymph spaces and œdema.

**Lymphangiog′raphy** (*graphe*, description). Description of the lymphatic vessels.

**Lymphangioii′tis.** Angioleucitis.

**Lymphangiol′ogy** (*logos*, description). Treatise on the lymphatics.

**Lymphangio′ma.** Condition in which there is dilatation of the lymphatic vessels. **L. capilla′re varico′sum,** l. circumscriptum. **L. caverno′sum,** l. colli cysticum. **L. circumscrip′tum,** chronic eruption of vesicles associated in clusters and with dilated lymphatics. **L. col′li cys′ticum,** congenital disease of the skin characterized by the presence of vesicles due to dilated lymphatic vessels. **L. cu′tis,** excessive development of lymph elements in the corium, presenting a white, glistening, tuberculated appearance. **L. tubero′sum mul′tiplex,** appearance of papules or tubercles formed of dilated lymphatic vessels.

**Lymphangiomyo′ma.** Myoma or tumor involving muscular tissue and the lymphatic vessels.

**Lymphangion′cus.** Lymphangioma.

**Lymphangiophlebi′tis.** Inflammation of lymphatic vessels and veins.

**Lymphangiot′omy.** Dissection of lymphatic vessels.

**Lymphangi′tis.** Angioleucitis. **L. tuberculo′sa cuta′nea,** the lymphatics of the skin are invaded with tubercle bacilli, with linear lesions corresponding to the lymphatic trunks or tuberculous nodules.

**Lymphat′ic.** Relating to lymph or lymph vessels. **L. anæ′mia,** Hodgkin's disease. **L. cachex′ia,** Hodgkin's disease. **L. duct,** see *Lymphatic vessels.* **L. fis′tula,** lymph fistula. **L. gan′glions** or **glands,** lymph nodes, conglobate glands. **L. heart,** the frog and several other animals are provided with large receptacles for the lymph immediately under the skin, which exhibit distinct and regular pulsations like the sanguiferous heart; their use appears to be to propel the lymph. **L. leukæ′mia,** leukæmia associated with or dependent on disease of the lymphatic glands. **L. node,** l. gland. **L. sys′tem,** system of organs which are inservient to the formation and circulation of lymph; these are l. ganglions or glands and l. vessels. **L. tem′perament,** constitution possessed by persons of sluggish habit, flabby muscles, pale and rather coarse features, clumsy in their movements, and expressionless. **L. tu′mor,** lymphoma. **L. ves′sels,** arising at the surface of membranes and in the tissues of the organs; they carry into the veins the lymph. Lymphatic vessels are found in almost every part. They form two orders—one *superficial,* the other *deep*—frequently communicating with each other. Lymphatic vessels are smaller than the arteries and veins, are very thin, diaphanous, and cylindrical, but present here and there more or less considerable dilatations, caused by valves in their interior. All the branches before joining the principal trunks pass through lymphatic ganglions; are formed of an outer areolar membrane and an internal coat, similar to that of the veins; of the latter the valves are formed. All the lymphatics of the body ultimately discharge themselves at the junction of the subclavian and internal jugular veins. Two of these trunks are considerably larger than the others—the *thoracic duct* and the great trunk of the right side, the *right* or *lymph-duct.* The former receives the lymphatics of the abdomen of the lower extremities, the left side of the thorax, the left upper extremity, and the corresponding side of the head and neck; the latter receives those of the right upper extremity and of the right side of the head, neck, and thorax.

**Lymphat′ics.** Lymphatic vessels.

**Lymph′atism.** Lymphatic habit. Scrofula.

**Lymphati′tis.** Angeioleucitis.

**Lymphat′ocele.** Tumor of dilated lymphatics.

**Lymphecta′sia.** Dilatation with lymph.

**Lympheurys′ma** (*eurysma,* dilatation). Lymphangiectasis.

**Lymphi′tis.** Angeioleucitis.

**Lym′phocele.** Tumor formed by the abnormal collection of lymph.

**Lymph′ocyte** (*kytos,* cell). Lymph corpuscle. A form of leucocyte, of which there are two varieties, large and small; the latter have a diameter of about 7.5$\mu$, and contain one large nucleus, which colors a deep blue or purple with Ehrlich's triple stain; they constitute about 25 per cent. of the entire number of leucocytes; the large lymphocytes have a diameter of 11$\mu$ up to 14$\mu$, and contain a single nucleus, which colors a pale blue with Ehrlich's triple stain; they constitute about 5 per cent. of the entire number of leucocytes.

**Lymphocythæ′mia.** Excess or increase of lymph corpuscles in the blood.

**Lymphocyto′sis.** Great increase in the number of lymph corpuscles in the blood, especially of young children. It occurs in various constitutional affections.

**Lymphocytozo′on** (*zoon,* animal). A protozoon parasitic in the lymphocytes.

**Lymphoder′mia.** Morbid condition of lymphatics of the skin. **L. pernicio′sa,** enlargement of the lymphatic glands in the skin in cases of leukæmia.

**Lymphœde′ma.** Œdema from obstruction of the lymphatics.

**Lymphogen′ic.** Producing lymph or lymph corpuscles. **L. diath′esis,** constitutional condition causing leukæmia and leucocytosis.

**Lymphogenous,** lim-foj′en-us. Producing lymph.

**Lymphog′raphy** (*grapho,* to write). A description of lymph or the lymphatics.

**Lymph′oid** (*eidos,* resemblance). Lymph-like. **L. tis′sue,** adenoid tissue.

**Lympho′ma.** Tumor composed of adenoid tissue. **Malig′nant** or **mul′tiple l.,** Hodgkin's disease.

**Lymphomyelo′ma.** Medullary tumor with involvement of the lymphatic system. Sarcoma with small round cells.

**Lymphomyxo′ma.** Tumor, generally benign, consisting of adenoid tissue.

**Lymphon′cus** (*onkos,* a tumor). Lymphangioncus. **L. i′ridis,** iridauxesis.

**Lymphop′athy** (*pathos,* disease). Disease involving the lymphatics. **Atax′ic l.,** lymphœdema accompanying a tabetic crisis.

**Lymphorrha′gia** (*rhegnymi,* to break forth). Discharge of lymph from a lymphatic vessel owing to lesion of its coats.

**Lymphorrhœ′a** (*rhoia,* flow). Escape of lymphatic fluid by spontaneous rupture or accidental wound, producing a fistulous opening of the lymphatic vessels.

**Lymphosarco′ma.** Sarcomatous tumor with small round cells, enclosed in a structure like that of a lymphatic gland. Lymphadenoma or Hodgkin's disease.

**Lymphosarcomato′sis.** General or local sarcomatous enlargement of the lymph glands. Development of lymphsarcoma.

**Lympho′sis.** Preparation or elaboration of lymph.

**Lymphos′tasis.** Stasis of lymph.

**Lymph′otome.** Instrument for dissection of the lymphatics. Also one intended for excising adenoid growths of the tonsils.

**Lymphot′omy.** Dissection of the lymphatics.

**Lymphotorrhœ′a.** Lymphoid discharge from the ear.

**Lymphotoxin′.** A cytotoxin having a specific action upon the reticulum cells in lymph nodes.

**Lymphot′rophy** (*trophe,* nourishment). Nourishment of the lymphatic vessels.

**Lymph′ous.** Relating to lymph.

**Lymphu′ria.** Chyluria.

**Lymphyza′tion.** The formation of lymph.

**Lynn wahoo′.** Ulmus alata.

**Lynx** (hiccough). Singultus or hiccough.

**Ly′pe** (*lype,* sadness). Despondency; melancholy.

**Lypeman′ia.** Melancholy.

**Lype′ria cro′cea.** South African plant, ord. *Scrophulariaceæ;* the flowers closely resembles saffron in smell and taste, and possess similar medical virtues.

**Lypothy′mia** (*lype,* sadness, *thymos,* the mind). Very great sadness.

**Ly′ra.** The under surface of the posterior part of the body of the fornix, which is impressed with numerous transverse and oblique lines, giving to it a resemblance to the ancient lyre. Arborescent striæ in the interior of the cervix uteri. Rugous interior of the vagina.

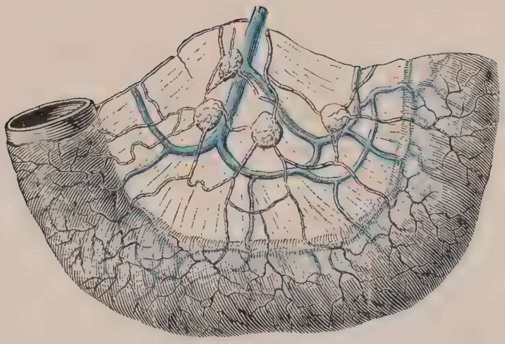
**Lysæ′mia** (*lysis,* solution, *haima,* blood). Hæmatolysis.

**Lysatin′.** $C_6H_{13}N_3O_2$. Base homologous with creatin, derived from casein.

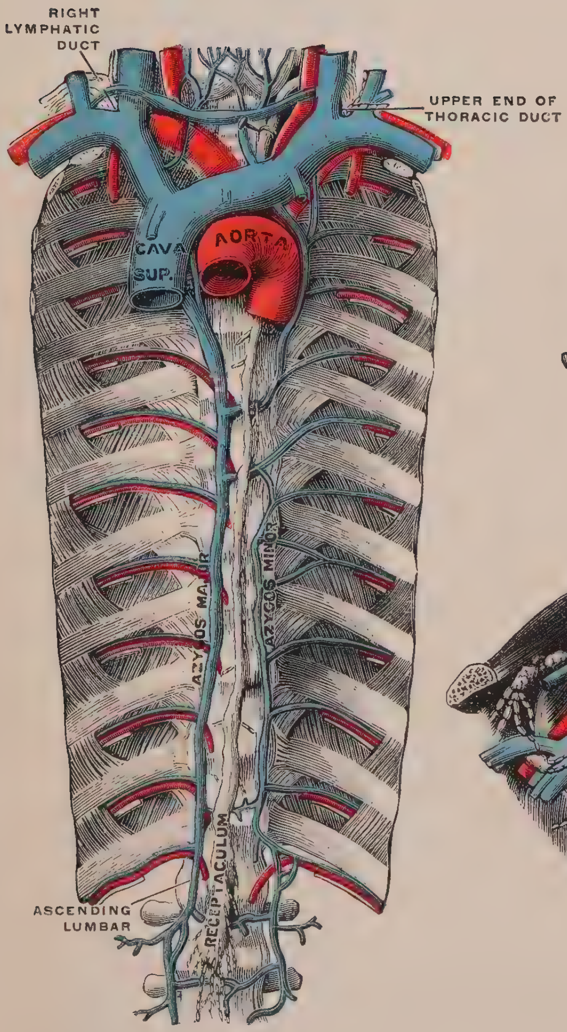
**Lysatinin′.** $C_6H_{11}N_3O$. Base homologous with creatinin, derived from casein.

**Lysidin′.** $C_4H_5N_2$. Methyl-glyoxalidine. A red, crystalline mass obtained by action of ethylendiamine hydrochloride on sodium acetate. It is usually seen in 50 per cent. solution. A uric-acid solvent, in doses of gr. xv–ʒj (1.0–4.0) daily of the solid substance.

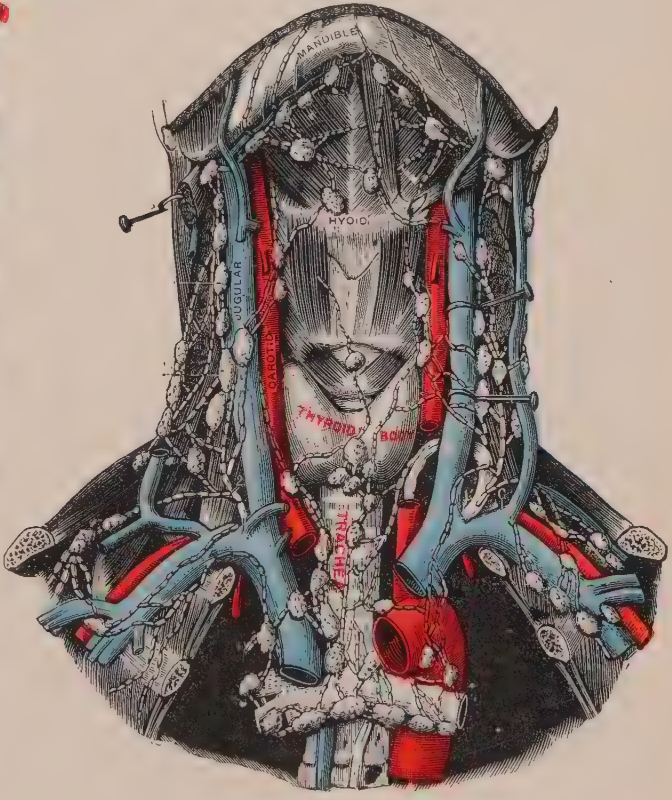
**Lysimach′ia nummula′ria.** Creeping loosestrife, moneywort, ord. *Primulaceæ.* This plant was formerly accounted vulnerary. It has been considered to possess antiscorbutic and astringent qualities, and has been used in leucorrhœa. **L. purpu′rea,** Lythrum salicaria. **L. quadrifo′lia,** four-leaved loosestrife, crosswort, indigenous plant, astringent; has been used as a stomachic and antiperiodic. **L. thyrsiflo′ra**



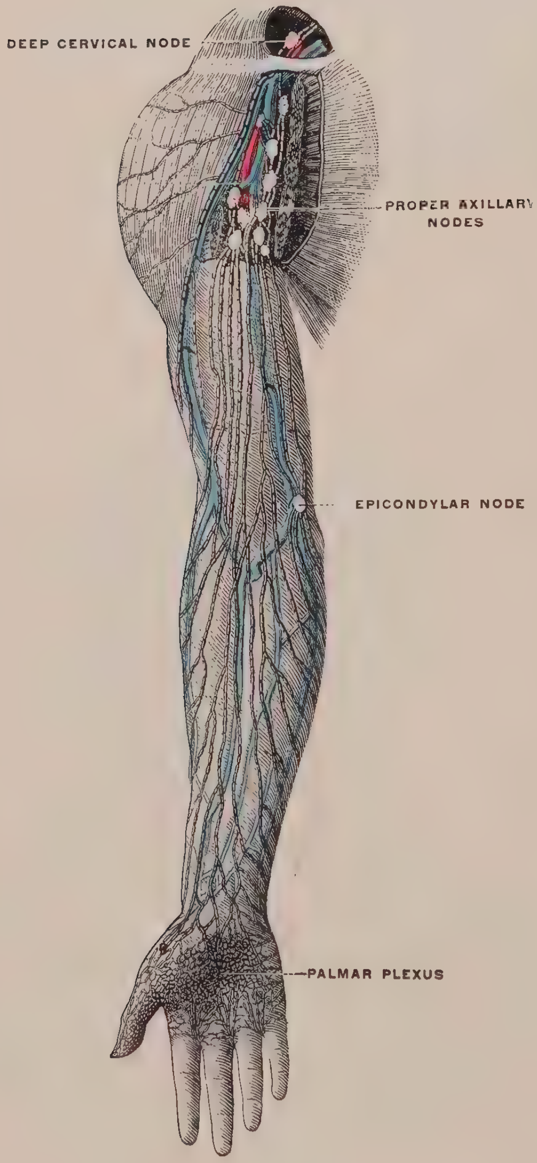
Lymph-nodes of mesentery. (Gerrish, after Testut.)



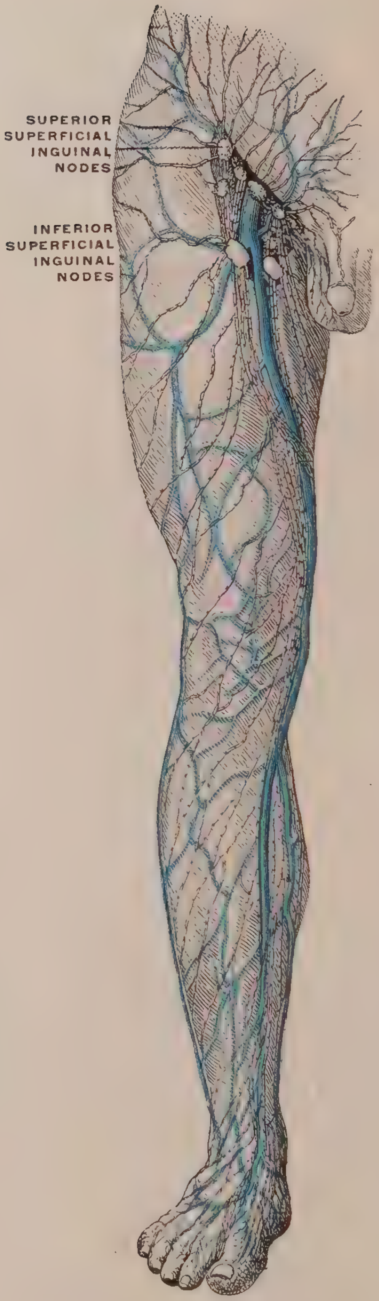
Thoracic duct and right lymphatic duct. (Gerrish, after Testut.)



Lymph-nodes of neck and upper part of thorax. (Gerrish, after Testut.)



The lymph-nodes and vessels of the upper limb.
(Gerrish, after Testut.)



SUPERIOR SUPERFICIAL INGUINAL NODES
INFERIOR SUPERFICIAL INGUINAL NODES

The lymph-nodes and vessels of the lower limb.
(Gerrish, after Testut.)

or **vulga′ris,** common yellow loosestrife, used in diarrhœa, tuberculosis of the lungs, etc.

**Lysin′** (*lyo,* to dissolve). Cell-destroying substance formed in the blood-serum. The lysins are distinguished according as the substance destroys cells in the animal's own body (autolysin), those in an animal of the same species (homolysin or isolysin), or those in an animal of a different species (heterolysin). Also a leucomain, $C_6H_{14}N_2O_2$, discovered by Drechsel, derived from proteids.

**Ly′sis** (*lysis,* solution). Termination of disease insensibly; that is, gradually and without critical symptoms. Destruction of cells.

**Ly′sitol.** Germicide resembling lysol. See *Lysol.*

**Ly′sol.** Brown, oleaginous liquid, having odor of creosote, made during the preparation of creosote, by dissolving in fat and saponifying with addition of alcohol the portion of oil of tar which boils between 190° and 200° C. Soluble in water; antiseptic; stronger than carbolic acid and less poisonous. Used chiefly in gynecology and dermatology.

**Lys′sa** or **L. cani′na.** Hydrophobia, rabies.

**Lys′si.** Pustules or vesicles near the frænum of the tongue, seen in early period of rabies.

**Lys′sic.** Pertaining to hydrophobia.

**Lyssin′.** Term for the specific zymotic principle of lyssa or rabies.

**Lyssodec′tus** (*lyssa,* rabies, *deko,* to bite). One bitten by a mad dog or actually laboring under hydrophobia.

**Lyssodeg′ma.** Bite of a mad dog.

**Lyssodex′is.** Bite of a mad dog.

**Lys′soid.** Like rabies.

**Lyssopho′bia** (*phobos,* fear). Morbid fear of rabies, sometimes giving rise to symptoms resembling those of that disease.

**Lyte′rian** (*lyterios,* dissolving). Epithet given to signs which announce the termination of a disease.

**Lyth′rum.** Plant, ord. *Lythraceæ;* astringent and demulcent. **L. ala′tum,** milk-willow; leaves are used in Mexico in poultices applied to cancerous ulcers. *L. album* and *L. lanceolatum* are similarly employed. **L. hyssopifo′lia,** Lythrum salicaria. **L. salica′ria,** common or purple willow herb, loosestrife; herb, root, and flowers possess a considerable degree of astringency, and are used occasionally in the cure of diarrhœa and dysentery, leucorrhœa, hæmoptysis, etc.

**Lyt′ic.** Relating to lysin or lysis; effecting lysis or cell destruction.

**Lyt′ta** (*lyttao,* to be mad). Coleopterous insect, a number of species of which are used for blistering purposes. **L. cæru′lea,** see *Cantharis.* **L. gi′gas,** vesicating beetle. **L. gi′gas mas,** see *Cantharis.* **L. ru′ficeps,** see *Cantharis.* **L. ru′fipes,** variety of lytta peculiar to Chile, more active as a vesicant than the cantharis or the Lytta vittata. **L. seg′etum,** see *Cantharis.* **L. vesicato′ria,** cantharis. **L. vitta′ta,** potato fly.

# M.

**M.** An abbreviation for minim; manipulus, a handful; misce, mix; metre; myopia; and mille, a thousand.

**M. a.** Abbv. for metre-angle.

**Ma.** Abbv. for milliampère.

**Maago′ni.** Swietenia mahogani.

**Mac.** Abbv. for macera, macerate.

**Maca′co worm.** Larva of a South American fly, Dermatobia noxialis, found on the human skin and on the skin of animals.

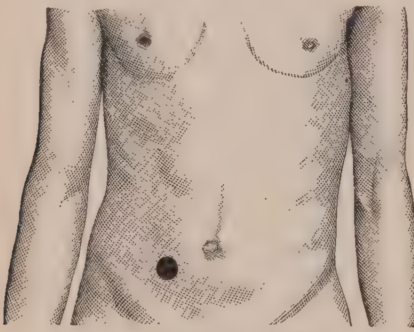
**Maca′ja but′ter.** Oil product of seeds of Cocos aculeata.

**Macalline′.** Alkaloid derived from Andira excelsa; has action similar to quinine.

**Macapat′li.** Smilax sarsaparilla.

**Macau′la.** Contagious disease with eruption on the skin and mucous membranes, resembling tubercular syphilide.

**McBur′ney's point.** A spot on the right side of the abdomen, on a line passing from the anterior superior spine of the ilium to the umbilicus, and two inches from the former, where tenderness is felt on pressure in appendicitis.



McBurney's point.

**Macdow′ell's fræ′num.** Folds given off from the tendon of the pectoralis major.

**Mace.** Macis. **M. reed,** Typha latifolia.

**Macedonis′ium.** Smyrnium olusatrum.

**Ma′cene.** $C_{10}H_{16}$. Active principle of mace.

**Ma′cer** (lean). Gracilis muscle.

**Macerated,** mas′er-a-ted. Softened by long soaking in a fluid. Emaciated.

**Macera′tion** (*macero,* to soften by water). Infusion without heat of a solid substance in a liquid, so as to extract its virtues. Emaciation, loss of flesh.

**Mac′erator.** A vessel for macerating any substance.

**Macera′tum.** Product of maceration.

**Macero′na.** Smyrnium olusatrum.

**Macewen's** (mak-yu′ens) **opera′tions.** 1. Procedure for rectification of knock-knee, consisting of section through femoral shaft above the condyles. 2. Radical cure of inguinal hernia by forming pad of sac, with which the internal ring is closed. **M.'s space,** supramental triangle. **M.'s symp′tom,** increased clearness of sound when percussion and auscultation are practised simultaneously in serious intercranial lesions. **M.'s tri′angle,** supramental triangle.

**McGraw's meth′od.** Gastroenterostomy or enteroenterostomy performed with the aid of elastic ligatures.

**Machinal,** mak′e-nal. Relating to a machine. Mechanical, effected without conscious volition.

**Machine′.** Compound instrument or arrangement for putting a body in motion.

**Ma′cies.** Atrophy, emaciation. **M. infan′tum,** tabes mesenterica.

**Macilen′tus** (*maceo,* to be lean). Gracilis.

**Mac′Intyre's splint.** Splint applied posteriorly for fracture of the leg.

**Ma′cis.** Mace. The official (Ph. U. S.) name of the arillode of the seed of Myristica fragrans, which is also the source of nutmeg. Dose, gr. v–x (0.32–0.65).

**Macleyine′.** $C_{20}H_{19}NO_5$. Alkaloid from Macleya cordata of China and Japan.

**McMunn's′ elix′ir.** A watery infusion prepared from opium, from which the narcotine has been removed with ether and to which alcohol has been added; the strength is the same as that of laudanum.

**Macran′trus.** Term applied to skulls in which a vertical line falling on the radius fixus from the most prominent part of the torus frontalis falls in front of that dropped from the nasion by 4 to 9 mm.

**Macrauchen,** mak-rau′ken (*macros,* long, *auchen,* neck). Having a long neck.

**Macrenceph′alus.** Term applied to skulls in which the angle between lines projected from hormion to nasion and inion is from 156.5° to 170°.

**Macrencra′nus.** Term applied to skulls having a large cerebellar sector (20° to 27.50°).

**Mac′ritas** or **Macritu′do.** Emaciation.

**Macro-** (*makros,* long). In composition, long or large.

**Macroæsthe′sia** (*makros,* large, *aisthesis,* sensation). Perverted sensation of touch, in which the object seems to be larger than it is.

**Macroangio′sis** (*angeion,* vessel). Congenitally large blood-vessels of a limb.

**Macrobio′sis** (*makros,* long, *bios,* life). Longevity.

**Macrobiot′ic.** Of long life. *Macrobiotics* is the macrobiotic art or art of long living.

**Mac′roblast.** Macrocyte; megaloblast.

**Macrocarpin′.** Neutral principle derived from the root of Thalictrum macrocarpum.

**Macrocephal′ia** (*makros,* large, *kephale,* head). Condition in which the head is unusually large, as at birth, rendering labor difficult.

**Macrocephal′ic.** Having a large head.

**Macroceph′alous.** Affected with macrocephalia.

**Macroceph′alus.** One with a large head.

**Macroceph′aly.** Macrocephalia.

**Macrochas′mus.** Term applied by Lissauer to a skull with an angle of between 94° and 114°.

**Macrocheilia,** mak-ro-ki′le-ah (*makros,* large, *cheilos,* lip). The condition of having preternaturally large lips.

**Macrochei′ria** (*makros,* large, *cheir,* hand). Excessive development of the hands.

**Macroc′ladus.** Wild cabbage palm, the young leaves of the tops of which are edible.

**Macrocne′mius** (*makros,* long, *kneme,* leg). Possessing long legs.

**Macrocne′mum.** Genus of the *Cinchoneæ.* **M. cinchonoi′des,** species growing in Peru. **M. corybo′sum,** Condaminea corymbosa. **M. humboldtia′num,** Cascarilla peluda, found in the Andes of Peru; bark is reputed to be febrifuge. **M. ros′eum,** species growing in the Andes; bark has astringent properties. **M. tincto′rum,** Condaminea tinctoria.

**Macrococ′cus.** A large micrococcus.

**Macroco′lia** (*makros,* large, *kolon,* limb). Large limbs in general.

**Macroco′lous.** Having long legs.

**Macrocor′nea.** Large cornea.

**Mac′rocosm** (*makros,* large, *kosmos,* world). The universe.

**Mac′rocyte** (*makros*, large, *kytos*, cell). Giant blood corpuscle; megalocyte.

**Macrocythæ′mia** (*makros*, large, *kytos*, cell, *haima*, blood). Condition in which there is augmentation of the dimensions of the red corpuscles of the blood.

**Macrocyto′sis.** Condition in which the red corpuscles are increased in size, becoming macrocytes; noted in pernicious anæmia especially.

**Macrodactyl′ia.** Condition in which the fingers and toes are abnormally long or hypertrophied.

**Macrodac′tylus** (*makros*, long, *daktylos*, finger). Long-fingered.

**Macrodac′tyly.** Macrodactylia.

**Mac′rodont** (*makros*, large, *odous*, tooth). Having abnormally large teeth.

**Macrodon′tia.** Great size or length of the teeth.

**Macrogam′ete** (*makros*, large, *gamete*, wife). A granular, non-flagellated form which constitutes the female element of the sporozoa.

**Macrogam′etocyte.** The female gametocyte.

**Macrogas′ter plat′ypus** (*makros*, large, *gaster*, belly, *platypus*, flat-footed). Acarus folliculorum.

**Macrogas′trous.** Having a large stomach.

**Macroge′nious** (*makros*, long, *geneion*, chin). Possessing a long lower jaw.

**Macroglos′sa** or **Macroglos′sia** (*makros*, large, *glossa*, tongue). Large-tongued. See *Paraglossa*.

**Macroglos′sus.** One having a large tongue. See *Paraglossa*.

**Macroma′nia** (*makros*, large+*mania*). Delusional form of insanity in which the objects appear larger than in reality. Also megalomania.

**Macromas′tia** (*mastos*, nipple). Abnormal development or growth of the nipple.

**Macroma′zia** (*mazos*, mamma). Macromastia.

**Macrome′lia** (*makros*, large, *melos*, limb). Excessive size of a limb.

**Macrom′elus.** One affected with macromelia.

**Mac′romere** (*makros*, large, *meros*, part). Large blastomere. **Ante′rior m.**, macromere which is to form the cephalic or anterior extremity of the embryo.

**Macronu′cleus** (*makros*, large). A large nucleus.

**Macropanenceph′alus** (*pan*, all, *kephale*, head). Large size and extra development of the whole head.

**Mac′rophage** or **Macroph′agus** (*makros*, large, *phago*, to eat). Phagocyte composed of a large cell with one nucleus; the microphages are absorbed by the macrophages.

**Macrophal′lus** (*makros*, large, *phallos*, penis). Large size of the male organ.

**Macropho′nus** (*makros*, large, *phone*, voice). One with a strong voice.

**Macrophthal′mus** (*makros*, large, *ophthalmos*, eye). Having large eyes.

**Macrophysoceph′alus** (*makros*, large, *physa*, air, *kephale*, head). Caput succedaneum, a tumefied condition of the child's scalp in labor.

**Macro′pia.** See *Macropsia*.

**Macrop′iper.** Piper longum. **M. excel′sum**, Piper excelsum. **M. latifo′lium**, Piper methysticum.

**Macropo′dia** (*makros*, large, *pous*, foot). Condition in which the feet are abnormally developed.

**Macrop′odus.** One possessing large feet.

**Macroproso′pia** (*makros*, large, *prosopon*, face). Monstrosity with excessive size of face.

**Macrop′sia.** Vision in which objects appear to be too large.

**Mac′ropus.** Macropodus.

**Macrorrhin′ia.** Hypertrophy of the nose.

**Macror′rhis** (*makros*, long, *rhis*, nose). Long-nosed.

**Macros′celes** (*makros*, long, *skelos*, leg). Long-legged.

**Macrosce′lia.** Condition in which the legs are abnormally developed.

**Macroscop′ic.** Implying natural or enlarged appearance, in contrast with the microscopic; that which can be seen with the naked eye.

**Macro′sis.** Augmented in size.

**Macrosmat′ic** (*makros*, large, *osmao*, to smell). Possessing olfactory organs in a highly developed state.

**Macrosoma′tia** (*makros*, large, *soma*, body). Macrosomia.

**Macroso′matous.** Giant-like; large-bodied.

**Macroso′mia.** Great size of body; see *Giant*.

**Mac′rospore.** Macrogamete.

**Macros′toma** (*makros*, large, *stoma*, mouth). Congenital fissure of the lip at the angle of the mouth.

**Macrosto′matus.** Pertaining to macrostomia.

**Macrosto′mia** (*makros*, large, *stoma*, mouth). Condition characterized by abnormally large mouth.

**Macrotar′sous.** Possessing long tarsi.

**Macro′tia** (*makros*, large, *ous*, ear). Preternatural largeness or length of ears.

**Macrotin′.** Resinous extract of Cimicifuga racemosa.

**Macro′tys racemo′sa.** Actæa racemosa.

**Mac′ula.** Spot; permanent discoloration of some portion of the skin, often with a change of its texture. *Ephelis*, *nævus*, *spilus*, etc., belong to the maculæ. See also *Molecule*. **M. acus′tica**, nearly circular spot on the wall of the utriculus of the ear where the branch of the nervus acusticus reaches it. **M. al′ba** or **al′bida**, leucoderma. **M. arcua′ta**, arcus senilis. **M. au′rea**, foramen centrale retinæ. **Cer′ebral m.**, see *Macula*. **M. cor′neæ**, caligo. **M. c. arcua′ta**, arcus senilis. **M. c. margarita′cea**, cicatrix on transparent part of the eye. **M. cribro′sa**, one of the porous spots in the vestibule through which delicate filaments of the auditory nerves pass. **M. emortua′lis**, see *Suggillation*. **M. fla′va**, portion of the anterior end of the vocal cord showing a yellow nodule through the mucous membrane; also m. aurea. **M. follic′uli**, point of rupture on the surface of a Graafian follicle. **M. fus′ca**, ephelides. **M. germinati′va**, see *Molecule*. **Ger′minous m.**, macula germinativa. **M. hepat′ica**, chloasma nævus. **M. lenticula′ris**, ephelides. **M. lu′tea ret′inæ**, foramen centrale. **M. matrica′lis**, nævus. **M. matri′cis**, nævus. **Menin′geal m.**, a modification in the vascularity of the skin, an important symptom in meningitis, the skin being diffused with a bright red tint wherever it may be pressed upon. **M. ni′gra**, see *Optic nerve*. **M. origina′lis**, nævus. **M. rubo′sa**, cloudiness of the retina. **M. semipellu′cida**, caligo. **M. sola′ris**, ephelides. **M. syphilit′ica**, peculiar stain remaining after syphilitic roseola.

**Mac′ulæ.** Plural of *macula*, which see. **M. al′bæ**, white spots seen on serous membranes, especially on that investing the heart. **M. an′te oc′ulos volitan′tes**, metamorphopsia. **M. atroph′icæ**, white patches, like cicatrices, on the surface of the body, due to atrophy of the skin. **M. cæru′leæ**, discolorations occurring sometimes on the skin after pediculosis corporis. **M. gangræno′sæ**, macules due to gangrene in its incipiency. **M. incer′ti color′is**, term applied by Plenck to nævi, artificial cutaneous discolorations, and to oily seborrhœa. **M. lac′teæ**, m. albæ. **M. tendin′eæ**, strophulus.

**Mac′ular** or **Mac′ulate.** Spotted.

**Macula′tion.** Formation of macules.

**Mac′ule.** Macula.

**Maculicol′lis** (*macula*, spot, *collum*, neck). Hairy moles on the neck.

**Mac′uliform.** Resembling a macula.

**Maculopap′ular.** Marked by a combination of macules and papules.

**Mac′ulose** or **Mac′ulous.** Spotted.

**Mad.** Insane. **M. ap′ple plant**, Solanum melongena. **M. doc′tor**, psychiater. **M. itch**, parasitic cattle disease characterized by excessive itching.

**Ma′dar.** Mudar.

**Madaro′sis** (*madao*, to be bald). Loss of hair, particularly of the eyelashes.

**Madarot′ic.** Relating to madarosis.

**Mad′arous** (*madoroo*, to make bald). Suffering from madarosis.

**Mad′der, dy′ers′.** Rubia.

**Mad′dox rod.** A glass rod employed in testing for heterophoria.

**Madefac′tion.** Process of wetting.

**Madel′con.** Bdellium.

**Mad′elung's neck.** Diffuse lipoma of the cervical region.

**Made′ma** (*madao*, to be bald). Madarosis.

**Mades′cent.** Giving off moisture.

**Made′sis** (*madao*, to be bald). Depilation; loss of hair.

**Mad′ia.** Genus of herbs of the *Helianthoideæ*. **M. oil,** oil from seed of Madia sativa. **M. sati′va,** oil plant; grows in certain parts of California and in Chile; an oil is obtained from the seeds.

**Mad′ness.** Insanity.

**Ma′dor.** Moisture; cold sweat.

**Madras′ tur′meric.** Coloring-matter of vegetable origin.

**Mad′stone.** A stone credited with the power of absorbing poison when applied to wounds.

**Madu′ra foot.** Mycetoma.

**Mad′weed.** Scutellaria lateriflora.

**Mad′wort.** Camelina sativa; vermifuge.

**Mæa** (*maia*). Midwife.

**Mæeusioma′nia** (*maieusis*, parturition + *mania*). Puerperal mania.

**Mæeusipho′bia** (*maieusis*, parturition + *phobos*, fear). Fear of childbirth.

**Mæeutic,** me-u′tik. Relating to obstetrics.

**Mæi′a.** Obstetrics.

**Maësapic′ta.** Abyssinian tree; anthelmintic.

**Mafou′tra.** Tree of Madagascar; fruit possesses astringent qualities.

**Magendie's** (mazh-on-deze′) **fora′men.** Foramen of communication between the subarachnoid space and the fourth ventricle. **M.'s law,** Bell's law. **M.'s solu′tion,** solution of morphine; strength, 16 grs. to the fluidounce of water. **M.'s spa′ces,** lymph spaces between the arachnoid and the pia mater.

**Magen′ta.** Red aniline stain.

**Mag′got.** Larva of insect. **M. pim′ple,** see *Acne*.

**Magiste′rium.** Magistery. **M. bismu′thi,** bismuth subnitrate. **M. jalap′æ,** resin of jalap. **M. marcasi′tæ,** bismuth subnitrate. **M. plum′bi,** plumbi subcarbonas. **M. sul′phuris,** sulphur lotum. **M. tar′tari pur′gans,** potassii acetas.

**Magistery,** maj′is-ter-e (*magister*, master). A precipitate from a saline solution was formerly so called. Also other medicines, the preparation of which was kept secret. **M. of bis′muth,** bismuth subnitrate.

**Magis′tral.** Extemporaneous. Prescription is so called—*formula magistralis* or *extemporanea*—which is prepared extemporaneously; an *official* prescription—*formula officinalis*—being such as is prepared in quantity and kept on hand.

**Mag′ma.** Thick residuum, obtained after expressing certain substances to extract the fluid parts from them; salve of certain consistence. **M. reticula′tum,** reticulated magma; the gelatiniform substance found between the chorion and amnion in the early period of embryonic existence.

**Mag′nan's sign** or **symp′tom.** A sensation as of round bodies under the skin, experienced in chronic cocaine poisoning.

**Mag′nes.** Magnet. **M. arsenica′lis** (sulphur, white arsenic, and common antimony, of each equal parts, mixed by fusion); a corrosive; see *Magnetic plaster*. **M. epilep′siæ,** hydrargyri sulphuretum rubrum.

**Magne′sia.** Alkaline earth whose metallic base is magnesium. The official (Ph. U. S.) name for calcined magnesia, oxide of magnesium, light magnesia, Husband's magnesia, in the form of a white, light, spongy powder; sp. gr. 2.3, requiring 2000 times its weight of water for solution; is antacid and laxative; dose, gr. x–ʒj (0.65–4.0). **M. aöra′ta,** magnesii carbonas. **M. al′ba,** m. carbonas. **Cal′cined m.,** magnesia. **Car′bonate of m.,** magnesii carbonas. **Chlo′rinated m., solution of,** not caustic, and therefore preferable, for internal use or as an application to delicate tissues, to chlorinated lime or chlorinated soda. **M. cit′rate,** magnesii citras. **Din′neford's m.,** see *Magnesia, fluid*. **M. edinburgen′sis,** m. carbonas. **Heav′y m.,** m. ponderosa. **Flu′id m.,** liquor magnesii carbonatis, preparation in Ph. Br., consisting of a solution of carbonate of magnesium in carbonated water; it is also termed *carbonated magnesia-water, aërated magnesia-water, solution of carbonate of magnesia*, and *condensed solution of magnesia*. **M. le′vis** (Ph. Br.), light magnesia; made by calcining light carbonate of magnesium; dose, gr. x–ʒj (0.65–4.0). **Light m.,** m. levis. **M. mi′tis,** magnesii carbonas. **Mu′riate of m.,** magnesii chloridum. **M. opali′na,** mixture of antimony, potassium nitrate, and sodium chloride; emetic. **M. pondero′sa** (Ph. U. S. and Br.), heavy magnesia; prepared like light magnesia, the heavy carbonate of magnesium being used; both have the same therapeutic action. **M. sa′lis ama′ri,** magnesii carbonas. **M. sa′lis ebsdamen′sis,** magnesii carbonas. **M. Satur′ni,** antimonium. **M. ter′ra,** magnesia. **M. us′ta,** magnesia. **M. vitriola′ta,** magnesii sulphas.

**Magne′sian lemonade′.** Solution of citrate of magnesium.

**Magne′sic.** Relating to magnesia.

**Magne′sii carbo′nas.** (Ph. U. S.) Occurs in light, friable blocks or lumps or in a fine powder; dose, gr. x–xv (0.65–1.0). **M. chlo′ridum,** chloride of magnesium; bitter, deliquesent salt, cholagogue cathartic in dose of ℥ss (16.0) to the adult. **M. cit′ras efferves′cens** (Ph. U. S.) is made by adding together carbonate of magnesium, citric acid, bicarbonate of sodium, sugar, alcohol, and distilled water; dose, one to three teaspoonfuls as laxative or cathartic, but generally given in the official solution; see *Liquor magnesii citratis*. **M. sul′phas** (Ph. U. S. and Br.), Epsom salt; occurs in small, colorless crystals of a bitter, disagreeable taste; purgative and diuretic; dose, ʒij–℥j (8.0–32.0). **M. s. efferves′cens** (Ph. Br.); dose, ℥ss-j (16.0–32.0).

**Magne′sio-efferves′cens.** Containing magnesia and being effervescent.

**Magnesiofer′ric cit′rate.** Citrate of iron and magnesium.

**Mag′nesite.** Native magnesium carbonate.

**Magne′sium.** A metallic element of a silver color, symbol Mg, the base of the alkaline earth magnesia. **M. ben′zoate,** a white, crystalline powder, used therapeutically in gout and urinary calculus, and also in tuberculosis. **M. bo′rate,** made by action of solution of a magnesium salt on a solution of borax; antiseptic. **M. borocit′rate,** made by action of citric acid in solution on magnesium and borax; used in cases of gravel; dose, gr. xv–xxx (1.0–2.0). **M. car′bonate,** magnesii carbonas. **M. chlo′ride,** magnesii chloridum. **M. cit′rate,** magnesii citras. **M. creoso′tate,** mixture of creosote and calcined magnesia. **M. glycerophos′phate,** white, soluble powder; nerve-tonic; dose, gr. ij–v (0.13–0.32). **M. gynocar′date,** mixture of magnesia and gynocardic acid; used in lepra; dose, gr. xv–ʒj (1.0–4.0). **M. ich′thyolate,** mixture of calcined magnesia and ichthyol; antiseptic dusting-powder. **M. lac′tate,** product of neutralization of lactic acid with magnesium carbonate; laxative, in doses of gr. xv–xxx (1.0–2.0). **M. loret′inate,** soluble yellow salt, used as an antiseptic dusting-powder. **M. ox′ide,** magnesia usta. **M. perman′ganate,** blue-black soluble salt; therapeutic action similar to that of calcium permanganate. **M. phenosul′phonate,** a white, alkaline, bitter salt; used as an antiseptic laxative in doses of gr. xv–xxx (1.0–2.0). **M. sal′icylate,** used in typhoid fever as antiseptic and slightly laxative. **M. sil′icate,** talc. **M. sozoiod′olate,** antiseptic. **M. sul′phate,** magnesii sulphas. **M. sulphophe′nate,** m. phenol-sulphonate. **M. sul′phite,** antizymotic in dyspepsia; dose, gr. v–xv (0.32–1.0).

**Mag′net.** The loadstone. Native ferric oxide; also name of iron possessing magnetic powers. In pharmacy it is used to purify iron filings. **Elec′tro-m.**, magnet capable of exerting magnetic force only while influenced by an electric current. **Grue′ning's m.**, magnet employed for the purpose of removing particles of steel from the eye. **M. opera′tion**, removal of a fragment of iron or steel from the eye by means of a powerful magnet.

**Magnet′ic.** Relating to magnetism. **M. flu′id,** a name given to the imponderable fluid to which the magnet owes its virtues; see *Magnetism, animal; Mesmerism.*

**Magnet′ico-electric′ity.** Electromagnetism.

**Mag′netism.** The action of a magnet in repelling or attracting. **An′imal m.**, mesmerism or hypnotism.

**Mag′netite.** Native iron oxide possessing magnetic properties.

**Magnetiza′tion.** The inducing of magnetic properties in a body.

**Mag′netized.** Made magnetic; also mesmerized.

**Magnetoelectric′ity.** Electricity developed by induction from a magnet.

**Magnet′ograph** (*magnes*, magnet, *grapho*, to write). Instrument for recording intensity of magnetic force.

**Magnet′o-induc′tion.** Induced current produced by surrounding magnet with a coil of wire.

**Magnetom′eter.** Magnetograph.

**Magnet′o-op′tic.** Relating to magnetism and light.

**Magnetother′apy.** Application of magnetism to the treatment of disease, as chorea, neuralgia, or hysteria.

**Magnicauda′tus** (*magnus*, large, *cauda*, tail). Long-tailed.

**Magniduc′tor.** Adductor femoris magnus.

**Magnifica′tion.** Apparent enlargement of a body in the field of a microscope. Power of inducing this apparent enlargement possessed by a lens.

**Magnoc**, man′yok. Jatropha manihot.

**Magno′lia fra′grans.** Magnolia glauca. **M. glau′ca,** small magnolia, swamp sassafras, elk bark, Indian bark, white laurel, sweet bay, beaver wood, beaver tree, white bay, castor bay, sweet or laurel magnolia, ord. *Magnoliaceæ*. The bark is possessed of tonic properties resembling those of cascarilla, canella, etc. The same may be said of *Magnolia tripetala* or umbrella tree; *M. acuminata* or cucumbertree; *M. grandiflora* and *M. macrophylla*, laurel, elkwood, silverleaf, big leaf, white bay, beaver tree, elk bark, big bloom. *Magnolia* (formerly in the Ph. U. S.) is the bark of *Magnolia glauca, M. acuminata,* and *M. tripetala.*

**Magnolin′.** Active crystalline principle of Magnolia tripetala.

**Mag′num De′i do′num** (great gift of God). Cinchona. **M. os** (great bone), the third bone of the lower row of the carpus, reckoning from the thumb; the largest bone of the carpus, also called *os capitatum.*

**Mag′pie test.** Test for salts of mercury, a gray and white precipitate of calomel and mercury taking place when chloride of tin is added.

**Maguey′.** Agave americana.

**Mahamur′ree.** Pali plague.

**Ma′her's disease′.** Perivaginitis.

**Mahmou′dy.** Convolvulus scammonia.

**Mahoe′.** Arbutilon indicum.

**Mahog′any.** Gymnocladus canadensis. **M. flush,** a dusty red spot on one cheek, sometimes seen in pneumonia. **Moun′tain m.**, Betula lenta. **M. tree,** Swietenia mahogani.

**Maho′nia aquifo′lia.** Berberis aquifolium. **M. champa′ca,** Michelia champaca.

**Mahu′ra.** Covolam.

**Maial′ic acid.** Acid derived from Convallaria maialis.

**Maialine′.** Alkaloid, identical with convallamarin, obtained from Convallaria maialis.

**Maian′themum.** Convallaria maialis.

**Maidalak′ri.** Bark of Tetranthera laurifolia of the East Indies; used in diarrhœa and dysentery.

**Mai′denhair.** A fern of the genus *Adiantum* **Amer′ican m.** or **Can′ada m.**, Adiantum pedantum **Com′mon m.**, Asplenium trichomanoides. **Gol′den m.**, polytrichum. **White m.**, Asplenium ruta muraria.

**Mai′denhead.** Virginity. Hymen.

**Maidism,** ma′dizm (*zea mays*, maize). Pellagra.

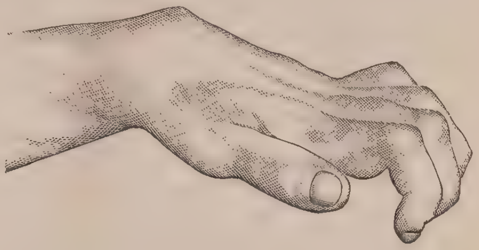
**Maid-of-the-mead′ow.** Spiræa ulmaria.

**Mai′er's si′nus.** Occasionally existent diverticulum of the lacrymal sac receiving the lacrymal ducts.

**Mail-ratour′.** Decoction of leaves of this plant is used by the East Indians in dysentery.

**Maim′ing.** Disabling by a wound; crippling. Mayhem.

**Main** (Fr.). Hand. **M. bote,** clubhand. **M. en crochet′,** flexion of the fourth and fifth fingers, recalling the hand of a woman who is crocheting or knitting. **M. en griffe,** clawhand, flexion of the fingers giving to the hand the appearance of a claw. **M. de prédicateur′,** preacher's hand, pronation and extension of the hand, seen often in cases of cervical myelitis. **M. succulente′,** swollen, smooth, and shining hand seen often in cases of syringomyelia.



Clawhand. (Gray.)

**Mains.** Instrument used in obstetrics, consisting of two spoons without fenestræ, mounted on wooden handles, the branches united by a steel band.

**Maira′nia u′va ur′si.** Arbutus uva ursi.

**Maisonneuve′.** A form of urethrotome in which the stricture is divided by a triangular blade running in a grooved sound. (See cut under *Urethrotome.*)

**Mais′siat's band.** Iliotibial ligament.

**Maize.** Zea mays. **Japanese′ m.**, Zea japonica. **Wa′ter m.**, Victoria regia.

**Majee's′ dad.** Tinea imbricata.

**Ma′jor hel′icis** (larger muscle of helix). Narrow band of muscular fibres situated upon the anterior border of the helix of the ear, just above the tragus.

**Majora′na.** Origanum majorana. **M. horten′sis,** Origanum majorana. **M. syri′aca,** Teucrium marum.

**Ma′kiah.** The small leaves of Cannabis sativa.

**Makro-.** For words beginning thus, see *Macro-*.

**Mal** (Fr. and Sp. from *malum*, evil, injury). Any pain or suffering; disease. **M. de la Baie de Saint Paul** (disease of the Bay of Saint Paul), mal anglais, mal de chien, mal de Chicot, mal des éboulements, Ottoway disease. A syphiloid affection which prevailed in Canada from 1760 to 1780 and upward. **M. de cade′ras,** a disease of horses, mules, and swine in South America prevalent especially in the wet season; it is characterized by emaciation, fever, and paresis first of the hind legs and later becoming general. In the horse the disease lasts from two to six months and is uniformly fatal. It is due to the presence of a blood parasite, probably that called *Trypanosoma equinum.* **M. de coït,** dourine, a contagious venereal disease of the horse; formerly called equine syphilis. **Grand m.**, epilepsy. **M. de Laira′,** barking disease, an epidemic hysteroidal affection, a form of theomania which prevailed in several convents of Germany and elsewhere in the seventeenth century. **M. de mer,** seasickness. **Petit′** (small) **m.**, a mild form of epilepsy in which consciousness is not lost during the attack. **M. del Pin′to** or **de los Pin′tos,** Pinta disease, a Mexican affection resembling psoriasis.

**Ma'la.** Malar bone; cheek. **M. au'rea,** see *Citrus aurantium.*

**Mal'abar itch.** Disease due to scabies ferox. **M. ul'cer,** Aden ulcer.

**Malabath'rum.** Cadeji-Iddi. Leaves of a tree in the East Indies, believed to be a species of laurel. *Oleum Malabathri* is obtained from them.

**Malacarne's' pyr'amid.** Projection made by the union of the inferior vermis of the cerebellum with the transverse nerve masses which communicate with the hemispheres. **M.'s space,** posterior perforated space constituting a portion of the floor of the third ventricle.

**Malacat'uron.** Tree, native of the Philippines; its sap is employed in dysentery, etc.

**Malac'cæ ra'dix.** Sagittarium alexipharmacum.

**Malache,** mal'ak-e. Mallow, malva rotundifolia.

**Mal'achite** (*malache,* mallow). Native green carbonate of coopper.

**Malachra,** mal-ak'rah. A genus of plants, ord. *Malvaceæ.* **M. capita'ta,** leaves of this species are employed as an anthelmintic.

**Mala'cia** (*malakia,* softening). Depravation of taste, in which an almost universal loathing is combined with an exclusive longing for some particular article of food. If the patient desires substances that are noxious or not eatable, it constitutes *pica, depraved appetite.* This symptom accompanies several nervous affections; in pregnancy it is common and termed *longing.* Also mollities, or a softening of a part or tissue, as osteomalacia or softening of the bones. **M. africano'rum,** chthonophagia. **Amphibles'troid m.,** affection of the retina characterized by softening. **M. cor'dis,** softening of the heart from inflammation or as a result of lesion of the function of nutrition. **Vas'cular m.,** malacia in which excessive formation of new vessels exists.

**Malacis'mus** (*malakos,* soft). Mollities.

**Malacocatarac'ta** (*malakos,* soft). Soft cataract.

**Malacoder'mus.** Having a soft skin.

**Malacogas'ter.** Gastromalaxia.

**Malacoi'des.** Plant of Chile; in decoction it is employed as a febrifuge.

**Malaco'ma** (*malakos,* soft). Preternatural softness of an organ or part of an organ.

**Malacosarco'sis** (*malakos,* soft, *sarx,* flesh). Softness of the muscular system.

**Malaco'sis** (*malakos,* soft). Malacia, mollities. Preternatural softness of an organ or part of an organ. **M. cer'ebri,** see *Mollities cerebri.* **M. cor'dis,** see *Malacia cordis.* **M. hep'atis,** softening of the liver. **M. u'teri,** softening of the uterus.

**Malacos'teon** (*malakos,* soft, *osteon,* a bone). Mollities ossium.

**Malacosteo'sis.** Mollities ossium.

**Malacos'tomous** (*malakos,* soft, *stoma,* mouth). Possessing soft jaws devoid of teeth.

**Malacot'omy** (*malakos,* soft, *tome,* incision). Laparotomy.

**Malacypero'a** (*malakos,* soft, *hyperoa,* palate). Soft palate.

**Maladie'** (Fr.). Malady. **M. de coït,** dourine.

**Mal'ady.** Disease. **Eng'lish m.,** hypochondriasis. **M. of post'boys,** aneurysm of the aorta observed to occur among mounted letter-carriers.

**Mal'æ os.** Malar bone.

**Malag'ma** (*malasso,* to soften). Emollient cataplasm. Every local application having the property of softening organic tissues.

**Malaise,** mal-aze' (*mal,* ill, *aise,* ease). Indisposition. The feelings of discomfort preceding illness.

**Malakin'.** A salicylic derivative, possessing antipyretic and analgesic properties; used also in rheumatism; dose, gr. xv (1.0).

**Malam'bo bark.** Matias.

**Malam'ide.** Asparagin. Principle found in asparagus and the shoots of various plants.

**Mal'anders.** Malandria.

**Malan'dria.** Species of lepra or elephantiasis. *Malanders* or *mallenders,* a disease of the horse, consists of a scurfy eruption on the inside of the hock or a little below it, as well as at the bend of the knee. It is called *mallenders* in the foreleg, and *sallenders* in the hind leg.

**Malan'ea verticilla'ta.** Danais rotundifolia.

**Malapa'ri.** Tree found in the Moluccas; bark and root act as antidotes to some poisons.

**Malaprax'is.** Malpraxis.

**Ma'lar.** Belonging to the cheek. **M. bone,** cheekbone, situated at the lateral and superior part of the face, and constituting the zygomatic region of the cheek. It is irregularly quadrilateral. Its outer surface is convex, covered by muscles and skin, and pierced with canals, called malar, through which vessels and nerves pass. Its upper surface is concave, forming part of the orbit. Its posterior surface is concave, and enters into the composition of the temporal fossæ. This bone is thick and cellular. It is articulated with the frontal, temporal, sphenoid, and superior maxillary bones, and is developed by a single point of ossification. **M. canals',** foramina in the malar bone for the passage of nerves and blood-vessels. **M. point,** prominence on the external surface of the malar bone. **M. pro'cess,** zygomatic process.

**Mala'ria** ([I.] bad air). A febrile disease due to the presence in the red blood corpuscles of an animal microparasite, the Plasmodium malariæ. Marchiafava and Bignami distinguish three forms of malaria, each having its peculiar parasite: quartan (including double quartan and triple quartan or quotidian); tertian (including double tertian or quotidian); æstivo-autumnal (including tropical and pernicious forms). The infection occurs through the bite of the mosquito (Anopheles), which has herself been infected by previously drawing blood from a person suffering from malaria. The soverign remedy for malaria is quinine. Chronic malaria leads to a condition called malarial cachexia, marked by impoverishment of the blood, enlargement of the spleen, and an earthy color of the skin.

**Mala'rial.** Relating to or connected with malaria. Malarious. **M. cachex'ia,** the chronic constitutional toxic influence of malaria. **M. fe'ver,** fever of a periodic character, due to infection with the specific germ of malaria.

**Malarilabia'lis.** Zygomaticus major muscle.

**Malarin'.** A citrate of paraphenetidin to which some acetophenone has been added; antipyretic and antineuralgic; dose, gr. vij–xv (0.5–1.0).

**Mala'rioid** (*malaria* + *eidos,* resemblance). Resembling malaria or its effects.

**Mala'rious.** Malarial. Owing to or connected with malaria; as malarious soil or disease.

**Mala'ris.** Muscle constituting a part of the orbicularis palpebrarum.

**Malassez's' disease'.** Cystic testicle.

**Malassimila'tion.** Imperfect assimilation or nutrition.

**Mal'ate of i'ron.** Preparation made by the action of acidulous ripe apples on pure iron filings.

**Mal'axate** (*malasso,* to soften). To soften drugs by kneading. Process is called *malaxation.*

**Malaxa'tion.** See *Malaxate.* **M. of the eye,** manipulation of the eyeball following sclerotomy, consisting in pressure made on the eyeball with the fingers, thus keeping the margins of the incision separated and removing part of the aqueous humor.

**Malax'ia** (*malasso,* to soften). Softening; malaxis; malacia.

**Malax'is.** Preternatural softness, malacia. **M. cor'dis,** see *Cardiomalacia.* **M. hepat'ica,** accumulation of fat in secreting cells of the liver. **M. ventric'uli,** softening of the stomach walls.

**Malax'is odora'ta.** Native plant of the E. Indies; the juice is used there medicinally.

**Malconforma'tion.** Malformation.

**Male.** Of the sex that begets young. Not female. **M. or'gan,** penis.

**Ma'le.** Axilla.

# DESCRIPTION OF PLATES OF MALARIAL PARASITES.[1]

The drawings were made with great care and skill by Mr. Max Broedel, with the assistance of the camera lucida, from specimens of fresh blood. A Winkel microscope, objective, 1-14 (oil-immersion), ocular, 4, was used.

Figs. 4, 13, 23, 24, and 42 of Plate I. were drawn from fresh blood, without the camera lucida.

## The Parasite of Tertian Fever.

1.—Normal red corpuscle.

2, 3, 4.—Young hyaline forms. In 4 a corpuscle contains three distinct parasites.

5, 21.—Beginning of pigmentation. The parasite was observed to form a true ring by the confluence of two pseudopodia. During observation the body burst from the corpuscle, which became decolorized and disappeared from view. The parasite became, almost immediately, deformed and motionless, as shown in Fig. 21.

6, 7, 8.—Partly developed pigmented forms.

9.—Full-grown body.

10–14.—Segmenting bodies.

15.—Degenerative form simulating a segmenting body.

16, 17.—Precocious segmentation.

18, 19, 20.—Large swollen and fragmenting extracellular bodies.

22.—Flagellate body.

23, 24.—Degenerative forms showing vacuolation.

## The Parasite of Quartan Fever.

25.—Normal red corpuscle.

26.—Young hyaline form.

27–34—Gradual development of the intracorpuscular bodies.

35.—Full-grown body. The substance of the red corpuscle is not visible in the fresh specimen.

36–39.—Segmenting bodies.

40.—Large swollen extracellular form.

41.—Flagellate body.

42.—Degenerative form showing vacuolation.

## The Parasite of Æstivo-autumnal Fever (*Hæmatozoön falciparum*).

1, 2.—Small refractive ring-like bodies.

3–6.—Larger disk-like and amœboid forms.

7.—Ring-like body with a few pigment granules in a brassy, shrunken corpuscle.

8, 9, 10, 12.—Similar pigmented bodies.

11.—Amœboid body with pigment.

13.—Body with a central clump of pigment in a corpuscle showing a retraction of the hæmoglobin-containing substance about the parasite.

14–20.—Bodies with central pigment clumps or blocks. Presegmenting forms.

21–24.—Larger bodies with central pigment blocks. Presegmenting bodies. Seen in the peripheral circulation during a severe paroxysm.

25–28.—Segmenting bodies from the spleen. Figs. 25–27 represent one body where the entire process of segmentation was observed. The segments, eighteen in number, were accurately counted before separation, as in Fig. 27. The sudden separation of the segments, occurring as though some retaining membrane were ruptured, was observed.

29–37.—Crescents and ovoid bodies. Figs. 34 and 35 represent one body which was seen to extrude slowly, and later to withdraw, two rounded protrusions.

38, 39.—Round bodies.

40.—Pseudo-gemmation, fragmentation.

41.—Vacuolation of a crescent.

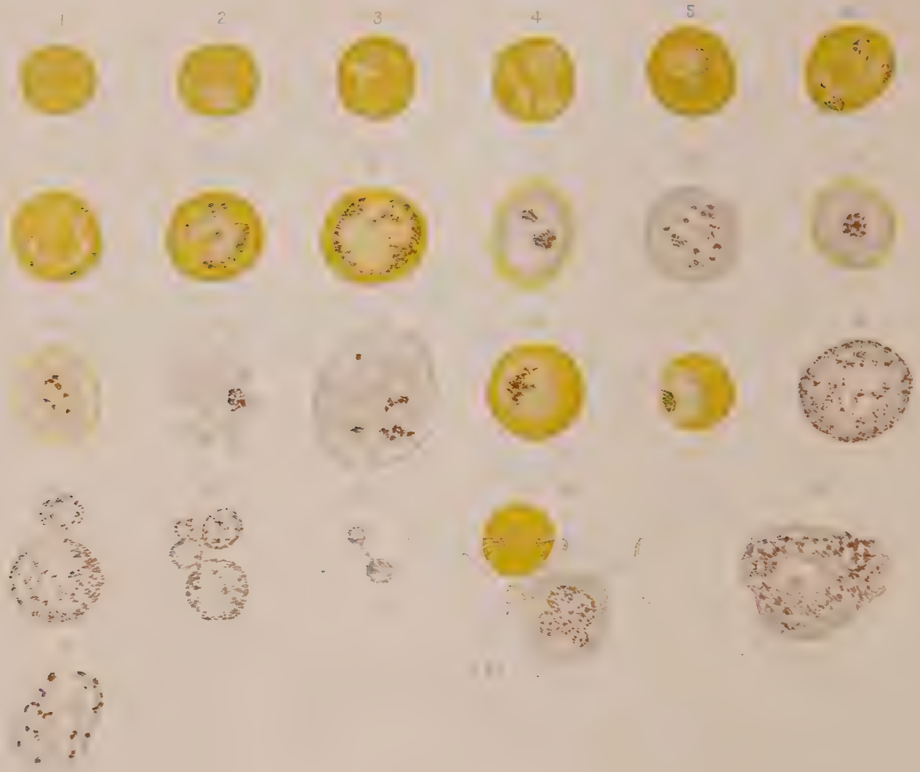
42–44.—Flagellation. The figures represent one organism. The blood was taken from the ear at 4.15 P. M.; at 4.17 the body was as represented in Fig. 42. At 4.27 the flagella appeared; at 4.33 two of the flagella had already broken away from the mother body.

45–49.—Phagocytosis. Traced with the camera lucida.

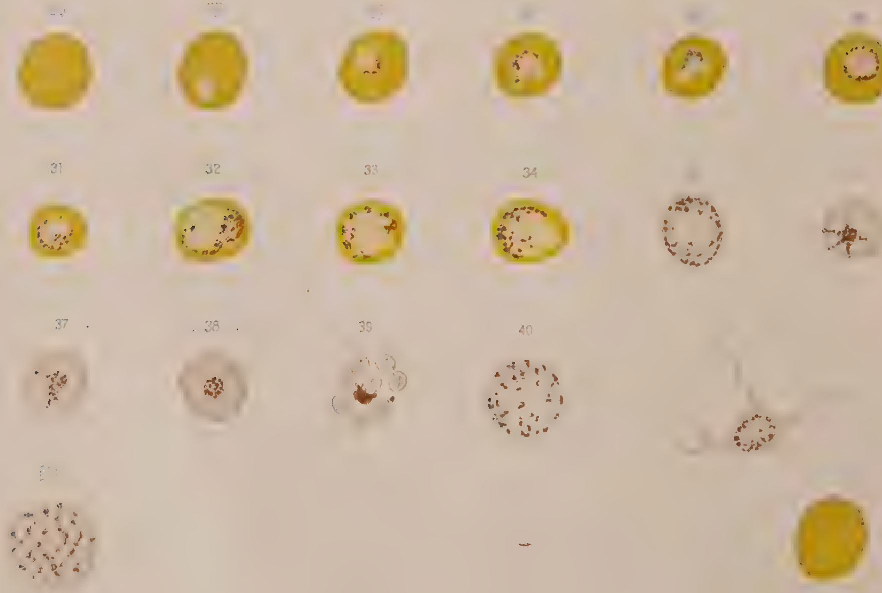
---

[1] These plates are taken by permission from *The Johns Hopkins Hospital Reports*, vol. v., 1895. Four figures—viz., Figs. 21, 22, 23, and 24—have been added to the plate of æstivo-autumnal fever, and are also from the drawings of Mr. Max Broedel.

The Parasite of Tertian Fever.

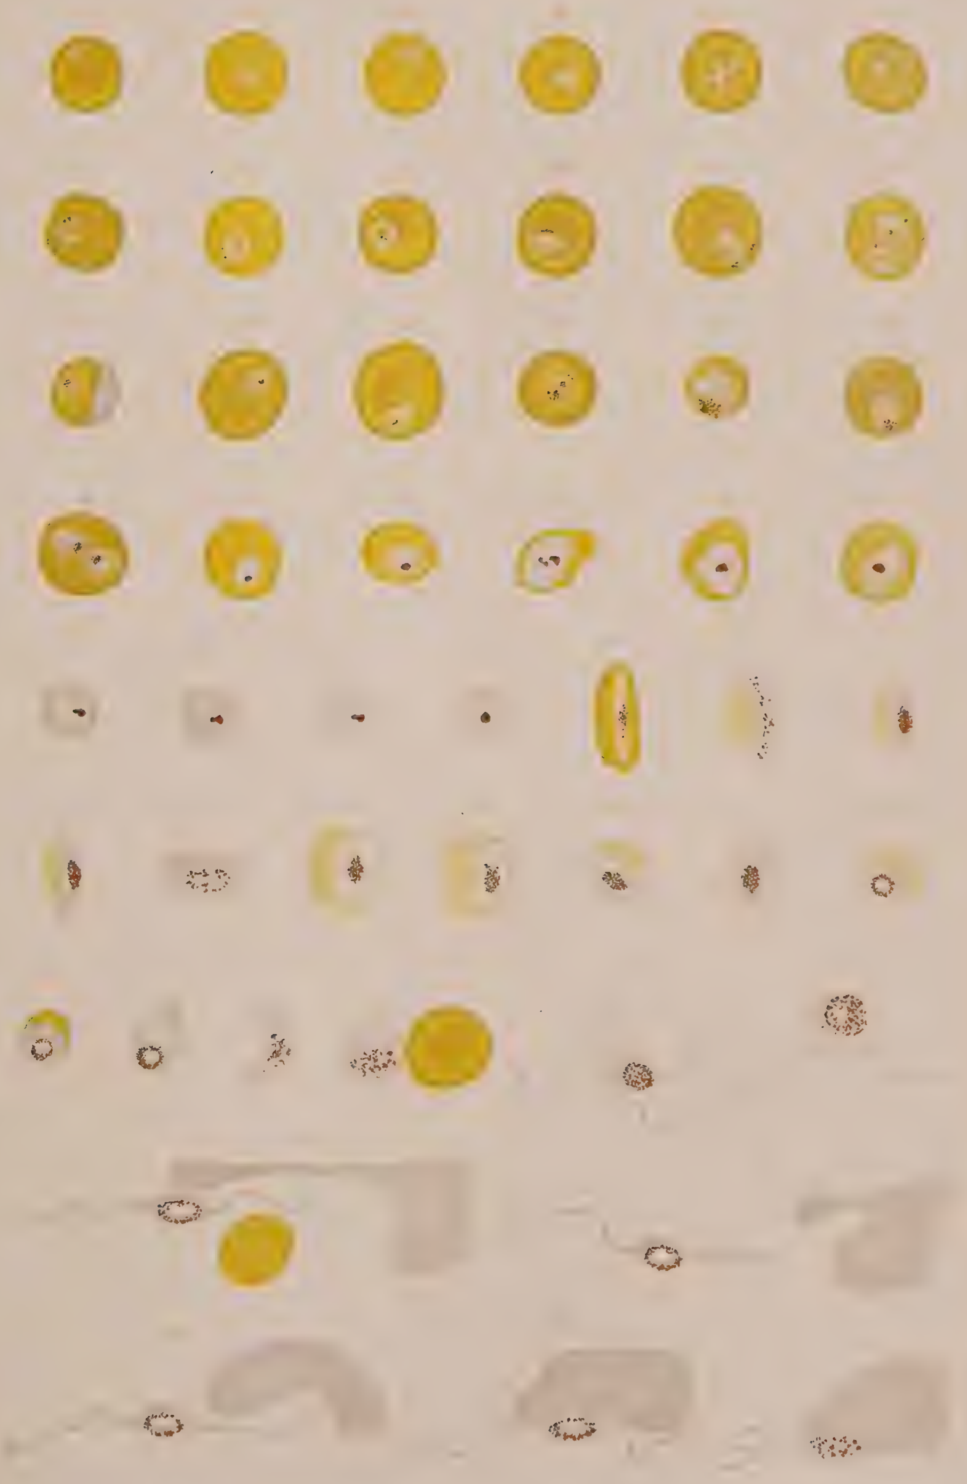


The Parasite of Quartan Fever



Malarial Parasites. (Thayer.)

## The Parasite of Aestivo-Autumnal Fever.



**Malemis′sion.** Non-discharge of the spermatic fluid.

**Malforma′tion** (*malus*, bad, *forma*, form). Wrong formation or irregularity in the structure of parts. See *Monster*.

**Malgaigne′s′ amputa′tion.** Calcaneoastragaloid disarticulation. **M.′s fos′sa,** superior carotid triangle. **M. her′nia,** infantile hernia; descent of the bowel into the still open vaginal process of the peritoneum. **M.′s hooks,** hooks for maintaining in proper position the pieces of a fractured patella. **M.′s tri′angle,** superior carotid triangle.

**Malgen′ic** (*malum*, disease, *gennao*, to engender). Giving rise to disease.

**Ma′lia** or **Malias′mus.** See *Malis* and *Equinia*.

**Mal′ic acid.** $C_4H_6O_5$. Acid derived from apple; occurs in other fruits also.

**Mal′ice.** Althæa.

**Malico′rium.** The rind of Punica granatum.

**Mal′iform.** Resembling in shape an apple.

**Malign′.** Malignant.

**Malig′nancy.** Condition of being malignant.

**Malig′nant** (*malus*, bad). Term applied to any disease whose symptoms are so aggravated as to threaten the destruction of the patient, as malignant scarlet fever, malignant cholera, etc. A disease of a very serious character, although it may be mild in appearance. *Malignant œdema* signifies œdematous anthrax; *malignant pustule* or vesicle, anthrax. A *malignant tumor* is one the tendency of which is to destroy life if not removed, and to recur after removal; tumors of this class are mainly sarcoma and carcinoma.

**Ma′li-ma′li.** A convulsive tic prevalent among the natives in the Philippines.

**Malin′gerer.** A simulator of disease.

**Malin′gering.** Simulation of disease.

**Ma′lis.** Cutaneous vermination. Cuticle or skin infested with parasites—parasitismus superficiei. In Persia this affection is produced by the Guinea-worm; in South America by the chigre; and in Europe, occasionally, by the louse. See *Equinia* and *Phtheiriasis*. **M. ac′ari,** scabies. **M. acridophago′rum,** locust-eating. **M. america′na,** inflammation of the skin due to the presence of the chigre. **M. a. crinon′ibus,** cutaneous affection in children, in which numerous comedones are present. **M. dracun′culus,** dracunculus. **M. gor′di,** dracunculus. **M. œst′ri,** disease produced by the presence of the larvæ of the gadfly in the nose or external ear. In cattle the larvæ are found under the skin. **M. pedicula′ris,** phtheiriasis. **M. pedic′uli,** phtheiriasis. **M. praten′sis,** cutaneous affection due to the presence of prairie ticks. **M. pu′licis,** eruption from flea-bites. **M. transylva′nica,** disease occurring in Transylvania, accompanied by rheumatism and discharge of worms from the region of the knees. **M. westphalien′sis,** disease resembling scurvy, occurring in Westphalia in the sixteenth century, in which the joints were affected.

**Mal′leable.** Capable of being beaten into thin plates.

**Mal′leal** or **Mal′lear.** Relating to the malleus.

**Mallea′tion** (*malleus*, hammer). Affection described by Morgagni and others as a form of chorea, characterized by a constant hammering with one hand on the other, or on the knee or the side. Flagellation.

**Mal′leatory.** Relating to a hammer or hammering movement, as *m. chorea*, in which the individual movements are of that kind.

**Malle′dius.** Tensor tympani.

**Malle′iform.** Shaped like a hammer.

**Mallein′.** Liquid of a yellowish color obtained from sterilized and filtered culture of Bacillus mallei. It has been suggested to employ this fluid as an injection in glanders for diagnostic purposes.

**Mal′lenders.** Malandria.

**Mal′leo-in′cudal** (*malleus*, hammer, *incus*, anvil). Relating to the malleus and incus of the ear.

**Malle′olar** (*malleolus*). Belonging to the ankles. **M. ar′teries** are two branches furnished by the anterior tibial about the instep; the one—the internal—passes transversely behind the tendon of the tibialis anticus to be distributed in the vicinity of the malleolus internus; the external glides behind the tendons of the extensor communis digitorum pedis and the peroneus brevis, and sends its branches to the parts which surround the outer ankle as well as to the outer region of the tarsus.

**Malle′olus** (dim. of *malleus*, mallet). Two projections formed by the bones of the leg at their inferior part. The inner belongs to the tibia, the outer to the fibula. The ankles afford attachment to ligaments, and each has a sort of gutter in which certain tendons slide.

**Malleomy′ces** (*malleus*, hammer, *mykes*, fungus). Schizomycetes occurring in pus of glanders, and thought to be the etiological factor in that disease.

**Mal′let.** Wooden hammer used with a gouge for removing or cutting bones in surgical and anatomical operations. **M. fin′ger,** condition of thinning and distention of extensor tendon of finger, generally due to injury; the last phalanx becomes permanently flexed. **M. toe,** see *Hammer toe*.

**Mal′leus** (mallet). Longest and outermost of the four small bones of the ear, situated at the outer part of the tympanum, and united to the membrana tympani. It has: An ovoid head—caput, capitulum—which is articulated behind with the incus, and is supported by a narrow part called the neck—cervix. Anteriorly, a long apophysis, which is engaged in the glenoid fissure, and called the apophysis or process, processus gracilis of Rau. It affords attachment to the anterior or externus mallei muscle. A handle—manubrium—which forms an obtuse angle with the neck, and corresponds to the membrane of the tympanum, which it seems to draw inward. It is furnished at the upper extremity with a process—the processus brevis—to which the internus mallei is attached. **M. farcimino′sus** or **M. hu′midus,** equinia.

**Mallotoxin′.** Crystalline material resembling kamala.

**Mallo′tus philippinen′sis.** Rottlera tinctoria.

**Mal′low.** Malva. **In′dian m.,** Abutilon avicennæ. **Marsh m.,** althæa. **Wild m.,** Malva sylvestris. **Yel′low m.,** Abutilon avicennæ.

**Malls.** Rubeola.

**Malmsey,** mahm-ze. Wine of Greece and Madeira.

**Malnutri′tion.** Impaired nutrition from defective assimilation.

**Malocclu′sion.** Abnormal joining of the upper with the lower teeth.

**Malograna′tum.** Pomegranate; punica granatum.

**Mal′onate.** Salt of malonic acid.

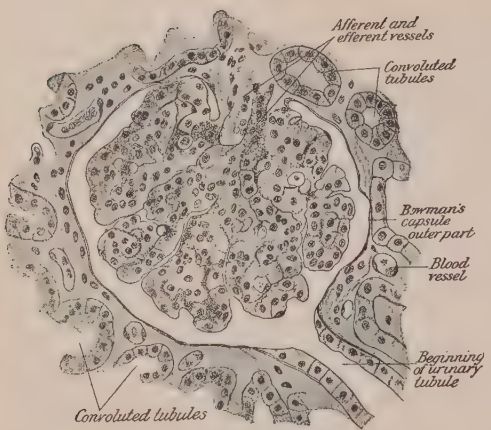
**Malone′tia nit′ida.** South American plant, product of which is reputed to be contained in curare.

**Malo′ni bap′cai.** Seed of Indian plant employed as an external application in scabies.

**Mal′ope malacoi′des.** Mallow-wort of Barbary.

**Malpi′ghia latifo′lia.** A plant growing in the Antilles; its bark is very similar to simaruba bark. **M. mourel′la,** bark of this shrub, a native of Cayenne, reputed to be febrifuge and useful in diarrhœa. **M. m. crassifo′lia,** Brysonia crassifolia. **M. m. gla′bra,** Barbadoes cherry; fruit is employed as a febrifuge and the bark as an astringent. **M. u′rens,** cowhage cherry; fruit is edible, and possesses astringent properties like the root and bark.

**Malpi′ghian ac′ini** or **bod′ies.** Corpora Malpighiana; see also *Spleen*. **M. cap′sule,** Bowman's capsule. **M. cells,** alveoli of the lungs. **M. cor′puscles,** convoluted masses of blood-vessels in the kidney, each of which is enclosed in a sac, Bowman's capsule; they secrete the watery elements of the urine. **M. lay′er of the skin,** rete mucosum. **M. pyr′amids,** pyramidal masses in the medullary part of the kidney. **M. re′te mirab′ile,** plexus or network formed by the terminal branches of the pulmonary artery. **M. stig′mata,** openings of communication of the capillary veins with the small



Afferent and efferent vessels
Convoluted tubules
Bowman's capsule outer part
Blood vessel
Beginning of urinary tubule
Convoluted tubules

A Malpighian corpuscle of the kidney.

splenic veins. **M. stra′tum,** rete mucosum. **M. tuft,** glomerule of the kidney. **M.'s ves′icles,** alveoli of the lungs.

**Malposi′tion.** Irregularity or error in location, as of a tooth. Faulty position of the fœtus in the pelvis. *Malpresentation* refers to the faulty presentation of the fœtus, as by the shoulder, etc.

**Malprac′tice.** Malpraxis.

**Malprax′is.** Bad management or treatment of a case; also criminal abortion.

**Malpresenta′tion.** See *Malposition.*

**Malt.** The seed of Hordeum distichum or barley caused artificially to germinate. It has been recommended in medicine as antiscorbutic, antiscrofulous, etc.; it contains maltose, dextrin, and diastase. **M. ex′tract,** an evaporated infusion of malt, to which is added the bitter of the hop. Employed in irritable forms of indigestion and as a general tonic in tuberculosis and nervous diseases. **M. liq′uors,** alcoholic beverages prepared from malt, as beer, ale, and porter. **M. spir′it,** spirit distilled from malt. **M. su′gar,** maltose.

**Mal′ta fe′ver.** Fever due to a specific parasite, the Micrococcus melitensis. It may be of enteric, remittent, or hybrid form, and is often followed by rheumatism, tonsillitis, or orchitis. It occurs along the shores of the Mediterranean, in the Southern United States, and in many parts of the tropics.

**Mal′tase.** Ferment in starch which changes starch into maltose and erythrogranulose.

**Mal′tha** (*malatto,* to soften). Soft wax; also mixture of asphalt with petroleum.

**Malthax′is.** Mollities.

**Maltin′.** Diastase.

**Maltine′.** A proprietary preparation from malt, having tonic properties.

**Maltobi′ose.** Maltose.

**Maltodextrin′.** Carbohydrate produced when starch is converted into maltose.

**Mal′tol.** $C_6H_6O_3$. One of the components of caramel made from malt.

**Mal′tose.** Sugar, result of action of diastase on fecula of barley.

**Mal′tum.** Malt.

**Malt′zey.** Leprosy.

**Malt′zyme** (*zymos,* ferment). A proprietary malt extract.

**Ma′lum** (*malus,* bad). Disease. Cheek. Apple. **M. ægypti′acum,** diphtheria. **M. aleppen′se,** Aleppo boil. **M. articulo′rum,** gout. **M. cadu′cum,** epilepsy. **M. c. pulmo′num,** asthma. **M. ca′num,** see *Pyrus cydonia.* **M. coen′se,** Averrhoa carambola. **M. coto′neum,** see *Pyrus cydonia.* **M. Cotun′nii,** neuralgia femoropoplitæa. **M. hypochondri′acum,** hypochondriasis. **M. hyster′icum,** hysteria. **M. insa′num,** see *Solanum melongena.* **M. ischiad′icum,** neuralgia femoropoplitæa. **M. laz′ari,** elephantiasis. **M. lycoper′sicum,** Solanum lycopersicum. **M. ma′jus,** grand mal. **M. mi′nus,** petit mal. **M. mor′tuum,** species of lepra in which the affected portions of skin seem to be dead. **M. per′forans pe′dis,** perforating ulcer of the foot, mycetoma. **M. pila′re,** trichosis. **M. Pot′tii,** see *Pott's disease.* **M. prima′rium,** idiopathia. **M. reg′imen,** malpraxis. **M. Rust′ii,** disease of a tuberculous character affecting the superior cervical vertebræ. **M. sclerot′icæ seni′le,** scleritis occurring in old people. **M. seni′le arteria′rum,** arteritis deformans due to old age. **M. s. articulo′rum,** a joint disease occurring in advanced life, similar in outer aspects to arthritis deformans, but affecting usually the larger joints, such as the hip. **M. spino′sum,** Datura stramonium. **M. terres′tre,** Atropa mandragora. **M. vene′reum,** syphilis. **M. vertebra′le poste′rius,** necrosis affecting the spines of the vertebræ.

**Ma′lus** (apple tree). Pyrus malus. **M. auran′tia ma′jor,** Citrus aurantium. **M. commu′nis,** Pyrus malus. **M. dasyphyl′la,** Pyrus malus. **M. in′dica,** Bilumbi biting-bing of Bontius, ord. *Rosaceæ;* juice of this is cooling, and is drunk as a cure for fevers; leaves, boiled and made into a cataplasm with rice, are famed in all sorts of tumors; juice, mixed with arrack, is drunk for the cure of diarrhœa. **M. limo′nia ac′ida,** see *Citrus medica.* **M. med′ica,** see *Citrus medica.* **M. sylves′tris,** Pyrus malus.

**Mal′va.** A genus of plants, ord. *Malvaceæ;* mallow. **M. al′cea,** Alcea rosea, hollyhock, mallow; emollient. **W. angustifo′lia,** Mexican species; leaves and roots are emollient. **M. anseri′na,** M. rotundifolia. **M. arbo′rea,** Althæa rosea. **M. balsam′ica,** species of Southern Africa, where it is employed as an emollient. **M. commu′nis,** M. sylvestris. **M. ma′jor,** Alcea rosea. **M. moscha′ta,** see *Musk.* **M. o′pium,** an opium from India. **M. rotundifo′lia,** resembles M. sylvestris in its properties. **M. scopa′ria,** species growing in Peru; root is employed in diarrhœa. **M. sylves′tris,** the common mallow; leaves and flowers are chiefly used in fomentations, cataplasms, and emollient enemata; demulcent.

**Malvavis′cum** (*viscum,* bird-lime). Althæa.

**Mama′ pian′.** Mother yaw; ulcer of a bad aspect which is the commencement of the pian, and which, after having destroyed the flesh, extends to the bones.

**Mam′bi.** Substance used in Peru to add to coca-leaves.

**Mam′ei.** From incisions made in the branches of this West Indian tree a copious discharge of pellucid liquor occurs, which is called *momin* or *toddy wine;* is diuretic, and esteemed to be a good antilithic. See *Mammea americana.*

**Mamelu′co.** In Brazil the hybrid between the white and Indian.

**Mamil′la** (dim. of *mamma*). Mammilla.

**Mamil′læ arachnid′iæ.** Papillæ renales.

**Mamil′laplasty.** Operation for the purpose of restoring a depressed nipple.

**Mamilla′ria lewin′i.** A plant, ord. *Cactaceæ,* furnishing mescal buttons; contains an exceedingly poisonous alkaloid called anhaloine. **M. sim′plex,** this plant is used as an emollient in external applications.

**Mam′illary.** Mammillary.

**Mam′illate** or **Mam′illated.** Resembling a mamma in shape.

**Mamillifor′mis.** Nipple-shaped.

**Mam′illoid,** (*mamilla,* nipple, *eidos,* resemblance). Resembling a nipple in shape.

**Mam′ma.** The breast. Glandular organ proper to *mammalia* intended for the secretion of milk; see *Mammary gland.* The mammæ exist in both sexes, but they acquire a much greater size in the female, especially during pregnancy and lactation. At this time, at the central part of each breast, the skin changes color and assumes a rosy tint. It is of a reddish-brown in women who have suckled several children. This circle has a rugous appearance, owing to the presence of sebaceous glands, and is called *areola* or *aureola*. These glands—*tubercles of the areola*—furnish an unctuous fluid for defending the nipple from the action of the mouth of the suckling infant. In the midst of the areola is the nipple, a rosy, conoidal, erectile eminence, and at the surface of which the galactophorous ducts open. The breasts with the space between are called the *bosom, sinus, colpus*. At time these terms are restricted to the space between the breasts. Mamma also means a nurse. In the cow the mamma is called the *udder*. **M. aber′rans,** supernumerary mammary gland. **M. errat′ica,** supernumerary mammary gland possessing the true glandular character, situated in an abnormal position. **U′terine m.,** cotyledon of the placenta.

**Mam′mæ** (pl. of mamma) **accesso′riæ.** Glands occasionally found on various parts of the body which secrete milk. **M. sicca′tæ,** dried mammary glands of the cow, powdered; said to increase the secretion of milk from the mammary gland.

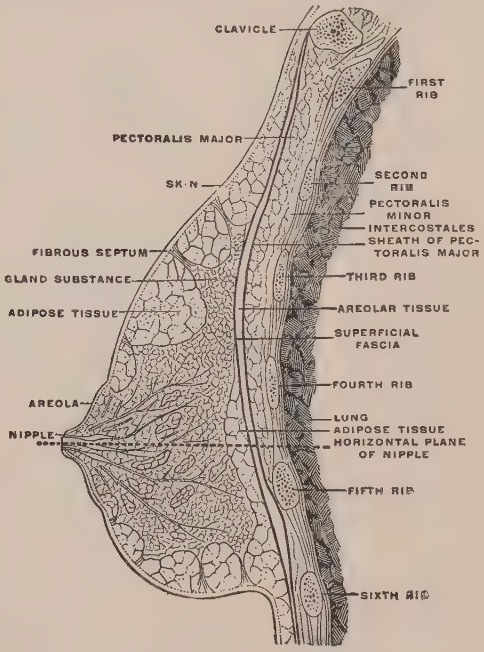
**Mam′mæform.** Mammiform.

**Mam′mal.** Mammiferous animal. An animal that suckles its young.

**Mammal′gia** (*algos*, pain). Neuralgia of the breast.

**Mamma′lia.** Division of vertebrata that suckle their young, including man. See *Vertebrata*.

**Mam′mary.** Relating to the breasts. **M. are′ola,** zone around the nipple, of pink color in virgins and blondes; of darker and brown color in mothers and brunettes. **M. ar′teries** are three in number: 1. The *internal mammary, arteria sternalis, internal thoracic*. It arises from the subclavian, and descends obliquely inward, from its origin to the cartilage of the third rib. Below the diaphragm it divides into two branches, one external, the other internal. From its origin until its bifurcation it gives branches to the muscles and glands of the neck, to the thymus, mediastinum, pericardium, and œsophagus. In each intercostal space it gives off *internal* and *external musculocutaneous* branches, and also on each side the *superior diaphragmatic*. Its two ultimate branches are distributed on the parietes of the abdomen, and anastomose with the external mammary, intercostal, lumbar, circumflexa ilii, and epigastric arteries. 2. The *external mammary arteries* are two in number, superior and inferior. The *superior external mammary, superior thoracic*, is furnished by the axillary artery. It descends obliquely forward between the pectoralis major and pectoralis minor, to which it is distributed by a considerable number of branches. The *inferior external mammary, long* or *inferior thoracic*, arises from the axillary artery, a little below the preceding; descends vertically over the lateral part of the thorax; curves afterward inward; becomes subcutaneous and divides into a number of branches, which surround the breasts; gives branches to the pectoralis major, serratus magnus anticus, the intercostal muscles, the glands of the axilla, and the integuments of the breast. **M. gland** is the secretory organ of the milk; is situated in the substance of the breast, to which it gives shape. The tissue of this gland results from the assemblage of lobes of different size, united intimately by areolar tissue. Each is composed of several lobules, formed of round granulations, of a rosy white color, and the size of a poppy-seed. The glandular grains give rise to the radicles of the excretory canals of the mamma, which are called *galactophorous* or *lactiferous;* see *Lactiferous vessels*. These excretory vessels unite in ramusculi, rami, and in trunks of greater or less size; collect toward the centre of the gland; are tortuous, very extensible, and semitransparent. All terminate in sinuses situated near the base of the nipple, which are commonly from 15 to 18 in number. These sinuses are very short, conical, and united by areolar tissue. From their summits a fasciculus of new ducts sets out, which occupy the centre of the nipple, and open separately at its surface. The arteries of the mammary gland come from the thoracic, axillary, intercostal, and internal mammary. The veins accompany the arteries; the nerves are furnished by the intercostals and brachial plexus; the lymphatic vessels are very numerous, and form two layers. They communicate with those of the thorax, and pass into the axillary ganglions.



Right mammary gland in sagittal section, inner surface of outer segment. (Gerrish.)

The following measurements have been made of these glands and their component parts (Vierordt):

Weight of both breasts, 222 g. (E. Bischoff).

| | |
|---|---|
| Greatest length (along margin of pectoralis major) | 128 mm. |
| Vertical height | 111 |
| Thickness (in a sagittal direction) | 54 |
| Sinus lactiferi | 5–7 in diameter. |
| Ductus “ | 1.7–2.3 |
| Mouth of ducts | 0.6 wide |
| Acini | (0.08–0.16). |

**M. line,** a line parallel with the vertical axis of the body passing through the nipple. **M. phthi′sis,** see *Phthisis*. **M. re′gion,** thoracic region containing mamma. **M. sarco′ma,** tumor of the color and texture of the mammary gland; dense and whitish; sometimes softer and brownish; often producing, on extirpation, a malignant ulcer with indurated edges; found in various parts of the body and limbs. **M. veins** follow the same course as the arteries, and have received the same denominations. The *internal mammary vein* of the right side opens into the superior cava; that of the left into the corresponding subclavian vein. The *external mammary veins* open into the axillary vein.

**Mam′mate.** Possessing breasts.

**Mam′mea africa′na.** Tree of Africa; fruit is edible. **M. america′na,** ord. *Guttiferæ;* systematic name of the tree on which the mammee fruit grows. The fruit has a delightful flavor when ripe, and is much cultivated in Jamaica. A decoction of the leaves is used as antiperiodic, and the bark as an emollient application to wounds. **M. asiat′ica,** Barringtonia speciosa.

**Mammea′ta** (*mamma*). One who has large breasts.

**Mammel′la** (dim. of mamma). Nipple.

**Mam′mifer** (*mamma+fero,* to bear). Mammal.

**Mammif′erous ani′mal.** Mammal.

**Mam′miform** (*mamma+forma,* form). Mastoid.

**Mammil′la** (dim. of mamma). Nipple; small prominence; papilla.

**Mammil′læ** (pl. of *mammilla*) **arachnid′iæ.** Papillæ renales; see *Kidney.* **M. medulla′res,** see *Mammillary eminence.*

**Mammil′laplasty** or **Mammil′loplasty.** Plastic operation on the nipple in case of injury or to restore it to a normal condition.

**Mammilla′ria.** Tuber cinereum.

**Mammilla′ris** (*mammilla*). Mastoid.

**Mam′millary.** Having the shape of a nipple. See *Mastoid.* **M. em′inence,** name given: 1. To more or less marked prominences on the inner surface of the bones of the cranium, which correspond to the anfractuosities of the cranium. 2. To white, round, medullary tubercles, of the size of a pea, situated at the base of the brain, behind the gray substance from which the infundibulum of the brain arises. These *mammillary tubercles, corpora albicantia,* are united to each other by a small, grayish band corresponding with the third ventricle. They receive the anterior prolongations of the fornix. Older anatomists, taking the nervous trunks, to which Willis first gave the name *olfactory nerves,* for simple appendages of the brain, called them, on account of their shape, *carunculæ mammillares.* Vesalius, Fallopius, Columbus, and several others termed them *processus mammillares cerebri ad nares;* they have also been called *trigona olfactoria.* **M. pro′cesses,** tubercles which project backward from each of the superior articular processes of the lumbar vertebræ; see *Mammillary eminence* and *Mastoid process.*

**Mam′millated.** That which has mammiform projections on its surface. **M. liv′er,** cirrhosis.

**Mammilla′tion.** Granulation of some mucous membranes, as of the stomach. If in excess in the latter it may be pathognomonic of polypus of the stomach.

**Mammil′liform.** Nipple-shaped.

**Mam′milloid.** Resembling a nipple in shape.

**Mammi′tis.** Inflammation of the mamma; mastitis.

**Mam′mose.** Mammate.

**Mammot′omy.** Incision into or operation on the mamma or mammary gland.

**Mam′mula** (dim. of mamma). Small breast.

**Man.** The chief and most perfect of the mammalia; in Greek, anthropos (*ana,* upward, *trepo,* to turn), because he alone, of all animals, possesses the natural power of standing erect. He is the only animal whose incisor teeth, wedged in a projecting jaw, are absolutely vertical. Man is especially distinguished from other mammalia by the faculty he possesses of classing his ideas and comparing them with each other, and connecting, representing, and transmitting them by signs and articulate sounds. He possesses in the highest degree the attributes of intelligence—memory, judgment, and imagination. Differences in figure, color, stature, etc., have caused naturalists to divide mankind into a number of races or varieties.

The following estimates have been made of the proportions of a man of medium size (Schadow):

| | |
|---|---|
| Total length of a man | 166.5 cm. |
| Length of arms expanded | |
| Distance between nipples | 21 |
| Clavicular bones | |
| Both knees close together | |
| Half the width of shoulder | |
| Length of neck | 8 |
| Height of foot | |
| From external to internal malleolus, front | |
| Length of upper arm (front) | 34 |
| " " " (on the side) | |
| Length of elbow | 26 |
| Breadth below ribs *en face* | |
| Length of foot (*profile*) | |
| Breadth of both calves *en face* | 24 |
| " of shoulder-blade to breast (on the side) | |
| " from glutæus to genital region | |
| Length of hand | 18.5 |
| From sacral vertebra to umbilicus (on the side) | |
| Calves above (on the side) | |
| Breadth of foot | 10.5 |

A few dimensions may be added, after Krause:

| | Men. | Women. |
|---|---|---|
| Height of sternal region | 19 cm. | 18 cm. |
| Height from scrobiculus cordis to umbilicus | 18 | 18 |
| Height from umbilicus to mons Veneris | 14 | 16 |
| Circumference of abdomen around iliac regions | 70 cm. | 73 cm. |
| Circumference of abdomen around crest of ilium | 81 | 84 |
| Circumference of the upper arm | 28 | 26 |
| " of forearm at upper end | 27 | 24 |
| " of forearm at lower end | 19 | 18 |
| Breadth of carpus | 6 | 5 |
| Circumference of carpus | 18 | 16 |
| Breadth between trochanters | 34 | 35 |
| Circumference of thigh at upper end | 51 | 49 |
| " " in the middle | 47 | 41 |
| " " at lower end | 35 | 32 |
| Circumference of knee | 34 | 32 |
| " " leg below the knee | 31 | 28 |
| " " the calf | 37 | 34 |
| Length of foot (from the heel to the toes) | 26 | 23 |

Dimensions and weight of the bones of the skeleton (fresh skeleton of a man aged 42) (Krause and Dursy):

| | Men (cm.). | Women (cm.). | Weight of bone (g.). |
|---|---|---|---|
| Entire skeleton—height | 162–172 | 151–162 | *9814 |
| Height of head (posteriorly) | 14 | 13 | †1115 |
| Vertical length of vertebral column | 70 | 68 | ‡1556 |
| Length of sternum | 18 | 16 | 80 |
| " " clavicle | 14.2 | 13.6 | 41 |
| " " scapula (base) | 16 | 14 | 134 |
| Breadth of scapula (above) | 12 | 10 | |
| Length of acromion | 6 | 5 | |
| " " humerus | 32 | 30 | 308 |
| " " ulna | 26 | 23 | 99 |
| " " radius | 24 | 22 | 90 |
| " " hand | 20 | 18 | 126 |
| Height of os innominatum | 22 | 19 | §958 |
| Breadth of crest of the ilium | 28 | 30 | |
| Length of femur | 55 | 43 | 940 |
| " " patella | 4 | 4 | 39 |
| " " tibia | 39 | 34 | 530 |
| " " fibula | 37 | 33 | 78 |
| " " foot | 24 | 22 | 325 |

* Including teeth, intervertebral cartilages, and costal cartilages.

† Including teeth.

‡ Including intervertebral cartilages.

§ Whole pelvis (without sacrum).

Weight of vertebræ (fresh skeleton) (Dursy):

| | | Heaviest. | Lightest. |
|---|---|---|---|
| 7 cervical vertebræ | 144 g. | 7th (28) | 3d (16) |
| 12 thoracic vertebræ | 623 | 11th and 12th (81) | 2d and 3d (34) |
| 5 sacral vertebræ | 526 | 3d (112) | 5th (100) |
| Average, | 54 | | |

Dry skeleton (Bardeleben):

| | | Heaviest. | Lightest. |
|---|---|---|---|
| 7 cervical vertebræ | 52.2 g. | 7th (9.9) | 1st (5.7) |
| 12 thoracic vertebræ | 176.2 | 12th (21.4) | 3d (10.7) |
| 5 sacral vertebræ | 154.1 | 3d (33) | 1st (26.4) |
| Average, | 16.8 | | |

**Man′aca.** Root of Franciscea uniflora; vegetable mercury; antisyphilitic; purgative.

**Man′akin** (dim. of man). Fantom.

**Manchineel.′** Hippomane mancinella.

**Mancura′na.** Origanum.

**Man′cus.** Lame.

**Mandel′ic acid.** Crystalline acid obtained from bitter almond oil. Its salts are mandelates.

**Man′dible** or **Mandib′ula** (*mando,* to chew). Inferior maxillary bone; lower jaw.

**Mandib′ular.** Pertaining to the inferior maxilla. **M. an′gle,** angle formed by the ramus of the inferior maxilla in its relation to the plane of the body of the bone. **M. arch,** arch formed by the tympanic plate of the temporal bone and the inferior maxilla. **M.**

**nerve,** inferior maxillary nerve. **M. plate,** two osseous embryonic structures ultimately forming the lower jaw. **M. pro′cess,** part from which, in the fœtus, the mandible proceeds. **M. tu′bercle and dim′ple,** tubercle and spot occasionally located on the cheek from two to four centimetres behind the angle of the mouth.

**Mandibula′ris.** Masseter muscle.

**Mandib′ulate.** Possessing mandibles.

**Mandibulocondyl′ial tri′angle.** Triangle with base between the condylia and the apex at the symphysion.

**Mandibulocoro′nal tri′angle.** Triangle with the base between the two coronia and the apex at the symphysion.

**Mandibulofa′cial in′dex, Mandibuloin′frafacial in′dex,** or **Mandibulosu′prafacial in′dex.** Indices determined by vertical projection measurements of the lower jaw compared with the facial.

**Mandibulogo′nial tri′angle.** One having the base between the two gonia and apex at the symphysion.

**Mandib′ulum.** Inferior maxillary bone.

**Man′dioc** or **Mandio′ca.** Jatropha manihot.

**Man′do** (*mando,* to chew). Glutton.

**Mandrag′ora.** Atropa mandragora; mandrake.

**Mandragorine′.** Alkaloid from Mandragora officinalis, $C_{17}H_{23}NO_3$. The sulphate is employed as a mydriatic.

**Man′drake.** Atropa mandragora, Podophyllum peltatum, P. montanum. **Amer′ican m.,** Podophyllum peltatum. **Fe′male m.,** Mandragora vernalis. **Male m.** Mandragora autumnalis. **Medic′inal m.,** Mandragora officinalis.

**Man′drin.** The wire used to give rigidity to a flexible catheter during introduction.

**Manduca′tion** (*manduco,* to chew). Mastication.

**Manducato′rius.** Masseter muscle.

**Man′ducatory** (*manducatio,* mastication). Appertaining to mastication. **M. nerve,** see *Trigemini.*

**Man′ec's paste.** See *Paste.* **M.'s opera′tion,** operation for ligation of the innominate artery.

**Manet′tia.** Genus of the *Cinchoneæ.* **M. cordifo′lia, M. glab′ra,** root of this species possesses emetic properties. **M. lanceola′ta,** Ophiorrhiza lanceolata.

**Man′ganate.** A salt of manganic acid.

**Man′ganese.** Metal abundant in nature in an oxidized state, often in combination with iron, for which it has a marked affinity. It is of a grayish-white color, hard and brittle, and destitute of magnetic properties. Specific gravity about 8. Chemical symbol, Mn. It is given internally in its salts or other compounds; albuminate, saccharate, peptonate, and dextrinate of manganese have been recently introduced as tonics, in chlorosis particularly. The official (Ph. U. S.) salts are the black oxide and the sulphate of manganese, and potassium permanganate; see *Mangani.* **M. albu′minate,** yellowish, soluble salt, employed like *m. peptonate* and *m. saccharate,* as easily assimilated blood tonics in chlorosis, etc. **M. ar′senate,** arseniate of manganese; prepared by saturating a solution of arsenic acid with freshly precipitated manganese carbonate. **Black ox′ide of m.,** mangani dioxidum, is used in preparing chlorine gas. **M. diox′ide,** mangani dioxidum. **M. i′odide,** this salt is prescribed in pill and syrup in the anæmia attendant on scrofula, phthisis, cancer, etc. **M. monox′ide,** MnO, substance of a light green color. **M. sesquiox′ide,** $Mn_2O_3$, substance of a black or dark-brown color when in the hydrated state. **M. sul′phate,** *mangani sulphas;* rose-colored, soluble salt, isomorphous with magnesium sulphate; recommended as a cholagogue in doses of ʒj–ij (4.0–8.0). **M. tetrox′ide,** black oxide of manganese.

**Mangane′sic acid.** Name of acid derived from manganese.

**Mangane′sii** (gen. of manganesium). See *Mangani.*

**Mangane′sium** or **Man′ganum.** Manganese.

**Man′gani diox′idum.** (Ph. U. S.) Black oxide or dioxide of manganese; tonic and alterative; used in syphilis, chlorosis, prurigo, scabies, pyrosis; dose, gr. j–v (0.065–0.32). **M. sul′phas** (Ph. U .S.), $Mn\,SO_4$, made by heating native black oxide with concentrated sulphuric acid; occurs in pale pink or colorless crystals; cholagogue, cathartic, like sodium sulphate; dose, gr. ij–v (0.13–0.32).

**Mangan′ic acid.** $H_2MnO_4$. An acid from manganese which is known only in combination with bases in the form of manganates. See *Potassii permanganas.*

**Man′ganite.** Mangani dioxidum.

**Manganiza′tion.** Adulteration.

**Manganja,** man-gan′yah. See *Arrow poison.*

**Manganoammon′ic.** Manganous and containing ammonium.

**Manganopotas′sic.** Manganous and containing potassium.

**Man′ganous.** Relating to or containing manganese, especially manganese oxide.

**Man′ganum.** Manganese.

**Mange,** mainje. Scabies ferina. Parasitic skin disease of the dog, horse, and other animals, produced by ascarinæ. **Follic′ular m.,** contagious disease of the dog, due to the presence of the Demodex folliculorum. **Tex′as m.,** prairie itch.

**Mangif′era** (*mango,* fruit, *fero,* to bear) **fœ′tida.** Horse-mango; native of Cochin China and the Moluccas; fruit can be eaten. **M. in′dica** or **domes′tica,** mango tree, ord. *Terebinthaceæ.* Tree cultivated over Asia and South America. Mangos when ripe are juicy, of a good flavor, and so fragrant as to perfume the air to a considerable distance; they are eaten either raw or preserved with sugar. From the expressed juice a wine is prepared. Also fruit of Garcinia mangostana. **M. pinna′ta,** Spondias mangifera. **M. racemo′sa,** Holigarna longifolia.

**Man′go tree.** Mangifera indica.

**Mangostan′.** Garcinia mangostana.

**Mangosta′na.** Garcinia mangostana. **M. cambo′gia,** Garcinia cambogia. **M. garcin′ia,** Garcinia mangostana.

**Mangoustan′** or **Mangosteen′.** Garcinia mangostana.

**Man′grove.** A plant of the genus *Avicennia.* **Black m.,** Avicennia nitida. **White m.,** Avicennia tomentosa.

**Man′hood.** Adult age.

**Ma′nia** (*mainomai,* to be furious). Raving or furious madness. Disorder of the intellect in which there is erroneous judgment or hallucination, which impels to acts of fury; acute mental excitement; fury or frenzy. If the raving be not directed to a single object, it is mania properly so called; if to one object, it constitutes *monomania,* a term, however, usually given to another form of insanity. Mania attacks adults chiefly, women more frequently than men; prognosis is unfavorable. Separation is one of the most effective means of treatment, with attention to the physical condition and everything that can add to the mental comfort and turn thoughts away from the subjects of delusion. **Alcohol′ic m.,** delirium tremens. **Ambit′ious m.,** delirium grandiosum. **Chron′ic delu′sional m.,** delusional monomania. **M. contaminatio′nis,** mysophobia. **M. crapulo′sa,** dipsomania. **Dan′cing m.,** dancing plague; form of convulsion which has appeared, at various times, epidemically under the form of St. Vitus's dance, St. John's dance, tarantism, hysteria, Tigretier (in Abyssynia), and diseased sympathy, and which has been fully described by Hecker in his "Epidemics of the Middle Ages." **M. despon′dens,** mania characterized by depression. **Ephem′eral m.,** mania of a transitory character. **M. epilep′tica,** see *Epilepsy.* **Epilep′toid m.,** mania with symptoms resembling epilepsy. **M. erot′ica,** erotomania. **M. fix′a,** chronic mania. **M. furio′sa,** furious mania. **M. gra′vis,** mania of an acute and delirious character. **M. hallucinato′ria,** form observed after acute diseases, parturition, fevers, acute alcoholism, wasting diseases, etc. **Homici′dal m.**, mania characterized by marked homicidal tendency. **Hyster′ical m.**, m. with tendency to hysterical attacks, or the usual symptoms of hysteria. **Incen′diary m.**, pyromania. **M. intermit′tens**, mania occurring in periodical attacks. **M. lac′tea**, puerperal mania. **Lead m.**, mania due to plumbism. **M. melanchol′ica**, melancholy. **M. mi′tis**, delirium. **M. a pathe′mate**, ungovernable passion; fixed delusion. **M. of persecu′tion**, mania in which the patient has delusions of persecution. **M. post-menstrua′lis**, mania of a maniacal character occurring after menstruation. **M. potato′rum**, delirium tremens. **M. a po′tû**, delirium tremens. **M. præmenstrua′lis**, mania of a maniacal character preceding menstruation. **Puer′peral m.**, puerperal insanity; mania which supervenes in the childbed state, usually within a week or ten days after delivery. Pathological lesions observed after death are not constant. The brain is generally almost exsanguine. **M. puerpera′rum acu′ta**, puerperal m. **Reas′oning m.**, paranoia. **M. si′ne delir′io**, insanity unaccompanied with delirium; pathomania. **M. sub′ita**, mania of a transitory character. **M. sylves′tris**, melancholy. **M. a temulen′tiâ**, delirium tremens. **Tran′sitory m.**, violent but brief attacks of mania. **Traumat′ic m.**, insanity due to traumatism.

**Ma′niac.** Maniacal. One affected with mania. **Period′ical m.**, one who is subjected to recurring maniacal attacks.

**Mani′acal.** Maniac. **M. fu′ry**, see *Mania.*

**Man′ica Hippoc′ratis** (sleeve of Hippocrates). Conical flannel bag for straining liquid.

**Manico′mium** (*manikos*, mad, *komeo*, to take care of). Lunatic asylum.

**Manic′ula.** Attack of mania in a mild degree.

**Man′icure.** One who beautifies the hand; also the care of the hands and nails.

**Man′iform.** Resembling the shape of a hand.

**Manig′raphy** (*mania*+*grapho*, to write). Description of mental diseases. Psychiatry.

**Maniguet′ta.** Amomum grana paradisi.

**Man′ihot utilis′sima.** Jatropha manihot.

**Manihotoxin′.** Exceedingly poisonous product derived from roots of Manihot utilissima.

**Man′ikin** (dim. of *man*). Fantom. Anatomical model for instruction.

**Man-in-the-ground.** Convolvulus panduratus.

**Man′ioc.** Jatropha manihot.

**Man′iplus.** A handful.

**Manipula′tion** (*manus*). Mode of working. Term is applied to the manual examination and treatment of parts. **Conjoined′ m.**, external manipulation or pressure in labor practised in conjunction with internal exploration or pressure.

**Manip′ulus** (*manus*, hand, *pleo*, to fill). Handful; quantity of a substance capable of filling the hand. See *Fasciculus.*

**Man-mid′wife.** Accoucheur.

**Mann's sign.** Lessened sensitiveness of the scalp to the voltaic current in traumatic neuroses.

**Man′na.** (Ph. U. S.) Concrete saccharine exudation of Fraxinus ornus; it is inodorous, sweetish, and slightly bitter; laxative; useful for administration to children, who take it readily on account of its sweet taste; dose, ʒj–℥j (4.0–32.0). It forms one of the ingredients of compound infusion of senna. See *Fraxinus ornus.* **Brian′con m.**, see *Pinus larix.* **M. briganti′na**, see *Pinus larix.* **M. calabri′na**, see *Fraxinus ornus.* **M. croup**, semolina. **He′brew m.**, Alhagi maurorum. **M. larice′a**, see *Pinus larix.* **M. metallo′rum**, hydrargyri submurias. **M. tree**, Fraxinus ornus.

**Mann-fruit.** Root of Cyperus esculentus.

**Man′nikin.** Fantom.

**Man′nin.** See *Fraxinus ornus.*

**Man′ning's exan′thema.** Exanthem dependent on or associated with blood poisoning in scarlet fever and diphtheria. **M.'s splint**, an appliance used in the treatment of a fractured patella.

**Man′nioc.** Jatropha manihot.

**Mannip′arous.** Yielding manna.

**Man′nitan.** $C_6H_{12}O_5$. Syrupy liquid in mannite

**Man′nite.** See *Fraxinus ornus.*

**Mannit′ic acid.** Acid, formula of which is $C_6H_{12}O_7$. **M. al′dehyde**, mannose.

**Man′nitol.** Mannite.

**Man′nitose** or **Man′nose.** $C_6H_{12}O_6$. A glucose from mannite.

**Mann′kopff-Rumpf sign.** See *Mannkopff's sign.*

**Mann′kopff's sign.** Increase in the number of heart-pulsations when sensitive points are pressed upon in traumatic neuroses.

**Manno′socell′ulose.** Cellulose of the coffee-bean.

**Man-of-the-earth.** Convolvulus panduratus.

**Man′ol.** Liquid composed or carbolic acid, oil of anise, alcohol, and cane-sugar.

**Manom′eter.** Instrument for determining the blood pressure or the tension of a vapor.

**Manomet′ric cicat′rices.** Cicatrices of the membrana tympani which move outward or inward, according to the amount of pressure.

**Mano′ra.** Jasminum sambac.

**Man′oscope** (*manos*, thin, *skopeo*, to examine). Manometer.

**Man′sa.** Rhizome of Anemiopsis californica, employed in malaria and dysentery.

**Mansa′na arbo′rea.** See *Jujube.*

**Man′slaughter.** Involuntary or unpremeditated homicide.

**Manso′nia africa′na.** Panoplites africanus; a mosquito, carrier of the embryo of Filaria sanguinis hominis.

**Manso′rius** (*mando*, to chew). Buccinator.

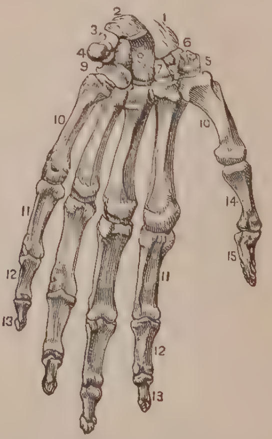
**Manstupra′tion** (*manus*, hand, *stupro*, to ravish). Masturbation.

**Man′tle** (*mantelum*, cloak). Panniculus carnosus. Also, at an early period of fetal development, that portion of the cerebral hemisphere-vesicle forming the expanded or covering portion of the hemisphere.

**Man′ual-ex′ercise bone.** See *Drill-bone.*

**Manu′brium** (*manus*, hand). Handle of anything, as *manubrium mallei*, handle of the malleus. A kind of handle composed of two movable laminæ of horn, shell, or ivory united only at the extremity which holds the blade of the instrument, as in the old-style bleeding-lancet. (See cut under *Lancet.*) **M. ma′nûs**, radius. **M. ster′ni**, uppermost broad part of the sternum; see *Sternum.*

**Ma′nus.** Hand; part which terminates the upper extremity of man. It extends from the fold of the



Anterior view of the skeleton of the left hand. 1, scaphoides; 2, lunare; 3, cuneiform; 4, pisiform; 5, trapezium; 6, groove for flexor carpi radialis tendon; 7, trapezoid; 8, magnum; 9, unciform; 10, 10, five metacarpal bones; 11, 11, first row of phalanges; 12, 12, second row of phalanges; 13, 13, third row of phalanges; 14, first phalanx of thumb; 15, terminal phalanx of thumb.

wrist to the extremity of the fingers; is divided into three parts—*carpus* or wrist, *metacarpus*, and *fingers*. The concave surface is called the *palm*, the convex surface the *back* or *dorsum*. The facility of being able to oppose the thumb to the fingers in order to seize objects forms one of the distinctive characters of the human hand. **M. cur′ta**, clubhand. **M. va′ra**, talipomanus.

**Manustupra′tion.** Manstupration. Masturbation.

**Man′yplies** (many plies or folds). Omasum.

**Manz's glands.** Inconstant glands found at the border of the eyelids.

**Manzani′ta.** Leaves of Arctostaphylos glauca, of California; action like that of Uva ursi.

**Ma′ple.** A tree of the genus *Acer*. **Ash′-leaved m.**, Negundo aceroides. **Great′er m.**, sycamore. **Ground m.**, Heuchera cortusa. **Red m.**, Acer rubrum. **Rock m.**, Acer saccharinum. **Striped m.**, Acer pennsylvanicum. **Su′gar m.**, Acer saccharinum. **Virgin′ia m.**, Acer rubrum.

**Map′pa ven′tris.** Omentum.

**Mapped tongue.** Lingua geographica.

**Maprou′nea brasilien′sis.** Shrub, species of the *Crotoneæ;* native of Brazil, where a decoction of the root is used for enemas.

**Maran′da.** Tree, native of Ceylon; decoction of leaves is used in syphilis.

**Maran′sis** (*maransis*). Atrophy.

**Maran′ta** (after Maranta, a Venetian physician). A genus of plants, ord. *Zingiberaceæ*. **M. arundina′cea**, arrowroot. **M. galan′ga**, the smaller galangal. Two kinds of galangal are mentioned in the pharmacopœias: the *greater*, obtained from *Kæmpferia galanga*, and the *smaller*, from the root of *Maranta galanga*. The dried root is brought from China in pieces from one to two inches in length, but scarcely half as thick; branched; full of knots and joints, with several circular rings; of a reddish-brown color on the outside and brownish within. Was formerly much used as a warm, stomachic bitter, and generally ordered in bitter infusions.

**Maran′tic** (*maransis*, atrophy). Pertaining to atrophy, malnunitrition, or marasmus. **M. thrombo′sis**, thrombosis of the cerebral sinuses occurring primarily in conditions of profound exhaustion and atrophy.

**Maraschi′no.** See *Spirit*.

**Marasmat′ic** or **Maras′mic.** Relating to marasmus; affected with marasmus. **M. clot**, see *Clot*.

**Maras′mius.** Genus of *Agarics*. **M. ovea′des**, champignon, edible fungus.

**Maras′moid.** Resembling or suffering with marasmus.

**Maras′mous.** Marasmic.

**Maras′mus** (*marasmos*). Atrophy. **M. climacter′icus**, loss of weight and strength occurring in women at the menopause. **M. inanito′rum**, marasmus due to excessive discharges, as of blood. **M. infanti′lis**, marasmus occurring in infants, due to enfeebled constitution or lack of proper nourishment. **M. lactan′tium**, atrophy of young children; tabes mesenterica. **M. phthi′sis**, phthisis pulmonalis. **M. præmatu′rus**, marasmus due to disease. **M. seni′lis**, progressive atrophy of the aged. **M. s. cor′neæ**, arcus senilis. **M. syphilit′icus**, marasmus due to syphilis. **M. ta′bes**, tabes. **M. t. dorsa′lis**, tabes dorsalis. **M. t. purulen′tus**, marasmus caused by pus being absorbed. **M. t. strumo′sus**, tuberculosis affecting the glands of the mesentery. **M. venena′tus**, marasmus due to poisoning of the system with lead, etc.

**Marathri′tes.** Wine impregnated with fennel.

**Marathrophyl′lum.** Peucedanum.

**Marath′rum.** Anethum. **M. sylves′tre**, peucedanum.

**Marau′gia** (*maraugeo*, to dazzle). See *Metamorphopsia*.

**Mar′ble.** Marmor.

**Marcasi′ta.** Bismuth. **M. al′ba**, bismuth subnitrate. **M. plum′bea**, antimonium.

**Marca′site.** Bismuth.

**Marces′cent.** Shrivelled.

**Marcgra′via umbella′ta.** South American and West Indian shrub; has been used in syphilis.

**Marchantia** (mar-shon′te-ah) **polymor′pha** (after Marchant, a Parisian botanist). Liverwort, ord. *Hepaticæ*. Mildly pungent and bitter; recommended as an aperient, resolvent, and antiscorbutic, and used in diseased liver, etc.

**Mar′chi's tract.** Descending anterolateral tract of the spinal cord.

**Mar′cor** (*marceo*, to wither). Emaciation; marasmus.

**Mar′cory.** Stillingia.

**Mar′ea.** Mountain sickness and mountain fever; puna.

**Maremmat′ic.** Relating to Maremma, a certain very malarious region on the Tuscan coast in Italy.

**Mare's fat.** Inula dysenterica. **M.'s tail**, Hippuris vulgaris.

**Mar′garate.** Salt of margaric acid.

**Margaretiz′za.** Scherlievo.

**Margar′ic acid.** Acid produced from fat, having formula $C_{17}H_{34}O_2$.

**Mar′garin.** A substitute for butter, made from beef fat.

**Margarin′ic acid.** Margaric acid.

**Margarita′ceous** (*margarita*, pearl). Resembling mother-of-pearl, as *leucoma margaritaceum*, pearl-like leucoma.

**Mar′garoid tu′mor.** A form of cholesteatoma or pearl-like tumor.

**Mar′garyl.** Chemical radical composed of margarin and stearin.

**Mar′gin** (*margo*). A border or edge.

**Mar′ginal.** Situated at or belonging to the margin or edge, as of the eyelid, in *marginal blepharitis*, for example. **M. ab′scess**, an abscess at the edge of any part, especially an abscess at the margin of the anus. **M. bun′dle**, collection of white nerve matter on the edge of the dorsal cornu of the cord. **M. cells**, see *Gianuzzi*. **M. gy′rus**, the supramarginal gyrus. **M. rid′ges**, ridges of enamel about the necks of the teeth.

**Mar′ginate.** Having a margin; marginal.

**Mar′ginoplasty** (*margo*, margin, *plasso*, to mould). Formation of a border. **Pal′pebral m.**, plastic operation in trichiasis.

**Mar′go.** Margin, border. **M. acu′tus**, see *Liver*. **M. denta′tus**, see *Retina*. **M obtu′sus**, see *Liver*. **M. orbita′lis**, see *Orbit*.

**Margo′sa oil.** Yellow, bitter, garlicky oil, expressed from the seeds of the Melia azedarach, of the East Indies; anthelmintic; used externally in rheumatism.

**Margosin′.** Crystalline principle of azedarach.

**Maria′no's meth′od.** See *Lithotomy*.

**Marie's′ disease.** Term applied to several diverse morbid conditions, such as acromegaly; hereditary ataxia due to cerebellar lesion; hypertrophic pulmonary ostearthropathy; conjoined anchylosis of the spine and hip-joint, sometimes of the shoulder-joint. **M.'s sign** or **symp′tom**, tremor, local or general, in exophthalmic goitre.

**Marie′-Kah′ler symp′tom.** Marie's symptom. **M.-Rob′inson syn′drome**, diabetes associated with insomnia, melancholia, etc.

**Marig′nia acutifo′lia.** Black dammar.

**Mar′igold.** Name given to a number of composite plants. **Di′amond fig m.**, Mesembryanthemum crystallinum. **Gar′den m.**, Calendula officinalis. **Marsh m.**, Caltha palustris. **Sing′le m.**, Calendula officinalis. **Wild m.**, Calendula arvensis.

**Marine′ asth′ma.** Beriberi.

**Mariotte's′ exper′iment.** Celebrated experiment of the Abbé Mariotte, which consists in placing two small, round spots on a wall at some distance from each other, standing opposite the left-hand spot, and looking at it with the right eye, the left being closed. By walking backward until the distance from the spots is about five times as great as the distance between the two the right will be found to disappear, the rays from it then impinging upon the blind spot. **M.'s law,** law that volume of gases is inversely as the pressure. **M.'s spot,** the blind spot in the retina.

**Maris′ca.** Hemorrhoidal tumor.

**Maris′cous.** Resembling hemorrhoids.

**Maritonu′cleus** (*maritus,* relating to wedlock). Nucleus of a fecundated ovum.

**Mar′jolin's wart′y ul′cer.** See *Warty tumor of cicatrices.*

**Mar′joram.** Origanum.

**Mark.** A spot or stain. **Birth m.,** nævus. **Moth′er's m., port wine m., straw′berry m., wine m.,** Nævus flammeus.

**Mark′asol.** Bismuth borophenate. Antiseptic powder for ulcers, wounds, and burns.

**Marmar′yga.** Sparks or bright spots before the eyes.

**Marmar′yge** (*marmaryge,* splendor). Appearance of sparks or coruscations before the eyes. See *Metamorphopsia.*

**Mar′mor** (*marmairo,* to shine). Marble. White, granular carbonate of calcium. Used in pharmacy for the preparation of pure lime and the disengagement of carbonic acid.

**Mar′morate.** Marbled.

**Marmora′ta au′rium.** Cerumen.

**Mar′morek's se′rum.** Antistreptococcus serum; streptococcus antitoxin; used in erysipelas and puerperal sepsis; marmorekin.

**Marmorekin′.** Antistreptococcin; streptococcus antitoxin.

**Marmor′yge.** Metamorphopsia. **M. Hippoc′ratis,** hemiopia.

**Mar′rol.** Dietetic substance composed of ox-marrow, extract of hops, and malt.

**Mar′row.** Medulla. Oily, inflammable, whitish, or yellowish juice which fills the medullary canal of the long bones, the cancellated structure at the extremities of those bones, the diploë of flat bones, and the interior of short bones. Marrow is furnished by the medullary membrane, is fluid during life. It is enveloped in the medullary membrane. **Spi′nal** or **ver′tebral m.,** spinal cord.

**Marrubiin′.** Bitter extractive of marrubium.

**Marru′bium.** Hoarhound, horehound, ord. *Labiatæ.* The leaves and tops are official (Ph. U. S.). Leaves have a moderately strong, aromatic smell, and a very bitter, penetrating, diffusive, and durable taste; it has been given in coughs and asthmas as a pectoral; dose, ʒss–j (2.0–4.0) in infusion. **M. al′bum,** marrubium. **M. german′icum,** marrubium. **M. ni′grum,** Ballota fœtida. **M. vulga′re,** marrubium.

**Mars** (god of war). Ferrum, iron. **M. solu′bilis,** ferrum tartarizatum.

**Marsa′la.** Italian wine; contains about 18 per cent. of alcohol.

**Marsde′nia erec′ta.** Shrub of Eastern Europe and Asia Minor; the juice of the plant is an external vesicant, and poisonous internally. **M. tincto′ria,** East Indian species yielding indigo.

**Marsh.** A swampy place. Marshes were formerly believed to give off emanations which were the cause of malarial fevers, but now it is recognized that the danger consists in the fact that they afford breeding places for the mosquitoes which are the hosts of the specific germs of malaria. The most unhealthy periods for residence in a marshy district are during the summer and autumnal heats, at which times the water becomes evaporated, and the marshy bottom is covered with shallow pools in which the larvæ of the mosquitoes thrive. **M. fe′ver,** malaria. **M. gas,** carbureted hydrogen; methyl hydride. **M. poi′son,** miasm. **M. root,** Statice caroliniana. **M. rose′mary,** root of Statice caroliniana; astringent. **M. tea,** Ledum palustre.

**Marsh's disease′.** Exophthalmic goitre. **M.'s test,** qualitative test for arsenic; extremely delicate, and used in medicolegal investigations; it depends upon the action of sulphuric acid and zinc in a flask containing the suspected matter; if arsenic is present arseniureted hydrogen will be formed and make its escape with the nascent hydrogen, and form its characteristic impress on a porcelain plate held in front of the flame.

**Marsh′all-Hall's disease′.** See *Hall.* **M.-H.'s meth′od,** see *Drowning, resuscitation from.*

**Marsh′all's vein.** Remnant of the left superior vena cava; it empties into the coronary sinus. **M.'s vestigial′ fold,** fold of the pericardium containing a remnant of the left superior vena cava.

**Marshmal′low.** Althæa. **M. flow′ers,** flores althææ.

**Marsh′wort.** Helosciadium nodiflorum.

**Marsh′y.** Relating to a marsh.

**Marsu′pia** (pl. of marsupium) **patella′ria.** Alar ligaments of the knee.

**Marsu′pial.** See *Marsupium.*

**Marsupia′lian.** Marsupial.

**Marsupia′lis.** Ischiotrochanterianus; obturator internus.

**Marsupializa′tion** (*marsupium,* small sac or pouch). Production or formation of a pouch, as *m. of the peritoneum;* or the forming of an open cavity in the abdomen.

**Marsu′piate.** See *Marsupium.*

**Marsu′pium** (a small sac or pouch). Sac or bag, with which any part is fomented. Also abdominal pouch in the kangaroo, opossum, etc., into which the young, born at a very early stage of development, are received and nourished with milk secreted from glands which open into the pouches. Such animals are termed *marsupial, marsupiate, marsupialia.* See *Generation.* **M. cerebel′li,** posterior transverse fissure of the brain. **M. cer′ebri ante′rius,** anterior transverse fissure of the brain. **M. c. poste′rius,** posterior transverse fissure of the brain. **M. musculo′sum,** dartos.

**Martegia′ni's a′rea.** Slight dilatation of the hyaloid canal anterior to the optic disk.

**Mar′tial** (*Mars*). Chalybeate.

**Mar′tin's ban′dage.** Elastic bandage for varicose veins. **M.'s depil′atory,** calcium sulphydrate. **M.'s hæmostat′ic,** agaric to which chloride of iron has been added. **M.'s opera′tion,** postero-anterior colporrhaphy with circular amputation of the cervix uteri.

**Martinot′ti's cells.** Ganglion cells of the cortex of the brain.

**Mar′tol.** Extract from shells of the cacao-bean, composed of carbohydrates, salts, etc.

**Martyn′ia angulo′sa.** Herb, species of *Martyniaceæ;* has emollient properties.

**Mar′um cortu′si.** Teucrium marum. **M. cre′ticum,** Teucrium marum. **M. syri′acum,** Teucrium marum. **M. ve′rum,** Teucrium marum. **M. vulga′re,** Thymus mastichina.

**Maru′ta cot′ula.** Anthemis cotula.

**Mar′vel of Pe′ru.** Mirabilis jalapa.

**Ma′ryland pink.** Spigelia marilandica.

**Mas.** Male. Modiolus.

**Maschaladeni′tis** (*maschale,* axilla, *adenitis,* inflammation of a gland). Inflammation of the glands of the axilla.

**Maschalephidro′sis** (*maschale,* axilla, *epi,* above, *hidrosis,* sweating). Excessive axillary sweating.

**Maschalhyperidro′sis** (*maschale,* axilla, *hyper,* denoting excess, *hidrosis,* sweating). Excessive axillary sweating.

**Maschaliæ′us.** Axillary.

**Mascha′lis.** Axilla.

**Maschalon′cus** (*maschale,* axilla, *onkos,* tumor). Bubo or other swelling in the axilla.

**Mas′chi.** Virulent poison of British Guiana made of the root-stalks of Arum venenatum.

**Mas′culine.** Of the male sex.

**Mas′culus** (dim. of *mas,* male). Male.

**Mase′sis.** Mastication.

**Mase′ter.** Masseter.

**Mas′hua.** Tuberous root, of a flat, pyramidal shape, which is cultivated and cooked like the potato by the Serranos of Peru. The Indians use it as a medicine in dropsy, dyspepsia, and dysentery.

**Mask.** Bandage applied over the face in cases of burns, scalds, or erysipelas. **U′terine m.,** chloasma uterinum.

**Mask′ed.** Disguised, as a masked fever or one which is not clearly developed.

**Masochism,** mas′o-kizm (from Sacher Masoch, a writer on this subject). Sexual perversion, in which a member of one sex takes delight in being dominated, even to the extent of violence or cruelty, by one of the other sex. The opposite of sadism.

**Masonu′cleus.** The male pronucleus.

**Mass** (*masso,* to knead). Compound from which pills are formed. **Blue m.,** massa hydrargyri. **Interme′diate cell m.,** mass of blastema forming mesonephros. **M. of interrup′tion,** corpora striata and thalami optici. **Invest′ing m.,** tissue mass in embryo embracing part of the notochord; later it forms the parachordal cartilages. **Mul′berry m.,** see *Morula.* **Vallet′s′ m.,** massa ferri carbonatis.

**Mas′sa.** Mass. The pharmacopœial name of soft preparations of a pilular consistency. There are three massæ in the Ph. U. S. **M. car′nea Jaco′bi Syl′vii,** see *Flexor longus digitorum pedis profundus perforans.* **M. copai′bæ** (Ph. U. S.), mass of copaiba; copaiba, 94, magnesia, recently prepared, 6; dose, gr. x–ʒj (0.65–4.0). **M. de dac′tylis,** date paste. **M. explemen′ti,** cortical brain substance. **M. de extrac′to glycyrrhi′zæ,** pasta glycyrrhizæ gummata et anisata. **M. fer′ri carbona′tis** (Ph. U. S.), mass of carbonate of iron; Vallet's mass; contains about 35 per cent. of ferrous carbonate preserved in honey and sugar; it is given as a hæmatic tonic in chlorosis and anæmia; dose, gr. iij–v (0.2–0.32). **M. de gum′mi arab′ico,** marshmallow paste. **M. hydrar′gyri** (Ph. U. S.), mass of mercury, blue mass, blue pill; contains 33 per cent. of metallic mercury with glycerin and honey; sialagogue, alterative, purgative; dose, gr. ij–xx (0.13–1.3). **M. ligamento′sa,** ligamentum calcaneo-astragaloideum interosseum. **M. de zizypho′rum fruc′tû,** paste of jujubes.

**Mas′sæ** (pl. of massa) **os′sis sa′cri.** Lateral sacral masses.

**Massage′** (*masso,* to knead). Shampooing of the body by special manipulations, such as kneading, tapping, stroking, etc. **Va′por m.,** the intermittent forcing of vapor into a cavity. **Vi′bratory m.,** light, rapid percussions made with a vibrating hammer.

**Masse′ma** or **Masse′sis.** Mastication.

**Masser′ing** or **Masseur′ing.** The employment of massage.

**Masse′ter** (*massomai,* to chew). Muscle situated at the posterior part of the cheek, and lying upon the ramus of the lower jaw-bone; long, quadrilateral, and attached above to the inferior edge and inner surface of the zygomatic arch; below, it terminates at the angle of the jaws and outer surface and inferior margin of the ramus of that bone. It is composed of an intermixture of fleshy and aponeurotic fibres. It raises the lower jaw and acts in mastication. **M. inter′nus,** pterygoideus internus.

**Masseter′ic.** Relating to the masseter muscle. **M. ar′tery,** arises from the trunk of the internal maxillary or temporalis profunda posterior, and is distributed to the masseter muscle, after having passed horizontally through the sigmoid notch of the lower jaw-bone. **M. fas′cia,** continuation of the cervical fascia over the masseter muscle. **M. nerve** is given off from the inferior maxillary branch of the fifth pair. It passes through the sigmoid notch and is distributed on the inner surface of the masseter. In luxation of the lower jaw this nerve is strongly stretched, and considerable pain, consequently, is produced. **M. vein** has the same distribution as the artery; it opens into the internal maxillary vein.

**Masseterine′.** Masseteric.

**Masseur′** (Fr.). Male individual who practises massage.

**Masseuse′** (Fr.). Female practising massage.

**Mas′sicot.** Plumbi oxidum semivitreum; yellow monoxide of lead.

**Mas′sing** (*masso,* to knead). Shampooing or massaging.

**Mass′ive.** Of great size or weight, or existing in a mass. **M. pneumo′nia,** pneumonia in which the air cells and bronchial tubes are almost choked up with the products of exudation.

**Masso′ia aromat′ica.** A Japanese plant from which massoy-bark is obtained, which has stomachic virtues; used in colic and diarrhœa.

**Mas′sol.** Massoy.

**Massotherapeu′tics** (*masso,* to rub, *therapeuo,* to treat). Employment of massage for therapeutic purposes.

**Massother′apy.** Massage; massotherapeutics.

**Massoy′.** Bark of *Massoia aromatica.*

**Mas′sula** (dim. of massa). Molecule.

**Mastad′en** (*mastos,* breast, *aden,* gland). Mammary gland.

**Mastadeni′tis.** Inflammation of the mammary gland.

**Mastal′gia** (*mastos,* breast, *algos,* pain). Pain in the breast.

**Mastatro′phia.** Atrophy of the mammary gland.

**Mastaux′e** (*auxe,* growth). Enlargement of the breast.

**Mas′tax.** The mouth and pharynx in certain of the lower forms of life.

**Mast-cell.** A basophyllic leucocyte found in the blood in leukæmia.

**Mastecchymo′sis.** Mammary ecchymosis.

**Maste′ma.** Masticatory.

**Mas′ter of the woods.** Galium circæzans.

**Mas′terwort.** Angelica atropurpurea, Heracleum lanatum, imperatoria.

**Maste′sis.** Mastication.

**Masthelco′sis** or **Mastelco′sis** (*mastos,* breast, *helkos,* an ulcer). Ulceration of the mammary gland.

**Mas′tic.** Mastiche.

**Mastica′tion.** Chewing. Action of bruising food in the mouth to mix it with the saliva and prepare it for digestion in the stomach.

**Mas′ticatory.** Chewing. Relating to mastication; also a substance chewed with the intention of exciting the secretion of saliva. **M. nerve,** see *Trigemini.* **M. spasm of the face,** trismus.

**Mastich,** mas′tik. See *Pistacia lentiscus.* **M. herb, com′mon,** Thymus mastichina. **M. h., Sy′rian,** Teucrium marum. **M. tree,** Pistacia lentiscus.

**Mastiche,** mas′te-ke. (Ph. U. S.) Mastic. Concrete resinous exudation from Pistacia lentiscus; used as an excipient, as in the official pilulæ aloës et mastiches.

**Mastichic acid,** mas-tik′ic as′id. $C_{20}H_{32}O_2$. Acid derived from mastich.

**Mastichina** (mas-te-ke′nah) **gallo′rum.** Thymus lentiscus.

**Masticic acid,** mas-tis′ik as′id. Mastichic acid.

**Masticin′.** Resin obtained from mastich, insoluble in alcohol.

**Mas′ticol.** See *Massicol.*

**Mas′ticus.** Belonging to the mammary glands.

**Mastigo′des hom′inis.** Trichocephalus.

**Mastigoph′ora.** Flagellated animal microorganisms, some of which are parasitic.

**Mastigoph′orous** (*mastix,* whip, *phoreo,* to bear). Having flagella.

**Mas′tigopod** (*mastix,* whip, *pous,* foot). Protozoa having flagella.

**Mastigo′sis** (*mastigoo,* to whip). Flagellation. Employed by the ancients as a remedy in many diseases. The *flagellation* or *scourging mania* was a form of theomania which prevailed in Europe in the thirteenth and fourteenth centuries. They who were affected with it were termed *flagellants.*

**Masti′tis.** Inflammation of the breast. Inflammation of the mammary gland of the pregnant or parturient woman is vulgarly called *weed in the breast.* **M. adolescen′tium,** mastitis which may exist at the time of puberty, observed in both sexes. **M. apostemato'sa,** abscess of the breast. **M. carcinomento'sa,** cancer of mamma. **Chron'ic lob'ular intersti'tial m.,** interstitial inflammation of a chronic nature involving part of the mammary gland. **Cir'cumscribed intersti'tial m.,** interstitial inflammation of the mammary gland of limited extent. **Cuta'neous phleg'monous m.,** inflammation involving areola of the mamma. **Diffuse' intersti'tial m.,** interstitial inflammation of the mamma involving the entire gland. **Gum'matous m.,** affection of a syphilitic character involving the substance proper of the mamma. **M. lactan'tium,** mastitis occurring during lactation. **M. metastat'ica,** metastatic mastitis occurring in mumps or puerperal fever. **Parenchy'matous m.,** inflammation of the glandular element of the breast. **Petromam'mary m.,** submammary mastitis. **M. puerpera'lis,** inflammation of the mamma in the childbed woman. **Scrof'ulous m.,** tuberculous mastitis. **M. sep'tica,** mastitis due to septic infection. **Submam'mary m.,** inflammation of the submammary connective tissue. **Supramam'mary m.,** inflammation of the subcutaneous or supramammary connective tissue.

**Mas'tix.** See *Pistacia lentiscus*.

**Masto-** (*mastos*, breast). Prefix relating to the breast.

**Mastocarcino'ma.** Carcinoma of the breast.

**Mastochondro'sis** (*chondros*, cartilage). Cartilaginous formation in the breast.

**Mastodeal'gia** (*mastodes*, resembling a breast, *algos*, pain). Pain in the mastoid process.

**Mastodeocente'sis** or **Mastodeoparacente'sis** (*mastodes*, resembling a breast, *kentesis*, puncture). See *Mastoideocentesis*.

**Masto'des.** Mastoid.

**Mastodyn'ia** (*mastos*, breast, *odyne*, pain). Pain in the breasts; a form of neuralgia. Phlegmonous inflammation of the breast, running on to suppuration, generally in the childbed female. **M. polyg'ala,** extreme distention of the breast, as with milk.

**Mas'toid** (*mastos*, breast, *eidos*, resemblance). Having the form of a nipple. Relating to the mastoid process. **M. an'gle,** postero-inferior angle of the parietal bone. **M. an'trum,** name given to m. cells. **M. ap'erture,** opening of communication between the cavity of the tympanum and the mastoid cells. **M. ar'tery,** posterior branch of the external carotid. **M. bone,** mastoid portion of the temporal bone. **M. canalic'ulus,** canal leading from jugular fossa to Glasserian fissure, transmitting auricular branch of pneumogastric nerve. **M. can'cer,** firm, carcinomatous growth, the section of which resembles the boiled udder of the cow. **M. cav'ity,** cavity occasionally found, supposed to be the result of coalescence of mastoid cells. **M. cells,** mastoid sinuses, are situated in the mastoid process, communicate with each other, and open into the cavity of the tympanum. **M. diam'eter,** term applied to superior and inferior measurements made from one mastoid process to the other; the latter is known as the bimastoid diameter. **M. disease',** mastoiditis. **M. em'issary vein,** venous channel connecting either posterior auricular or occipital vein with the lateral sinus through the mastoid foramen. **M. fora'men** is behind the mastoid process, and gives passage to a small artery of the dura mater and a vein which opens into the lateral sinus. **M. fos'sa** is a depression at the inner surface of the mastoid portion of the temporal bone, which forms part of the lateral sinus. **M. glands,** lymphatic glands behind the ear. **M.** or **digas'tric groove,** groove at the inner side of the mastoid process, giving attachment to the posterior belly of the digastric muscle. **M. mar'gin,** name given to portion of occipital bone articulating with the mastoid process of the temporal bone. **M. mus'cle, poste'rior,** splenius. **M. opera'tion,** opening into the mastoid cells and drainage in cases of suppurative mastoiditis. **M. por'tion,** the inferior and posterior part of the temporal bone; the m. bone. **M. pro'cess** is at the inferior and posterior part of the temporal bone, and gives attachment to the digastric and mastoid muscles; it is the distinct prominence felt superficially behind each ear. **M. si'nuses,** m. cells.

**Mastoid'al** or **Mastoid'eal.** Relating to mastoid process.

**Mastoideal'gia.** Pain in the mastoid process.

**Mastoid'ean.** Relating to the mastoid process.

**Mastoideocente'sis** (*kentesis*, a puncture). Puncture of mastoidal sinuses, as for evacuation of retained morbid fluids.

**Mastoideosqua'mous.** Relating to the mastoid and squamous portions of the temporal bone; the suture between them is so called.

**Mastoide'um.** Mastoid bone.

**Mastoide'us.** Sternocleidomastoideus. **M. later-a'lis,** complexus minor.

**Mastoidi'tis.** Inflammation of the mastoid cells, occurring usually by extension from suppurative otitis media; the condition is a dangerous one owing to the proximity of the cerebral structures and the liability of propagation of the inflammation to them. **Bez'oldt's m.,** see *Bezoldt*. **Sclero'sing m.,** m. resulting in condensation of the trabeculæ between the mastoid cells and obliteration of the latter.

**Mastoidoconcha'lis** (*concha*, shell). Retrahens aurem.

**Mastoidot'omy** (*tome*, incision). Incision into the mastoid cells for the relief of suppurative mastoiditis; mastoid operation.

**Mastol'ogy** (*mastos*, breast, *logos*, doctrine). Treatise relating to the breast or mammary gland.

**Mastome'nia** (*mens*, month). Vicarious menstruation from the mamma.

**Maston'cus** (*mastos*, breast, *onkos*, tumor). Tumefaction of the nipple or of the breast itself. When of an adipous character it is termed *mastopioncus* or *mastopimeloncus*. **M. polygalac'ticus,** mastospargosis.

**Masto-occip'ital.** Relating to mastoid process and occiput.

**Mastopari'etal.** Relating to mastoid process and parietal bone.

**Mastopath'ic.** Relating to mastopathy.

**Mastop'athy** (*pathos*, disease). Disease of the breast.

**Mas'topexy** (*pexis*, fixation). Operation for raising and retaining a pendulous breast.

**Mastopimelon'cus** (*pimele*, fat, *onkos*, tumor). Fatty tumor of the breast. See *Mastoncus*.

**Mastopion'cus** (*pion*, fat, *onkos*, tumor). Fatty tumor of the breast. See *Mastoncus*.

**Mastorrha'gia** (*rhegnymi*, to break forth). Unusual flow of milk. Hemorrhage from the breast.

**Mastoscirrhus,** mas-to-skir'rhus (*mastos*, breast, *skirros*, hard tumor). Scirrhus of the breast.

**Mastoscrophulo'sis.** Scrofulous abscess of the mammary gland.

**Masto'sis.** Mammary enlargement.

**Mastospargo'sis** (*mastos*, breast, *spargo*, to be full to bursting). Fulness of the breasts with milk.

**Mastosyr'inx** (*mastos*, breast, *syrinx*, a pipe). Fistula of the mamma.

**Mastot'omy** (*tome*, incision). Incision into the breast.

**Mastupra'tion.** Masturbation.

**Masturba'tion** (*manus*, hand, *stupro*, to ravish). Self-abuse. Excitement of the genital organs by the hand.

**Mas'turbator.** One given to masturbation.

**Mas'turbatory.** Relating to masturbation.

**Match'makers' disease'.** Necrosis of the jaw due to the action of phosphorus.

**Ma'te.** See *Ilex paraguayensis*.

**Mate'ba.** African palm; fruits are employed in febrile attacks and dysentery.

**Mateine'.** Caffeine obtained from leaves of Ilex paraguayensis.

**Matel'la.** Urinal.

**Ma'ter** (*mater*, mother). Uterus. **Du'ra m.,** the outer membrane covering the brain; see *Dura*. **M.**

**herba′rum,** Artemisia vulgaris. **M. metallo′rum,** hydrargyrum. **M. mol′lis,** pia mater. **Pi′a m.,** the inner membrane covering the brain; see *Pia*. **M. seca′lis,** ergot. **M. ten′uis,** pia mater.

**Mate′ria.** Matter. **M. alimenta′ria,** see *Aliment*. **M. chirur′gica,** aggregate of agents employed by the surgeon, with the means of administering them and the rationale of their employment. **M. fibro′sa,** fibrin. **M. med′ica,** branch of medical science which treats of drugs, preparations and respective doses thereof, and the physiological phenomena produced by them in the human economy. (For a classification of the various articles of the materia medica, see *Drugs*). **M. med′ica, dynam′ical,** division of pharmacology treating of the effects and uses of medicines; pharmacodynamics. **M. morbo′sa,** matter which is the cause of disease. **M. os′sea,** bony or earthy portion of bones; cement of a tooth. **M. pec′cans,** materies morbi. **M. perspirato′ria,** sweat. **M. saliva′ris,** ptyalin. **M. scytodep′sica,** tannin. **M. siali′na,** see *Saliva*. **M. testa′cea den′tium,** see *Tooth*. **M. urino′sa,** urea.

**Mate′rial.** Matter. **Form′ative m.,** protoplasm.

**Mate′ries.** Matter. **M. mor′bi,** the material cause of disease.

**Mater′nal.** Pertaining to the mother. **M. impres′sions,** mental impressions in pregnant women which are supposed to influence the development and growth of the fœtus.

**Mater′nity** (*maternus*, maternal). An establishment for the reception of pregnant women.

**Mati′as.** Bark of South American tree, used in intermittents and as a tonic. Its principal constituent is a bitter resin. It is probably the same as the Malambo bark; the latter has been referred to *Croton Malambo*.

**Maticin′.** See *Matico*.

**Mati′co.** (Ph. U. S.) The leaves of Piper angustifolium or soldiers' tea or herb; South American herb, ord. *Piperaceæ*. Tonic, stimulant, diuretic, and astringent; used both internally and externally; dose, ʒss–j (2.0–4.0), in decoction. The following preparations are official: *Extrac′tum mati′co flu′idum;* dose, ʒss–j (2.0–4.0). *Tinctu′ra m.*, dose, ʒss–ij (2.0–8.0). An active principle, *maticin*, has been derived from it.

**Matlazahuatl′.** Disease similar to the plague, or to typhus fever, occurring in epidemic form among the natives of Mexico in the sixteenth century.

**Mato′nia cardamo′mum.** Amomum cardamomum.

**Mato′rium.** Gum ammoniac.

**Matou′rea guianen′sis.** A plant, genus *Scrophulaceæ*, employed in leucorrhœa. **M. praten′sis,** species employed as a vulnerary, internally and externally.

**Matræmato′ma.** Hæmatoma of the cerebral meninges.

**Mat′rass.** Glass vessel with a long neck and a round and sometimes oval body; used in pharmacy for distillation, digestion, etc.

**Matrica′lis.** Relating to the uterus.

**Matrica′ria.** (Ph. U. S.) The flowering tops of M. chamomilla or German chamomile, ord. *Compositæ*. The flowers resemble in their properties chamomile and tansy, and have been esteemed tonic, stomachic, emmenagogue, vermifuge, etc.; dose, ℥ss–j (16.0–32.0), in infusion. **M. chamomil′la,** German chamomile; the source of matricaria (Ph. U. S.). **M. glabra′ta,** S. African plant, having the same properties as the other species of matricaria. **M. ino′dora,** Chrysanthemum inodorum. **M. leucan′themum,** Chrysanthemum leucanthemum. **M. multif′ida,** species found in South Africa, where it is used in skin diseases and rheumatism. **M. parthenoi′des,** plant closely resembling Chrysanthemum parthenium. **M. suave′olens,** M. chamomilla.

**Matric′ulate** (*matricula*, an army roll or register). To secure admission into a university or college by enrolling or having one's name enrolled. One who has thus enrolled himself in an institution is called a *matriculate;* the process is called *matriculation*.

**Mat′ricyte** (*mater*, mother, *kytos*, cell). Term formerly applied to colorless blood corpuscles of large size from which small white corpuscles were supposed to be derived.

**Matrisyl′va.** Asperula odorata.

**Ma′trix** (from *mater*, mother, uterus). Blastema, cytoblastema. Stomach. Uterus. A sand, plaster, or metallic form in which plastic material is cast, as in dentistry. A tooth socket. **M. of bone,** the animal matter of bone serving to retain the mineral salts; ossein. **M. of hy′aline car′tilage,** substance of a granular character containing cells, and when subjected to boiling yielding chondrin. **M. pi′li,** hair papilla. **M. of a tooth,** substance of the tooth containing lime salts. **M. un′guis,** see *Nail*.

**Matrona′lis.** Viola.

**Mat′ted.** Term applied to parts adherent or tangled.

**Mat′tee.** See *Ilex paraguensis*.

**Mat′ter.** Any substance which enters into the composition of a body; pus.

**Mat′toid** (*mattus*, crazy, *eidos*, like). One who is on the doubtful line between sanity and insanity; a crank.

**Mat′urant.** Making ripe; said of applications made to hasten maturation.

**Mat′urate.** To ripen; said of an abscess when suppuration occurs, or of a cataract when it is sufficiently advanced for operation.

**Matura′tion** (*maturo*, to ripen). Progression toward maturity; state of maturity.

**Mat′urative.** Medicine which favors the maturation of an inflammatory process or of a cataract.

**Mature′.** Ripe; ready to be operated upon.

**Matur′ity.** State of fruits and seeds when developed; state of an abscess in which the pus is completely formed, or of a cataract ready for operation. **Preco′cious m.,** precocity.

**Matu′tinal.** Occurring in the morning, as a fever.

**Mat′zol.** Combination of cod-liver oil and matzoon.

**Mat′zoon.** Fermented milk resembling kumyss.

**Mauchart's′ lig′aments.** Alar odontoid ligaments.

**Maud′lin.** Achillea ageratum. **M. tan′sey,** Achillea ageratum. **M. wort,** Chrysanthemum leucanthemum.

**Mau′mene's test.** Perchloride-of-tin test for glycosuria.

**Mauriceau's′ lance.** A spear-like instrument used for perforating the skull in embryotomy.

**Mauri′tia flexuo′sa.** Palm tree of S. America yielding sago.

**Mauth′ner's sheath.** Protoplasmic stratum around the axis-cylinder of a nerve-fibre, beneath the medullary sheath of Schwann. (See cut under *Nerve*.) **M.'s test,** test for color-blindness, a large number of small bottles containing different colored matters being used.

**Mauvanilin′.** Dye of violet color derived from anilin.

**Mavacu′ri.** Plant of British Guiana containing curare.

**Ma′via.** Erythrophlœum judiciale.

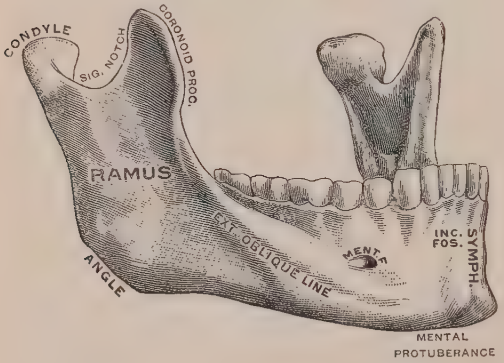
**Maw.** Stomach. **M. worm,** ascaris.

**Maw-bound.** Constipated.

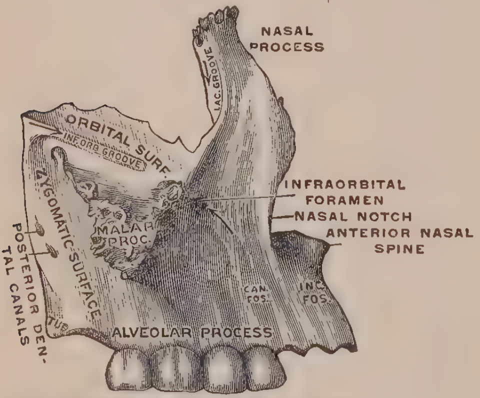
**Maxil′la.** Maxillary bone. **Infe′rior m.,** mandible, lower jaw. **Supe′rior m.,** upper jaw.

**Maxilla′ris.** Maxillary. **M. exter′na,** facial artery. **M. infe′rior,** lower jaw. **M. inter′na,** internal maxillary artery.

**Max′illary.** Relating to the jaws. **M. ar′teries** are the *external* (see *Facial*) and the *internal*. The latter arises from the external carotid with the temporal; it is remarkable for its complex course and the number of branches it transmits to the deep-seated parts of the face. Immediately after its origin it buries itself under the neck of the lower jaw, curving inward and downward; advances directly inward in the space between the two pterygoid muscles toward the maxillary tuberosity. It turns again, becomes vertical and ascends into the bottom of the zygomatic fossa until, having arrived at the floor of the orbit, it takes a transverse direction, enters the sphenomaxillary fossa, and divides into several branches. **M. bones,** the maxillæ, name given to the jaw-bones which support the teeth. The *inferior* maxillary bone, or mandible, is a symmetrical, nearly parabolic bone, the middle portion of which is horizontal and called the *body;* the posterior part is vertical, the angular portions being termed rami or branches. These have behind a parotidean edge, which forms, by uniting with the base, the angle of the jaw. The branches terminate above by two processes separated by the sigmoid notch, the anterior of which is called the coronoid, the posterior the condyloid process, or maxillary condyle, supported by a cervix or neck. The lower jaw has an alveolar edge which contains alveoli for the reception of teeth. The lower jaw-bone is developed by two points of ossification which unite at the symphysis; it is articulated with the temporal bone and the teeth. The *superior* maxillary bones or upper jaw-bones are to the face what the sphenoid bone is to the cranium; they are articulated with all the portions composing it; they determine, almost alone, the shape of the face and give it solidity; their size is considerable, form unequal; they occupy the middle and anterior part of the face, and enter into the composition of the nasal fossæ, orbit, and mouth. Each superior maxillary bone articulates with its fellow, the ethmoid, frontal, nasal, lacrymal, palatine, inferior spongy, vomer, the teeth of the upper jaw, and sometimes the sphenoid bone, and is developed by four or five points of ossification. **M. fis′sure,** fissure on the upper maxillary bone for the reception of the maxillary process of the palate bone. **M. glands,** lymphatic gands and channels situated along the ramifications of the internal maxillary artery. **M. line,** an imaginary line extending from one zygo-orbital point to the corresponding opposite, constitutes the superior m. line; and one between the zygomaxillary points the inferior. **M. nerves** are two formed of the second and third branches of the fifth pair. The *superior maxillary nerve* arises from the middle of the gangliform enlargement of the fifth pair, passes forward and issues from the cranium through the foramen rotundum of the sphenoid bone, enters the sphenomaxillary fossa, passes into the infraorbital canal, and makes its exit to vanish on the cheek. It gives off the following branches: the orbital, posterior dental, and anterior dental, and terminates in the infraorbital nerves, which are divided into superior, inferior, and internal. The *inferior maxillary nerve* is the largest of the three branches furnished by the fifth pair. It issues from the cranium by the foramen ovale of the sphenoid. Having reached the zygomatic fossa, it divides into two trunks: the one, superior and external, gives off the deep temporals, masseterine, buccal, and pterygoids; the other, inferior and internal, the larger of the two, furnishes the inferior dental, lingual, and auricular. **M. plate,** embryonic structure originating from the first visceral arch, and connecting the frontonasal processes to form the upper jaw. **M. pro′cess,** that portion of the malar, inferior turbinated, and palatal bones which articulates with the superior maxilla. **M. ridge,** ridge of mucous membrane in which the teeth are developed. **M. si′nus,** antrum Highmorii. **M. veins** present the same arrangement as the arteries they accompany.



Inferior maxilla, viewed from the right and a little in front. (Gerrish.)



Right superior maxilla, outer surface. (Gerrish.)

**Max′illate.** Having jaws.

**Maxil′liform.** Resembling a jaw-bone in shape.

**Maxilli′tis.** Inflammation of a jaw-bone.

**Maxilloden′tal.** Relating to the jaw and the teeth.

**Maxilloju′gal.** Relating to the malar bone and superior maxilla.

**Maxillolabia′lis.** Depressor anguli oris.

**Maxillolabinasa′lis.** Levator labii superioris alæque nasi.

**Maxillonarina′lis.** Compressor naris.

**Maxillopal′atine.** Relating to the maxilla and palate.

**Maxillopalpebra′lis.** Orbicularis palpebrarum.

**Maxillopharyn′geal.** Relating to maxilla and pharynx.

**Maxillosclerot′icus.** Obliquus inferior oculi muscle.

**Maxillosuprafa′cial.** Relating to maxilla and superior part of face.

**Maxillotur′binal bone.** Inferior turbinated bone.

**Max′imal** (*maximus*, greatest). Term meaning the greatest possible, applied to dosage of remedies, amount of stimulation, degree of perception, etc.

**Max′imum.** Greatest, as applied to height, value, dose, location, limit. **M. dose,** see *Dose.* **M. thermom′eter,** see *Thermometer.*

**Max′well's ring.** A ring seen under certain conditions when looking at a gray or blue surface. When looking through a solution of chromium chloride on a bright field a large violet ring, called Loewe's ring, is observed.

**May′apple.** Podophyllum peltatum. **Moun′tain m.,** Podophyllum montanum.

**May′flower.** Anthemis cotula.

**Mayel′la.** Curcuma longa.

**May′er's rea′gent.** Solution of corrosive chloride and potassium iodide, used as a test for alkaloids. **M.'s solu′tion,** solution of potassium phosphate, calcium phosphate, and magnesium phosphate; a culture liquid for bacteria.

**May′hem.** Act of depriving a person of a limb necessary for defence, or any useful part or organ.

**Mayidis′mus.** Pellagra.

**May′nard's adhe′sive liq′uid.** Collodion.

**Maynores′in.** Resin from Calophyllum longifolium.

**Mays.** Zea mays. **M. america′na,** Zea mays. **M. ze′a,** Zea mays.

**May′weed.** Maruta cotula.

**May′worm.** Meloë maialis.

**Mazischesis,** maz-is′ke-sis (*maza,* placenta, *schesis,* holding, retention). Retention of the placenta.

**Mazocacoth′esis** (*maza,* placenta, *kakos,* bad, *thesis,* place). Abnormal position of placenta.

**Mazodyn′ia** (*mazos,* breast, *odyne,* pain). Mastodynia.

**Mazoï′tis** (*mazos,* breast). Mastitis.

**Mazol′ogy** (*mazos,* breast, *logos,* description). Treatise on mammals.

**Mazol′ysis** (*maza,* placenta, *lysis,* solution). Separation of the placenta.

**Mazolyt′ic.** Relating to mazolysis; remedy producing expulsion of placenta.

**Mazopath′ia** or **Mazop′athy** (*maza,* placenta, *pathos,* disease). Disease of the placenta or originating from the placenta.

**Mazopath′ic.** Pertaining to placental disease.

**Mazzo′ni's bod′y** or **cor′puscle.** Ending of a sensory nerve, like Krause's end-bulb.

**M′boundou.** Akasga.

**Me′able.** Capable of easy penetration.

**Mead.** Fermented honey or syrup. Hydromel.

**Mead′ow bloom.** Ranunculus acris. **M. fern,** Comptonia asplenifolia. **M. gar′lic,** Allium canadense. **M. pride,** see *Calumba.* **M. rue,** thalictron. **M. saf′fron,** Colchicum autumnale. **M. sweet,** Gillenia trifoliata, Spiræa ulmaria. **M. sweet, Amer′ican,** Spiræa lobata. **M. sweet, red,** Spiræa tomentosa.

**Meal.** See *Farina.*

**Meal′y.** Resembling meal. **M. star′wort,** Aletris farinosa. **M. tree,** Viburnum dentatum.

**Meas′les.** Morbilli or *rubeola,* which see. Disease of swine caused by the presence of Cysticercus cellulosæ, the larval form of Tænia solium or armata; the symptoms are a discharge from the nostrils, cough, elevated temperature, and an eruption of vesicles on a reddened base. A similar disease is caused in cattle by the Cysticercus bovis, the larval form of Tænia mediocanellata. **Bas′tard m.,** rubella. **Black m.,** see *Rubeola.* **Con′fluent m.,** scarlatina. **False m.,** roseolæ. **French m.,** rubella. **Ger′man m.,** rubella. **Hemorrhag′ic m.,** black measles. **Hy′brid m.,** rubella.

**Meas′le-worm.** Scolex of a tænia.

**Meas′lings.** Rubeloa.

**Meas′ly.** Morbillous. **M. pork,** pork containing cysticerci; see *Measles.*

**Meas′ure, grad′uated.** Glass measure used in pharmacy, so divided as to indicate accurately the quantity of liquid contained in it.

**Meas′urement.** Mensuration. **Thomp′son's m.,** lithotrite provided with scale so as to indicate size of calculus within its grasp.

**Meas′ures.** See *Weights and Measures.*

**Meat.** The flesh of animals used for food. **M. extrac′tive,** osmazome. **M. flour** is made of beef dried at a low temperature and ground into very fine powder, one pound representing four of flesh. **Flu′id m.,** solution of meat in pepsin and hydrochloric acid; it contains the fibrinous and nutritious portions of meat. **M. juice** is obtained from fresh beef, and contains ozmazome, with the salts, sapid and odorous principles of meat. **M. poi′soning,** poisoning by meat containing ptomains. **M. pow′der,** meat flour.

**Meatal,** me-at′al. Relating to a meatus.

**Meatom′eter.** Apparatus for measuring the calibre of a meatus, especially the meatus urinarius.

**Meatoscope,** me-at′o-skope. Speculum for examination of the urethra near the meatus.

**Meatot′omy.** Incision of angle of the meatus, effecting enlargement thereof; the knife being called a *meatotome.*

**Meatus,** me-at′us. Passage or canal. **M. acus′ticus** or **audito′rius,** auditory canal. **M. cæ′cus,** Eustachian tube. **M. cuticula′ris,** pore of the skin. **M. cys′ticus,** cystic duct. **M. na′rium** or **na′si,** one of the three nasal fossæ. **M. n. commu′nis,** portion of the nasal cavity next to the septum; the space into which the other meatuses open. **M. nasopharynge′us,** portion of the nasal cavity communicating with the pharynx under the body of the sphenoid; see *Nasal fossæ.* **M. Rivi′ni,** foramen of Rivini. **M. semina′lis u′teri,** Fallopian tube. **M. semina′rius,** corpus Highmorii. **M. of Syl′vius,** interspace between the anterior cornua of the lateral ventricles of the cerebrum. **M. urina′rius,** the entrance to the urethra. **M. u. fœmine′us,** female urinary meatus. **M. u. viri′lis,** male urinary meatus

**Mech′ameck.** Convolvulus panduratus. **M. bind′weed,** Convolvulus panduratus.

**Mechan′ical** (*mechane,* machine). Relating to material force. **M. ir′ritant,** an irritant which acts physically and not chemically. **M. physic′ians,** or iatromathematical physicians, were those who referred every function, healthy or morbid, to mechanical or mathematical principles—*medicina mechanica.*

**Mechanicother′apy.** Mechanical treatment, as by gymnastics and massage.

**Mechan′ics.** The science of material force. **An′imal m.,** part of physiology whose object is to investigate the laws of equilibrium and motion of the animal body.

**Mech′anism.** Structure of a body; collection or aggregate of the parts of a machine; mode in which forces produce any effect, as the mechanism of parturition.

**Mechanother′apy.** Mechanicotherapy.

**Mechoaca′na ni′gra** (from Mechoacan, in Mexico). Convolvulus jalapa. **M. ni′gricans,** Convolvulus jalapa. **White m.,** Convolvulus mechoacan.

**Mecis′mus** (*mekos,* length). Condition characterized by unusual length of parts of the body.

**Meckel's′ car′tilage.** A cartilage of fetal life, the upper part of which forms the malleus and its handle, the lower part a rod, on the external surface of which the lower jaw is developed. **M.'s cav′ity,** space in the dura mater into which the roots of the fifth cranial nerve are received after leaving the pons Varolii. **M.'s cru′ral arch,** Poupart's ligament. **M.'s divertic′ulum,** see *Diverticulum.* **M.'s gan′glion,** sphenopalatine ganglion. **M.'s rod,** see *Meckel's cartilage.* **M.'s space,** space in the dura mater in which the Gasserian ganglion rests.

**Meckelec′tomy** (*ektome,* excision). Excision of Meckel's ganglion.

**Meckel′ian bar.** Cartilage of Meckel.

**Mecom′eter** (*mekos,* length, *metron,* measure). Graduated compass used at the Hospice de Maternité of Paris, to measure the length of newborn infants.

**Me′con.** Meconium; opium; papaver.

**Meconarceine′.** Derivative of narceine, in yellow, soluble crystals; used in neuralgia, bronchitis, insomnia, etc.

**Mec′onate.** Salt of meconic acid.

**Mecon′ic acid.** $C_7H_4O_7$. Acid derived from opium from which a solution of bimeconate of morphine is prepared.

**Meconidin′.** See *Porphyroxin.*

**Meconin′.** $C_{10}H_{10}O_4$. Neutral substance obtained from opium.

**Meco′nioid.** Resembling meconium.

**Meconiorrhœ′a.** Discharge of meconium in excessive quantity.

**Meco′nious.** Of the nature of meconium.

**Meco′nis.** Poppy.

**Mec′onism** or **Meconis′mus.** Poisoning by opium.

**Meco′nium** (*mekonion,* inspissated juice of the poppy). Opium. Also the excrement passed by the newborn infant. **M. theba′icum,** opium.

**Mec′onoid.** Relating to or resembling meconium.

**Meconoiosin′.** Colorless substance in crystals derived from opium.

**Meconoph′agism** (*mekon*, opium, *phago*, to eat). Opium-eating.

**Meconop′sis diphyl′la.** Stylophorum diphyllum.

**Mede′ola verticillifo′lia.** M. virginica. **M. virgin′ica,** indigenous herb, ord. *Smilaceæ*, growing in every part of the United States, the root of which resembles a small cucumber; diuretic.

**Me′diad.** Directed or situated toward the median plane.

**Me′dial.** Median.

**Me′dian** (*medium*, the middle). That which is situated in the middle. **M. ar′teries,** twigs supplying the fourth ventricle which originate from either the basilar or vertebral artery. **M. ar′tery,** small artery accompanying median nerve, originating from anterior interosseous artery. **M. ar′tery of spinal cord,** artery originating from anterior spinal artery, passing along the anterior median line of the cord. **M. brown line,** brown line extending from the xiphoid cartilage to the symphysis pubis. **M. line,** vertical line supposed to divide the body into two equal parts, one right, the other left. **M. lithot′omy,** lithotomy performed in the median line of the perineum. **M. nerve** arises chiefly from the anterior branches of the last two cervical nerves and first dorsal. The fifth and sixth cervical pairs also send a branch, which separates from the musculocutaneous nerve. The median nerve descends on the inner part of the arm along the biceps muscle. Opposite the elbow-joint it buries itself behind the aponeurosis of that muscle, and engages itself between the two fasciculi of the pronator teres. Lower down it is between the flexors—sublimis and profundus—and passes, with their tendons, under the anterior annular ligament, then divides into five branches, which are distributed to the muscles of the thenar eminence, to the lumbricales, the integuments of the thumb, the index, middle finger, and outer part of the ring finger. This nerve gives no branches to the arm. In the forearm it furnishes filaments to all the pronator and flexor muscles, and one of them accompanies the anterior interosseous artery. It also gives off a filament to the integuments of the palm of the hand. **M. veins,** three of the superficial veins of the forearm are so called: the median basilic, the median cephalic, and common median; see *Basilic* and *Cephalic*.

**Median′um.** Mediastinum; mesentery.

**Me′diary.** Median.

**Medias′tinal.** Relating to the mediastinum. **M. ar′teries** are very delicate arterial branches distributed in the areolar texture of the mediastinum. They are distinguished into anterior and posterior.

**Mediastini′tis.** Inflammation of the connective tissue in the mediastinum.

**Mediasti′nopericardi′tis.** Inflammation involving the mediastinum and pericardium.

**Mediasti′num.** Space formed by a double reflection of the pleura, extending from the spine to the posterior surface of the sternum. It is divided into superior and inferior, the latter subdivided into three: anterior, middle, and posterior. The superior m. lies above upper level of pericardium, and is bounded anteriorly by manubrium sterni and posteriorly by dorsal vertebræ. A plane extending from fourth dorsal vertebra to junction of manubrium with gladiolus is the imaginary dividing line. It contains origin of sternohyoid and thyroid muscles and ends of longus colli, transverse aorta, innominate artery and vein, left carotid and subclavian arteries, superior cava, left superior intercostal vein, pneumogastric, cardiac, phrenic, and left recurrent laryngeal nerves, trachea, œsophagus, thoracic duct, thymus gland or its remains, and lymphatics. The inferior, being subdivided, may be described as inferior anterior, which is bounded in front by sternum, laterally by pleura, and posteriorly by pericardium. It contains origin of triangularis sterni muscles, internal mammary vessels of left side, and lymphatic glands and vessels permeating areolar tissues; inferior middle is the broadest portion, and contains heart, ascending aorta, superior cava, bifurcation of trachea, pulmonary arteries and veins, and phrenic nerves; inferior posterior is parallel with vertebral column, bounded anteriorly by pericardium and roots of lungs, posteriorly by vertebral column from inferior border of fourth dorsal vertebra downward, and laterally by pleura. It contains descending arch and thoracic portion of aorta, greater and lesser azygos veins, pneumogastric and splanchnic nerves, œsophagus, thoracic duct, and lymphatic glands. **M. au′ris,** see *Tympanum*. **M. cerebel′li,** falx cerebelli. **M. cer′ebri,** falx cerebri, septum lucidum. **M. dorsa′le,** posterior m. **M. tes′tis,** corpus Highmorii. **M. ventriculo′rum latera′lium,** septum lucidum.

**Me′diate ausculta′tion.** Auscultation by means of an instrument, as a stethoscope.

**Med′icable.** Curable.

**Med′ical.** Appertaining to medicine. **M. juris-pru′dence,** legal medicine. **M. man,** physician or surgeon.

**Med′icament.** Remedy; medicine.

**Medicamen′tal.** Medicinal.

**Medicamenta′tion.** Treatment with medicine.

**Medicamen′tous.** Medicinal.

**Medicamen′tum.** Drug, medicament.

**Medicas′ter.** Charlatan.

**Med′icated.** Treated or impregnated with medicine. **M. milk,** human milk modified by the administration of drugs to the mother in order to treat disease in the nursing infant.

**Medica′tion.** Treatment by medicine.

**Medicatri′na.** Physician's office or fee.

**Medica′trix.** Having the power of healing, as *vis medicatrix naturæ*, nature's healing force.

**Medicerebel′lar.** Relating to the middle region of the cerebellum.

**Medicer′ebral.** Relating to the middle region of the cerebrum.

**Medicinal,** me-dis′in-al. Medical, remedial, having remedial power; relating to medicine. **M. days,** days on which the ancients considered that remedies might be administered, and especially evacuants; such days were not esteemed critical. **M. hours,** times at which—the stomach being freed from its digestive actions—medicine, it was thought, could be most advantageously administered. **M. rash,** see *Rash, medicinal*.

**Med′icine.** The healing art. A science the object of which is the cure of disease and the preservation of health. Occasionally it is used to comprehend all the branches of the healing art; at others to comprise one great division, in contradistinction to *surgery* and *obstetrics*. Medicine, in this sense, includes many branches, the chief of which are anatomy, physiology, pathology, bacteriology, diagnosis, therapeutics, hygiene, materia medica, and pharmacy. Medicament. **M. chest,** case or chest for medicines. **Clin′ical m.,** see *Clinical*. **Conserv′ative m.,** mode of treating disease which tends to the preservation, development, and support of the vital powers. **Cuta′neous m.,** see *Cutaneous*. **Eclec′tic m.,** see *Eclectic*. **Empir′ical m.,** secret remedy. **Le′gal m.,** medical jurisprudence or forensic medicine; application of medical knowledge to the solution of questions connected with the administration of justice. **Pat′ent m.,** see *Patent medicine*. **Quack m.,** arcanum. **State m.,** medical knowledge brought to bear on public hygiene and matters appertaining to medical jurisprudence.

**Medicine′rea** (*cineres*, ashes). Gray matter in the interior of the brain.

**Medicochirur′gical.** Relating to medicine and surgery.

**Medicole′gal.** Relating to legal medicine.

**Medicomechan′ical.** Relating to both medicinal and mechanical remedies.

**Medicom′missure.** Middle commissure; layer of gray substance uniting the thalami optici.

**Med'icon.** Poisonous drug.

**Medicopneumat'ic.** Relating to pneumatic medicine.

**Medicopsycholog'ical.** Relating to psychological medicine.

**Medicor'nu.** Middle cornu; descending horn of the lateral ventricle. Also middle turbinated bone.

**Medicostatis'tics.** See *Statistics, medical.*

**Med'icus** (*medeor,* to heal). Doctor of medicine; physician.

**Medifron'tal.** Relating to the median line of the forehead.

**Medi'na worm.** Guinea-worm.

**Medinogor'dius.** Dracunculus.

**Mediobilat'eral.** Relating to the median plane and both sides of the body.

**Mediocar'pal.** Relating to the middle carpal articulation.

**Mediocol'ic.** Relating to the middle of the colon. **M. ar'tery,** middle colic artery.

**Mediofron'tal.** Relating to the middle of the frontal region. **M. gy'rus,** middle frontal convolution.

**Medi'ola.** Medeola.

**Mediolat'eral.** Relating to the median plane and sides.

**Me'dio-occip'ital.** Relating to the middle of the occipital region. **M.-o. gy'rus,** middle occipital gyrus.

**Mediopal'atine.** Relating to the middle of the palate.

**Mediopon'tine.** Relating to the middle of the pons Varolii.

**Mediotar'sal.** Relating to the middle tarsal articulation. **M. articula'tion,** joint situated between the astragalus and calcaneum posteriorly, and scaphoid and cuboid anteriorly.

**Medipec'tus.** See *Mesosternum.*

**Medipedun'culus.** Middle peduncle of the cerebellum.

**Mediscale'nus.** Scalenus medius muscle.

**Med'isect.** To divide in the median line.

**Meditem'poral.** Middle temporal.

**Mediterra'nean fe'ver.** Malta fever.

**Meditri'ceps.** Middle head of the triceps muscle.

**Meditul'lium.** Diploë.

**Me'dium** (middle). Means. Any of the conditions which surround a living body and are inservient to its continued existence. Thus air, water, heat, light, etc., are so many media. Also a substance, such as agar, bouillon, milk, potato, etc., used in the cultivation of bacteria. **M. car'damoms,** Malabar cardamoms of commerce. **M. mus'culi,** see *Muscle.* **M. ven'tris,** umbilicus.

**Me'dius.** Middle; median. **M. dig'itus,** middle finger.

**Med'lar.** Mespilus.

**Me'do.** Hydromeli.

**Medorrhœ'a** (*medea,* genitals, *rheo,* to flow). Gonorrhœa. **M. fœmina'rum in'sons,** leucorrhœa. **M. urethra'lis,** gonorrhœa. **M. viri'lis,** gonorrhœa.

**Medorrhœ'ic.** Relating to or suffering with medorrhœa.

**Med'os.** Bladder.

**Medul'la** (*medius,* in the middle). Marrow. Pith of a plant stem. Medulla oblongata. **M. cer'ebri,** see *Cerebrum.* **M. dorsa'lis** or **dorsua'lis,** m. spinalis. **M. neph'rica,** m. renis. **M. nervo'rum,** neurine. **M. oblonga'ta,** cerebral protuberance, mesocephalon, the medullary substance that lies within the cranium upon the basilar process of the occipital bone. The anterior surface, which rests in the basilar groove, is impressed by the basilar artery. At the upper extremity of and on its posterior surface are the tubercula quadrigemina. At the same extremity the medulla gives rise to two prolongations, the *peduncles of the brain,* separated from each other by the mammillary eminences, and becoming lost in the optic thalami. The lower extremity is called the tail or rachidian bulb, bulbus medullæ spinalis or rachidicus, and is continuous with the spinal cord. It is to this part only that some anatomists apply the name *medulla oblongata.* From the posterior angles two other prolongations arise, called *peduncles* of the cerebellum. The medulla oblongata has several eminences—the pons Varolii, corpora pyramidalia, c. olivaria, etc.—and has a longitudinal fissure before and another behind, called the *anterior* and the *posterior median fissures.* The vesicular neurine in the centre of the medulla is the nervous centre of respiration and deglutition; hence it has been called *centrum vitale.* (See cut under *Pons.*) **M. os'sium,** bone-marrow. **M. re'nis,** the pyramidal portion of the kidney. **M. spi'næ** or **M. spina'lis,** spinal cord or marrow, nervous system of voluntary motion and tactile impression (Gall). Continuation of the medulla oblongata. Commences at the foramen magnum of the occipital bone, and descends in the vertebral canal as low as the second lumbar vertebra, presenting in its course several evident enlargements. It is grooved on both its anterior and posterior surfaces by a furrow which divides it in its whole length into two great nervous cords, intimately united with each other. The longitudinal fissure on its anterior surface is called the *anterior median fissure;* that on the posterior surface the *posterior median fissure.* Between these, two *lateral fissures* have also been described on each side of the cord. The spinal marrow terminates by an oval tubercle, whence a number of nerves set out, called *cauda equina,* from its resemblance to a horse's tail. The spinal cord is formed of two substances, one white, the other gray, presenting an inverse arrangement to that which they have in the brain, the white being external, the gray in the centre, *substantia grisea centralis.* It is enveloped by a yellowish, fibrous membrane, very resisting, which is a continuation of the cerebral pia mater, and by two other membranes, which are prolongations of the arachnoid and dura mater. **M. vertebra'lis,** m. spinalis.

**Medullad'en** (*medulla,* marrow, *aden,* gland). A preparation of bone-marrow, recommended in anæmia and neurasthenia.

**Medul'læ** (pl. of medulla). Sperm.

**Medul'lar.** Medullary.

**Med'ullary** (*medulla,* marrow). Relating to or analogous to marrow. **M. ar'teries,** arteries which enter bones and pass to the marrow. **M. canal',** cylindrical cavity in the shaft of a long bone, containing marrow; vertebral canal containing the spinal cord. **M. cav'ities,** hollow of a bone containing marrow. **M. cells,** reticulations in the bone-marrow formed by the m. membrane. **M. fur'row** or **M. groove,** groove running longitudinally, in the vertebrate embryo, which forms the medullary canal later on. **M. juice,** marrow. **M. lam'inæ,** strata of white matter situated between the gray substance of the brain. **M. mat'ter,** see *Nerve-fibres.* **M. mat'ter of the brain,** see *Cerebrum.* **M. mem'brane,** vascular, areolar web of extreme tenuity which envelops the marrow and lines the inner surface of the medullary canal of the long bones. This membrane has been considered as a species of internal periosteum of those bones. It has numerous vessels, which bury themselves in the thickness of the marrow, and others which nourish the innermost plates of the bone. The cells formed by it are termed *cellulæ* or *sacculi medullares.* **M. neu'rine,** *see Neurine.* **M. nu'cleus,** white fibres of cerebellum. **M. plates,** epiblastic plates in the embryo forming the medullary groove. **M. rays,** the collection of uriniferous tubules in the cortical substance of the kidney; also lines running from the pith to the bark in the stem of an exogenous plant. **M. ridges,** protuberances which form the boundary-line of the medullary groove. **M. sarco'ma,** encephaloid, hæmatodes fungus. **M. sheath,** see *Nerve-fibres.* **M. spaces,** spaces in bone when in stage of formation filled with embryonic marrow. **M. stri'æ,** white lines running transversely on floor of fourth ventricle. **M. sub'stance of the kid'ney,** medulla renis. **M. sub'stance of Schwann,** see *Nerve.* **M. sys'tem,** Bichat gives this name to the bone-marrow and its membranes. He distinguishes two species of medullary systems: the one occupies the cellular tissue at the extremities of the long bones and that of the flat and short bones; the other is found merely in the central canal of long bones. **M. tube,** spinal cord in the primitive tubular stage. **M. tu′mor of the lungs,** cancerous phthisis. **M. ve′li,** folds situated in upper part of the fourth ventricle; they are divided into anterior and posterior medullary velum.

**Med′ullated.** Containing marrow. **M. fi′bres,** see *Fibres, medullated.*

**Medul′lic.** Contained in or obtained from medulla. **M. acid,** an acid occurring in beef-fat.

**Medulline′.** Sterilized organic extract of the spinal cord of the ox; employed in locomotor ataxia and other nervous diseases.

**Medullispi′nal veins.** Veins given off by the spinal cord and uniting into a fine network on the pia mater.

**Medulli′tis.** Myelitis.

**Medulliza′tion** (*medulla,* marrow). Softening of the osseous tissue from osteitis, the earthy constituents becoming absorbed and the Haversian canals, lacunæ, etc., enlarged.

**Medulloarthri′tis** (*medulla,* marrow, *arthron,* joint). Inflammation involving the medulla in the extremities of the long bones, and followed by structural changes in the articulation.

**Medul′locell.** Myelocyte.

**Medulloencephal′ic.** Relating to spinal cord and cerebrum.

**Medu′sa, head of.** See *Caput Medusæ.* **M. san′guinis hom′inis,** microbe found in the blood in a remittent form of fever observed in China.

**Meer′an.** Daucus carota.

**Megabacte′ria.** Very large bacteria.

**Megacephal′ic** (*megas,* large, *kephale,* head). Pertaining to crania whose capacity exceeds 1450 cc.

**Megaceph′alus.** One having a large head.

**Megachei′lus** (*megas,* large, *cheilos,* lip). One having large lips.

**Megacoc′cus** (*megas,* large, *kokkos,* berry). Largest form of coccus.

**Megaco′lon.** Enlargement of colon.

**Meg′adont** (*megas,* large, *odous,* tooth). Having large teeth.

**Megafar′ad.** A million farads.

**Megagas′tria** (*gaster,* stomach). Condition of abnormally large stomach, but not necessarily morbid.

**Megagnath′us** (*megas,* large, *gnathos,* jaw). One having a large jaw.

**Megalanthropogen′esis** (*megas,* large, *anthropos,* man, *genesis,* birth). Term used by a French physician to designate the art of procreating men of genius by causing talented men to marry clever women.

**Megalo-** (*megas,* great). In composition, great.

**Meg′aloblast** (*megas,* great, *blastos,* germ). Corpuscle larger than a red blood corpuscle, found in the marrow of the embryo. The nucleus is more clearly defined than that of a white blood corpuscle.

**Megalocar′dia** (*kardia,* heart). Having a very large heart.

**Megalocephal′ia** or **Megaloceph′aly** (*kephale,* head). An unusally large size of the head. Leontiasis ossea.

**Megalocephal′ic.** Having an unusually large head.

**Megalochei′rous** (*cheir,* hand). Having large hands.

**Megalococ′cus myxoi′des.** A blastomycete found in a pseudomyxoma and believed to be pathogenic.

**Megalocœ′lia** (*koilia,* abdomen). Megalosplanchnia.

**Megalocor′nea.** Unusual size of cornea.

**Meg′alocyte** (*megas,* large, *kytos,* cell). Very large red blood corpuscle observed in cases of anæmia.

**Megalodac′tylous** (*megas,* large, *daktylos,* finger). Having large fingers.

**Megalogas′tria** (*gaster,* stomach). Condition of abnormally large stomach.

**Megaloglos′sia** (*glossa,* tongue). Condition in which the tongue is hypertrophied and protrudes from the mouth.

**Megaloma′nia** (*megas,* large, *mania,* madness). Form of insanity in which the patient imagines himself to be a very exalted and powerful individual.

**Megalome′lia** (*melos,* limb). A monstrosity characterized by very large limbs.

**Megalom′elus.** Monster with very large limbs.

**Megalopho′nia** (*phone,* voice). The condition of having a full, strong voice.

**Megalopho′nic** or **Megaloph′onous.** Having a strong voice.

**Megalophthal′mus** (*ophthalmos,* eye). A congenital deformity in which the eye is inordinately large.

**Megalo′pia.** Megalopsia.

**Megalopo′dia** (*pous,* foot). Condition of having large feet.

**Megalop′sia** (*megas,* great, *opsis,* sight). An affection of the eye in which objects appear larger than they are in reality.

**Megal′opus** (*pous,* foot). Having an unusually large foot.

**Meg′aloscope** (*skopeo,* to see). Magnifying instrument for making endoscopic examinations of the bladder, rectum, and stomach.

**Megalos′copy.** Observation with the microscope.

**Megalosplanch′nus** (*splanchnon,* viscus). Megalocœlia. Having a tumid condition of the viscera or a viscus. Some have used the substantive *megalosplanchnia* for the tumor itself.

**Megalosple′nia.** Splenoncus; splenomegaly.

**Megalos′poron.** A fungus which invades the hair.

**Meg′ascope** (*skopeo,* to see). Modification of microscope for examining bodies of comparatively large size.

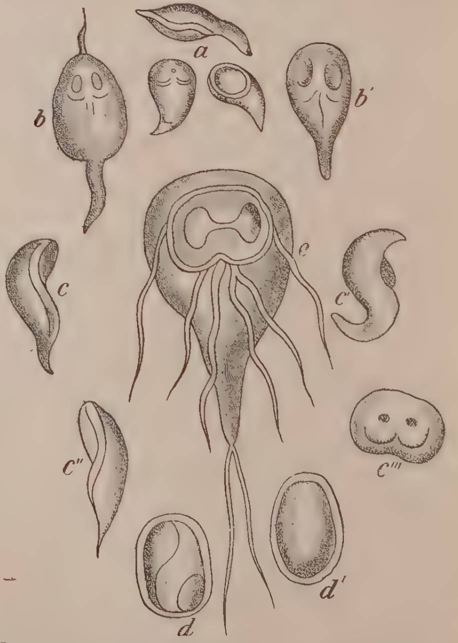
**Megascop′ic** (*megas,* great, *skopeo,* to see). Visible to the eye without the use of a magnifier.

**Meg′aseme** (*megas,* great, *sema,* sign). Having a large index; term used in craniometry; having an orbital index over 89.

**Megas′thenes** (*megas,* great, *sthenos,* strength). See *Microsthenes.*

**Megasthen′ic.** Having great strength.

**Megas′toma** (*megas,* great, *stoma,* mouth). A genus of *Protozoa.* **M. enter′icum** or **intestina′le,**



Megastoma entericum. *a, b, b′, c, c′, c″, c‴,* various forms of Cercomonas intestinalis, after Lambl; *d, d′,* encysted forms of Megastoma entericum, after Grassi and Schewiakoff; *e,* Megastoma entericum, adult form.

a protozoon observed to exist in the small intestines of rats, and also found in human beings in cases of impaired digestion with diarrhœa.

**Megasto′matous.** Having a large mouth.

**Meg′avolt.** Electrical unit equivalent to a million volts.

**Megistoceph′alus** (*megistos*, very large, *kephale*, head). One having a very long cranium.

**Me′glin's pal′atine point.** Point at which the palatine nerve leaves the palatomaxillary canal.

**Meg′ohm.** Resistance of electromagnet amounting to one million ohms.

**Megophthal′mus** (*megas*, large, *ophthalmos*, eye). Having large eyes.

**Megox′ycyte** (*oxys*, acid, *kytos*, cell). Large eosinophile cell. See *Eosinophile.*

**Megox′yphile cell.** Megoxycyte.

**Me′grim** (*migraine*, itself abridged from *hemicrania*). Hemicrania. *Megrims* is used in England for lowness of spirits.

**Me′hu's test.** Test for albumin, by the use of nitric, carbolic, and acetic acids.

**Meibo′mian cal′culus.** Indurated secretion of the m. glands. **M. cyst**, chalaza. **M. fora′men**, foramen cæcum of the tongue. **M. glands**, follicles of Meibomius, palpebral or ciliary follicles. Small, sebaceous follicles called after Meibomius, although known long before his description of them. They are situated in special grooves in the tarsal cartilages, and are ranged by the side of each other in the form of yellowish, parallel, and vertical lines, sometimes straight, at others tortuous. They may be seen at the inner surface of the eyelids, through the conjunctiva. They secrete a sebaceous humor called humor of Meibomius, lippitudo, or gum. **M. sty**, acute inflammation of m. glands. **M. tu′mor**, chalazion.

**Meigs's cap′illaries.** Capillary vessels between the cardiac muscular fibres.

**Mein′ert's enteropto′sis.** Enteroptosis associated with chlorosis.

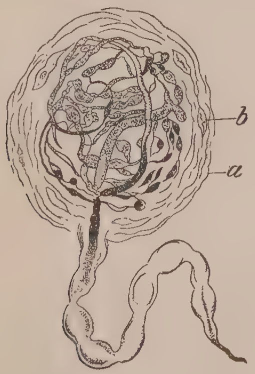
**Meiocar′dia** (*meioo*, to lessen, *kardia*, heart). Diminution of the volume of the heart.

**Meiodid′ymus.** Miodidymus.

**Meio′sis** (*meioo*, to lessen). The period of a disease in which the symptoms begin to diminish; decline; remission. Also idiotism.

**Meiot′ic.** Relating to meiosis.

**Meiss′ner's bod′ies** or **cor′puscles.** Oblong bodies seen in some of the broad papillæ of the skin of the volar portion of the fingers and the palm, and into which a medullated nerve-fibre enters, either enveloping the corpuscles spirally or becoming lost in its centre. **M.'s gan′glion**, a flat layer of nervous masses in the tunica submucosa of the intestines, a few ganglia projecting toward the mucous membrane and penetrating between the adjoining follicles. **M.'s plex′us**, M.'s ganglion.



Meissner's corpuscle from the human corium. *a*, upper portion, in which the epithelial cells alone are represented. The nuclei of those cells are in the broader peripheral portion of the cytoplasm; *b*, nerve-dendrite coiled about the epithelial cells. (Böhm and Davidoff.)

**Meiss′ner-Bill′roth plex′us.** Meissner's plexus.

**Meiu′rus** (*meioo*, to lessen, *oura*, tail). Shortened; curtailed. Term figuratively applied to the pulse when tapering off to a fine point.

**Mek′ilwort.** Atropa belladonna.

**Mel** (*meli*). (Ph. U. S.) Honey. A liquid of a mucosaccharine nature prepared by the Apis mellifica or common hive-bee, which collects the materials from the nectaries of flowers. Honey is employed as aliment, condiment, and medicine. It is demulcent and aperient, and is prescribed as an adjunct to gargles in sore throat. *Virgin honey, mel virginum* or *virgineum*, is that which flows from the wax spontaneously. *Honey-water* is a mixture of essences colored with saffron; a little honey is added to communicate a clamminess, the effect of which is to make it retain the scent the longer; used as a scent. **M. aceta′tum**, oxymel. **M. ægypti′acum**, a mixture of honey, vinegar, and verdigris, formerly employed as a detergent by veterinary surgeons. **M. aë′rium**, Fraxinus ornus. **M. arundina′ceum**, saccharum. **M. bora′cis**, honey of borax or borax honey, contains borax ʒj, glycerin ʒss, clarified honey ℥j; detergent; applied to the mouth in aphthous affections. **M. can′næ**, saccharum (non purificatum). **M. coc′tum**, boiled honey. **M. despuma′tum** (Ph. U. S.), clarified honey (melt the honey in a water-bath and remove the scum); uses the same as those of honey. **M. ro′sæ** (Ph. U. S.), honey of rose, an extract of powdered rose leaves in honey; astringent and detergent; used chiefly in gargles and washes in aphthæ, etc. **M. scil′læ**, oxymel scillæ. **M. s. compos′itum**, syrupus scillæ compositus. **M. vino′sum**, honey wine; wine mead. **M. vir′ginum**, see *Mel.*

**Melachol**, mel′ak-ol. A solution of sodium citrophosphate, used as a laxative in hepatic disorders.

**Melæ′mia** (*melas*, black, *haima*, blood). Black jaundice.

**Melæ′na** (*melaino*, to blacken). Black jaundice. Vomiting of black matter, ordinarily succeeded by evacuations of the same character. Also, and more commonly, the passage of thick material of a dark color, consisting chiefly of altered blood mixed with mucus, from the intestines. **M. fungo′sa carcino′des**, hæmatodes fungus. **M. neonato′rum**, a disease of the newborn characterized by a discharge of altered blood from the intestine; a form of hemorrhagic diathesis; it is of evil prognosis, though not invariably fatal. **M. spu′ria**, m. of the newborn in which the blood has come from the nurse's nipple, being swallowed with the milk, and is then discharged in altered form with the fæces.

**Melænodiarrhœ′a.** Melæna.

**Melænorrha′gia.** Melæna.

**Melaleu′ca caju′puti.** Plant of the order *Myrtaceæ*, which affords cajeput oil. Leaves are esteemed diuretic, stomachic, and emmenagogue. **M. leucaden′dron**, M. cajuputi. **M. linarifo′lia**, an oil, closely resembling oil of cajeput, is obtained from this species; this tree, planted in low, marshy ground, is believed to exert a beneficial effect preventing malaria. **M. mi′nor**, M. cajuputi. **M. viridiflo′ra**, tree of New Caledonia, from which an essence is obtained resembling that of eucalyptus, and which is similarly employed.

**Melal′gia.** Melosalgia.

**Melam′bo bark.** See *Bark.*

**Melampho′nus** (*melas*, black, *phone*, voice). Having a hoarse or indistinct voice.

**Melamphyl′lum.** Acanthus mollis.

**Mel′ampode** or **Melampo′dium.** Helleborus niger.

**Melam′pous.** Having black feet.

**Melam′pyrit.** Dulcitol.

**Melanæ′ma** (*melas*, black, *haima*, blood). Suffocation.

**Melanæ′mia.** Venosity. Condition of the blood in pernicious malarial fever, in which black coloring-matter is found, which in mass may become dangerous clots.

**Melanæ′mic.** Relating to or suffering from melanæmia.

**Melanchloro′sis.** Black jaundice; melæna.

**Melancho′lia** (*melas*, black, *chole*, bile). Melancholy. **M. ambulato′ria**, m. errabunda. **M. an′glica**, m. in which desire for death exists. **M. atton′ita**, melancholy attended with a condition resembling stupor, the patient showing no interest at all in what goes on about him. **M. autochi′rica**, suicidal impulse. **M. congen′ita**, hereditary melancholia. **M. crapulo′sa**, alcoholic melancholy. **M. dæmon′ica**, demonomania. **M. ebrio′sa**, alcoholic melancholia. **M. errabun′da**, m. associated with nervous agitation and an inability to remain quiet; cuttubuth. **M. flatuo′sa**, hypochondriasis. **M. hila′ris**, insanity characterized by exaltation. **M. hypochondri′aca**, hypochondriasis. **M. hyster′ica**, hysterical melancholia. **M. malev′olens**, melancholy in which propensity to do mischief exists. **M. ner′vea**, hypochondriasis. **M. nostal′gica**, nostalgia. **M. persecutio′nis**, form of melancholy in which a delusion of persecution is present. **M. pleonec′tica**, m. associated with inordinate greed. **M. a po′tu**, alchoholic melancholy. **M. sal′tans**, chorea. **M. sim′plex**, a slight form of melancholia. **Stu′porous m.**, m. attonita. **M. suicid′ium**, suicidal impulse. **M. uteri′na**, nymphomania. **M. zoänthrop′ica**, zoanthropia.

**Melancho′liac.** One affected with melancholy.

**Melanchol′ic.** Laboring under melancholy; belonging or relating to melancholy. In popular language, one of a gloomy disposition. **M. tem′perament**, see *Bilious temperament*.

**Mel′ancholiness.** Melancholy.

**Mel′ancholy** (*melas*, black, *chole*, bile). Disease supposed by the ancients to be caused by black bile; variety of mental alienation characterized by excessive gloom, mistrust, and depression generally, not infrequently with insanity on one particular subject or train of ideas, monomania, monomoria, or, on a few subjects, oligomania. Panophobia, demonomania, erotomania, nostalgia, etc., may be referred to this head. *Melancholy* also means gloominess of disposition in the sane. **Affec′tive m.**, m. of an emotional character. **Ag′itated m.**, m. associated with continuous movement, crying, and excessive emotional expression. **Alcohol′ic m.**, melancholy caused by alcoholic excesses. **Amenorrhœ′al m.**, melancholy due to amenorrhœa. **Am′orous m.**, melancholy characterized by love for a person, but free from desire for sexual intercourse. **Anæ′mic m.**, m. due to anæmia. **Catalep′tic m.**, m. associated with catalepsy. **Cataton′ic m.**, catatonia. **Climacter′ic m.**, m. occurring at menopause. **Convul′sive m.**, m. complicated with epilepsy. **Delu′sional** or **delir′ious m.**, form of melancholy characterized by delusions. **Demonopho′bic m.**, demonomania. **Diabet′ic m.**, melancholy attributed to diabetes as the cause. **Erot′ic m.**, erotomania. **Homici′dal m.**, m. in which individual has homicidal tendencies. **Hyster′ical m.**, m. attributed to hysteria. **Love m.**, erotomania. **Panpho′bic m.**, m. associated with excessive timidity and fear of every object. **Paret′ic m.**, m. occurring as an initial stage of paresis. **Phthis′ical m.**, m. occurring in phthisis. **Podag′rous m.**, m. attributed to gout. **Rea′soning m.**, hypomelancholia. **Relig′ious m.**, m. characterized by religious delusions. **Rheumat′ic m.**, m. occurring in and thought to be due to rheumatism. **Stu′porous m.**, melancholia attonita. **Suici′dal m.**, m. associated with a suicidal impulse. **Syphilit′ic m.**, m. due to syphilis or to syphilophobia.

**Melanencephalo′ma** (*melas*, black, *enkephalos*, brain). Melanotic tumor of brain.

**Melanephidro′sis** (*melas*, black, *ephidrosis*, sweating). Sudor anglicus niger. A form of chromidrosis.

**Melani′anous.** Covered with dark pigment.

**Melan′ic, Mel′anoid,** or **Melanot′ic** (*melas*, black). Of or belonging to melanosis, as melanic deposit, a black coloring-matter deposited from the blood under special circumstances; see *Melanosis*.

**Melanic′terus** (*melas*, black, *icterus*, jaundice). Black jaundice.

**Melanidro′sis** (*melas*, black, *hidrosis*, sweat). Chromidrosis; colored excretion of sweat or sebum.

**Melanin′.** Dark pigment covering internal surface of membrana choriocapillaris, consisting of several layers of pigment-cells; also occurs in the skin of the negro, in urine, in melanotic tumors, pulmonary tubercles, etc.

**Mel′anism** or **Melanis′mus.** Change of coloration of the skin in which the pigment is of a deeper hue and in greater quantity than natural.

**Melano-** (*melas*, black). In composition, black, obscure.

**Melanocan′croid.** Melanotic epithelioma.

**Melanocarcino′ma.** Melanotic cancer.

**Melanocatarac′ta.** Black cataract.

**Melanochloro′sis.** Black jaundice.

**Melanoco′mus** (*kome*, hair). Having black or dark hair.

**Mel′anocyte** (*melas*, black, *kytos*, cell). Lymphoid cell which has been stained by blood pigment.

**Melanoder′ma** (*derma*, skin). Melanopathia. Chloasma with dark patches. **M. cachectico′rum**, form of m. noticed in connection with systemic diseases, as syphilis, cancer, malarial fevers, etc. **M. of the scrof′ulous**, hyperpigmentation of the skin, strongly resembling pigmentary syphilide.

**Melanœde′ma** (*melas*, black, *oidema*, swelling). Melanosis of the lungs; anthracosis.

**Melan′ogen.** Chromogen found in the urine in melanuria.

**Mel′anoid.** Melanotic. Resembling dark pigment. **M. can′cer**, melanotic cancer.

**Melanoleukæ′mia.** Melanæmia occurring in leucocythæmia.

**Melano′ma.** Melanosis.

**Melanomy′ces** (*mykes*, fungus). Melanospongus.

**Melanopath′ia** or **Melanop′athy** (*pathos*, affection). Nigritism. Augmentation of black pigment, generally in patches, in the skin. The discoloration may vary from mere duskiness to the deepest black.

**Melanophthal′mus** (*melas*, black, *ophthalmos*, eye). Melanosis of the eye. Black-eyed.

**Melanophy′ma** (*phyma*, growth). Secale cornutum.

**Melanop′iper.** Piper nigrum.

**Melanopla′kia** (*plax*, plate). The occurrence of pigmented patches on the buccal mucous membrane.

**Melanopneu′mon** (*pneumon*, lung). See *Melanosis*.

**Melanorrha′gia** (*rhage*, breaking forth). Melæna.

**Melanorrhi′zum** (*rhiza*, root). Helleborus niger.

**Melanorrhœ′a** (*melas*, black, *rheo*, to flow). Dark discharge from any emunctory.

**Melanosarco′ma.** Melanotic sarcoma.

**Melanosarcomato′sis.** A widely scattered deposition of foci of melanosarcoma.

**Melanoscir′rhus** (*melas*, black, *skirrhos*, tumor). Scirrhus with melanotic deposit.

**Melano′ses.** Cutaneous affections including various forms of melasma.

**Melanosina′pis commu′nis.** Black pepper.

**Melano′sis** (*melas*, black). Discoloration of a part—skin or internal organs—by a deposit of pigment in the tissues. It is often associated with malignant growths, but not necessarily so. Melanism. Organic affection in which the tissue of the parts is converted, owing to a thick deposit of pigment matter, into a black, hard, homogeneous substance, near which ulcers or cavities may form, owing to the softening either of the substance itself or of some other morbid tissue—of tubercles especially. This morbific change affects the lungs particularly, when it is called melanosis or melanoma or anthracosis, black degeneration, melanotic or black cancer, black tubercle. It is also met with in the liver and areolar texture. The causes are very obscure. *Spurious melan-*

*osis* arises from the introduction of carbonaceous matter, from the action of chemical agents on the blood, or from stagnation of that fluid. Several varieties of true melanosis have been described, as the punctiform, tuberiform, stratiform, and liquiform or fluid. **Bil′iary m.**, melanoderma caused by diseased or disordered condition of the liver. **Can′cerous m.**, melanosarcoma. **M. cuticula′ris progressi′va**, xeroderma pigmentosum. **M. cu′tis**, melanosis of the skin. **M. cu′tis benig′na**, melasma. **False m.**, spurious m. **Gran′ular m.**, melasma granulatum. **M. lenticula′ris progressi′va**, xeroderma pigmentosum, a rare cutaneous affection. **Malig′nant m.**, melanotic cancer and keloid. **Pneu′momelano′sis metallur′gica**, anthracosis pulmonum. **M. pulmo′num**, see *Melanosis*. **Spu′rious m.**, see *Melanosis*. **M. universa′lis**, venosity. **M. of wheat**, ergot of wheat.

**Melanospon′gus** (*spongos*, sponge). Tuberiform variety of melanosis of the lungs.

**Melanosyphilol′epis** (*melas*, black, *lepis*, scale). Syphilitic eruption, black and scaly in character.

**Melanothan′atus** (*thanatos*, death). Black death; plague.

**Mel′anothrix** (*thrix*, hair). Having black hair.

**Melanot′ic.** Melanic; relating to melanosis. **M. can′cer**, see *Cancer*. **M. sarco′ma**, see *Sarcoma*.

**Melanot′richous** (*melas*, black, *thrix*, hair). Black-haired.

**Mel′anous.** Epithet applied to people characterized by the hair and skin being very dark or blackish.

**Melan′sis.** Melanosis.

**Melante′ria.** Copperas.

**Melan′thera brown′ei.** The leaves of this West African plant are used as a tonic and antiperiodic substitute for quinine.

**Melanthigenin′.** Product of melanthin derived by decomposition.

**Melanthin′.** Glucoside existing in seed of Nigella sativa.

**Melan′thium.** Nigella, M. virginicum. **M. muscætox′icum**, Amianthium muscætoxicum. **M. sabadil′la**, veratrum sabadilla. **M. sati′vum**, Nigella sativa. **M. vi′rens**, Veratrum viride. **M. virgin′icum**, Leimanthium virginicum, quafadil; indigenous; ord. *Melanthaceæ;* said to be a sure but severe remedy for itch.

**Melanu′ria**, **Melanure′sis** (*melas*, black, *ouron*, urine). Black urine, a condition usually dependent on the presence of blood coloring-matter or indigo.

**Melanu′ric.** Relating to melanuria.

**Melanurin′.** Black pigment sometimes found in urine.

**Mel′as** (*melas*, black). Lepra nigricans. **M. ic′terus**, jaundice with dark discoloration.

**Melas′ma.** Black spot or ecchymosis occurring on the lower extremities of old people especially. **M. Addiso′ni**, Addison's disease, a cutaneous affection, analogous to chloasma, differing from it only in the dark color of the morbid pigment. **M. granula′tum**, rare form of melasma, consisting of blackish granules and papules. **M. maculo′sum**, form of melasma in which macules appear on various parts of the body, generally situated on the legs of people advanced in years. **M. suprarena′le**, Addison's disease. **M. tinc′tum**, see *Argyria*. **M. universa′le**, variety of melasma involving the entire surface of the cutis, occurring in old people especially. Also called pityriasis nigra. An affection of the kind is seen in old persons who sit in winter with the shins exposed to a fire: in Ireland it is called the trouts. **M. uteri′num**, Chloasma uterinum.

**Melasper′mum.** Nigella sativa.

**Melas′ses.** Molasses, treacle.

**Melas′sic acid.** Product obtained from molasses.

**Melastearrhœ′a.** Chromidrosis.

**Melasto′ma ackerman′ni.** Tree of South America, yielding an oil resembling salicylate of methyl.

**Melatro′phia** or **Melat′rophy** (*melos*, limb, *atrophia*, wasting). Atrophy of a limb.

**Meldom′eter** (*meldo*, to melt, *metron*, measure). Instrument to determine the melting-points of minerals.

**Me′le.** Probe; explorator; stylet; sound.

**Mel′ea** (*melis*, apple-tree). Pyrus malus.

**Meleag′ra** (*melos*, limb, *agra*, pain). Pain in the limbs.

**Meleguet′ta.** Amomum grana paradisi.

**Meletin′.** Quercetin.

**Melez′itose.** Melezibros. Sugar found in larch manna.

**Mel′i.** Mel.

**Mel′ia.** Fraxinus ornus. **M. azed′arach**, Azedaracha amœna, poisonberry tree, azedarach, pride of India or of China, pridetree, hoptree, beadtree; ord. *Meliaceæ*. Bark of the root, azedarach, has been given in decoction for its purgative effects, also as an emetic; it is sometimes formed into an ointment and used in tinea capitis. Tree is a native of Syria, Persia, and the north of India, and is abundant in the Southern United States and in Bermuda. The bark is bitter and astringent, and is prescribed in India as a tonic and antiperiodic. Seeds and oil obtained from the pericarp have been regarded as anthelmintic; bark of the root as emmenagogue; gum which exudes from it as aphrodisiac; and the leaves have been applied in the form of poultice to ulcers and cutaneous affections. **M. ter′ra** (from the island of Melos), chalk.

**Melia′ceæ.** Natural order of trees and shrubs, natives of tropical Asia and America. Several species of this order possess astringent and tonic properties; some act as purgatives and emetics.

**Melian′thus ma′jor.** South African plant, ord. *Zygophylleæ*, decoction of whose leaves is a good external remedy in tinea capitis, crusta serpiginosa, necrosis, and foul ulcers; also useful as a gargle and lotion in sore throat and diseases of the gums; bruised leaves applied to ulcers promote granulation. **M. grandiflo′ra**, Calamintha grandiflora. **M. mi′nor**, small Cape honey-flower, containing a blackish honey of disagreeable odor.

**Melias′mus.** Glanders.

**Melib′iose.** Melitose.

**Melice′ra** or **Melice′ria** (*meli*, honey, *keros*, wax). Porrigo favosa.

**Meliceris**, mel-is′er-is. Encysted tumor filled with a substance resembling honey; also porrigo favosa.

**Melicero′ma.** Meliceris.

**Melicerous** (mel-is′er-us) or **Melicer′itous.** Having the character of meliceris, as a melicerous tumor.

**Melice′rum.** Porrigo favosa.

**Melich′rous** (*meli*, honey, *chroa*, color). Having the color of honey; sweetened with honey.

**Melicra′tum** (*kerao*, to mix). Hydromeli.

**Melifa′vium** (*favus*, honeycomb). Meliceris; porrigo favosa.

**Mel′ilot.** Melilotus.

**Melilo′tal.** Oily liquid derived from the melilot herb.

**Melilot′ic acid.** $C_9H_{10}O_3$. Acid derived from Melilotus officinalis.

**Melilo′tus.** A genus of plants, ord. *Leguminosæ;* Trifolium melilotus; clover. **M. officina′lis**, yellow melilot, balsam-flowers.

**Melinephidro′sis** (*melinos*, of a quince color, *ephidrosis*, perspiration). Excessive yellow perspiration observed in some forms of fever and in jaundice.

**Meli′ni sul′phas.** Cadmii sulphas.

**Meliphyl′lum** (*meli*, honey, *phyllon*, leaf). Melissa.

**Melis′sa.** The official (Ph. U. S.) name of the leaves and tops of M. officinalis, balm; it has a pleasant odor and an aromatic taste. Balm was formerly much used in nervous diseases, but is now employed only when made into tea, as a diluent in febrile affections; dose, ʒj–iv (4.0 16.0) in infusion; a compound spirit is given in dose of ℥ss (16.0). Basis of a celebrated preparation—*agua carmelitana, Carmelite water*. **M. calamin′tha**, calamint, nespite; plant smells like wild mint, though more agreeably; used popularly as a tea in dyspepsia, flatulent colic, hysteria, uterine obstruction, etc. **M. canarien′sis,** Cracocephalum canariense. **M. citra′ta,** melissa. **M. citri′na,** melissa. **M. clinopo′dium,** Clinopodium vulgare. **M. grandiflo′ra,** mountain calamint; resembles M. calamintha in its virtues. **M. hirsu′ta,** melissa. **M. horten′sis,** melissa. **M. hu′milis,** Melittis melissophyllum. **M. nepe′ta,** field calamint, spotted calamint; formerly used as an aromatic. **M. officina′lis,** melissa. **M. pulegioi′des,** hedeoma. **M. roma′na,** melissa. **M. tra′gi,** Melittis melissophyllum. **M. tur′cica,** Dracocephalum canariense.

**Melis′sic acid.** $C_{30}H_{60}O_2$. Fatty, crystalline acid derived from beeswax.

**Melissophyl′lum.** Melissa; Melittis melissophyllum.

**Melitæ′mia** or **Melithæ′mia** (*meli,* honey, *haima,* blood). Condition of the circulating fluid in which it contains an unusual quantity of saccharine matter.

**Melitæ′na.** Melissa.

**Melitag′ra** (*meli,* honey, *agra,* seizure). Impetigo. **M. flaves′cens,** eczema of the face, with yellow, honeycomb-like crusts. **M. parturien′tium,** malagra parturientium.

**Melitag′ria** (*meli,* honey, *agrios,* wild). Impetigo.

**Melithæ′mia.** Melitæmia.

**Melithyperu′ria** (*meli,* honey, *hyper,* in excess, *ouron,* urine). Diabetes mellitus.

**Meli′tis** (*melon,* cheek). Inflammation of the cheek.

**Melitopty′alism** (*meli,* honey, *ptyalon,* saliva). Copious secretion of sweet-tasted saliva.

**Melitopty′alon** (*meli,* honey, *ptyalon,* saliva). Saliva containing glucose.

**Meli′tose.** Saccharine matter derived from Eucalyptus manna; has the same composition as cane-sugar.

**Melit′tis.** Melissa. **M. grandiflo′ra,** Melittis melissophyllum. **M. melissophyl′lum,** bastard balm, ord. *Labiatæ;* plant was formerly employed like balm in uterine obstructions. **M. sylves′tris,** M. melissophyllum.

**Melitu′ria** (*meli,* honey, *ouron,* urine). Glycosuria; diabetes mellitus. **M. ino′sita,** inosuria.

**Meli′tus** or **Melli′tus** (*meli,* honey). Appertaining to honey. Sweet. **Diabe′tes m.,** saccharine diabetes, see *Diabetes.*

**Melizo′ron.** Melizomum.

**Mella′go** (*meli,* honey). Medicine having the consistency of honey. Fluid extract.

**Mel′leous.** Having an odor or taste like honey.

**Mellif′erous** or **Mellif′ic.** Producing honey.

**Melligenous,** mel-lij′en-us. Melleous.

**Melli′go.** Honey-dew. Substance containing saccharose, occurring on leaves of maples and other trees.

**Melli′na** (*meli,* honey). Melizomum.

**Melli′ta** or **Mel′lite.** Honey or a preparation of it.

**Mellithæ′mia.** Glycohæmia.

**Mellitu′ria.** Melituria.

**Melli′tus.** Melitus.

**Me′lo.** Melon. **M. aquat′icus,** Cucumis citrullus.

**Meloæ′mia** (*melas,* black, *haima,* blood). Melæmia.

**Melobe′sia.** Genus of *Algæ,* possessing therapeutical virtues of chalk.

**Melocam′pyle** (*melos,* limb, *kampylos,* crooked). Distortion of limbs.

**Melocar′pus.** Fruit of Aristolochia clematitis.

**Meloch′ia corchorifo′lia.** Plant growing in the East Indies; employed there externally for snake-bites.

**Melochi′tis.** Armenian stone. Variety of blue carbonate found in Germany, the Tyrol, and especially in Armenia; formerly employed as a cardiac tonic.

**Melodid′ymus** (*melos,* limb, *didymos,* double). Double member or limb.

**Mel′oë maia′lis.** See *Cantharis.* **M. ni′ger, M.** pennsylvanicus, class *Insecta,* ord. *Coleoptera.* Blistering fly, native of the United States; it feeds upon Prunella vulgaris or self-heal, and Ambrosia trifida or stickweed. These flies resemble Spanish flies in properties. **M. pennsylvan′icus,** M. niger. **M. proscarabæ′us,** anciently used as a diuretic and antihydrophobic; see *Cantharis.* **M. vesicato′rius,** cantharis.

**Mel′ol.** Castor oil disguised with honey or syrup.

**Melolon′tha vulga′ris.** Insect said to possess aphrodisiac properties.

**Meloma′nia** (*melos,* song). A mania for music.

**Melom′eles** (*melos,* limb, *meleos,* useless). Monster with supernumerary limbs. Condition is called *melomelia.*

**Mel′on.** Disorder of the eye in which it protrudes out of the socket; see *Exophthalmia.* Also Cucumis melo; seeds are official and are diuretic. **M. plant,** Cucumis melo. **M.-seed bod′ies,** bodies resembling melon seeds, sometimes observed in joints and sheaths of tendons. **Wa′ter m.,** Cucurbita citrullus.

**Melon′cus** (*melon,* cheek, *onkos,* tumor). Tumor of the cheek.

**Melon′gena.** Solanum melongena.

**Meloplas′tic** (*melon,* cheek, *plasso,* to form). Genoplastic. An epithet for the operation for forming a new cheek when any part of it has been lost, the operation being called *meloplasty.*

**Me′los.** Membrum. Member; limb; an organized part composed of other parts.

**Melosal′gia** (*melos,* limb, *algos,* pain). Pain in a limb.

**Meloschisis,** me-los′kis-is (*melon,* cheek, *schisis,* fissure). Congenital fissure of the face embracing the upper lip and cheek.

**Meloth′ria pen′dula.** Creeping cucumber; fruit is purgative.

**Meloth′rum.** Bryonia alba.

**Melotrid′ymus** (*melos,* limb, *tridymos,* threefold. Fetal monstrosity with three sets of limbs.

**Melt.** Spleen; also the sperm of fish; milt.

**Melt′ing.** Fusion. **M. point,** the degree of temperature at which a solid becomes a liquid.

**Me′lum.** An apple; fruit in general. A round, firm female breast. The cheek. Apple-eye or melon-eye, an apple-shaped projection of the eye from the orbit. See *Melon.* **M. armeni′acum,** Prunus armeniaca. **M. cydo′nium,** see *Pyrus cydonia.*

**Melunel′la flexuo′sa** (Borg). Spirillum rugula.

**Mem′ber.** Membrum.

**Mem′bra** (pl. of membrum) **pudend′a** or **vil′ia.** Genital organs.

**Membra′na** (*quia membra tegit,* because it covers limbs). Membrane. **M. abdom′inis,** peritoneum. **M. adamantin′ea,** cuticle of tooth. **M. adipo′sa,** cellular membrane. **M. adventit′ia,** decidua reflexa. **M. agni′na,** amnios. **M. albugin′ea profun′da,** see *Albugineous.* **M. albugin′ea superficia′lis,** see *Albugineous.* **M. allantoi′des,** allantois. **M. amphiblestroi′des,** retina. **M. aponeurot′ica,** aponeurosis. **M. arachnoi′dea,** hyaloid membrane. **M. aryepiglot′tica,** arytenoepiglottic fold. **M. atlan′tico-occipita′lis,** an occipito-atlantal ligament. **M. basila′ris,** a delicate membrane in the cochlea, stretched across from the free margin of the osseous lamina to the outer part of the spiral canal. The two zones into which the basilar membrane is divisible are called *habenula tecta* or *arcuata,* and *zona pectinata.* **M. blastoder′mica,** blastoderma. **M. Bruch′ii,** choroid tunic. **M. cadu′ca,** decidua. **M. c. reflex′a,** decidua reflexa. **M. c. ve′ra,** decidua vera. **M. capsula′ris tes′tis,** albuginea. **M. capsulopupilla′ris,** see *Crystalline.* **M. carno′sa,** dartos. **M. cellulo′sa,** connective tissue; decidua. **M. cer′ebri mol′lis,** pia mater. **M. cer′ebri pro′pria,** pia mater. **M. cer′ebri ten′uis,** pia mater. **M. cho′rii,** chorion. **M. choriocapilla′ris,** see *Choroid tunic.* **M. circumcin′gens,** periosteum. **M circumossa′lis,** periosteum. **M. commu′nis,** decidua

**M. cor circumplex'a**, pericardium. **M. cor'dis**, pericardium. **M. coro'næ cilia'ris**, ciliary zone. **M. Cort'ii**, see *Corti, organ of.* **M. costa'lis**, pleura. **M. co'stas succin'gens**, pleura. **M. cras'sa**, decidua reflexa. **M. cribrifor'mis**, decidua. **M. cribro'sa**, decidua. **M. cu'muli**, stratum proligerum. **M. cuticula'ris**, dura mater. **M. decid'ua**, decidua. **M. decid'ua exter'na**, decidua vera. **M. decid'ua menstrua'lis**, menstrual decidua. **M. decid'ua reflex'a**, decidua reflexa. **M. decid'ua seroti'na**, see *Decidua.* **M. Demour'si**, m. of Demours. **M. demuria'na**, see *Aqueous humor* and *Cornea.* **M. denta'ta**, ligamentum denticulatum. **M. dermato'des**, dura mater. **M. Descemet'ii**, see *Aqueous humor* and *Cornea.* **M. diaphrat'ton**, mediastinum. **M. duddelia'na**, see *Aqueous humor.* **M. dura cer'ebrum am'biens**, dura mater. **M. e'boris** (*ebur*, ivory), a membrane connected with the development of the teeth, which is made up of a number of cells, *odontoblasts*, arranged perpendicularly on the surface immediately over the plexus of vessels in the central portion of the dental papilla. **M. elas'tica**, membrane formed of the elastic areolar tissue and occurring in the coats of vessels, especially the arteries, in the trachea, bronchi, etc. **M. e. laryn'gis**. submucous layer of the larynx. **M. epicra'nia**, galea aponeurotica capitis. **M. excoriab'ilis**, dartos. **M. exter'na den'tium**, tapetum alveoli. **M. exter'na system'atis nervo'si centra'lis**, dura. **M. farcimina'lis**, allantois. **M. fenes'træ rotun'dæ**, see *Fenestra.* **M. fenestra'ta**, delicate granular membrane perforated with holes, placed between the internal and external granule-layers of the retina; see *Retina.* **M. fibro'sa**, see *Membrane.* **M. f. tym'pani**, middle layer of membrana tympani. **M. filamento'sa**, decidua reflexa. **M. flac'cida**, part of membrana tympani extending over notch of Rivinus. **M. flocculen'ta**, decidua. **M. fœ'tum invol'vens**, amnion. **M. fus'ca**, see *Sclerotic.* **M. germinati'va**, blastoderm. **M. granulo'sa**, *granular membrane* or *layer;* layer of yellow granular matter lining the inner layer of the Graafian follicle, and regarded by Kolliker as epithelium. **M. hu'moris a'quei**, see *Aqueous humor.* **M. hyaloide'a**, see *Hyaloid.* **M. hyoepiglot'tica**, hyoepiglottic ligament. **M. interme'dia**, mesoblast. **M. intermuscula'ria bra'chii**, ligamenta intermuscularia brachii. **M. inter'na**, endopleura. **M. inter'na system'atis nervo'si centra'lis**, pia. **M. interspina'lis**, interspinal ligament. **M. intestina'lis**, allantois. **M. intrachoroide'a**, tunica Ruyschiana and membrana brachii taken as one. **M. ir'idis ante'rior**, lamella iridis anterior. **M. ir'idis poste'rior**, composed of cells situated between dilatator pupillæ and pigmentary layer of iris. **M. Jaco'bi**, tunica Jacobi. **M. Jaco'bi Ar'nold**, see *Iris.* **M. lamino'sa**, laminar membrane; membrane investing the fetal surface of the placenta when the amnion is removed, considered to be the remains of the allantois. **M. ligamento'sa**, ligamentum tectorium. **M. lim'itans**, see *Membrane, basement,* and *Iris.* **M. lim'itans olfacto'ria**, membrane over surface of olfactory epithelium. **M. lim'itans ret'inæ**, limiting membrane of retina. **M. loca'lis**, pia. **M. macilen'tior**, epiploon, gastrohepatic. **M. me'dia**, tunica media. **M. me'dia cer'ebri**, arachnoid. **M. mol'lis**, pia. **M. muco'sa**, see *Membrane* and *Decidua.* **M. muscula'ris muco'sæ**, smooth, muscular fibres forming a proper layer in the mucous membrane of the intestines. **M. nec'tans**, m. nictitans. **M. nervo'rum**, neurilemma. **M. nic'titans**, valvula semilunaris in the eye of a bird. **M. obli'qua**, ligamentum rotundum antibrachii. **M. obturato'ria**, membrane or ligament which almost entirely covers the obturator foramen. **M. obturato'ria fenes'træ rotun'dæ**, membrana tympani secundaria. **M. obturato'ria laryn'gis**, thyrohyoid membrane. **M. obturato'ria sta'pedis**, fine membrane between the two rami and base of stapes. **M. obturato'ria ventric'uli quar'ti** or **M. obtura'trix**, membrane enclosing the fourth ventricle in early fetal life; valve of Vieussens. **M. olfacto'ria**, pituitary membrane. **M. os'sa amplec'tans**, periosteum. **M. os'sis**, periosteum. **M. o'vi mater'na**, decidua. **M. o'vuli cortica'lis**, membrane of the egg-shell. **M. pala'ti**, mucous membrane of hard palate. **M. pellu'cida**, amnion. **M. pharyn'gobasila'ris**, pharyngeal aponeurosis. **M. pigmen'ti**, see *Choroid tunic* and *Iris.* **M. pinguedino'sa**, adipose connective tissue. **M. pin'guis intestino'rum**, mesentery. **M. pituita'ria**, pituitary membrane. **M. pituito'sa**, pituitary membrane. **M. pleurit'ica**, pleura. **M. præ-exis'tens**, decidua. **M. præformati'va**, preformative membrane; structureless membrane situated between the enamel pulp and the enamel, believed by some to be the most external layer of the matrix, projecting beyond the odontoblasts. As the presence of such a membrane can be demonstrated only after the use of chemical reagents, it is possibly only an artefact. **M. præten'sa**, peritoneum. **M. prolif'era**, blastoderm. **M. prolig'era**, discus proligerus. **M. pro'pria**, basement membrane and folliculi graafiani. **M. pro'pria cer'ebri**, pia. **M. pro'pria ster'ni**, membrane over the sternum, formed by junction of the sternocostal ligaments with the periosteum. **M. pro'pria tu'bæ**, lining over cartilage of Eustachian tube. **M. pulmo'num**, pleura pulmonalis. **M. pupilla'ris**, pupillary membrane. **M. pupilla'ris persev'erans**, see *Pupillary membrane.* **M. putam'inis** (*putamen*, shell or husk), membrane adherent to the inner surface of the egg-shell—*putamen* or *testa ovi.* **M. quadrangula'ris**, portion of membrana elastica laryngis situated above the false vocal cord. **M. Reiss'neri**, see *Reissner.* **M. reticula'ris ret'inæ**, external membrane of retina. **M. retifor'mis cho'rii**, decidua reflexa. **M. reu'niens**, consisting of m. r. inferior and m. r. superior; term applied to processes of the protovertebræ. **M. ruyschia'na**, choroid (inner layer). **M. saccifor'mis**, separate synovial membrane for the inferior radiocubital articulation which covers the upper surface of the triangular ligament, and the sort of incomplete ring which circumscribes the head of the ulna. **M. schneideria'na**, pituitary membrane. **M. semiluna'ris conjuncti'væ**, m. nictitans. **M. semipellu'cida**, caligo. **M. sero'sa**, see *Membrane.* **M. seroti'na**, decidua serotina. **M. Shrapnel'li**, m. flaccida. **M. sinuo'sa**, decidua. **M. spongio'sa**, decidua. **M. subcosta'lis**, pleura. **M. succin'gens**, diaphragm, pleura. **M. superchoroide'a** or **suprachoroide'a**, numerous bands of connection existing between the sclerotic and choroid coats of the eye which are sometimes developed into a network, to which this name is given. **M. tecto'ria** (*tectum*, roof), membrane of Corti; elastic membrane in the cochlea, attached at one edge to the membrane of Reissner, and on the other to the peripheral wall of the cochlea a little above the basilar membrane; see *Corti.* **M. ten'sa**, lower portion of the m. tympani. **M. ten'uis**, arachnoid. **M. ter'tia**, membrana nictitans. **M. testa'cea**, membrana testæ. **M. tes'tæ**, shell membrane; membrane lining shell of the bird's egg. **M. thora'cem intersep'iens**, mediastinum. **M. transver'sa**, membrane between rings of trachea and bronchi. **M. tym'pani**, the drum-membrane, dividing the tympanic cavity from the external auditory meatus; two parts are distinguished, called m. tensa and m. flaccida or m. vibrans and m. Shrapnelli. See *Tympanum.* **M. tym'pani secunda'ria**, membrane closing the fenestra rotunda. **M. urina'ria**, allantois. **M. u'teri inter'na evolu'ta**, decidua. **M. u'vea**, uvea. **M. vagi'næ præten'sa**, hymen. **M. vasculo'sa cer'ebri**, pia mater. **M. vaso'rum commu'nis**, the inner lining membrane of the blood-vessels. **M. velamento'sa**, see *Rods of Corti.* **M. verricula'ris**, retina. **M. versic'olor**, peculiar membrane situated immediately behind the retina and in connection with it; separable into layers distinct from the choroid, and supplied with blood-vessels. **M. vestibula'ris**, membrane of Reissner; see *Lamina denticulata.* **M. vi'brans**, m. tensa. **M. villo'sa**, decidua reflexa. **M. virginita′tis,** hymen. **M. vitelli′na,** zona pellucida. **M. vit′rea,** hyaloid. **M. voca′lis,** portion of mucous membrane of larynx covering vocal cords. **M. wachendorfia′na,** pupillary membrane. **M. Zin′nii,** lamella iridis anterior; see *Iris.*

**Membrana′ceous.** Membranous.

**Mem′brane.** Name given to different thin tissues representing a species of supple, more or less elastic webs, varying in their structure and vital properties, and intended in general to absorb or secrete certain fluids and to separate, envelop, and form various organs. *Simple membranes* comprise three orders: 1. *Mucous membrane,* membrana mucosa, so called on account of the mucous fluid by which it is constantly lubricated. Mucous membranes line the canals, cavities, and hollow organs which communicate externally by different apertures on the skin. Bichat refers them to two great divisions—the *gastropulmonary* and the *genito-urinary.* Mucous membranes have a striking analogy with the cutaneous tissue in organization, functions, and diseases. They are composed of corium, papillæ, and epidermis, and are furnished with a multitude of follicles which secrete a viscid humor—mucus. They receive a number of arterial vessels, veins, lymphatics, and nerves. 2. The *serous membranes,* membranæ serosæ, are transparent and thin. One surface adheres to other textures, the other is smooth, polished, and moistened by a serous fluid. Serous membranes resemble the areolar membrane in structure and diseases. They facilitate the motion on each other of the organs which they envelop. They may be divided into: (*a*) *Serous membranes,* properly so called, as the arachnoid, pleura, peritoneum, and tunica vaginalis. (*b*) *Synovial membranes* or *capsules,* which belong to joints, tendons, aponeuroses, etc. These membranes—mucous and serous—are constituted of similar layers—epithelium, basement membrane, condensed areolar tissue—and a looser form of areolar tissue, termed *submucous* in one case, *subserous* in the other. 3. *Fibrous membranes,* membranæ fibrosæ, are almost all continuous, and terminate at the periosteum, their common centre. They have been divided into: (*a*) *Enveloping aponeuroses, aponeuroses of insertion, fibrous capsules of the joints,* and *fibrous sheaths of tendons.* (*b*) The *periosteum, dura mater, sclerotica, tunica albuginea testis, fibrous membrane of the spleen,* etc. Fibrous membranes are not free or moistened by any particular fluid, adhere by both surfaces to the neighboring parts, are firm, resisting, but slightly elastic, and of a white color; sometimes pearly and glistening. Their vessels are numerous in some, as in the dura mater and periosteum; in others scarcely perceptible, as in the aponeuroses. Fibrous membranes in general augment the solidity of the organs which they envelop; retain the muscles in their respective positions; favor the motion of the limbs, and that of the muscles and skin; form canals and rings for the passage of different organs, etc. The three chief species of *compound membranes* are: 1. *Serofibrous,* formed of a serous and a fibrous lamina, intimately adherent to each other; as pericardium, dura mater, and tunica albuginea. 2. *Seromucous,* formed of a serous and a mucous lamina; as the gall-bladder at its lower part. 3. *Fibromucous,* constituted of the union of a fibrous and mucous membrane; as the mucous membrane of the nasal fossæ, gums, etc. **Accident′al m.,** false membrane. **Adventit′ious m.,** false membrane. **Anhis′tous m.,** decidua. **An′imal m.,** membrane enveloping the fœtus. **M. of a′queous hu′mor,** membrana humoris aquei. **Arach′noid m.,** see *Arachnoid.* **M. of Ar′nold,** see *Iris.* **Base′ment m.,** primary or limiting membrane; delicate, structureless lamella found beneath the epidermis or epithelium on all the free surfaces of the body, and as a basis on which the constituents of parts, as of the iris, retina, etc., rest. **Bas′ilar m.,** membrana basilaris; see also *Corti.* **M. of Bichat′,** see *Bichat.* **M. bones,** those originating from membrane. **Bow′man's m.,** see *Cornea.* **M. of Bruch,** see *Bruch.* **Cell m.,** cell wall. **Cer′ebral m.,** dura, arachnoid, and pia. **Cho′roid m.,** choroid tunic. **M. of Cor′ti,** see *Membrana tectoria* and *Corti.* **Costocor′acoid m.,** see *Pectoralis minor.* **Cricothy′roid m.,** see *Cricothyroid.* **Crou′pous m.,** see *Croupous.* **Diphther′ic** or **diphtherit′ic m.,** see *Croup* and *Diphtheria.* **Debove's′ m.,** see *Debove.* **M. of Demours′** or **of Descemet′,** see *Cornea.* **M. of Drid′del,** m. of Descemet. **Drum m.,** membrani tympani. **Dysmenorrhœ′al m.,** see *Dysmenorrhœa, membranous.* **Elas′tic m.,** m. formed of elastic connective tissue, and occurring in the coats of vessels, especially in the arteries, in the trachea and bronchi, etc. **M. of the enam′el,** cuticula. **False m.,** accidental or adventitious membrane, pseudomembrane; membranous productions which form on all the free natural surfaces and on every free accidental surface are so called; they are in general produced by the exudation of fibrinous matter susceptible of organization, which takes place in consequence of inflammation of the various tissues. These accidental membranes occur on the skin after the application of a blister, on mucous surfaces, as in croup, etc. By some it has been proposed to give the name pseudomembrane to fibrinous exudations, as in diphtheria, which are devoid of organization, while neomembrane may be applied to the fresh productions, as from serous membranes, which have become supplied with vessels and nerves. **Fenes′trated m.,** see *Artery.* **Fi′brous m.,** see *Membrane.* **F. m. of the eye,** sclerotic. **Fe′tal m.,** one of the membranes which immediately enclose the fœtus in the cavity of the uterus, the rupture of which during labor gives rise to the discharge of the liquor amnii; the bag of waters; these membranes are the decidua, chorion, and amnion. **Germ m.,** blastoderm. **Ger′minal m.,** see *Blastoderm* and *Molecule.* **Gran′ular m.,** membrana granulosa. **Hanno′ver's interme′diate m.,** see *Hannover.* **Hap′togen m.,** see *Haptogenous.* **Hen′le's m.,** see *Henle.* **Homoge′neous m.,** m. of very delicate structure situated directly over the tissue of the villi of the human placenta. **M. of Ho′vius,** tunica ruyschiana. **Hux′ley's m.,** see *Huxley.* **Hy′aline m.,** membrana propria. **Hy′aloid m.,** see *Hyaloid membrane.* **Hyoepiglot′tic m.,** membrana hyoepiglottica. **Hyothy′roid m.,** membrana hyothyroidea. **Intercos′tal m.,** intercostal fascia. **Interos′seous m.,** membrana interossea. **I. m. of fore′arm,** membrana interossea antibrachii. **I. m. of leg,** membrana interossea cruris. **Invest′ing m.,** haptogenous membrane. **I′vory m.,** membrana eboris. **Ja′cob's m.,** tunica Jacobi. **Keratog′enous m.,** matrix of the nail. **Lam′inar m.,** membrana laminosa. **Lim′iting m. of ret′ina,** primary or structureless membrane lining the retina, and becoming blended at its anterior portion with the hyaloid membrane; see *Retina.* **Mecon′ic m.,** m. in the rectum of the fœtus. **Med′ullary m.,** endosteum. **Mu′cous m.,** see *Membrane.* **M. nasa′le,** pituitary membrane. **Nas′myth's m.,** cuticula dentis. **Nic′titating** or **nic′tating m.,** membrana nictitans. **Nu′clear m.,** m. enveloping the cell-nucleus. **Ob′turator m.,** see *Obturator.* **Olfac′tory m.,** see *Olfactory nerves* and *Pituitary membrane.* **Ov′ular m.,** membrana vitellina. **Pal′atine m.,** m. of the roof of the mouth. **Per′forated m.,** see *Artery.* **Periodon′tal m.,** dental periosteum. **Perior′bital m.,** periorbita. **Pitu′itary m.,** mucous membrane of the nasal fossæ. **Preform′ative m.,** membrana præformativa. **Pri′mary m.,** basement membrane. **Prolig′erous m.,** discus proligerus. **Pseu′do-m.,** false membrane. **Pu′pillary m.,** see *Pupillary.* **Pyogen′ic m.,** layer of granulated tissue, rich in vessels, inside of an abscess. **M. of Reich′ert,** Bowman's layer. **M. of Reiss′ner,** see *Lamina denticulata.* **M. of Ruysch,** m. choriocapillaris; choroid (inner layer); tunica ruyschiana. **Scar′pa's m.,** see *Scarpa.* **M. of Schwann,** neurilemma. **Schnei-**

**de′rian m.**, pituitary membrane. **Se′rous m.**, see *Membrane*. **Shell m.**, membrana testæ. **M. of Shrap′nell**, membrana flaccida. **Sim′ple m.**, see *Membrane*. **Struc′tureless m.**, membrana propria. **Spi′nal m.**, one of the membranes covering the spinal cord, the meninges. **Subenam′el m.**, a hypothetical structure lying between the enamel and the dentine. **Subepithe′lial m.**, endothelium, see *Epithelial*. **Syno′vial m.**, see *Membrane*. **Tecto′rial m.**, organ of Corti. **M. of Ténon′**, fascia of Ténon. **Testa′ceous m.**, membrana putaminis. **Thyrohy′oid m.**, see *Thyrohyoid*. **Tu′bular m.**, neurilemma. **Tym′panal m.**, see *Tympanum*. **Tympan′ic m.**, see *Tympanum*. **Un′dulatory m. of a spermatozo′oid**, m. of delicate structure uniting the spiral filament of the spermatozooid with the body and tail. **U′teroepicho′rial m.**, decidua vera. **Vas′cular m.**, choroid tunic. **Vesic′ular syno′vial m.**, bursa mucosa. **Vir′ginal m.**, hymen. **Vitel′lary m.**, zona pellucida. **Vit′reous m.**, m. of Descemet. **Volk′mann's m.**, see *Volkmann*. **M. of Wach′endorf**, see *Wachendorf*. **Yolk m.**, vitelline membrane. **M. of Zinn**, see Zinn.

**Mem′braneless.** Devoid of membrane.

**Membra′neous.** Membranous.

**Mem′braniform** (*membrana*+*forma*, shape). Resembling a membrane. Name given to thin and flat parts which resemble membranes. **M. mus′cles**, very broad and thin muscles, as the platysma myoides, obliquus abdominis, etc.

**Mem′branin.** Glucoproteid in Descemet's membrane and in the capsule of the lens. Cellulose of the cells of yeast.

**Membranocar′neous.** Possessing membranous and fleshy structure.

**Membranocartilag′inous.** Relating to membrane and cartilage.

**Membranocra′nium** (*membrana* + *kranion*, skull). Membranous condition of the embryonic skull before ossification has taken place.

**Membranogen′ic.** Producing membrane.

**Mem′branoid.** Membraniform.

**Membranol′ogy.** Science of the structure, etc., of membranes.

**Membrano′sus.** Fascia lata muscle. Membranous.

**Mem′branous.** Having the nature of membrane; formed of membrane. **M. lab′yrinth**, see *Labyrinth*. **M. por′tion of ure′thra**, see *Urethra*. **M. semicir′cular canals′**, see *Semicircular canals*. **M. sore throat**, pharyngitis herpetica; pseudomembranous tonsillitis. **M. spi′ral lam′ina**, see *Corti*.

**Membran′ula** (dim. of membrana) or **Membran′ulet.** Hymenium; membranule. **M. coro′næ cilia′ris**, see *Ciliary*. **M. luna′ta vagi′næ**, hymen. **M. nervo′rum**, neurilemma. **M. semiluna′ris conjuncti′væ**, valvula semilunaris.

**Mem′branule** or **Membran′ula.** Small membrane.

**Mem′brum.** Limb, member. The limbs or extremities or members of animals are certain parts exterior to the body, which are more or less apparent, long, and movable. By means of their limbs animals transport themselves from one place to another and defend themselves or attack others. In man they are four in number—two upper or thoracic, and two lower, pelvic or abdominal. Also the male organ of generation. **M. mulieb′re**, clitoris. **M. viri′le**, penis.

**Memo′ria.** Cerebral faculty by which past impressions are recalled to the mind; memory.

**Mem′ory.** Recollection; the faculty of recalling impressions made on the sensorium in the past. **Loss of m.**, amnesia. **An′terograde m.**, m. of impressions long past, but amnesia for recent events.

**Men′agogue.** Emmenagogue.

**Menarche**, men-ar′ke (*men*, month, *arche*, beginning). Puberty in girls; the establishment of menstruation.

**Menda′cia un′guium** (*mendax*, false, *unguis*, nail). Small white spots on the nails.

**Men′del's solu′tion.** Essence of thyme, of eucalyptus, and of cinnamon, each 5, in sterilized olive oil 100; given by intratracheal injection, ♏xlv (3.0) four times a day, in acute hyperæmia of the lungs.

**Menelco′sis** (*menes*, menses, *helkosis*, ulceration). Vicarious menstruation from an ulcer.

**Me′nes.** Menses.

**Menfrige**, men′fre-je. See *Pistacia lentiscus*.

**Menidro′sis** (*menes*, menses, *hidrosis*, sweating). Vicarious menstruation from the skin.

**Ménières′** (ma-ne-airs′) **disease′.** Labyrinthic, auditory, or aural vertigo; the patient, after recovering consciousness from an apoplectiform attack or severe vertigo, finds himself totally deaf in one ear, with tinnitus aurium, rotatory movements toward the affected side, etc. Affection described by Dr. Paul Ménière, in 1861.

**Menike′lis.** Menocelis.

**Meningarthroc′ace** (*meninx*, membrane, *arthron*, joint, *kakos*, evil). Inflammation of the membranes of a joint. When accompanied with fibrinous exudation from the synovial membrane, it is called *arthromeningitis cruposa;* with suppuration, *a. purulenta.*

**Menin′geal.** Relating to one or more of the meninges. **M. ap′oplexy**, see *Apoplexy*. **M. ar′tery, mid′dle**, largest of the branches given off by the internal maxillary artery; it enters the cranium by the foramen spinale, and distributes its branches chiefly to the dura mater. **M. grooves**, sulci meningei. **M. nerve**, branch given off by the jugular ganglion of the pneumogastric, which returns to the cranium and innervates the meninges. **M. veins**, tributaries of the pterygoid plexus which accompany the meningeal artery. **M. ves′sels**, vessels of the membranes of the brain.

**Menin′ges** (pl. of meninx). Membranes enveloping the brain and spinal cord—dura mater, arachnoid, and pia mater.

**Meninghæmato′ma.** Hæmatoma of the dura mater.

**Menin′gia tuberculo′sa.** Tuberculous meningitis.

**Meningii′tis.** Meningitis.

**Meningi′na.** Name given by Chaussier to the pia mater, united to the cerebral layer of the arachnoid.

**Meningini′tis.** Inflammation of the meningina.

**Menin′gion** (dim. of meninx). Arachnoid membrane.

**Men′ingism.** A condition in which symptoms pointing to meningitis are present, but in which there are no anatomical lesions of such inflammation; pseudomeningitis.

**Meningit′ic streak.** Tache cérébrale, a condition of the skin, noticed in meningitis especially, in which a congestive streak follows the white mark made by the finger-nail drawn across it.

**Meningi′tis.** Inflammation of a membrane, and especially of the meninges or membranes of the brain or spinal cord. When the dura mater is alone or chiefly affected the disease is called *pachymeningitis;* when it involves the pia and arachnoid to the exclusion of the dura it is called *leptomeningitis*. **M. arthrit′ica**, cephalagra. **Bas′ilar m.**, tuberculous meningitis. **Ascend′ing m.**, m. ascending from the lower part of the spinal cord. **Cer′ebral m.**, inflammation of the membranes of the brain. **Cerebrospi′nal m.**, cerebral or cerebrospinal or syncopal typhus, epidemic or typhoid or malignant meningitis, petechial fever, cerebrospinal fever, cerebrospinal arachnitis, sinking typhus, malignant or typhoid meningitis, spotted fever; a generally fatal disease, attended with fever, painful contraction of the muscles of the neck and retraction of the head, headache, vertigo, delirium, coma, pain in the back and limbs, tetanoid phenomena, hyperæsthesia of the skin, and in certain epidemics by a purpuric eruption, whence the designation *spotted fever*. It is due to the toxins of Diplococcus intracellularis meningitidis, or Weichselbaum's diplococcus. **M.**

**chirur′gica**, m. from external injury; traumatic meningitis. **Convul′sive m.**, m. with convulsions as a conspicuous feature. **Epidem′ic m.**, cerebrospinal meningitis. **M. exsudati′va**, inflammation of the membranes of the spinal cord, with effusion of serum. **Fo′cal m.**, m. localized in a small space. **Ful′minant cerebrospi′nal m.**, m. with intense symptoms, dark, purpuric spots, and usually rapidly fatal termination. **Gout′y m.**, cerebral gout. **Gran′ular m.**, hydrocephalus internus. **M. gummato′sa**, syphilitic form of meningitis. **Hemorrhag′ic m.**, m. accompanied with sanguineous effusion. **M. hydrocephal′ica**, hydrocephalus internus. **I′chorous m.**, form of meningitis with ichorous or puriform fluid in contact with the membranes or spinal cord. **M. infan′tum**, hydrocephalus internus. **M. luet′ica**, syphilitic form of meningitis. **M. mechan′ica**, traumatic meningitis; m. chirurgica. **M. membrano′sa**, spinal meningitis. **M. mesencephal′ica**, inflammation of the meninges of the medulla oblongata, and pons Varolii more especially. **Metastat′ic m.**, m. occurring in later stages of other diseases, as pneumonia, acute rheumatism, etc. **Otit′ic m.**, m. from or associated with purulent inflammation of the middle or internal ear. **M. peripher′ica**, spinal meningitis. **M. phantasmataph′ora**, delirium tremens. **Phrenit′ic m.**, m. accompanied with symptoms of mental disorder. **M. potato′rum**, delirium tremens. **Pur′puric m.**, form of cerebrospinal meningitis which may become rapidly intense and fatal. **Rhachid′ian m.**, spinal meningitis. **Rheumat′ic m.**, cerebrospinal rheumatism. **Scroph′ulous m.**, hydrocephalus internus. **Se′nile m.**, m. of old persons; slow in progress and accompanied with delirium and general paralysis. **Se′rous m.** or **M. sero′sa**, m. accompanied with serous effusion. **M. sid′erans**, fulminant meningitis. **Spi′nal m.**, rhachidian meningitis, perimyelitis, myelomeningitis; inflammation of the meninges of the spinal marrow. **Spu′rious m.**, chronic hydrocephalus. **Syphilit′ic m.**, m. due to or associated with syphilitic taint; chronic, and attacking the lower surface of the brain. **Traumat′ic m.**, m. from external injury. **Tuber′culous m.**, or **M. tuberculo′sa**, hydrocephalus internus. **Ver′tical m.**, m. occurring in the superior portion of the brain.

**Meningitopho′bia** (*meningitis*+*phobos*, fear). Condition in which great dread of meningitis exists, and which sometimes seems to induce the symptoms of that disease.

**Menin′gium** (dim. of *meninx*, membrane). Fine, delicate membrane; arachnoid tunic of the brain.

**Meningo-** (*meninx*, membrane). In composition, membrane.

**Menin′gocele** (*meninx*, membrane, *kele*, tumor). See *Encephalocele*. **Cer′ebral m.**, tumor of the head resembling hydromeningocele. **Spi′nal m.**, spina bifida.

**Meningocephali′tis** (*meninx*, membrane, *kephale*, head). Inflammation of the membranes and brain.

**Meningocerebri′tis.** Meningocephalitis; encephalitis.

**Meningococ′cus** (*meninx*, membrane, *kokkos*, kernel). Name given to two cocci which are causative of meningitis, viz., Diplococcus introcellularis meningitidis and Micrococcus lanceolatus.

**Menin′goencephali′tis.** Encephalitis accompanied with meningitis.

**Menin′goenceph′alocele.** Hernia of the brain and its membranes.

**Menin′goependymi′tis.** Hydrocephalus accompanied with a deposition of fluid in the ventricles and induration of the ependyma.

**Meningogas′tric fe′ver** or **Meningogastri′tis.** Gastric fever.

**Meningomala′cia** (*meninx*, membrane, *malakia*, softening). Softening of membranes in general.

**Meningomy′ces** (*meninx*, membrane, *mykes*, fungus). Fungoid growth on the membranes of the brain.

**Meningomyeli′tis.** Inflammation of the spinal cord and its membranes.

**Meningomy′elocele** (*meninx*, membrane, *myelos*, marrow, *kele*, tumor). Spina bifida in which a part of the cord, or the cauda equina, and its membranes are contained in the cyst.

**Meningophy′lax** (*meninx*, membrane, *phylax*, preserver). Instrument for depressing the dura mater and guarding it from injury while the bone is cut or rasped.

**Meningorrhachid′ian** (*meninx*, membrane, *rhachis*, spine). Relating to the spinal cord and its membranes. **M. veins**, veins uniting into plexuses on the inside of the spinal canal, situated between the membranes of the spinal cord and the vertebræ.

**Meningorrha′gia.** Meningeal hemorrhage.

**Meningorrhœ′a** (*meninx*, membrane, *rheo*, to flow). Effusion of blood upon or between the meninges.

**Meningo′sis.** Union of bones by means of membrane—*e. g.*, the articulation of the cranial bones in the fœtus; a variety of syndesmosis.

**Meningospi′nal.** Relating to the spinal membranes or meninges.

**Meningosym′physis** (*meninx*, membrane, *symphysis*, growing together). Adhesion of or by membrane; adhesion of the membranes of the brain to each other or to the brain.

**Meningosyz′ygy** (*syzygia*, conjunction). Meningosymphysis.

**Meningozeux′is** (*zeuxis*, adhesion). Meningeal adhesion.

**Meningu′ria.** Passage of urine containing membranous shreds.

**Men′inx.** Membrane (especially one that invests the brain or spinal cord). **M. arachnoide′a**, arachnoid membrane. **M. au′ris**, membrana tympani. **M. cerebra′lis**, cerebral membrane. **M. choroi′des**, pia mater. **M. cras′sa**, dura mater. **M. du′ra**, dura mater. **M. exte′rior**, dura mater. **M. fibro′sa**, dura mater. **M. inte′rior**, pia mater. **M. me′dia**, arachnoid membrane. **M. pachei′a** or **scle′ra**, dura mater. **M. sero′sa**, arachnoid membrane. **M. vasculo′sa**, pia mater.

**Menischesis**, men-is′ke-sis (*menes*, menses, *ischo*, to restrain). Amenorrhœa, when the menses do not appear at the usual age.

**Menisci**, men-is′ki (pl. of meniscus). Interarticular cartilages. **Tac′tile m. of Ranvier′**, expansion of nerve-fibres in the epidermis having the shape of a meniscus.

**Menis′cus.** Concavo-convex lens; interarticular cartilage. **M. interme′dius**, intermediate fibrocartilage.

**Menispermine′.** Alkaloid found in Menispermum canadense and M. cocculus.

**Menisper′mum.** The official (Ph. U. S.) name of the rhizome and roots of M. canadense; tonic and used as a substitute for sarsaparilla. The official preparation is *extrac′tum menisper′mi fiu′idum;* dose, ♏v–xxx (0.32–2.0). **M. angula′tum** or **M. canaden′se**, moonseed, yellow parilla, ord. *Menispermaceæ*, climbing plant growing in various parts of the United States; used as a substitute for sarsaparilla; excitant tonic. **M. coc′culus**, systematic name of the plant, the dried fruit of which is well known by the names of Cocculus indicus, Indian berries, Indian cockles, fish berries, Coccus indicus. The berries are remarkable for their inebriating and destructive quality to fish. A deleterious principle appears to reside in the kernel and in the active principle, called *picrotoxin*. Cocculus indicus has been used in decoction to kill vermin; it has at times been added to beer to render it more inebriating. **M. colum′ba**, Jateorrhiza calumba. **M. cordifo′lium**, the goluncha of Bengal; a stomachic and astringent. **M. fenestra′tum**, Pereira medica. **M. glau′cum**, M. cocculus. **M. palma′tum**, calumba. **M. tuber cula′tum**, Chinese plant, an extract from the root of which is stomachic and astringent. **M. verruco′sum**, M. tuberculatum.

**Menispine′.** Bitter alkaloid from Menispermum canadense.

**Menoce′lis** (*menes*, menses, *kelis*, stain). Amenorrhœa with purpura or congestion of the skin.

**Menocryph′ia** (*menes*, menses, *kryptos*, concealed). Amenorrhœa.

**Menoke′lis.** Menocelis.

**Menolip′sis** (*menes*, menses, *leipsis*, want). Amenorrhœa; retention of the menses. See *Menopause*.

**Menom′ene.** Zizania aquatica.

**Menometas′tasis.** Vicarious menstruation.

**Men′opause** or **Menopau′sis** (*menes*, menses, *pauo*, to cease). Natural cessation of the menses, occurring usually between the ages of 45 and 50. See *Menses*.

**Menopha′nia** (*menes*, menses, *phaino*, to appear). First appearance of the menses.

**Menopla′nia** (*menes*, menses, *plane*, wandering). Vicarious menstruation; also an affection resulting from suppression of menstruation.

**Menorrha′gia** or **Menorrhœ′a** (*menes*, menses, *rhegnymi*, to burst forth). Very profuse or excessive menstruation. Frequently the word is used synonymously with uterine hemorrhage or metrorrhagia. **M. al′ba**, leucorrhœa. **M. diffic′ilis**, dysmenorrhœa. **M. erro′nea**, vicarious menstruation. **M. lochia′lis**, excessive lochial discharge, with blood. **M. Nabo′thi**, hydrorrhœa gravidarum. **M. stillati′tia**, dysmenorrhœa.

**Menorrhagic**, men-or-raj′ik. Relating to menorrhagia. **M. fe′ver**, febrile and other constitutional symptoms associated with profuse menstruation.

**Menorrhœ′a** (*menes*, menses, *rheo*, to flow). Ordinary flow of the menses. Also, and usually, too long continuing or too often returning menstruation; menorrhagia.

**Menoschesis**, men-os′ke-sis (*menes*, menses, *schesis*, a checking). Amenorrhœa, when the menses do not appear at the usual age.

**Menosep′sis** (*menes*, menses, *sepsis*, putrefaction). Putridity of the menses; or septicæmia from resorption of retained menstrual fluid.

**Menosta′sia** or **Menos′tasis** (*menes*, menses, *stasis*, standing). Retention of the menses and accumulation of the blood in the uterus; also acute pain sometimes preceding each appearance of the menses, and presumed to proceed from the stasis of blood in the capillary vessels of the uterus. Hæmatometra.

**Menotyphlo′sis** or **Menotyphlo′tes** (*mene*, moon, *typhlos*, blind). Moon-blindness; ocular inflammation popularly thought to be caused by the moon in the tropics.

**Mens.** Mind.

**Men′sa.** Table. Upper superficial part or corona of the jaw teeth.

**Mensa′lis.** Trapezius.

**Men′ses** (*men*, a month). Courses, menstrual flux, monthly courses or periods, terms. Sanguineous evacuation from the uterus; menstrual blood, the monthly occurrence of which constitutes menstruation or monthly illness. First appearance of the menses—*menophania* or *menarche*—is usually preceded by the discharge of a fluid, whitish, mucous matter from the vagina, by nervous excitement, vague pains, and heaviness in the loins and thighs, numbness of the limbs, etc. More or less indisposition and irritability also precede each successive recurrence of the menstrual flux. In temperate climates each period, *menstrual period*, ordinarily continues from three to six days, and returns in twenty-six to twenty-eight days, and the quantity lost varies from four to eight ounces; according to Vierordt, 100–200 grammes; in England and Northern Germany, 120 g. (Smellie and Dobson); 90–150 g. (De Haen); 150 g. (Pasta); Holland, up to 180 g.; Southern Germany, up to 240 g.; Italy and Spain, up to 360 g.; Greek Archipelago, up to 90 g. The menses continue to flow from the age of puberty until the age of 45 or 50. The menstrual epoch is thus from 30 to 35 years. The following interesting facts in regard to the time of appearance of the menses have been recently tabulated from various sources (Vierordt): In Germany—Berlin, commencement of 15th year; in Bavaria, 16th year; in Austria, 15 years 7½ months; in Hindu women in Calcutta, 11 years 11 months; in negro women in Jamaica, 14 years 10 months; in Esquimaux women in Labrador, 15 years 3 months; in Denmark and Norway, 16 years; in Norway, Lapp women, 16.7 years; in Hungary: Jewish women, 14–15 years; Magyar women, 15–16 years; Slovac women, 16–17 years; in Transylvania, German women and Hungarians, 15 years; in Roumanian, Armenian, and Jewish women, 14 years. The menses appear, according to Clay: In tropical countries at 8–11 years of age; in Abyssinia, India, and Turkey, at 9–11 years; in France, Italy, and Spain, at 11–13 years; in England, 13–15 years; in Iceland, Lapland, Greenland, 17–20 years. According to Felt, they appear in hot climates at 13 years 6 days; in temperate, at 14 years 6 days; in cold, at 15 years 10 days. The menstrual discharge comes from the vessels of the uterus and vagina, and has a peculiar odor. It is usually arrested during pregnancy and lactation. Dried menstrual blood, especially of a woman in her first menstruation, was formerly given as an antiepileptic. At the term of the natural cessation of the menses, *menopause*, the flux becomes irregular, and this irregularity is occasionally accompanied with various disagreeable symptoms, such as flushing of the face and neck, irritability and nervousness or even temporary insanity, bloating, etc., constituting what is called the *critical time* or *turn* or *change of life;* yet it does not appear that the mortality is increased by it; and in the great majority of cases nothing more than a little irregularity in the return of the menses and slight vasomotor disturbances mark the period. **M. al′bi**, leucorrhœa. **M. anom′ali**, paramenia. **M. de′vii**, vicarious menstruation. **M. dolorif′ici**, dysmenorrhœa. **M. immod′ici**, menorrhagia. **M. stillan′tes**, oozing of blood from the uterus. **M. super′flua**, menorrhagia.

**Men′strua.** Menses. **M. al′ba**, leucorrhœa. **M. diffic′ilis**, dysmenorrhœa. **M. doloro′sa**, dysmenorrhœa. **M. exig′ua**, menorrhagia. **M. immod′ica**, menorrhagia. **M. membrana′cea**, membranous dysmenorrhœa. **M. nim′ia**, menorrhagia. **M. præ′cox**, premature menstruation, occurring before the usual age or time. **M. recidi′va**, menstruation when protracted beyond the usual age or recurring after its cessation. **M. reten′ta**, retention of menses; amenorrhœa; paramenia. **M. seroti′na** (*serotinus*, late in the day), retarded or tardy menstruation. **M. super′flua**, menorrhagia. **M. vica′ria**, vicarious menstruation; appearance of the menstrual discharge from any other than the usual and normal place or outlet.

**Men′strual.** Relating to the monthly periods or menses. Catamenial. **M. col′ic**, paroxysmal abdominal pain caused by obstruction to the menstrual discharge. **M. decid′ua**, see *Decidua*. **M. excre′tion**, see *Menses*. **M. flux**, menses. **M. or′gan**, membrane lining the uterus taken as a special organ, similar to adenoid glands, in regard to menstruation. **M. pe′riod**, see *Menses*. **M. secre′tion**, see *Menses*.

**Men′struant.** One subject to catamenia; menstruating.

**Men′struate.** To discharge blood at the monthly period.

**Menstrua′tio.** Menstruation.

**Menstrua′tion.** Flow of the menses; see *Menses*. **Concealed′ m.**, occult menses. **Dif′ficult m.**, dysmenorrhœa. **Ectop′ic m.**, vicarious menstruation. **Labo′rious m.**, dysmenorrhœa. **M. metrorrha′gia**, menorrhagia. **Occult′ m.**, concealed menstruation; retention of the catamenia in the uterus or the vagina, there being secretion without excretion. **Premature′ m.**, menstruation occurring before the usual age or time. **Profuse′ m.**, menorrhagia. **Scan′ty m.**, see *Menorrhagia*. **Ser′otine m.**, retarded or tardy menstruation. **Supplement′ary m.**, vicarious menstruation. **Tar′dy m.**, menstruation retarded from any cause. **Vica′rious m.**, ectopic or supplementary menstruation; a discharge of blood elsewhere than from the vagina, as from the surface of an ulcer or the mucous membrane of the stomach, at the time the catamenia are due, the latter, however, being absent.

**Men′struous.** Catamenial. Menstrual.

**Men′struum** (*mensis*, month). Any substance possessing the property of dissolving others slowly and with the aid of heat; a solvent, as water, alcohol, ether, acids, oils, etc. The plural form of this word, *menstrua*, signifies the catamenia or menses. **M. au′ri**, nitromuriatic acid. **M. ventric′uli**, gastric juice.

**Men′struus.** Menstrual.

**Mensura′tion** (*mensura*, measure). Measurement. Means for exploring the state of the thoracic and other cavities, consisting in a comparative measurement of each side of the chest by means of a tape extended from the median line of the sternum to the spine. When effusion exists on one side, the measurement is usually greater than on the other; and when a portion of a lung has ceased to exert its respiratory functions, the corresponding side of the chest becomes smaller. Also measurement of the skull, etc. See *Stethometer*.

**Men′ta.** Mentha.

**Mentag′ra** (*mentum*, chin, *agra*, seizure). Sycosis. **M. infan′tum**, porrigo lupinosa; favus. **M. parasit′ica**, parasitic sycosis.

**Mentag′raphyte** or **Mentag′rophyte** (*mentagra* + *phyton*, plant). A fungous growth regarded as the cause of mentagra, the *Microsporon mentagrophytes*.

**Mentagroph′yton.** Mentagrophyte.

**Men′tal** (*mens*). Belonging or relating to the mind; as mental aberration or alienation, mental diseases, etc. In anatomy mental signifies that which relates to the chin (*mentum*, chin). **M. aliena′tion**, insanity. **M. ar′tery**, artery given off by the inferior dental, and issuing at the mental foramen to be distributed on the lower lip. **M. disease′**, insanity. **M. for′amen**, anterior maxillary foramen; outer orifice of the inferior dental canal, situated on the outer surface of the lower jaw-bone, opposite the second incisor or canine tooth, and giving passage to the vessels and nerves. **M. fos′sa**, see *Fossa, mental*. **M. nerve**, furnished by the inferior dental nerve, issues by the mental foramen and is distributed in numerous filaments to the muscles of the lower lip. **M. plex′us**, plexus formed by mental and facial nerves at the foramen mentale. **M. point**, term used in craniometry, denoting the foremost median point of the lower border of the inferior maxillary bone. **M. posi′tion**, position of the fœtus in the utero with the head extended and the chin presenting; it is distinguished as anterior or posterior according as the chin is directed forward or backward in relation to the body of the mother. **M. pro′cess**, m. prominence. **M. prom′inence**, eminence of inferior maxillary bone, forming the chin. **M. re′gion**, region of the chin. **M. spines**, mental tubercles. **M. sym′physis**, the middle line of the chin, line of union of the two centres of ossification of the inferior maxilla. **M. tu′bercles**, four small tubercles at the posterior part of the m. symphysis, forming the genial apophysis. **M. veins**, tributaries of the facial vein.

**Menta′lis.** Levator labii superioris proprius.

**Mental′ity.** Intellectual power; action of the mind.

**Mentaliza′tion.** The normal exercise of the functions of the brain, as in reason, judgment, etc.

**Men′te cap′tus** (Lat.). Old Roman term for one whose mental powers are deficient.

**Men′tha.** A genus of plants of the order *Labiatæ;* the mints. **M. aquat′ica**, wintermint, less agreeable than Mentha viridis, and more bitter and pungent; used like spearmint. **M. arven′sis**, corn mint or field mint, one of the sources of the oil from which menthol is obtained. **M. balsam′ea**, piperita. **M. capen′sis**, growing at the Cape of Good Hope, possesses the medical properties of the mints. **M. cata′ria**, Nepeta cataria, catnip. **M. cervi′na**, Hart's pennyroyal, hyssop-leaved mint, possesses the properties of pennyroyal, but is very unpleasant. **M. citra′ta**, melissa. **M. cris′pa**, curled, crisped, or cross mint, possesses properties of peppermint. **M. crucia′ta**, M. crispa. **M. feli′na**, Nepeta cataria. **M. genti′lis**, M. viridis. **M. glabra′ta**, a variety of M. arvensis, one of the sources of menthol. **M. hercyn′ica**, M. crispa. **M. hirsu′ta**, M. aquatica. **M. læviga′ta**, M. viridis. **M. monta′na**, calamintha. **M. nep′eta**, Nepeta cataria. **M. no′bilis**, M. gentilis. **M. officina′lis**, M. piperita. **M. palus′tris**, M. aquatica. **M. piperas′cens**, a variety of M. arvensis, one of the sources of menthol. **M. piperi′ta**, peppermint; leaves and tops are official (Ph. U. S.). The odor of this variety is strong and agreeable; taste pungent, aromatic, and producing a sensation of coldness in the mouth. Virtues depend upon essential oil and camphor. Stomachic and carminative. Chiefly used in the form of essential oil—the *oleum menthæ piperitæ* (Ph. U. S.); dose, ♏j–v (0.065–0.32). *Aqua m. p.* (Ph. U. S.) is given in dose of ʒj–℥j (4.0–32.0). *Trochisci m. p.* each contain ♏⅙ (0.01) of the oil, with sugar and tragacanth; dose, one as required. *Essence of peppermint* or *spiritus m. p.* (Ph. U. S.) contains 10 c.c. of oil of peppermint, 1 gm. of peppermint leaves, in 100 c.c. of alcohol; dose, ♏x–xx (0.65–1.3). **M. pule′gium**, pennyroyal, pudding grass; the oil—*oleum pulegii, oil of pennyroyal*—possesses the virtues of the plant, resembling the mints in general. It is used in domestic medicine as an emmenagogue. Aqua pulegii, aqua menthæ pulegii, pennyroyal-water, has been official in some pharmacopœias. **M. roma′na**, Balsamita suaveolens, Tanacetum balsamita. **M. rotundifo′lia palus′tris**, M. aquatica. **M. saracen′ica**, Balsamita suaveolens, Tanacetum balsamita. **M. sati′va**, M. viridis. **M. silves′tris**, horsemint, brook or water mint; several varieties have been employed. **M. spica′ta**, M. viridis. **M. vir′idis**, spearmint; leaves and tops are official (Ph. U. S.); odor strong, aromatic; taste warm and bitterish; virtues the same as those of peppermint. *Oleum menthæ viridis* (Ph. U. S.) is obtained from it; dose, ♏j–v (0.65–0.32). *Aqua m. v.* (Ph. U. S.) is given in dose of ʒj–℥j (4.0–32.0). *Spiritus m. v.* (Ph. U. S.), essence of spearmint, contains 10 c.c. of oil of spearmint, 1 gm. of spearmint leaves, in 100 c.c. of alcohol; dose, ♏xx–xl (1.32–2.65). **M. vulga′ris**, M. viridis.

**Menthas′trum.** Mentha sylvestris.

**Men′thene.** A liquid product obtained from peppermint oil.

**Men′thol.** (Ph. U. S. and Br.) $C_{10}H_{20}O$. Stearoptene obtained by cooling oil distilled from fresh herb of Mentha piperascens, M. glabrata, and M. piperita; menthol camphor; peppermint camphor; crystalline body separating from oil of peppermint on standing. Used externally, solid, as in pencil form, or in solution, in neuralgia, migraine, etc., and in nasal affections. Anæsthetic, disinfectant; internally, carminative and stomachic, but not much used; dose, gr. ss–ij (0.032–0.13). Menthol plaster, *emplastrum menthol*, is official in the Ph. Br.; it contains menthol 1½, dissolved in yellow wax 1, and resin 7½; applied in intercostal neuralgia and muscular rheumatism. **M. ben′zoate**, benzoic acid added to menthol increases the effect of the latter when used externally.

**Menthophe′nol.** Prepared by the fusion of 1 part of phenol with 3 parts of menthol. Used in concentrated form in wounds and burns; in weak solution as a mouth-wash; and in minor surgery as a local anæsthetic and antiseptic.

**Menthox′ol.** Solution of hydrogen dioxide with menthol and alcohol.

**Menti′go** (*mentum*, chin). Porrigo larvalis; sycosis; mentagra.

**Men′tism** (*mens*, mind). Irregular movement of the mind, whether from emotion or a vivid imagination.

**Men′to-ante′rior.** With the chin directed forward; see *Mental position.*

**Mentobicor′neus** (*mentum*, chin, *bicorneus*, two-horned). Geniohyoid muscle.

**Mentobregmat′ic.** Relating to the chin and bregma.

**Mentocondyl′ial tri′angle.** Triangle formed with the apex at the gnathion and base situated between the two condylia.

**Mentocoro′nal tri′angle.** Triangle with its apex at the gnathion and base situated between the two condylia.

**Mentogo′nial** (*mentum*, chin, *gonia*, angle). Relating to the chin and gonion. **M. tri′angle,** triangle having its apex at the gnathion and its base at the bigoniac diameter.

**Mentohy′oid.** Occasional muscle from the hyoid bone to the lower jaw or platysma muscle.

**Mentola′bial** (*mentum*, chin, *labium*, the lip). Levator labii inferioris and quadratus muscles united. **M. fur′row,** transverse depression between the lower lip and the chin, remarkable for the perpendicular direction of the hairs growing upon it.

**Mentomas′toid.** Relating to chin and mastoid process. **M. tri′angle,** triangle with the apex at the gnathion and bounded at its base by the inferior mastoid diameter.

**Mentoposte′rior.** With the chin directed backward; see *Mental position.*

**Mentulag′ra** (*mentula*, penis, *agra*, seizure). Convulsive erection of the penis, such as is said to be sometimes observed in eunuchs; priapism.

**Mentuloma′nia** (*mentula*, penis, *manus*, hand). Masturbation.

**Men′tum.** Chin; the inferior and middle part of the face, situated below the lower lip.

**Mentzel′eah as′pera** or **his′pida.** Mexican herb; drastic; used in syphilis and gonorrhœa.

**Menyan′thes trifolia′ta.** Water trefoil, buckbean, bogbean, bog trefoil; ord. *Gentianaceæ.* Taste is intensely bitter, and is extracted by water; tonic, anthelmintic, diuretic, cathartic, and, in large doses, emetic. In some countries it is used as a substitute for hops in making beer. **M. ver′na,** American buckbean, marsh trefoil, water shamrock, bitter root, has similar properties.

**Menyanthin′.** Bitter principle obtained from Menyanthes trifoliata; a glucoside soluble in alcohol and water.

**Menyan′thol.** Volatile, oily product due to the action of hot dilute acid upon menyanthin.

**Mephit′ic.** Anything possessed of an unwholesome property; chiefly applied to noxious exhalations or disease caused by them. **M. acid,** carbonic acid. **M. air,** carbonic acid. **M. gan′grene,** moist necrosis.

**Mephi′tis.** Old name for nitrogen, and in general for all exhalations and gases unfit for respiration. A genus of skunks. **M. hepat′ica,** sulphureted hydrogen, **M. inflammab′ilis,** hydrogen. **M. mephit′ica,** the common skunk. **M. urino′sa,** ammonia.

**Meph′itism.** Any pernicious exhalation.

**Meral′gia** (*meros*, thigh, *algos*, pain). Pain in the thigh. **M. paræsthet′ica,** tingling, burning, or tearing sensation in the area of distribution of the external cutaneous nerve of the thigh.

**Meramauro′sis** (*meros*, part, *amaurosis*). Slight or partial amaurosis.

**Meranæsthe′sia** (*meros*, part, *a*, priv., *aisthesis*, sensation). Insensibility of a part of the body.

**Meratroph′ia.** Atrophy of some part of the body.

**Mercap′tan.** Sulphur alcohol, ethyl sulphydrate; sulphydrate of an alcohol radical; substance which even in minute doses gives rise to marked mental depression.

**Mercier's′ bar.** Ridge of submucous tissue which bounds the trigonum vesicæ posteriorly. **M.'s opera′tion,** prostatectomy. **M.'s valve,** a valve-like prominence at the urethral opening into the bladder, made by a hypertrophied condition of the internal sphincter muscle of the bladder.

**Mercu′rial.** Containing or relating to mercury; preparation of mercury. **M. disease′,** hydrargyriasis. **M. er′ethism,** see *Erethism.* **M. oint′ment,** unguentum hydrargyri. **M. pal′sy** or **paral′ysis,** paralysis due to exposure to mercurial vapors. **M. pill,** massa hydrargyri. **M. plas′ter,** emplastrum hydrargyri. **M. rash,** eczema mercuriale. **M. suppos′itories,** oleum theobromæ 2 parts; melt and add unguentum hydrargyri 1 part. **M. tre′mor,** mercurial palsy.

**Mercurialine′.** Liquid alkaloid obtained from Mercurialis annua.

**Mercuria′lis.** A genus of euphorbiaceous plants. **M. an′nua,** French mercury; cathartic, hypnotic, and emmenagogue; has been chiefly used by enema. See *Chenopodium bonus Henricus.* **M. peren′nis,** Kentish balsam; dog's mercury; acronarcotic.

**Mercu′rialism.** Pathological condition resulting from excessive or prolonged use of mercury. See *Hydrargyriasis.*

**Mercu′rialist.** One inordinately addicted to prescribing mercury.

**Mercurializa′tion.** State of being affected by mercury; one under the influence of mercury is said to be *mercurialized.*

**Mercu′ric.** Relating to compounds in which one atom of mercury unites with two of the acid radical. **M. al′anate,** crystalline salt, soluble in cold water; prepared by dissolving oxide of mercury in a boiling, aqueous solution of alanin; recommended for hypodermic use in syphilis; dose, gr. $\frac{1}{16}$–$\frac{1}{8}$ (0.004–0.008). **M. ben′zoate,** used subcutaneously in syphilis. **M. car′bolate,** hydrargyri carbolas; prepared by the action of potassium carbolate upon mercuric chloride; recommended in constitutional syphilis; used in syphilis in dose of gr. $\frac{1}{3}$–$\frac{1}{2}$. **M. chlo′ride,** corrosive sublimate. **M. c. ure′a,** prepared by adding urea to a solution of corrosive sublimate; used hypodermically in syphilis in doses of gr. $\frac{1}{32}$–$\frac{1}{16}$ (0.002–0.004). **M. cy′anide,** hydrargyri cyanidum. **M. formam′idate,** hydrargyrum formamidatum; used as convenient form for giving mercury. **M. imidosuc′cinate,** white powder, employed as an antisyphilitic, usually subcutaneously. **M. i′odide,** hydrargyri iodidum rubrum. **M. naph′tholate,** yellow, odorless powder; dose internally, gr. j (0.065). **M. ni′trate,** see *Hydrargyri nitras.* **M. o′leate,** oleatum hydrargyri. **M. ox′ide,** hydrargyri oxydum flavum. **M. o. asparagin′,** prepared by adding mercuric oxide to an aqueous solution of asparagin; employed hypodermically in dose of gr. $\frac{1}{32}$ (0.002). **M. oxycy′anide,** $Hg_2O(Cn)_2$; antiseptic, and said to be superior to corrosive sublimate as such. **M. pep′tonate,** yellowish liquid; mild mercurial for hypodermic use. **M. phe′nate** or **phen′ylate,** m. carbolate. **M. resor′cinate,** a yellow, crystalline powder, made by mixing solutions of mercuric acetate and sodium resorcinate, and dissolving the precipitate in excess of mercuric acetate. It should be used with caution hypodermically, being a potent drug and insoluble in ordinary menstrua, requiring liquid paraffin for its suspension. **M. sal′icylate,** white, odorless, tasteless powder; used externally in gonorrhœa, and internally for the same effect as other mercurials; it is mild in its effect and rapid in action; dose, gr. $\frac{1}{8}$–j (0.008–0.065). **M. sozoï′odol,** see *Sozoiodol.* **M. sul′phate,** hydrargyri sulphas. **M. sul′phide,** hydrargyri sulphidum rubrum. **M. tan′nate,** green substance, odorless and tasteless; antisyphilitic; dose, gr. j–ij (0.065–0.13). **M. thy′molate** and **M. thymolac′etate,** employed in syphilis, internally or by intramuscular injection; also in tuberculosis of the lungs.

**Mercu′rius.** Hydrargyrum. The homœopathic term for mercury. **M. cosmet′icus,** hydrargyrum præcipitatum. **M. dul′cis,** calomel. **M. emet′icus,** turpeth mineral. **M. mor′tis,** algaroth. **M. solu′bilis of Hahn′emann,** yellow oxide of mercury.

**M. terres′tris**, Polygonum hydropiper. **M. vi′tæ**, algaroth. **M. vi′vus**, metallic mercury. **M. zot′icus Hartman′ni**, hydrargyri submurias.

**Mer′curol.** Combination of mercury and nuclein. Internally used as an antisyphilitic, and externally in solution, 1 per cent., in gonorrhœa and affections of the eye and ear.

**Mer′curous.** Applied to mercury compounds in which two atoms of mercury are considered as forming a bivalent radical, embracing the lower salts of mercury. **M. ac′etate**, a product of the mixture of solutions of mercury nitrate and sodium acetate; in white scales; used in syphilis internally, and externally applied in the form of ointment; dose, gr. $\frac{1}{8}$–j (0.008–0.065). **M. bro′mide**, salt of mercury obtained by double decomposition of potassium bromide and mercurous nitrate; same properties as mercurous iodide. **M. chlo′ride**, calomel. **M. i′odide**, hydrargyri iodidum flavum. **M. ni′trate**, hydrargyri nitras. **M. ox′ide**, hydrargyri oxidum cinereum. **M. tan′nate**, hydrargyri tannas, obtained by treating mercurous acetate with tannic acid; used in syphilis.

**Mer′cury.** Hydrargyrum. **Acid ni′trate of m.**, hydrargyri nitras. **M. al′anate**, m. amidopropionate. **M. albu′minate**, an antiseptic application formed by mixing solutions of albumin and corrosive sublimate. **M. amidochlo′ride**, hydrargyrum præcipitatum. **M. amidopro′pionate**, m. alanate; white, crystalline powder resulting from the neutralization of amidopropionic acid with mercuric oxide; see *Mercuric alanate*. **Ammo′niated m.**, hydrargyrum præcipitatum. **M. ammoniochlo′ride**, hydrargyrum præcipitatum. **M. aspar′aginate**, mercuric oxide asparagin. **M. bichlo′ride**, corrosive sublimate. **M. bini′odide**, hydrargyri iodidum rubrum. **M. bro′mide**, hydrargyri bromidum. **M. car′bolate**, mercuric carbolate. **M. with chalk**, hydrargyrum cum cretâ. **Dog′s m.**, mercurialis perennis. **Eng′lish m.**, Chenopodium bonus Henricus. **M. ethylchlo′ride**, a product of the mixture of corrosive sublimate and mercury ethide; a substitute for the bichloride when administered hypodermically. **M. formam′idate**, mercuric formamidate. **French m.**, mercurialis. **M. gal′late**, a greenish-black powder employed in syphilis; produced by mixing gallic acid and yellow oxide of mercury in solution. **M. glu′tino-pep′tonate sub′limate**, antisyphilitic; dose, gr. $\frac{1}{4}$ (0.01). **M. imidosuc′cinate**, m. asparaginate; dose, gr. $\frac{1}{6}$ (0.01) administered hypodermically; a crystalline powder, produced by warming together freshly precipitated mercuric oxide and watery solution of succinimide. **M. i′odate**, employed with potassium iodide in syphilis, subcutaneously; dose, gr. $\frac{1}{6}$ (0.01). **M. iodochlo′ride** iodide of calomel (made by the reaction of iodine on mild chloride of mercury). Two iodides may be prepared—the *iodide* and the *biniodide*. Both are violent irritants; the biniodide especially is a powerful caustic. Both have been given in scrofula. Biniodide is used only externally, like nitrate of silver, in scrofulous and certain syphilitic ulcerations. An ointment of the iodide is rubbed on scrofulous tumefactions. **M. pep′tonate**, hydrargyrum peptonatum. **M. potas′sium hyposul′phite**, a preparation particularly adapted for the subcutaneous administration of mercury; $3Hg(S_2O_3)_2+5K_2S_2O_3$; a solution of precipitated mercuric oxide in solution of potassium hyposulphite. **M. potas′sium sul′phite**, soluble salt, employed hypodermically. **M. pyrobo′rate**, brown powder, applied externally to wounds in the form of ointment. **M. silicoflu′oride**, a soluble salt employed in solution or ointment as an antiseptic to wounds and ulcers. **Sol′uble m.**, hydrargyri nitras. **M. tan′nate**, used in syphilis; dose, gr. iij–v (0.2–0.32). **Three-seed′ed m.**, Acalypha virginica. **M. thymolac′etate**, a crystalline powder, used internally in doses of gr. $\frac{1}{12}$–$\frac{1}{6}$ (0.005–0.01), and hypodermically suspended in paraffin oil; it is produced by dissolving mercury thymolate in a solution of mercuric acetate. **M. thy′molate**, $C_{10}H_{13}OHgOH$, a violet, greenish powder obtained by precipitating mercuric nitrate with sodium thymolate. **M. thy′mol ni′trate**, used hypodermically. **M. tribromphe′nol ac′etate**, a yellow, crystalline salt used hypodermically in syphilis; produced by dissolving the precipitate resulting from a solution of sodium tribromphenolate and a solution of mercuric acetate in a concentrated solution of mercuric acetate. **Veg′etable m.**, mudar. **M. vine**, Rhus toxicodendron. **M. weed**, Mercurialis annua.

**Mer′da.** Excrement. **M. diab′oli**, asafœtida.

**Mereche′ma** (*meros*, part, *echema*, sound). Sound elicited by auscultation of the gravid uterus, supposed by some to be produced by friction of the thighs of the fœtus.

**Meremphrax′is** (*meros*, part, *emphraxis*, obstruction). Obstruction or infarction of an organ or part.

**Meren′dera.** Bulbocodium. Plant resembling colchicum found in the Pyrenees.

**Mer′etrix.** Prostitute. **M. metallo′rum**, copper.

**Merian′dra benghalen′sis.** Bengal sage, shrub possessing an odor resembling camphor, and having stimulant properties.

**Meria′nia.** Leucantha. Shrub, genus *Merianeæ;* flowers are employed as a pectoral.

**Mer′ic** (*meros*, a part). Relating to a part.

**Merid′ian.** Imaginary great circle surrounding any globe and passing through the poles. **M. of the cor′nea**, curve on the surface of the cornea made by the anteroposterior plane passing through its apex. **M. of the eye**, imaginary circle surrounding the globe of the eye. **M. planes**, those passing through the line of sight and the retinal meridians; also planes passing through the axis of the eye and meridians of the eye. **M. p. of field of regard′**, planes which pass through the lines of regard and the meridians of the field of regard.

**Merid′ianal.** Relating to a meridian.

**Meridro′sis** (*meros*, part, *hidrosis*, sweating). Partial perspiration.

**Merim′na** or **Merim′ne.** Cure.

**Merismat′ic** (*merismos*, division). What takes place by internal division, as merismatic multiplication or reproduction; that which occurs by the splitting or division of cells or of whole beings.

**Merismope′dia** (*merismos*, division, *pedion*, a plain). Bacterium increasing by division in two directions, forming lamellæ or plates. Several micrococci belong properly to this variety of bacteria, but the term has been improperly given to several varieties of sarcina. **M. chondroi′des** or **M. glau′ca**, Sarcina renis. **M. gonorrhœ′æ**, gonococcus. **M. Goodse′rii**, Sarcina ventriculi. **M. hyali′na** (Kützing), Sarcina hyalina. **M. litora′lis** (Rabenhorst), Sarcina litoralis. **M. Reitenbach′ii** (Caspari), Sarcina Reitenbachii. **M. uri′næ**, Sarcina urinæ. **M. viola′cea** (Kützing), Sarcina violacea. **M. ventric′uli**, Sarcina ventriculi.

**Mer′ispore** (*meros*, part). A spore resulting from a division or segmentation of another spore.

**Meris′ta.** Merismopedia.

**Meristemat′ic.** Merismatic.

**Meris′tiform.** Of the shape of merismopedia; sarcinous.

**Mer′ithal.** Part of fingers between the joints; phalanx.

**Mer′kel's cor′puscles.** Grandry's corpuscles. **M.'s horizon′tal plane**, plane of the auricular points reaching to the inferior border of the orbits. **M.'s line**, hypothetical line from the central point of the internal palpebral ligament to the point next to the last bicuspid teeth. **M.'s mus′cle**, ceratocricoid. **M.'s touch-cells**, oval, nucleated bodies found chiefly in the lower animals; supposed to be connected with the ultimate nerve-fibres.

**Merlan′gus.** Gadus pollachius. **M. vulga′ris**, hake, found in the Mediterranean and Atlantic Ocean; same uses as Gadus morrhua.

**Mero-** (*meros*, part). In composition, a part.

**Meroacra'nia.** Monstrosity characterized by the absence of part of the skull.

**Mer'oblast** (*meros*, a part). An ovum or egg in which there is not only germinal matter, but also food structure.

**Meroblas'tic** (*meros*, part, *blastos*, germ). Term applied to the ova of oviparous animals, in which the yolk is chiefly nutritive, and in a small part only formative.

**Me'rocele** (*meros*, thigh, *kele*, tumor). Femoral or crural hernia. In this hernia the viscera issue from the abdomen through the crural canal, or through an opening immediately on the outer side of Gimbernat's ligament, which gives passage to lymphatic vessels. This affection is more frequent in the female than in the male, and especially in those who have had children. A tumor formed by merocele is generally small, round, and more or less difficult of reduction. In other respects it possesses all the characters of hernia. The neck of the sac has, close on the outside, the epigastric artery; above, the spermatic cord and spermatic artery in the male—the round ligament in the female; on the inside, Gimbernat's ligament; and, below, the pubes. When the obturator artery arises from the epigastric it generally passes on the outside of and below the orifice of the sac; sometimes, however, it takes a turn above, and then to the inside of the opening. Crural hernia admits of several rare varieties, as *hernia of Cloquet* or *pectineal crural hernia*, the hernia resting on the pectineus muscle, the aponeurosis of which may form an envelope to it; *hernia of Laugier*, or crural hernia through Gimbernat's ligament; *hernia of Hesselbach*, or hernia with a diverticulum, through the cribriform fascia; and *hernia of Sir Astley Cooper*, or crural hernia with a diverticulum, through the superficial fascia.

**Merocoxal'gia** (*meros*, thigh, *coxa*, hip, *algos*, pain). Coxalgia.

**Merodial'ysis** (*meros*, part, *dialysis*, separation). Incomplete chemical decomposition.

**Merodiastol'ic.** Relating to part of the diastole.

**Merogen'esis** (*meros*, a part). Formation by segmentation or division.

**Merol'ogy** (*meros*, part, *logos*, discourse). Branch of anatomy treating of the elementary parts or constituents of the tissues and humors of the organism.

**Mero'pia** (*meros*, part, *opsis*, vision). Partial obscurity of vision.

**Merorrhachischesis**, me-ror-rak-is'ke-sis (*meros*, part, *rhachis*, spine, *schisis*, fission). Fission of a part of the spinal cord.

**Merorrheu'ma** (*meros*, part, *rheuma*, rheumatism). Rheumatism affecting a part; local rheumatism.

**Merorrhex'is** (*meros*, part, *rhexis*, rupture). Merocele.

**Me'ros.** Femur, thigh.

**Merosystol'ic.** Relating to part of the systole.

**Merot'omy** (*meros*, part). Division into parts.

**Meroto'pia** (*meros*, part, *topos*, place). Reduction of a part into position.

**Merotro'pia** (*meros*, part, *tropos*, turning). Formation of new chemical compounds after decomposition of their component parts. Reduction of a dislocation of the hip (*meros*, thigh).

**Merozo'ite.** A demilune or falciform body, representing one of the stages of development of certain protozoa; a young malarial parasite produced by monogonia or non-sexual generation.

**Mer'ry An'drew.** Itinerant quack who exposes his nostrums for sale at fairs and markets. See *Charlatan*. So called from Dr. Andrew Boorde, who lived in the reigns of Henry VIII., Edward VI., and Queen Mary, and who was in the habit of frequenting fairs and markets, at which he harangued the populace.

**Merten'sia marit'ima** (after C. H. Mertens, botanist, of Bremen). Pulmonaria maritima, oyster plant; plant is mucilaginous, and the leaves have a flavor resembling oysters. **M. pulmonarioi'des,** plant is mucilaginous. **M. virgin'ica,** Pulmonaria virginica, Virginian cowslip, smooth lungwort; indigenous. Family *Boraginaceæ*. Plant is mucilaginous, and may be used as a demulcent.

**Meru'lius.** Morchella esculenta. **M. auric'ula,** Peziza auricula. **M. des'truens** or **lac'rimans,** fungus producing dry-rot in wood. **M. vasta'tor,** M. lacrimans.

**Me'rus.** Pure, genuine; as vinum merum, unmixed wine. Also femur; thigh.

**Mer'vine, male.** Cypripedium luteum.

**Merycic,** mer-is'ik. Relating to merycism or rumination.

**Mer'ycism.** Rumination.

**Mer'ycole.** One who practises rumination.

**Merycol'ogy** (*merykazo*, to ruminate, *logos*, description). Work treating of rumination.

**Mér'y's glands.** Cowper's glands.

**Me'sad.** Toward the median plane.

**Me'sal.** Mesial.

**Mesamœ'boids** (*mesos*, middle, *amœboid*, resembling an amœba). Free amœbiform cells of the mesoderm of the embryo; also a leucocyte of the adult. Elements of mesoderm cellular in character and possessing locomotion.

**Mesaræ'um** (*mesos*, middle, *araia*, belly). Mesentery.

**Mesara'ic.** Mesenteric.

**Mesarterii'tis** or **Mesarteri'tis** (*mesos*, middle, *arteritis*, inflammation of an artery). Inflammation of the middle layer of an artery.

**Mesaticephal'ic** (*mesatos*, midmost, *kephale*, head). Term applied to skulls having an index of 75° to 80°.

**Mesaticeph'alus.** Having a skull with an index of 75° to 80°.

**Mesatipel'vic** (*mesatos*, midmost + *pelvis*). Relating to a pelvis with an index between 90° and 95°.

**Mesauchenus,** mes-aw-ke'nus (*mesos*, middle, *auchen*, neck). Term given by Lissauer to skulls in which the line joining the inion and basion forms an angle of 38° to 26° with the radius fixus.

**Mescal'.** Strong, intoxicating liquor, obtained from pulque. **M. but'ton,** the tip of Anhalonium lewinii, a species of cactus; a nerve stimulant somewhat resembling strychnine.

**Mescaline'.** An alkaloid derived from Anhalonium lewinii; a nerve stimulant, producing hallucinations of color.

**Mesembryan'themum.** A genus of plants of the order *Ficoideæ;* fig-marigold. **M. acinacifor'me,** see *M. edule*. **M. chilen'se,** Chilean species with very active cathartic properties. **M. cop'ticum,** see *Soda*. **M. crystal'linum,** diamond fig-marigold, iceplant; a plant common in the neighborhood of Cape Town; it has been recommended in dysuria, ischuria, and some other affections of the urinary organs. **M. edu'le** and **M. acinacifor'me,** South African plants; much used as domestic remedies at the Cape; expressed juice of the leaves acts as an astringent in dysentery, and as a mild diuretic; also used as an antiseptic gargle in malignant sore throat, violent salivation, and aphthæ, and as a lotion to burns and scalds. **M. ficoi'des,** M. crystallinum. **M. tortuo'sum,** a S. African plant, said to possess narcotic properties.

**Mesem'bryo** (*mesos*, middle). Blastula.

**Mesembryon'ic.** Relating to the blastula.

**Mesencephal'ic.** Relating to the mesencephalon.

**Mesenceph'alon** (*mesos*, middle, *enkephalos*, brain). Midbrain. In early fetal development one of the three primary cerebral vesicles; from it are formed the crura cerebri below, corpora quadrigemina above, its cavity remaining as the aqueduct of Sylvius.

**Mesenceph'alus** (*mesos*, middle, *kephale*, head). Term given by Lissauer to skulls in which the angle between the lines from the hormion to the nasion and inion is from 142.5° to 156.5°.

**Mesen'chyma** or **Mes'enchyme** (*mesos*, middle, *chymos*, juice). Portion of mesoblast formed by gemmation from the epiblast or hypoblast; connective tissue in the embryo.

**Mesen′chymal.** Relating to the mesenchyme or persistent mesoblastic pulp. **M. hylo′ma,** see *Hyloma.*

**Mesenchy′matous.** Relating to the mesenchyme.

**Mesen′cranus** (*mesos,* middle, *enkranion,* cerebellum). Term applied by Lissauer to skulls with a median cerebellar sector of 15° to 20°.

**Mesen′na.** Bark of an Abyssinian tree, the Albizzia anthelmintica, belonging to the family of the *Mimosæ.* The powdered bark is used by the natives, in doses of ℥ij (64.0), as a powerful tæniafuge.

**Mesenteremphrax′is** (*mesenteron,* mesentery, *emphraxis,* obstruction). Strangulation of the mesentery.

**Mesenter′ic.** Relating or belonging to the mesentery. **M. ar′teries** are two in number, and distinguished into: 1. *Superior mesenteric,* which arises from the anterior part of the abdominal aorta, below the cœliac. It immediately descends to the left, forward, behind the pancreas, and in front of the third portion of the duodenum, to gain the superior extremity of the mesentery, where it makes a long curvature, the convexity of which is turned forward and to the left. Toward the termination of the ileum it ends by anastomosing with a branch of the right inferior colic artery. At its concavity it gives off the three arteriæ colicæ dextræ, which belong to the great intestine, and at its convexity it sends off fifteen or twenty branches, distributed to the small intestine after forming numerous arches by their anastomoses. 2. The *inferior mesenteric artery* arises from the anterior part of the abdominal aorta, an inch and a half before its termination. It descends on the left side, behind the peritoneum, engages itself in the substance of the iliac mesocolon, forming a considerable curvature, whose convexity faces the left side. When it reaches the brim of the pelvis it passes along the posterior separation of the mesorectum, and attains the neighborhood of the anus, under the name superior hemorrhoidal artery. It gives off no branch at its concave part, but from the convex the three arteriæ colicæ sinistræ arise. **M. disease′,** tabes mesenterica. **M. fe′ver,** enteric fever. **M. glands** or **gan′glia,** lymphatic ganglia of the mesentery. Through them the chyliferous vessels pass to the thoracic duct. When these glands become diseased nutrition is interfered with and emaciation results. **M. her′nia,** if one of the layers of the mesentery be torn by a blow, while the other remains in its natural state, the intestines may insinuate themselves into the aperture and form a kind of hernia. It has not been recognized during life. **M. plex′uses** are furnished by the solar plexus, and have been distinguished into superior and inferior, like the mesenteric arteries, which they accompany. **M. veins** are two in number, and belong to the vena porta. They are distinguished into: 1. *Superior mesenteric* or mesaraic or great mesaraic. This trunk receives, from above downward, and on the right side, the three venæ colicæ dextræ and the gastroepiploica dextra. Into its left side the veins of the small intestine open. It passes in front of the transverse portion of the duodenum, and, behind the pancreas, unites with the splenic vein to form the vena porta. 2. The *inferior* or *lesser mesenteric vein* corresponds to the artery of the same name, and opens into the splenic near the union of that vein with the superior mesenteric and behind the pancreas.

**Mesenter′ica.** Vessel of the mesentery.

**Mesenter′icomesocol′ic fold.** Ligamentum mesentericomesocolicum.

**Mesenterii′tis.** Mesenteritis.

**Mesenteri′olum proces′sus vermifor′mis.** Duplicature of the peritoneum connecting the vermiform process with the mesentery.

**Mesenterit′ic.** Relating to mesenteritis.

**Mesenteri′tis.** Inflammation of the mesentery. Pain is here seated deeply and more immediately in the mesenteric region. External tenderness is less than in some of the other varieties of peritonitis.

**Mesente′rium.** Mesentery. **M. cras′sum,** mesocolon. **M. u′teri,** broad uterine ligaments.

**Mesen′teroid** (*mesenteron,* mesentery, *eidos,* resemblance). Bearing a resemblance to the mesentery.

**Mesen′teron.** Middle portion of the fetal alimentary canal. Mesentery.

**Mesen′terophthi′sis** or **Mesenteri′ophthi′sis.** Tabes mesenterica.

**Mes′entery** (*meso,* middle, *enteron,* intestine). Term in anatomy applied to several duplicatures of the peritoneum which maintain the different portions of the intestinal canal in their respective situations, allowing, however, more or less motion. They are formed of two laminæ, between which are contained the corresponding portion of intestine and the vessels that pass to it. One only of these duplicatures has received the name *mesentery,* properly so called. This belongs to the small intestine, which it suspends and retains in situ. Its posterior margin, which is the smallest, is straight, and descends obliquely from the left side of the body of the second lumbar vertebra to the right iliac fossa. Its anterior margin is curved, undulating, plaited, and corresponds to the whole length of the small intestine. The mesentery contains between the two laminæ which form it a number of lymphatic ganglions, the trunks and branches of the mesenteric vessels, the nervous plexuses accompanying them, and many lacteals and lymphatics. The term is sometimes applied also to similar structures in relation with other organs. **Cæ′cal m.,** mesocæcum. **Car′diac m.,** mesocardium. **Col′ic m.,** mesocolon. **Gas′tric m.,** mesogastrium. **Rec′tal m.,** mesorectum. **Sig′moid m.,** fold of the peritoneum connecting the sigmoid flexure to the left iliac fossa. **U′terine m.,** mesometrium.

**Mes′era.** Tutia.

**Me′siad.** Toward the median plane.

**Me′sial** (*mesos,* middle). Median; relating or appertaining to the middle. **M. plane,** imaginary plane dividing the head, neck, and trunk into similar halves toward right and left. Every aspect toward this plane is *mesial;* and every aspect toward right or left is *lateral,* every lateral aspect being *dextral* or *sinistral.* **M. plate,** see *Plate.*

**Mes′ion.** Middle plane.

**Mes′itylene bihy′drate.** Acetone.

**Mesmer′ic** (from Anthony Mesmer). Relating to mesmerism or animal magnetism.

**Mes′merism.** Animal magnetism; hypnotism.

**Mes′merist.** Practiser of or believer in mesmerism.

**Mesmeriza′tion.** Act of mesmerizing. State of being mesmerized.

**Mes′merized.** Affected with mesmerism or animal magnetism. When the person is in a state of magnetic sleep he is said to be *hypnotized.*

**Mes′merizer.** One who practises mesmerism.

**Mesmeroma′nia.** The practice of mesmerism; term applied formerly by those who regarded mesmerism as an insane delusion. Also insanity associated with extreme belief in and addiction to the practice of mesmerism.

**Mesmerophrenol′ogy.** Phrenomagnetism.

**Meso-** (*mesos,* middle). In composition, middle.

**Mesoappen′dix.** Mesentery connected with the vermiform appendix.

**Mesoa′rium.** Mesovarium.

**Mesoarteri′tis.** Inflammation of the middle arterial coat.

**Mesobacte′ria.** Subdivision of the coccobacteria, including the medium-sized organisms.

**Mes′oblast** (*mesos,* middle, *blastos,* germ). The mesoderm; middle layer of the blastoderm; the nucleus. See *Cytoblast* and *Molecule.* **Allantoi′dean m.,** that part of the mesoblast from which the allantois is formed. **Pari′etal** or **somat′ic m.,** upper or external mesoblastic layer. **Splanch′nic** or **vis′ceral m.,** lower mesoblastic layer.

**Mesoblas′tic.** Relating to the mesoblast.

**Mesobrachycephal′ic.** Mesocephalic. Term applied to a head neither very long nor very short.

**Mesobreg′mate** (*mesos*, middle, *bregma*, top of the head). Relating to mesobregmus skulls.

**Mesobreg′mus.** Term applied by Lissauer to skulls in which the line drawn from the hormion to the bregma describes with the radius fixus an angle of 68° to 82°.

**Mesobronchi′tis** (*mesos*, middle, *bronchia*, bronchial tubes. Inflammation affecting the middle layer of the bronchial tubes.

**Mesobron′chium.** Main bronchus of birds.

**Mesocæ′cum** (*mesos*, middle). Name given to a duplicature of the peritoneum at the posterior part of the cæcum; the mesentery of the cæcum.

**Mesocar′dium** (*mesos*, middle, *kardia*, heart). Fold of the mesoblast attached to the heart. **Ante′rior m.**, formed by an extension of the mesoblast from the anterior cardiac surface to the anterior wall of the body. **Lat′eral m.**, duplicature of the mesoblast which in the early developmental period furnishes a partial division between the general cavity and the cavity in which the heart is situated.

**Mesocephal′ic** (*mesos*, middle, *kephale*, head). Term applied in craniometry to a head of medium size. Also signifies relating to the mesocephalon.

**Mesocephali′tis.** Inflammation of the mesocephalon.

**Mesoceph′alon** (*mesos*, middle, *kephale*, head). Midbrain, consisting of the corpora quadrigemina and crura cerebri.

**Mesoceph′alus.** Cranium with a capacity of from 1350 to 1450 cubic centimetres.

**Mesocer′ebrum.** Mesocephalon.

**Mesochon′driac** (*mesos*, middle, *chondros*, cartilage). A name given by Boerhaave to fleshy fibres situated between the cartilaginous rings of the trachea.

**Mesococ′cus.** A micrococcus of moderate size.

**Mes′ocœle** or **Mesocœ′lia.** Aquæductus Sylvii.

**Mesocol′ic** (*mesos*, middle, *kolon*, colon). Belonging or relating to the mesocolon.

**Mesoco′lon.** Name given to the duplicatures of the peritoneum which fix the different parts of the colon to the abdominal parietes. It has received different names, according to its situation. The *right lumbar mesocolon* fixes the ascending colon to the corresponding lumbar region. The *transverse mesocolon* arises from the concave arch of the colon, and forms a septum between the epigastric and umbilical regions; its inferior portion is continuous with the mesentery. The *left lumbar mesocolon*, which contains the ascending colon, is continuous below with the *iliac mesocolon*. The last includes between its layers the sigmoid flexure of the colon, and ends in the mesorectum. The fold of peritoneum which retains the sigmoid flexure in connection with the left iliac fossa is called the *sigmoid mesocolon*. Under the right kidney it is narrow and firm, and forms the right *ligament of the colon;* at the under end of the left kidney it forms the *left ligament of the colon.*

**Mesoconch**, mes′o-konk. Possessing an orbital index between 80° and 85°.

**Mes′ocord.** Umbilical cord inserted in a duplicature of the amnion.

**Mesocra′nium** (*mesos*, middle, *kranion*, skull). Vertex.

**Mesocu′neiform** (*mesos*, middle). Middle cuneiform bone.

**Mesocyn′ion** (*mesos*, middle, *cuneus*, wedge). Union of talus and tibia.

**Mes′ocyst** (*mesos*, middle, *kystis*, cyst). Double fold of peritoneum joining gall-bladder and liver, met with only rarely when the bladder is entirely covered by the peritoneum.

**Me′soderm.** See *Mesoblast.*

**Mesoder′mic.** Relating to the mesoderm.

**Mesoder′mum** (*mesos*, middle, *derma*, skin). Corpus mucosum.

**Mesodiastol′ic.** Relating to middle of the cardiac diastole.

**Mesod′me** (*mesodme*, crossbeam). Mediastinum.

**Mesodmi′tis.** Inflammation of the mediastinum.

**Mes′odont** (*mesos*, middle, *odous*, tooth). Having medium-sized teeth.

**Mesoduode′num.** The mesentery of the duodenum.

**Mesoepidid′ymis.** Double serous fold like the mesocolon, formed by tunica vaginalis passing from the body of the epididymis and uniting it to the testicle.

**Mesogas′ter.** The midgut.

**Mesogas′tric** (*mesos*, middle, *gaster*, belly). Relating to the umbilical region.

**Mesogas′trium.** Umbilical region; also a median membranous fold, a rudimental mesentery, which in early fetal development connects the alimentary canal with the rest of the embryo. **M. Mül′leri**, portion of mesentery which passes from the vertebral column to the left curvature of the stomach.

**Mesoglos′sal.** Situated in middle of tongue.

**Mesoglos′sus** or **Mesoglot′tus.** Genioglossus.

**Mesognath′ic.** Relating to the mesognathion.

**Mesognath′ion** (*mesos*, middle, *gnathos*, jaw). The external of the two premaxillary bones described by Albrecht.

**Mesog′nathism.** Condition of being mesognathous.

**Mesog′nathous** (*mesos*, middle, *gnathos*, jaw). Having a moderate or intermediate gnathic index of from 98° to 103°.

**Mesohylo′ma.** A tumor derived from primitive pulp tissue of mesoblastic origin (mesenchymal hyloma) or of mesothelial origin (mesothelial hyloma); see *Hyloma.*

**Meso-il′eum.** The mesentery of the ileum.

**Mesojeju′num.** The mesentery of the jejunum.

**Mesolepido′ma.** A tumor made up of cells derived from the persistent mesothelium of the embryo; see *Lepidoma.*

**Mesolo′bar.** Belonging or relating to the mesolobe or corpus callosum. **M. ar′teries**, arteries of the corpus callosum.

**Mes′olobe.** Corpus callosum.

**Mesolo′bic.** Relating to the mesolobe.

**Mesol′obus** (*mesos*, middle, *lobos*, lobe). Corpus callosum.

**Mesol′ogy** (*mesos*, middle, *logos*, speech). The science of the relations of organisms to the mediums surrounding them.

**Mesomen′tal** (*mesos*, middle, *omentum*). Relating to the middle of the omentum.

**Mes′omere.** A protovertebra.

**Mesomer′ion.** Perineum.

**Mesometri′tis** (*mesos*, middle, *metra*, womb). Inflammation of the middle layer of the uterus.

**Mesome′trium.** Vascular tissue associating the body of the uterus with contiguous organs; broad ligaments, or uterine mesentery.

**Mesome′try** (*mesos*, middle, *metra*, womb). Mesometrium.

**Mesom′phalum** or **Mesomphal′ion** (*mesos*, middle, *omphalos*, navel). Umbilicus.

**Mes′on.** Middle plane.

**Mesona′sal.** Situated in the middle of the nose.

**Mesoneph′ric.** Relating to the Wolffian body.

**Mesoneph′ron** (*mesos*, middle, *nephros*, kidney). Fold of the peritoneum which when the kidney becomes displaced may connect it with the body-wall, acting as a mesentery. Also mesonephros.

**Mesoneph′ros.** Wolffian body proper.

**Mesoneuri′tis.** Inflammation of the connective tissue of a nerve. **Nod′ular m.**, neuritis with nodular thickenings on the nerve.

**Mesono′tum** (*mesos*, middle, *noton*, back). Dorsal part of the mesothorax.

**Mesopanenceph′alus** (*panenkephalos*, the whole brain). Name given by Lissauer to skulls in which the angle between the lines drawn from the hormion to the basion and nasion is 163° to 188.5°.

**Mesophil'ic** (*mesos*, middle plane, *phileo*, to love). Term applied to bacteria which develop at a medium temperature (10° to 15° C. to about 45° C.).

**Mesophlebi'tis** (*mesos*, middle, *phlebitis*, inflammation of a vein). Inflammation of a vein or, in a more limited sense, of the middle layer of a vein.

**Mesophle'bium** (*mesos*, middle, *phleps*, vein). Space between two veins.

**Mesoph'ryon** (*mesos*, middle, *ophrys*, eyebrow). Part between the eyebrows.

**Mesopleu'rium** (*mesos*, middle, *pleuron*, rib). Intercostal space.

**Mesopneu'mon.** The duplicature of the pleura attached to the lung.

**Mesopodial'ia** (*mesos*, middle, *podion*, foot). Bones of the carpus and tarsus taken together as corresponding.

**Mesoproso'pic** (*mesos*, medium, *prosopon*, face). Having a face of medium or average width.

**Mesopsy'che.** Midbrain, mesencephalon.

**Mesor'chis.** Mesorchium.

**Mesor'chium** or **Mesor'chion** (*mesos*, middle, *orchis*, testicle). Duplicature of the peritoneum which supports the testicle in its passage from the abdomen into the scrotum.

**Mesorec'tum.** Triangular reflection formed by the peritoneum between the posterior surface of the rectum and the anterior surface of the sacrum. Between the two layers of which the mesorectum is composed are found much areolar tissue and the termination of the inferior mesenteric vessels.

**Mesoret'ina.** The middle layer of the retina.

**Mesorop'ter** (*mesoros*, boundary, and *optomai*, to see). Measure of field of accommodation; the distance within which an object is plainly visible.

**Mes'orrhine** (*rhis*, nose). Nose with an index from 48° to 53°.

**Mesosal'pinx.** Upper part of the broad ligament included between the Fallopian tube, tubo-ovarian ligament, and ovary with its proper ligament.

**Mesoscap'ula.** Spine of the scapula.

**Mesoscap'ular.** Term applied in early life to the acromial extremity of the clavicle, the mesoscapular segment of that bone.

**Mesos'celocele** (*mesoskelon*, perineum, *kele*, rupture). Perineal hernia.

**Mesoscelophy'ma** (*mesoskelon*, perineum, *phyma*, swelling). Tumor of the perineum.

**Mes'oseme** (*mesos*, middle, *sema*, mark). Having an orbital index between 84° and 89°.

**Mesosig'moid** or **Mesosigmoide'a.** The sigmoid mesocolon.

**Mesos'kelon** (*mesos*, middle, *skelos*, leg). Perineum.

**Mesostaphyl'ic** (*mesos*, middle, *staphyle*, uvula). Having a palatal index of from 80° to 85°.

**Mes'ostate** (*mesos*, middle, *stasis*, state). Substance intermediate in formation and complexity in a series of metabolic changes.

**Mesoster'nal.** Relating to the mesosternum.

**Mesoster'neber** or **Mesoster'nebra** (*mesos*, middle, *sternebra*, segment of the sternum). Segment forming body of sternum, situated between the manubrium and xiphoid appendage; in man, the gladiolus.

**Mesoster'num** (*mesos*, middle, and *sternum*). Body of the sternum proper; gladiolus.

**Mesosthen'ic** (*mesos*, middle, *sthenos*, strength). Possessed with a medium amount of muscular force.

**Mesosto'matous** or **Mesos'tomus** (*mesos*, middle, *stoma*, mouth). Provided with a mouth in the middle of the body.

**Mesotar'sal.** Mediotarsal.

**Mesoten'don.** Membranous synovial folds extending to tendons from sheaths of their fibres.

**Mesothelio'ma.** Epithelioma developing from middle layer of tissue in embryo.

**Mesothe'lium.** Epithelium which lines a primitive embryonic body-cavity.

**Mesoth'enar** (*mesos*, middle, *thenar*, palm of the hand). Muscle which carries the thumb toward the palm. Winslow applied the term to the abductor pollicis, united to the deep-seated portion of the flexor brevis pollicis.

**Mesotocatar'rhus** (*mesos*, middle, *ous*, ear, *katarrhos*, catarrh). Catarrh of the middle ear.

**Mesotœchi'tis.** Inflammation of the mediastinum.

**Mesotœchium** (mes-o-te'ke-um) or **Mesotœ'chum** (*mesos*, middle, *toichos*, wall). Mediastinum.

**Mesova'rium** (*mesos*, middle, *ovarion*, ovary). Mesentery of the ovary.

**Mesox'alate.** Combination of meso-oxalic acid with a base.

**Mesoxallylure'a.** Alloxan, an oxidation product of uric acid.

**Mespilodaph'ne cupula'ris.** Species reputed to possess stomachic, sudorific, and antidysenteric properties. **M. pretio'sa**, bark resembles cinnamon in its properties. **M. sas'safras**, Canella sassafras.

**Mes'pilus** (*mesos*, middle, *pilos*, a ball, from the resemblance of the fruit to half a ball). The medlar, ord. *Rosaceæ*. Fruit and seeds of the medlar have both been used medicinally—the immature fruit as an astringent, and the seeds in nephritic diseases. **M. a'ria**, Cratægus aria. **M. domes'tica**, Sorbus domestica. **M. german'ica**, medlar. **M. interme'dia**, Mespilus oxyacantha. **M. læviga'ta**, Mespilus oxyacantha. **M. oxyacan'tha**, white hawthorn; the flowers of this uncommon European plant are sometimes used in infusion as a pectoral. **M. oxycanthoi'des**, Mespilus oxyacantha.

**Mesquite** (mes'keet) **gum.** Gum obtained in New Mexico from a tree of the same family as the acacia. Same properties as gum arabic.

**Mestee'.** See *Mestizo.*

**Mesti'no.** See *Mestizo.*

**Mesti'zo** (*mixtus*, mixed). In Spanish America, the child of a Spaniard or Creole and a native Indian. See *Half-caste.* A *Mastee* or *Mestee* is the child of a white and mulatto or quadroon.

**Mes'ua.** Genus of shrubs or trees natives of the tropics. **M. fer'rea**, East Indian iron wood; bark is astringent, and root has tonic properties. An oil is made from the seeds which is used for external applications in rheumatism. **M. naga'na, peduncula'ta, roxburgh'ii**, or **salici'na**, M. ferrea. **M. specio'sa**, species similar to Mesua ferrea; bark and root have sudorific properties; leaves are expectorant; oil of the seeds is employed externally in rheumatism.

**Meta-** (*meta*, with, beyond, over). Prefix signifying change or transformation.

**Metab'asis** (*metabaino*, to digress). Change of a remedy, of the course of a disease, etc.

**Metabioxyphen'ol.** Resorcin.

**Metabole**, met-ab'o-le (*metaballo*, to transpose). Metabasis; transformation.

**Metabo'lia.** Metabasis.

**Metabol'ic.** Appertaining to change or transformation. **M. force**, term employed by Schwann for the power possessed by living cells of changing the character of the substances brought in contact with them.

**Metab'olin.** Metabolite.

**Metab'olism** (*metaballo*, to change). Chemical change within the body in nutrition and secretion; metamorphosis of tissue; tissue-changes under the influence of cell-action. **Construc'tive m.**, anabolism, change of nutritive products into protoplasm. **Destruc'tive m.**, katabolism, catabolism, change of protoplasm into excrementitious products.

**Metab'olite.** Product of metabolism.

**Metab'olous.** Metabolic.

**Metacar'pal.** Relating to the metacarpus. **M. ar'tery** arises from the radial, where it engages itself in the upper extremity of the abductor indicis. It descends obliquely upon the back of the hand; its branches are distributed to the abductor indicis and the integuments; some communicate with the dorsalis carpi. **M. articula'tions** are those by which the last four metacarpal bones are united together at their upper extremity. **M. bones**, bones composing the metacarpus, are five in number and distinguished into first, second, third, etc., beginning from the outer or radial side. They are articulated by their superior extremity with the bones of the second range of the carpus, and by the lower with the first phalanges. **M. canals′**, spaces in the palm of the hand situated between the tendons of the flexors of the fingers. **M. lig′ament**, inferior palmar ligament, fibrous band, stretched transversely before the inferior extremities of the last four metacarpal bones, which it keeps in their respective positions. **M. mus′cles**, interosseous muscles of the hand. **M. phalan′ges**, first phalanges of the fingers, so called because they are articulated with the bones of the metacarpus. **M. range** or **row of the car′pal bones**, lower row of carpal bones, so called because they are articulated with the bones of the metacarpus; they are composed of trapezium, trapezoid, os magnum, and unciform.

**Metacarpa′lia.** Metacarpal bones.

**Metacarpe′us.** Abductor metacarpi minimi digiti.

**Metacar′pion.** Metacarpus.

**Metacarpocar′pal.** Relating to the metacarpus and carpus, as the metacarpocarpal articulation.

**Metacarpometacar′pal.** Relating to the metacarpal bones in their associations with each other.

**Metacarpophalan′geal.** Relating to the metacarpus and phalanges. **M. articula′tions** are formed by the bones of the metacarpus and the corresponding phalanges. In these articulations the bony surfaces are incrusted with cartilage, covered by a synovial membrane, and kept in connection by means of an anterior and two lateral ligaments. **M. lig′aments**, digital fibrocartilages.

**Metacarpophalange′us pol′licis.** Abductor pollicis manûs.

**Metacar′pus** (*meta*, beyond, *karpos*, wrist). The part of the hand comprised between the carpus and fingers. Composed of five parallel bones, called *metacarpals*, forming the back of the hand externally and the palm internally.

**Metaca′sein.** Coagulable substance formed secondarily when caseinogen is changed to casein by the action of the pancreatic juice.

**Met′acele.** Metacœle.

**Metacel′lulose.** Cellulose.

**Metacetam′ide.** Propionamide.

**Metace′tic acid.** Propionic acid.

**Metacetone**, met-as′e-tone. Diethylketone.

**Metaceton′ic acid.** Obtained as one of the products when sugar is heated with hydrate of potassium; resembles acetic acid.

**Metachlo′ral.** White substance, insoluble in water, obtained by the action of sulphuric acid on anhydrous chloral. Narcotic like chloral hydrate, but less active.

**Metachore′sis** (*meta*, change, *choreo*, to go). Metastasis. Dislocation.

**Metachromat′ic** (*chroma*, color). Changing color. **M. bod′ies**, peculiar form of granulation noticed in the interior of the cells in many species of bacteria on staining, such as the diphtheria bacillus; they are sometimes called *sporogenous granules*. **M. stain′ing**, a form of staining in which the tissues take on various colors at the same time.

**Metachro′matism** (*meta*, change, *chroma*, color). Change of color.

**Metachysis**, met-ak′es-is (*meta*, with, *chyo*, to pour). Transfusion of blood, or introduction of any substance into the circulation.

**Metacine′ma** or **Metacine′sis.** Metakinesis.

**Met′acism.** Act of using the letter *m* too frequently.

**Met′acœle** or **Metacœ′lia** (*meta*, beyond, *koilia*, cavity). Fourth ventricle of the brain.

**Metacon′dyle.** See *Phalanx*.

**Met′acone** (*meta*, beyond, *konos*, cone). Posterior external cusp of a superior molar.

**Metaco′nid.** Anterior internal cusp of an inferior molar.

**Metacon′ule.** Posterior intermediate cusp of a superior molar.

**Metacopai′vic acid.** Acid obtained from copaiba.

**Metacre′sol.** $C_7H_8O_2$. A phenol which is an isomer of cresol. **M. an′itol**, combination of metacresol and anitin; a germicide. **M. bis′muth**, astringent and antiseptic. **M. cinnam′ic es′ter**, a mixture of metacresol and cinnamic acid in toluol; employed in tuberculosis.

**Metacye′sis** (*meta*, change, *kyesis*, pregnancy). Extra-uterine pregnancy in which the fœtus is at first in the uterus, but subsequently in some other place.

**Metadermato′sis** (*meta*, change, *derma*, skin). Abnormal development of the epidermis or epithelium.

**Metadihydroxyben′zene.** Resorcin.

**Metadioxyben′zene** or **Metadioxyben′zol.** Resorcin.

**Metadioxynaph′thalin.** Naphthoresorcin.

**Metad′rasis** (*meta*, over, *drasis*, action). Overexertion.

**Metafa′cial** (*meta*, behind, *facies*, face). Situated behind the face. **M. an′gle**, Serres' angle, formed by pterygoid processes with base of cranium.

**Metagal′lic acid.** Substance formed by action of a ferric salt on gallic acid.

**Metagas′ter** (*meta*, beyond, *gaster*, stomach). Alimentary canal of such embryonic animals as have a differentiated secondary intestine derived from the protogaster.

**Metagas′trula.** Gastrula differing from the usual type, as to segmentation and excavation. See *Gastrula*.

**Metagen′esis** (*meta*, beyond, *genesis*, generation). Alternate or changeable generation. Term proposed by Professor Owen to express the changes of form which one animal species undergoes in a series of successively produced individuals, extending from the one developed from the ovum to that which becomes the image or last perfected individual. This term he employs in contradistinction to metamorphosis, which he restricts to the change of form undergone by one and the same individual. See *Generation, alternate*, and *Parthenogenesis*.

**Metagenet′ic** or **Metagen′ic.** Relating to metagenesis.

**Metagum′mic acid.** Metarabic acid.

**Metakine′sis** (*meta*, beyond, *kineo*, to move). Metastasis; separation of the two parts of the diaster.

**Metakre′sol.** See *Cresol*.

**Met′al.** A class of elementary bodies, in general distinguished from others by considerable specific gravity, a particular splendor, almost total opacity, malleability and ductility, insolubility in water, and the property they have of ringing when struck and of conducting electricity. Metals have no effect, except of a mechanical nature, when taken into the stomach, unless they have already undergone, or undergo in the stomach, oxidation or union with an acid, when at times deleterious compounds may be formed. Copper coins, quicksilver, lead, have frequently been swallowed in the metallic state with impunity. Tin and mercury are the only metals which have been prescribed for a mechanical effect, the former as an anthelmintic, the latter, idly enough, in cases of fancied intussusception. **M. dar′cets**, alloys of tin, lead, and bismuth, having a very low fusing-point; used in dentistry.

**Metalbu′min.** Mixture of paralbumin and proteids, met with in urine and some ovarian cysts.

**Metal′dehyde.** A white, crystalline solid, a partial conversion of aldehyde, when in contact with acids or low temperature. Hypnotic.

**Metallac′ter.** Bacillus. **M. anth′racis** (Trevisan), Bacillus anthracis. **M. trem′ulus**, (Trevisan), Bacillus tremulus. **M. ul′na** (Trevisan), Bacillus ulna.

**Metallax′is.** Metabasis.

**Metallenterophthisis**, met-al-ent-er-o-te′sis (*metallon*, metal, *enteron*, intestine). Intestinal wasting or ulceration due to poisoning with metals.

**Metal'lic.** Relating to or possessing the characters of a metal. **M. tink'ling,** sound heard in cases of pneumothorax where communication with a large air-tube exists; resembles the striking of a distant small bell. **M. voice,** sound resembling that caused by striking glass, metal, or porcelain with a pin, or the sound of the keys of a musical box, heard on auscultation of the chest when the patient speaks; pathognomonic of pneumothorax.

**Metallodyn'ia** (*metallon,* metal, *odyne,* pain). Pain owing to the injurious influence of a metal, as lead, quicksilver, etc.

**Met'alloid** (*eidos,* form). Resembling a metal. The base of an alkaline earth, such as sodium. Any non-metallic element, such as oxygen, phosphorus, or iodine; of these latter there are thirteen known to exist.

**Metalloph'agy** (*metallon,* metal, *phago,* to eat). Variety of mania characterized by a desire to swallow metallic substances.

**Metallos'copy** (*metallon,* metal, *skopeo,* to view). Mode of determining by applying metals to the skin what metals will act most favorably in a therapeutic sense upon the individual. Treatment of disease by the application of metals to the part affected, or metallotherapy.

**Metallother'apy.** See *Metalloscopy.*

**Metal'lum.** Metal. **M. hæmatopoiët'icum,** iron.

**Met'amere** (*meta,* after, *meros,* part). One of a longitudinal series of parts which are serially homologous with one another; a protovertebra.

**Metamer'ic.** Relating to a metamere or metamerism.

**Metam'eride.** A metamere.

**Metam'erism.** The state of being divided into a longitudinal series of equal segments. Identity in chemical composition of two bodies coexisting with a difference in chemical action; isomerism.

**Metamethylphe'nol.** Metacresol.

**Metamor'phic** (*metamorphoo,* to transform). Relating to metamorphosis; changing or being changed; metamorphous.

**Metamorphine'.** An alkaloid obtained by Wittstein from a substance separated from the dregs of laudanum, probably the result of chemical change in morphine.

**Metamor'phism.** Metamorphosis.

**Metamorphop'sia** (*metamorphe,* transformation, *opsis,* vision). Aberration of the sense of sight, which transmits the image of imaginary objects, or distorts those of real objects. This affection sometimes depends on a slight opacity in the transparent parts of the eye—the cornea, crystalline, or vitreous humor—when it is symptomatic and of no consequence. At other times it occurs particularly in those who have been in the habit of constantly fixing their eyes on very brilliant or small bodies. The objects fancied to be seen are various. They are sometimes circular, perpetually moving; or shining, or black spots, cobwebs, insects, or pieces of wood—when they are often termed *muscæ* or *flocci volitantes,* and the condition *visus muscarum, scotomata, suffusio myodes, myoidopsia.* These appearances continue for a few days, or they may exist for life. Certain of them change their position and appear to be seated in the humors of the eye, in the vitreous humor more especially; hence the term *entohyaloid muscæ* applied to them.

**Metamorphop'sy.** Metamorphopsia.

**Metamor'phosing respira'tion.** An auscultatory phenomenon in which inspiration begins with bronchial sound and ends with a cavernous sound.

**Metamor'phosis.** Any alteration in appearance or composition. In pathology, conversion of constitutents of tissues, chiefly albuminous, into other material; often synonymous with degeneration. See *Metagenesis* and *Metabolism.* **M. adipo'sa,** fatty metamorphosis. **Albu'minous m.,** cloudy swelling. **Ca'seous** or **chees'y m.,** caseation. **Construc'tive m.,** anabolism. **Croup'ous m.,** change taking place among epithelial cells when they commence to become granular. **Descend'ing m.,** retrograde metamorphosis from decay and dissolution of the orpanic tissues and of the blood. **Destruc'tive m.,** katabolism. **Gran'ular albu'minous m.,** in this form of degeneration the molecules are found throughout the tissues, giving rise to cloudy swelling. **M. regre'diens,** histolysis. **Regres'sive, ret'rograde,** or **retrogres'sive m.,** descending m. **Tis'sue m.,** metabolism. **M. ventric'uli gelatinifor'mis,** gastromalacia. **Vis'cous m.,** massing together of blood plates in the process of formation of a thrombus.

**Metamorphot'ic.** Pertaining to metamorphosis.

**Metamor'phous.** Metamorphic, metamorphotic.

**Metamor'phy.** Metamorphosis.

**Metamyx'ia** (*meta,* beyond, *myxa,* mucus). A condition in which there is either excess (hypermyxia) or diminution (hypomyxia) in the secretion from the mucous membranes.

**Metanaph'thalin.** A hydrocarbon produced by dry distillation of some resins.

**Metaneph'ric.** Relating to the metanephros.

**Metaneph'ron** or **Metaneph'ros** (*meta,* behind, *nephros,* kidney). Back portion of the Wolffian duct, which develops into the kidney and ureter.

**Metanu'cleus.** The nucleus of the ovum after leaving the germinal vesicle.

**Metapep'tone.** See *Peptone.*

**Met'aphase.** Longitudinal division of a chromosome.

**Metaphenylendi'amine.** Poisonous base causing vomiting and diarrhœa, increased urinary secretion, etc.

**Metaphlogo'sis** (*meta,* beyond, *phlogosis,* burning). Inflammation in which the parts are engorged with blood, but accompanied with only slight induration.

**Metaphos'phate.** Salt formed by metaphosphoric acid uniting with a base.

**Metaphosphor'ic acid.** $HPO_3$. Monobasic acid, generally called glacial phosphoric acid.

**Metaph'renon** (*meta,* behind, *phren,* diaphragm). The back.

**Metaphysi'cian.** In a medical sense, one practising mind-cure.

**Metaph'ysis** (*meta,* over, *physis,* nature). Metamorphosis.

**Metapla'sia.** Change of adult tissue into a different form of adult tissue, as, for instance, of hyaline cartilaginous into osseous tissue.

**Met'aplasm.** Protoplasm in a state of retrograde metamorphosis.

**Metaplas'tic.** Relating to metaplasia. **M. bone,** bone developed from the periosteum.

**Met'aplex** or **Metaplex'us.** Choroid plexus.

**Metapneumonic,** met-ah-nu-mon'ic. Occurring after pneumonia; postpneumonic.

**Metapodia'lia.** Bones of metacarpus and metatarsus considered as one.

**Metapo'dium** (*podion,* a foot). Metatarsus.

**Metapoph'yses.** Mammillary processes of the vertebræ (Owen).

**Met'apore.** Foramen of Magendie.

**Metapsyche,** met-ap-si'ke. Metencephalon.

**Metapto'sis** (*meta,* over, *pipto,* to fall). Mutation; change in the form or seat of a disease; transformation.

**Metapyret'ic.** Occurring after fever, especially septic fever; *m. amputation,* for example.

**Metarabin'.** Gum from cherry, plum, and almond trees.

**Metarrhœ'a** (*rheo,* to flow). Reflux; transfer of a disease from without to within, or from one part to another.

**Metar'rhysis.** Metarrhœa.

**Metaschemat'isis** (*meta,* over, *schema,* form). Metaptosis.

**Metasche'matism.** Metaptosis of membrane.

**Metas'tasis** (*meta,* over, *histemi,* to place). Change in the seat of a disease, as in mumps, from the parotid gland to the testicle; also used in the same sense as metaptosis. **M. dolo′rum ad par′tum,** condition which may occur during labor, in which the contractions of the uterus stop abruptly and pains of a like character are felt in other parts of the body. **M. lac′tis,** galactoplania; phlegmasia dolens.

**Metastat′ic.** Belonging or relating to metastasis.

**Metastear′ic acid.** Margaric acid.

**Metaster′num** (*meta,* behind, *sternon,* breast). Ensiform cartilage.

**Metasyn′crisis** (*meta,* after, *synkrino,* to join). Recomposition of bodies after their momentary dissolution; recorporation.

**Metasyncrit′ic.** Belonging or relating to metasyncrisis. Medicines were formerly so called to which was attributed the virtue of producing regeneration of the body or of some of its parts.

**Metasyph′ilis.** Hereditary syphilis, more constitutional than local.

**Metatar′sal.** Relating or belonging to the metatarsus. **M. ar′tery** arises from the arteria dorsalis tarsi, passes transversely over the back of the foot, and furnishes at its convexity, which is anterior, three branches, called arteriæ interosseæ dorsales pedis; these branches are distributed in the interosseous spaces. **M. articula′tions** are those resulting from the junction of the metatarsal bones with each other; are strengthened behind by dorsal and plantar ligaments, and before by a transverse metatarsal ligament, which is plantar and has the greatest analogy to the inferior transverse metacarpal ligament. **M. bones** are five in number, and are distinguished as the *first, second, third, fourth,* etc., reckoning from the outer side. **M. phalan′ges** are the first phalanges of the toes; so called because they are united to the metatarsus. **M. row,** of the bones of the tarsus, is the second row or that contiguous to the metatarsus, comprehending the cuboid and three cuneiform bones; some add the scaphoid.

**Metatarsal′gia** (*algos,* pain). Pain in the metatarsus.

**Metatarse′us.** See *Abductor minimi digiti pedis.*

**Metatar′so-infraphalan′gian.** Subphalangeus.

**Metatarsolatera′les supraplanta′res.** See *Interossei pedis.*

**Metatarsolatera′lis.** Situated on the outer metatarsal side.

**Metatarsophalange′us latera′lis planta′ris.** One of the interossei plantares. **M. transver′sus hallu′cis,** transversus pedis.

**Metatarsophalan′gian** or **Metatarsophalan′geal.** Relating to the metatarsus and phalanges. **M. articula′tions** are formed by the bones of the metatarsus and the corresponding phalanges. They bear the greatest analogy to the *metacarpophalangian articulations.*

**Metatarsosubphalange′us hallu′cis.** Adductor hallucis. **M. min′imi dig′iti,** adductor minimi digiti pedis. **M. pol′licis,** adductor hallucis.

**Metatar′sus** (*meta,* after, *tarsos,* tarsus). Part of the foot situated between the tarsus and toes, corresponding with the metacarpus; composed of five parallel bones, one to each toe. Like the metacarpal bones, they are developed from two points of ossification.

**Metate′la** (*meta,* behind, *tela,* tissue). Posterior choroid membrane.

**Metathal′amus.** The geniculate bodies, external and internal.

**Metath′esis** (*meta,* after, *tithemi,* to place). Transposition; operation by which a morbific agent is removed from one place to another, where it may produce less disturbance in the exercise of the functions; as, for example, in the operation of depressing cataract, or when a calculus in the urethra is pushed back into the bladder. Also derivation.

**Metathet′ic.** Relating to metathesis.

**Metato′cia** (*meta,* beyond, *tokos,* birth). Preternatural labor.

**Metatolu′ic acid.** Toluic acid.

**Metatro′phia.** Atrophy due to defective nutrition.

**Metazo′a** (*meta,* after, *zoe,* life). Animals whose ova undergo division.

**Metazo′an.** Relating to the metazoa.

**Metch′nikoff′s lar′va.** Period in embryonic life following that of the inclusion of the blastula.

**Metel′la.** Nux vomica.

**Meten′cephal** or **Metenceph′alon** (*meta,* after, *enkephalos,* brain). After-brain. One of the fundamental parts—*epencephalon* and *metencephalon*—of which the posterior primary cerebral vesicle is the basis. The former includes the cerebellum, pons Varolii, and the anterior part of the fourth ventricle; the latter, the medulla oblongata, fourth ventricle, and auditory nerve.

**Metensomato′sis** (*soma,* body). Incorporation.

**Me′teorism** or **Meteoris′mus.** Tympanites. **Myogen′ic m.,** meteorism due to atonic condition of the abdominal wall. **Paralyt′ic m.,** meteorism caused by paralysis affecting the intestinal muscular layer.

**Meteoris′tic.** Tympanitic.

**Meteoriza′tion.** Production of gas in the cavity of the abdomen.

**Meteorol′ogy** (*meteoros,* a meteor, *logos,* discourse). The science whose object is the knowledge of the origin, formation, changes, etc., of atmospheric phenomena. The state of the atmosphere has a most important bearing upon the health of animals. The barometer, thermometer, and hygrometer are the instruments used to detect the varying weight or pressure, temperature, and moisture.

**Metep′icœle.** The fourth ventricle.

**Me′ter** (*metron,* a measure). Suffix to words denoting a measure, as in *barometer, pleximeter,* etc. A measure equal to 39.371 inches; see *Weights and Measures.*

**Me′ter-lens.** Lens whose focal distance is one meter; used by oculists.

**Methacetin′.** Crystalline substance derived from phenol. Crystallizes in colorless scales. Antipyretic, analgesic, sometimes violently sudorific.

**Methæmachy′mia** (*meta,* with, *haima,* blood, *chyo,* to pour). Transfusion.

**Methæ′mata.** Capillary system of vessels in which the blood undergoes the change from venous to arterial, and conversely.

**Methæmoglo′bin.** A modified form of hæmoglobin which does not give up its oxygen in a vacuum or suffer its displacement by carbon monoxide; it occurs in one stage of the transformation of hæmoglobin to hæmatin, and is found in poisoning by potassium chlorate, various synthetic antipyretics, ether, etc.

**Methæmoglobinæ′mia.** The occurrence of methæmoglobin in the blood.

**Methæmoglobinu′ria.** Excretion of methæmoglobin in the urine

**Methæmoglob′ulin.** Result of change in hæmoglobin when left to itself or when carbonic acid gas is passed through it. May be seen in old extravasations of blood.

**Meth′al.** Alcohol from spermaceti; myristic alcohol.

**Meth′ane.** $CH_4$. Marsh gas; after-damp.

**Meth′enyl chlo′ride.** Chloroform.

**Metheth′yl.** A combination of ethyl chloride, chloroform, and methyl chloride. A local anæsthetic.

**Methilep′sia.** Methomania.

**Meth′od** (*meta,* with, *hodos,* way). The way in which anything is done or conducted; mode, manner. **Howard′s m., Mariano′s m., Sylvester′s m.,** etc., see the proper names. **Antisep′tic m.,** method introduced in surgery by Sir Joseph Lister; see *Surgery, antiseptic,* and *Antiseptic.* **Graph′ic m.,** see *Graphic.* **Numer′ical m.,** method of clinical observation devised by Louis; consists in recording every case and every symptom of a case numerically, so as to ensure, as far as practicable, accuracy of observation, and to enable us, by the analysis and collation of such facts, to deduce general laws and conclusions. Also the application of numbers to the study of disease.

**Meth′odists.** Sect of physicians whose doctrine was in vogue after that of the Empirics and Dogmatists toward the end of the first century.

**Methogastro′sis** (*methe,* drunkenness, *gastrosis,* disease of the stomach). Disease of the stomach from excessive use of alcohol.

**Methoma′nia** (*methe,* drunkenness). Irresistible desire for intoxicating substances. Dipsomania.

**Meth′onal.** Dimethylsulphone dimethylmethane; hypnotic. Its preparation is like that of sulphonal, except that methyl mercaptan is used instead of ethyl mercaptan.

**Meth′onome.** Instrument used for correction of stuttering.

**Methox′ycaffeine′.** Derivative of alkaloid caffeine from coffee and tea plants and Paullinia sorbilis. White substance; a weak narcotic used in neuralgia and migraine; also locally anæsthetic.

**Methozin′.** Antipyrin.

**Meth′yl.** Hypothetical radical, $CH_3$, of methylic alcohol. **M. acetan′ilid,** exalgin. **M. al′cohol,** wood alcohol. **M. aurin′,** rosolic acid. **M. ben′zol,** toluene. **M. blue,** pyoktanin. **M. bro′mide,** liquid, $CH_3Br$, with odor like chloroform. **M. chlo′ride,** $CH_3Cl$, prepared by heating together wood-spirit, common salt, and sulphuric acid, and collecting the evolved gas over water. A less manageable anæsthetic than methylene bichloride. **M. cy′anide,** acetanitril; a liquid having sedative action combined with action of the class. **M. e′ther,** see *Ether.* **M. gal′late,** gallicin. **M. glycol′ic acid-phenetidin′,** kryofin. **M. glyoxalidin′,** see *Lysidin.* **M. green,** anilin dye resulting from action of methyl derivatives on rosanilin. **M. guanidin′,** a toxic ptomain, result of oxidation of creatin and creatinin. **M. hydantoïn′,** $C_4H_6N_2O_2$, leucomain extracted from fresh meat. **M. hy′drate,** wood alcohol. **M. hy′dride,** marsh gas. **M. i′odide,** methylene iodide; colorless liquid obtained by distilling together phosphorus 1, iodine 8, and wood-spirit 12 or 15 parts. When added to other substances, as strychnine, brucine, morphine, thebaine, codeine, etc., it forms methyl iodides, as iodide of methyl-strychnine, iodide of methyl-brucine, etc. The poisonous properties of each are greatly diminished by such additions. Some of them possess the physiological action of curare. **M. ketotrioxyben′zene,** gallacetophenone. **M. loretin′,** see *Loretin.* **M. mercap′tan,** one of the intestinal gases. **M. ox′ide,** methylic ether. **M. oxybenzo′ic acid,** anisic acid. **M. para-am′idome′taoxyben′zoate,** orthoform. **M. paraoxybenzo′ic acid,** anisic acid. **M. phenacetin′,** prepared by action of methyl iodide on phenacetin sodium; hypnotic. **M. phe′nate,** anisol. **M. phe′nyl acet′amide,** exalgin. **M. protocatechu′ic al′dehyde,** see *Vanillin.* **M. pyridin′ sulphocy′anate,** a salt derived from treating quinolin with sulphocyanic acid; active antiseptic; used in weak solution in gonorrhœa. **M. sal′icylate** (Ph. U. S.), a synthetic oil of wintergreen (see *Methylsalicylic acid*), a slightly yellowish liquid; used in rheumatism; dose, ♏x–xxx (0.65–2.0). **M. sal′ol,** paracresotonic phenylester; used in rheumatism. **M. spir′it,** alcohol. **M. theobromine′,** caffeine. **M. uram′ine,** m. guanidin. **M. ure′thane,** urethylan, from action of cyanogen chloride on methyl alcohol; hypnotic. **M. vi′olet,** anilin dye for staining bacteria, pyoktanin, germicidal. **M. xan′thin,** heteroxanthin; amorphous or microcrystalline base, occurring in urine.

**Meth′ylal.** $CH_2(OCH_3)_2$. Methylene dimethyl ether, colorless liquid, soluble in water, alcohol, or ether, obtained from distillation of methylic alcohol, sulphuric acid, and manganic oxide; has hypnotic and anæsthetic properties, and is used hypodermically as an antidote to poisoning by strychnine. Prescribed in mental diseases, delirium, psychoses, insomnia. Successful remedy administered subcutaneously in delirium tremens.

**Methylam′ine.** Colorless gas, $NH_2CH_3$, possessing a strong ammoniacal odor, and strongly resembling ammonia; burns when ignited. Ptomain in putrefying fish.

**Meth′ylate.** Compound of methyl alcohol with a base.

**Meth′ylated spir′it.** Mixture of alcohol containing 10 per cent. of methylic alcohol; the addition of the latter ingredient makes it unfit for drinking. Used in chemistry and the arts as a solvent.

**Methyla′tion.** Process of mixing with methyl alcohol.

**Methylben′zol.** Toluene.

**Meth′ylconine′.** Alkaloid of conium, found in conium of commerce.

**Meth′ylendimeth′yle′ther.** Methylal.

**Meth′ylene.** A bivalent hydrocarbon radical, $CH_2$, existing in compounds, but not free. **M. bichlo′ride,** chlormethyl; a colorless liquid with an odor of chloroform, of a sp. gr. 1.344, introduced to notice by Dr. B. W. Richardson, of London; made by exposing to sunshine in a glass globe chlorine and gaseous chloride of methyl and condensing, or by mutual action of methyl alcohol and hydrochloric acid. It produces insensibility without previous excitement; the quantity used averages about a drachm every five minutes. **M. bihy′drate,** wood alcohol. **M. blue,** coal-tar color of deep blue, used in dyeing, and extensively for staining bacteriological specimens; analgesic when used internally in rheumatism, neuralgia, migraine, intermittent fever, tuberculosis, etc.; dose, gr. j-iij (0.065-0.2). Externally it is used in scrofulous glands of the neck, tuberculosis of the pharynx, etc. **M. chlo′ride,** $CH_2Cl_2$, prepared by action of chlorine on marsh gas, or by reduction of chloroform, in alcoholic solution, by zinc and hydrochloric acid. Colorless liquid, with odor like that of chloroform, for which it was suggested as a substitute, especially in gynecological practice, although serious nervous and tetanic effects have been reported from its use. Another preparation under the same name, a mixture of ethyl ether and methylene chloride, has been used as an anæsthetic, but it is not safe thus employed. Under the same name a mixture of chloroform and methyl chloride has been similarly employed. **M. dichlo′ride,** m. bichloride. **M. dii′odide,** $CH_2I_2$, anæsthetic and hypnotic liquid. **M. e′ther,** mixture of methylene bichloride and ethylic ether, an anæsthetic.

**Methylguanidin′.** $C_2H_7N_3$. Poisonous ptomain, product of oxidation of creatin and creatinin from decomposing horseflesh and from mixed cultures in beef broth.

**Methylhydantoïn′.** Leucomain existing in fresh muscle.

**Methyl′ic.** Relating to or containing methyl. **M. al′cohol, M. e′ther,** etc., methyl alcohol, methyl ether, etc.

**Methylpelletierine′.** Alkaloid discovered by Tanret in the bark of pomegranate.

**Methylphenylke′tone.** Hypnone.

**Methylpropyloxyben′zol.** Thymol.

**Methylpy′rocatechin′.** Guaiacol.

**Methylsalicyl′ic acid.** Principal ingredient of wintergreen oil (oleum gaultheriæ).

**Methyluram′ine.** Methylguanidin.

**Methysticin′.** Crystalline principle in Piper methysticum.

**Methystophyl′lum glau′cum.** South African plant, ord. *Amyridaceæ.* Infusion of leaves is pleasant to the taste, and is used in bronchitis, asthma, and other thoracic diseases.

**Me′tis.** See *Mulatto.*

**Metoa′rion.** Corpus luteum.

**Metodonti′asis** (*meta,* after, *odontiasis,* dentition). Second dentition. Faulty development of the teeth.

**Metœce′sis** (*oikesis,* dwelling). Displacement.

**Metœ′cious.** Heterœcious.

**Metœ′cism.** Heterœcism.

**Metop′agus** (*metopon,* front, *pegnymi,* to fix). Monstrosity in which twins are united by the head.

**Metopantral′gia.** Pain in the frontal sinuses.

**Metopantri′tis.** Inflammation of the frontal sinuses.

**Metopan′tron** or **Metopant′rum** (*metopon*, forehead, *antron*, cavern). Frontal sinus.

**Metop′ic** (*meta*, between, *ops*, eye). Of or relating to the forehead. **M. anteroposte′rior diam′eter,** diameter from the metopion to the occipital point. **M. point,** metopion. **M. su′ture,** frontal suture.

**Meto′pion** (*metopios*, pertaining to the forehead). A point in the median line between the frontal eminences. Also Bubon galbanum.

**Metopodyn′ia** (*metopon*, forehead, *odyne*, pain). Frontal neuralgia.

**Met′opon** (*meta*, between, *ops*, eye). Forehead; frontal bone.

**Metopopa′gia** (*metopon*, forehead, *pagios*, fixed). Monstrosity in which there is a union of the foreheads of two fœtuses and but one cranial cavity exists; the bodies are separate, and each individual is provided with an umbilical cord.

**Metox′enous.** Heterœcious.

**Me′tra.** Uterus.

**Metracine′sis** (*metra*, uterus, *a*, priv., *kineo*, to move). Feebleness of labor pains.

**Me′træ** (pl. of *metra*, womb). Secundines.

**Metræ′mia** (*metra*, uterus, *haima*, blood). Congested condition of the uterus.

**Metræmorrha′gia.** Metrorrhagia.

**Metral′gia** (*metra*, uterus, *algos*, pain). Pain in the uterus.

**Metral′gic.** Relating to metralgia.

**Metranæ′mia.** Anæmic condition of the uterus.

**Metranas′trophe.** Inversion of the uterus.

**Metran′eurysm.** Morbid dilatation of the uterus.

**Met′ratome.** Hysterotome.

**Metrato′nia.** Atony of the uterus.

**Metratre′sia.** Imperforation of the os uteri.

**Metratro′phia.** Atrophy or want of development of the uterus.

**Metraux′e.** Hypertrophy of the uterus.

**Me′tre.** Measure equal to about 39⅓ inches; see *Weights and Measures.* **M. an′gle,** angle formed by the eyes when converging on a point one metre distant; this is a basis for estimating the amount of deviation in the eye. **M. lens,** dioptre.

**Metrechos′copy** (*metreo*, to measure, *echeo*, to sound, *skopeo*, to look at). The practice of mensuration, auscultation, and inspection.

**Metrecta′sia** (*ektasis*, dilatation). Dilatation of the womb.

**Metrec′tomy** (*ektome*, excision). Excision of the uterus.

**Metrecto′pia** or **Metrec′topy** (*ektropos*, displaced). Displacement of the womb.

**Metrelco′sis** (*helkos*, ulcer). Ulceration of the uterus.

**Metremphrax′is** (*emphrasso*, to obstruct). Obstruction of the womb or of the vessels of the womb—*infarctus uteri.* Name under which some authors have confounded chronic inflammation of that viscus and the different degenerations to which it is exposed.

**Metremphyse′ma.** Physometra.

**Metrepidem′ia.** Epidemic puerperal sepsis.

**Me′tria** (*metra*, uterus). Puerperal fever.

**Met′ric.** Having the metre as unit of measurement. **M. sys′tem,** decimal system of weights and measures, used in scientific work on account of its exactness; see *Weights and measures.*

**Metriopath′ia** (*metrios*, tempered, *pathos*, affection). State of an individual whose passions are temperate.

**Metri′tis.** Inflammation of the uterus or womb. Characteristic symptoms of this affection are pain, swelling, and tenderness in the hypogastric region, with heat, pain, and tenderness of the os uteri, vomiting, smallness and frequency of pulse. It occurs most frequently after delivery, *puerperal metritis,* when there is generally suppression of the lochial discharge, *lochiometritis.* Acute inflammation of the womb, seated in its internal membrane, is called *endometritis* or catarrhal inflammation of the womb. It known by the discharge of a clear, stringy fluid per vaginam, preceded by pains, which, from the hypogastric region, shoot to the thighs, groins, etc., with more or less fever. It requires energetic and prompt treatment. *Chronic metritis* sometimes succeeds the acute; to it must be referred the indurations observed in the uterus, and many of the leucorrhœal discharges to which women are subject. Chronic endometritis intensified at the menstrual period has received the name of *menstrual metritis.* Inflammation of the substance or parenchyma of the uterus is called *parenchymatous metritis, idiometritis.* **Cer′vical parenchy′matous m.,** parenchymatous inflammation of the cervix uteri. **Corpo′real parenchy′matous m.,** parenchymatous metritis of the body of the uterus. **Exanthem′atous m.,** m. complicating one of the exanthemata. **Gan′grenous m.,** gangrene of a puerperal character involving the uterus. **M. gravida′rum,** metritis in pregnant women. **Hemorrhag′ic m.,** metritis in which a disposition to hemorrhage exists. **Idiopath′ic puer′peral m.,** metritis often caused by extensive laceration of the cervix uteri. **Men′strual m.,** see *Metritis.* **Mu′cous m.,** endometritis. **Parenchy′matous m.,** see *Metritis.* **Phleg′monous m.,** puerperal metritis in which the walls of the uterus are œdematous. **Puer′peral m.,** metritis occurring after birth of a child or coexisting with puerperal fever. **M. rheumat′ica,** rheumatic inflammation of the uterus. **M. sep′tica,** putrescency or gangrene of the uterus. **M. veno′sa,** see *Phlebitis.*

**Metro-arc′tia.** Coarctation of the uterus.

**Metroblennorrhœ′a.** Uterine leucorrhœa.

**Metrobotry′tes** (*metra*, uterus, *botrys*, cluster of grapes). Cauliflower excresence of the uterus.

**Metroc′ace** (*metra*, uterus, *kakos*, evil). Gangrene of the uterus.

**Metrocamp′sis** (*metra*, uterus, *kampsis*, bending). Oblique position of the uterus.

**Metrocarcino′ma.** Cancer of the uterus.

**Metrocatar′rhus.** Leucorrhœa uteri. **M. benig′nus,** uterine leucorrhœa. **M. malig′nus,** uterine gonorrhœa.

**Met′rocele.** Hysterocele.

**Metrocel′ides** (pl. of metrocelis) (*meter*, mother, *kelis*, mark). Nævus.

**Met′roclyst** (*metra*, uterus, *klyzo*, to wash out). Instrument for making injections into cavity of the uterus.

**Metrocol′pocele** (*kolpos*, vagina, *kele*, hernia). Prolapse of uterus into the vagina.

**Metrocysto′sis.** Morbid condition of the womb, in which cysts are formed in that organ.

**Me′trocyte** (*meter*, mother, *kytos*, cell). A mother cell.

**Metrodynamom′eter.** Hysterodynamometer.

**Metrodyn′ia** (*odyne*, pain). Pain in the uterus.

**Metrodysto′cia** (*metra*, uterus, *dys*, with difficulty, *tokos*, childbirth). Difficult delivery, caused by unfavorable condition of uterus.

**Metroecta′sia.** Metraneurysm.

**Metroepidem′ia.** Metrepidemia.

**Metrohæ′mia.** Hyperæmia of the uterus.

**Metroleucorrhœ′a.** Uterine leucorrhœa.

**Metrolox′ia** (*loxos*, oblique). Oblique position of the uterus.

**Metrolymphangi′tis.** Lymphangitis of the uterus.

**Metromalaco′ma** or **Metromalaco′sis** (*metra*, uterus, *malakos*, soft). Softness or softening of the uterus.

**Metroma′nia.** Nymphomania.

**Metrom′eter.** Instrument for measuring the uterus.

**Metrom′etry.** Measurement of the uterus.

**Metromyz′eus** (*metra*, uterus, *myzo*, to suck). Exhausting-syringe, applied to the os uteri to make suction in cases of amenorrhœa.

**Metronanodes,** met-ron-an-o′dees (*metra*, uterus, *nanodes,* dwarf-like). Possessing an exceedingly small uterus.

**Metron′cus** (*onkos,* tumor). Tumor of the uterus.

**Metroneu′ria.** Nervous affection of the womb.

**Metroneuro′sis.** Neurosis arising from uterine affection.

**Metroparal′ysis.** Paralysis of the uterus.

**Metropath′ic.** Relating to uterine affections.

**Metropath′ia** or **Metrop′athy** (*pathos,* affection). Uterine disease.

**Metroperitoni′tis.** Inflammation of the uterus and peritoneum.

**Metrophlebi′tis** (*phleps,* vein). Inflammation of the veins of the uterus. See *Phlebitis.* **M. puerpera′lis,** puerperal fever.

**Metrophlegmy′men** (*phlegma,* mucus, *hymen,* membrane). Mucous membrane of the uterus.

**Metrophlegmymeni′tis.** Endometritis.

**Metrophlogo′sis.** Inflammation of the uterus.

**Met′rophore.** A form of uterine pessary.

**Metrophy′ma** (*phyma,* swelling). Tumor of the uterus.

**Metropleth′ora** (*metra,* uterus, *plethora,* fulness). Congestion or hyperæmia of the uterus.

**Metropol′ypus.** Polypus of the uterus.

**Metropropto′sis** or **Metropto′sis.** Prolapsus uteri.

**Metrorrha′gia** (*metra,* uterus, *rhegnymi,* to break forth). Uterine hemorrhage, flooding. Effusion of blood from the inner surface of the uterus, either at the menstrual or other period, but in a greater quantity than proper. Uterine hemorrhage may be caused by those influences which produce hemorrhage in general. It happens, however, more frequently during pregnancy and during or after delivery, when the vascular system of the uterus is so circumstanced as to favor its occurrence more than at other times. The termination of metrorrhagia is usually favorable. Should it, however, be very copious or frequently recur, or should it happen to a great extent after delivery, death may take place very speedily—and in some cases without the discharge being perceptible—constituting *internal hemorrhage.* **Exter′nal m.,** metrorrhagia, in which blood escapes per vaginam. **M. gravida′rum,** metrorrhagia occurring in pregnant women. **Inter′nal m.,** m. in which blood flows into the gravid uterus, due to the placenta being partly detached.

**Metrorrheu′ma.** Rheumatism of the uterus.

**Metrorrhex′is** (*rhexis,* rupture). Rupture of the uterus.

**Metrorrhœ′a** (*rheo,* to flow). Protracted discharge of fluid from the uterus.

**Metrortho′sis** (*orthos,* straight). Replacement of the uterus in an improved or normal position after displacement.

**Metrosalpingi′tis** (*metrosalpinx,* Fallopian tube). Inflammation of the Fallopian tube.

**Metrosalpingorrha′gia.** Hemorrhage from the Fallopian tubes.

**Metrosalpingorrhex′is.** Rupture of a Fallopian tube.

**Metrosal′pinx.** Fallopian tube.

**Metroscir′rhus,** met-ro-skir′rus (*metra,* uterus, *skirrhos,* scirrhus). Scirrhous cancer of the uterus.

**Metroscolio′ma** or **Metroscolio′sis** (*skolios,* oblique). Oblique position of the uterus.

**Met′roscope** (*metra,* uterus, *skopeo,* to view). Instrument to aid in examination of the uterus; also one for listening to the sounds of the heart of the fœtus in uterogestation when they are imperceptible through the walls of the abdomen. The extremity of the instrument is introduced into the vagina and applied against the neck of the uterus.

**Metros′copy** (*metra,* womb, *skopeo,* to examine). Examination of the womb.

**Metrosid′eros torment′osa.** Christmas tree; native New Zealand plant, bark of which is rich in tannin and valuable in dysentery. **M. ve′ra,** true iron tree of the Moluccas, bark of which is used in diarrhœa.

**Metrosphongio′ma** (*metra,* womb, *sphongia,* sponge). Fungous tumor of the womb.

**Metrostax′is** (*metra,* uterus, *stax,* a drop). Uterine *epistaxis.* Slight but persistent discharge of blood from the uterus at other than a menstrual period.

**Metrosteno′sis** (*stenosis,* narrowing). Contracted condition of the cavity of the uterus.

**Metrostere′sis** (*steresis,* privation). Extirpation or absence of the uterus.

**Metrosynize′sis** (*synizesis,* running together). Morbid adhesion of the uterus to adjacent parts.

**Met′rotome** (*tome,* incision). Instrument for incision or division of the uterus.

**Metrot′omy** (*tome,* section). Hysterotomy.

**Metrotuber′culum** or **Metrotylo′ma.** Outgrowth from the womb of a nodular and fungous character.

**Me′tro-ure′throtome** (*metron,* measure, *urethra, tome,* incision). Instrument for incising a stricture of the urethra to any desired depth.

**Metrox′ylon.** Genus of palms; the source of sago.

**Metrydrorrhœ′a** (*metra,* womb, *hydrorrhoia,* watery flow). Watery discharge from the uterus.

**Metrymeni′tis** (*metra,* womb, *hymen,* membrane). Endometritis.

**Metryperæ′mia.** Hyperæmia of the uterus.

**Metryperæsthe′sia.** Hypersensitiveness of the uterus.

**Metrypercine′sis** or **Metryperkine′sis** (*hyper,* excess, *kinesis,* motion). Excessive activity of labor-pains.

**Metryperpath′ia** (*metra,* uterus, *hyper,* excessive, *pathos,* disease). Uterine disease of a severe type.

**Metrypertro′phia.** Hypertrophy of the womb.

**Meu.** Æthusa meum.

**Me′um.** Æthusa meum. **M. anethifo′lium,** Æthusa meum. **M. athaman′ticum,** Æthusa meum. **M. fœnic′ulum,** Fœniculum vulgare.

**Meunier's′ sign.** Progressive daily loss of weight for about a week after infection with measles.

**Me′vium.** Syphilis.

**Mew.** Meum athamanticum.

**Mex′ican.** Pertaining to Mexico. **M. el′emi,** product said to be obtained from Amyris elemifera. **M. goose′foot,** Chenopodium ambrosioides. **M. snake′root,** Asclepiodora decumbens; employed against snake-bite. **M. tea,** herb of Chenopodium ambrosioides; tonic and stomachic.

**Mey′er's disease′.** Enlargement of the pharyngeal tonsil. **M.'s rings,** rings noticed around a flame in front of a dark background.

**Mey′er-Woeh′ler rings.** Meyer's rings.

**Mey′nert's bun′dle.** M.'s fasciculus. **M.'s claus′tral forma′tion,** stratum of cells situated in the lamina corticalis of the brain. **M.'s com′missure,** transverse fibres in the tuber cinereum uniting the two hemispheres; they pass from the floor of the third ventricle through the optic tracts to the pes cruris. **M.'s fascic′ulus,** band of white fibres passing from the ganglion habenulæ to the ganglion interpedunculare, fasciculus retroflexus. **M.'s fi′bres,** collection of nerve-fibres between the anterior quadrigeminal body and the nuclei of the eye muscles. **M.'s field,** network of the pons Varolii. **M.'s gan′glion,** the basal optic ganglion, see *Ganglion.* **M.'s foun′tain decussa′tion,** formed by crossing of fibres under the posterior longitudinal fasciculus. **M.'s lay′er,** layer of cells in the cerebral cortex.

**Mey′net's nodos′ities.** Hard nodes or growths occasionally found in joints, tendons, etc., especially in rheumatism.

**Mezcal′.** Strong, intoxicating liquor, distilled from pulque, the fermented juice of Agave americana.

**Mezereïn′.** Active principle of Daphne mezereum.

**Meze′reon** or **Meze′reum.** The official (Ph. U. S.) name for the bark of Dalphne mezereum and other species of daphne. It is diuretic and diaphoretic, and used in rheumatism, syphilis, and certain diseases of the skin, and externally as an application to sluggish ulcers. The official preparation is *extrac'tum meze'rei flu'idum;* dose, ♏v (0.32) diluted. Daphne mezereum.

**Mezi'za.** The practice of sucking the wound after ritual circumcision.

**Mez'quite gum.** Mesquite gum.

**Miam'ma, Mian'sis,** or **Mia'ria.** Miasm.

**Mi'asm** or **Mias'ma** (*miasma*, stain or contaminate). The word *miasm* has, by some, been employed synonymously with contagion. It is now used more definitely for any emanation, either from the bodies of the sick, or from animal and vegetable substances, or from the earth, especially in marshy districts (*marsh poison*), which may exert a morbid influence on those who are exposed to its action. It was formerly believed that malarial fevers were due to emanations from marshy regions, hence the term is often used even yet as synonymous with malaria.

**Miasmat'ic.** Belonging or relating to miasm; paludal, malarial.

**Miasmoconta'gious.** Propagated either by miasmatic or contagious influences or a combination of both.

**Mi'ca.** A mineral cleaving in thin laminæ or plates; used as substitute for glass in places where it is exposed to great heat. **M. pa'nis,** bread crumb.

**Mica'ceous.** Sparkling like bits of mica, crumby or scaly.

**Mica'tion** (*mico*, to move quickly). Rapid winking. **M. cor'dis,** systole.

**Micel'la** (a small crumb). Tagma; a collection or aggregation of molecules.

**Miche'lia cham'paca** (after P. A. Micheli, a Florentine botanist). Champaca, ord. *Magnoliaceæ.* Oriental tree, much prized for the odor and beauty of its flowers. The oily infusion of the flowers is employed in the Moluccas in headache. **M. kiso'pa,** tree, native of the Himalayas, has same properties as Michelia champaca. **M. monta'na,** tree, native of India, has same properties as cascarilla.

**Michel'i's diplococ'cus.** Micrococcus occurring in a form of contagious conjunctivitis. **M.'s paste,** asbestos and concentrated sulphuric acid, in proportion of 1 : 3.

**Micracous'tic.** See *Microcoustic.*

**Micraine'.** See *Migraine.*

**Micrallan'toid.** Provided with a small allantois.

**Micranat'omy.** Minute anatomy; see *Anatomy.*

**Micran'dra.** Ord. *Euphorbiaceæ,* native of Brazil. Inspissated juice is caoutchouc.

**Micran'gia** (*mikros*, small, *angeion*, a vessel). Capillary vessels.

**Micrangiop'athy.** Disease of the capillary vessels.

**Micrencephal'ium** (*mikros*, small, *enkephalos*, encephalon). Cerebellum.

**Micrenceph'alous.** Having a small brain.

**Micrenceph'alum.** Cerebellum.

**Micrencra'nus** (*mikros*, small, *enkranion*, cerebellum). Name given to skulls with a cerebellar sector of 8.5° to 15°.

**Micristol'ogy** (*mikros*, small, *histos*, tissue, *logos*, discourse). Science treating of minutest organic tissues; histology.

**Micro-** (*mikros*, small). In composition, small.

**Micro-anat'omy.** Microscopic anatomy.

**Microbacte'ria** (*mikros*, small, *bacterium*). Bacteria having elliptical or short cylindrical cells.

**Microbæ'mia.** Presence of microbes in the blood.

**Mi'crobe** (*mikros*, small, *bios*, life). Term applied to minute forms of life. Microorganisms, animal or vegetable, but usually denoting the latter. The term *microzoa* distinguishes microscopic animal life from microscopic vegetable forms—*microphyta.* See *Bacillus, Bacteria, Micrococci, Spirilla, Streptococci,* etc.

**Micro'bial.** Microbic.

**Micro'bian** or **Micro'bic.** Relating to microbes.

**Microbici'dal.** Destructive to microbes.

**Micro'bicide** (*mikros*, small, *bios*, life, *cædo*, to kill). Destructive of microbes; agent producing such destruction.

**Microbicidin'.** Sodium naphtholate; antiseptic.

**Microbiohæ'mia** (*mikros*, small, *bios*, life, *haima*, blood). Term applied to diseased conditions due to presence of microorganisms in the blood.

**Microbiol'ogist.** One skilled in microbiology.

**Microbiol'ogy** (*logos*, discourse). Science of microorganisms.

**Micro'bion.** Microbe.

**Microbiopho'bia** (*phobos*, fear). Morbid dread of microbes.

**Micro'bioscope.** Instrument (as microscope) for study of microbes or of minute living tissues.

**Mi'crobism.** Condition indicating presence or influence of a microbe or microbes. **La'tent m.,** presence of bacteria in the skin, lymphatic glands, and blood, without marked symptoms of systemic infection.

**Mi'croblast** (*mikros*, small, *blastos*, sprout). Small blood corpuscle which is in an undeveloped condition.

**Microblepha'ria** or **Microbleph'arism.** Microblepharon.

**Microbleph'aron** (*mikros*, small, *blepharon*, lid). Condition in which the eyelids are unusually small.

**Microbleph'ary.** Microblepharon.

**Microbra'chia.** Congenital smallness of the arms.

**Microbra'chius** (*mikros*, small, *brachion*, arm). One with congential smallness of the arms.

**Microbrachycepha'lia.** Condition in which brachycephalia and microcephalia coexist.

**Microcar'dia.** Congenital smallness of the heart.

**Microcau'lia.** Condition in which a very small penis exists.

**Microcau'lus** (*mikros*, small, *kaulos*, penis). One with a small penis.

**Microcepha'lia** (*mikros*, small, *kephale*, head). Abnormal smallness of the head.

**Microcephal'ic** or **Microceph'alous.** Having an abnormally small head or a small, imperfect cranium.

**Microceph'alism.** Microcephalia.

**Microceph'alon.** Abnormal smallness of head.

**Microceph'alous.** Microcephalic.

**Microceph'alus.** A microcephalic monster.

**Microceph'aly.** Microcephalia.

**Microchelia,** mi-kro-ke'le-ah (*mikros*, small, *cheilos*, lip). Abnormal smallness of the lips.

**Microchem'ical.** Relating to microchemistry.

**Microchem'istry.** Chemical examination of very minute or microscopic objects. Investigation of delicate and exact chemical reactions by aid of the microscope.

**Microcidin'.** $C_{40}H_7ONa$. A sodium beta-naphthol. Used externally as an antiseptic, internally as an antipyretic and antiseptic.

**Micrococ'cus** (*mikros*, small, *kokkos*, berry). As already stated under *Bacteria,* schizomycetes or fission-fungi are divisible, according to the classification of Migula, into six families, of which the *Coccaceæ* form one group, including streptococcus, micrococcus, sarcina, planococcus, and planosarcina. The micrococci are characterized by division in two dimensions, the cocci after division remaining aggregated in irregular clusters, or singly, or in pairs, threes, or tetrads. When the cocci, after division, remain attached, forming plates, they are known as *merismopedia.* **M. a.** (Fontin), found in hail; saprophytic. **M. ace'ti,** Bacillus aceti. **M. ac'idi lac'tici** (Grotenfelt), found in milk; causes fermentation. **M. ac'idi lac'tici** (Lindner), found in milk; causes fermentation. **M. ac'idi lac'tici** (Marpmann), detected in milk; causes fermentation. **M. ac'idi, lac'tici liquefa'ciens** (Krüger), detected in butter and cheese; causes fermentation. **M. ac'idi paralac'tici** (Nencki), found in atmospheric air, water, and milk. **M. of acute' infec'tious osteomyeli'tis,** M. pyogenes aureus. **M. of Ad'ametz,** found in certain kinds of cheese; causes fermentation. **M. aërog'enes** (Miller), detected in water and in the secretions of the intestines; causes pink-red pigment. **M. ag′ilis** (Ali-Cohn), in water. **M. ag′ilis cit′reus** (Menge), found in water; causes yellow pigment. **M. al′ba** (Eisenberg), found in atmospheric air and water; causes fermentation. **M. al′bicans am′plus** (Bumm), the cocci resemble gonococci, but are larger; found in the vaginal secretions. **M. al′bicans tardis′simus** (Eisenberg and Bumm), detected in the puerperal vaginal secretions. **M. al′bicans tar′dus** (Unna and Tommasoli), in eczematous eruption. **M. al′bidus** (Roze), found in potato scab; lives on dead organic matter. **M. al′bus**, found in human milk and in some forms of pus; saprophytic. **M. al′bus** (Lindner), found in water; lives on dead organic matter. **M. al′bus** (Maschek), found in water; saprophytic. **M. al′bus uri′næ**, M. urinalbus. **M. of Alep′po boil** (Nicolle and Noury), found in pus of that disease; pathogenic. **M. of alope′cia area′ta** (von Sehlen, Vincent, Robinson, Vaillard), found in that disease. **M. of ammoni′acal u′rine**, M. ureæ and M. ureæ liquefaciens. **M. amylov′orus** (Burrill), oval cells, the cause of fire-blight of pear-trees and apple-trees; excites fermentation in saccharine fluids. **M. apthico′la** (Hallier and Schottelius), found in vesicles on skin of sheep, cattle, etc. **M. aquat′ilis** (Bolton), in water. **M. aquat′ilis invisib′ilis** (Vaughan), in water. **M. a′reæ Cel′si** (Buchner and Sehlen), detected in the hair in alopecia areata. **M. articulo′rum**, found in the pseudomembrane of diphtheria; pathogenic. **M. ascofor′mans** (Johne), M. botryogenes. **M. auranti′acus** (Cohn and Schroter), found in atmospheric air, water, and soil; causes yellow pigment. **M. auranti′acus** (Lindner and Koch), found in atmospheric air, water, and weiss-beer; causes fermentation, and yellow pigment. **M. auranti′acus sorg′hi** (Bruyning), found in decayed sorghum; pathogenic to that plant. **M. aur′ea** (Macé), found in exudation in the lungs of one dead from pneumonia; causes fermentation and yellow pigment. **M. au′reus**, found in carcinoma; saprophytic. **M. b.** (Fontin), found in hail; pathogenic. **M. of beriber′i** (Lacerda), Bacillus bersbericus. **M. billroth′ii** (Cohn), in spoiled bouillon, also in saccharine solutions; caseinous odor, ammoniacal smell; causes fermentation. **M. of Bisk′ra but′ton**, m. of Heydenreich. **M. bisk′ræ**, m. of Heydenreich. **M. of bit′ter milk**, M. lactis viscosus. **M. blennorrhœ′us**, m. gonorrhœa. **M. bom′bycis** (Béchamp), oval cocci occurring in contents of the alimentary canal and in gastric juice of silkworms affected with flacherie. **M. of Bono′me**, found in exudation of meningitis; pathogenic. **M. botryog′enes** (Bollinger and Rabe), microorganism found in mycodesmoids of the horse, the chief symptom of which is the formation of neoplastic growths in the connective tissue. **M. of bo′vine masti′tis** (Kitt), M. mastobius. **M. of bo′vine pneumo′nia** (Poels and Nolen), in pulmonary organs of cattle infected with pleuropneumonia; pathogenic. **M. bo′vis**, found in cattle with hæmoglobinuria. **M. of bronchi′tis** (Picchini), three varieties are described. **M. bu′tyri aromafa′ciens**, found in butter; causes fermentation. **M. cadav′eris** (Sternberg), found in liver after death from yellow fever. **M. can′dicans** (Flügge), cocci in masses, obtained from contaminated plate-cultivations. **M. can′didus** (Cohn), found in water. **M. can′didus** (Reincke), found in air and water; causes fermentation. **M. capillo′rum**, in the hair; causes reddish-yellow pigment. **M. car′neus** (Zimmermann), in water; produces red pigment. **M. ca′sei ama′ri** (Freudenreich), found in bitter Swiss cheese; causes fermentation. **M. catarrha′lis**, in sputa and secretions from the nose in infectious bronchitis and catarrhal pneumonia. **M. cella′ris** (Hansgirg), found in dust and soil of a cellar; two varieties were noted. **M. ceras′inus sic′cus** (List), found in water; causes cherry-colored pigment. **M. of cerebrospi′nal meningi′tis**, M. intercellularis meningitidis. **M. ce′reus al′bus** (Passet), found in pus and water; causes a gray pigment. **M. ce′reus au′reus** (Schroter and Winkler), in coryza; produces orange-red pigment. **M. ce′reus fla′vus** (Passet), Staphylococcus cereus flavus. **M. cerevis′iæ** (Francke and Balcke), found in stale beer; causes fermentation. **M. of chick′enpox**, Staphylococcus viridis flavescens. **M. chlori′nus** (Cohn), forms yellow pigment; found in water; occurring in granular zooglœa masses. **M. chol′eræ gallina′rum** (Zopf), bacterium of fowl-cholera, Bacillus choleræ gallinarum. **M. cinnabar′eus** (Flügge), large cocci found contaminating old cultivations. **M. cit′reus** (List), in water; forms a yellow pigment. **M. cit′reus ag′ilis**, very motile; causes a yellow pigment. **M. cit′reus conglomera′tus** (Bumm), the cocci resemble gonococci, and have been isolated from blennorrhœic pus and from ordinary atmospheric dust. **M. cit′reus liquefa′ciens** (Unna and Tommasoli), found in the skin in eczema seborrhoicum; produces yellow pigment. **M. co′li grac′ilis** (Escherich), found in fæces. **M. concent′ricus** (Zimmermann), in water; produces brownish-yellow pigment. **M. conglomera′tus** (Kurth), found in scarlatina; pathogenic. **M. conglomera′tus** (Weichselbaum), found in water. **M. of conta′gious mammi′tis**, M. mastobius. **M. corona′tus** (Flügge), isolated from the air. **M. cory′zæ** (Klebs and Hajek), found in the secretions of the nose in coryza. **M. cory′zæ contagio′sæ equo′rum** (Schutz), found in pus of lymphatic glands of horses in infectious pneumonia; pathogenic. **M. cremoi′des** (Zimmermann), in water; causes yellow pigment. **M. crepus′culum** (Cohn), round or short oval cells occurring in various infusions and putrefying fluids; associated with Bacterium termo. **M. cumula′tus ten′uis** (von Besser), in the secretions of the nasal passages. **M. cyan′eus** (Schroter), in the atmosphere and water; causes a yellow pigment. **M. of Dan′tec**, in salt codfish. **M. decal′vans** (Schroter), found in the scalp in alopecia areata; pathogenic; M. areæ Celsi. **M. delacouria′nus** (Roze), in dark, gangrenous potatoes; pathogenic to that plant. **M. of Dem′me**, diplococcus of pemphigus acutus. **M. of den′gue** (McLaughlin), found in blood of dengue; Scheutzia laughlini. **M. of den′tal ca′ries**, Leptothrix vulgaris; L. gigantea; Spirillum dentium; epsilon bacillus (Miller). **M. des′idens** (Flügge), M. flavus desidens. **M. dif′fluens** (Schroter), in the atmosphere, in dust, etc. **M. of diphthe′ria**, Streptococcus articulorum. **M. diphtherit′icus** (Oertel, Loeffler, and Cohn), detected in diphtheritic deposits, etc. **M. of Disse and Tagu′chi**, in condyloma and primary syphilis. **M. doyen′ii**, M. urinæ albus olearius. **M. of drink′ing water**, M. aquatilis. **M. of Egyp′tian ophthal′mia**, m. of trachoma. **M. endocardit′icus**, Streptococcus endocarditicus. **M. endocardit′idis ruga′tus** (Weichselbaum), detected in vegetations on valves in ulcerative endocarditis. **M. of endocardi′tis**, Streptococcus endocarditidis and Micrococcus endocarditidis rugatus. **M. epider′midis al′bus** (Welch), found in the epidermis; pathogenic. **M. of erysip′elas** (Fehleisen), M. pyogenes. **M. erysipel′atis** (Fehleisen), in erysipelas; pathogenic; M. pyogenes. **M. erysipel′atos**, M. pyogenes. **M. erysipelato′sus** (Fehleisen), M. pyogenes. **M. erythromyx′a** (Lafar), found in water; causes red and yellow pigments. **M. fermen′ti**, M. viniperda. **M. fervido′sus** (Adametz), in water; produces yellow pigment. **M. finlayen′sis** (Sternberg), in post-mortem examination of a yellow fever case; produces yellow pigment. **M. floc′cii**, found in the conjunctiva; pathogenic. **M. fla′vus**, M. flavus liquefaciens. **M. fla′vus** (De Barry), found in beer and cheese; causes fermentation and a yellow pigment. **M. fla′vus conjuncti′væ**, found in the healthy conjunctiva; pathogenic. **M. fla′vus des′idens** (Flügge), Streptococcus flavus desidens. **M. fla′vus liquefa′ciens tar′dus** (Unna and Tommasoli), found in the skin in eczema seborrhoicum; produces yellow pigment. **M. fla′vus tardigra′dus** (Flügge), isolated from contaminated cultures. **M. fla′vidus**, found in scab of potato. **M. fluores′cens fœt′idus** (Klamann and Rosenbach), found in secretions of human nose; produces green-violet pigment. **M. fœt′idus** (Klamann), found in the nose and pharynx; produces fetid odor. **M. fœt′idus** (Rosenbach), small oval coccus isolated from carious teeth. **M. of foot-and-mouth disease′** (Schottelius), in eruptions in animals affected with this disease; pathogenic. **M. of Forbes,** in diseased larvæ of cabbage butterfly; pathogenic. **M. of fowl-chol′era,** Bacillus septicæmiæ hæmorrhagicæ. **M. of Fre′ire,** microbe obtained from yellow fever patients. **M. freudenreich′ii** (Guillebeau), causes stringy condition of milk. **M. friedländ′eri,** Bacillus pneumoniæ Friedländeri. **M. ful′vus** (Cohn), found in excrement of horses and rabbits; produces rose-colored pigment. **M. of fu′runcle** (Pasteur), Bacillus osteomyelitidis. **M. fusces′cens** (Falkenheim), found in human stomach; causes fermentation. **M. fus′cus** (Maschek), in water; produces dark brown color and putrefactive odor; causes fermentation. **M. gallici′dus,** Bacillus septicæmiæ hæmorrhagicæ. **M. of gan′grenous mammi′tis** or **masti′tis,** M. mastobius. **M. gelatinog′enus** (Braütigam), found in stringy milk; causes fermentation. **M. gelatino′sus,** coagulates milk; causes fermentation. **M. ghadial′li,** found in water; lives on dead organic matter. **M. gingi′væ pyog′enes** (Miller), in abscess of the gums; produces abscess and peritonitis in mice. **M. gonorrhœ′æ** (Neisser), gonococcus, in the pus of specific urethritis; pathogenic only to man. **Gray m.** (Maschek), found in water; causes fermentation; also a blue-gray-green pigment. **M. of gray par′rot disease′,** M. psittaci. **Gray-white m.** (Bumm), Diplococcus albicans amplus. **M. gris′eus** (Winter), Bacterium griseum. **M. gummo′sus** (Happ), found in stringy infusion of senega; causes fermentation. **M. hæmato′des** (Babès), found in red sweat; produces blood-red pigment. **M. hæmorrhag′icus** (Klein), found in vesicular eruption in sheep; pathogenic. **M. havanien′sis** (Sternberg), in vomit of yellow fever. **M. of Hey′denreich,** in Biskra button. **M. of hog chol′era,** Bacillus of swine plague. **M. hollan′dicus** (Weichmann), found in stringy milk; causes fermentation. **M. hu′muli lauen′sis** (Mohl), found in hops; causes fermentation. **M. hyali′na** (Kützing), found in marsh water; causes fermentation. **M. of hydropho′bia,** M. lyssæ. **M. imet′rophus** (Trevisan), Bacillus prodigiosus. **M. imperato′ris** (Roze), in potato scab. **M. of infec′tious osteomyeli′tis,** M. pyogenes aureus and M. osteomyelitidis. **M. influen′zæ** (Letzerich), bacillus of influenza. **M. insecto′rum** (Burrill), found in the digestive organs of the chinch-bug. **M. intercellula′ris meningit′idis** (Neumann and Schäffer), in nervous matter in cerebrospinal meningitis and in secretions from the nose in the same disease; pathogenic. **M. intracellula′ris meningit′idis** (Weichselbaum), meningococcus; found in the exudation of cerebrospinal meningitis; pathogenic. **M. of Kirch′ner,** found in sputa in influenza; pathogenic. **M. lac′teus favifor′mis** (Bumm and Bockhardt), found in vaginal secretions and in sputa. **M. lac′tis ac′idi** (Marpmann), found in milk; produces fermentation. **M. lac′tis visco′sus** (Conn), produces bitterness in milk and cream; causes fermentation. **M. lanceola′tus,** lancet-shaped microbe first observed by Sternberg in 1880, in the blood of rabbits inoculated with his own saliva; afterward it was proven to be the chief etiological factor in the production of croupous or lobar pneumonia in man; it is variously named *pneumococcus, Micrococcus pneumoniæ crouposæ* (Sternberg), *m. of sputum septicæmia, diplococcus of Fraenkel,* and *D. pneumoniæ of Weichselbaum.* **M. larda′rius** (Krassilochtchik), found in disease of silkworms; pathogenic. **M. lateric′eus** (Dobrzyniecki), found in the mouth; causes brick-red pigment. **M. liquefa′ciens,** M. flavus liquefaciens. **M. liquefa′ciens** (Sternberg), found in liver of patient dead from yellow fever. **M. liquefa′ciens** (von Besser), detected in normal secretions from the nose. **M. liquefa′ciens conjuncti′væ,** found in healthy conjunctiva; causes temporary opacity and vascular excitement in rabbits. **M. litora′lis** (Oersted), found in sea water; causes fermentation and a red pigment. **M. loewenberg′ii,** found in discharges of ozæna; has odor of putrefaction. **M. lu′teus** (Adametz), found in water; forms yellow pigment. **M. lu′teus** (Cohn), found in water, earth, dust, etc.; forms bright enduring yellow pigment. **M. lu′teus** (Schroter), found in atmospheric air, water, and soil; forms yellow pigment. **M. lys′sæ** (Neisser), found in the spinal marrow in rabies of animals. **M. ma′jor** (Doyen), M. urinæ major. **M. manfred′ii,** in sputa of pneumonia and in granuloma. **M. of Man′neberg,** found in the urine in acute inflammation of the kidney; pathogenic. **M. of Mar′morek,** found in erysipelas; pathogenic. **M. of masti′tis** (Kitt), M. mastobius. **M. masto′bius** (Nocard, Mollereau, and Kitt), detected in the milk of animals suffering from gangrenous mastitis; pathogenic. **M. max′ima** (Lindner), found in malt during the manufacture of beer; causes fermentation. **M. of meas′les** (Klebs and Keating), in blood and intestinal discharges of that disease. **M. meliten′sis** (Bruce), found in the spleen in cases of Malta fever; pathogenic. **M. meningit′idis** (Neumann), M. intercellularis meningitidis. **M. mesenterioi′des** (Cienkowski and van Tieghem), in molasses and sap of beet-root; causes fermentation. **M. methys′tes** (Veley), in poor rum; causes fermentation. **M. michel′i,** found in the follicles of trachoma; resembles M. gonorrhœæ. **Milk-white m.** (Bumm), M. albicans tardissimus. **M. minu′ta** (De Bary), found in sour milk; produces fermentation. **M. mirab′ilis** (Roscoe and Lunt), found in sewage. **M. monomor′phus** (Bujwid and Heryng), found in benign ulcers of the pharynx. **M. of Moore,** Bacillus fœtidus. **M. morbillo′sus** (Klebs and Keating), m. of measles; found in blood and exudation products of that disease. **M. mor′rhuæ,** found in codfish; produces fermentation. **M. of mouth and lungs** (Fischer), found in those organs in man; causes fermentation. **M. of mumps** (von Leyden), found in the salivary secretion of the parotid gland; pathogenic. **M. of mycodes′moids of the horse,** M. botryogenes. **M. of myco′sis** (Rindfleisch and Auspetz), in fungoid granuloma. **M. nasa′lis** (Hack), in the postnasal cavities; non-pathogenic. **M. ni′trificans** (van Tieghem), in water and soil, and in influenza; causes fermentation. **M. no′bilis** (Maurea), in ascites; causes fermentation and brick-red pigment. **M. nu′clei** (Roze), found in potatoes. **M. oblon′gus,** Bacterium oblongum. **M. ochroleu′cus** (Prove and Legrain), in human urine; has sulphurous odor; yields a sulphur-yellow pigment; causes yellow transformation product. **M. olea′rius,** M. urinæ flavus olearius. **M. orbicula′ris fla′vus** (Ravenel), found in the soil. **M. orchit′idis** (Hugonnenq and Eraud), found in orchitis; pathogenic. **M. osteomyelit′idis** (Becker), found in osteomyelitis; pathogenic; causes fermentation; M. pyogenes aureus. **M. of osteomyeli′tis,** M. pyogenes aureus. **M. ova′lis** (Escherich), in the fecal discharges of the earliest period of life. **M. ova′tus,** microbe of epidemic disease of silkworms; nosæma bombycis. **M. of ozæ′na** (Loewenberg), found in nasal secretions in that disease. **M. paludo′sa** (Schroter), in water of marshes; causes fermentation. **M. pasteu′ri** (Sternberg), Bacillus septicus sputigenus; M. lanceolatus. **M. of pear blight,** Bacillus butyricus. **M. of peb′rine,** microbe of epidemic disease of silkworms. **M. pellu′cidus** (Roze), found in diseased potatoes. **M. of pem′phigus acu′tus** (Gibier), in the eruption of that disease; pathogenic. **M. peritonit′idis e′qui** (Hamburg), in exudations in bodies of horses dead from that disease; pathogenic. **M. pernicio′sus,** coccus found in the blood in cases of fatal disease in the gray parrot. **M. pertus′sis** (Ritter), in the sputa of that disease. **M. pflü′geri** (Ludwig), Photobacterium pflügeri. **M. phospho′reus** (Cohn), Bacillus phosphoreus. **M. plumo′sus** (Braütigam), in water; produces yellow pigment. **M. of pneumo′nia,** M. septicus; Bacillus pneumoniæ of Friedländer. **M. of pneumo′nia of**

**cat'tle,** Streptococcus weissii. **M. of pneumo'nia of hor'ses,** found in the lungs of horses affected with pneumonia; pathogenic for mice, rabbits, and guinea-pigs; causes death to horses when injected into the lungs. **M. pneumo'niæ croupo'sæ** (Sternberg), Bacillus septicus sputigenus; M. lanceolatus. **M. pneumo'niæ infectio'sæ** (Friedländer), Bacillus pneumoniæ Friedländeri. **M. porcello'rum,** in hogs suffering from inflammation of the liver; pathogenic. **M. prodigio'sus,** Bacillus prodigiosus. **M. of progres'sive ab'scess forma'tion in rab'bits** (Koch), detected in their discharges after inoculation with blood that has undergone putrefactive fermentation; pathogenic. **M. of progres'sive granulo'ma forma'tion,** M. manfredii. **M. of progres'sive lympho'ma of an'imals,** found in sputa of pneumonia following measles; produces infectious granuloma when inoculated. **M. of progres'sive tis'sue necro'sis** (Koch), detected in the excreta of mice after inoculation with blood that has undergone putrefactive fermentation; pathogenic. **M. pseudocy'anus** (Cohn), in boiled potatoes and in atmospheric air; produces green ferment. **M. psit'taci** (Eberth and Wolf), produces disease of parrots similar to cholera of chickens. **M. pulmo'num** (Hauser), found in the sputa; causes fermentation. **M. puta'tus** (Ravenel), found in soil. **M. pu'tridus,** found in water; causes fermentation. **M. of pyæ'mia** (Koch), detected in the excreta of rabbits inoculated with decaying animal matter. **M. pyog'enes** (Rosenbach), in acute purulent abscesses and in the skin of erysipelatous patients; pathogenic. **M. pyog'enes au'reus,** Staphylococcus pyogenes aureus. **M. pyog'enes malig'nus** (Krause and Flügge), in spleen in leukæmia; pathogenic. **M. pyog'enes ure'æ** (Rorsing), found in purulent urine. **M. pyog'enes ure'æ fla'vus** (Rorsing), in purulent urine. **M. pyosep'ticus** (Richet), in cancerous tumor; pathogenic. **M. of ra'bies** (Fol), M. lyssæ. **M. radia'tus** (Flügge), in the atmosphere and in water; produces yellowish-green pigment. **M. of red sweat,** M. hæmatodes. **M. reitenbach'ii** (Caspary), found in decaying vegetation. **M. re'nis** (Hepworth), found in the lungs of patients dead from tuberculosis; causes fermentation. **M. rheumarthrit'idis** (Kussmaul), Bacillus rheumarthritidis. **M. of Rhine wa'ter** (Burri), found in that water; lives on decaying organic matter. **M. rhodoc'rous,** found in goose's stomach; produces red, fatty pigment. **M. ro'sea** (Menge and Schroter), found in atmospheric air, milk, and beer; produces red pigment. **M. of rose-red disease' of wheat** (Prillieux), in bacterial degeneration of wheat; pathogenic. **M. rosenbach'ii,** M. pyogenes tenuis; in pus of abscesses; resembles Staphylococcus pyogenes albus. **M. rosetta'ceus** (Zimmermann), in water; produces a grayish-yellow pigment. **M. ro'seus** (Bumm), in atmospheric air; produces a pink pigment; in sputum of epidemic influenza; causes rose-colored pigment; Diplococcus roseus. **M. ro'seus** (Maggiora and Flügge), found on the skin; produces pink pigmentation. **M. rubino'sus** (Edington), in scarlatina. **M. of S. Le M. Moore,** Bacillus fœtidus. **M. saliva'rius pyog'enes** (Biondi), in rabbits inoculated with saliva or purulent matter from scarlet fever; pathogenic. **M. saliva'rius sep'ticus** (Biondi), from inoculations from sputa of puerperal septicæmia; pathogenic to smaller animals. **M. of Salvo'li,** Bacillus septicus sputigenus. **M. san'guinis ca'nis** (Pitfield), found in dogs' blood; pathogenic. **M. saprog'enes vi'ni** (Kramer), found in wine; causes fermentation. **M. scarlati'næ, M. scarlatino'sus** (Coze and Feltz), detected in blood, skin, etc., of scarlatina. **M. of scar'let fe'ver** (Pohl and Pincus), M. scarlatinæ. **M. of Schmidt-Mül'heim,** found in milk; causes fermentation. **M. of Schütz,** found in milk; causes fermentation. **M. of septicæ'mia in rab'bits** (Koch), in their discharges after inoculation with septic animal infusions; pathogenic; see *Streptococcus charrini.* **M. sep'ticus** (Flügge), in earth; pathogenic. **M. sep'ticus liquefa'ciens** (Babès), in septicæmia; pathogenic. **M. septopyæ'micus** (Biondi), in laryngeal erysipelas and phlegmonous sore throat; pathogenic. **M. sialosep'ticus,** in saliva in puerperal septicæmia; pathogenic; M. salivarius septicus. **M. of small-pox,** M. variolæ et vaccinæ. **M. sor'didus** (Dyar), found in water; causes fermentation. **M. sorntha'lii** (Adametz), in Sornthal cheese; causes fermentation. **M. of spu'tum septicæ'mia** (Fränkel), Bacillus septicus sputigenus; M. lanceolatus. **M. stella'tus** (Maschek), found in water; causes brownish-yellow pigment. **M. subfla'vus** (Flügge and Neisser), from lochial and vaginal secretions; pathogenic. **M. su'is** (Burrill), Bacillus tardigradus. **M. of swine plague,** bacillus of swine plague. **M. of syph'ilis** (Haberkorn and Marcus), detected in white corpuscles in that disease; causes red pigmentation. **M. tardigra'dus,** M. flavus tardigradus. **M. tetrag'enus** (Achard and Gaillard), in vesicles of small-pox; produces yellow pigment. **M. tetrag'enus** (Bosc and Galarielle), found in gangrene of the lungs; pathogenic. **M. tetrag'enus** (Gaffky), procured from tuberculous cavity in the lungs and acute sore throat; pathogenic; also causes fermentation. **M. tetrag'enus** (Marotta), in variolous eruptions; causes fermentation. **M. tetrag'enus feb'ris fla'væ** (Finlay and Sternberg), from yellow-fever cases; causes yellow ferment. **M. tetrag'enus mo'bilis ventric'uli** (Mendosa), found in the stomach; odor of excrement noticed in old cultures; causes fermentation. **M. tetrag'enus subfla'vus** (von Besser), in secretions from the nose. **M. tetrag'enus versat'ilis** (Sternberg), M. tetragenus febris flavæ. **M. toxica'tus** (Burrill), in poison-ivy eruption; pathogenic. **M. of tracho'ma** (Sattler and Michel), in conjunctival mucus and nodules of trachoma. **M. of tracho'ma** (Snydæker), found in the secretions of that disease. **M. u'beris** (Dinwiddie), found in milk; causes fermentation. **M. ul'ceris mol'lis,** bacillus of chancroid. **M. un'næ** (Lareddo), in vesicles of eczema; pathogenic. **M. ure'æ** (Cohn), found in atmospheric air, water, and in ammoniacal urine; causes ammoniacal changes in urine. **M. ure'æ** (Pasteur and van Tieghem), in the atmosphere and in ammoniacal urine. **M. ure'æ liquefa'ciens** (Flügge), in ammoniacal urine, resembles M. ureæ; causes fermentation. **M. uri'næ** (Welcker), found in urine. **M. uri'næ al'bus olea'rius** (Doyen), found in the urine in nephritis and cystitis. **M. uri'næ fla'vus olea'rius** (Doyen), detected in urine associated with M. urinalbus and M. urinæ albus, in cystitis; causes yellow pigment. **M. uri'næ ma'jor** (Doyen), detected under same conditions as the other forms of M. urinæ already mentioned. **M. urinal'bus** (Doyen), in urine in inflammatory conditions of the kidney and bladder. **M. of vacci'na,** M. variolæ et vaccinæ. **M. va'rians** (Ewart), found in water; green pigmentation. **M. vari'olæ** or **M. vari'olæ et vacci'næ** (Cohn), found by a number of observers in smallpox and vaccina. **M. ventric'uli** (Goodsir), found in gastric diseases; causes fermentation and light yellow pigmentation. **M. vermifor'mis** (Maschek), in water; causes yellow pigment. **M. versat'ilis,** on healthy skin and in post-mortem examinations of the organs in yellow fever. **M. versic'olor** (Flügge), in atmospheric air and in water; causes fermentation of glucose; also yellowish-green pigment. **M. vi'brans** (van Tieghem), in water. **M. viniper'da,** in fermented wine. **M. viola'ceus** (Cohn), in water; violet-blue pigmentation. **M. viola'ceus** (Kützing), in water; produces violet pigment. **M. viola'ceus** (Schroter), in atmospheric air and in water; violet pigmentation. **M. vir'idis flaves'cens** (Guttmann), in varicellous eruption; causes greenish-yellow pigmentation. **M. visco'sus** (Pasteur), in diseased wine; see *Streptococcus fermenti.* **M. viticulo'sus** (Flügge and Katz), in the atmosphere and in water. **M. of Weig'mann,** found in slimy milk; causes fermentation. **M. welcke'rii** (Rossmann), in urine; causes fermentation. **M. of whoop'ing-cough** (Letzerich), in the sputa of that disease. **M. xanthogen'icus,** in yellow fever; pathogenic. **M. of zoonot'ic**

**erysip′eloid**, found in that disease; pathogenic to man.

**Microco′ria** (*mikros*, small, *kore*, pupil). Obliteration of the pupil by excessive contraction.

**Microcor′nea** (*mikros*, small). Unusually small size of the cornea.

**Mi′crocosm** (*mikros*, small, *kosmos*, world). Little world. Some philosophers have given this appellation to man, whom they consider as the epitome of the universe. The latter they call *macrocosm* (*makros*, great).

**Microcos′mic.** Relating to man or an epitome of the universe; see *Microcosm.* **M. salt,** salt composed of soda, ammonia, and phosphoric acid; originally obtained from human urine.

**Microcou′lomb.** Millionth part of a coulomb.

**Microcous′tic** (*mikros*, small, *akouo*, to hear). Microphonous; anything that contributes to increase the intensity of sound—as the speaking-trumpet—by collecting the sonorous rays.

**Microcra′nius** (*mikros*, small, *kranion*, cranium). Microcephalus.

**Mi′crocrith** (*mikros*, small, *krithe*, barley). Unit of molecular weight, denoting the weight of half a molecule of hydrogen.

**Microcrys′talline.** Occurring in microscopic crystals.

**Mi′crocyst** (*mikros*, small, *kystis*, bladder). Small cyst.

**Mi′crocyte** (*mikros*, small, *kytos*, cell). Small red blood corpuscle, often present in large numbers in pernicious anæmia.

**Microcythæ′mia** (*mikros*, small, *kytos*, cell, *haima*, blood). State of blood in which microcytes are numerous.

**Microcyto′sis.** Microcythæmia.

**Microdacty′lia** (*mikros*, small, *daktylos*, finger). Smallness of fingers.

**Mi′crodont.** Having short or small teeth; the condition is called *microdontism.*

**Microfar′ad** (*mikros*, small, *farad*). Unit of electrical capacity, equal to one millionth of a farad.

**Microgam′ete.** The male element, flagellum, of the microgametocyte.

**Microgam′etocyte** (*mikros*, small, *gametes*, husband, *kytos*, cell). The flagellated or male gametocyte; the male cell of sporozoa.

**Microgas′ter plat′ypus.** Demeodes folliculorum.

**Microge′nia** (*mikros*, small, *geneion*, chin). Smallness of the chin.

**Mi′crogerm.** Microbe.

**Microglos′sia** (*mikros*, small, *glossa* tongue). Congenital smallness of the tongue.

**Micrognath′ia** (*mikros*, small, *gnathos*, jaw). Unusual small size of the jaws.

**Mi′crogramme.** Millionth part of a gramme.

**Microg′raphy** (*mikros*, small, *graphe*, description). Description of objects with the aid of the microscope. See *Photomicrography.*

**Microgy′ria.** Condition of the brain in which the gyri are unusually small.

**Microhal′oa ro′sea** (Kützing). Beggiatoa roseopersicina.

**Microhistol′ogy.** Histology.

**Mi′crohm.** Electrical resistance equal to the millionth part of an ohm.

**Microlen′tia.** Small size of the crystalline lens.

**Microleuconymphæ′a.** Nymphæa alba.

**Mi′crolitre.** Millionth part of a litre.

**Microl′ogy** (*mikros*, small, *logos*, description). See *Microscopy.*

**Microma′nia** (*mikros*, small + *mania*). Condition observed in the insane, in which the person affected imagines that some part of his body is becoming smaller.

**Microma′zia.** Unusual smallness of the mammæ.

**Microme′lia** (*mikros*, small, *melos*, limb). Congenital imperfect development of the extremities. **M. chondromala′cia,** congenital rachitis; achondroplasia. **M. unilatera′lis,** micromelia confined to one side of the body.

**Microm′elus** (*mikros*, small, *melos*, a limb). Monster having imperfectly developed extremities; the limbs are normal in shape, but abnormally small. If confined to the upper extremity, it is called *microbrachius;* if to the legs, *micropus.*

**Microme′ria douglas′sii.** Plant, genus of *Labiatæ;* yerba buena, possessing medicinal properties.

**Microm′eter** (*mikros*, small, *metron*, measure). Instrument for microscopic measurements.

**Microm′etry.** Measurement of very small bodies with the aid of the micrometer.

**Micromil′limetre.** Thousandth part of a millimetre or a millionth part of a meter; mikron or micron; abbreviation, $\mu$; about $\frac{1}{25000}$ inch; used in microscopic measurements.

**Microm′matus** (*mikros*, small, *omma*, eye). Microphthalmus.

**Microm′otoscope.** Apparatus for taking photographs of moving microorganisms.

**Micromyce′tes** (*mikros*, small, *mykes*, mushroom). Minute fungi.

**Micromye′lia** (*mikros*, small, *myelos*, marrow). Condition characterized by unusual smallness of the spinal cord, existing in microcephalia.

**Mi′cron.** Micromillimetre.

**Micronu′cleus.** A small or minute nucleus.

**Microor′ganisms.** Minute organized cells; microbes; term used to designate the entire order of microscopic life.

**Micropanenceph′alus** (*mikros*, small, *pan*, entire, *enkephalos*, brain). Term given by Lissauer to skulls in which the angle between the line from the hormion to the nasion and basion is from 138° to 163°.

**Micropathol′ogy.** That part of pathology which relates to diseases caused by microorganisms. Also morbid histology.

**Mi′crophages** (*mikros*, small, *phago*, to eat). Name given to wandering cells in the lymphatic tissue of the alimentary canal; the microorganisms are supposed to be consumed by them. See *Phagocyte.*

**Microph′agous.** Phagocytic.

**Mi′crophone** (*phone*, sound). Instrument for augmenting sound.

**Micropho′nia.** Condition in which the voice is weak.

**Micropho′noscope.** Binaural stethoscope having a membrane to augment sound.

**Microph′onous** (*mikros*, small, *phone*, voice). Microcoustic.

**Micropho′tograph.** Photographic object so minute as to be only discernible with a microscope. See *Photomicrograph.*

**Microphthal′mia.** Condition in which the eye is unusually small or imperfectly developed.

**Microphthal′mos** or **Microphthal′mus** (*mikros*, small, *ophthalmos*, eye). One who has small eyes. Monster with two small or imperfectly developed eyes.

**Mi′crophytes** (*mikros*, small, *phyton*, vegetable). Microscopic plants; bacteria.

**Microphyt′ic.** Relating to or caused by microphytes or vegetable microbes.

**Micro′pia** (*mikros*, small, *ops*, eye). Condition usually dependent on retinitis or choroidoretinitis, in which objects appear smaller to the patient than they really are.

**Micropo′dia.** Micropus.

**Microproso′pus** (*mikros*, small, *prosopon*, face). Monster in which a part of the face is absent.

**Microp′sia.** Micropia.

**Mi′cropsy.** Mycropia. **Hyster′ical m.,** delusion in hysterical subjects that distant objects are unnaturally small.

**Micropsy′chia** (*mikros*, small, *psyche*, soul). Weakness of mind.

**Mic′ropus** or **Microp′odous** (*mikros*, small, *pous*, foot). One who has small feet. Condition is called *micropodia.* See *Micromelus.*

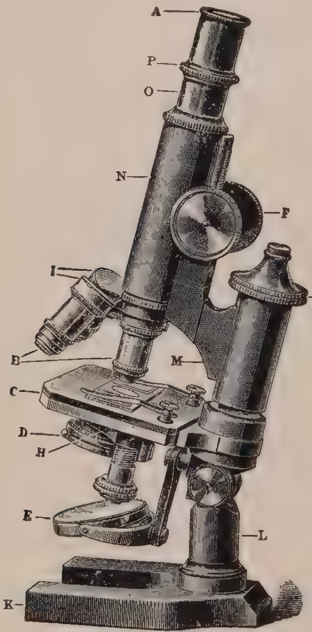
**Micro′py.** Micropia.

**Micropy′la** or **Mi′cropyle** (*mikros*, small, *pyle*, gate). Opening in the episperm of seeds, through which the fecundating pollen enters the ovule to fecundate it; it has been supposed that such a micropyle exists in the human ovule.

**Micror′chis** (*mikros*, small, *orchis*, testicle). One who has very small testicles.

**Micros′celous** (*mikros*, small, *skelos*, leg). Short-legged.

**Mi′croscope** (*mikros*, small, *skopeo*, to see). Optical instrument for examining minute objects which are not visible to the naked eye.



Compound microscope: A, ocular; B, objectives; C, stage; D, substage; E, mirror; F, coarse adjustment; G, fine adjustment; H, diaphragm; I, nose-piece; K, base; L, pillar; M, arm; N, body; O, draw-tube; P, collar.

**Microscop′ic.** Relating to microscopy. An eye capable of distinguishing very minute objects is sometimes called a *microscopic eye*.

**Micros′copist.** One who is expert with the microscope or accustomed to its practical use.

**Micros′copy.** Observation by the microscope; an important agency in the examination of the healthy and morbid tissues. The description of the results of such observation is called *micrography*. *Micrology* is often used with the same signification, and for a treatise on the microscope and the results of microscopy.

**Mi′croseme** (*mikros*, small, *sema*, mark). Having an orbital index below 84°.

**Microso′ma** (*soma*, body). Little corpuscle; one of the minute granules which are present in the protoplasm.

**Microsomat′ia** (*soma*, body). State in which the entire body with all its parts is smaller than common.

**Microso′mia.** Microsomatia.

**Microspec′troscope.** Spectrum arrangement applied to a microscope for spectroscopic examination.

**Mi′crospheres.** Minute bodies having a round shape, occurring in recent lymph from pustules of vaccine and smallpox. According to Cohn, they belong to the schizomycetes, and are regarded by him as the carriers of contagion.

**Microsphyx′ia** (*sphyxis*, pulse). Smallness of pulse.

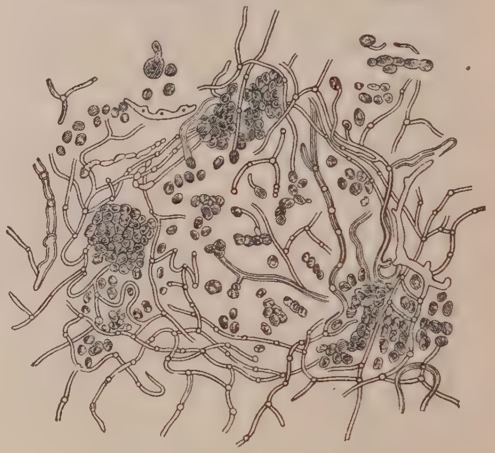
**Microspi′ra** (*speira*, coil). In Migula's classification, a genus of the family *Spirillaceæ;* the cells are rigid segments of spirals having two or three polar flagella. They are usually referred to vibrio or spirillum.

**Microsplanch′nus** (*splanchnon*, viscus). Possessing small viscera.

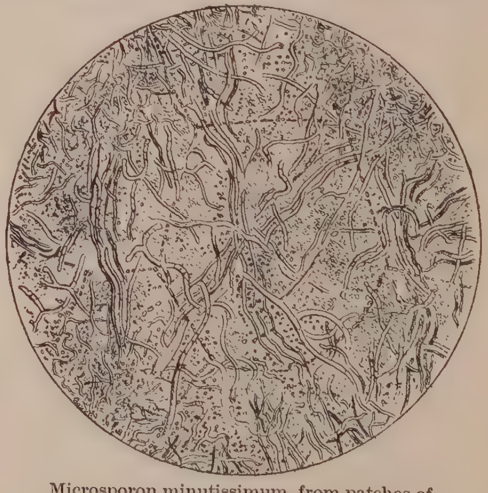
**Mi′crospore.** A minute round body, the reproductive form of many bacilli.

**Microsporid′ium.** A genus of animal microparasites.

**Micros′poron.** A genus of microscopic fungi, causing various forms of ringworm and other diseases of the skin and hair. **M. audoui′ni,** a fungus of tinea tonsurans described by Gruby. **M. anomœ′on,** a fungus growth described by Vidal as present in pityriasis rosea. **M. fur′fur,** the fungus of pityriasis versicolor. **M. mentagraphy′tes,** mentagraphyte. **M. minutis′simum** occurs in the axillæ, inguinal and genitocrural regions, cleft of nates, and adjoining parts of the trunk or limbs, and causes a contagious disease called erythrasma. **M. sep′ticum,** round micrococcus described by Klebs as having been detected in septicæmic blood.



Microsporon furfur. (Kaposi.)



Microsporon minutissimum, from patches of erythrasma. (Hyde.)

**Mi′crostat.** Stage and finder for the microscope.

**Micros′thena** (*mikros*, small, *sthenos*, strength). Order of mammalia having a small size, in contradistinction to the *Megasthena*, which are the largest and most powerful of the mammalia.

**Microstom′atous.** Having a small mouth.

**Micros'tomus** (*mikros*, small, *stoma*, mouth). One who has a small mouth. Condition is called *microstomia* or *microstoma;* usually congenital, and due to some deficiency in the lower jaw.

**Micro'tia** (*ous*, ear). Unusually small size of the ear.

**Mi'crotome.** An instrument for cutting fine sections for microscopic examination.

**Microtrichia**, mi-kro-trik'e-ah (*mikros*, small, *thrix*, hair). Fineness or shortness of hair.

**Microtro'phia** (*mikros*, small, *trophe*, nourishment). Leptotrophia.

**Mi'cro-u'nit.** Unit of minute measurements, as the *micro-unit of heat*, the heat produced by raising a milligramme of water through 1° C.

**Mi'crovolt.** Millionth part of a volt.

**Microzo'a** (*mikros*, small, *zoon*, animal). Very minute forms of animal life.

**Microzo'öspore.** Minute zoospore.

**Microzy'ma.** Microzyme. **M. bomby'cis** (Béchamp), Micrococcus bombycis.

**Microzy'matous.** Relating to microzymes; zymotic.

**Mi'crozyme** (*zyme*, ferment). Microorganism that secretes a ferment that is active in the production of disease.

**Mic'tio** (*mingo*, *mictum*, to pass urine). Micturition. **M. cruen'ta**, hæmaturia. **M. inopportu'na**, enuresis. **M. involunta'ria**, enuresis. **M. sanguin'ea**, hæmaturia.

**Mic'tion.** Micturition.

**Mictol'ithos** (*miktos*, mixed, *lithos*, stone). Calculous concretion composed of different parts.

**Mictopy'ous.** Mixed with pus.

**Micturi'tion** (*micturio*, to make water). Act of passing water; urination. **M. cen'tre**, centre in the lumbar portion of the spinal cord which presides over the process of urination.

**Mic'tus.** Micturition. **M. cruen'tus**, hæmaturia.

**Mid-.** A prefix referring to the central portion, as *midaxilla*, *midsternum*, etc.; same as *Medio-* or *Meso-*.

**Mid'body.** Collection of granules in the equatorial portion of the spindle in karyokinesis.

**Mid'brain.** Mesencephalon.

**Midfa'cial.** Situated in the middle of the face.

**Midfron'tal.** Situated in the middle of the forehead; term applied to the central plate of the frontonasal process in fetal life. **M. a'rea**, one of the two divisions of the upper frontal area.

**Mid'gut.** Term applied to the rudimentary embryonic intestinal tract, which at a later period forms the principal part of the intestines.

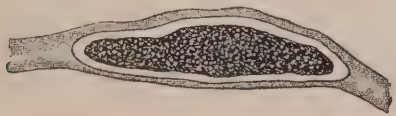
**Mid'riff.** Diaphragm.

**Mid'wife.** Woman practising obstetrics.

**Mid'wifery.** Obstetrics.

**Miesche'ria.** Sarcosporidia.

**Mie'scher's tubes** or **tu'bules.** Cylindrical cysts in muscular tissue, containing sarcosporidia.



Miescher's tube, × 50. (Leuckart.)

**Mig'ma.** Mistura.

**Mignonette**, min-yon-et'. Reseda odorata.

**Migraine'.** Hemicrania. **Ophthal'mic m.**, a form of nervous disturbance accompanied with headache, associated with disordered vision. **Ophthalmople'gic m.**, m. followed by temporary paralysis of one or more muscles of the eye.

**Migra'na.** Hemicrania.

**Migranine'.** A compound formed by the combination of antipyrin with caffeine and citric acid; employed for the relief of migraine and other forms of headache, as that of influenza, in doses of gr. xv (1.0).

**Mi'grating.** Moving from place to place, as *m. pneumonia*.

**Migra'tion.** Act of migrating. **M. of o'vum** transition of the ovum from the ovary to the Fallopian tube. **M. of the tes'ticle**, the descent of the testes into the scrotum. **M. of the white cor'puscles**, occurs in inflammation, the white corpuscles passing through the walls of the vessels.

**Mi'gratory.** Relating to migration.

**Mika'nia gua'co** (after Prof. J. Mikan, botanist, of Prague). Guaco. **M. officina'lis**, Brazilian species; reputed to be a febrifuge and tonic. **M. opif'era**, plant of Brazil; used in snake-bite. **M. scan'dens**, of Eastern and Southern United States; same properties as M. guaco.

**Mikro-.** For words beginning thus, see *Micro-*.

**Mik'ulicz's cells.** Vesicles in the tissue involved in rhinoscleroma, the latter being due to the Bacillus rhinoscleromatis. **M.'s disease'**, chronic enlargement of the lacrymal and salivary glands. **M.'s drain'age**, method of draining cysts of the abdomen or peritoneum, consisting in introducing iodoform gauze into the cavity and packing with the same material. **M.'s opera'tion** consists in the excision of the inferior end of the tibia and fibula, astragalus, os calcis, and the posterior portion of the scaphoid and cuboid bones, the remains of the latter being then brought into apposition with the tibia and fibula.

**Mil'dew.** Term including different minute fungi which thrive on plants, animal tissue, or decaying matter. **Corn m.**, rust in wheat due to Puccinia graminis. **Gan'grene m.**, ergotism.

**Mil'foil.** Achillea milefolium.

**Mil'ia.** Miliaria.

**Milia'ria** (*milium*, millet). A disease of the skin characterized by an obstruction to the secretion of sweat. Miliary fever. **M. al'ba**, vesicular miliary eruption in which the fluid in the vesicles has lost its limpidity, becoming white in color. **M. crystal'lina**, sudamina; non-inflammatory form of miliaria, consisting in simple obstruction to the escape of sweat. **M. papulo'sa**, lichen tropicus; prickly heat: **M. ru'bra**, miliaria vesiculosa. **M. su'dans**, miliary fever. **M. sudato'ria**, miliary fever. **M. vesiculo'sa**, form of miliaria in which the sweat glands are distended, the retention of sweat giving rise to inflammation; the chronic form constitutes "red gum" or strophulus of infants.

**Miliar'iform.** Having a resemblance to a millet-seed.

**Milia'ris.** Miliary. **M. purpura'ta**, typhus fever. **M. sudato'ria**, sudor anglicus; sudor picardicus.

**Mil'iary.** Resembling millet-seed; hence miliary fever; miliary glands. **M. an'eurysm**, aneurysm of the smallest arteries of the brain. **M. fe'ver**, so called from the eruption resembling the seed of the milium or millet; a fever accompanied by an eruption of small, red, isolated pimples, rarely confluent, but almost always very numerous, slightly raised above the skin, and presenting, at the end of 24 hours, a small vesicle filled with a white, transparent fluid, which quickly dries up and separates in the form of scales. **M. glands**, sebaceous glands. **M. granula'tions** or **tu'bercles**, see *Granulation*.

**Mil'ii sem'ina** (seeds of millet). Panicum italicum.

**Mili'olum** (dim. of *milium*, millet). Small tumor on the eyelids, resembling in size a millet-seed.

**Milita'ris her'ba.** Achillea millefolium.

**Mil'itary** (*miles*, soldier). Pertaining to a soldier or an army—as military medicine and military surgery. **M. ophthal'mia**, see *Ophthalmia*.

**Mil'ium.** A whitish or yellowish-white nodule of small size, usually due to the retention of a sebaceous secretion. Also a genus of grasses, the millet grasses; the seed, about one millimetre ($\frac{1}{25}$ inch) in diameter, is used as a rough term of comparison in determining the size of cutaneous nodules and other lesions. **Am'yloid m.**, molluscum contagiosum. **Col'loid m.**, colloid degeneration of the skin; rare affection, occurring chiefly on the face; lesions consist of flattish elevations imbedded in the skin, containing a mass resembling jelly and a drop of blood. The disease has been attributed to changes in the sebaceous glands. **M. esculen′tum**, panicum miliaceum. **M. in′dicum**, panicum italicum. **M. pan′icum**, panicum miliaceum. **M. so′lis**, Lithospermum officinale.

**Milk.** Fluid secreted by the mammary glands of the females of the mammalia. Skimmed *milk of the cow* contains water, caseous matter, traces of butter, sugar of milk, chloride of sodium, phosphate and acetate of potassium, lactic acid, lactate of iron, and earthy phosphates. *Cream* is formed of butter, casein, and whey, in which there are sugar of milk and salts. When examined by the microscope, milk is seen to contain a large number of particles, of irregular size and shape, varying from $\frac{1}{12700}$ to $\frac{1}{3040}$ of an inch in diameter, floating in a colorless liquid—liquor lactis. They consist of oily matter surrounded by a delicate pellicle, and are the *milk-globules*.

Cow's milk is employed for the preparation of cream, butter, cheese, whey, sugar of milk, etc. It is useful in poisoning by many substances, by acting as a demulcent, by decomposing certain poisons, or by combining with others so as to neutralize them. It is constantly employed as an aliment, and may be regarded as an emulsion in which butter and casein are found in suspension. When taken into the stomach it is coagulated by the gastric fluids, and the coagulum is digested like any other solid; the watery parts are absorbed.

Between milk, flour, and blood there is great similarity of composition. The following table is given by Dr. Robert Dundas Thompson:

| *Milk.* | *Flour.* | *Blood.* |
|---|---|---|
| Curd or Casein | Fibrin,<br>Albumin,<br>Casein,<br>Gluten. | Fibrin,<br>Albumin,<br>Casein,<br>Coloring matter. |
| Butter . . . . | Oil. | Fat. |
| Sugar . . . . | Sugar,<br>Starch. | Sugar. |
| Chloride of potassium,<br>" sodium,<br>Phosphate of sodium,<br>" calcium,<br>" magnesium,<br>" iron. | Starch. | Sugar. |

From a considerable number of experiments by other investigators the several kinds of milk are classed according to the following table, as regards the relative quantity of materials they contain:

| Casein. | Butter. | Sugar of Milk. | Serum. |
|---|---|---|---|
| Goat | Sheep | Woman | Ass |
| Sheep | Cow | Ass | Woman |
| Cow | Goat | Mare | Mare |
| Ass | Woman | Cow | Cow |
| Woman | Ass | Goat | Goat |
| Mare | Mare | Sheep | Sheep |

The following statement by Simon gives the average composition of various kinds of milk in parts; but milk often varies both in quantity and in quality in the same animal:

| | Human Milk. | | Cow's milk. | | Goat. | Sheep. | Ass. | Mare. |
|---|---|---|---|---|---|---|---|---|
| | Variations. | Average. | Variations. | Average. | | | | |
| Water . . . . . . . . . . . . . . . | 90.4 to 85.7 | 88.05 | 90.2 to 83.7 | 86.95 | 86.0 | 83.3 | 90.6 | 90.6 |
| Casein and albumin . . . . . . . . . . | 1.8 to 3.1 | 2.45 | 3.3 to 5.5 | 4.40 | 3.8 | 5.4 | 2.7 | 2.2 |
| Fat (butter) . . . . . . . . . . . . | 3.0 to 3.8 | 3.40 | 2.8 to 4.5 | 3.65 | 5.2 | 5.3 | 1.0 | 1.1 |
| Lactose . . . . . . . . . . . . . . . | 4.5 to 7.0 | 5.75 | 3.0 to 5.5 | 4.25 | 4.3 | 5.2 | 5.3 | 5.8 |
| Inorganic salts . . . . . . . . . . . | 0.3 to 0.4 | 0.35 | 0.7 to 0.8 | 0.75 | 0.7 | 0.8 | 0.4 | 0.3 |

| | Skimmed milk. | Condensed milk. | Butter. | Buttermilk. | Curd. | Whey. |
|---|---|---|---|---|---|---|
| Water . . . . . . . . . . . . . . . . | 89.6 | 25.0 | 15.0 | 91.0 | 59.4 | 93.8 |
| Casein and albumin . . . . . . . . . . | 4.2 | 14.0 | 2.2 | 3.7 | 27.7 | 0.8 |
| Fat (butter) . . . . . . . . . . . . . | 1.0 | 10.0 | 82.0 | 0.8 | 6.4 | 0.3 |
| Lactose . . . . . . . . . . . . . . . . | 4.4 | 49.0 | 0.3 | 3.8 | 5.0 | 4.5 |
| Inorganic salts . . . . . . . . . . . | 0.8 | 2.0 | 0.5 | 0.7 | 1.5 | 0.6 |

**Milk ab′scess.** Mastodynia apostematosa. **Af′ter-m.**, the strippings or residual milk which can be drawn off after the regular milking has been finished; it contains less casein and more fat than the bulk of the same milking. **Al′mond m.**, emulsio amygdalæ. **M. of ammo′niac**, mistura ammoniaci. **Artific′ial hu′man m.**, cow's milk prepared for infants so as to resemble very closely the composition of human milk. **Asafœt′ida m.**, mistura asafœtidæ. **Ass's m.** considerably resembles human milk, of which it has the consistence, smell, and taste, but it contains a little less cream, and more casein; often used by those laboring under pulmonary affections. **M.-blotch**, porrigo larvalis. **Blue m.**, m. deriving its blue color from the presence of the Bacillus cyanogenus. **But′ter-m.**, fluid which remains after butter has been made from cream. **Condensed′ m.**, milk immediately from the cow is heated in a boiler, sugar being added, and the contents constantly stirred to favor evaporation. When the volume is reduced four-fifths the concentrated liquid is poured into cans which are hermetically closed, and then exposed to heat in a boiler. **M.-crust**, porrigo larvalis; eczema pustulosum. **M.-cure**, treatment of disease by means of milk alone or as the principal article of diet employed. **M.-cyst**, a cystic tumor containing milk, due to obstruction of the milk ducts. **Ewe's m.**, affords more cream than cow's milk, but the butter is softer. The casein, on the contrary, is more viscid; it contains less serum than cow's milk. Roquefort cheeses are made from it. **M.-fe′ver**, a moderate elevation of temperature preceding or accompanying the secretion of milk in women recently delivered, coming on usually about the third day after delivery, and lasting rarely more than twenty-four hours. Also parturient paresis of cows. **M.-fis′tula**, fistula of the mamma. **Fore-m.**, colostrum; also the first part of the milking, containing less cream than the latter part. **M.-glass**, breast-glass. **M.-glob′ules**, see *Milk.* **Goat's m.**, resembles cow's milk; the butyraceous matter, however, which enters into its composition is more solid than that of the cow. Used as diet in scrofulous cases and also in phthisis. **Green m.**, colostrum. **M.-hedge**, Euphorbia tirucalli. **Hu′man m.**, contains more sugar of milk and cream, and less casein, than cow's milk; its composition differs according to the length of time after delivery. **I′odated m.**, iodine dissolved in alcohol and intimately mixed with milk until there is no taste, color, or smell of iodine. **M. jel′ly**, prepared by boiling milk with sugar, then adding gelatin, lemons, and wine. **M.-knot**, galactoganglion, knots often observed in the breast after inflammation of the organ or for some time after the suppression of the secretion. They generally end by resolution. **M.-leg**, phlegmasia dolens. **Mare′s m**, contains only a small quantity of fat, a little casein, softer than that of cow′s milk, and more serum. **Med′icated m.**, see *Medicated*. **Mod′ified m.**, cow′s milk treated by the addition in various proportions of water, cream, sugar, whey, etc., in order to adapt it to the purpose of infant feeding. **M.-pep′tone**, casein peptone. **M.-plas′ma**, clear fluid containing milk-globules. **Preserved′ m.**, condensed milk. **Red m.**, m. colored red by the presence of Bacillus lactis erythrogenes. **Resid′ual m.**, after-milk. **M.-scall**, porrigo larvalis. **M. sick′ness**, trembles, sick stomach, swamp sickness, tires, slows, stiff joints, puking fever, river sickness; an endemic disease formerly observed in certain States of the West and Southwest, which affected both man and cattle, but chiefly the latter. It was attributed in cattle to something eaten or drunk by them, and in man to the eating of the flesh or drinking of the milk of animals laboring under the disease. Symptoms of the disease were such as are produced by the acronarcotic class of poisons—vomiting, purging, extreme nervous agitation, etc.; the approved indications of treatment appeared to be gentle emetics and laxatives, with mucilaginous drinks and the maintenance of perfect quiet. The disease was attended with great fatality. **Skim** or **skimmed m.** contains not only casein, but also a saccharine assimilable principle—sugar of milk—the fatty matter having been separated by the cream. Its use has been proposed for various morbid conditions, as diabetes and the form of Bright′s disease known as fatty degeneration of the kidney, causing the sugar in the former and the albumin in the latter to disappear from the urine. The diet of the patient is restricted to skim milk, the quantity being augmented until several quarts are taken daily. **Snake′s m.**, Euphorbia corollata. **Solid′ified m.**, m. to which little less than an equal weight of white sugar has been added, evaporated to dryness. When redissolved in water it has all the qualities of fresh milk, with the additional quantity of sugar. To milk which has been evaporated to dryness the names *lactoline* and *lacleine* have been given. **M.-spots**, maculæ albæ; strophulus. **M.-stone**, kind of earth applied in intertrigo. **Su′gar of m.**, see *Sugar*. **M. of sul′phur**, sulphur præcipitatum. **Sweet m.**, Galium verum. **Tar m.**, petroleum barbadense. **M.-teeth**, see *Dentition*. **M.-this′tle**, Lilybum marianum. **M.-thrush**, aphthæ. **M.-tree**, tree yielding a juice bearing resemblance to milk. **M.-tu′mor**, galactocele; galactoma. **Tur′pentine m.**, rectified benzine. **U′terine m.**, a whitish fluid rich in albuminous and fatty matters found between the villi of the placenta in ruminants. **Veg′etable m.**, succus lacteus; the secretion of some varieties of trees resembles a milky juice. **M.-vetch**, Astragalus verus. **Stem′less m.-v.**, Astragalus exscapus. **M.-vine**, Periploca græca. **M.-wax**, ozokerite. **M.-weed**, Apocynum androsæmifolium, Asclepias syriaca, Euphorbia corollata. **Long-leaved green m.-w.**, Acerates longifolia. **Smooth m.-w.**, Asclepias sullivantii. **Witch′es′ m.**, fluid resembling colostrum, found in the mammæ of infants after birth. **Bit′ter milk-wort**, Polygala amara. **Com′mon m.-w.**, Polygala. **Dwarf m.-w.**, Polygala paucifolia. **Rat′tlesnake m.-w.**, polygala. **M.-yeast**, Saccharomyces lactis. **Yel′low m.**, yellow appearance of milk, due to the presence of a specific bacterium.

**Milk′ing cramp.** An occupation neurosis, analogous to writers′ cramp, affecting dairymen.

**Milk′y.** Lactic; like milk. **M. cat′aract**, cataract in which the lens has broken down into a whitish fluid. **M. stain**, a form of mucous patch, see *Patch*.

**Mill moun′tain.** Linum catharticum.

**Mil′lar′s asth′ma.** Laryngismus stridulus.

**Millard′-Gub′ler syn′drome.** See *Gubler′s hemiplegia.*

**Millefo′lium.** Achillea millefolium.

**Millegra′na.** Herniaria glabra.

**Millemor′bia scrophula′ria** (*mille*, thousand, *morbus*, disease). Scrophularia nodosa.

**Millep′edes** (*mille*, thousand, *pedes*, feet). Onisci aselli.

**Milleper′ta.** Hypericum perforatum.

**Mil′ler′s bacil′lus.** Bacillus dentalis viridans. Bacillus aërogenes. Epsilon bacillus.

**Mil′ler-Lew′is bacil′lus.** Bacillus shaped like a comma, met with in the mouth.

**Mil′let-seed rash.** Miliary fever.

**Milliampère′.** Electrical unit representing the thousandth part of an ampère.

**Milliampère′meter.** Instrument for measuring the strength of a current of electricty.

**Mil′ligramme.** Thousandth part of a gramme—about 0.0154 Troy grain.

**Milligra′na.** Herniaria glabra.

**Mil′lilitre.** Measure of capacity, the thousandth part of a litre, equal to 0.06102 of a cubic inch.

**Mil′limetre.** Thousandth part of the metre, equal to 0.03937 English inch, about two-fifths of a line.

**Mil′lon′s rea′gent.** Solution of mercury and nitric acid; imparts a purple-red color to proteids.

**Mills′s disease′.** Progressive ascending hemiplegia.

**Mill′stone-grind′ers′** or **M.-ma′kers′ phthi′sis.** Form of severe bronchitis dependent on inhalation of fine particles separated in the manufacture of millstones.

**Mil′phæ** or **Milpho′sis.** Loss of hair, particularly of the eyelashes.

**Milt.** Spleen. **M.-like**, epithet for a form of cancer characterized by a soft, pale growth containing scarcely any blood; called from resemblance to the milt of a fish. See *Encephaloid.*

**Mil′tus.** Plumbi oxidum rubrum.

**Milt′waste.** Asplenium.

**Mimet′ic.** Relating to imitation. **M. convul′sion**, spasmodic twitching of the facial muscles. **M. la′bor**, false labor pains. **M. paral′ysis**, facial paralysis. **M. spasm**, m. convulsion.

**Mim′ic.** Mimetic. **M. pal′sy**, facial paralysis. **M. spasm**, mimetic convulsion.

**Mim′icry.** Imitation.

**Mimochasme′sis** (*mimeomai*, to imitate, *chasmesis*, yawning). Imitative yawning.

**Mimog′raphy** (*mimeomai*, to imitate, *grapho*, to write). Sign language of deaf-mutes.

**Mimo′sa cat′echu.** Catechu. **M. cochliacar′pa**, see *Cortex adstringens brasiliensis*. **M. leucophlœ′a**, see *Spirit* (*arrack*). **M. nilot′ica**, see *Acacia*. **M. pudi′ca**, sensitive plant, native of tropical America; root has emetic properties; leaves are employed in baths to relieve pain. **M. scand′ens**, cachangparang. **Sen′egal m.**, see *Senegal, gum.* **M. virgina′lis**, see *Cortex adstringens brasiliensis.*

**Mim′ulus moscha′tus.** See *Musk.*

**Mimu′sops eleu′gi.** An East Indian tree; bark has tonic and astringent properties.

**Mind.** The seat of the intellectual reasoning power in man. **M.-blind′ness**, loss of power to recognize objects, due to cortical lesions; the sight, however, remains intact; apraxia; alexia. **M.-cure**, professed method of curing diseases by influence of healer′s mind upon that of the patient. **M.-deaf′ness** resembles mind-blindness; the patient loses the power to distinguish the nature of sounds, as a result of cortical lesions, the apparatus of hearing, however, remaining intact.

**Mindere′rus, spir′it of.** Solution of ammonium acetate.

**Min′eral.** An inorganic substance of a definite chemical composition, forming part of the earth′s surface. Also, as an adj., relating to, resembling, or composed of a mineral. **M. degenera′tion**, cretefaction. **M. oil**, petroleum. **M. wa′ter**, see *Water, mineral.*

**Mi′ners′ anæ′mia.** Ankylostomiasis. **M.′s asth′ma,** carbonaceous or black phthisis, miners' consumption; a form of severe bronchitic disease of miners, in consequence of the peculiar atmosphere breathed by them; it is often associated with mitral insufficiency. **M.′s el′bow,** enlargement of the bursa over the olecranon in such as habitually lean upon it; often seen in those who work on the side in low-roofed mines. **M.′s nystag′mus,** see *Nystagmus.* **M.′s phthis′is,** m.′s asthma.

**Min′im** (the least part or portion). The sixtieth part of a fluidrachm; measure introduced by the London College of Physicians in consequence of the uncertainty of the size of the drop; see *Drop.* The proportion between the minims and the drops of various fluid preparations is given under *Drop.*

**Min′imal.** The smallest possible appreciable or effective, as *m. dose* or *m. sensation.*

**Min′imum.** Least part or portion. Minim.

**Min′ium.** Plumbi oxidum rubrum; red lead. **M. græco′rum,** hydrargyri sulphuretum rubrum. **M. pu′rum,** hydrargyri sulphuretum rubrum.

**Mi′nor hel′icis** (smaller muscle of the helix). Muscle situated on the posterior border of the helix of the ear at its commencement in the fossa of the concha.

**Minora′tion.** Mild purgation by laxatives.

**Minor′ative** (*minor,* less). Laxative.

**Mint.** Mentha. **M. cam′phor,** menthol. **Cat m.,** nepeta. **Cock m.,** Tanacetum balsamita. **Curl′ed m.,** Mentha crispa. **Horse m.,** Monarda coccinea and M. punctata. **Horse m., hair′y,** Blephilla hirsuta. **Horse m., Ohi′o,** Blephilla hirsuta. **Horse m., sweet,** Cunila mariana. **Hys′sop-leaved m.,** Mentha cervina. **Moun′tain m.,** Monarda coccinea. **M. m., com′mon,** Pycnanthemum incanum. **Pep′per m.,** Mentha piperita. **Spear m.,** Mentha viridis. **Squaw m.,** hedeoma. **M.-stereop′tene,** menthol. **Stone m.,** Cunila mariana. **M. tea,** infusum menthæ viridis. **Wa′ter m.,** Mentha aquatica.

**Min′tha.** Mint.

**Minute′ anat′omy.** Histology.

**Minu′tio.** Diminution, as of capacity, power, etc.

**Miodid′ymus** (*meion,* less, *didymos,* twin). Monstrosity in which the two heads are united by the occiputs.

**Miod′ymus.** See *Miodidymus.*

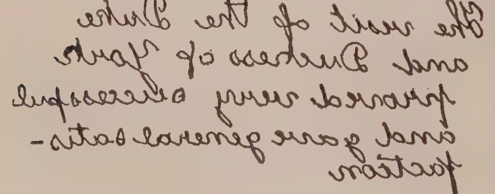
**Mi′opus** (*meion,* less, *ops,* eye). A syncephalic monster, having two faces looking outward, one normal, the other having an ear and an eye or two ears.

**Mio′sis.** Decline or remission of a disease. Abnormal contraction of the pupil, myosis.

**Miot′ic.** Relating to miosis. Causing contraction of the pupil; also agent producing such effect; myotic.

**Mirab′ilis dichot′oma.** Four-o'clock flower of W. Indies; a drastic purgative. **M. jala′pa,** false jalap; has been used as a substitute for official jalap. **M. suave′olens,** Mexican plant; leaves are stomachic, astringent, and antiarthritic.

**Mir′ror.** Mirrors are used extensively in ophthalmoscopy, laryngoscopy, rhinology, etc., for examining and treating cavities. **M. galvanom′eter,** a mirror fastened to the galvanometer needle, which reflects a beam of light upon a scale and indicates small motions of the needle. **Head-m.,** a circular mirror with a hole through the centre and with an attachment by which it can be strapped to the head; used for purposes of illumination in laryngoscopy, etc. **M. speech,** reversal of letters or syllables in speech, as "net-mag" or "ten-gam" for "magnet." **M.-wri′ting,** form of writing met with in some nervous diseases, in which the writing is reversed, looking as if reflected from a mirror.



Mirror-writing.

**Mir′rot.** Daucus carota.

**Mir′yachit.** Form of neurosis observed in Siberia and other cold countries, in which marked excitability, with imitation of words or movements, is present. Written also myriachit.

**Misan′thropy** (*misos,* hatred, *anthropos,* man). Aversion to man and society; symptom of melancholy and hypochondriasis.

**Miscar′riage.** Expulsion of a human fœtus between the third and seventh months of pregnancy. See *Abortion.*

**Miscegena′tion** (*misceo,* to mix, *genus,* a race). Sexual union between persons of different races, usually between blacks and whites.

**Misemis′sion.** Absence of emission in sexual intercourse.

**Misere′re me′i** (have pity on me). Ileus.

**Mis′ery** (*miser,* suffering). Colic; see *Pain.*

**Mislacta′tion.** Vitiated or defective condition of milk.

**Mis′mar** or **Mese′mar.** Nodus on the toes as the sequel of contusion or inflammation.

**Mismenstrua′tion.** Any form of disordered menstruation.

**Mismicturi′tion.** Any form of disordered passage of urine.

**Misog′amous** (*misos,* hatred, *gamos,* wedlock). Having morbid repugnance to wedlock.

**Misogyny,** mis-oj′in-e (*misos,* hatred, *gyne,* a woman). Morbid repulsion for, or hatred of, women.

**Misoma′nia** (*misos,* hatred). Delusion of persecution.

**Misopæ′dia** (*misos,* hatred, *pais,* child). Dislike of children by their parents.

**Misopsy′chia** (*misos,* hatred, *psyche,* soul). Weariness of life.

**Misoptochus,** me-sop-to′kus (*misos,* hatred, *ptochos,* poor). Having hatred for the poor. Gout has been so called because commonly affecting the rich.

**Misozo′ïa** (*misos,* hatred, *zoe,* life). Digust of life, even to the verge of suicide.

**Misplace′ment.** Displacement; ectopia.

**Missed abor′tion.** Failure to expel a fœtus dead before completion of term. **M. la′bor,** condition in which a dead fœtus remains in the womb for some time after the term of pregnancy has expired.

**Mis′sio san′guinis.** Bloodletting.

**Mis′tletoe.** Viscum album. **Yel′low m.,** Viscum flavescens.

**Mistu′ra.** The official (Ph. U. S. and Br.) name for mixture, a liquid containing an insoluble substance in suspension. The suspension is effected by the addition of mucilage or thick syrup; after the mixture has stood for a time its insoluble ingredients usually fall to the bottom of the bottle; hence mixtures should always be thoroughly shaken each time a new dose is measured out, for if this is not done the last few doses will contain an undue proportion of the active substance. The following are the official misturæ: **M. ammoni′aci** (Br.), contains 3.75 per cent. ammoniac; dose, ℥ss–j (16.0–32.0). **M. amyg′dalæ** (Br.), contains 5 per cent. sweet almond meal in gum acacia and sugar solution; dose, ℥ss–j (16.0–32.0). **M. asafœt′idæ** (formerly in the Ph. U. S.), contains 3.75 per cent. asafœtida; dose, ℥ss–j (16.0–32.0). **M. cam′phoræ** (formerly in the Ph. U. S.), camphor julep, contains camphor and magnesium carbonate. **M. creoso′ti** (Br.), contains about a minim to the ounce; dose, ℥ss–j (16.0–32.0). **M. cre′tæ** (U. S. and Br.), chalk mixture, contains 20 per cent. compound chalk powder and 40 per cent. cinnamon-water; dose, ʒj–iv (4.0–16.0). **M. fer′ri compos′ita**

(U. S. and Br.), Griffith's mixture, contains ferrous sulphate, potassium carbonate, myrrh, sugar, and spirit of lavender in rose-water; dose, ʒj–iv (4.0–16.0). **M. glycyrrhi'zæ compos'ita** (U. S.), brown mixture, contains extract of licorice, mucilage of acacia, paregoric, wine of antimony, spirit of nitrous ether, and syrup, in water; dose, ʒj–iv (4.0–16.0). **M. guai'aci** (Br.), contains resin of guaiac, about 3 per cent., suspended by means of sugar and gum acacia in cinnamon-water; dose, ℥ss–j (16.0–32.0). **M. ol'ei ric'ini** (Br.), castor-oil mixture, contains castor oil emulsified in mucilage of acacia, orange-flower water, and cinnamon-water; dose, ℥j–ij (32.0–64.0). **M. rhe'i et so'dæ** (U. S.), contains bicarbonate of sodium 3.5, fluid extract of rhubarb 1.5, fluid extract of ipecac 0.3, spirit of peppermint 3.5, glycerin 35.0, and water to make 100; dose, ʒss–ij (2.0–8.0). **M. sen'næ compos'ita** (Br.), black draught, contains magnesium sulphate 5, aromatic spirit of ammonia 1, compound tincture of cardamoms 2, liquid extract of licorice 1, in infusion of senna to make 20; dose, ℥j–ij (32.0–64.0). **M. spir'itus vi'ni gal'lici** (Br.), brandy mixture, contains brandy and cinnamon-water each ℥iv, sugar ℥ss, and the yelks of two eggs; dose, ℥j–ij (32.0–64.0).

**Mitch'ell's (S. Weir) disease'.** Erythromelalgia. **M.'s treat'ment,** rest cure.

**Mitchel'la re'pens** (after Dr. John Mitchell, of Virginia, botanist). Partridgeberry, checkerberry, winter clover. Indigenous trailing evergreen, of the family *Cinchonaceæ;* expectorant, emmenagogue, and diuretic; prescribed in dropsy and gout.

**Mite.** A very small insect, particularly the acarus. **Har'vest m.,** Leptus autumnalis. **Itch m.,** Sarcoptes scabiei.

**Mitel'la** (dim. of *mitra,* bandage). Sling.

**Mith'ridate.** Compound electuary into which entered myrrh, saffron, agaric, ginger, cinnamon, frankincense, garlic, mustard, birthwort, galbanum, castor, gum arabic, opium, gentian, valerian, acacia, honey, and other substances in Canary wine. Also an antidote; see *Mithridatism.*

**Mith'ridatism.** Condition of immunity against toxic drugs acquired by taking them in gradually increasing doses. Mithridates, king of Pontus and Bithynia, was credited with such protection, acquired intentionally as a preservative against poisoning by his enemies.

**Mit'igans** (*mitigo,* to assuage). Lenitive.

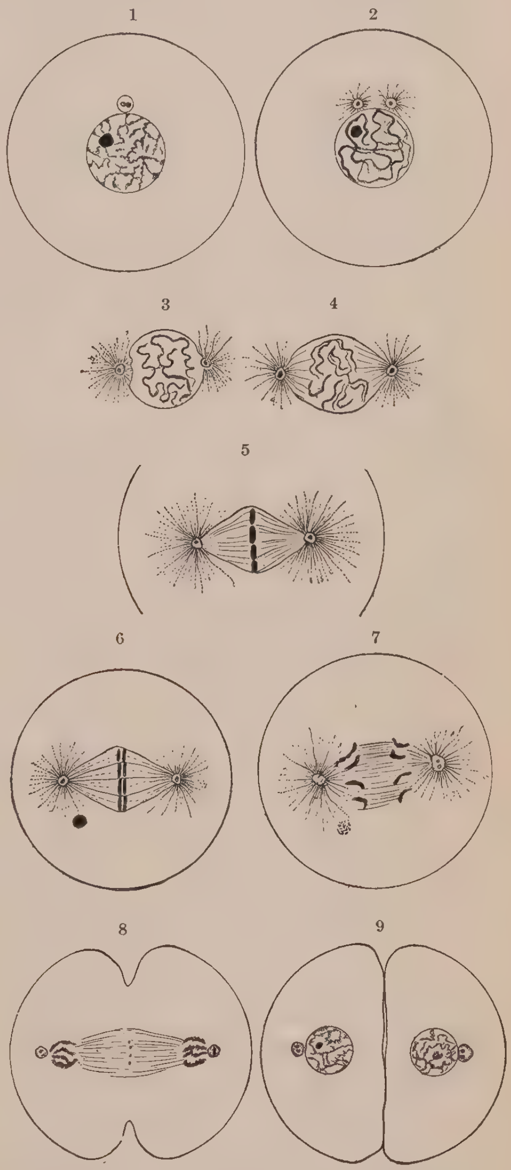
**Mit'igate.** To relieve pain or distress, or at least to moderate it.

**Mit'igated caus'tic** or **stick.** Fused nitrate of silver with equal part of potassium nitrate.

**Mito'ma** or **Mi'tome.** The fibrous network enclosing the more fluid portion of the protoplasm of a cell.

**Mitoschisis,** mi-tos'ki-sis (*mitos,* thread, *schisis,* splitting). Mitosis.

**Mito'sis** (*mitos,* thread). Karyokinesis; indirect method of cell-reproduction, in which the nucleus plays the principal part. The following are the various steps in mitosis: The centrosome divides into two young centrosomes which move apart from each other until they occupy opposite poles of the nucleus; the chromatin of the nucleus arranges itself as a tangled thread, *spirem,* which later breaks into a definite number of segments, *chromosomes;* these latter arrange themselves in the centre of a spindle-shaped figure having fibres derived from the chromatin network running from the chromosomes, which form the *equatorial plate,* to each extremity of the spindle where is the *aster,* or star-shaped arrangement of fibrils proceeding from the centrosome; this spindle with its two asters is called the *amphiaster.* The chromosomes divide longitudinally and then pass to the poles of the spindle, where they form the daughter nucleus, while the centrosome shows evidences of division in preparation for the next cell division. Finally the cell itself divides in a plane corresponding to the equator of the spindle, and the process is completed.



Mitosis. 1–5, *prophases:* 1, resting condition immediately preceding mitosis; 2, division and migration of centrosome; 3, resolution of chromatin into well-defined thread; 4, segmentation of the same into chromosomes; 5, development of amphiasters, the chromosomes being equatorial; 6, *metaphase;* 7, 8, *anaphases;* 7, divergence of the two sets of daughter chromosomes toward the poles of the spindle; 8, development of the interzonal fibres forming the inner spindle, and beginning division of the cell; 9, *telophase,* division of the entire cell in a plane passing through the equator of the spindle.

**Mi'tosome.** Karyosome.

**Mitot'ic.** Relating to mitosis.

**Mi'tra hippocrat'ica** (*mitra,* mitre, bandage). Bonnet of Hippocrates; capelline bandage.

**Mi'tral.** Having the form of a mitre; resembling a bishop's mitre. **M. disease',** disease of the endocardium, leading to deformity of the mitral valve.

**M. mur′mur,** sound heard on auscultation in case of disease of the mitral valve. **M. regurgita′tion,** insufficient closure of the mitral valve, allowing some of the blood to flow back into the auricle during systole; see *Regurgitation.* **M. steno′sis,** narrowing of the mitral valve in consequence of inflammation of its endocardial covering. **M. valves,** two triangular valves of the opening of communication between the left auricle of the heart and the corresponding ventricle; formed by the inner membrane of the left cavities of the heart, and retained on the side of the ventricle by tendinous cords proceeding from the columnæ carneæ. They permit the blood to pass from the auricle into the ventricle, and oppose its return.

**Mix′ed.** Mingled. **M. chan′cre,** a sore formed by the virus of syphilis and that of the chancroid acting together. **M. fe′ver,** malarial and typhoid fevers occurring together. **M. treat′ment,** the administration of both mercury and potassium iodide in the treatment of syphilis.

**Mix′is.** Coition. Mistura.

**Mix′tio** (*misceo, mixtum,* to mix). Mistura.

**Mixtu′ra.** Mistura.

**Mix′ture.** Mistura. **A.-C.-E. m.,** alcohol, 1; chloroform, 2; ether, 3; anæsthetic. **Al′mond m.,** emulsio amygdalæ. **Ba′sham's m.,** mistura ferri et ammonii acetatis. **Bes′tucheff's m.,** ethereal tincture of chloride of iron. **Bran′dy m.,** mistura spiritûs vini gallici. **Brown m.,** mistura glycyrrhizæ composita. **Cam′phor m.,** mistura camphoræ. **Chalk m.,** mistura cretæ. **Dung′lison's m.** or **ferrosa′line m.,** under the latter name Dr. Robley Dunglison was accustomed to prescribe the following combination in torpor of the colon: Magnes. sulphat., ℥j; potassii bitart., ʒj; ferri sulph., gr. x; for a quart of water. Wineglassful every morning, on rising, until the torpor is removed. **Grif′fith's m.,** mistura ferri composita. **Hope's m.,** recommended by a Mr. Hope in diarrhœa and dysentery; essentially a nitrate of morphine. **Lafayette′ m.,** m. for gonorrhœa, consisting of copaiba, spirit of nitrous ether, compound tincture of lavender, liquor potassæ, syrup, and mucilage of acacia. **Neu′tral m.,** liquor potassii citratis. **M. of rhu′barb and so′da,** mistura rhei et sodæ. **Schleich's m.,** sulphuric ether, petroleum ether, and chloroform, used to induce general anæsthesia. **Scud′amore's m.,** recommended by Sir C. Scudamore in gouty and rheumatic affections (magnes. sulph., ℥j–℥ij; aquæ menthæ, ℥x; aceti colchic., ʒj–ʒjss; syrup. croci, ʒj; magnes., ℈viij.—M.); dose, one, two, or three tablespoonfuls, repeated every two hours in a paroxysm of gout, until from four to six evacuations are produced in twenty-four hours. **Wachs′muth's m.,** turpentine 1, chloroform 5, for the production of general anæsthesia.

**Mnemon′ics** (*mneme,* memory). The art of aiding the memory and of forming artificial memory.

**Mnemotechne,** ne-mo-tek′ne (*mneme,* memory, *techne,* art). Mnemonics.

**Moan′ing.** A plaintive respiration in which the patient utters audible groans or moans.

**Moap′eye.** Myopia.

**Mo′bile spasm.** Term implying movements, slow and irregular in character, following hemiplegia.

**Mobil′ity** (*mobilis,* that can be moved). The power of being moved; not to be confounded with *motility,* which means the power of independent movement. In physiology, great nervous susceptibility, often joined to a disposition to convulsion. Greatly developed excitability.

**Mobiliza′tion.** Act of rendering movable, as an ankylosed part or joint.

**Mo′bilize.** To cause to be movable, as in the case of an ankylosed bone.

**Moc′casin.** A shoe with soft sole, worn by the American Indian. A poisonous serpent. **M. flow′er,** Cypripedium acaule, C. luteum. **M. plant,** Cypripedium luteum. **M. root,** Cypripedium pubescens.

**Mocharas** (mo′kar-as), **Moch′ras,** or **Mo′churrus.** A gum resin of Bombax malabarica, used in the treatment of dysentery and diarrhœa; dose, ʒss (2.0).

**Mochleu′sis** (*mochlos,* lever). Reduction of a luxated bone.

**Mochlus,** mok′lus. Lever.

**Mochthus,** mok′thus. Agony.

**Mock′knees.** Crusta genu equinæ.

**Mock or′ange.** Philadelphus coronarius; leaves are detergent.

**Mod′elling pro′cess.** A term proposed by Dr. Macartney, of Dublin, for the mode in which wounds are healed without inflammation or suppuration by a deposit of plastic matter from the surface of the wound, portion being laid upon portion, without waste, after the manner of clay in the hands of the sculptor.

**Mod′erator band.** Fibrous or muscular band often existing in man, extending across the right ventricle of the heart.

**Mod′ified lin′ear extrac′tion.** Von Graefe's method of operating on cataracts. **M. milk,** see *Milk.*

**Modi′olus.** (The nave of a wheel). A hollow cone in the cochlea of the ear, forming a nucleus, axis, or central pillar around which the gyri of the cochleæ pass; columella cochleæ. The modiolus forms the inner and larger portion of the central pillar, and is the cavity seen at the bottom of the meatus auditorius internus, lodging a branch of the auditory nerve. The central portion of the modiolus, *tractus spiralis foraminulosus,* contains a number of minute canals. Into these the nerves of the cochlea enter, and pass out at right angles between the bony plates forming the zona ossea of the lamina spiralis, to be expended on the membranous portion of the lamina. Also the crown of a trepan.

**Mo′dus operan′di** (mode of operating). Term applied to the general principles upon which remedies act in morbid states of the body. Also to mode of performing a surgical operation.

**Moe′bius's disease′.** Paralysis of the motor oculi, occurring either periodically or as a recurrence of a previous attack. **M.'s symp′tom,** difficulty in accommodation for near objects, encountered in exophthalmic goitre.

**Moel′ler's disease′.** Barlow's disease. **M.'s glossi′tis,** chronic superficial inflammation of the tongue; also an exfoliative form of glossitis accompanied with neuralgia or other intense pain in the tongue.

**Mœ′nia den′trum** (walls of the teeth). See *Alveolar.*

**Mœ′ror** (sorrow). Despondency; melancholy.

**Mog′ador gum.** Barbary gum.

**Mogigraph′ia** (*mogis,* with difficulty, *grapho,* to write). Writers' cramp.

**Mogilal′ia** (*mogis,* with difficulty, *laleo,* to speak). Difficult or defective articulation. See *Balbuties.*

**Mogipho′nia** (*mogis,* with difficulty, *phone,* voice). Neurotic affection of the larynx with loss of power of voice.

**Mogito′cia** or **Mogosto′cia** (*mogos,* difficulty, *tokos,* parturition). Dystocia; difficult labor.

**Mo′hawk tas′sel.** Eupatorium purpureum.

**Mohr′enheim's fos′sa.** Depression situated below the clavicle, between the pectoralis major and deltoid, serving as a guide for ligating the subclavian artery.

**Moh′ria thurif′raga** (after Prof. D. M. H. Mohr, a botanist of Kiel). South African fern, the dry leaves of which, pulverized and made into an ointment with fat, are serviceable in burns and scalds.

**Moillez's** (moah-yaze′) **disease′.** Acute idiopathic pulmonary congestion caused by exposure to cold, as in sea bathing, or by an injury to the chest.

**Mois′ture.** Simple humidity of the skin. The skin is said to be moist or in a state of moisture when there is slight perspiration.

**Mo′ka al′oes.** Aloes of poor quality from Arabia.

**Mo′la.** Maxillary bone. Molar tooth. Mole. Patella.

**Mo′lar** (*mola*, a mill). That which bruises or grinds. Relating to a mass (*moles*, a mass). Also relating to a mole. **M. death**, death of a large extent of surface or a large mass, as in gangrene or necrosis. **M. glands**, two small bodies formed by a collection of mucous crypts, seated in the substance of the cheeks, between the masseter and buccinator muscles, and whose excretory ducts open into the mouth opposite the last molar tooth. **M. le′sion**, lesion of a large surface or body. **M. preg′nancy**, pregnancy attended with formation of a mole. **M. teeth**, grinders, jaw teeth, lag teeth, wall teeth, cheek teeth, occupy the farther part of each alveolar arch. Their coronæ are broader than they are high, unequal, and tuberculated, and the roots are more or less subdivided. They are 20 in number, 10 in each jaw. The first two pair in each jaw are called lesser molars, premolar or bicuspid, dentes bicuspidati or buccales or molares anteriores or molares minores. The coronæ have two tubercles, the outer being more prominent and larger than the inner. The root is commonly simple, sometimes bifurcated. The other three pairs have been termed great molars—dentes molares posteriores or majores. Their coronæ are cubical, rounded, and have at the upper surface four or five tubercles separated by deep furrows. The root is divided into two, three, four, or five fangs, more or less curved. The third great molar appears a long time after the others, and hence has been called dens sapientiæ or wisdom tooth.

**Molar′iform.** Having the shape of a molar tooth.

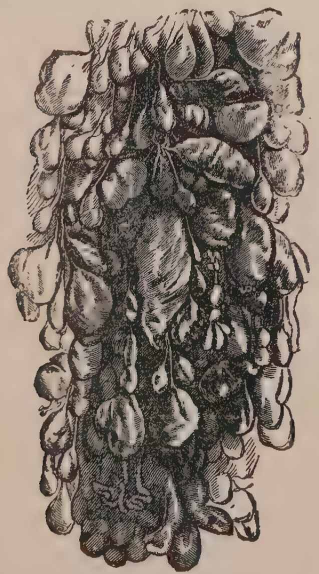
**Molas′ses.** Treacle, theriaca. The sweet liquid left after the crystallization of sugar. When refined and clarified it is called syrup.

**Mold.** A term applied to such fungi as aspergillus, mucor, and penicillium, or fungi which are met with in colored layers on foodstuffs. Fontanelle. A matrix in which any solidifying fluid is cast.

**Moldine′.** A mixture of potter's clay and glycerin; used in dentistry.

**Mold′ing flask.** A metallic frame for retaining a sand matrix.

**Mole** (*moles*, mass). Vesicular mole, hydatidiform or myxomatous degeneration of the placenta, mooncalf. Fleshy, insensible mass of variable size forming in the uterus and slightly united by vessels to that organ, from which its feeble vitality is derived. The formation of moles seems to be a morbid process, and it is generally connected with conception. At times they contain parts of the fœtus, but commonly do not. At different periods in different women the mass is expelled from the uterus with ordinary symptoms of abortion, and the case requires similar management. **Blood m.**, mass of blood and membranes remaining in the uterus after abortion. **Car′neous m.**, fleshy m. **False m.**, a tumor from the uterine wall. **Flesh′y m.**, a blood mole which has become solidified and colorless. **Hydat′id** or **Hydatid′iform m.**, a mass of small cysts filling the uterus which have been formed from the hypertrophied villi of the chorion. **M.-plant**, Euphorbia lathyris. **True m.**, a m. resulting from degeneration of the ovum, and not a uterine polyp or a transformed blood clot. **Vesic′ular m.**, hydatid m.



Hydatidiform mole, from degeneration of the chorion. (Leishman.)

**Molec′ular.** Relating to molecules or minute portions of anything; hence molecular death, in contradistinction to somatic death or death of the whole body. **M. conductiv′ity**, the specific conductivity of a solution multiplied by the volume in litres of the solution containing one gram-molecule of the dissolved substance. **M. death**, gradual destruction of the tissues of a part by ulceration or caries. **M. lay′er**, four layers are described: 1. Of gray matter in cortex cerebelli beneath the pia mater. 2. Superficial layer of gray matter in cortex cerebri; stratum moleculare; first layer of Meynert. 3 and 4. Two layers, *external* and *internal*, in the retina. **M. le′sion**, a lesion so minute as to be almost beyond appreciation by the eye or microscope. **M. movement**, see *Motion*. **M. weight**, see *Atomic weight*.

**Mol′ecule** (dim. of *moles*, mass). Minute portion of any body. The smallest particle of matter theoretically capable of existence in unchanged form. The ultimate division of which matter is theoretically capable without being broken into its chemical elements. The cicatricula, macula, gallatura, gelatinous molecule, tread of the cock, or embryo part of the impregnated ovum, observable by the microscope before the ovum has left the ovarium of the hen. It lies under the epidermic coats of the yolk, and upon its proper coat. If the ovum, according to Valentin, be lacerated and its contents minutely examined, the cicatricula is found like a grayish-white disk, which in its whole periphery is dense, granular, and opaque, but in the centre presents a clear and perfectly diaphanous point. Purkinje found that when he removed the dark, granular mass by suction with a small tube there remained a perfectly transparent vesicle filled with a pellucid lymph which had a decidedly spherical form, but, being extremely delicate, was easily lacerated, and then its fluid escaped. As he found this—which later naturalists have named, after its discoverer, the *Purkinjean vesicle*—in the ova of the ovary, but could not see it in ova which had already entered the oviduct, he named it *germinal vesicle*, *germ-vesicle*, or *germ-cell*, *vesicula prolifera* or *germinativa*, *blastocystinx*. Besides a perfectly colorless fluid this contains one or more dark corpuscles, which appear as a nucleus through the including membrane in the shape of opaque spots—the germinal spot, germ-spot, macula germinativa or germinans, nucleus germinativus, blastocardia, corculum germinis, blastocelis, Wagnerian spot or vesicle. The small dots observed by Valentin in the Wagnerian vesicles, and arising in them, have been termed *Valentinian vesicles*. The granular membrane—its thickened portion, the so-called "cicatricula"—and the germinal vesicle constitute those parts of the ovum which pass immediately into the original foundation of the embryo, the blastoderm, blastodermic or germinal membrane, vesicola blastodermatica or blastodermica, blastodermic vesicle. In the nomenclature of Professor Agassiz the yolk-membrane is an *ectoblast;* the Purkinjean vesicle, a *mesoblast;* the Wagnerian vesicle, an *entoblast;* and the Valentinian vesicle, an *entosthoblast*. See *Cytoblast*. **Gelat′inous m.**, molecule.

**Mo'les gangliform'is.** Ganglion of Gasser.

**Molib'dus.** Lead.

**Moli'men** (pl. molim'ina) (*molior*, to strive). An attempt, a struggle, especially on the part of the economy, to accomplish some physiological object. **M. apoplec'ticum,** cerebral hemorrhage. **M. crit'icum,** impulsion toward a sudden solution or crisis of a disease. **M. hæmorrhag'icum,** hemorrhagic diathesis or impulsion. **M. hæmorrhoida'le,** hemorrhoidal diathesis or impulsion. **Men'strual m.,** the periodical establishment of the menses. **M. natu'ræ saluta'rium,** instinct.

**Möl'ler's glossi'tis.** Glossodynia exfoliativa; chronic superficial glossitis.

**Molles'cence** (*mollis*, soft). Softening; mollities.

**Mollich'thyolin.** A mixture of ichthyol and mollin.

**Mol'lin** (*mollis*, soft). Soap composed of caustic potash, cocoanut oil, and glycerin; base for ointments in cutaneous affections.

**Mol'lipuffs.** Lycoperdon.

**Mollities,** mol-lish'e-eez (*mollis*, soft). Preternatural softness of an organ or part of an organ. **M. atroph'ica,** white softening of the brain, see *Cerebri*. **M. cer'ebri,** mollescence or softening or a kind of liquefaction of the cerebral substance, the remainder preserving its ordinary consistency. The neurine often contains small clots of blood, giving rise to what has been termed *capillary apoplexy* (Cruveilhier). Several varieties of softening are now described, as *red softening*, a result of inflammation; *yellow softening*, the result of the death of a portion of the cerebral tissue; *white softening*, *mollities atrophica*, the result of imperfect nutrition, due to deficient supply of blood. **M. cor'dis,** softening of the heart, caused by inflammation or from some lesion in the function of nutrition. **M. medul'læ spina'lis,** softening of the spinal cord. **M. os'sium,** softening of the bones; osteomalacia; rare affection in which the bones are deprived of their salts, particularly of the phosphate of lime, acquiring a degree of suppleness which renders them unfit for the performance of their functions. The disease generally affects all the bones, but it is especially remarkable during life in the long bones, which assume any curvature that may be wished. Very violent pain is often experienced in them, and the urine frequently contains an enormous proportion of calcareous phosphate. The patient is compelled to remain in the horizontal posture, the bones no longer being fixed points for the muscles to act upon. The disease has almost always terminated fatally, and dissection has exhibited the gelatinous nature of the bones, which, by desiccation, become transparent, as if they had been macerated in acid. Experience has afforded no means of relief in this affliction. Alkaline salts, earthy phosphates, etc., are of little or no use, the disease being one of nutrition. **M. un'guium,** unnaturally soft condition of the nails from faulty nutrition of those parts.

**Molli'tio** or **Mollitu'do.** Mollities.

**Mol'losin.** A vehicle for other substances, consisting of wax and petroleum.

**Moll's glands.** Small glands existing in the margin of the eyelids.

**Mollu'go cervia'na.** Infusion of the flowers is diaphoretic. **M. pentaphyl'la,** an infusion of this Asiatic plant is given as an abortifacient and stomachic. **M. sperg'ula** or **verticilla'ta,** carpet weed; Indian chickweed; laxative stomachic. **M. stric'ta,** plant of East Indies; used in infusion as a stomachic and abortifacient.

**Mollus'cum** (*molluscus*, soft). Cutaneous affection consisting of numerous tumors, varying in size from that of a pea to that of a pigeon's egg, and filled with an atheromatous matter, which are developed in the substance of the derma, and are of various shapes, some having a large base, others being adherent by a pedicle. The disease is probably seated in the sebaceous follicles. **M. adeno'sum,** m. contagiosum. **M. bod'ies,** minute capsulate bodies supposed to be the product of morbid action in the epithelial cells of the epidermis. **M. contagio'sum,** disease characterized by the presence of hard, round tubercles, which are smooth and transparent, and when pressed pour out from an orifice in their summits a little thick, opaque, or milky fluid, containing the molluscum bodies; the disease is supposed to be due to the presence of an animal microorganism. **M. cor'puscles,** m. bodies. **M. epithelia'le** or **epithelio'ma,** m. contagiosum. **M. fibro'sum,** morbid condition consisting of quite small masses or tumors developed around a hair follicle, each including an enlarged sebaceous gland belonging to the hair follicle, and a peripheral mass of nucleated connective tissue, the hair occupying the centre of the tumor. **M. non-contagio'sum** or **pen'dulum,** m. fibrosum. **M. seba'ceum,** m. contagiosum. **M. sim'plex,** m. fibrosum. **M. verruco'sum,** a form of molluscum contagiosum allowing of enucleation *en masse*.

**Moloche,** mol'o-ke. Malva rotundifolia.

**Molo'pes** (wheal). Vibices.

**Molybdæ'num magne'sii.** Black oxide of manganese.

**Molybdamauro'sis** (*molybdos*, lead). Amaurosis from lead poisoning.

**Molybdamblyo'pia.** Amblyopia from lead poisoning.

**Molyb'date.** A salt of molybdic acid.

**Molybdencepha'lia.** Affection of the brain from lead poisoning.

**Molybde'num.** A hard, silvery-white metal, symbol, Mo.

**Molyb'dic acid.** $H_2MoO_4$, a yellow, crystalline acid from molybdenum.

**Molybdocachex'ia.** Lead poisoning.

**Molybdocardial'gia.** Cardialgia from lead poisoning.

**Molybdocol'ica** (*molybdos*, lead). Lead colic.

**Molybdon'osus** (*nosos*, disease). Lead poisoning.

**Molybdopar'esis** (*paresis*, paralysis). Lead palsy.

**Molybdo'sis** (*molybdos*, lead). Lead poisoning.

**Molybdospas'mus.** Cramp or spasm due to lead poisoning.

**Moly'ne.** Anus.

**Momis'ci.** Molar teeth. Also the parts of the molar teeth connected with the gums.

**Momor'dica** (*mordeo*, to bite). Balm apple, balsam apple, ord. *Cucurbitaceæ;* fruit of this oriental tree, *Pomum mirabile* or *hierosolymitanum*, was formerly considered vulnerary. **M. as'pera,** M. elaterium. **M. bu'chu,** Ecbalium buchu. **M. elate'rium,** wild, squirting, or asses' cucumber, ord. *Cucurbitaceæ*. The dried sediment from the juice is the elaterium of the shops. A powerful cathartic, and has been used in dropsies. The active principle is *elaterin*, *ecbalin*, or *momordicin*.

**Momordicin'.** Elaterin.

**Mo'nad** (*monas*, a unit). Simple particle or atom or unit. Primary cell or germ. A flagellate infusorium.

**Monadeno'ma.** Adenoma of a single gland.

**Mo'næ.** Nates.

**Mon'akow's fi'bres.** Nervous tract between the anterior quadrigeminal body and the globe of the eye.

**Monam'ide.** Amide having one molecule of ammonia in which one or more atoms of hydrogen have been replaced by acid radicals.

**Monam'ine.** Amine having one molecule of ammonia in which one or more atoms of hydrogen have been replaced by basic radicals.

**Monanæsthe'sia** (*monos*, one, *anæsthesia*, loss of sensation). Loss of sensation in one part or limb from lesion of the nerves or of the occipital cortex, or it may be of hysterical origin.

**Monar'da.** Scarlet rose balm, mountain mint, Oswego tea, mountain balm, horsemint, square stalk, red balm; indigenous plant; ord. *Labiatæ;* has the excitant properties of Monarda punctata. **M. allophyl'la,** M. fistulosa. **M. clinopo'dia,** M.

fistulosa. **M. coccin'ea,** monarda. **M. did'yma,** monarda. **M. fistulo'sa,** wild bergamot, horsemint; leaves have a fragrant smell and an aromatic, somewhat bitter taste; reputed to be nervine, stomachic, and deobstruent. **M. kalmia'na,** monarda. **M. oblonga'ta,** M. fistulosa. **M. puncta'ta,** horsemint; indigenous in the United States; stimulant and carminative; *oleum monardæ, oil of horsemint,* was formerly official in the Ph. U. S. **M. purpu'rea,** monarda. **M. rugo'sa,** M. fistulosa.

**Monardin'.** Crystalline solid, isomeric with thymol, from oil of horsemint.

**Monarthri'tis.** Inflammation of a single joint.

**Monartic'ular** (*articulus*, joint). Relating to one joint.

**Mo'nas.** Monad. A genus of infusoria. **M. crepus'culum,** Micrococcus crepusculum. **M. prodigio'sa,** Bacillus prodigiosus. **M. ter'mo,** Bacterium termo.

**Monas'ter** (*monos*, single, *aster*, star). Single-star figure in karyokinesis.

**Monatheto'sis.** Athetosis involving a single limb or one side.

**Monatom'ic** (*monos*, single, *atomos*, atom). In chemistry, denotes an element of which one atom of hydrogen is saturated by only one atom of the combining element.

**Monelith'rix.** Irregular atrophy of the hair in which it resembles a string of beads.

**Monen'terum** (*enteron*, intestine). Colon.

**Mo'ner.** An undifferentiated, non-nuclear protoplasmic organism.

**Mone'ra.** Class of protozoans of the lowest forms of life.

**Moner'ula** (dim. of moner). An impregnated developing ovum without any nucleus.

**Mone'sia.** Vegetable extract imported into Europe from South America in hard, thick cakes. Prepared from the bark of a tree whose botanical name is uncertain—probably Chrysophyllum glycyphlæum or buranhem, burunhem, guaranhem; ord. *Sapotaceæ.* Very friable, and its fracture much resembles that of a well-torrefied cocoanut; wholly soluble in water; its taste is at first sweet like licorice, then becoming astringent. On account of its astringent properties it has been prescribed in chronic bronchitis, hæmoptysis, diarrhœa, leucorrhœa, uterine hemorrhage, etc.

**Monesin'.** Acrid principle obtained from monesia; identical with saponin.

**Mon'ey-jin'gle sound.** Cracked-pot sound.

**Mon'eywort.** Lysimachia nummularia.

**Mongo'lian.** Anthropologists give the name *Mongolian race* to a variety of the human species spread over a great part of the north of Asia, in China, India, Thibet, the Moluccas, etc. Individuals composing it have the skin of a brown-red color, forehead flat, eyes slanting, nose broad, cheeks prominent, and lips large. See *Man.* **M. id'iocy,** congenital idiocy unaccompanied by any signs of cretinism; the child has a flattened skull, short thumbs, and eyes slanting like the Chinese.

**Mon'grel.** Hybrid.

**Monileth'rix** (*monile*, necklace, *thrix*, hair). Moniliform or beaded hair.

**Monil'iform** (*monile*, necklace, *forma*, shape). Monilated; resembling a string of beads. Term applied to a peculiar change in the form of the blood-vessels, caused by partial dilatations of their walls; often observed in cases of cerebral softening.

**Moni'mia polystach'ia.** Plant of S. America, leaves of which are expectorant and bark astringent.

**Mo'nism** (*monas*, unity). Doctrine that matter and mind are identical.

**Mon'key-bread.** Fruit of baobab tree.

**Monks'hood.** Aconitum. **Com'mon m.,** Aconitum napellus. **M. ocam'pi,** herb from Mexico; leaves are considered tonic. **Sal'utary m.,** Aconitum anthora. **Wild m.,** Aconitum uncinatum.

**Monneret's' pulse.** The soft, full, infrequent pulse of jaundice.

**Monni'na polystach'ia.** South American plant, ord. *Polygaleæ.* The bark of the root is a powerful astringent, much used in South America in bowel diseases; also as a hair-wash.

**Mono-** (*monos*, one). In composition, alone, only one.

**Monoanæsthe'sia.** Anæsthesia of one limb or part.

**Monobacillary,** mon-o-bas'il-la-re. Containing or due to a single bacillus, or to one variety of bacillus.

**Monoba'sic** (*monos*, single, *basis*, base). Having one base; term used in chemistry.

**Monoblep'sia** or **Monoblep'sis** (*blepsis*, sight). Affection in which vision is confused, imperfect, and indistinct when both eyes are employed, but perfect or nearly so when either eye is used singly. Also monochromatic vision.

**Monobra'chius** (*brachium*, arm). Congenital absence of one arm.

**Monobromacetan'ilid.** Antisepsin.

**Monobro'mated.** Containing one bromine atom. **M. cam'phor,** compound of camphor containing bromine in place of one atom of its hydrogen.

**Monobrometh'ane.** Ethyl bromide.

**Monobro'mide.** A haloid salt containing one atom of bromine. **M. of cam'phor,** monobromated camphor.

**Monobromphen'ylacetam'ide.** Antisepsin.

**Monocal'cic.** Having one atom of calcium in a molecule.

**Monocar'pæ.** A division of cutaneous affections, which includes strophulus, psydracia, and ecthyma.

**Monoceph'alus** (*monos*, single, *kephale*, head). Monster having two bodies with a single head.

**Monochlo'ral-antipyrin'.** Hypnal.

**Monochloreth'ane.** Æther muriaticus. Ethyl chloride.

**Monochloreth'yl chlo'ride.** Ethidene dichloride.

**Monochlormeth'ane.** Methyl chloride.

**Monochlorphe'nol.** $C_6H_4ClOH$. Employed in tuberculosis. See *Chlorphenol.*

**Monochore'a.** Chorea involving one limb or part.

**Monochromat'ic.** Having but one color. **M. aberra'tion,** spherical aberration. **M. vis'ion,** a form of color-blindness in which the sufferer can distinguish but one of the primary colors.

**Mon'ocle.** See *Monoculus.*

**Monococ'cus.** Form of coccus in which each is single and detached.

**Monocœ'lic** (*koilia*, cavity). Having one cavity.

**Monoco'lon.** Cæcum; rectum.

**Monoc'ranus.** Monster with one cranium, but with the face in part double.

**Monocrot'ic** or **Monoc'rotous** (*kroteo*, to strike). See *Pulse, monocrotic.*

**Monoc'ular** (*oculus*, eye). Uniocular. Belonging or relating to one eye. **M. polyo'pia hyster'ica,** monocular diplopia or triplopia of hysterical subjects, including hysterical macropsy and micropsy.

**Monoc'ulum.** Cæcum.

**Monoc'ulus** (*oculus*, eye). Monocle. Bandage employed to maintain topical applications over one of the eyes.

**Mo'nocyst** (*kystis*, cyst). Unilocular.

**Monocyst'is epithelia'lis.** A supposed protozoan parasite of cowpox.

**Monodac'tylous** (*daktylos*, finger or toe). Having only one finger or toe.

**Monodiplo'pia** (*monos*, single, *diploos*, double, *ops*, eye). Unilocular diplopia or double vision with one eye. **M. hyster'ica,** monocular polyopia hysterica.

**Monœ'cius** (*monos*, single, *oikos*, house). Hermaphrodite.

**Monogas'tric** (*gaster*, stomach). Having but one stomach. Man is monogastric; ruminating animals, on the contrary, are polygastric; a muscle that has one belly is monogastric.

**Monoge'neous** (*genos*, kind). Of one race or family.

**Monogen'esis** (*genesis*, formation). Asexual generation; reproduction without contact or intercourse of individuals or cells.

**Monogeny**, mo-noj'en-e. See *Generation*.

**Monogo'nia** (*monos*, alone, *gone*, generation). Non-sexual reproduction.

**Mon'ograph** (*monos*, single, *graphe*, description). A treatise on a single class of diseases or on a single medical subject.

**Monohy'drated.** Containing one molecule of water or of hydroxyl.

**Monohy'dric.** Containing one atom of replaceable hydrogen, as *monohydric acid* or *alcohol*.

**Monoiodeth'ane.** Æther hydriodicus.

**Monoi'odide.** Combined with one atom of iodine.

**Mo'nol.** Watery solution of permanganate of calcium.

**Monoloc'ular** (*monos*, single, *loculus*, cell). Having but one cell or cavity; term applied to cystic tumors especially; unilocular.

**Mono'ma.** A term proposed by Herbert Snow to designate a progressive malignant uterine growth resembling an ordinary myoma except in its malignancy.

**Monom'achon** or **Monom'acum.** Cæcum.

**Monoma'nia.** Form of insanity in which the aberration is confined to one subject. **Homici'dal m.**, homicidal insanity. **Incen'diary m.**, pyromania. **M. syphilit'ica**, syphiliphobia.

**Monoma'niac.** One laboring under monomania.

**Monometal'lic.** Containing one atom of metal in the molecule.

**Monomicro'bic.** Containing or caused by one variety of microorganisms.

**Monom'matos** (*omma*, eye). Cyclops.

**Monomo'ria** (*moria*, silliness). Monomania.

**Monom'phalus** (*omphalos*, navel). A monster produced by the union of two bodies having a common umbilicus. Such a monster is called *monomphalian*.

**Mononœ'a** (*noos*, thought). Thought on one subject, as in monomania.

**Mo'nonte** (*monos*, alone, *on*, being). Term applied to the form of malarial parasite reproduced by fission. See *Amphionte*.

**Mononu'clear.** Containing but one nucelus, as *mononuclear cell*. Mononucleated.

**Mononu'cleated.** Having but one nucleus. Mononuclear.

**Monopa'gia** (*pagios*, fixed). Clavus hystericus; hemicrania.

**Monoparæsthe'sia.** Paræsthesia, or perverted sensation or sensibility, confined to one limb or part.

**Monopar'esis.** Paralysis of one part of the body.

**Monopathopho'bia** (*monos*, single, *pathos*, disorder, *phobos*, dread). Hypochondriasis.

**Monop'athy** (*pathos*, disorder). A state in which one organ or function is disordered. Applied also to monomania, which is said to be a monopathic affection.

**Monope'gia** (*monos*, single, *pegnymi*, to fix). Clavus hystericus; hemicrania.

**Monopha'sia** (*phasis*, a speech). Difficulty in speaking, consisting of inability to utter more than one syllable, one word, or one sentence.

**Monophenetidin'.** Apolysin.

**Monopho'bia** (*monos*, single, *phobos*, fear). Mental affection in which there exists a morbid dread of being left alone.

**Monophthal'mia.** Cyclopia.

**Monophthal'mus** (*ophthalmos*, eye). Cyclops; monoculus.

**Monophy'odont** (*monos*, single, *phyo*, to produce, *odous*, tooth). An animal having only one set of teeth.

**Monoplasmat'ic.** Having protoplasm formed of one substance only.

**Mo'noplast** (*monos*, single, *plasso*, to form). One cell of a tissue. A microorganism containing only one cell.

**Monoplas'tic** (*plasso*, to form). Having one form. A monoplastic element in histology is one which retains its primary form.

**Monoplas'tid.** An animal formed of one cell; a protozoon.

**Monopleg'ia** (*plege*, stroke). Paralysis limited to a single organ or part and dependent on circumscribed lesions of the nervous system, as in glossoplegia or paralysis of the tongue, or in hemianopsia.

**Monopo'dia** (*monos*, single, *pous*, foot). Sympodia.

**Monoproso'pus** (*monos*, single, *prosopon*, face). Double monster having a single face.

**Mo'nops** (*ops*, eye). Cyclops.

**Monop'sia** (*monos*, single, *opsis*, vision). Cyclopia.

**Monopsycho'sis** (*psyche*, mind). Monomania or delusional insanity.

**Mo'nopus** (*pous*, foot). One who has but one foot; monster in whom one lower extremity is entirely absent. See *Symmeles*.

**Monor'chia.** See *Monorchis*.

**Monor'chid.** One who has apparently a single testicle, the other not having descended into the scrotum.

**Monorchid'ia.** See *Monorchis*.

**Monor'chis** (*monos*, single, *orchis*, testicle). One who has only one testicle. The condition is *monorchidia* or *monorchia*, *monorchism*, *unilateral anorchism*.

**Monor'chism.** See *Monorchis*.

**Monos'celus** (*monos*, single, *skelos*, leg). One-legged.

**Monosit'ia** (*sitos*, food). Taking but one meal a day.

**Monoso'mus** (*monos*, one, *soma*, body). Double monster with a single body, without evidence of division.

**Mo'nospasm** (*monos*, single, *spasmos*, spasm). Spasm or convulsion of one part, as a limb or the face.

**Monos'toma len'tis.** An animal parasite in the crystalline lens.

**Monosymptomat'ic.** Having but one symptom.

**Mono'tic.** Relating to a single ear.

**Monot'richous** (*thrix*, *trichos*, hair). Term applied to cells which have but a single polar flagellum.

**Monotrid'ymus** (*tridymos*, threefold). A monster with three bodies or with triplication of some parts.

**Monot'ropa uniflo'ra.** Indian pipe, iceplant, pipeplant, nest root, fit root; ord. *Ericaceæ*. An indigenous plant whose juice, mixed with water, has been extolled by the Indians in ophthalmia. The dried root in powder has been given in epilepsy and nervous diseases.

**Monox'ide.** Same as protoxide.

**Monro's' fora'men.** An opening which forms the communication of the third with the lateral ventricle of the brain. **M.'s line**, line drawn from the umbilicus to the anterior superior spinous process of the ilium. **M.'s point**, the point where the spino-umbilical or Monro's line crosses the outer edge of the rectus muscle. **M.'s sul'cus**, a longitudinal sulcus or groove on the middle surface of the thalamus, from foramen of Monro to aqueduct of Sylvius.

**Mons cerebel'li.** Monticulus. **M. pu'bis** or **ven'eris** (mount of Venus), the more or less projecting eminence situated at the base of the hypogastrium above the vulva and in front of the os pubis. At the period of puberty it becomes covered with hair, formerly called *tressoria*.

**Monsel's' salt.** Ferri sulphas. **M.'s solu'tion**, see *Ferri sulphas*.

**Monso'nia ova'ta** (after Lady Ann Monson, aid to Lee in his Introduction to Botany). *Keita* of the Hottentots. Plant, ord. *Geraniaceæ*, which grows at the Cape of Good Hope. The root and herb are very astringent, and are used successfully in dysentery.

**Mon'ster** (anything strange). Any organized being having an extraordinary vice of conformation or a preternatural perversion of every part or of certain parts only. The following classification embraces the main varieties of malformations—*vitia primæ conformationis*: 1. Those in which certain parts of the normal body are absent or defective—monstra deficientia, constituting ectrogeny of Serres—monstrosity by defect. 2. Those produced by fusion or coalition of organs—coalitio partium, symphysis. 3. Those in which parts united in the normal state are separated from each other—clefts, fissures. 4. Those in which normal openings are occluded—atresia. 5. Those by excess or in which certain parts have a disproportionate size—monstra abundantia, monstrosity by excess. 6. Those in which one or more parts have an abnormal position—situs mutatus. 7. Those affecting the sexual organs—hermaphroditism. To these "true malformations" may be added: 8. Diseases of the fœtus and abnormal states of its envelopes. Among the numerous hypotheses entertained on the origin or causes of monsters, three only may be mentioned: 1. The influence of the maternal imagination on the fœtus in utero. 2. Accidental changes experienced by the fœtus at some period of its uterine existence. 3. A primitive defect in the germs. The second seems to be the most philosophical. Cases of supernumerary fingers and toes, which fall under the fifth division of the above classification, are probably owing to an excess of formative action in the part; and it may be a question whether many of the cases of diplogenesis are not due to this rather than to a fusion of two germs. As a medicolegal question, monsters, if capable of action as individuals, have the same rights as other persons. **Autosit′ic m.**, one capable of independent existence, notwithstanding that it has been arrested in development and its organs fused and displaced. **Com′pound m.**, a monster in which there are complete or incomplete elements of more than one individual. **Dou′ble m.**, m. in which there is duplication of one or more parts, usually of many parts or nearly the complete organism. **Gi′la m.**, Heloderma suspectum, a large lizard the bite of which is venomous. **Trip′let m.**, m. in which there is a triplication of one or more of the parts.

**Monstros′itas.** Monstrosity.

**Monstros′ity.** See *Monster*. **M. by defect′**, see *Monster*. **M. by excess′**, see *Monster*. **Parasit′ic m.**, form of compound monstrosity in which a second part or body is nourished at the expense of the principal body.

**Mon′strum.** Monster or monstrosity.

**Monteg′gia's disloca′tion.** Dislocation of the hip-joint in which the limb is turned outward, and the head of the femur can be located near the anterior superior spine of the ilium.

**Montgom′ery's cups.** Epithelial pits or depressions in the mucous membrane lining the uterus. **M.'s glands**, see *Mamma*. **M.'s tu′bercles**, tubercles of the areola; see *Mamma*.

**Month′lies.** Menses.

**Month′ly cours′es, ill′ness, pe′riods,** or **sick′ness.** Menses.

**Mont′icle.** Monticulus cerebelli.

**Montic′ulus** (dim. of *mons*, mountain). A slight, localized elevation. **M. carno′sus ure′thræ**, caput gallinaginis. **M. cerebel′li**, see *Vermiform processes of the cerebellum*. **M. ven′eris**, mons veneris.

**Monureide**, mon-u′re-ide. Ureide composed of a single molecule of urea.

**Mooltan′ sore.** Local disease of India, thought to be due to the presence of some animal parasite, as the ova of distomata. Perhaps identical with the *Delhi boil*.

**Moon′blindness** (improperly ascribed to the action of moonlight). Nyctalopia. Iridochoroiditis recidiva. Intermittent ophthalmitis of the horse.

**Moon′calf.** Mole. A fetal monstrosity.

**Moon-creep′er.** Menispermum.

**Moon′ed.** Lunatic.

**Moon′seed.** Menispermum canadense.

**Moon′struck.** Lunatic.

**Moon′wort.** Botrychium lunaria; Ophioglossum lunaria.

**Moor′berry.** Vaccinium oxycoccos.

**Moore's frac′ture.** Fracture of the inferior extremity of the radius, the ulna being also dislocated. **M.'s meth′od**, method employed in treating aneurysm by the insertion of a fine iron wire. **M.'s test**, test for sugar; an equal quantity of solution of caustic potash or soda is added to urine and boiled, and if sugar is present a yellow or brown color results.

**Moor′grass.** Potentilla anserina.

**Moor-ill.** Gastroenteritis of cattle.

**Moors′head.** Alembic.

**Moor′wort, broad-leaved.** Andromeda mariana.

**Moose′wood.** Dirca palustris.

**Mope′eye.** Myopia.

**Mop′sical.** Myopic.

**Moradeine′.** Alkaloid from Pogonopus febrifugus, a tree of South America.

**Mor′al insan′ity.** Affection involving the moral powers rather than those of the intellect.

**Morand's′ disease′.** Paralysis of the lower extremities. **M.'s foot**, foot with eight toes, as in a case described by this observer. **M.'s spur**, calcar, or hippocampus minor.

**Mor′bi** (pl. of morbus) **acquisi′ti.** Acquired diseases. **M. acu′ti**, acute diseases. **M. acutis′simi**, hyperacute or foudroyant diseases. **M. adventi′tii**, acquired diseases. **M. anniversa′rii**, annual diseases. **M. an′nui**, annual diseases. **M. asthen′ici**, adynamic diseases. **M. cela′ti**, feigned diseases. **M. chron′ici**, chronic diseases. **M. cogna′ti**, innate diseases. **M. complica′ti**, see *Complication*. **M. congen′iti** or **conna′ti**, congenital diseases. **M. connex′i**, diseases going on together. **M. consequen′tes**, diseases that follow one another. **M. dermato′des**, skin diseases. **M. disper′si**, sporadic diseases. **M. dissimula′ti**, feigned diseases. **M. epicte′ti**, acquired diseases. **M. evolutio′nis**, see *Development*. **M. heredita′rii**, hereditary diseases. **M. infitia′ti**, feigned diseases. **M. inter′ni**, internal diseases. **M. nervo′si**, nervous diseases. **M. occul′ti**, latent or larval diseases. **M. olfac′tûs**, diseases of olfaction. **M. perplex′i**, complicated diseases. **M. pseuda′lei**, feigned diseases. **M. sexua′les** or **sex′ûs**, sexual diseases. **M. simula′ti**, feigned diseases. **M. spar′si**, sporadic diseases. **M. spasmot′ici**, tics and spasmodic affections generally. **M. subacu′ti**, see *Acute*. **M. tac′tûs**, diseases of the sense of touch. **M. trop′ici**, tropical diseases.

**Mor′bid.** Diseased, or relating to disease. **M. anat′omy**, pathological anatomy.

**Morbid′ity.** Morbid condition. Sick-rate. Condition inducing disease.

**Morbif′erous** (*morbus*, illness, *fero*, to bear). Morbific.

**Morbif′ic** (*morbus*, illness, *facio*, to make). Causing or producing disease, as morbific emanations.

**Morbil′ity.** Disease.

**Morbil′li** (dim. of *morbus*, disease). Rubeola, measles. **M. confluen′tes**, scarlatina. **M. hemorrhag′ici**, measles accompanied with hemorrhagic manifestations on the skin, as ecchymoses, etc. **M. ig′nei**, scarlatina. **M. malig′ni**, measles with indications of serious blood poisoning, hemorrhages, etc. **M. petechia′les**, hemorrhagic measles. **M. sep′tici**, malignant measles.

**Morbil′liform.** Having resemblance to measles.

**Morbil′lous.** Measly; affected or connected with measles.

**Mor′bulent** (*morbus*, disease). Sickly.

**Mor′bus.** Disease; see *Morbi*. **M. Addiso′ni**, see *Addison*. **M. ampulla′ceus**, pemphigus. **M. amyloi′des**, amyloid degeneration. **M. an′glicus**, phthisis; rachitis. **M. aphrodis′ius**, syphilis. **M. arcua′tus**, icterus. **M. arie′tis**, influenza. **M. arqua′tus**, icterus. **M. articula′ris**, gout. **M. astra′lis**, epilepsy. **M. atton′itus**, apoplexy. **M. Basedo′wii**, exophthalmic goitre. **M. Bright′ii**, Bright's disease. **M. bullo′sus**, pemphigus. **M. cadu′cus**, epilepsy. **M. cæru′leus**, cyanopathy. **M. cal′culi**, lithiasis. **M. canaden′sis**, radezyge. **M. cancrifor′-**

**mis**, epithelial cancer. **M. cardi'acus**, cardialgia. **M. catarrha'lis**, influenza. **M. catox'ys**, hyperacute disease. **M. a Cel'si**, catalepsy. **M. cerea'lis**, ergotism. **M. cerebra'lis Whytt'ii**, hydrocephalus internus. **M. ce'reus**, waxy degeneration. **Chol'era m.**, see *Cholera.* **M. cirrho'rum**, plica. **M. cœli'acus**, cœliac flux. **M. comitia'lis**, epilepsy. **M. cor'dis**, disease of the heart. **M. costa'lis**, pleuritis. **M. cox'æ**, hip disease. **M. c. seni'lis**, arthritis deformans of the hip-joint. **M. coxa'rius**, hip disease. **M. croa'tus**, scherlievo. **M. cuculla'ris**, pertussis. **M. cucul'lus**, pertussis. **M. cystophlegmat'icus**, cystorrhœa. **M. dæmoni'acus**, epilepsy. **M. dæmo'nius**, epilepsy. **M. deif'icus**, epilepsy. **M. dissolu'tus**, dysentery. **M. ditmar'sicus**, syphilis. **M. divi'nus**, epilepsy. **M. domino'rum**, gout. **M. el'ephas**, elephantiasis. **M. ende'mius**, endemic disease. **M. epidem'icus**, epidemic disease. **M. epidem'icus gut'turis Fores'ti**, scarlatina. **M. erudito'rum**, hypochondriasis. **M. extrin'secus**, external disease. **M. farcimino'sus**, see *Equinia.* **M. febri'lis**, febrile affection. **M. felli'fluus**, cholera. **M. flatulen'tus**, hypochondriasis. **M. flatuo'sus**, hypochondriasis. **M. fluminien'sis**, scherlievo. **M. fœ'dus**, epilepsy. **M. fœmina'rum**, Scythian disease. **M. frig'idus**, atrophy. **M. gal'licus**, syphilis. **M. gesticulato'rius**, chorea. **M. granulo'sus re'num**, Bright's disease. **M. hæmorrhoida'lis**, hemorrhoids. **M. herac'leus**, epilepsy. **M. hercu'leus**, epilepsy. **M. hispan'icus**, syphilis. **M. hungar'icus**, Hungarian fever. **M. hydrophob'icus**, hydrophobia. **M. hypochondri'acus**, hypochondriasis. **M. hyster'icus**, hysteria. **M. in'dicus**, syphilis. **M. infanti'lis**, epilepsy. **M. interlu'nis**, epilepsy. **M. ischiad'icus**, sciatica. **M. ita'licus**, syphilis. **M. jecin'oris**, hepatitis. **M. larda'ceus**, waxy degeneration. **M. lasci'vus**, chorea. **M. latera'lis** or **lat'eris**, pleuritis. **M. laz'ari**, elephantiasis. **M. lese'oli**, icterus. **M. lunat'icus**, epilepsy. **M. lute'olus**, icterus. **M. maculo'sus hæmorrhag'icus Werlho'fii**, purpura hæmorrhagica. **M. mag'nus**, epilepsy. **M. ma'jor**, epilepsy. **M. marit'imus**, seasickness. **M. medico'rum**, disease due to the abuse of medicine. **M. mensa'lis**, epilepsy. **M. mercuria'lis**, eczema mercuriale; hydrargyriasis. **M. metal'licus**, lead colic. **M. milia'ris**, miliaria. **M. mirachia'lis**, hypochondriasis. **M. miser'iæ**, a disease caused or aggravated by privation. **M. muco'sus**, form of mucous flux which prevailed in Napoleon's army stationed at Göttingen, due, it was supposed, to the presence of an entozoon, the trichocephalus. **M. nau'ticus**, seasickness. **M. neapolita'nus**, syphilis. **M. ni'ger**, melæna. **M. origina'lis**, idiopathic disease. **M. ory'zeus**, cholera. **M. pal'lidus**, chlorosis. **M. pancœ'nus**, pandemic. **M. pande'mius**, pandemic. **M. parthe'nius**, chlorosis. **M. paxto'nii**, parasitic disease of the hair of the armpit, named after the first full describer. **M. pedicula'ris** or **pediculo'sus**, phtheiriasis. **M. pe'dis entophyt'icus**, Madura foot. **M. peracu'tus**, very acute disease. **M. phlyctenoi'des**, pemphigus. **M. phœni'ceus**, elephantiasis. **M. pila'ris**, trichiasis. **M. pleurit'icus**, pleuritis. **M. plum'beus**, lead poisoning. **M. popula'ris**, epilepsy. **M. porci'nus**, essera. **M. prima'rius**, idiopathic disease. **M. pro'prius**, idiopathic disease. **M. proteifor'mis**, a disease which assumes many forms. **M. protopath'icus**, idiopathic disease. **M. psoad'icus**, lumbar abscess. **M. pub'licus**, epidemic disease. **M. pueri'lis**, epilepsy. **M. pulicula'ris**, typhus gravior. **M. pustulo'sus fin'nicus**, see *Anthrax.* **M. recidi'vus**, relapse. **M. regiona'lis**, endemic. **M. re'gius**, icterus. **M. resiccato'rius**, hypochondriasis. **M. ructuo'sus**, hypochondriasis, eructation. **M. sa'cer**, epilepsy. **M. saltato'rius**, chorea. **M. Sanc'ti Joan'nis**, epilepsy. **M. Sanc'ti Valenti'ni**, epilepsy. **M. scarlatino'sus**, scarlatina. **M. sceles'tus**, epilepsy. **M. scrophulo'sus**, scrofula. **M. seleni'acus**, epilepsy. **M. seni'lis**, arthritis deformans. **M. sidera'tus**, epilepsy. **M. silesi'acus**, ergotism. **M. sim'plex**, simple affection. **M. solstitia'lis**, insolation. **M. son'ticus**, epilepsy. **M. spasmod'icus malig'nus** or **popula'ris**, ergotism. **M. strangulato'rius**, cynanche trachealis. **M. sudato'rius**, sudor anglicus. **M. suf'focans**, cynanche maligna. **M. suffocati'vus**, cynanche maligna. **M. truculen'tus infan'tum**, cynanche trachealis. **M. tuberculo'sus pe'dis**, podelcoma. **M. vermino'sus**, helminthiasis. **M. vernac'ulus**, endemic disease. **M. verveci'nus**, influenza. **M. vesicula'ris**, pemphigus. **M. virgin'eus**, chlorosis. **M. viridel'lus**, epilepsy. **M. vitriola'tus**, epilepsy. **M. vo'cis**, disease of the voice. **M. vul'pis**, alopecia.

**Morcella'tion.** Division. Removal in small pieces —of a tumor, for example.

**Morchel'la esculen'ta.** An edible mushroom; has been considered to be aphrodisiac.

**Mor'dant** (*mordeo*, to take hold). Possessing the property of fixing colors.

**Mor'dex** (*mordeo*, to bite). Tooth.

**Mor'dicant** (*mordeo*, to bite). Morbid heat, causing a disagreeable, pungent sensation in the fingers.

**Mordica'tion.** Biting sensation on the skin.

**Mo'rea.** Morus nigra.

**More'æ sisyrin'chium.** Spanish nut iris; mucilaginous and pectoral.

**Morel's' ear.** Abnormally large, smooth, pendulous ear.

**Morell', common.** Morchella esculenta.

**Moreto'sia huani'ta.** Plant of Michoacan, bark of which is astringent and antiperiodic.

**Morgagni's** (mor-gan'yees) **car'tilages.** Cartilages of Wrisberg. **M.'s car'uncle**, middle lobe of prostate gland. **M.'s cat'aract**, variety of cataract with a hard centre suspended in liquid. **M.'s col'umns**, straight columns of Morgagni, plicæ or folds in the rectum. **M.'s con'cha**, superior turbinated bone of the ethmoid. **M.'s fora'men**, cæcal foramen of the tongue. **M.'s fos'sa**, fossa navicularis of the urethra; also fossa between the upper margin of the superior constrictor of the pharynx and the basilar process of the occipital bone. **M.'s fræ'na**, fold or bridle around the cæcum caused by extension of the folds of the ileocæcal valve. **M.'s glands**, mucous glands in the bulbous part of the urethra. **M.'s glob'ules**, small bodies between the lens and its capsule, caused by coagulation of albuminous fluid in the lens. **M.'s hu'mor**, M.'s liquor. **M.'s hydat'id**, see *Hydatid.* **M.'s lacu'næ**, pits in the mucous membrane of the urethra, particularly the bulbous portion. **M.'s liq'uor**, peculiar transparent, slightly viscid fluid found between the crystalline lens and its capsule. **M.'s nod'ules**, body of Arantius. **M.'s prolapse'**, chronic inflammation of the mucous and submucous lining of the sacculus laryngis or Morgagni's ventricle. **M.'s retinac'ula**, M.'s fræna. **M.'s si'nus**, prostatic sinus. **M.'s si'nuses**, small sinuses or pouches near the anus composed of the mucous membrane lining the rectum; sinuses of Valsalva. **M.'s spheres**, M.'s globules. **M.'s tu'bercles**, tubercles of the areola; see *Mamma.* **M.'s valves**, M.'s sinuses. **M.'s ven'tricle**, sacculus laryngis.

**Mor'gan's spots.** Red spots occurring on the skin in cases of cancer.

**Morgue.** Mortuary. A dead-house wherein persons, found dead, are exposed with the view of being recognized by their friends.

**Mo'ria.** Idiotism. Dementia. **M. de'mens**, idiotism, dementia. **M. de'mens lere'ma**, see *Dementia.* **M. imbeci'lis amne'sia**, amnesia.

**Mor'ibund** (*morior*, to die). Dying; *in articulo mortis.*

**Morin'da citrifo'lia.** Indian mulberry; emmenagogue, astringent. **M. umbella'ta**, of E. Indies; vermifuge and antidysenteric.

**Morin'dar.** $C_{23}H_{30}O_{15}$. From Morinda citrifolia.

**Morin'ga ap'tera, M. oleïf'era, M. pterygosper'ma, M. zeylan'ica.** Guilandina moringa.

**Mo'rioplasty.** Plastic surgery.

**Morn'ing sick'ness.** See *Pregnancy.*

**Morn′ing-glo′ry.** Convolvulus.

**Mo′ro** (*morum*, mulberry). Morum. Small abscess resembling a mulberry. Small tumor, of a similar appearance, particularly on the genital organs.

**Morono′bea coccin′ea.** Hog gum tree, ord. *Clusiaceæ*, native of Brazil. Affords a resin which is substituted for balsam of copabia.

**Moro′sis.** Delirium with imbecility; idiocy.

**Morosita′tes** (*morosus*, morose, peevish). Generic name given by Linnæus to an order of Vesaniæ, in which he included bulimia, polydipsia, nostalgia, panophobia, satyriasis, nymphomania, tarantism, hydrophobia, and other affections.

**Morotroph′ium** (*moros*, foolish, *trophe*, support). A lunatic asylum.

**Morphæ′a.** A scurfy eruption on the face.

**Mor′phew.** Morphæa or morphœa.

**Mor′phia.** Morphine.

**Mor′phiated.** Impregnated with morphine or one of its salts.

**Mor′phic** (*morphe*, shape). Relating to the anatomical conformation of a part. Applied also in pharmacy to any composition of morphine.

**Mor′phica.** Monstrosities.

**Morphi′na** (Ph. U. S. and Br.) (*Morpheus*, god of sleep). Morphium, morphine, $C_{17}H_{19}NO + H_2O$. Solid, colorless alkaloid, crystallizable in beautiful pyramids, truncated and transparent; soluble in alcohol and slightly so in boiling water. It exists, combined with meconic acid, in opium. It may be obtained, by decomposing by means of ammonia or calcined magnesia, an aqueous solution of opium made in the cold. Morphine dissolves perfectly in acids, which it saturates, and with which it forms salts. All the salts have a bitter taste, and act upon the animal economy in the same manner as opium, but more powerfully. One-sixth of a grain has been considered equal to a grain of opium. Dose of the alkaloid, gr. $\frac{1}{10}$–$\frac{1}{3}$ (0.0065–0.02). The following are the salts of morphine most in use: **Morphi′næ ace′tas** (U. S. and Br.), a white, amorphous powder, becoming darker on exposure; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.032). **M.-diacet′yli hydrochlor′as,** diacetyl-morphine hydrochlorate, heroine hydrochlorate, a slightly bitter, crystalline salt; sedative, used in irritative coughs; dose, $\frac{1}{24}$–$\frac{1}{12}$ (0.0025–0.005). **M.-eth′yli hydrochlor′as,** ethyl-morphine hydrochlorate, dionin, a white, crystalline powder; anodyne and antispasmodic; used in asthma and bronchitis; dose, gr. $\frac{1}{12}$–$\frac{1}{6}$ (0.005–0.01). **M. hydrochlo′ras** (U. S.), **M. hydrochlo′ridum** (Br.), a white, crystalline or amorphous powder; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.032). **M. mec′onas,** a form in which morphine exists in opium, said to cause less disturbance of the digestive system than the other salts or the alkaloid itself; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.032). **M. mu′rias,** m. hydrochloras. **M. sul′phas** (U. S.), a white, crystalline, bitter powder; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.032). **M. tar′tras** (Br.), occurs in tufts of acicular crystals; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.032).

**Mor′phinated.** Morphiated.

**Morphine′.** Morphina. **M. hab′it,** morphinism, morphinomania,

**Mor′phinism.** Diseased condition brought about by the abuse of morphine. Morphinomania.

**Morphinoma′nia** or **Morphioma′nia.** Craving for morphine; morphine habit, whether the drug be swallowed or taken hypodermically; mania excited by the continued use of morphine or by sudden deprivation of it.

**Morphinoma′niac.** One addicted to morphine.

**Morphiom′etry.** Determination of the amount of morphine in opium or any mixture.

**Morphioph′agy** (*phago*, to eat). Morphine habit.

**Mor′phium.** Morphine.

**Morpho-** (*morphe*, shape or form). In composition, shape or form.

**Morphœ′a** (*morphe*, form). Addison's keloid. Circumscribed scleroderma, Wilson's morphœa. Cutaneous affection caused by the deposit of a lardaceous substance, which by its pressure obliterates the more highly organized tissues, such as the vessels, glands, and nerves. When very white it is called *morphœa alba;* when attended with pigmentary deposit it is called *m. nigra;* with atrophy, *m. atrophica;* when in bands or lines, *linear atrophy.* **M. flam′mea,** nævus vascularis.

**Morphogen′esis** (*morphe*, shape, *genesis*, production). Morphosis; process of formation.

**Morphogeny,** mor-foj′en-e. Development.

**Morphog′raphy.** Descriptive morphology.

**Morphological,** mor-fo-loj′ik-al (*morphe*, shape, *logos*, a description). That which relates to the anatomical conformation of parts. Applied at times to the alterations in the form of the several parts of the embryo, in contradistinction to histological, which is applied to the transformations by which the tissues are gradually generated. In comparative anatomy it is applied to the history of the modifications of forms which the same organ undergoes in different animals, and more generally to the doctrine of the forms of organized bodies.

**Morphol′ogist.** One given to the study of morphology.

**Morphol′ogy.** Anatomy. See *Morphological.*

**Morphol′ysis** (*lysis*, solution). Destruction of organization. An agent occasioning such destruction is called a *morpholytic.*

**Morpholyt′ic.** See *Morpholysis.*

**Morphom′etry** (*morphe*, form, *metron*, measure). Measurement or estimation of the external form.

**Mor′phon** (*morphe*, shape). An organism having a distinctive and characteristic form; a morphological element.

**Morphon′omy** (*morphe*, form, *nomos*, law). Law of organic formation. Department of anatomical science which teaches the laws of organic configuration.

**Morphonosus,** mor-fon′o-sus (*morphe*, shape, *nosos*, disease). Morbid change of shape or form.

**Morpho′sis** (*morphe*, form). Process of formation.

**Morphot′ic.** Term applied to organic or anatomical elements in contradistinction to the inorganic.

**Morphot′omy.** General anatomy. See *Anatomy.*

**Mor′pio** or **Mor′pion.** Crab-louse. See *Pediculus.*

**Morrant′ Ba′ker's cysts.** Baker's cysts.

**Mor′rhua.** Codfish. Gadus morrhua. See *Oleum morrhuæ.*

**Mor′rhuic acid.** $C_9H_{13}NO_3$. Ptomain obtained from brown cod-liver oil.

**Morrhuin′.** $C_{19}H_{27}N_3$. Ptomain from cod-liver oil, from mother liquors of aselline. An alkaline, oily, thick liquid; diuretic and diaphoretic.

**Mor′rhuol.** Alcoholic extract from oleum morrhuæ, used in phthisis, scrofula, etc., and containing iodine, bromine, and phosphorus.

**Mors.** Death. **M. appa′rens,** apparent death; asphyxia. **M. ni′gra,** black death, plague. **M. putati′va,** apparent death. **M. repenti′na,** sudden death.

**Mor′sal** (*mordeo, morsum*, to bite). Relating to the biting or grinding edge of a tooth.

**Morse fin′ger.** A contraction of the finger caused by use of the telegraph key.

**Morsel′lus** (dim. of *morsus*, a bite) or **Mor′sulus.** Tablet or lozenge.

**Mor′sus** (*mordeo, morsum*, to bite). Gnawing sensation about the upper orifice of the stomach. **M. diab′oli,** scabiosa succisa; fimbriæ of the oviduct. **M. Galli′næ,** alsine media. **M. stom′achi** or **ventric′uli,** cardialgia.

**Mort.** Adeps.

**Mor′ta.** Pemphigus.

**Mor′tal** (*mors*, death). Lethal. That which is subject to death or that which causes death—as, man is mortal, a disease is mortal.

**Mortal′ity.** This word, taken in an extended sense, expresses the condition of all organized bodies of being subject to the cessation of life. In the sense in which it is most frequently employed it signifies the death-rate—the proportional number of individuals who, in a certain population, die in a given time. **Bills of m.**, bills of necrology, mortuary registers; tables instituted for the purpose of exhibiting the number of deaths, etc., in a given time. In England they were formerly made out by the parish clerks, and the information was conveyed to them by two old women who were appointed in each parish, and were called *searchers*, their duty being to see that the deceased had died a natural death.

**Mor′tar.** Vessel for reducing to powder different solids substances, and for making certain mixtures. Usually made of iron, marble, glass, wedgewood-ware, etc.

**Mortari′olum** (dim. of mortarium). Alveolus.

**Morta′rium.** Mortar. The trunk.

**Mor′tifer** (*mors*, death, *fero*, to carry). Producing death; lethiferous.

**Mortifica′tion.** Sphacelation; loss of vitality in a part of the body. The incipient stage of mortification, when the case is still recoverable, is called *gangrene;* when the part is totally dead, *sphacelus.* Mortification of a bone is called necrosis. **Cold m.**, sphacelus. **Er′got m.**, ergotism. **Hot m.**, gangrene. **Mil′dew m.**, ergotism. **M. root**, Althæa officinalis.

**Mor′tified.** Dead, as a part affected with gangrene.

**Mortisec′tion.** Post-mortem examination.

**Mor′ton's cough.** Cough with vomiting of food, often noticed in those affected with pulmonary tuberculosis. **M.'s flu′id**, M.'s solution. **M.'s neural′gia** or **pain′ful affec′tion of the foot** (from Dr. Thomas G. Morton, of Philadelphia, who first described it), a painful affection of the plantar digital nerves, directly caused by pressure upon or pinching of them by certain portions of the metatarsophalangeal articulations, especially the fourth. **M.'s plane**, plane extending through principal points of parietal and occipital eminences. **M.'s solu′tion**, potassii iodidi, gr. xxx; iodini, gr. x; glycerini, ℥j; for injection in treatment of spina bifida. **M.'s toe**, Morton's painful affection of the foot.

**Mor′tooth.** Copper sulphate.

**Mor′tuary** (*mortuus*, dead). Relating to the dead. Morgue. **M. reg′isters**, bills of mortality,

**Mor′tuus** (*mors*, dead). Dead.

**Mor′ula** (*morus*, mulberry). Button scurvy. Stage of development of ovum after segmentation; mulberry mass or segmentation spheres.

**Mor′ulus.** Yaws. A spot of inflammation in frambœsia.

**Mo′rum** (*moron*). See *Morus nigra.* Condyloma; nævus. **M. pal′pebræ inter′næ**, trachoma carunculosum.

**Mo′rus al′ba.** White mulberry tree of China; diuretic, laxative, antiperiodic, anthelmintic. **M. in′dica**, leaves are galoctagogue. **M. ni′gra**, mulberry tree, ord, *Urticaceæ;* the fruit of the mulberry tree, *Morum sycaminum*, is pleasant, sweet, subacid, and abounds with a deep violet-colored juice. The bark of the root has been regarded as an anthelmintic. **M. ru′bra**, red mulberry, wild mulberry; indigenous; the root has been used to destroy tænia. **M. tincto′ria**, Maclura tinctoria.

**Mor′van's chore′a.** Contraction of the minute fibrils of the muscles of the inferior extremities and lower portion of the trunk. **M.'s disease′**, neuritic form of syringomyelia, characterized by the presence of painless whitlows, with progressive anæsthesia and paralysis, especially of the upper extremities.

**Morve.** Equinia.

**Mosa′ic.** Having shape of a pattern or design, as seen in cross-section of muscular fibres, m. of muscle-compartments, and m. of muscle-prisms.

**Moschatine′.** Bitter principle obtained from Achillea moschata. $C_{21}H_{27}NO_7$.

**Moschelæ′on** (*moschos*, musk, *elaion*, oil). Compound aromatic oil containing musk.

**Mos′chus.** (Ph. U. S. and Br.) The dried secretion from the preputial follicles of Moschus moschiferus or musk deer; stimulant and antispasmodic; dose, gr. v–x (0.32–0.65). The tincture, *tinctu′ra mos′chi*, is official; dose, ʒj–iv (4.0–16.0). See *Musk* and *Hibiscus abelmoschus.* **M. Ar′abum**, Hibiscus abelmoschus.

**Mos′ler's disease.** Inosituria.

**Moslich**, mos′lik. Maslach.

**Mosqui′ta.** A name given by the Portuguese to small red pimples on the skin resembling mosquito-bites.

**Mosqui′to** (Sp. dim. of *mosca*, fly). A blood-sucking gnat of the order *Diptera.* The sting of the female insect is irritating to the skin, causing the formation of an itching wheal or papule, with red areola; the irritation of this lesion may be removed by the application of ammonia, soap, or any alkaline lotion. The mosquito is of medical interest chiefly by reason of the discovery that several of the scourges of mankind, in the tropics especially, are communicated from man to man by its bite. Each disease appears to be spread by the agency of a special genus; thus the *Anopheles* is responsible for the diffusion of malaria, *Culex* probably for that of filariasis (elephantiasis), and *Stegomyia* for that of yellow fever. Mosquitoes breed chiefly in pools of stagnant water, and their numbers in any given locality may be reduced by drainage of swamps and covering the surface of all pools with a thin film of petroleum.

**Moss.** A small, cryptogamic plant. **Carrageen′ m.**, Irish moss. **Ceylon′ m.**, Fucus amylaceus. **Chinese′ m.**, agar-agar. **Club m.**, lycopodium. **Cor′sican m.**, helminthochorton. **M. cup**, Lichen pyxidatus. **Ed′ible m.**, Fucus amylaceus. **Hair′-cap m.**, Polytrichum juniperinum. **Ice′land m.**, Lichen islandicus; see *Muscus.* **Irish m.**, Chondrus crispus. **Jaff′na m.**, Fucus amylaceus. **Pearl m.**, Chrondrus crispus. **Pec′toral m.**, see *Muscus.* **Rock m.**, a species of lichen from which litmus is derived. **Stone m.**, lichen of Arctic regions of N. America, used as food. **Wall m.**, **com′mon yel′low**, Parmelia parietina.

**Moss′berry.** Vaccinium oxycoccos.

**Mota′men** (*moveo*, *motum*, to move). Motion.

**Mota′rion** or **Mota′rium.** Charpie or lint.

**Moth freck′le** or **M. patch.** Chloasma.

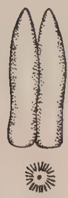
**Moth′er.** Parent of the female sex. Residue in solution. **M. cell**, parent cell. **M. liq′uor**, m. water. **M.'s mark** or **spot**, nævus. **M. star**, monaster. **M. of vin′egar**, Mycoderma aceti, a saccharomycete which possesses the power to convert a solution containing sugar into vinegar. **M. water**, fluid remaining after the precipitation of the crystals from solutions containing salts. **M.-wort**, Leonurus cardiaca, matricaria.

**Mo′tile.** Possessing the power of spontaneous movement.

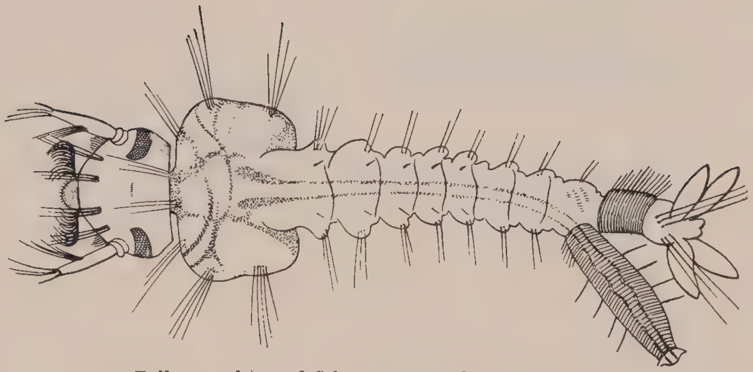
**Motil′ity** (*moveo*, *motum*, to move). Faculty of independent or spontaneous motion. Not to be confounded with *mobility*, which see.

**Mo′tion.** Movement; act of changing place. The various motions may be divided into: First, the *voluntary*, or those that are executed under the influence of the brain; secondly, the *involuntary*, which may be subdivided into those of the *reflex* kind, as the closure of the larynx on the contact of acrid vapors, or of the eye on irritation of the conjunctiva, and those that are executed under the influence of the organic and other nerves of involuntary function. It is probable, too, that every living tissue is capable of moving responsive to its appropriate irritant. See *Irritability.* The movements seen whenever very fine particles are disseminated in a liquid have been called *Brownian* or *Brunonian movements*, after Dr. Robert Brown, the celebrated phytologist. **Cil′iary m.**, see *Cilia.* **Invol′untary m.**, see *Automatic.* **M.-point**, point at which a motor nerve enters a muscle; in applying electricity the electrode is placed over this point. **M.-root**, nerve-root serving only to excite motion. **Vi′bratory m.**, see *Ciliary.* **Vol′untary m.**, motion entirely under control of the will.

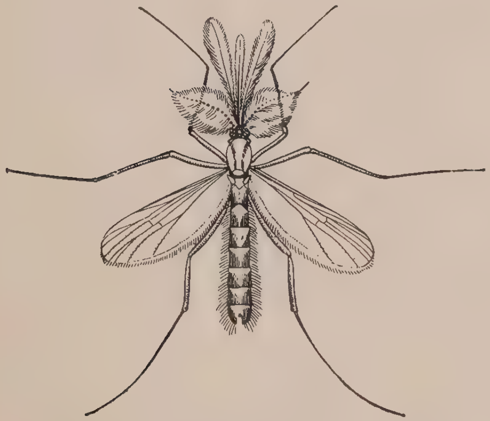
# MOSQUITOES



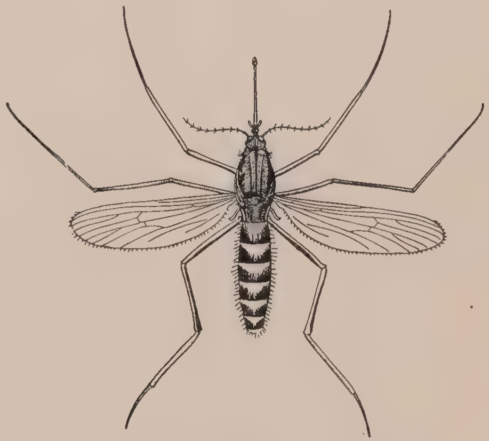
Eggs of *Culex pungens:* enlarged. (Howard.)



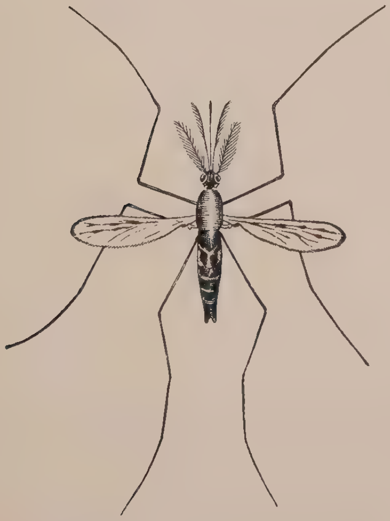
Full-grown larva of *Culex pungens:* enlarged. (Howard.)



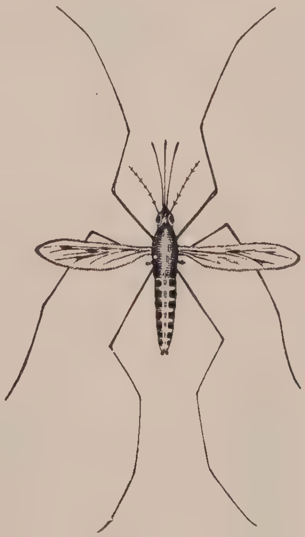
Male of *Culex pungens:* enlarged. (Howard.)



Female of *Culex pungens:* enlarged. (Howard.)

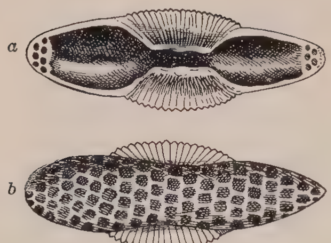


Male of *Anopheles maculipennis:* enlarged.

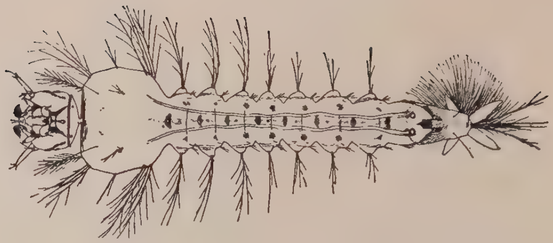


Female of *Anopheles maculipennis:* enlarged.

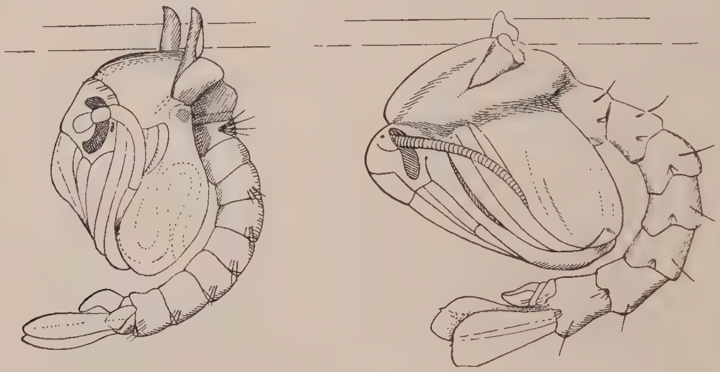
# MOSQUITOES



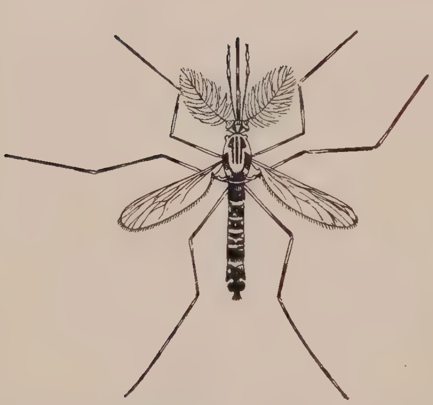
Individual eggs of *Anopheles maculipennis:* *a*, upper surface; *b*, lower surface; greatly enlarged. (Howard.)



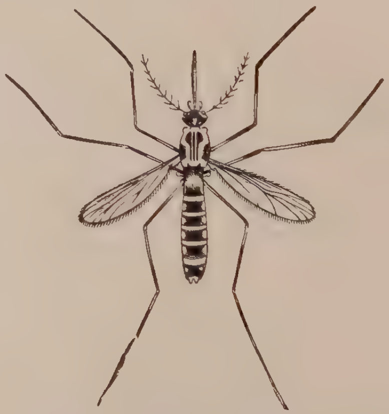
Full-grown larva of *Anopheles maculipennis:* enlarged. (Howard.)



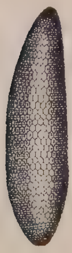
Pupa of *Anopheles* at right; *Culex* at left; enlarged. (Howard.)



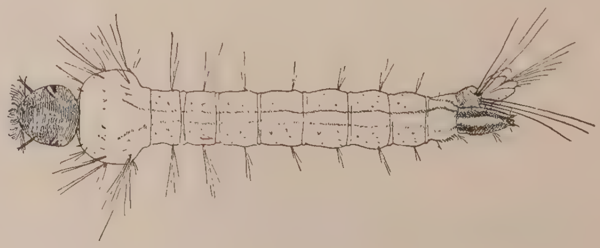
Male of *Stegomyia fasciata:* enlarged. (Howard.)



Female of *Stegomyia fasciata:* enlarged. (Howard.)



Egg of *Stegomyia fasciata:* enlarged.



Full-grown larva of *Stegomyia fasciata:* enlarged. (Howard.)

**Mo'tive.** Motor.

**Mo'tor.** Motive, motory, motorial, motile, kinetic or cinetic. That which moves or causes or possesses movement, as motor nerves, in contradistinction to sensory nerves. **M. apha'sia,** see *Aphasia.* **M. a'rea,** convolutions about upper part of fissure of Rolando. **M. cel'lule,** motor cell. **M. cen'tre,** m. area. **M. exter'nus,** motor oculi externus. **M. lin'guæ,** hypoglossal nerve. **M. ner'vous cen'tres,** hemispherical and other ganglia whence motor influences set out. **M. oc'uli,** common oculomuscular nerve, third pair of nerves, par tertium, arises from a depression at the inner side of the peduncles of the brain, between the tuber annulare and corpora mammillaria; it enters the outer part of the cavernous sinus and passes into the orbitar cavity. Behind the sphenoidal fissure it divides into two branches, the one superior and the other inferior. The former is lost on the rectus superior oculi and the levator palpebræ superioris; the latter—the larger of the two—divides into three branches, which pass to the rectus internus, rectus inferior, and lesser oblique. The last furnishes a filament which passes to the ophthalmic ganglion. **M. o. commu'nis,** the third nerve, m. oculorum. **M. o. exter'nus,** sixth pair of nerves, arises from the furrow which separates the pons Varolii from the medulla oblongata. It enters the cavernous sinus, anastomoses on the outside of the carotid artery with two filaments furnished by the superior cervical ganglion, enters the orbit by the sphenoidal fissure, and is lost on the rectus externus oculi. This nerve is also called *abducens.* **M. oculo'rum,** m. oculi. **M. points,** point of entrance of a motor nerve into a muscle. Over this point the application of an electrode produces contraction. **M. root,** spinal root of a nerve producing motion only.

**Mo'torgraph.** Motormeter.

**Moto'rial.** Motory. **M. end-plates,** termination of minute filaments of nerves in small disks or plates; see *End-plates.*

**Moto'rium commu'ne.** Motor nervous centre.

**Moto'rius.** Motor. **M. lin'guæ,** hypoglossal nerve. **M. oc'uli commu'nis,** motor oculi.

**Mo'tormeter.** An apparatus for the graphic representation of motion in any organ or part.

**Mo'torpathy.** Kinesipathy; medical gymnastics.

**Mo'tory.** Motor.

**Mo'tos.** Lint, charpie, tent.

**Motricity,** mo-tris'it-e. The power of exciting or conveying motor impulses.

**Mo'trix** (*moveo, motum,* to move). Motory.

**Mo'tum.** Lint, charpie.

**Mo'tus** (*moveo, motum,* to move). Motion. **M. assimilatio'nis,** plastic force. **M. automat'icus,** see *Automatic.* **M. compresso'rius,** peristole. **M. cor'dis diastal'ticus,** diastole. **M. hæmorrhoida'lis,** hæmorrhois. **M. intestina'lis** or **intestino'rum,** peristalsis; borborygmus. **M. involunta'rius,** automatic or involuntary motion. **M. peristal'ticus,** peristalsis. **M. testudin'eus,** peristole. **M. vermicula'ris,** peristalsis. **M. volunta'rius,** autokinesis.

**Mould.** Mold.

**Moult'ing** (*muto,* to change). Desquamation.

**Mound'ing.** Condition observed in the latter stages of ataxia, in which the fibres of a muscle rise into a mass when firmly struck.

**Moun'tain anæ'mia.** Ankylostomiasis. **M. ash,** Sorbus acuparia. **Amer'ican m. a.,** Sorbus americana. **M. balm,** Eriodictyon californicum. **M. bu'gle,** Ajuga pyramidalis. **M. cure,** cure of disease by residence in high altitudes. **M. dam'son,** see *Damson.* **M. fe'ver,** a form of fever, regarded by some as malarial, by others as typhoid, occurring on the slopes of the Rocky Mountains. **M. flax,** Linum catharticum or Polygala senega. **M. grape,** Berberis aquifolium. **M. lau'rel,** Kalmia latifolia. **M. mach'inell,** Rhus metopium. **M. mint,** see *Pycnanthemum.* **M. pine,** see *Pine.* **M. ser'vice,** Sorbus acuparia. **M. sick'ness,** puna; vertigo, nausea, sometimes vomiting, dyspnœa, and violent palpitations affecting novices in mountain climbing or those coming to live in high altitudes; it is due to the rarefaction of the atmosphere, to which one at length becomes habituated, when the symptoms disappear. **M. su'mach,** Rhus copallina. **M. tea,** Gaultheria procumbens. **M. tobac'co,** Arnica montana.

**Mount'ing flu'ids.** Solutions employed in mounting microscopic specimens, as iodine, gum dammar, glycerin, etc.

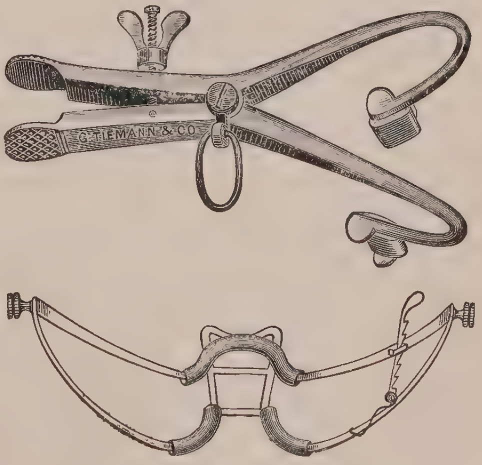
**Mouse.** A small rodent, Mus musculus. **M. ear,** Alsine media, Hieracium pilosella. **Joint m.,** floating cartilage in joints. **M. sight,** myopia.

**Moussenine'.** Alkaloid from bark of Albrizzia anthelmintica.

**Moustache'.** Mystax.

**Mouth.** This word sometimes signifies the cavity situated between the jaws and containing the tongue, etc.; at others, the outer orifice of that cavity, *peristomium, vestibulum oris.* The mouth, in the first acceptation, *cavitas* or *cavum* or *spatium oris,* is the cavity bounded above by the palatine arch; below, by the tongue; before, by the lips; and behind, by the velum palati and pharynx. The sides of the mouth and the organs it contains are lined by mucous membrane. The anterior aperture of the mouth is sometimes called facial; the posterior, pharyngeal. In the mouth are the teeth, gums, alveolar margins, tongue, the excretory ducts of the salivary glands, and those of a number of mucous follicles, etc. In this cavity the food is cut, torn, or bruised by the teeth, is impregnated with saliva, and formed into a mass or bolus, which is then subjected to the act of deglutition. The mouth contains the organs of taste, and serves in articulation, expectoration, suction, etc. The state of the mucous membrane of the mouth, especially that of the tongue, indicates the condition of the membrane of the alimentary canal generally. Mouth, *os,* is also applied to the open extremity of a vessel or other canal. **M.-breath'ing,** respiration through the open mouth instead of through the nostrils; in children often due to the presence of adenoid tissue in the nasopharynx. **Prim'itive m.,** blastopore. **M.-root,** coptis. **Sore m.,** aphthæ. **M. of the womb,** os uteri.

**Mouth-gag.** An instrument designed to prevent the jaws from closing during operations upon parts within the mouth or pharynx, intubation of the larynx, etc.



Mouth-gags.

**Mouth-wa'tering.** Salivation.

**Mov'able kid'ney.** Floating kidney. **M. liv'er,** mobile condition of the liver occasionally existing, and depending on exceptional length of the ligaments of that organ.

**Move'ment** (*moveo,* to move). Defecation. Motion, change of location. **Amœ'boid m.,** see

*Amœba.* **Asso′ciated m.**, see *Associated.* **Brown′ian** or **Bruno′nian m.**, molecular movement. **Cil′iary m.**, see *Cilia.* **Cir′cus m.**, circular locomotion observed in some forms of brain lesions, such as injury or disease of the corpus striatum, thalamus, or crus. **M.-cure**, kinesipathy. **In′dex m.**, m. of the head or cephalic extremity on the lower or caudal part of the trunk, acting as a fixed body. **Molec′ular m.**, m. of fine particles of a body in suspension in a liquid. **Swe′dish m.**, kinesipathy. **Vermic′ular m.**, peristalsis. **Vi′bratile m.**, ciliary m.

**Mow′er's mite.** Leptothrix autumnalis.

**Mox′a.** Word by which the Chinese and Japanese designate a cottony substance which they prepare by beating the dried leaves of the Artemisia moxa, a kind of mugwort used as a cautery. In Europe and this country the same kind of cautery was formerly practised with a cylinder of cotton-wool or with one formed from the pith of the greater sunflower. This mode of cauterization was employed as a powerful counterirritant. The term moxa has been extended to any substance which by gradual combustion on or near the skin is employed as a counterirritant, as the electric or galvanic moxa or cautery, in which electricity is employed as the cauterizing agent.

**Mox′a-bear′er.** Porte-moxa; instrument for applying the moxa.

**Moxibu′rium.** Moxa.

**Moxibus′tion.** Cauterization by means of the moxa.

**Moxocau′sis** (*kausis*, burning). Moxibustion.

**Moxosphy′ra** (*sphyra*, hammer). Counterirritation by means of a hammer heated in boiling water and placed on the skin.

**Moyrapua′ma** (from two Brazilian words meaning straight tree). A nervous tonic and aphrodisiac. The root is employed in medicine. Its virtues depend on a glucoside.

**Muavine′.** Alkaloid from Muawi bark, a Mozambique tree resembling digitalis in its therapeutic action; used also as an ordeal poison; the hydrobromate is the preparation used medicinally.

**Muca′go** (*mucus*). Mucilage. Mucus.

**Muccin′ium**, muk-sin′e-um (*mucus*). Mucilage.

**Mucedin′.** Constituent of wheat gluten, soluble in alcohol.

**Muce′do.** Mucilage; mucus.

**Mu′cic acid.** Acid obtained when sugar of milk, gum, mucilage, etc., are subjected to the action of nitric acid; white, crystalline powder.

**Mucif′erous** (*mucus*+*fero*, to bear). Producing mucus.

**Mucif′ic** (*mucus*+*facio*, to make). Producing mucus; blennogenous.

**Muciflux′us.** Blennorrhagia.

**Mu′ciform** (*mucus*+*forma*, form). Resembling mucus in character or appearance.

**Mu′cigen** (*mucus*+*gennao*, to form). Mucus-forming substance. Substance existing in mucous membranes and some glands, which is changed into mucin.

**Mucigin′.** Mucoid substance in the goblet-cells.

**Mu′cilage** (*mucus*). Mixture of gum and a small quantity of matter analogous to mucus, which is found in abundance in linseed, quinceseed, etc.; obtained by heating in water the parts or products of plants which contain it; much used in the preparation of emollient cataplasms and the greater part of the demulcent *tisanes.* **An′imal m.**, mucus.

**Mucilaginous**, mu-sil-aj′in-us. Gummy; resembling gum; possessing the character of mucilage. **M. glands**, Haversian glands.

**Mucila′go.** Mucilage; synovia. **M. aca′ciæ** (Ph. U. S. and Br.), contains about 34 per cent. of gum arabic; employed chiefly in the preparation of mixtures. **M. am′yli**, starch paste (ʒij in ℥j), used chiefly as a menstruum for remedies to be given by enema. **M. articulo′rum**, synovia. **M. astrag′ali tragacan′thæ**, m. tragacanthæ. **M. cydo′nii**, quince mucilage, formerly used as an external application in conjunctivitis, and as a medium for injections in gonorrhœa. **M. gum′mi arab′ici**, m. acaciæ. **M. gum′mi in′dici** (Ph. Br.), m. of ghati or ghatti gum, an exudation from the wood of Anogeissus latifolia. **M. hor′dei**, barley mucilage (ʒj in ℥xvj); used as a vehicle for remedies given by enema. **M. junctura′rum**, synovia. **M. sas′safras medul′læ** (Ph. U. S.), made with 2 parts of sassafras pith to 100 of water; dose, ʒj–iv (4.0–16.0). **M. tragacan′thæ** (Ph. U. S. and Br.), contains 6 per cent. tragacanth and 18 per cent. glycerin; used for pharmaceutical purposes. **M. ul′mi** (U. S.), made with 6 per cent. slippery elm bark; demulcent and nutritious drink; soothing application externally in erysipelas, boils, etc.

**Mucin′.** Albuminoid substance characteristic of mucus; occurring also in saliva, synovia, etc. **M. toxæ′mia**, see *Toxæmia thyropriva.*

**Mucin′ogen.** Mucigen.

**Mu′cinoid.** Resembling mucin. Also a glucoproteid found in the cornea, cartilage, tendons, and elsewhere, where it acts as a cement binding together the fibrils of connective tissue; mucoid. **M. glob′ulin**, proteid existing in lymph-cells.

**Mu′cinous.** Containing or relating to mucin. **M. cysts**, mucous cysts. **M. exuda′tions**, exudations in mucous inflammation.

**Mucinu′ria.** Excretion of mucin in the urine.

**Mucip′arous** (*mucus*+*pario*, to bring forth). Mucus-producing, as muciparous glands or follicles.

**Muci′tis.** Inflammation of a mucous membrane.

**Mucocar′neous** (*mucus*+*caro*, flesh). See *Myxosarcoma.*

**Mu′cocele** (*mucus*+*kele*, rupture). Enlargement or protrusion of the mucous membrane of the lacrymal passages, giving occasion to fistula lacrymalis, the secretion becoming thick and mucopurulent in character; mucous polyp, cyst of the mucous membrane.

**Mucocuta′neous.** Relating to both mucous membrane and skin.

**Mu′coderm** (*mucus*+*derma*, skin). Corium.

**Mucoenteri′tis.** Catarrh of the intestines.

**Mu′coid** (*mucus*+*eidos*, resemblance). Resembling mucus. Also mucinoid, the cement binding together the fibrils of connective tissue. **M. degenera′tion**, mucoid softening. **M. soft′ening**, gradual liquefaction of a part, as of cartilage, by the conversion of its albuminous matters into mucin. It has sometimes, but inaccurately, been called *colloid softening.* **M. tu′mor**, myxoma.

**Mucon′ic acid.** Acid obtained from mucic acid.

**Mucopu′rulent.** Having the character or appearance of mucus and pus.

**Mucopus′.** A discharge consisting of mucus and pus mingled.

**Mu′cor.** Corruption of the humors. Mucus. Genus of molds. **M. corym′bifer**, species occurring on bread made of wheat when kept at the temperature of the body, and also observed in the auditory meatus; pathogenic to rabbits when injected subcutaneously. **M. mu′ado**, see *Rubeola.* **M. muce′do**, see *Fungus.* **M. na′rium**, nasal mucus. **M. ni′ger**, a pathogenic fungus causing glossophytia or enlargement of the filiform papillæ of the tongue, with increase in pigment. **M. phycomy′ces**, grease-mold. **M. pucil′lus**, a fungus which forms a whitish mold on bread; it is also found in the ear, producing *otomycosis.* **M. racemo′sus**, mold occurring on beer-yeast and in bread; it may also be a cause of otomycosis. **M. rhizopodifor′mis**, a fungus which forms a mold on bread and is also found in buccal mycosis. **M. vulga′ris**, mucor mucedo.

**Mucorin′.** Albuminous material from molds.

**Muco′sa** (*membrana*, understood). Mucous membrane.

**Mu′cose.** Mucous.

**Mucosin′.** Albuminous matter from mucus, having same composition as keratin. See *Mucus.*

**Mucos'ity.** Fluid resembling mucus or containing a certain quantity of it. Sliminess.

**Muco'sosac'charine.** Sugar which cannot be crystallized.

**Mu'cous.** Containing, resembling, producing, or relating to mucus. Also sometimes used synonymously with gummy. In pathology it is occasionally employed to express the seat of a disease, as *mucous disease, mucous phlegmasia;* that is, having its seat in the mucous membrane. **M. can'cer,** colloid cancer has been described under this name. **M. cells,** cells lining the outlets of gastric glands and the alveoli of mucous follicles. **M. cor'puscles,** see *Mucus.* **M. cysts,** mucinous cysts; cystic tumors formed by the closure of the orifice of a mucous gland and the retention of its contents. **M. degenera'tion,** mucoid softening. **M. disease',** morbid condition characterized by the secretion of abnormal mucus on mucous surfaces, which then becomes aggregated into shreds, tubular casts, etc. **M. fe'ver,** disease mentioned by the older writers, but which has since been regarded as abortive typhus. **M. fol'licles,** follicles or small glands situated in mucous membranes; they secrete mucus. **M. glands,** m. follicles. **M. lay'er,** germinal disk; the inner layer, or stratum mucosum, of the epidermis. **M. lig'ament,** ligamentum mucosum. **M. mem'branes,** see *Membranes.* **M. pap'ules,** see *Condyloma* and *Papules.* **M. patches,** see *Condyloma.* **M. pol'yp,** a soft, gelatinous, pedunculated growth. **M. râle,** see *Râle.* **M. soft'ening,** mucoid softening. **M. tis'sue,** gelatinous connective tissue; occurs in the umbilical cord and in the vitreous humor of the eye. **M. tu'bercle,** see *Condyloma.* **M. transforma'tion,** mucoid softening or degeneration. **M. tu'mor,** myxoma. **M. web,** corpus mucosum.

**Mu'cro.** Sharp point; sword; the point of a sword; apex. **M. cor'dis,** apex or point of the heart. **M. hu'meri,** acromion. **M. ster'ni,** body of sternum; see *Sternum.*

**Mucrona'ta cartila'go** or **Mucrona'tum os** (*mucro,* tip of a sword). Xiphoid cartilage.

**Mucron'iform.** Resembling a sharp-pointed sword in shape.

**Mu'culent** (*mucus*). Slimy, viscid.

**Mucu'na.** Cowhage. See *Dolichos pruriens.*

**Mu'cus.** Animal mucilage. Substance analogous to vegetable mucilage, from which, however, it differs by affording subcarbonate of ammonia on distillation. Mucus is found at the surface of the mucous membranes, and presents some difference in its composition and properties according to the particular mucous membrane from which it is obtained. Its chief organic constituent is an albuminoid compound—*mucin, mucosin*—which, in inflammation of mucous membranes, gives to the discharge its tenacious character. Mucus preserves the membranes moist and in a state best fitted for the performance of their functions. The French give the term *glaire* to the thick, stringy mucus secreted by the mucous membranes when in a state of disease. Mucus examined with the microscope is found to contain numerous epithelial scales or flattened cells, together with round, granular bodies, commonly termed mucous corpuscles or mucous globules, which are contained in a fluid portion—*liquor muci.* **M. articulo'rum,** synovia. **M. cathar'ticus,** Lichen islandicus. **M. Malpigh'ii,** corpus mucosum. **M. na'rium,** nasal mucus.

**Mud fe'ver.** Term employed in veterinary practice for a disease generally known as the scratches.

**Mu'dar.** (Ph. Br.) The root bark freed from the outer layer of Calotropis procera and C. gigantea, ord. *Asclepiadaceæ;* called also vegetable mercury. In the Hindoo practice of physic the bark of the root, as well as the concrete juice of the plant, enters into various compound formulæ for the cure of elephantiasis and other disorders. Its properties are like those of ipecacuanha. Bark has been employed in paralysis, epilepsy, worms, etc., dose, gr. iij–x (0.2–0.65) as a tonic, ʒss–j (2.0–4.0) as an emetic. The *tincture* is used in doses of ʒss–j (2.0–4.0). The milky juice has been used in leprosy, herpes, dropsy, etc. An active principle, *mudarin,* has been separated. Mixed with oil it is used for gout in Malabar.

**Mudarin'.** See *Mudar.*

**Mueller.** See *Müller.*

**Mug'get.** Asperulo odorata.

**Muguet,** mue-ga'. Thrush; leukoplasia caused by Oidium albicans.

**Mug'wort.** Artemisia vulgaris.

**Muirapua'ma.** Moyrapuama.

**Mu'læ.** Old name for chilblains.

**Mulat'to** (*mulus,* a mule). Individual of the human species having one white and one black parent. A quadroon is the offspring of a white and mulatto; an octoroon, of white and quadroon. **M. jack,** yellow fever.

**Mul'berry.** Morus, morula. **M. bod'y** or **mass,** see *Morula* and *Muriform.* **M. cal'culus,** see *Calculi, urinary.* **Dyer's m.,** Merinda tinctoria. **M. juice,** mori succus. **M. mark,** nævus. **M. mass,** morula. **M. rash,** see *Typhus.* **Red m.,** Morus rubra. **M. tree,** Morus nigra. **White m.,** Morus alba. **Wild m.,** Morus rubra.

**Mul'der's test.** Indigo-carmine test for glucose; urine alkalinized with sodium bicarbonate is heated with indigo-carmine, which is decolorized if the urine contains sugar, but the color returns on cooling and aërating. Also nitric-acid test for proteids, which this acid turns yellow.

**Mules's operation.** The insertion of a hollow globe of glass, silver, or gold beneath the sclera after evisceration of the eyeball, in order to give support to an artificial eye.

**Mulge'dium acumina'tum,** blue lettuce, and **M. florida'num,** Lactuca floridana, false lettuce. Indigenous plants, ord. *Compositæ;* have the reputation of curing the bites of rattlesnakes.

**Mulieb'ria** (*mulier,* woman). Vulva; menses.

**Mulieb'ris.** Relating to a woman.

**Mulieb'rity.** State of puberty in the female.

**Mulier'itas.** Muliebrity, womanhood. State of puberty in the female.

**Mull.** Thin muslin employed in surgery for dressings.

**Mul'lein.** Verbascum. **Black m., Broad-leaved m.,** or **Yel'low m.,** Verbascum nigrum.

**Mül'ler's an'nular mus'cle.** See *Annular muscle.* **M.'s canal',** see *Canal of Müller.* **M.'s cap'sule,** Bowman's capsule. **M.'s cyst,** cyst taking its origin from M.'s duct. **M.'s disease',** Barlow's disease. **M.'s duct,** canal formed from the segmental duct, which afterward divides into Fallopian tube, uterus, and vagina. **M.'s dust-bod'ies,** blood dust. **M.'s em'inence,** prominence made by the cloaca, in the fœtus, where M.'s duct enters. **M.'s exper'iment,** see *Valsalva's experiment.* **M.'s fi'bres,** fibres of connective tissue extending between limiting membranes of retina. **M.'s flu'id,** potassii bichromatis, 45; sodii sulphatis, 20; aquæ, 2000; used for hardening specimens of tissue. **M.'s gan'glion,** the jugular ganglion. **M.'s mus'cle,** palpebral muscle, superior and inferior; orbital muscle; circular or transverse fibres of the ciliary muscle. **M.'s opera'tion,** laparotomy and removal of tumor of uterus which contains a dead fœtus. **M.'s ring,** cicatricial condition of internal os uteri, due to laceration of the cervix. **M.'s sarco'ma,** adenofibroma of the breast. **M.'s sign,** a symptom of aortic insufficiency, being a pulsation of the soft palate and tonsils.

**Mul'ligrubs.** Tormina; colic.

**Mul'lin.** Melizomum.

**Mul'sum.** Hydromeli. **M. vino'sum,** œnomel.

**Multan'gular.** Having many angles.

**Multan'gulum ma'jus.** Trapezium bone. **M. mi'nus,** trapezoid bone.

**Multiartic'ulate.** Having many articulations.

**Multicap'sular.** Having many capsules.

**Multicel'lular.** Composed of or containing many cells.

**Multicus′pidate** (*multus,* many, *cuspis,* point). Having several cusps, as the molar teeth.

**Multiden′tate.** Many-toothed, term applied to a process having many teeth.

**Mul′tifid.** Split into a number of parts.

**Multif′idus spi′næ** (*multus,* many, *findo,* to divide). Transversalis dorsi muscle.

**Multifœta′tion.** Pregnancy with more than two fœtuses.

**Multigrav′ida** (*multus,* many, *gravida,* pregnant). One who has been pregnant many times.

**Multilo′bate.** Divided into many lobes.

**Multilob′ular.** Multilobate.

**Multiloc′ular** (*multus,* many, *loculus,* small place or cell). Having many cells or small cavities.

**Multimam′mæ.** Variety of hypergenesis in which there are supernumerary mammæ.

**Multiner′vulate.** Provided with many nerves (applied to the placenta).

**Multino′date.** Having many nodes.

**Multinu′clear** or **Multinu′cleate.** Having several nuclei.

**Multinu′cleolate.** Having many nucleoli.

**Multip′ara.** One who has borne several children.

**Multipa′rient.** Multiparous.

**Multipar′ity.** Condition of being multiparous.

**Multip′arous** (*multus,* many, *pario,* to bring forth). Term applied to one that brings forth several young at the same time. Such a birth is called *plural.* Also to one who has had many children, *pluripara.*

**Mul′tiple gesta′tion.** M. pregnancy. **M. neuri′tis,** inflammation involving several nerves or nerve-trunks simultaneously. **M. preg′nancy,** pregnant condition in which the uterus contains more than one child.

**Mul′tiplicator** or **Mul′tiplier.** Instrument intended to determine the strength of an electric current.

**Multipo′lar.** Having three or more processes.

**Multisep′tate.** Multilocular.

**Multiv′alent.** Combining with three or more hydrogen or other univalent atoms.

**Multiv′orous.** Voracious.

**Multoc′ular.** Provided with several eyes.

**Mulun′gù.** Inner bark of Erythrina corallodendron, native of Brazil; has sedative properties.

**Mu′mia.** Mummy. **M. medul′læ,** marrow of bones. **M. de medul′lis,** marrow. **M. transmari′na,** manna.

**Mummifica′tion** (*mummy*+*fio,* to be made). Drying up, as of a fœtus. Dry gangrene.

**Mum′my** (Arab., *moumya, mum,* wax). Dead body, dried after having been embalmed.

**Mumps.** Infectious parotiditis. **M. of the lac′rymal glands,** inflammation and swelling of the lacrymal gland unaccompanied by suppuration.

**Münch′meyer's disease′.** Progressive ossifying polymyositis.

**Munc′tion.** Act of blowing the nose.

**Mun′dia spino′sa.** Plant, ord. *Polygaleæ,* growing in South Africa, a decoction of whose branches is used in atrophy, phthisis, etc.

**Mundifican′tia** (*mundus,* clean, *facio,* to make). Detergents.

**Mun′gos lig′num.** Root of Strychnos colubrina. **M. ra′dix,** Ophiorrhiza mungos.

**Mun′grel.** Hybrid. See *Mongrel.*

**Munjeet′.** Rubia cordifolia.

**Muntin′gia calaba′ra** or **M. gla′bra.** Calabar tree; possesses mucilaginous properties; fruit can be eaten, and flowers are reputed to be antispasmodic.

**Mur.** Murr. See *Coryza.*

**Mu′ral** (*murus,* wall). Parietal; relating to a wall. **M. ab′scess,** abscess of the wall of the abdomen or other large cavity. **M. endocardi′tis,** inflammation of the interior of the walls of the heart. **M. fi′broids,** fibroid tumors in the wall of the uterus. **M. gesta′tion,** pregnancy in which the fœtus is embedded in the wall of the uterus. **M. preg′nancy,** m. gestation.

**Mu′res** (pl. of mus) **articula′res.** Joint-mice; loose bodies in joints.

**Mu′rex.** A shell-fish from which a purple dye was anciently obtained. One species furnishes a remedy employed in homœopathic medicine.

**Murex′an.** Substance produced by decomposition of murexide.

**Murex′ide.** Acid purpurate of ammonium, derived from guano. **M. test,** test for uric acid; some of the deposit is placed in a watch-glass, nitric acid is added and evaporated to dryness; when cold a little ammonia or caustic potash is added, and if uric acid is present a rich purple color is produced.

**Mur′fies.** Ephelides, papulæ.

**Mu′ria** (*halmuris,* salt water). Brine. Sodium chloride.

**Mu′rias.** Muriate.

**Mu′riate.** Hydrochlorate. Salt of muriatic or hydrochloric acid.

**Mu′riated** (*muria,* brine). Combined with chlorine.

**Muriat′ic.** Hydrochloric. **M. acid,** hydrochloric acid, see *Acidum hydrochloricum.*

**Muriat′ous.** Hydrochloric.

**Muri′cia cochinchinen′sis.** Plant, genus *Momordica,* native of China and Cochin China; leaves and fruit possess aperient properties.

**Mu′ride.** Bromine.

**Mu′riform.** Mulberry-shaped, as muriform mass or body, collection of vitelline globes proceeding from the segmentation of the vitellus.

**Mu′rigene** (*muria,* brine, *gennao,* to generate). Chlorine.

**Muri′na.** Bromine.

**Muriox′ic acid.** Chlorine.

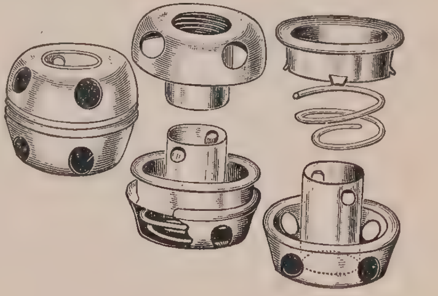
**Mur′mur.** Low continued or continuously repeated sound, as that of flame or a stream running over a stony bottom. **Abdom′inal m.,** borborygmus. **Accident′al m.,** hæmic murmur. **Amphor′ic m.,** see *Cavernous respiration.* **Anæ′mic m.,** hæmic murmur due to anæmia. **Aneurys′mal m.,** m., systolic in character, heard over an aneurysm. **Aor′tic m.,** m. occurring with the systole or diastole, or occurring between these two sounds, elicited over the aortic valves. **A. obstruc′tive m.,** organic murmur heard with and after the systole, having its greatest intensity at the base of the heart, and generally transmitted into the carotids. **A. regur′gitant m.,** organic murmur heard with second sound of the heart, most distinct at the base of the heart and transmitted toward the apex. **A. systol′ic m.,** m. with and after the first sound of the heart, with the maximum intensity at the base of the heart. **Arte′rial m.,** hæmic murmur, blood sound, sound heard when the ear is applied over a blood-vessel; it varies in disease, becoming for instance more musical in oligæmia. **Auric′ular systol′ic m.,** m., presystolic in time, due to stenosis of the mitral or tricuspid orifice. **M. au′rium,** tinnitus aurium. **Bel′lows m.,** bruit de souffle. **Blood m.,** hæmic murmur. **Car′diac m.,** normal or abnormal sound heard in auscultation of the heart. The table on the following page gives a view of the significance of murmurs of valvular origin (Finlayson). **Cardiopul′monary m.,** m. caused by the heart striking against the lung, the transmission of the sound being favored by pulmonary consolidation. **Diastol′ic m.,** m. heard during the diastole of the heart, due to mitral stenosis or aortic or pulmonary regurgitation. **D. aor′tic m.,** m. diastolic in time, heard over the aortic area, due to insufficiency of the aortic valves. **Direct′ m.,** m. caused by obstruction to flow of blood-current. **Duroziez's′ doub′le m.,** double arterial murmur occurring in insufficiency of the aorta and when compensation still exists. **Dynam′ic m.,** m. caused by excessive or irregular contraction of the myocardium. **Endocar′dial m.,** m. having its seat within the cardiac ventricles. **Exocar′dial m.,** m. caused by friction in the pericardial sac, by the

TABULAR VIEW OF CARDIAC MURMURS OF VALVULAR ORIGIN.

| Rhythm of murmur. | The various causes of a murmur having such a rhythm. | Diagnosis from rhythm area combined. |
|---|---|---|
| Before first sound or auricular-systolic. | Obstruction at the right or left auriculo-ventricular orifice. | If in mitral area = obstruction at mitral orifice.<br>If in tricuspid area = obstruction at tricuspid orifice (very rare). |
| After first sound or ventricular-systolic. | Obstruction at the orifice of the aorta or the orifice of the pulmonary artery.<br>Regurgitation through mitral orifice or through tricuspid orifice. | If in aortic area = obstruction at aortic orifice.<br>If in pulmonic area = obstruction at orifice of pulmonary artery (very rare).<br>If in mitral area = mitral regurgitation.<br>If in tricuspid area = tricuspid regurgitation. |
| After second sound or ventricular-diastolic. | Regurgitation through aortal semilunar valves or through semilunar valves of pulmonary artery. | If in aortic area = aortic regurgitation.<br>If in pulmonic area = regurgitation through valves of pulmonary artery (very rare). |
| After second sound and running up to first. | Obstruction at auriculo-ventricular orifices in an extreme form; or, if complex, a combination of obstruction at one or other auriculo-ventricular orifice, and regurgitation through the aortic or pulmonic valves. | If in mitral area = obstruction of mitral orifice.<br>If in tricuspid area = obstruction at tricuspid orifice.<br>If the two elements of the murmur have separate areas—*e. g.* mitral and aortic—this indicates mitral obstruction combined with aortic regurgitation. |

blood stream in the primary vessels, or by some other condition outside of the heart. **Fish′er's m.**, a murmur heard over the fontanelle in rickets; see *Fisher*. **Flint's m.**, an additional systolic murmur heard at the apex in ventricular dilatation due to aortic insufficiency. **Fric′tion m.**, one due to the rubbing together of the opposed pericardial surfaces. **Func′tional m.**, m. due to changes in the blood. **Fu′nic m.**, see *Bellows sound, funic*. **Gas′tric m.**, borborygmus. **Hæ′mic m.**, arterial murmur. **Indirect′ m.**, m. caused by a reversal of the blood stream. **Inorgan′ic m.**, functional murmur. **Interso′nal m.**, m. heard between the systole and diastole. **Intes′tinal m.**, borborygmus. **M. intestina′le** or **intestino′rum** or **ven′tris**, borborygmus. **Intracar′diac organ′ic m.**, organic murmur. **Ju′gular m.**, venous hum heard over the jugular veins. **Mi′tral m.**, m. heard over the mitral valve, systolic, diastolic, or presystolic in time. **Mi′tral regur′gitant m.**, m. occurring with the systole, due to insufficiency of the mitral valve, thus allowing blood to regurgitate into the left auricle. **Mu′sical m.**, a murmur having a musical quality. **Organ′ic endocar′dial m.**, m. due to the current of blood within the heart itself. **Pericar′dial m.**, friction murmur. **Prediastol′ic m.**, m. heard immediately before the diastole. **Presystol′ic m.**, m. heard just before the systole. **Pu′erile m.**, see *Puerile*. **Pul′monary regur′gitant m.**, m. of rare occurrence, due to insufficiency of the pulmonary valves, occurring with the second sound of the heart. **Regur′gitant m.**, m. caused by regurgitation of blood into the cardiac ventricle. **Respi′ratory m.**, noise heard during inspiration and expiration, especially the former; produced by the passage of air through the bronchial tubes and into the air-cells. Also called *murmur of the expansion of the lungs*, and, when distinctly vesicular, *respiration of the cells* or *vesicular respiration*. Vesicular respiration is, of course, absent when the cells of the lungs have been obliterated from any cause. We may then have the *respiration nulle, absence du bruit respiratoire, silence*, and *respiration silencieuse* of the French writers. At times it is rude during inspiration or expiration, or both—the *respiration rude* or *r. râpeuse* of the French; at other times there is a blowing sound, as if some one were blowing into the auscultator's ear through a tube. This is heard in the healthy state over the larynx, trachea, *tracheal murmur*, and about the bifurcation of the bronchia, *bronchial murmur;* but when it proceeds from the lungs it denotes disease. It may be tubular or diffused. In the former the whiffing murmurs appear to occur in a space limited to the immediate neighborhood of the part examined. In the latter they are produced with but moderate intensity, and sometimes at a distance from the ear, over a tolerably extended space. The respiration perceived over the trachea and bronchia in health is called tracheal or bronchial or tubal, according to the situation in which it is heard. **Systol′ic m.**, m. heard during the systole of the heart; it usually indicates obstruction at the aortic or the pulmonary orifice. **Tricus′pid direct′ m.** occurs before the first sound of the heart and immediately after the second sound, and is due to stenosis of the tricuspid orifice. **T. regur′gitant m.** occurs with the first sound of the heart, and is due to insufficiency of the tricuspid valves, thus allowing the blood to regurgitate into the right auricle. **U′terine** or **u′teroplacen′tal m.**, *bruit placentaire*. **Vas′cular m.**, m. seated in the blood-vessels. **Ve′nous m.**, bruit de diable. **Vesic′ular m.**, respiratory murmur. **Whiff′ing m.**, see *Murmur, respiratory*.

**Mur′phy but′ton.** A device used in intestinal anastomosis; it consists of two mushroom-shaped or button-like pieces of metal, over each of which one end of the divided intestine is drawn and firmly attached to a groove; then the two buttons are fastened together in such a way that the peritoneal surfaces of the intestinal ends are in apposition.



Murphy button.

**Murr** (*mori*, to die). Murrain, ovine variola, tag-sore, rot, pestilential fever. Epizoötic, contagious, disease, resembling smallpox, affecting cattle, especially sheep, and said to have been transferred to man. Modification of the disease by inoculation of animals with it has been called *clavelization*.

**Mur′rain.** Murr; any fatal cattle disease.

**Murra′ya.** Genus of trees, ord. *Rutaceæ*. Native of tropical Asia and Australia. Bark and leaves of **M. exot′ica** are said to be tonic. **M. kœnig′ii**, curry-leaf tree, native of East Indies; root possesses stimulant and laxative properties, and is employed to control vomiting in cholera. Leaves are edible.

**Murrayin′.** Bitter extract of Murraya exotica.

**Mur′rimur′ri.** Form of influenza in the Hebrides. Supposed to be always brought there by strangers; hence called the *stranger's cold*.

**Mus articulo′rum.** Floating cartilage in a joint.

**Mu′sa.** A genus of tropical plants, ord. *Scitamineæ.* **M. paradisi′aca,** plantain, of India and South America. The fruit, eaten for bread, consists of a mealy substance, plantain meal, conquin tay. It is clammy, has a sweetish taste, and will dissolve in the mouth without being chewed; it is not edible in the raw state. Being smooth and soft, it is employed as a dressing for blisters. Water from the soft trunk is astringent, and used in diarrhœa. **M. sapien′tum,** the fruit, banana, is shorter, straighter, and rounder, the pulp softer and more luscious; it is edible raw or cooked. Both varieties are natives of Guinea.

**Musa′da.** Strychnos nux vomica.

**Musam′bra.** Impure aloes.

**Musan′ga.** Cecropioides, genus *Ulmaceæ.* Species found in Africa; leaves are reputed to possess emmenagogue properties.

**Mus′ca hispan′ica** or **hispanio′la** (Spanish fly). Cantharis. **M. vesicato′ria,** cantharis vesicatoria.

**Muscadine′.** Muscatel.

**Mus′cæ, entohy′aloid.** See *Metamorphopsia.* **M. volitan′tes,** see *Metamorphopsia.*

**Mus′cardine.** Fungous disease of silkworms.

**Musca′ria.** See *Amanita muscaria.*

**Muscarin′.** $C_5H_{15}NO_3$. Ptomain from poisonous mushroom, Agaricus muscarius, and decomposing haddock. It has been employed (the nitrate) as a cardiac tonic and diuretic.

**Mus′cle.** A tissue possessing the power of contraction and relaxation, whereby motion of a part is produced. Muscles have been divided into those of animal life or of the life of relation—voluntary muscles—which execute movements under the influence of the will, as the muscles of the limbs, head, trunk, etc.; and into those of organic life—involuntary muscles—which contract under the influence of certain special stimuli, as the heart, fleshy fibres of the stomach, etc. Mixed muscles are those which belong partly to each of these divisions, as the muscles of respiration and the sphincters. Muscles acting in opposition to each other are called antagonistic; thus every extensor has a flexor for an antagonist, and conversely. See *Antagonism.* Muscles that concur in the same action are termed synergistic or congenerous.

The muscles present numerous varieties in form, size, situation, use, etc., and have been divided by some into long, broad, and short. Each of these divisions comprises simple and compound muscles. Simple or rectilinear muscles have all their fibres in a similar direction, and only one body, as the sartorius, pronator quadratus, etc. Compound muscles have only one belly and several tendons, as the flexors of the fingers and toes; or several bellies and several tendons, as the biceps flexor cubiti, etc. To the compound muscles belong also the radiated muscles. Their fibres set out from a common centre, and are arranged like radii of a circle; as the diaphragm, iliacus, etc. Pennatid or penniform muscles have their fibres arranged in two rows, united at a median line, at greater or less angles, nearly as feathers are inserted into a quill; the palmaris longus is one of these. Semipenniform muscles have their fibres oblique, but inserted only on one side of the tendon. Hollow muscles are the heart, intestines, urinary bladder, etc. The enumeration of muscles varies; some authors reckon them at upward of 400. The greater part of them are in pairs. Very few are azygous.

Muscles have been variously named: 1. According to their uses, as diaphragm, buccinator, extensors, flexors, adductors, abductors, levators, depressors, etc. 2. According to their position, as interspinales, interossei, etc. 3. According to their shape, as trapezius, splenius, etc. 4. According to their dimensions, as pectoralis major, rectus capitis anticus major, pectoralis minor, glutæus maximus, medius, and minimus. 5. According to their direction, as obliquus abdominis, transversalis abdominis, rectus femoris, rectus abdominis, etc. 6. According to their composition, as semimembranosus, semitendinosus, complexus, etc. 7. According to their attachments or the different points of the skeleton with which they are connected by means of tendons or aponeuroses, as sternocleidomastoideus, sternohyoideus, etc.

The end of the muscle adhering to the most fixed part is usually called *origin* or *head,* and that adhering to the more movable part the *insertion* or *tail;* the intervening part or body of the muscle being called the *venter, gaster,* or *belly.* Hence the names digastricus, biceps, and triceps, according as they have two bellies, two or three heads, etc.

The following table, founded on the arrangement of Dr. Barclay, gives a comprehensive view of the actions of the various muscles of the human body:

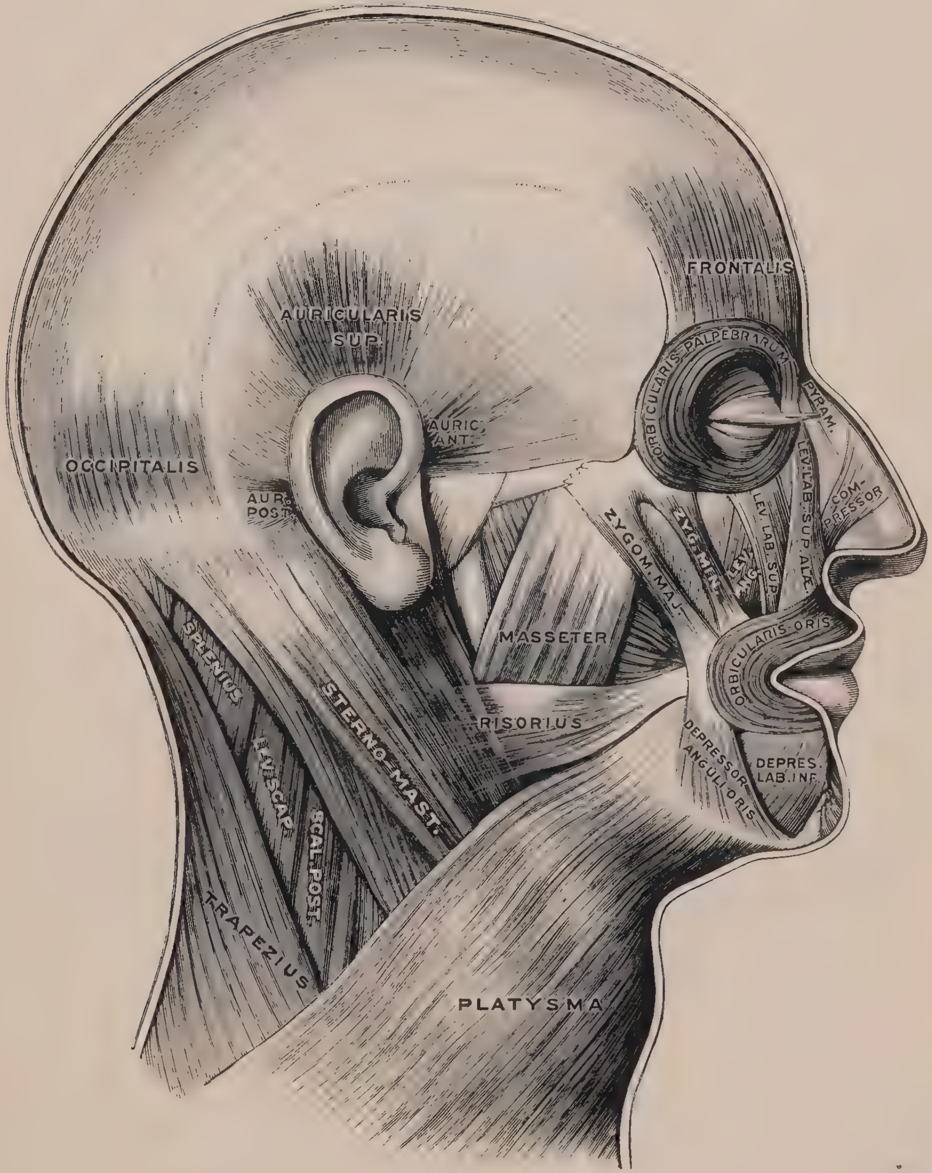
## TABLE OF THE MUSCLES ARRANGED ACCORDING TO THEIR ACTIONS.

### THE HEAD IS MOVED

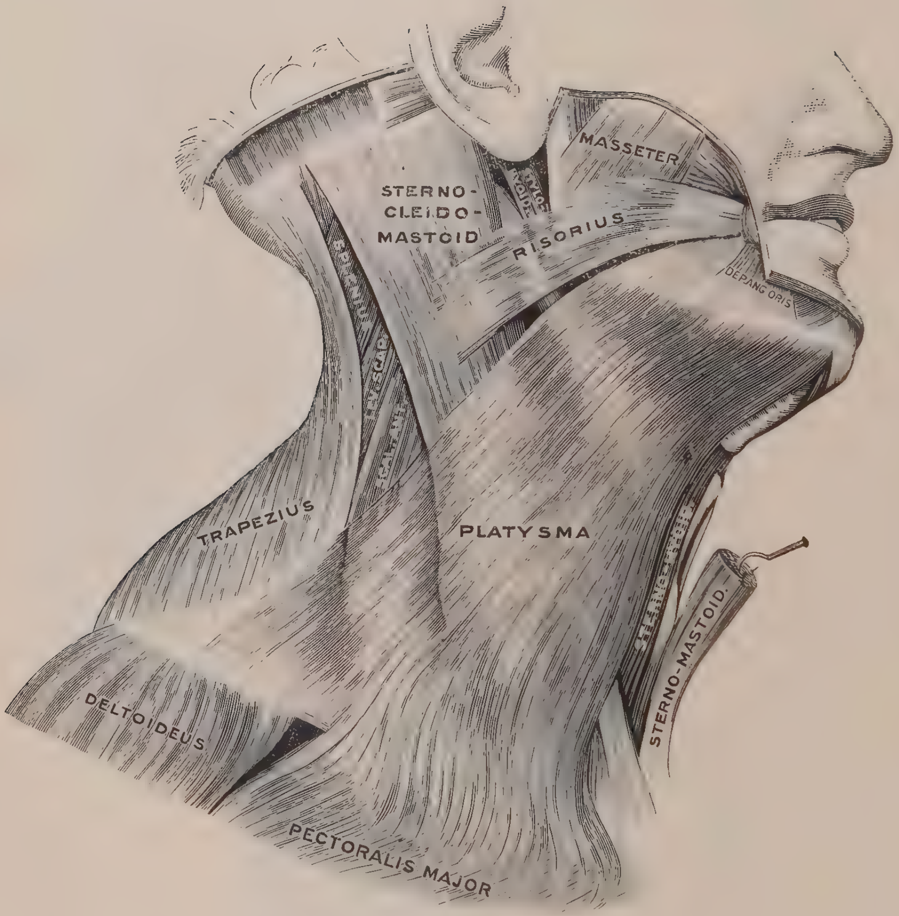
| *Forward by* | *Backward by* | *To either side by* |
|---|---|---|
| Platysma myoides, | Part of trapezius, | Platysma myoides, |
| Sternomastoideus, | Splenius capitis, | Sternomastoideus, |
| Rectus anticus major, | Complexus, | Part of trapezius, |
| " " minor. | Trachelomastoideus, | Splenius capitis, |
| *Assisted (when the lower jaw is fixed) by* | Rectus posticus major, | " colli, |
| Mylohyoideus, | " " minor, | Trachelomastoideus, |
| Geniohyoideus, | Obliquus capitis superior. | Complexus. |
| Geniohyoglossus, | | |
| Digastrici. | | |

### THE NECK IS MOVED

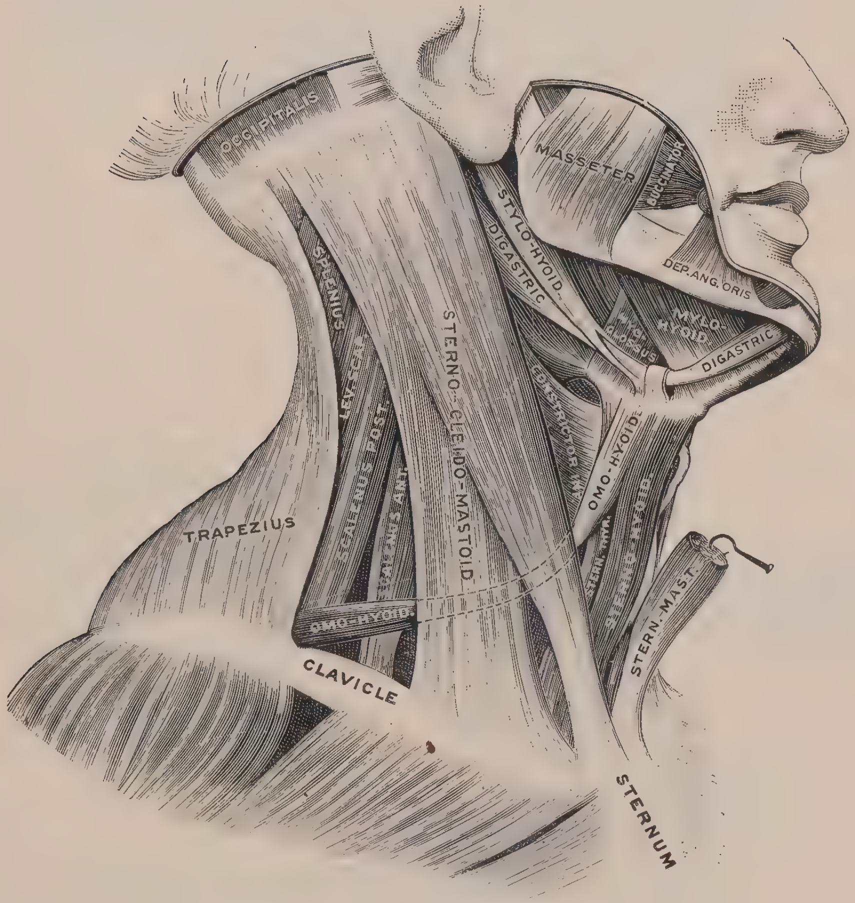
| *Forward by* | *Backward by* | *Laterally by* |
|---|---|---|
| Platysma myoides, | Part of trapezius, | Various combinations of those muscles which separately move it forward and backward, assisted by the scaleni, intertransversales, and recti laterales. |
| Sternomastoideus, | Rhomboideus minor, | |
| Digastricus, | Serratus posticus superior, | |
| Mylohyoideus, | Splenius capitis, | |
| Geniohyoideus, | " colli, | |
| Geniohyoglossus, | Complexus, | |
| Omohyoidei, | Trachelomastoideus, | |
| Sternohyoidei, | Transversalis colli, | |
| Thyrohyoidei, | Interspinales colli, | |
| Rectus anticus minor, | Semispinales colli, | |
| Longus colli. | Rectus posticus major, | |
| | " " minor, | |
| | Obliquus capitis superior, | |
| | " " inferior, | |
| | Scaleni postici, | |
| | Levator scapulæ. | |



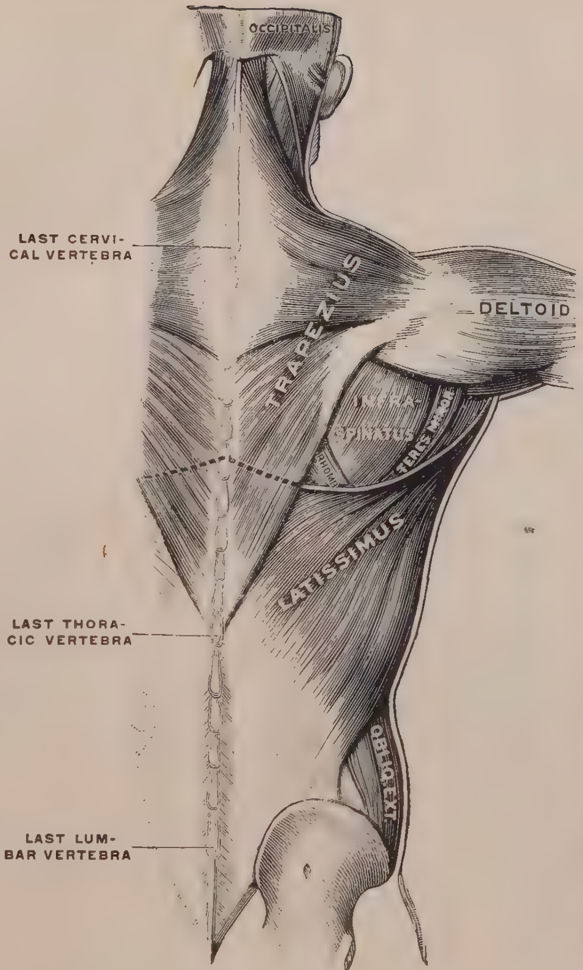
Superficial muscles of head and neck. (Gerrish, after Testut.)



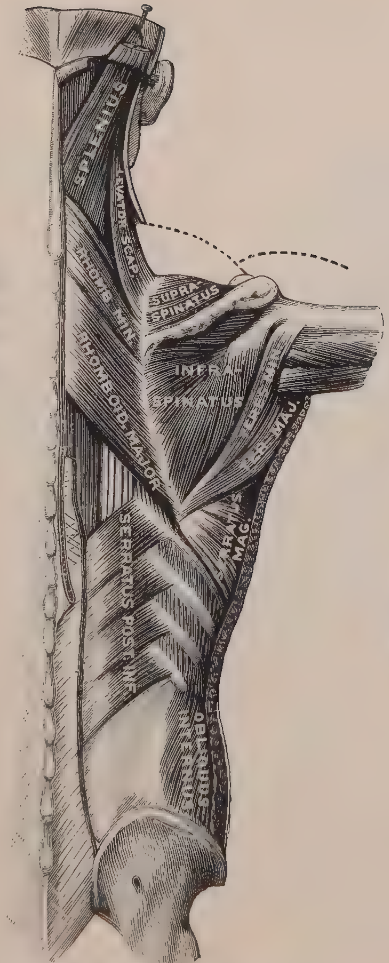
Superficial muscles of side of neck. (Gerrish, after Testut.)



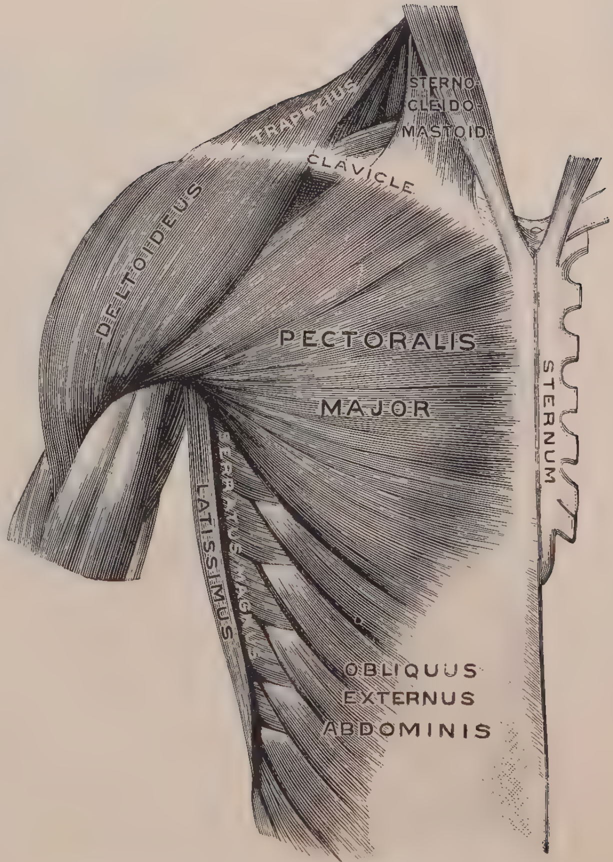
Muscles in front and side of neck. (Gerrish, after Testut.)



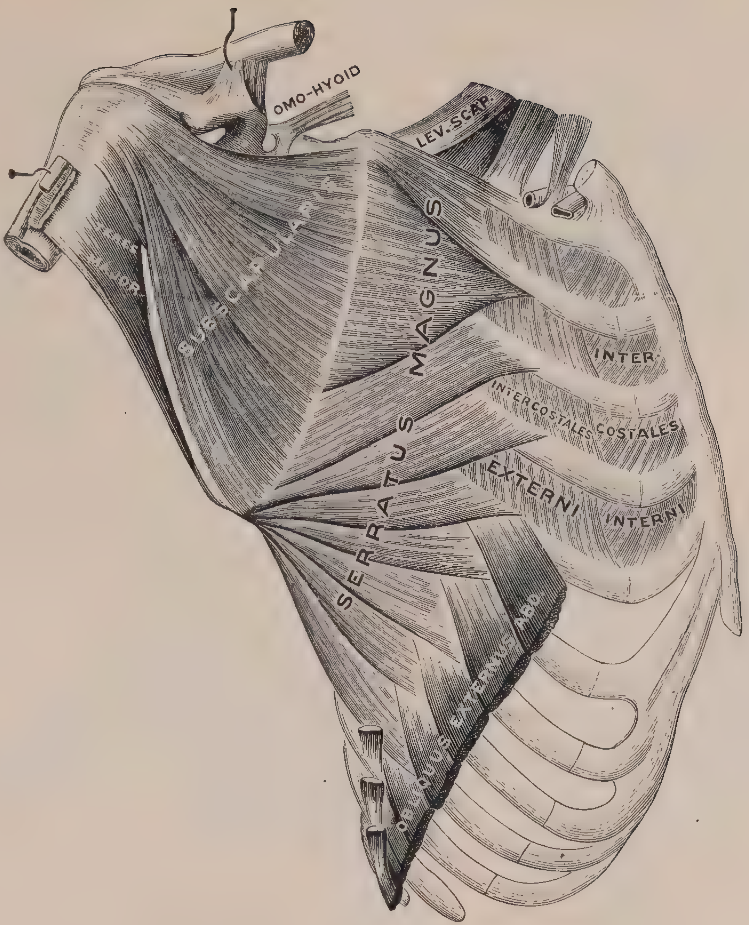
Muscles in superficial layer of back. (Gerrish, after Testut.)



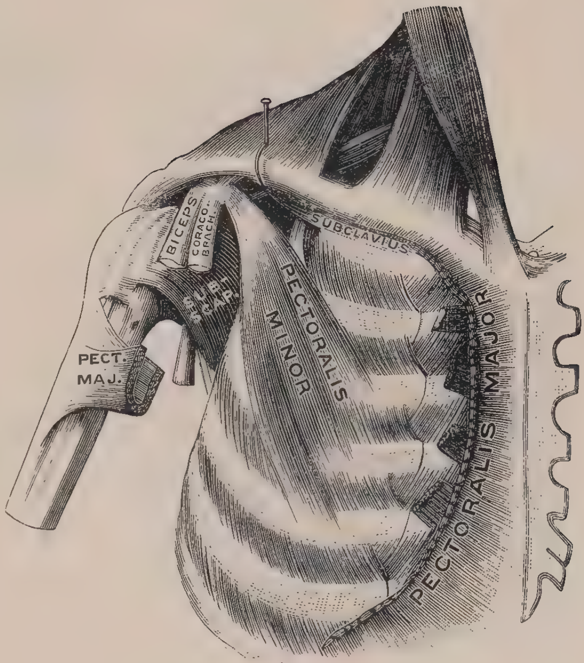
Muscles in second layer of back and on dorsum of shoulder. (Gerrish, after Testut.)



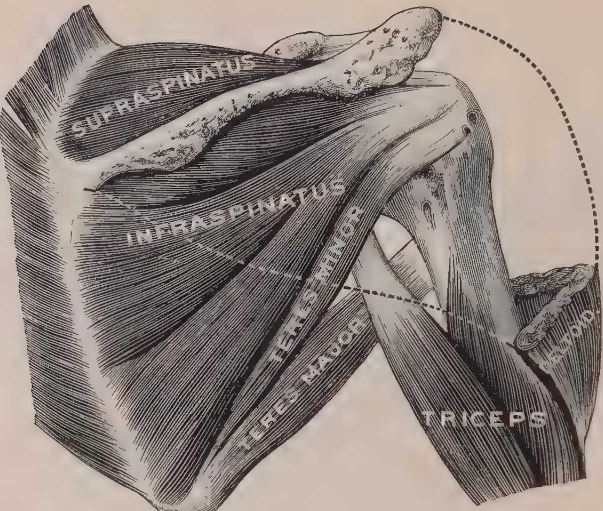
Front of chest and shoulder of right side, superficial muscles (Gerrish, after Testut.)



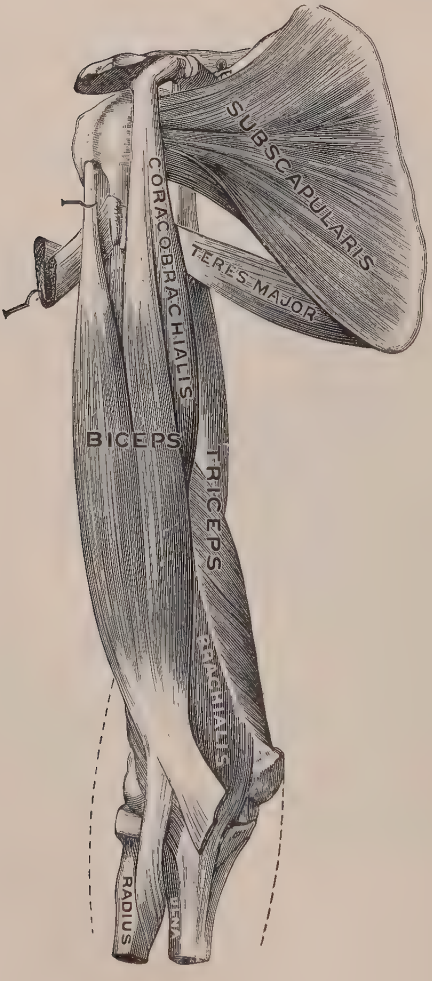
Serratus magnus of right side. The scapula has been turned backward and drawn outward. (Gerrish, after Testut.)



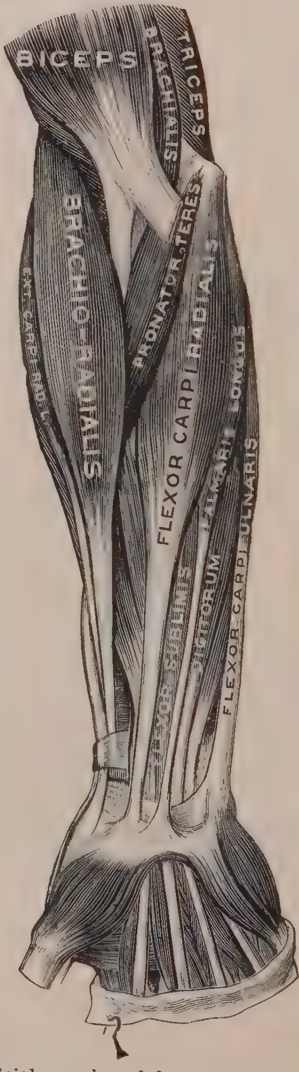
Pectoralis minor of right side. (Gerrish, after Testut.)



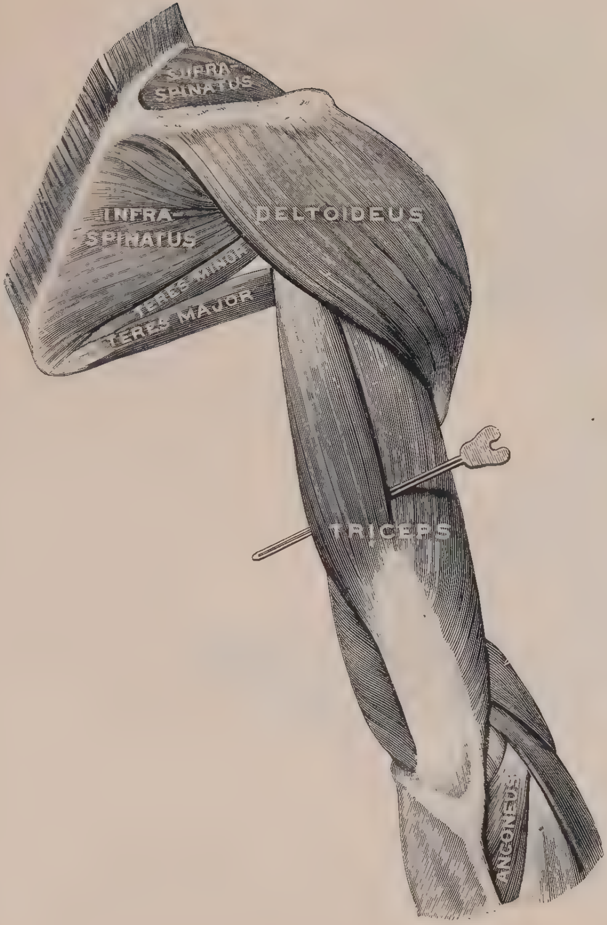
Muscles of dorsum of scapula, right side. (Gerrish, after Testut.)



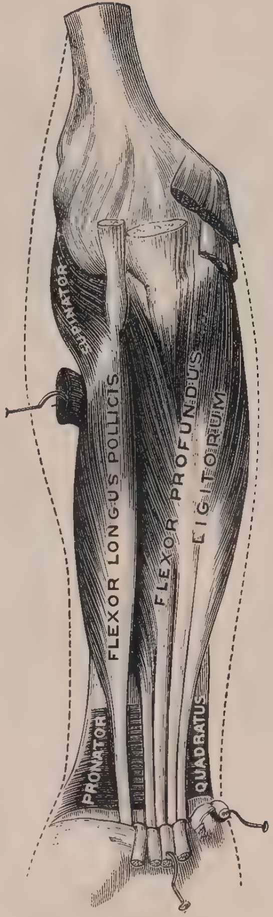
Muscles of front of right shoulder and arm.
(Gerrish, after Testut.)



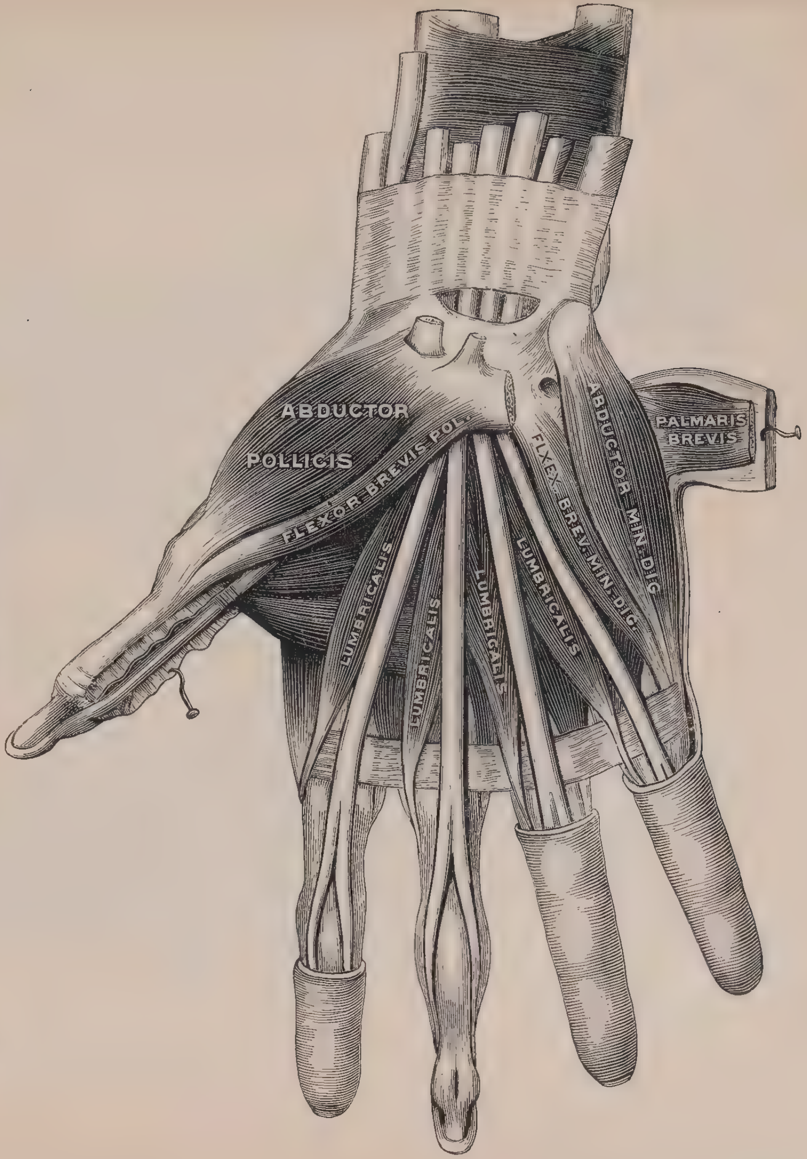
Superficial muscles of front of right forearm.
(Gerrish, after Testut.)



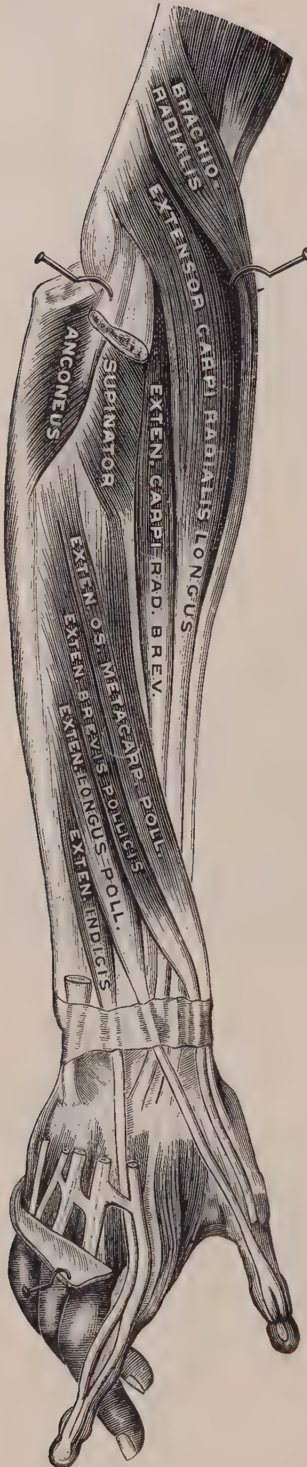
Muscles on dorsum of right shoulder and arm. (Gerrish, after Testut.)



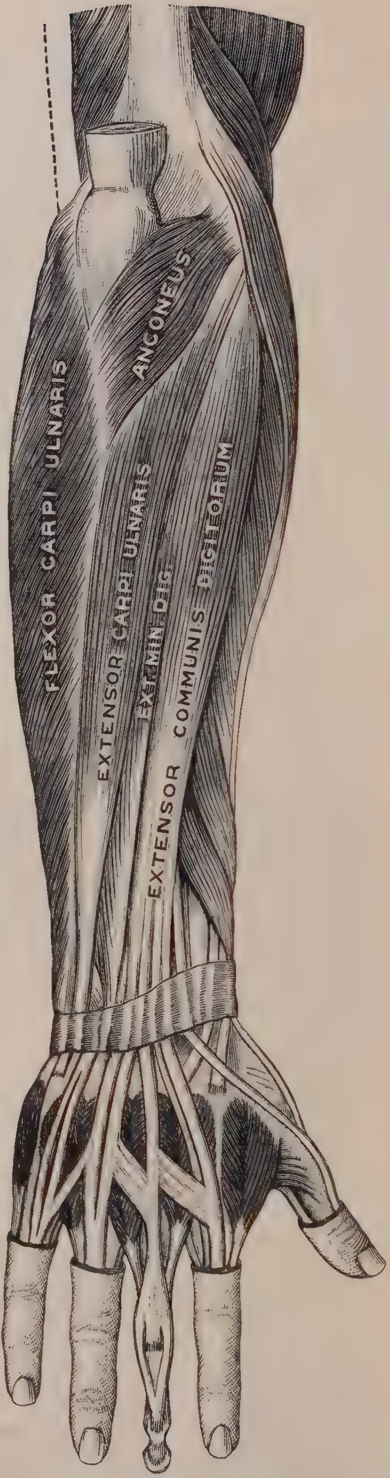
Muscles in right forearm, the deepest layer. (Gerrish, after Testut.)



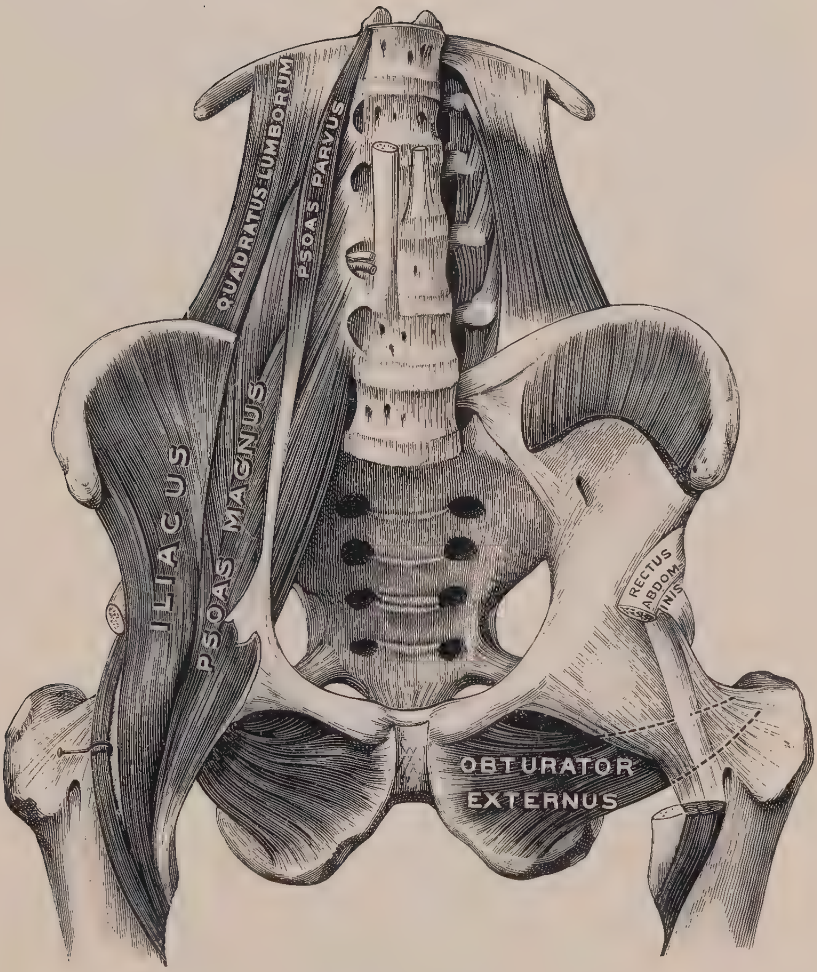
Muscles of right palm. The palmaris brevis is reflected to ulnar side. (Gerrish, after Testut.)



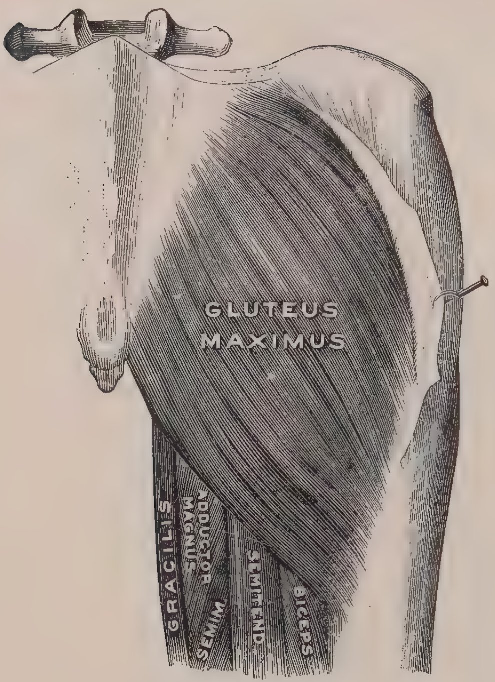
Muscles in radial region of right forearm, and deep muscles in its dorsum. (Gerrish, after Testut.)



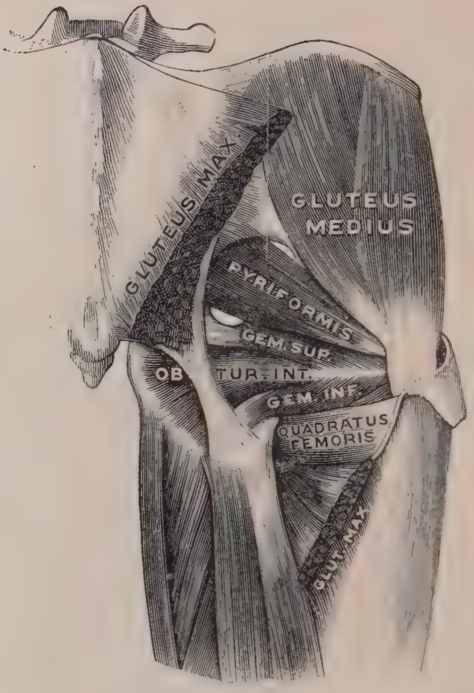
Muscles in dorsum of right forearm and hand. (Gerrish, after Testut.)



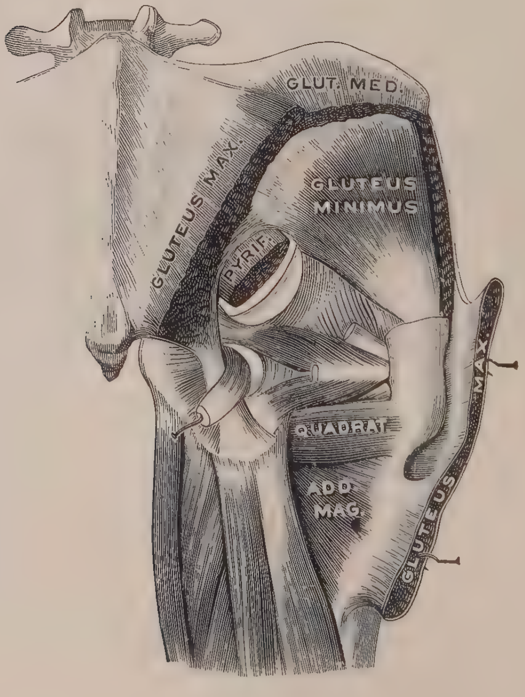
Psoas, iliacus, and obturator externus muscles. (Gerrish, after Testut.)



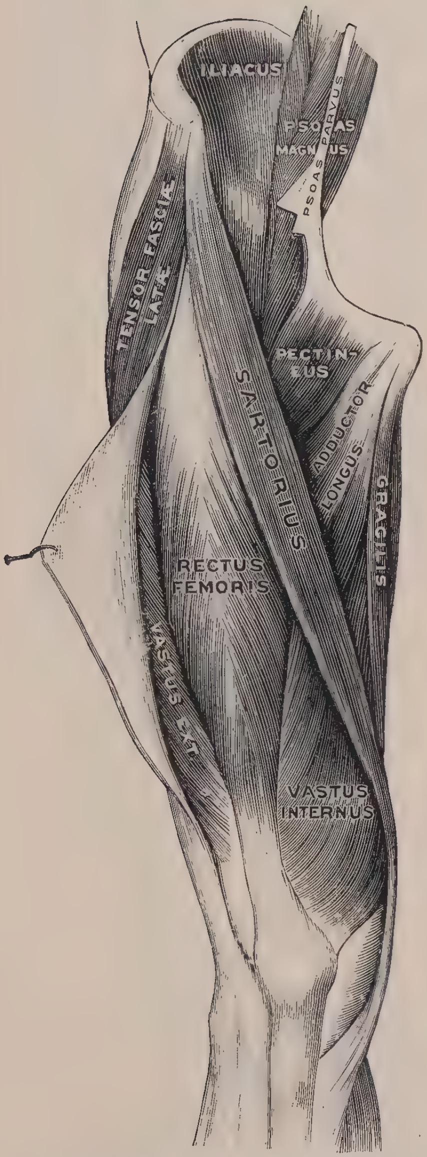
Gluteus maximus of right side. (Gerrish, after Testut.)



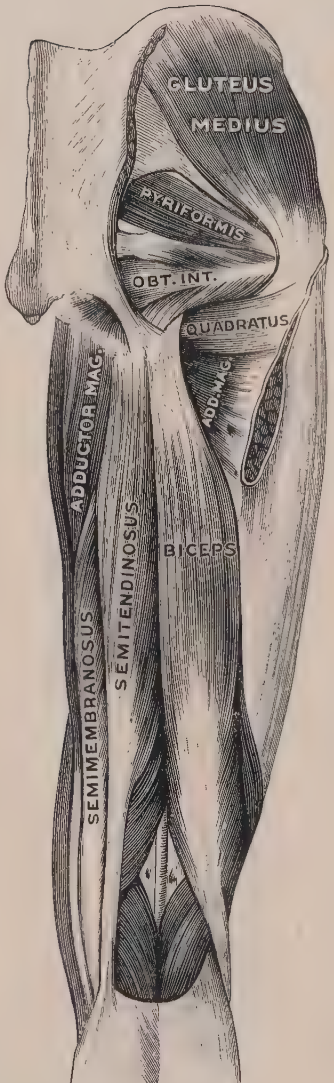
Muscles of right hip, viewed from behind, the gluteus maximus having been cut away. (Gerrish, after Testut.)



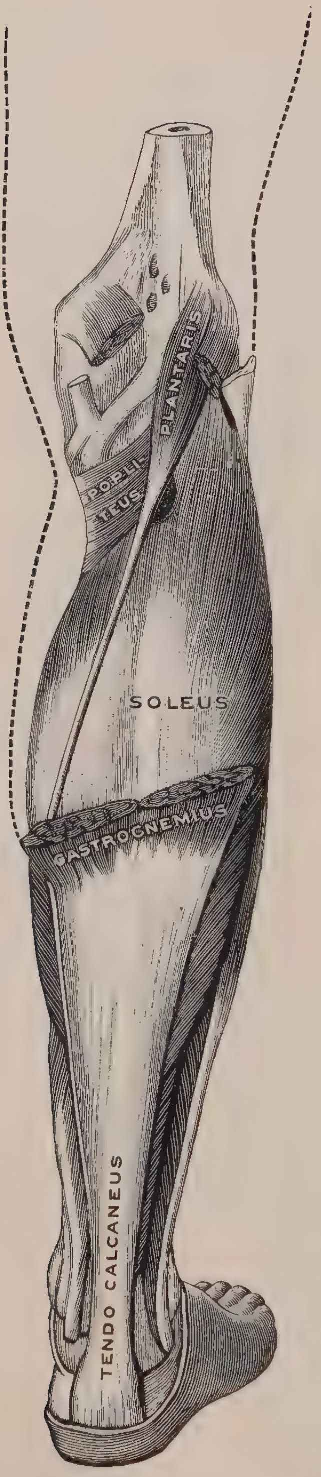
Gluteus minimus of right side. (Gerrish, after Testut.)



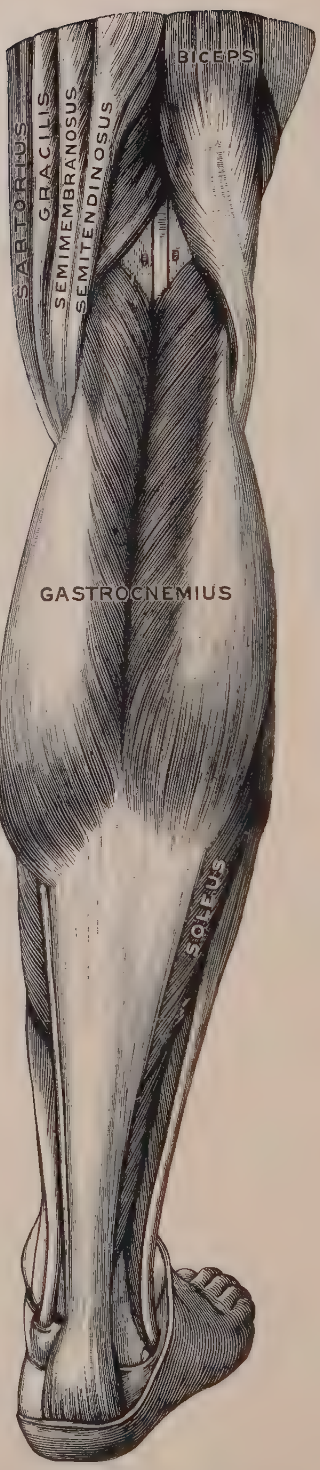
Superficial muscles in front part of right thigh. (Gerrish, after Testut.)



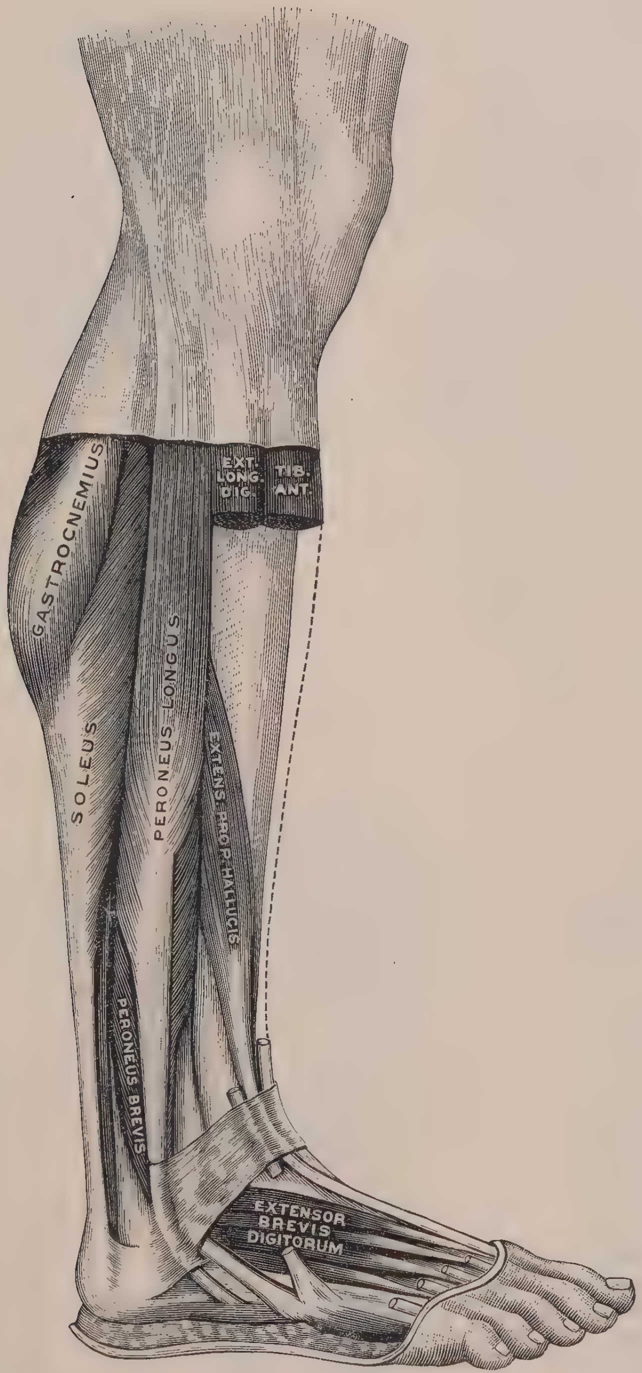
Muscles in the dorsum of right thigh (Gerrish, after Testut.)



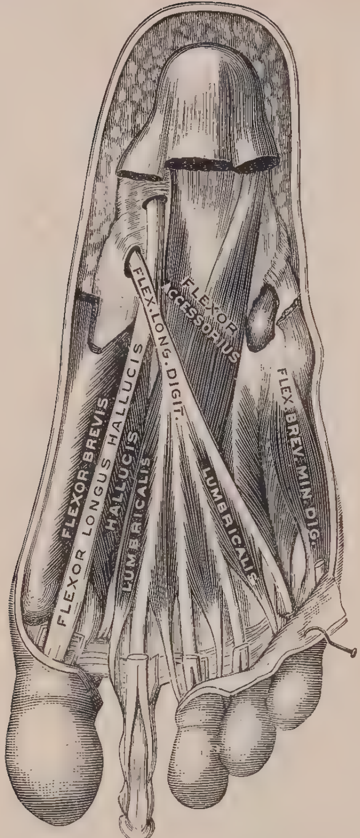
Soleus and plantaris of right side. (Gerrish, after Testut.)



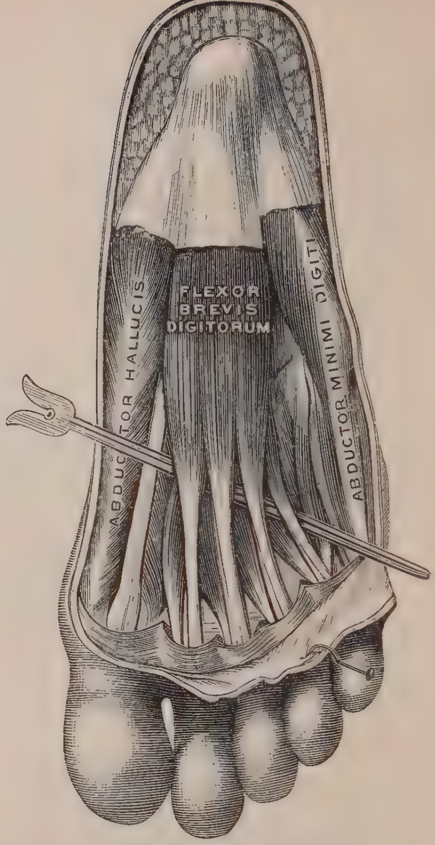
Gastrocnemius of right side. (Gerrish, after Testut.)



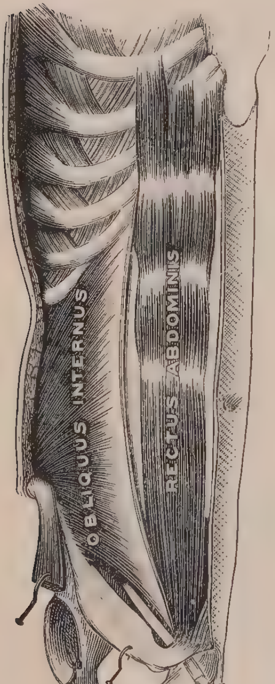
Muscles in the outer side of right leg and dorsum of foot. (Gerrish, after Testut.)



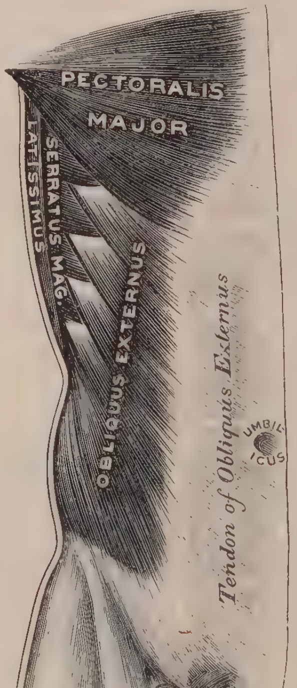
Flexor accessorius and lumbricales of right foot.
(Gerrish, after Testut.)



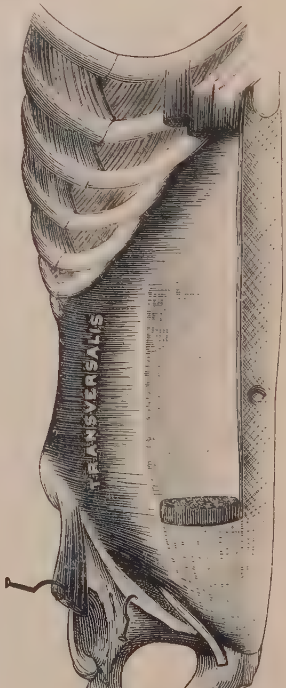
Muscles of superficial layer of right foot.
(Gerrish, after Testut.)



Rectus abdominis and obliquus internus of right side. (Gerrish.)



Obliquus externus abdominis of right side. (Gerrish.)



Transversalis abdominis of right side. (Gerrish.)

## THE TRUNK IS MOVED

*Forward by*

Rectus abdominis,
Pyramidalis,
Obliquus externus abdominis,
Obliquus internus,
Psoas magnus,
“ parvus,

*Assisted (when the arms are carried forward) by*

Pectoralis major,
“ minor,
Serratus magnus.

*Backward by*

Trapezius,
Rhomboideus major,
Latissimus dorsi,
Serratus posticus superior,
“ “ inferior,
Sacrolumbalis,
Longissimus dorsi,
Spinales dorsi,
Semispinales dorsi,
Multifidus spinæ,
Intertransversales dorsi et lumborum.

*Laterally by*

Obliquus externus,
“ internus,
Quadratus lumborum,
Longissimus dorsi,
Sacrolumbalis,
Serratus postici,
Latissimus dorsi.

## THE SCAPULA IS MOVED

*Upward by*

Trapezius,
Levator scapulæ,
Rhomboidei.

*Downward by*

Lower part of trapezius,
Latissimus dorsi,
Pectoralis minor.

*Forward by*

Pectoralis minor,
Serratus magnus.

*Backward by*

Part of trapezius,
Rhomboidei,
Latissimus dorsi.

## THE HUMERUS IS MOVED

*Forward by*

Part of deltoid,
Part of pectoralis major,

*Assisted in some circumstances by*

Biceps,
Coracobrachialis.

*Backward by*

Part of deltoid,
Teres major,
“ minor,
Long head of triceps,
Latissimus dorsi.

*Inward by*

Part of pectoralis major,
Latissimus dorsi.

*Rotated inward by*

Subscapularis,

*Assisted occasionally by*

Pectoralis major,
Latissimus and teres major.

*Outward by*

Supraspinatus,
Infraspinatus,
Teres minor.

## THE FOREARM IS MOVED

*Forward by*

Biceps,
Brachialis anticus,
Pronator teres,

*Assisted by*

Flexor carpi radialis,
“ sublimis,
“ ulnaris,
Supinator longus.

*Backward by*

Triceps,
Anconeus.

*Rotated inward by*

Pronator teres,
Flexor carpi radialis,
Palmaris longus,
Flexor sublimis,
Pronator quadratus.

*Outward by*

Biceps,
Supinator brevis,
Extensor secundi internodii.

## THE CARPUS IS MOVED

*Forward by*

Flexor carpi radialis,
Palmaris longus,
Flexor sublimis,
“ carpi ulnaris,
“ profundus,
“ longus pollicis.

*Backward by*

Extensor carpi radialis longior,
Extensor carpi radialis brevior,
Extensor secundi internodii,
Indicator,
Extensor communis digitorum,
Extensor proprius pollicis.

*Outward by*

Flexor carpi radialis,
Extensor carpi radialis longior,
Extensor carpi radialis brevior,
Extensor ossis metacarpi,
“ carpi internodii.

*Inward by*

Flexor sublimis,
“ carpi ulnaris,
“ profundus,
Extensor communis digitorum,
“ minimi digiti,
“ carpi ulnaris.

## THE THUMB IS MOVED

*Inward and forward across the palms by*

Opponens pollicis,
Flexor brevis,
“ longus.

*Outward and backward by*

Extensor ossis metacarpi pollicis,
Extensor primi internodii,
“ secundi internodii.

*Upward and forward, away from the other fingers, by*

Abductor,

*Assisted by part of the*

Flexor brevis.

*Backward and inward to the other fingers by*

Adductor,
Extensor primi internodii,
“ secundi internodii.

## THE FINGERS ARE MOVED

*Forward or flexed by*

Flexor sublimis,
“ profundus,
Lumbricales,
Interossei,
Flexor brevis digiti minimi,
Abductor digiti minimi.

*Backward or extended by*

Extensor communis,
“ minimi digiti,
Indicator.

*Outward to radial border by*

Abductor indicis,
“ digiti minimi,
Interossei.

*Inward by*

Abductor digiti minimi,
Interossei.

## THE THIGH IS MOVED

*Forward by*

Psoas magnus,
Iliacus,
Tensor vaginæ femoris,
Pectineus,
Adductor longus,
“ brevis.

*Backward by*

Gluteus maximus,
Part of gluteus medius,
Pyriformis,
Obturator internus,
Part of adductor magnus,
Long head of biceps,
Semitendinosus,
Semimembranosus.

*Inward by*

Psoas magnus,
Iliacus,
Pectineus,
Gracilis,
Adductor longus,
“ brevis,
“ magnus,
Obturator externus,
Quadratus femoris.

*Outward by*

Tensor vaginæ femoris.
Gluteus maximus,
“ medius,
“ minimus,
Pyriformis.

THE THIGH IS ROTATED

| *Inward by* | *Outward by* |
|---|---|
| Tensor vaginæ femoris, | Gluteus maximus, |
| Part of gluteus medius, | Part of gluteus medius, |
| *And, when the leg is extended, by* | Pyriformis, |
|  | Gemellus superior, |
| Sartorius, | Obturator internus, |
| Semitendinosus. | Gemellus inferior, |
|  | Quadratus femoris, |
|  | Obturator externus, |
|  | Psoas magnus, |
|  | Iliacus, |
|  | Adductor longus, |
|  | " brevis, |
|  | " magnus, |
|  | Biceps cruris, slightly. |

THE LEG IS MOVED

| *Backward or flexed by* | *Extended by* |
|---|---|
| Semitendinosus, | Rectus, |
| Biceps, | Crureus, |
| Semimembranosus, | Vastus externus, |
| Gracilis, | " internus. |
| Sartorius, |  |
| Popliteus. |  |

THE FOOT IS MOVED

| *Forward or flexed by* | *Backward or extended by* | *Inclined inward by* | *Outward by* |
|---|---|---|---|
| Tibialis anticus, | Gastrocnemius, | Extensor proprius pollicis, | Peroneus longus, |
| Extensor proprius pollicis, | Plantaris, | Flexor longus digitorum, | " brevis, |
| " longus digitorum, | Soleus, | " longus pollicis, | Extensor longus digitorum, |
| Peroneus tertius. | Flexor longus digitorum, | Tibialis posticus. | Peroneus tertius. |
|  | " longus pollicis, |  |  |
|  | Tibialis posticus, |  |  |
|  | Peroneus longus, |  |  |
|  | " brevis. |  |  |

THE TOES ARE MOVED

| *Backward or flexed by* | *Forward or extended by* | *Inclined inward by* | *Outward by* |
|---|---|---|---|
| Abductor pollicis, | Extensor longus digitorum, | Abductor pollicis, | Abductor pollicis, |
| Flexor brevis digitorum, | " proprius pollicis, | Interossei. | " digiti minimi, |
| Abductor minimi digiti, | " brevis digitorum. |  | Interossei. |
| Flexor longus pollicis, |  |  |  |
| " digitorum, |  |  |  |
| " accessorius, |  |  |  |
| Lumbricales, |  |  |  |
| Flexor brevis pollicis, |  |  |  |
| Adductor pollicis, |  |  |  |
| Flexor brevis minimi digiti, |  |  |  |
| Interossei. |  |  |  |

Muscles are formed: 1. Essentially of muscular or fleshy fibre (see *Muscular fibre*). 2. Of areolar tissue, which unites the fibres. This areolar tissue is not very visible between the fine and loose fibres, but becomes more so when they unite in fasciculi, as it then ensheaths each fasciculus. It forms, moreover, to each muscle an external envelope, formerly called *tunica propria musculorum*, which unites it to the neighboring parts and admits of its motion. 3. Of arteries. These proceed from neighboring trunks, and are generally very large; their size and number are always in proportion to the bulk of the muscle. With the exception of some viscera, as the lungs and the kidneys, there are few organs that receive as much blood as the muscles. 4. Of veins. They follow the same course in the muscles as the arteries. 5. Of lymphatics. 6. Of nerves. These are numerous and of different sizes. They almost all proceed from the encephalon; some, however, issue from ganglions, and accompany the arteries. After they have entered the muscle they divide and subdivide until they terminate in the motorial end plates.

When muscles are subjected to heavy pressure at about 32° F., a fluid, *muscle-juice*, is obtained, to which the name of *muscle-plasma* has been given. It coagulates spontaneously and separates into serum and clot; the latter, called *myosin*, corresponding with the clot formed by coagulating blood.

The constituents of muscle may be tabulated as follows:

| | |
|---|---|
| Water | 745 |
| Solids: | |
| Myosin and insoluble proteids | 155 |
| Soluble proteids | 20 |
| Gelatin | 21 |
| Fats | 23 |
| Organic and inorganic salts | 36 |
| | 1000 |

Muscle contains various extractive matters, as creatin, creatinin, hypoxanthin or sarkin, xanthin, inosic acid, inosite or muscle-sugar, fatty matters, all embraced in the above summary. **M.-beat′ing**, method of massaging muscles with an instrument called a muscle-beater. **Bell's m.**, see *Bell*. **Bow′man's m.**, ciliary m. **Brück′e's m.**, Bowman's m.; muscularis mucosæ. **M. ca′ses**, elements entering into the formation of striated muscular fibres. **M. of Chassaignac′**, see *Chassaignac*. **M.-clot**, myosin. **M.-cor′puscle**, muscle-nucleus. **M. of Cramp′ton**, see *Cramptonian*. **M. curve**, myogram. **M. of Fo′lius**, laxator tympani m. **M. of Gavard′**, oblique muscular fibres of the stomach. **M. of Guth′rie**, compressor urethræ. **M. of Hil′ton**, compressor sacculi laryngis. **M. of Hor′ner**, tensor tarsi. **M. of Hous′ton**, compressor venæ dorsalis penis. **M.-jerk**, see *Reflex*. **M.-juice**, m. plasma, fluid surrounding the fibres of striated muscle and the fibre-cells of smooth muscles, which differs from the liquor sanguinis of the blood; containing a considerable amount of casein; see *Muscle*. **Koy′ter's m.**, corrugator supercilii. **Lusch′ka's m.**, see *Luschka*. **Mer′kel's m.**, ceratocricoid. **Mül′ler's m.**, see *Müller*. **Phil′lip's m.**, see *Phillip*. **M.-plas′ma**, m.-juice. **M.-plate**, segment of embryonic mesoderm from which the voluntary muscles of the body are developed. **M.-prism**, one of the muscle-rods, prismatic in shape, situated in a muscle compartment. **M.-read′ing**, body-reading; power of detecting, through physical contact, very slight and delicate muscular tensions and relaxations, and thereby divining the desires of the subject as indicated by these unconscious muscle changes. **Reiss′eisen's m.**, see *Reisseisen*. **Ri′olan's m.**, see *Riolan*. **M.-rod**, muscle-fibre situated between two intermediate disks. **Rouget's′ m.**, Müller's m. **M. of Santori′ni**, involuntary muscular fibres surrounding the urethra; the upper portion of the platysma myoides risorius. **M.-se′rum**, fluid portion of the m. juice.

**M.-su′gar,** inosite. **M. of Treitz,** see *Treitz.* **M.-tu′mor,** myoma. **M. of Wil′son,** compressor urethræ.

**Mus′cular.** Belonging or relating to muscles; well furnished with muscles. **M. anæsthe′sia,** loss of m. sense. **M. at′rophy,** see *Atrophy.* **M. ar′teries,** arteries distributed to the muscles. *Muscular arteries of the eye* are two branches sent off by the ophthalmic artery to the rectus inferior oculi, lacrymal sac, etc., and to the rectus superior oculi and levator palpebræ superioris. **M. contrac′tion,** exertion of the power possessed by muscles of shortening themselves or of contracting to produce motion; muscular motion being the change in the situation and relation of organs induced by muscular contraction. When a muscle contracts its fibres assume more the zigzag direction, and the extremities approximate, but the bulk of the whole muscle is not augmented. This contraction takes place, at times, with extreme velocity; a single trill in the letter *r* can be pronounced in the $\frac{1}{30000}$ part of a minute. The force of contraction, *myodynamis,* depends upon the healthy physical condition of the muscle, combined with due energy of the brain. The duration, in voluntary motion, is for a certain time dependent upon the will—contractions excited involuntarily cannot be so long maintained. **M. cur′rent,** current, according to Matteucci, existing in every living muscle whose tendinous extremities are not equally disposed—one, for example, forming a cord; the other broad and ribbon-like—and which circulates in the muscle from the tendinous extremity to the muscular surface. **M. dys′trophy,** myopathic atrophy. **M. fascic′uli,** muscular fibres distributed in bundles. **M. fi′bre,** name given to filaments which, by their union, form the muscles. This fibre is flat, soft, downy, linear, but little elastic, and more or less red; firmer in adults than in the young or the aged; of the same size in the great and small muscles; and runs its course without bifurcation or ramification; though but slightly resisting in the dead body, tearing readily, during life it supports very great efforts without laceration. It is itself composed of a considerable number of fibrils, similar to each other, and subdividing almost *ad infinitum,* and enclosed in a delicate sheath—the *sarcolemma.* See *Sarcous elements.* Muscle fibre exists under two forms, *striated* or *striped,* and *non-striated, smooth,* or *unstriped;* muscles composed of the former ministering, as a general rule, to the animal functions; of the latter to the organic. The color of the muscular fibres is red in man and white in several animals. A greater or less number of fibres united in bundles, *fasiculi* or *lacerti musculorum,* approximated to each other, and forming a distinct mass of variable size and shape, the extremities ordinarily being attached to bones by means of tendons, constitutes a muscle. In this are included connective tissue, vessels, and nerves; see *Muscle.* **M. hyperæsthe′sia,** increase of m. sense; sometimes acute sensibility of muscles to painful irritants. **M. hyperalge′sia,** m. hyperæsthesia (second definition). **M. juice,** see *Muscle-juice.* **M. mo′tion,** movement dependent on action of muscles. **M. nerves,** nerves distributed to the muscles are so named. **M. pro′cess,** process on the arytenoid cartilage for the insertion of muscles. **M. re′flex,** tendon reflex. **M. rheu′matism,** myalgia. **M. seg′ment,** myotome. **M. sense,** consciousness of muscular exertion or activity which accompanies and directs muscular movements; sense by which certain properties, as weight and position of bodies and muscular exertion, are estimated. **M. sub′stance,** see *Muscle.* **M. sys′tem,** term given to the aggregate of the muscles of the body. **M. tis′sue,** the structure of muscle, see *Muscle.* **M. tu′mor,** myoma. **M. veins,** these bring back the blood which has been carried to the muscles by the muscular arteries.

**Muscula′ris.** Muscular layer. **M. muco′sæ,** a layer of organic muscular fibres which can be traced from one end of the intestinal canal to the other, and from which processes are given off in different directions; they are separated by the submucous tissue from the muscular coat proper. **Proces′sus m.,** prominence situated at side of the arytenoid cartilage, which serves as attachment for muscles.

**Muscular′ity.** Muscular contractility, as of the arteries, etc.

**Muscula′tion.** Exertion of muscular action. **Irresist′ible m.,** chorea.

**Mus′culature.** Muscular apparatus of the body.

**Mus′culi** (pl. of *musculus,* muscle) **accesso′rii ad sacrolumba′lem.** See *Sacrolumbalis.* **M. amato′rii,** oblique muscles of the eye. **M. bicauda′ti,** muscles with a tendon dividing them into two portions with separate insertions. **M. bicip′ites,** muscles arising from two separate points. **M. gemel′li su′ræ,** gastrocnemii. **M. gem′ini,** m. gemelli. **M. incisi′vi,** accessores orbicularis oris. **M. papilla′res,** papillary muscles; columnæ carneæ. **M. pectina′ti,** pectinated muscles; muscular bands extending from the parietes of the auricles of the heart. **M. polycauda′ti,** muscles with a tendon dividing into several portions with separate insertions. **M. polycip′ites,** muscles with several heads. **M. prosta′tici supe′rior et infe′rior,** fibres of the ischiourethralis running transversely above and below the urethra in front of the prostate, to which they were formerly believed to be attached. **M. pterygoide′i,** pterygoid muscles. **M. pubovesica′les,** pubovesical muscles. **M. rec′ti labio′rum,** compressor labii. **M. triangula′res,** scaleni muscles.

**Mus′culin.** Paramyosinogen, a proteid of muscle-plasma. See *Fibrin.*

**Musculine′.** Organic extract, sterilized, from the muscular tissue of the ox; used in rheumatism.

**Musculin′teger.** Term applied to the union of two or several separate muscles regarded as one.

**Musculocuta′neous** (*musculus,* muscle, *cutis,* skin). Appertaining to muscles and skin. **M. nerve,** name given to several nerves—one, the *external cutaneous nerve,* is furnished by the brachial plexus (see *Cutaneous nerves*), another is given off from the poplitæus externus. The latter descends on the anterior and outer part of the leg—at first hid among the muscles; becomes superficial about the middle of the leg, and divides into two branches which pass superficially on the back of the foot. Two musculocutaneous nerves—superior and inferior—proceed from the first lumbar; the *superior musculocutaneous*—*ilioscrotal, iliohypogastricus*—divides into two branches, abdominal and scrotal; the *inferior musculocutaneous* is smaller than the superior, and is distributed as its name, *ilioinguinal,* indicates.

**Musculocuta′neus perone′i.** Musculocutaneous nerve of the leg.

**Musculoelas′tic.** Relating to muscular and elastic tissue.

**Mus′culo-intes′tinal.** See *Myenteric.*

**Musculomem′branous.** Having the character of muscle and membrane.

**Musculophren′ic** (*musculus,* muscle, *phren,* diaphragm). Belonging to the muscular portion of the diaphragm. Supplying muscles and diaphragm, as the musculophrenic artery.

**Musculorachid′ian** (*rhachis,* spine). Relating to certain muscles and to the spine. Name given to branches furnished behind by the intercostal, lumbar, and sacral arteries, which are distributed to the spine and to the muscles of the neighborhood.

**Musculo′sa.** Muscularis.

**Musculospi′nal.** Appertaining to muscles and spine; musculorachidian.

**Musculospi′ral groove** (*musculus,* muscle, *spira,* spiral). Groove situated posteriorly on the femur, for the passage of the musculospiral nerve and the superior profunda artery. **M. nerve,** radial nerve.

**Musculo′sus.** Muscular.

**Musculotegumen′tary.** Musculocutaneous. Including integument and muscles.

**Mus′culous.** Containing muscular fibres.

**Mus′culus.** Muscle. **M. accli′vis,** obliquus internus abdominis. **M. accommodato′rius,** ciliary muscle. **M. admira′tor,** rectus superior oculi. **M. amato′rius,** obliquus superior oculi. **M. anom′alus,** muscular fasciculus, attached only to the superior maxillary bone with which the levator labii superioris alæque nasi muscle is related. **M. anom′alus men′ti,** fasciculus from the lower maxillary bone near the levator labii inferioris, passing outward to be again inserted on the bone. **M. anom′alus transver′sus,** rare muscular mass extending transversely across the orbit in the region of the equator oculi. **M. anon′ymus clavic′ulæ,** muscular slip from the sternal to the acromial extremity of the clavicle. **M. ap′icis na′si,** levator nasi proprius. **M. aponeurot′icus,** tensor fasciæ latæ. **M. aryvoca′lis,** part of the internal thyroarytenoid muscle to the vocal cord. **M. auxilia′rius,** pyramidalis abdominis. **M. bibito′rius,** rectus internus oculi. **M. bi′ceps,** a muscle having two heads or bands of origin. **M. Brueckian′us,** see *Ciliary muscle.* **M. bursa′lis** or **M. bursa′rius,** obturator internus. **M. cani′nus,** levator anguli oris. **M. Casser′ii,** laxator tympani minor. **M. cate′næ,** tibialis anticus. **M. cilia′ris,** ciliary muscle. **M. c. Riola′ni,** ciliary muscle. **M. c. supe′rior** and **M. c. infe′rior,** palpebral part of the orbicularis palpebrarum. **M. cochlea′ris,** ligamentum spirale. **M. constricto′rius,** sphincter. **M. coracoide′us,** coracobrachialis. **M. cra′nii cuta′neus,** occipitofrontalis. **M. cuta′neus,** platysma myoides. **M. c. ma′nûs,** palmaris brevis. **M. dormita′tor,** orbicularis palpebrarum, because the eyes are closed in sleep. **M. Eusta′chii,** laxator tympani. **M. Fallo′pii,** pyramidalis abdominis. **M. fascia′lis,** sartorius. **M. fem′oris membrano′sus,** fascia lata. **M. gracil′limus,** a small, occasional muscle of the eye arising near the superior oblique muscle and inserted into the synovial sheath. **M. hip′picus,** tibialis anticus. **M. Hor′neri,** tensor tarsi. **M. hu′milis,** rectus inferior oculi. **M. immer′sus,** subscapularis. **M. im′par pharyn′gis,** azygos pharyngis. **M. incisu′ræ majo′ris auric′ulæ** or **M. incisu′ræ Santori′ni,** intertragicus. **M. indica′tor,** extensor indicis. **M. indignato′rius,** rectus externus. **M. iracun′dus,** rectus externus oculi. **M. la′bii pro′prius,** muscular fibres connecting the skin and mucous membrane around the orifice of the mouth. **M. lacryma′lis poste′rior,** Horner's muscle. **M. læti′tiæ,** rectus internus oculi. **M. liv′idus,** pectineus. **M. longis′simi ten′dini,** plantaris. **M. mal′lei exter′nus,** laxator tympani minor. **M. m. inter′nus,** tensor tympani. **M. membrano′sus,** tensor fasciæ latæ. **M. multif′idus,** multifidus spinæ. **M. nasa′lis la′bii superio′ris,** nasolabialis. **M. nau′ticus,** tibialis posticus. **M. orbita′lis,** Müller's muscle. **M. os′sis metacar′pi dig′iti quin′ti,** opponens minimi digiti. **M. pathet′icus,** m. amatorius, the superior oblique muscle of the eye. **M. patien′tiæ,** levator anguli scapulæ. **M. penicilla′tus,** levator labii inferioris. **M. perfora′tus Cas′seri,** coracobrachialis. **M. phren′icus,** diaphragm. **M. polygas′tricus,** muscle with several bellies. **M. prostat′icus,** sphincter urethræ prostaticus. **M. quadra′tus antibra′chii,** pronator quadratus. **M. quad′riceps,** muscle having four heads. **M. religio′sus,** m. admirator, the rectus superior oculi. **M. rhomboide′us,** m. anomalus. **M. Riola′ni,** see *Riolan's muscle.* **M. riso′rius Santori′ni,** platysma myoides. **M. sac′ci lacryma′lis,** tensor tarsi. **M. scandala′rius,** parathenar. **M. singula′ris col′li,** an aberrant intertransversalis longus muscle. **M. s. splen′ii accesso′rius,** adjutor splenii. **M. sterna′lis,** sternalis muscle. **M. subcuta′neus,** platysma myoides. **M. succenturia′tus,** pyramidalis abdominis. **M. succin′gens,** diaphragm. **M. super′bus,** rectus superior oculi. **M. supercil′ii,** corrugator supercilii. **M. supina′tor,** supinator brevis. **M. supraclavicula′ris,** tensor of the superficial cervical fascia. **M. su′ræ,** triceps suræ. **M. te′res antibra′chii,** pronator teres. **M. testicon′dus** or **tes′tis,** cremaster. **M. tri′ceps,** muscle having three heads. **M. tu′bæ no′væ,** circumflexus. **M. u′vulæ,** azygos muscle. **M. voca′lis,** internal thyroarytenoid muscle.

**Mus′cus arbo′reus.** Lichen plicatus. **M. cani′nus,** Lichen caninus. **M. cathar′ticus,** Lycopodium selago. **M. clava′tus,** lycopodium. **M. corralli′nus,** Corallina corsicana. **M. cra′nii huma′ni,** Lichen saxatilis. **M. erec′tus,** Lycopodium selago. **M. helminthocor′tos,** Corallina corsicana. **M. islan′dicus,** Lichen islandicus. **M. mari′nus,** Corallina corsicana. **M. marit′imus,** corallina. **M. polyt′richus,** Polytrichum commune. **M. pulmona′rius querci′nus,** Lichen pulmonarius. **M. pyxida′tus,** Lichen pyxidatus. **M. pyxoi′des terres′tris,** Lichen pyxidatus. **M. re′pens,** Lycopodium clavatum. **M. squamo′sus,** Lycopodium clavatum. **M. ursi′nus,** Polytrichum commune. **M. villo′sus,** peristroma.

**Muse′na bark.** See *Rottlera schimperi.*

**Musenin′.** Active principle from musena bark, tæniacide; it resembles saponin.

**Mush′room.** A form of fungus; some varieties are edible.

**Mu′sic** (*musa*, a song). Art of producing harmonious and cadenced sounds; has been beneficially used in diseases, particularly in those of the mind or on which the mind could act in a salutary manner. This application of music is called *musicotherapy.*

**Mu′sical mur′mur.** A cardiac murmur possessing a musical quality. **M. sound,** rhythmical sound heard on auscultation, resembling at times the humming of insects, noise of spinning-wheel, sounds of animals, etc. Such sound is more generally met with in chlorosis.

**Musi′cians' cramp.** A professional neurosis, varying according to the instrument played upon; analogous to *writers' cramp,* which see.

**Musicoma′nia** or **Musoma′nia.** Variety of monomania in which the passion for music is carried to an excessive degree.

**Musicother′apy.** See *Music.*

**Musk** (Arab.). Peculiar concrete animal substance, of a very diffusible odor and bitter taste, enclosed in the preputial follicles of the *Moschus moschiferus,* musk deer; it is stimulant and antispasmodic. See *Moschus.* The volatile oil of certain plants having its characteristic odor has sometimes been substituted for musk; distilled oils of Malva moschata and of Mimulus moschatus, for example, have been employed in hysterical disorders and certain forms of nervous diseases. **Amer′ican m.,** m. obtained from the musk-rat, Fiber zibethicus. **M.-plant,** Mimulus moschatus. **M.-root,** sumbul. **M.-seed,** see *Hibiscus abelmoschus.* **M.-tree,** Olearia argophylla. **M.-wood,** thymiama.

**Mus′keg moss.** Plant of the N. W. parts of the United States, used as absorbent substance for dressings.

**Musk′grape flow′er.** Bulbus vomitorius.

**Musk′mallow.** Hibischus abelmoschus.

**Musk′melon.** Cucumis melo.

**Musoma′nia.** Musicomania.

**Mus′quash root.** Cicuta maculata.

**Mussæn′da frondo′sa.** Decoction of this Ceylonese plant has been esteemed refrigerant. **M. gla′bra,** species found in East Indies possessing same properties as Mussænda frondosa. **M. lute′ola,** employed in Arabia in snake-bites.

**Mus′sel.** Mytilus edulis.

**Mus′sel poi′soning.** See *Mytilus.*

**Musset's** (mue-saze′) **sign.** Rhythmical oscillations of the head in patients with aortic insufficiency or suffering from aortic aneurysm.

**Mussita′tion** (*mussito,* to murmur). Condition in which the tongue and lips move as in the act of speaking, but without sounds being produced. Unfavorable sign in disease, as indicating great cerebral debility.

**Mussy's′ point** or **symp′tom.** See *Guéneau de Mussy.*

**Must.** The recent juice pressed from the grape; after fermenting it becomes wine.

**Mus′tard.** Sinapis. **Black m.,** Sinapis niger. **Clam′my m.,** Polanisia graveolens. **False m.,** Polanisia graveolens. **Green m.,** Lepidium sativum.

**Hedge m.**, erysimum. **In'dian m.**, Brassica juncea. **M. leaves**, charta sinapis. **M. mith'ridate**, Thlaspi campestre. **M. oil**, see *Sinapis alba*. **M. pa'per**, charta sinapis. **M. plas'ter**, cataplasma sinapis. **Stink'ing hedge m.**, alliaria. **Trea'cle m.**, Thlaspi arvense. **White m.**, Sinapis alba. **Wild m.**, Sinapis arvensis.

**Mustee'.** One born of parents one of whom is white, the other a mulatto. See *Mestizo*.

**Mustela'neus** (*mustela*, weasel). One who has two short arms.

**Mu'tacism.** Mytacism.

**Muta'tion.** Change. Term applied in obstetrics to the operation of version.

**Mute.** Dumb.

**Muteo'sis** (*mutus*, dumb). Every phenomenon of expression, voluntary and involuntary, which impresses the sight or touch.

**Mutila'tion** (*mutilus*, broken). Maiming. The removal or privation of a limb or of some other external part of the body.

**Mutis'ia.** Genus of shrubs, natives of South America. **M. viciæfo'lia**, native of the Andes; seeds are employed medicinally as a heart tonic; herb has tonic and expectorant properties.

**Mu'tism.** Dumbness; mutitas.

**Mu'titas** (*mutus*, dumb). Dumbness, speechlessness. Impossibility of articulating sounds, although they can be elicited. Dumbness is often congenital and united with deafness, of which it is an effect. In some cases it is accidental. **M. aton'ica**, atonic dumbness due to neuroses of the glossal nerves. **M. elin'guium**, dumbness due to loss of the tongue. **M. organ'ica**, dumbness due to disease or injury of the vocal organs. **M. surdo'rum**, deaf-dumbness, deafmutism, speechlessness from deafness, congenital or produced during infancy. The subjects of this affection are called deaf and dumb or deaf-mutes. **M. traumat'ica**, dumbness due to injury of the vocal organs. **M. vul'neris**, mutitas traumatica.

**Mu'tualism.** Community of dependence of organisms. Symbiosis.

**Myacan'tha.** Ruscus.

**Myacanthococ'cus cella'ris** (Hansgirg). Micrococcus found in soil and dust.

**Myal'gia** (*mys*, muscle, *algos*, pain). Muscular pain; cramp.

**Mya'sis** (*myia*, fly). Presence of larvæ of insects in the cavities of the nose.

**Myasthe'nia** (*mys*, muscle, *astheneia*, debility). Muscular debility. **M. gra'vis pseudoparalyt'ica**, a peculiar condition, in which excessive fatigue of the voluntary muscles occurs after ordinary functional activity.

**Myasthen'ic.** Relating to or characterized by muscular weakness.

**Mycelioph'ori** (*mykes*, fungus, *phoreo*, to bear). True fungi.

**Myce'lium** (*mykes*, fungus, *elos*, nail). Filaments or threads of fungi.

**My'ces.** Fungus.

**Mycetencan'this.** See *Encanthis carcinomatosa*.

**Myce'tes** (pl. of myces). Fungi.

**Mycethæ'mia.** Mycohæmia.

**Mycetis'mus** (*mykes*, mushroom). Mushroom poisoning.

**Mycetogen'esis** (*mykes*, fungus, *genesis*, formation). Formation of fungi.

**Mycetog'raphy.** Mycetology.

**Myce'toid.** Resembling a fungus in shape.

**Mycetol'ogy** (*mykes*, fungus, *logos*, discourse). Science of fungi.

**Myceto'ma.** Podelcoma, Madura foot, fungous foot of India. An affection of the hands and feet prevailing extensively in India and ascribed to the growth of a fungus, called *Chionyphe carteri* (after Dr. H. V. Carter), but believed by many to be the ray fungus, *Actinomyces*. The disease begins as a papule, becoming a pustule, and finally breaking down into an ulcer and giving exit to a number of small black or yellow seed-like bodies. Other pustules form and break down, the ulcers extend in depth, and finally the foot becomes simply a spongy mass with sinuses running in every direction through it.

**Mycetoph'agous** (*mykes*, fungus, *phago*, to eat). Deriving nourishment from fungi.

**Mycetozo'a** (*mykes*, fungus, *zoon*, animal). Myxomycetes.

**Mychthismus**, mik-thiz'mus. Moaning; sighing.

**Mycobacte'rium.** A genus of microorganisms of the family *Mycobacteriaceæ*. See *Bacteria*, classification of Migula.

**Mycocel'lulose.** Fungin.

**My'coderm** or **Mycoder'ma** (*mykes*, fungus, *derma*, skin). A cryptogamous growth constituting the crusts of favus; see *Porrigo favosa*. Genus of fungi forming a membranoid surface on fermenting liquors. Also a mucous membrane. See *Membrane*. **M. ace'ti**, mother of vinegar. **M. al'bicans**, Saccharomyces albicans. **M. cerevis'iæ**, Torula cerevisiæ. **M. cyan'eum**, Micrococcus cyaneus. **M. mesenter'icum**, Saccharomyces mycoderma. **M. pli'cæ**, tricomaphyton, a cryptogamous growth said to be present in plica. **M. sac'chari**, **M. vi'ni**, m. of alcoholic fermentation; Saccharomyces mycoderma.

**Mycoder'mis.** Microorganisms found in excreta of some cutaneous affections, as favus.

**Mycodermi'tis.** Mucitis.

**Mycodes'moid** (*mykes*, fungus, *desme*, a bundle, *eidos*, resemblance). An affection of the lungs in the horse, due to the presence of Micrococcus botryogenes.

**Mycodiarrhœ'a.** Mucous diarrhœa.

**Mycodysente'ria.** Mucous dysentery.

**Mycodyspnœ'a** (*mykos*, mucus, *dyspnoia*, difficulty of breathing). Dyspnœa from excessive secretion of mucus.

**Mycofibro'ma.** Mycodesmoid.

**Mycogastri'tis** (*mykos*, mucus, *gaster*, stomach). Inflammation of the mucous membrane lining the stomach.

**Mycog'raphy.** Mycetology.

**Mycohæ'mia** (*mykes*, fungus, *haima*, blood). Presence of microorganisms in the blood.

**Mycol'ogist.** One who is versed in the study of mycetology.

**Mycol'ogy.** Mycetology.

**Mycomyringi'tis** (*mykes*, fungus, *myrinx*, membrana tympani). Inflammation of the membrana tympani caused by fungi.

**Myconos'toc.** Microorganism, perhaps identical with cladothrix.

**Mycophlyza'cium** (*phlyzakion*, small blister). Pustule situated on a mucous surface.

**Mycophthal'mia** (*mykes*, fungus, *ophthalmos*, eye). Fungoid ophthalmia.

**Mycophthi'sis.** See *Bronchorrhœa*.

**Mycophylaxin** (*mykes*, fungus, *phylax*, a guardian). A defensive proteid formed in the interior of the animal body which has acquired the property of immunity to an infectious disease; it is destructive to the pathogenic microorganisms causing the disease.

**Mycopro'tein** (*mykes*, fungus). Albuminoid substance due to the bacteria of putrefaction.

**Mycorthopnœ'a** (*mykos*, mucus, *orthos*, erect, *pneo*, to breathe). Orthopnœa from excessive secretion of mucus in the air-passages—orthopnœa pituitosa.

**My'cose.** Peculiar kind of sugar existing in ergot.

**Myco'sis** (*mykes*, fungus). A disease caused by bacteria. **Catalyt'ic m.**, microbiohæmia. **M. circina'ta**, trichophytosis capitis. **M. cu'tis chron'ica**, furunculus orientalis; ulceration of the face common in oriental countries. **M. endocar'dii**, infectious endocarditis. **M. favo'sa**, favus. **M. frambœsioi'des**, frambœsia, yaws. **M. fungoi'des**, cutaneous disease, thought to be parasitic, characterized by the occurrence of soft red, mammillated tumors which may develop into fungous ulcers; it is almost invariably fatal. **M. furfura'cea**, pityriasis versicolor. **M. intestina'lis**, diarrhœa attended with symptoms of collapse, supposed to be associated with the presence of a fungus in the alimentary canal. **M. leptothric'ea** or **leptotrich'ea**, fungous disease caused by leptothrix, involving especially the tonsil and pharynx. **M. lupino'sa**, favus. **M. microspori'na**, dermatomycosis furfuracea. **M. pulmo'num**, pneumonomycosis. **M. pustulo'sa**, sycosis parasitica. **M. syphiloi'des**, scherlievo. **Tox'ic m.**, sapræmic poisoning from ptomains. **M. trichophyti'na**, mycosis due to presence of trichophyton. **Vag'inal m.**, term applied to pruritic irritation of the vagina excited, it is supposed, by the presence of a fungus.

**Mycosozin'.** A defensive proteid occurring in health. See *Sozin*.

**Mycotetraë'dron cella're** (Hansgirg). Micrococcus found in soil.

**My'cothrix** (*mykos*, mucus, *thrix*, hair). Leptothrix.

**Mycot'ic.** Relating to mycosis.

**Myc'ter.** Nose.

**Mycter'ic.** Relating to the nasal cavities.

**Mycteropho'nia** (*mycter*, nose, *phone*, voice). Nasal voice; commonly called "speaking through the nose."

**Mycteroxero'sis.** Dryness of the interior of the nose.

**Mydalein'** (*mydaleos*, putrid). Poisonous ptomain obtained from putrefying liver and other organs. It produces intense dilatation of the pupil, increased temperature, intestinal peristalsis, etc.

**Mydatoxin'.** $C_6H_{13}NO_2$. Poisonous ptomain from gradually decomposing flesh, especially from internal organs.

**Myde'sis** (*mydao*, to be damp or to putrefy). Moisture. Corruption. By some it is used to designate a mucous discharge from inflamed eyelids.

**Mydin'** (*mydao*, to be damp or to putrify). $C_8H_{11}NO$. Non-poisonous ptomain obtained from the putrefaction of human viscera and from cultures of the Eberth bacillus.

**My'don.** Sloughing tissue in certain fistulous ulcers. Also flesh putrid from mouldiness.

**Mydri'asis** (*mydriasis*, excessive dilatation of the pupil). Preternatural dilatation of the pupil—coromydriasis; noticed in atrophy of the optic nerve, paralysis of the third nerve, epilepsy, etc. Weakness of sight produced by hydrophthalmia, or superabundance of humors. **Ir'ritative m.**, dilatation of the pupil from spasm of the fibres of the dilator iridis muscle, or excitomotory action of the sympathetic. **M. paralyt'ica**, mydriasis dependent on paralysis of the sphincter pupillæ. **Spas'tic m.**, irritative m. **Spi'nal m.**, dilatation of the pupil from irritation of the spinal centre for such dilatation.

**Mydriat'ic.** Relating to or causing dilatation of the pupil.

**Mydriat'ics.** Drugs acting upon the iris are either mydriatics, which dilate the pupil, or miotics, which contract it. The most important of the drugs of these two classes are the following:

*Mydriatics.*

Atropine.
Belladonna.
Belladonnine.
Benzoyltropine.
Cocaine.
Daturine.
Duboisine.
Gelsemine locally.
Homatropine.
Hyoscyamine.
Muscarine locally (?).
Mydrine.
Mydrol.
Narcissine.
Piturine.
Scopalein.
Stramonium.

*Miotics.*

Calabar bean.
Gelsemine internally.
Jaborandi.
Lobeline internally.
Morphine internally.
Muscarine internally.
" locally.
Nicotine locally.
Opium.
Physostigmine (eserine).
Pilocarpine.
Thebaine.

**Mydrine'.** A compound of ephedrine and homatropine. Used as a rapid mydriatic, its effects being of brief duration.

**My'drol.** Iodo-methyl-phenyl-pyrazolin. Bitter, soluble powder, employed as a mydriatic, in 5 to 10 per cent. solution. It is not toxic.

**Myec'topy** (*myon*, muscle *ektopos*, out of place). Abnormal location or displacement of position of a muscle.

**My'el** (*myelos*, marrow). Spinal cord.

**Myelæ'mia.** Myelogenous leucocythæmia.

**Myelal'gia** (*myelos*, marrow, *algos*, pain). Pain in the spinal marrow.

**Myelanalo'sis** (*myelos*, marrow, *analosis*, wasting). Tabes dorsalis.

**Myelapoplex'ia** or **Myelap'oplexy.** Spinal apoplexy.

**Myelasthe'nia.** Spinal weakness or exhaustion.

**Myelate'lia** (*myelos*, marrow, *a*, priv., *telos*, end). Incompleteness of the spinal marrow.

**Myelat'rophy** (*myelos*, marrow, *atrophy*). Tabes dorsalis.

**Myelaux'is** (*myelos*, marrow, *auxe*, increase). Condition of dilatation or hypertrophy of the spinal cord.

**My'elen** (*myelos*, marrow). Phosphorized substance found in the brain. Red, syrupy extract of bone-marrow; used in anæmia, rickets, and scrofula.

**Myelenceph'alon** (*myelos*, marrow, *enkephalos*, brain). Cerebrospinal axis. Also after-brain or metencephalon.

**Myeletero'sis** (*myelos*, marrow, *heterosis*, alteration). Pathological change in the spinal marrow.

**Myelin'.** Mixture of lecithin with cerebric acid and cholesterin, constituting the fatty substance in nerve-tissue, etc. See *Nerve-fibres*.

**Myelin'ic.** Relating to myelin.

**Myeli'tis.** Inflammation of the spinal cord or its membranes, indicated by deep-seated burning pain in the spine, with various nervous, muscular, and vascular irregularities of function. The peripheral symptoms, such as paralysis, anæsthesia, increased reflexes, girdle pains, etc., vary in character and location with the seat of inflammation in the cord. Myelitis is also used synonymously with osteomyelitis or inflammation of the bone-marrow. **Ascend'ing m.**, m. in which the inflammation extends gradually upward. **Bul'bar m.**, inflammation of the medulla oblongata, with softening, attended with cephalic, respiratory, and gastric disturbance, and usually paralysis. **Cav'itary m.**, m. with cavities formed in the substance of the cord. **Cen'tral m.**, m. involving the gray matter. **Compres'sion m.**, pressure myelitis. **Concus'sion m.**, m. caused by concussion of the cord. **M. convulsi'va**, electric chorea. **Cor'nual m.**, m. seated in the cornua or horns of the cord. **Descend'ing m.**, m. in which the inflammation gradually extends downward. **Diffuse' m.**, m. involving a large part of the cord. **Dissem'inated m.**, m. occurring at several different foci in the cord. **M. exsudati'va**, hydrorrhachis. **Fo'cal m.**, m. limited to a circumscribed space. **Intersti'tial m.**, sclerosing myelitis **Mul'tiple m.**, disseminated myelitis. **M. parenchymato'sa**, myelitis. **M. petechia'lis**, cerebrospinal meningitis. **Pres'sure m.**, inflammation of the spinal cord, caused by compression from disease of the vertebræ or from tumors or other growths. **Sclero'sing** or **sclerot'ic m.**, m. with increased growth of interstitial tissue with induration of the cord. **M. spina'lis**, myelitis. **Transverse' m.**, m. in which the inflammation affects a transverse section of the spinal cord. **Traumat'ic m.**, m. consequent upon direct and positive injury.

**Myelo-** (*myelos*, marrow). In composition, marrow.

**My'elocele** (*kele*, tumor). Tumor of the spinal cord.

**Myelochysis**, me-el-ok'is-is (*myelos*, marrow, *chyo*, to pour out). Hydrorrhachis.

**Myelocœ'le.** Canal of the spinal cord.

**Myelocys'tic.** Relating to a cyst of the cord.

**Myelocys′tocele.** Condition in which an excess of liquid exists in the central canal of the spinal cord.

**Myelocystomenin′gocele** (*myelos*, marrow, *kystis*, cyst, *meninx*, membrane, *kele*, tumor). Spina bifida with substance of the cord, membranes, and fluid included in its contents. Combination of meningocele and syringomyelocele.

**My′elocyte** (*myelos*, marrow, *kytos*, cell). A cell of the gray substance of the brain. A bone-marrow cell, one of the varieties of leucocytes.

**Myelodias′tasis.** Disintegration of the spinal cord.

**Myeloganglii′tis.** An old term for sporadic cholera.

**Myelogen′ic** or **Myelog′enous** (*myelos*, marrow, *gennao*, to generate). Originating in the bone-marrow. **M. leu′cocytes,** myelocytes. **M. tu′mor,** myeloid tumor.

**My′eloid** (*myelos*, marrow, *eidos*, resemblance). Marrow-like. **M. sarco′ma,** medullary sarcoma. **M. tu′mor,** fibroplastic tumor, myelogenic tumor; sarcomatous tumor, the more characteristic constituents of which are peculiar many-nucleated corpuscles, which have been recognized as constituents of the marrow and diploë of the bones, especially in the fœtus and in early life. It is more nearly related, therefore, to cartilaginous than to fibrinous tumors.

**Myeloidin′.** Substance in the pigmented retinal cells.

**Myelo′ma** (*myelos*, marrow). Encephaloid tumor. Tumor of medullary substance. Tumor of bone-marrow resembling Hodgkin's disease. Sarcoma. Tumor of embryonic life and substance.

**Myelomala′cia.** Softening of the medulla spinalis.

**Myelome′nia** (*myelos*, marrow, *men*, month). Metastasis of the menstrual flux to the spinal cord.

**Myelomeningi′tis.** Spinal meningitis.

**Myelomenin′gocele.** Hernia of the spinal cord and its membranes.

**Myelomen′inx** (*myelos*, marrow, *meninx*, membrane). Membrane covering the spinal cord.

**Myelomy′ces** (*myelos*, marrow, *mykes*, fungus). Myeloma.

**Myelomyce′tes.** Order of fungi.

**My′elon.** Medulla spinalis, or spinal cord.

**Myelo′nal** or **Myelon′ic.** Relating to the spinal cord.

**Myeloparal′ysis.** Spinal paraplegia.

**Myelopath′ia** (*myelos*, marrow, *pathos*, disease). Disease of the spinal cord. **M. trop′ica,** beriberi.

**Myelopath′ic.** Relating to or caused by a disease or injury of the spinal cord.

**Myelophthi′sis.** Tabes dorsalis.

**Myelophy′mata** (pl. of myelophyma) (*myelos*, marrow, *phyma*, tumor). Tubercles of the spinal marrow.

**My′eloplaque** (*myelos*, marrow, *plaque*, plate). Osteophage, osteoclast, giant cell; one of the large many-nucleated cells, most abundant in the external layers of the bone-marrow.

**My′eloplast.** Leucocyte in bone-marrow.

**My′eloplax** (*myelos*, marrow, *plax*, a flat stone). Myeloplaque.

**Myeloplaxo′ma.** Tumor of a part in which osteoclasts are numerous.

**Myelople′gia.** Spinal paralysis.

**Myelorrha′gia** (*myelos*, marrow, *rhegnymi*, to break forth). Apoplexy of the spinal cord.

**Myelor′rhaphy** (*myelos*, marrow, *rhaphe*, suture). Suture of the spinal cord, as after gunshot wounds and other injuries; has been followed by return of sensation and of the power of motion in the previously paralyzed parts.

**My′elos.** Marrow.

**Myelosarco′ma.** Osteosarcoma.

**Myeloscler′o′sis.** Sclerosis of the spinal cord or of the bone-marrow.

**Myelo′sis.** Growth of medullary tumor.

**Myelospon′gium.** Network made by spongioblasts or cells that develop into neuroglia in the medullary canal.

**Myelospon′gus** (*spongus* sponge). Encephaloid tumor.

**Myelosyph′ilis.** Spinal syphilis.

**Myelosyringo′sis.** Syringomyelia.

**Myelother′apy.** Therapeutic employment of bone-marrow preparations.

**My′elotome.** A knife for dividing the spinal cord.

**Myelotoxin′.** A cytotoxin having a specific action upon the bone-marrow cells.

**Myelozo′a.** Class of *Vertebrata* provided with a spinal cord, but without brain.

**My′elus.** Marrow, medulla spinalis.

**Myelyperæ′mia.** Hyperæmia of the spinal cord.

**Myener′gia.** Muscular strength.

**Myen′tasis** (*mys*, muscle, *entasis*, a stretching). Stretching or extension of the muscles.

**Myenter′ic** or **Myenter′icus** (*mys*, muscle, *enteron*, intestine). Relating to the muscular apparatus of the intestines, as *plexus myentericus*, musculo-intestinal plexus, a nervous plexus situated between the circular and longitudinal fibres.

**Myen′teron.** The muscular tunic of the intestine.

**Mygin′da rhaco′ma** and **M. uragoy′a.** Two species of shrubs growing in the West Indies; the roots of both are diuretic.

**Myg′mus.** Sigh.

**Myi′a.** Musca; fly.

**Myi′asis** (*myia*, a fly). Disease caused by larvæ of flies. When affecting the exterior of the body it is called *m. externa;* when affecting the interior, *m. interna;* when produced by the full-grown fly (*imago*), *m. imaginosa;* when produced by the larvæ (*maggots*), *m. larvosa;* when produced by the common fly, *m. mucosa;* when produced by the œstrus or gad-fly, *m. œstruosa;* when caused by a burrowing larva, *m. linearis* or hyponomoderma.

**Myioceph′alum** (*myia*, fly, *kephale*, head). Ptosis iridis.

**Myiodesop′sia** (*myiodes*, like a fly, *opsis*, vision). Vision in which flying matters—muscæ volitantes—are present before the eyes.

**Myiosis,** mi-i-o′sis. Myiasis.

**Myist′os** (*mys*, muscle, *histos*, tissue). Muscular tissue.

**Myi′tis.** Inflammation of a muscle; myositis.

**Myko-.** For words beginning thus, see *Myco-*.

**Myl′abris cicho′rii, phalera′ta, puncta′ta,** or **pustula′ta.** A dried beetle of India possessing vesicating and irritating properties similar to those of cantharis.

**Mylaceph′alus** (*myle*, mole, *a*, priv, *kephale*, head). Monster with only traces of viscera, and without head or extremities.

**Myl′acri** (*myle*, millstone). Molar teeth; grinders.

**Myl′acris.** Patella.

**My′le** (*myle*, millstone). Patella; mole.

**Myl′ic.** Molar.

**Myl′los.** Vulva; lip.

**Mylo-** (*myle*, mill). In composition, the jaw, especially the lower jaw.

**Mylodon′tes.** Molar teeth; grinders.

**Myloglos′sus.** Muscular fibres which pass from the posterior part of the myloid line of the lower jaw, and from the sides of the base of the tongue to the parietes of the pharynx. These fibres belong to the constrictor superior pharyngis.

**Mylohy′oid.** Relating to the lower jaw and the hyoid bone. **M. ar′tery,** branch from inferior dental to mylohyoid muscle. **M. fur′row** or **groove,** furrow passing from the superior orifice of the inferior dental canal of the lower jaw in the same direction as the canal, and lodging the mylohyoid nerve, a branch of the inferior dental. **M. line,** internal oblique or internal maxillary line, giving origin to the m. muscle. **M. mus′cle,** see *Mylohyoideus.* **M. nerve,** see *Mylohyoid furrow.*

**Mylohyoide′us.** Mylopharyngeus of Morgagni and Santorini; a muscle situated at the upper and anterior part of the neck, behind the lower jaw; is broad, flat, and has the form of a truncated triangle. Arises from the internal oblique, internal maxillary, or mylohyoid line of the lower jaw-bone, and is inserted at the forepart of the body of the os hyoides. Its innermost fibres unite with those of the opposite side to form a raphe on the median line. The mylohyoideus raises the os hyoides and carries it forward, or it depresses the lower jaw.

**Mylopharynge′us.** Constrictor pharyngis; mylohyoideus.

**Myn′sicht′s elix′ir of vit′riol.** Aromatic sulphuric acid, stronger than the official elixir.

**Myo-** (*mys*, muscle). In composition, muscle.

**Myoalbu′min.** Serum albumin of muscle, the existence of which is denied by some.

**Myoal′bumose.** Proteid of muscle-plasma, resembling or associated with myosin ferment.

**Myoatro′phia lipomato′sa.** Pseudohypertrophic paralysis.

**My′oblasts** (*mys*, muscle, *blastos*, germ). Cell-elements which go to form muscular fibres.

**Myobro′ma fra′grans.** Vanilla planifolia.

**Myocar′diograph.** Instrument or apparatus for graphic record of the effective work of the muscular structure of the heart.

**Myocardi′tis** (*mys*, muscle, *kardia*, heart). Inflammation of the muscular structure of the heart; chronic myocarditis may lead to degeneration of the heart-muscle and induration. Carditis.

**Myocar′dium.** Muscular structure of the heart.

**My′ocele** (*mys*, muscle, *kele*, tumor). Muscular tumor.

**Myocelluli′tis.** A combination of myositis and cellulitis.

**Myochordi′tis.** Inflammation of muscles of the larynx and vocal bands.

**My′ochrome** (*mys*, muscle, *chroma*, color). Pigment contained in muscles, identical with hæmatocrystallin.

**Myochron′oscope** (*mys*, muscle, *chronos*, time, *skopeo*, to view). Instrument for estimating rapidity with which muscles contract or for determining that of the transmission of nerve-stimuli through muscles.

**Myoclo′nia** (*mys*, muscle, *klonos*, twitching). Disease characterized by the occurrence of myoclonus.

**Myoc′lonus.** Spasm of the muscles of the upper and lower extremities, and occasionally of those of the back. **M. ep′ilepsy,** epilepsy in which the attacks are preceded by myoclonic spasms, but followed by a longer or shorter period of freedom from myoclonus; the affection is usually marked by decided mental impairment; the underlying condition is believed to be a familial anomaly of the cortical motor and sensory cells, the exciting cause being some intoxication or autointoxication. **M. mul′tiplex,** paramyoclonus.

**Myocœlial′gia** (*mys*, muscle, *koilia*, abdomen, *algeo*, to suffer). Pain in the muscles of the abdomen.

**Myocœli′tis** or **Myocœlii′tis** (*mys*, muscle, *koilia*, abdomen). Inflammation of the muscles of the abdomen.

**Myocolpi′tis** (*mys*, muscle, *kolpos*, vagina). Inflammation of muscular wall of vagina.

**Myocom′ma** (*mys*, muscle, *komma*, slice). Myotome; muscular metamere.

**Myocton′ic acid.** Yellowish oil derived from Palicourea macrafii; highly poisonous internally and intoxicant when inhaled.

**Myoctonine′.** Alkaloid obtained from Aconitum lycoctonum; very poisonous, like curare.

**Myoctonin′ic acid.** Myoctonic acid.

**Myoc′tonon.** Aconitum napellus.

**Myocys′tis.** Cystic tumor of a muscle.

**My′ocyte.** Muscle-cell.

**Myode′mia** (*mys*, muscle, *demos*, fat). Fatty degeneration of muscle.

**Myodesop′sia.** Myiodesopsia; metamorphopsia.

**Myodias′tasis.** Separation or rupture of muscle.

**Myodyna′mia** (*dynamis*, power). Power of a muscle.

**Myodynam′ic.** Relating to the power or force of muscular contraction.

**Myodynam′ics.** The physics of muscular action.

**Myodynamiom′eter** or **Myodynamom′eter.** Dynamometer.

**Myodyn′ia** (*mys*, muscle, *odyne*, pain). Pain in the muscles—rheumatismal or other; myalgia. **M. inflammato′ria,** myositis. **M. puerpera′lis,** puerperal myalgia.

**Myoendocardi′tis.** Myocarditis and endocarditis existing at the same time.

**Myoepithe′lial.** Relating to myoepithelium.

**Myoepithe′lium.** Myothelium or muscle-plate.

**Myofibro′ma.** Fibrous degeneration of the muscular structure.

**Myogas′ter.** Belly or thickened portion of a muscle.

**Myogas′tric.** Relating to the belly of a muscle.

**My′ogen.** Myosinogen. **M. fi′brin,** myosin resulting from the coagulation of myosinogen.

**Myogen′esis.** Development of muscle-tissue.

**Myogen′ic** or **Myogenous,** mi-oj′en-us (*mys*, muscle, *gennao*, to produce). Muscular in its origin or development.

**Myoglob′ulin.** Globulin obtained from muscle; resembles serum-globulin; coagulated by heat at 63° C.

**Myogna′thus** (*mys*, muscle, *gnathos*, jaw). Monster in which the supernumerary head has only muscular and cutaneous attachment.

**My′ogram** (*mys*, muscle, *gramma*, drawing). Tracings obtained by the myograph.

**Myogram′mata.** Inscriptiones tendineæ.

**My′ograph** (*mys*, muscle, *grapho*, to write). Instrument for taking tracings of muscular contraction. Myographion.

**Myograph′ic tracing.** Myogram.

**Myograph′ion** (*mys*, muscle, *grapho*, to write). Instrument consisting essentially of three parts—a frame to hold the isolated frog-muscle having the nerve attached; clockwork to move a revolving cylinder with regular velocity; and an arrangement for stimulating the nerve at the proper moment; the object of the whole being to determine the rapidity of the nerve-current. Myograph.

**Myog′raphy.** Anatomical description of muscles. Employment of the myograph.

**Myohæm′atin.** Nitrogenous pigment contained in muscles.

**My′oid** (*mys*, muscle, *eidos*, resemblance). Resembling muscle. **M. tu′mor,** tumor composed of fibre-cells or muscular fibres.

**Myoide′ma** (*mys*, muscle, *oidema*, tumefaction). A symptom of peculiar muscular irritability, exhibited in the elevation of nodules at points pressed upon by the fingers; mounding. Œdema of muscle-tissue.

**Myoi′des.** Muscle-like, as platysma myoides of the neck.

**Myoky′mia** (*mys*, muscle, *kyma*, wave). Persistent muscular quivering, not associated with muscular atrophy or paresis.

**Myolem′ma** (*mys*, muscle, *lemma*, coat). Membranous covering of muscular fibrillæ.

**Myolemmat′ic.** Relating to myolemma.

**Myolin′.** Name given by Mr. Erasmus Wilson to a transparent substance that fills the cells which he conceived to form, by their union, the ultimate muscular fibril.

**Myolipo′ma.** Tumor consisting of muscular and fatty tissue.

**Myol′ogy** (*mys*, muscle, *logos*, discourse). The division of anatomy which treats of the muscles.

**Myo′ma.** Myomatous or muscular tumor. This name has also been used synonymously with fibromuscular tumor, fibromyoma, a fibrous tumor containing muscle-fibres. If the muscular fibres belong to the smooth variety the tumors are called *leiomyomata;* if to the striped, *rhabdomyomata.* **M.**

**caverno'sum**, myoma telangiectodes. **Cuta'neous m.**, this is either simple, when it is called *liomyoma*, or dartoic, which is usually single and occurs most frequently on the mammæ, labia majora, and scrotum. **M. lævicellula're**, term applied by Virchow to fibroid tumor of the uterus, under the view that the spindle-shaped cells observed in it are muscle-cells. **M. striocellula're**, tumor of striated or striped muscular tissue. **M. telangiecto'des**, tumor of muscular tissue surrounding a mass of vessels, as an angioma.

**Myomala'cia** (*malakia*, softness). Softening of muscle.

**Myo'matous.** Relating to or composed of myoma.

**Myomec'tomy** (*ektome*, a cutting out). Operation for the removal of a myoma.

**Myomelano'sis** (*melas*, black). Pigmentation of a muscle.

**My'omere.** Segment of a muscle.

**Myom'eter** (*mys*, muscle, *metron*, measure). Instrument intended to measure a muscle when contracting.

**Myometri'tis** (*mys*, muscle, *metra*, uterus). Inflammation of the myometrium or muscular structure of the uterus; either *hypertrophic*, in which there is increase of all the histological elements, or *interstitial* or *cirrhotic*, in which there is increase of connective tissue and loss of muscular tissue.

**Myome'trium.** Muscular structure of the uterus.

**Myomohysterec'tomy.** Hysterectomy performed for the removal of myoma of the uterus.

**Myomot'omy.** Excision through the abdomen of fibromyoma of the uterus. Myomectomy.

**Myomu'coid.** Mucoid present in muscular tissue.

**My'on.** Muscle.

**Myonarco'sis** (*narke*, stupor). Numbness of the muscles.

**Myone'oplasm** (*neos*, new, *plasma*, formation). Myoma.

**Myoneural'gia.** Muscular neuralgia, usually of the neck or shoulder or lumbar region.

**My'oneure.** Motor nerve-cell supplying power to a muscle.

**Myoneuro'ma.** Combination of myoma and neuroma.

**Myonin'.** Muscle-substance.

**Myoni'tis.** Myositis.

**Myon'osus** (*nosos*, disease). Disease of the muscles.

**Myœde'ma.** Myoidema.

**Myopachynsis**, mi-o-pak-in'sis (*mys*, muscle, *pachynsis*, thickening). Hypertrophy affecting the muscles.

**Myopal'mus.** Muscular twitching; subsultus tendinum.

**Myoparal'ysis.** Muscular paralysis.

**Myopath'ic.** Pertaining to myopathy.

**Myop'athy** (*mys*, muscle, *pathos*, affection). Disease of a muscle or muscles.

**My'ope.** A near-sighted person.

**Myopericardi'tis.** Myocarditis and pericarditis combined.

**My'ophone** (*mys*, muscle, *phone*, voice). Instrument for conveying the sound of muscular contraction.

**Myopho'nia.** Sound of muscular contraction, as that of the ventricles of the heart during the systole of that organ.

**Myo'pia** (*myo*, to close, *ops*, eye). Myopy, short-sightedness, near-sightedness. State of those who can see objects only when near. The defect is owing to the too great convexity or depth of the eye, or to too great density of the humors, and is palliated by wearing concave glasses. **Ax'ial m.**, m. caused by the elongation of the axis of the eye. **Curv'ature m.**, m. due to change in curvature in the refracting surface of the eye. **In'dex m.**, m. due to an abnormal change in the media. **Malig'nant m.**, m. caused by serious disease or injury. **Perni'cious m.**, malignant myopia.

**Myop'ic.** Short-sighted, near-sighted, purblind. Relating or appertaining to myopia. **M. cres'cent**, whitish, crescentic space in the vicinity of the papilla, from exposure of the sclerotic by detachment of the choroid.

**Myopro'teid.** Proteid derived from muscle-plasma.

**Myopro'teose.** Myoalbumose.

**My'ops.** Myope; one affected with myopia or short-sightedness.

**Myopsin'.** Ferment of pancreatin; albumin is digested by it.

**Myo'py.** Myopia.

**Myor'cytes weisman'ni.** Parasitic round-worm of small size occurring in the muscles.

**Myorrheu'ma.** The severe pains felt in rheumatism.

**Myorrhex'is** (*rhexis*, rupture). Rupture of a muscle.

**Myosalpingi'tis.** Inflammation of the muscular tissue of the Fallopian tube.

**Myosal'pinx** (*mys*, muscle, *salpinx*, tube). Muscular structure of the Fallopian tube.

**Myosarco'ma.** Sarcomatous tumor in which muscular fibres are found, or which has developed on a myoma.

**Myosclero'sis** (*mys*, muscle, *skleros*, hard). Induration of muscle through increase in the interstitial connective tissue.

**Myosclerot'ic.** Relating to myosclerosis. **M. pal'sy** or **paral'ysis**, pseudohypertrophic muscular paralysis.

**My'oseism** or **Myoseis'mia** (*seismos*, trembling). Disease affecting the movements of the muscles of the eyes, limbs, and voice. There are tremors, jerkiness, and want of equilibrium from the sudden checking of muscular contractions.

**Myosep'tum.** Septum or partition dividing two myotomes.

**My'osin.** Globulin proteid from muscle-plasma. **M. fer'ment**, a ferment found in muscle which coagulates blood plasma. **M. fi'brin**, insoluble form of myosin. **Veg'etable m.**, a substance of similar nature to myosin found in seeds.

**Myosin'ogen** (*myosin+gennao*, to beget). Proteid of muscle-plasma; coagulated by heat at 56° C.; now usually called myogen.

**Myosino'ses.** Products obtained when myosin is digested by the gastric juice.

**Myo'sis** (*myo*, to close the eyes). Miosis; smallness or contraction of the pupil. Phthisis pupillaris. Permanent contraction of the pupil, usually caused by iritis, and extremely difficult to cure, but it may be associated with locomotor ataxia, disseminated sclerosis, uræmia, opium poisoning, etc. When it exists to such an extent as to obliterate the pupil it is called *synizesis*. **Spas'tic m.**, myosis caused by the contraction of the sphincter pupillæ. **Spi'nal m.**, myosis occurring in some affections of the spine.

**Myosit'ic.** Causing contraction of the pupil.

**Myosi'tis** (*mys*, muscle). Inflammation of the muscles; also rheumatism. **Fi'brous** or **interstit'ial m.**, myosis in which the connective tissue is in a hyperplastic condition and the muscular fibres are atrophied. **M. lipomato'sa**, m. in which the muscle-fibres become infiltrated with fat. **Os'sifying m.**, arises from traumatic congestion, such as is induced by continuous pressure, as in the cavalry and infantry drill; see *Drill-bone*. **Parenchy'matous m.**, inflammation of the actual muscle-fibres and not of the connective tissue alone. **Pri'mary mul'tiple m.**, pseudotrichinosis. **Pyæ'mic m.**, m. due to pyæmia. **Pyret'ic m.**, m. caused by fever. **Specif'ic m.**, syphilitic myositis. **M. trichino'sa**, m. due to the presence of Trichina spiralis in the muscles. **M. typho'sa**, m. characterized by softening and other changes in muscles; this condition occurs sometimes in typhoid fever.

**Myos'pasis.** Muscular contraction.

**My'ospasm.** Spasm of a muscle; cramp.

**Myospas'mia.** Disease in which involuntary muscular contractions are characteristic symptoms.

**Myostyp′sis** (*mys*, muscle + *stypsis*). Disease in which muscular spasm of the excreting ducts occurs.

**Myosu′ture.** Muscle-suture.

**Myosynize′sis.** Condition in which muscle-fibres adhere to one another.

**Myotal′gia.** Myalgia.

**Myot′asis.** Muscular tension.

**Myotat′ic** (*mys*, muscle, *teino*, to stretch). Relating to muscular tension. **M. contrac′tion,** contraction which takes place when muscle-tendons are subjected to blows; also called tendon reflex or tendon jerk. **M. irritabil′ity,** increased muscular irritability from passive extension.

**Myotenot′omy** (*mys*, muscle, *tenon*, tendon, *tome*, incision). The act of dividing muscles and tendons.

**Myothe′lium.** Muscle-plate.

**Myother′mic** (*mys*, muscle, *therme*, heat). Relating to heat generated by muscles.

**Myot′ic** (*myo*, to close). Miotic; causing contraction of the pupil. See *Mydriatic*.

**Myot′ics** (*myo*, to close). Agents which contract the pupil—the Calabar bean, for instance.

**Myotil′ity.** Muscular contractility.

**My′otome** (*mys*, muscle, *tome*, section). Myocomma, myomere. An instrument for performing myotomy.

**Myot′omy** (*mys*, muscle, *tome*, section). Practical anatomy treating of the dissection of the muscles; also surgical division of muscles. **Intraoc′ular m.,** operation in which the ciliary muscle is divided. **Oc′ular m.,** section of muscles in strabismus.

**Myoto′nia** (*tonos*, stretching). Tonic muscular contraction or spasm; tension of a muscle; myotony. **M. congen′ita,** Thomsen's disease.

**Myoton′ic.** Relating to myotonia. **M. reac′tion,** a form of reaction of degeneration in which the contraction of the muscle continues after withdrawal of the electric stimulation which produced it.

**Myot′ony.** Muscular tone.

**Myotyr′be** (*mys*, muscle, *tyrbe*, disorder). Chorea.

**Myr′cia ac′ris.** Pimenta acris.

**Myr′iachit.** A term applied in Siberia to a form of convulsive tic similar to if not identical with the jumping disease of Maine, imubacco of Japan, latah of the Malays, etc. Written also miryachit.

**Myr′iagramme** (*myrioi*, ten thousand, *gramma*, gramme). Weight equal to 10,000 grammes, or to 26 pounds 9 ounces and 6 drachms Troy.

**Myr′ialitre.** Measure of capacity containing 10,000 litres, equal to 2642 U. S. gallons.

**Myr′iametre.** Measure of 10,000 metres or 10 kilometres, equal to 16 miles 1 furlong 156 yards 14 inches.

**Myri′ca asplenifo′lia.** Comptonia asplenifolia. **M. cerif′era,** myrtle wax. **M. gale,** Dutch myrtle, sweet gale, sweet willow, ord. *Myricaceæ*. Leaves, flowers, and seeds have a strong, fragrant smell and a bitter taste; used for destroying moths and cutaneous insects; infusion is given internally as a stomachic and vermifuge. **M. palus′tris,** M. gale.

**Myricin′.** One of the substances contained in wax. A substance derived from myrtle wax.

**Myrin′ga.** Membrana tympani.

**Myringi′tis** (*myringa*, membrana tympani). Inflammation of the membrana tympani, and also of the tympanum. **M. parasit′ica,** myringomycosis.

**Myringodec′tomy** (*myringa*, membrana tympani, *ektome*, excision). Excision of a part or the whole of the membrana tympani.

**Myringodermati′tis.** Inflammation of the dermal layer of the membrana tympani.

**Myringomyco′sis** (*myringa*, membrana tympani, *mykosis*, fungous disease). Otitis parasitica; otomycosis. Inflammatory affection of the meatus of the ear caused by parasitic vegetable growths, Aspergillus nigrescens and A. flavescens.

**Myringomyringi′tis.** Myringomycosis.

**Myrin′goplasty** (*myringa*, membrana tympani, *plasso*, to form). Plastic operation on the membrana tympani.

**Myrin′gotome** (*tome*, incision). Surgical knife for making an incision into the membrana tympani.

**Myringot′omy.** Incision into or operation on the membrana tympani.

**Myr′inx.** Membrana tympani.

**Myr′istate.** Salt of myristic acid.

**Myris′tic.** Relating to myristica or nutmeg. **M. acid,** monobasic acid obtained from spermaceti, nutmeg-butter, and other fats. **M. al′cohol,** $C_{14}H_{29}OH$, an alcohol derived from spermaceti.

**Myris′tica.** (Ph. U. S.) Official name of the seed of M. fragrans or nutmeg, ord. *Myristiceæ*, a tree which produces both the nutmeg and mace. It has a fragrant, aromatic odor, an agreeable, pungent taste, and is much used for culinary purposes. Alcohol extracts its active matter. It has the properties of aromatics in general, being stimulant and stomachic. The oil—*oleum myristicæ* or *o. nucistæ æthereum, volatile oil of nutmeg*—possesses the virtues of nutmeg. Dose of powdered nutmeg is gr. v–xx (0.32–1.3); of the oil, gtt. iij–vj (0.2–0.4); of the spirit, *spiritus myristicæ*, ♏x–xx (0.65–1.3). Nutmeg enters into the composition of aromatic powder and compound tincture of lavender. *Mace* is the arillus of the fruit; it is membranous, with the odor and taste of the nutmeg, and is possessed of similar qualities. The *oleum macis* or *macidis* is a fragrant, sebaceous substance expressed in the East Indies; it is used only externally. It is the adeps myristicæ, oleum myristicæ expressum, oleum or balsamum nucistæ, butter of nutmegs, expressed oil of mace or nutmegs. **M. aromat′ica, fra′grans, moscha′ta,** or **officina′lis,** myristica. **M. oto′ba,** tree, native of Columbia, said to possess tonic properties. **M. sebif′era,** tree, native of Guiana and Brazil; ocuba wax is obtained from the seeds.

**Myristica′tio hep′atis.** Nutmeg liver.

**Myris′ticene.** A stearopten of the oil of nutmeg.

**Myris′ticol.** $C_{10}H_{16}O$. A camphor-like substance obtained from nutmeg.

**Myris′til al′cohol.** Myristic alcohol.

**Myristin′.** Glyceride of myristic acid occuring in the oil of nutmeg.

**Myrme′cia.** Formica; growth on palms or soles producing sensation of formication.

**Myrmeci′asis** or **Myrmecias′mus.** Convulsio cerealis; formication.

**Myr′mex.** Formica.

**Myrobalanin′.** Fruit of Terminalia indica and T. nigra, myrobalanus; employed in diarrhœa and other intestinal troubles; dose, gr. xv–ʒj (1.0–4.0).

**Myrobal′anus.** (Ph. Br.) Dried Indian fruit of the plum kind, of different species of terminalia, ord. *Combretaceæ*. Of this there are several varieties, all of which have an unpleasant, bitterish, astringent taste, and strike an inky blackness with a solution of steel. They are said to possess laxative as well as astringent properties.

**Myrocar′pus fastigia′tus.** Cabriura preta; contains a balsam resembling balsam of Tolu.

**My′ronate.** Salt of myronic acid. **M. of potas′sium,** occurs in black mustard seeds.

**Myron′ic acid.** Acid which is present in Sinapis nigra combined with potassium.

**Myrosin′.** Nitrogenous ferment contained in black mustard seed.

**Myrosper′mum emargina′tum.** Myroxylon frutescens. **M. erythrox′ylon, frutes′cens, perei′ræ, peruif′erum,** or **of Sonsona′te,** see *Myroxylon peruiferum*. **M. toluif′erum,** see *Toluifera balsamum*.

**Myrosyne,** mir-os′in-e (sweet-scented juice). Principle closely allied to emulsin found in black mustard seeds; also in horseradish root.

**Myroxocarpin′.** See *Myroxylon peruiferum*.

**Myroxylin′.** Substance contained in wood and bark of Myroxylon peruiferum.

**Myrox′ylon.** A genus of trees, ord. *Leguminosæ*, the source of balsam of Peru and tolu. **M. perei′ræ,** tree of Central America and the Pacific coast, source of official balsam of Peru. **M. peruif′erum,** quin-

quino, cabureiba, affording the Peruvian balsam, balsamum peruvianum or peruvianum nigrum or peruanum or indicum, putzochill, myroxyli peruifera balsamum, cabureiciba, Indian, Mexican, or American balsam. Balsamum peruvianum (Ph. U. S. and Br.) is obtained from myroxylon or Toluifera pereiræ. It consists of benzoic acid, resin, and an essential oil. The odor is fragrant and aromatic; taste hot and bitter; soluble in alcohol, and miscible in water by the aid of mucilage. Stimulant and tonic, and considered to be expectorant; as such it has been employed in paralysis, chronic asthma, chronic bronchitis, rheumatism, gleet, leucorrhœa, etc., and externally for cleansing and stimulating foul, indolent ulcers. Dose, gtt. v–xxx (0.32–2.0). White balsam of Peru, natural balsam, balsamum album, styrax alba, balsamelæon, is obtained by incision from Myrospermum peruiferum. **M. of Sonsona′te,** in Central America—*Myrospermum pereiræ* of Dr. Royle—according to the Ph. Br., furnishes balsam of Peru. From it is obtained a resinous principle called *myroxocarpin.* **M. toluif′erum,** Toluiferum balsamum.

**Myroxyt′ic acid.** Acid prepared from cinnamein.

**Myr′rha.** (Ph. U. S. and Br.) Myrrh. A gum resin from Commiphora or Balsamodendron myrrha, a plant of Abyssinia or Arabia felix. It has a fragrant, peculiar odor and bitter, aromatic taste. It is in reddish-yellow, light, brittle, irregular tears; partially soluble in distilled water when aided by friction; sp. gr. 1.360; is stimulant, and has been used in cachectic affections, humoral asthma, chronic bronchitis, etc., and, in the form of tincture, as a mouth-wash. Dose, gr. j–v (0.065–0.32). The tincture, *tinctura myrrhæ,* is official in Ph. U. S.; dose, ♏v–xv (0.32–1.0). The drug also enters into the composition of the Official pilulæ aloes et myrrhæ and tinctura aloes et myrrhæ. **M. imperfec′ta,** bdellium.

**Myr′rhine.** Myrtus.

**Myr′rhis an′nua.** Athamanta cretensis. **M. ma′jor** or **odora′ta,** Chærophyllum odoratum.

**Myr′rhol.** Volatile oil, $C_{10}H_{14}O$, derived from myrrha.

**Myrrholin′.** A mixture of myrrh and fatty oil; employed as a means of administering creosote in tuberculosis of the lungs and larynx.

**Myrsinelæ′on.** Oil of myrtle.

**Myrtacan′tha.** Ruscus.

**Myrtid′anon** (*myrtus,* myrtle). Excrescence growing on the trunk of the myrtle and used as an astringent.

**Myrtifo′lia bel′gica.** Myrica gale.

**Myr′tiform** (*myrtus,* myrtle, *forma,* shape). Having the shape of a leaf of myrtle. **M. car′uncle,** caruncula myrtiformis. **M. fos′sa,** a depression in the superior maxillary bone just above the incisor teeth, the fossa incisiva. **M. mus′cle,** depressor alæ nasi or compressor naris.

**Myrtil′lus.** See *Vaccinium myrtillus.*

**Myr′tle.** Myrtus. **Bas′tard m.,** Myrica gale. **M. berry′,** Vaccinium myrtillus. **M. can′dle-berry,** see *Wax, myrtle.* **Dutch m.,** Myrica gale. **M. tree,** Myrtus communis. **M. wax,** see *Wax, myrtle.* **Wild m.,** ruscus.

**Myrtochei′la** or **Myrtochi′la.** Nymphæ.

**Myr′tol.** Oil obtained from leaves of Myrtus communis by distillation; recommended in catarrhal affections; dose, ♏v (0.32).

**Myr′ton.** Clitoris.

**Myrtophyl′lum** (*myrtus,* myrtle, *phyllon,* leaf). Genus of flagellate *Protozoa,* having shape of myrtle leaf. **M. hep′atis** is found in abscess of the liver.

**Myr′tus.** The myrtle. Ord. *Myrtaceæ.* Berries of this plant have been recommended in alvine and uterine fluxes and other disorders of relaxation and debility. Moderately astringent and somewhat aromatic. **M. a′cris,** see *Spiritus myrciæ.* **M. an′glica,** Myrica gale. **M. braban′tica,** Myrica gale. **M. caryophylla′ta,** tree which is considered to afford the *clove bark, cortex caryophyllatus* or *caryophyllata.* Bark is a warm aromatic, resembling clove, with an admixture of cinnamon; it may be used for the same purpose as cloves or cinnamon; see *Spiritus myrciæ.* **M. caryophyl′lus,** Eugenia caryophyllata. **M. cauliflo′ra,** Jaboticabeira; decoction of the bark is aromatic and astringent, and is employed in sore throat. **M. chekan′,** cheken, chekan, chequen; tree or shrub, native of Chile; leaves have been recommended in bronchitis. **M. commu′nis,** myrtle. **M. leucoden′dron,** Melaleuca cajuputi. **M. pimen′ta,** tree which bears the Jamaica pepper, pimentæ baccæ, pimento berries, pimento, allspice. The nearly ripe berries—*pimenta* (Ph. U. S.), pimento—have an aromatic odor, resembling a mixture of cinnamon, nutmeg, and cloves; the taste is pungent, but mixed like the odor. Like other peppers, this is stimulant and carminative. The oil—*oleum pimentæ*—possesses the virtues of the berries. The powdered fruit has been called *four spices.* Dose, gr. v–xx (0.32–1.3). Aqua pimentæ, pimento-water, is carminative; dose, ʒj–ij (32.0–64.0).

**Mysiolo′gia** (*mys,* muscle, *logos,* a discourse). Myology.

**Mysi′tis.** Myositis.

**Mysopho′bia** (*mysos,* uncleanness, *phobos,* fear). Morbid fear of contamination or infection; abnormal fastidiousness.

**Mys′tax.** Hair growing on each side of the upper lip in men, moustache; also the upper lip.

**My′tacism** (*mytakismos,* fondness for the letter μ). Inordinate employment of the letter *m* in speaking, it being frequently substituted for other letters.

**Mytilotoxin′** (*mytilos,* mussel). $C_6H_{15}NO_2$. Ptomain in poisonous mussels, violent poison resembling curare.

**Mytilotox′ism.** Poisoning by mussels.

**Myt′ilus ed′ulis.** Common mussel; bivalve, the flesh of which, when at all in a state of decomposition, is highly poisonous; when fresh it is an agreeable but not very digestible article of diet, producing in some persons all the symptoms of urticaria. One affected with such phenomena is said, occasionally, to be *musselled.*

**Myu′rus** or **Myu′rous** (*mus,* mouse, *oura,* tail). The pulse is so called when it sinks progressively and becomes smaller and smaller like a mouse's tail. *Pulsus myurus reciprocus,* a pulse which, after having become gradually weaker, resumes by degrees its former character.

**Myx′a.** Mucus; sebestena.

**Myxadeni′tis.** Inflammation of a mucous gland. **M. fibro′sa,** myxadenitis in which the connective tissue is in a hyperplastic condition.

**Myxadeno′ma.** Myxoadenoma.

**Myxæ′mia** (*myxa,* mucus, *haima,* blood). Condition supposed to underlie mucoid infiltration.

**Myxangeii′tis.** Inflamed condition of the outlets of the mucous glands; that is, of the mucous canals.

**Myxasthæ′nia.** Atrophy of the mucous or goblet-celled epithelium in the mucous membrane of the digestive tract, with resulting decreased secretion of mucus and dryness of the mouth.

**Myxeurys′ma.** Lymphangeioma cavernosum.

**Myxio′sis** (*myxa,* mucus). Gonorrhœa.

**Myxoadeno′ma** (*myxa,* mucus). Glandular tumor in the cystic spaces of which gelatinous material has been generated.

**Myxochondro′ma** (*myxa,* mucus, *chondros,* cartilage). Myxoma containing honeycomb-like septa, such as are met with in chondroma.

**Myxochondrosarco′ma.** Variety of myxosarcoma in which cartilage-cells exist.

**Myxocol′ica** (*myxa,* mucus, *colica,* colic). Mucous colic.

**Myxocylindro′ma.** Myxosarcoma.

**Myxœde′ma** (*myxa,* mucus, *oidema,* swelling). Disease characterized by hyperplasia of the connective tissue and mucoid infiltration of the cutis and surrounding organs. The thyroid gland also becomes atrophied, and it is upon the absence of the thyroid secretion that the condition depends. Treatment consists in the administration of thyroid extract or some other preparation of this gland. **Congen′ital m.** or **M. of child′hood,** sporadic cretinism.

**Myxofibro′ma.** Myxomatous fibroma, fibromyxoma; fibrous growth containing mucus, the result of softening; sometimes attains a very large size.

**Myxoglio′ma.** See *Gliomyxoma.*

**Myx′oid** (*myxa,* mucus, *eidos,* resemblance). Muciform; mucous. **M. œde′ma,** myxoidœdema.

**Myxoidœde′ma.** Epidemic disease called also American grippe, and having the general characters of influenza, with symptoms of great prostration and debility, elevated temperature, dyspnœa, and other abnormal respiratory phenomena, and infiltration of the submucous tissues.

**Myxo-ino′ma.** A myxomatous inoma.

**Myxolipo′ma.** Lipomatous myxoma.

**Myxo′ma** (pl. myxomata) (*myxa,* mucus). Myxomatous, mucous, or mucoid tumor; elastic, soft tumor, composed of loose tissue with a semifluid matrix, resembling the Whartonian jelly of the umbilical cord or the vitreous humor. One variety is benign, its tissue resembling embryonic tissue; another variety is recurrent after removal, and is allied to sarcoma, or sometimes combined with it, as in myxosarcoma. Originally described by J. Müller as *collonema.* Types are to be found in gelatinoid polypus of the nose, ear, etc., cystic neuromata, etc. **Cartilag′inous m.,** m. containing cartilage-like cells. **Cys′tic m.,** m. containing fluid material, giving it the appearance of a cyst. **Diffuse′ m. of the placen′ta,** vesicular mole. **Enchondro′matous m.,** m. with a deposit of cartilage in the stroma of the tumor. **Erec′tile m.,** m. rich in vessels. **Lipo′matous m.,** m. in which a large quantity of fat is contained. **Vas′cular m.,** erectile myxoma, m. with increased development of vessels, like an angioma.

**Myxomato′des.** Resembling myxoma; term applied to mucocarneous sarcomata. See *Myxosaccoma.*

**Myxo′matous degenera′tion of the placen′ta.** Mole. **M. sarco′ma,** myxosarcoma.

**Myxomyce′tes** (*myxa,* mucus, *mykes,* fungus). Slime fungi; occurring as brownish or yellowish masses of protoplasm.

**Myxomy′cetous.** Belonging or relating to the myxomycetes.

**Myxoneuro′ma.** Interstitial tissue between the nerve-filaments of neuroma, resembling mucous tissue.

**Myxopapillo′ma.** A mixed papilloma and myxoma.

**Myx′opod** (*myxa,* mucus, *pous,* foot). A protozoon possessing pseudopodia, and not flagella; see *Mastigopod.*

**Myxorrhe′us** (*myxa,* mucus, *rheo,* to flow). One who is subject to mucous discharge. Applied to an infant that discharges a considerable quantity of mucus and saliva.

**Myxosarco′ma** (*myxa,* mucus, *sarx,* flesh). Myxomatous or mucocarneous sarcoma; mucous transformation of round-celled sarcoma, malignant and of large volume, usually attacking the omentum, skin, etc.

**Myx′ospores.** Spores of certain fungi contained in a gelatinous mass.

**Myze′sis** (*myzeo,* to suck). Sucking.

# N.

**N.** Symbol of nitrogen.

**N. A.** Abbreviation of numerical aperture.

**Na.** Symbol of natrium or sodium.

**Nab′alus al′bus.** White lettuce, lion's foot, rattlesnake's master, rattlesnake root, gall of the earth. Indigenous plant, ord. *Compositæ*, which, with several other species of the genus, is reputed to possess the power of curing the bites of serpents. The root has been used in dysentery. A poultice has been employed in ulcers, gangrenous sores, etc. **N. fra′seri** has similar properties.

**Na′bot.** Saccharum candidum.

**Nabo′thian cysts.** Mucous cysts of the N. glands, analogous to cysts of Cowper's glands in the male. **N. fol′licles** or **glands,** small mucous crypts or follicles situated in the interstices of the duplicatures of the lining membrane of the cervix uteri. Naboth, from noticing them in a morbid condition, mistook them for ova, and hence they received the name *ovula Nabothi.* **N. menorrha′gia,** hydrorrhœa gravidarum, serous vaginal discharge occurring in pregnant women, first observed by Naboth. **N. ov′ules,** N. follicles.

**Nac′ra.** Nakra, nasa. Term for influenza in India.

**Na′creous.** Margaritaceous, pearly

**Nac′ta.** Mammary abscess.

**Nae′gele's obliq′uity.** Lateral deviation of the head of the fœtus at the superior strait. **N.'s pel′vis,** oblique distortion of the pelvis described by Naegele, which depends on arrest of development, fusion of the sacrum with the ilium, or ankylosis after inflammation of the sacroiliac joint.

**Næ′void** (*nævus*+*eidos*, resemblance). Resembling nævus. **N. elephanti′asis,** a form of elephantiasis in which the lymphatic vessels are dilated; also elephantiasis with the usual characteristics of that disease, and in addition the development of spongy and erectile tissue. **N. lu′pus,** angioma serpiginosum.

**Næ′vose.** Relating to a nævus; nævoid.

**Næ′vus.** Mother's mark or spot, strawberry mark, port-wine stain. Nævi (pl. of nævus) are marks of various kinds on the skin of children when born, which sometimes have been attributed to the influence of the maternal imagination on the fœtus in utero. They are of various appearances, some much better supplied with blood than others. Some are merely superficial or stain-like spots, pigmentary nævi; others are prominent, vascular nævi, and often have long, irregular hairs growing from them. Others are rounded, fatty growths covered with normal skin, lipomatous nævi. These have been usually called moles, nævi pilares, spili, spilomata, epichroses, etc. See *Telangiectasia.* **N. angiomato′des,** angioelephantiasis. **N. araneo′sus** or **ara′neus,** nævus of a vascular character resembling in shape a spider. **Cap′illary n.,** n. formed of superficial cutaneous capillaries; port-wine mark is a variety of this form. **N. caverno′sus,** n. with new vascular growth, and both erectile and compressible. **N. cuticula′ris,** capillary nævus. **N. fibromato′sus,** n. in which pieces of fibrous tissue exist. **N. flam′meus,** angioma. **Lin′ear n.,** a unilateral papillary eruption with elevated streaks or bands, associated with pruritus. **N. lipomato′des,** soft and fatty form of nævus. **N. lymphat′icus,** lymphangioma of the skin. **N. mater′nus,** congenital nævus. **N. molluscifor′mis,** n. lipomatodes. **N. nervo′sus,** linear nævus. **N. pigmento′sus,** nævus; pigmentary mole or birthmark. **N. pilo′sus,** pigmentation on the skin surmounted by growth of dark-colored hairs. **N. papilla′ris nervo′sus,** linear nævus. **N. prom′inens,** n. verrucosus. **N. sanguin′eus,** n. vascularis. **N. sigil′lum,** nævus. **N. spi′lus,** see *Nævus.* **N. uni′us lat′eris,** n. of one side, a form of linear nævus. **N. vascula′ris** or **vasculo′sus,** nævus. **Ve′nous n.,** consists of veins and sinuses adhering to the connective tissue. **N. verruco′sus,** pigmented mole with a warty appearance. **N. vino′sus,** port-wine stain; sometimes called strawberry mark or mulberry mark; a reddish, slightly elevated patch.

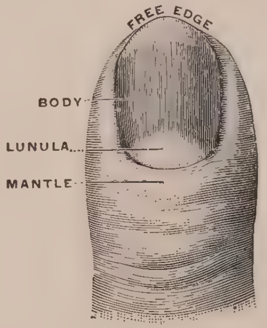
**Naf′da.** Naphtha.

**Naf′ta.** Naphtha.

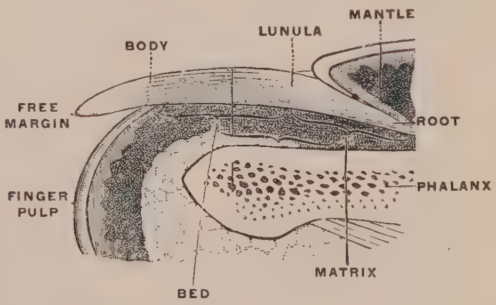
**Naf′talan.** A German proprietary ointment, used in rheumatism.

**Naga′na.** Tsetse-fly disease.

**Nail.** Whitish, transparent substance, similar to horn, covering the dorsal extremity of the fingers. Three portions are distinguished in it: the extremity, which is free, at the end of the finger; the body or middle portion, adherent by its inner surface; and the root, onychorrhiza, rhizonychia, radix or matrix unguis, intimum unguis. The last presents two distinct parts: the one, terminated by a thin, serrated edge, is buried in a duplicature of the skin, vallecula unguis, which acts the part of a *nail-follicle;* the other, called lunula or semilunula or selene or arcus or exortus or anatole or albedo unguium, is whitish and of a semilunar shape, and is situated above the part where the epidermis terminates. The surface covered by the nail is called the *nail-bed.* The nails are composed of a horny tissue, of the same nature as that forming the hoofs, horns, and scales of different animals. When the nail has been torn off the papillæ of the skin become covered by a soft, whitish lamina, whose consistence gradually augments. New laminæ are then formed underneath, and give the nail the thickness it ought to possess. The cor-



Thumb-nail. (Gerrish.)



Nail in longitudinal section. (Gerrish.)

neous substance being thus constantly produced at the extremity of each of these laminæ, the whole of the nail is pushed forward, and it would grow indefinitely were it not cut or worn by friction. The nails protect and support the extremities of the fingers against the impression of hard bodies; they are also useful in laying hold of small bodies and dividing those that have but little consistence. **N. bed,** see *Nail*. **N.-biting,** the habit of nibbling at the nails so as to keep them worn down to the quick; a form of phaneromania. **N. cul′ture,** a culture in which the bacterial colony assumes the shape of a nail. **N. fold,** fold of connective tissue embracing the nail below and at the sides. **N. fol′licle,** see *Nail*. **Hang-n.,** see *Hangnail*. **Hippocrat′ic n.,** the curved nail seen in connection with the fusiform swelling of the Hippocratic finger. **In′growing** or **in′grown n.,** onyxis. **N. ma′trix,** n. bed. **Reed′y n.,** a nail that is grooved and furrowed. **N.-spring,** hangnail. **Stri′ated n.,** n. marked with longitudinal furrows.

**Nail′ers′ consump′tion.** Variety of siderosis.

**Nail′wort.** Draba incana.

**Na′ja tripu′dians.** Cobra di capello.

**Na′ked-eye appear′ances,** etc. Lesions visible to the unaided eye; gross appearances.

**Nak′ra.** Nacra.

**Namangeii′tis** (*nama*, a stream, *angeion*, vessel). Lymphangitis.

**Nang′nail.** Hangnail.

**Nan′ism** (*nanos*, dwarf). Dwarfishness.

**Nanna′ri.** Hemidesmus indicus.

**Nannyber′ry.** Viburnum lentago.

**Nanoceph′alus.** A monster of which the whole head or certain of its parts are too small, while the trunk and extremities are normal.

**Nanoceph′aly** (*nanos*, dwarf, *kephale*, head). See *Nanocephalus*.

**Nanocor′mia.** See *Nanocormus*.

**Nanocor′mus** (*nanos*, dwarf, *kormos*, trunk). A monster whose trunk is too small, while the head possesses its normal size.

**Nan′oid** (*nanos*, dwarf, *eidos*, shape). Dwarfish.

**Nanome′lia.** See *Nanomelus*.

**Nanom′elus** (*nanos*, dwarf, *melos*, limb). A monster in which some part of an extremity is too small and the whole limb too short.

**Nanoph′yes** (*nanos*, dwarf, *phyo*, to grow). Dwarfish.

**Nanoso′mia** (*nanos*, dwarf, *soma*, body). Dwarfishness. State in which the entire body, with all its parts, is smaller than common.

**Nanoso′mus.** Nanus, dwarf.

**Nan′ous.** Dwarfish; undersized.

**Na′nus** (*nanos*, a dwarf). Dwarf; one much below the usual stature. Term applicable to all organized beings, from man to the vegetable. Trees have their dwarfs, as has the human species. See *Pigmy*.

**Napaconitine′.** Aconitine.

**Nape of the neck.** Nucha.

**Napelli′na** or **Napelline′.** White alkaloid from root of Aconitum napellus; used subcutaneously in neuralgia.

**Napel′lus ve′rus.** Aconitum napellus.

**Naph′a.** Orange flowers.

**Naphthali′num.** (Ph. U. S.) Coal-tar camphor, occurring in crystalline, colorless lamellæ; dose, gr. j–x (0.065–0.65). See *Naphthalin*.

**Naph′tha.** From a Chaldaic and Syriac word signifying *bitumen*. A product of distillation from petroleum; a limpid liquid, of a yellowish-white color, a smell slightly resembling that of oil of turpentine, and lighter than water; it resembles petroleum in its properties, and has been chiefly used as an external application, although, occasionally, as an anthelmintic, and in inhalation in phthisis pulmonalis. **N. ace′ti,** see *Æther sulphuricus*. **Coal-tar n.,** benzene. **N. pe′træ, N. petro′lei,** petroleum. **N. sulphu′rica,** æther sulphuricus. **N. vegetab′ilis,** æther aceticus. **N. vitrio′li,** æther sulphuricus. **Wood n.,** methylic alcohol.

**Naph′thalan.** Black, greasy mass resulting from distillation of Armenian naphtha. Used as base for ointment made from this naphtha and soap. Analgesic and microbicide in cutaneous affections, burns, etc.

**Naph′thalene.** Naphthalin.

**Naph′thalin.** $C_{16}H_8$. Coal-tar camphor, official in Ph. U. S. as *naphthalinum*. When coal-tar is subjected to distillation, naphthalin passes over after coal naphtha. It is also obtained by action of heat as phenylbutylene. White, shining, concrete, crystalline substance, fusible at 176° and boiling at 423°. Soluble in alcohol, ether, naphtha, and the oils, but insoluble in water. It is antiseptic and disinfectant, anthelmintic, and has been used as an excitant expectorant in the dose of gr. j–x (0.065–0.65), in emulsion or syrup. When made into an ointment it is used in psoriasis, lepra vulgaris, etc.

**Naph′thalol.** $\beta$-naphthol-salicylic ether or betol. Given internally as an antiseptic. See *Betol*.

**Naph′thol** or **Naph′tol.** (Ph. U. S. and Br.) $C_{10}H_7OH$. Iso-naphthol; beta-naphthol. It has antiseptic properties, and is used locally in cutaneous affections, in ointment and alcoholic solution; in chronic affections of the middle ear attended with suppuration, etc. Internally, in doses of gr. j–v (0.065–0.32), it is used in intestinal antisepsis, in chronic diarrhœa, etc. It is bactericidal, and in solution of 1 : 1000 it is employed for preserving pathological specimens, etc. **Al′pha-n.** is isomeric with beta-naphthol; is decidedly antiseptic, and fatal to bacilli of typhoid fever and tuberculosis; also used as a test for sugar in urine. **N. antipyrin′,** a naphthol compound of antipyrin. **N. ar′istol,** diiodo-beta-naphthol. **Be′ta-n.,** naphthol. **N. bis′muth,** orphol, bismuth naphtholate. **N. cam′phor** or **cam′phorated n.,** used antiseptically for furuncles, diphtheritic sore throat, pulmonary tuberculosis—administered by injection into the parenchyma of the lung—tuberculous abscesses, etc. **N. car′bonate,** $CO(OC_{10}H_7)_2$, in colorless scales; suggested as a substitute for beta-naphthol, which is more irritating when used as an antiseptic. **N. carbon′ic acid,** carbonaphtholic acid. **N. carboxyl′ic acid,** $C_{10}H_6(OH)CO_2H$, a white, crystalline powder, antiseptic and antiparasitic; used in ointment or gauze. It is produced by acting upon sodium-$x$ naphthol with carbonic dioxide gas. **N. disul′phonate,** salt of dibasic *n. disulphonic acid*, derived from naphthol. **N. disul′phonate of alu′minum,** alumnol. **N. monosul′phonate of cal′cium,** asaprol. **N.-pyrin′,** n. antipyrin. **N. resorcin′,** an antiseptic derivative of n. and resorcin. **N. sal′ol,** betol. **N. so′dium,** sodium naphtholate, microcidin. **N. sul′phonate,** salt of monobasic *n. sulphonic acid*, derived from naphthol.

**Naph′tholate.** A compound of naphthol in which the hydrogen atom in the hydroxyl is replaced by a base.

**Naphthopyrin′.** A beta-naphthol compound of antipyrin.

**Naphthoquin′one.** $C_{10}H_6O_2$. Crystalline substance derived from oxidation of naphthalin.

**Naphthosal′ol.** Betol. Salol, in which phenol is replaced by naphthol.

**Naphthox′ol.** A combination of hydrogen peroxide, alcohol, and naphthol.

**Naph′thyl.** $C_{10}H_7$. Radical of naphthalene. **N. al′cohol,** naphthol. **N. ben′zoate,** benzonaphthol. **N. dii′odide,** n. aristol. **N. lac′tate,** lactol. **N. phe′nol,** naphthol. **N. sal′icylate,** betol, alphol.

**Naph′tol.** (Ph. U. S., 1890) Naphthol.

**Naph′tyl.** Naphthyl.

**Na′piform** (*napus*, turnip, *forma*, shape). Epithet for a form of scirrhous tumor, carcinoma reticulare, whose cut surface presents concentric lines resembling those seen in the interior of a turnip. Also descriptive of the shape of the colonies in certain test-tube bacterial cultures.

**Na′pium.** Lapsana; sinapis.

**Na′ples fe′ver.** Malta fever.

**Napthalin′.** Naphthalin.

**Nap′thalol.** Betol.

**Napthasal′ol.** Betol.

**Na′pus** (*napu*, mustard). Sinapis. **N. leucosina′pis**, Sinapis alba. **N. sylves′tris**, Brassica napus.

**Na′py.** Sinapis.

**Na′ra.** Dracunculus.

**Na′ram.** Dracunculus.

**Nar′ca** (*narke*, stupor). Narcosis.

**Narcaph′thon.** Bark of an aromatic tree formerly brought from India; by some supposed to be that of the tree affording the olibanum; used in fumigation in diseases of the lungs. See *Lacaphthon* and *Thymiama*.

**Nar′ce** (*narke*, stupor). Narcosis.

**Narceïne′.** $C_{23}H_{29}NO_9$. One of the alkaloids of opium, which is in colorless, silky needles, and of bitterish, metallic taste, slightly soluble in water, insoluble in ether, and very soluble in alcohol. Said to exceed all the opium alkaloids in soporific power, without producing the disagreeable secondary effects. Dose, gr. $\frac{1}{6}$–$\frac{3}{4}$ (0.011–0.048). **N. hydrochlo′rate**, a soluble salt, hypnotic in dose of gr. $\frac{1}{6}$–$\frac{3}{4}$ (0.011–0.048). **N. mec′onate**, soluble yellow crystals, possessing same properties as the preceding; dose, gr. $\frac{1}{8}$–$\frac{1}{2}$ (0.008–0.032).

**Narce′ma.** Narcosis.

**Narce′sis.** Narcosis.

**Narcissine′.** Alkaloid discovered by Girard in the bulb of the daffodil.

**Narcis′sus jonquil′la.** Jonquil; its root possesses the same medicinal properties as that of N. pseudonarcissus. **N. poet′icus**, bulb is reputed to be emetic and cathartic. **N. pseudonarcis′sus**, daffodil, bellflower, butter and eggs, lent rose; ord. *Amaryllidaceæ;* root is emetic and cathartic, in the dose of ʒj (4.0); flowers are antispasmodic.

**Narcohyp′nia.** Numbness experienced on awaking from sleep.

**Nar′colepsy.** Tendency in some affections to fall frequently into deep sleep, but only of short duration.

**Narco′ma.** Stupor produced by narcotics.

**Narcoma′nia.** Addiction to narcotic drugs.

**Narco′matous.** Relating to narcoma.

**Narcopep′sis.** Slow digestion.

**Nar′cose.** In a state of stupor.

**Narco′sis** (*narkeo*, to benumb). Torpor, stupor, stupefaction. Aggregate effects produced by narcotic substances. At times narcotism is confined to a state of more or less profound stupor, and constitutes, in certain cases, a useful remedial condition; at others it is a true poisoning, characterized by vertigo, nausea, delirium, convulsive motions, etc. Emetics in strong doses and not much diluted with water, purgatives, and clysters are the first means to be used in this condition. Stupor may afterward be combated by the use of excitant and stimulating drinks. The production of narcosis or the effect of narcotics has been called *narcotization.* **N. folliculo′rum**, state of the scalp which Mr. Erasmus Wilson conceives to be dependent upon torpid action of the hair follicles, and in which the scalp and hair are found covered with a yellowish, dirty-looking powder, composed of an admixture of granular particles and furfuraceous scales.

**Narcospas′mus.** Stupor combined with spasm.

**Narcot′ic.** A substance having property of stupefying; as opium, stramonium, or hyoscyamus. In small doses, as a general rule, narcotics stimulate; in large doses they act as sedatives. The following is a list of the chief narcotics: aconitum, ætherea, belladonna, cannabis, conium, digitalis, humulus, hyoscyamus, lactucarium, opium and morphine, stramonii folia, stramonii semina. See *Poison*.

**Narcot′ico-ac′rid.** See *Poison*.

**Narcotine′.** $C_{22}H_{23}NO_7$. Solid, white, insipid substance, crystallizable; fusible like the fats; soluble in boiling alcohol and ether, and scarcely soluble in water; antiperiodic and tonic, but not (or very feebly) narcotic; its salts, which are very bitter, have been used successfully in India in intermittents; dose, gr. j–iij (0.065–0.2).

**Nar′cotism.** Narcosis.

**Narcotiza′tion.** See *Narcosis*.

**Nar′cotized.** Affected with stupor, as from the use of a narcotic.

**Nard.** Spikenard. **Cel′tic n.**, Valeriana celtica. **In′dia n.**, Nardus indica. **True n.**, Nardus indica. **Wild n.**, Asarum europæum.

**Nardos′tachys jataman′si** or **patrin′ia.** Nardus indica.

**Nar′dum gal′licum.** Valeriana celtica.

**Nar′dus america′na.** Aralia nudicaulis. **N. cel′tica**, Valeriana celtica. **N. c. al′tera**, Arnica montana. **N. in′dica**, India nard, spikenard; root of this plant is one of the ingredients in the mithridate and theriaca; moderately warm and pungent, and has a flavor by no means disagreeable; used by the Orientals as a spice. The ointment was formerly used, called *unguentum nardinum;* it was prepared of nard, malabathrum leaves, oil of worms, costus, amomum, myrrh, etc., and was used as a detergent. **N. monta′na**, asarum, **N. rus′tica**, asarum.

**Naregam′ia.** Root of N. alata; has emetic, expectorant, and cholagogue virtues.

**Naregamin′.** Active principle from the root of Naregamia alata, expectorant and emetic.

**Na′res** (pl. of naris). Nostrils; external openings of the nasal fossæ. **Ante′rior n.**, two elliptical apertures at the under surface of the nose, and separated from each other by the cartilaginous septum or the columna nasi. These apertures are continually open, and give passage to the air and to the mucous fluids secreted in the nasal fossæ. **N. coali′tæ**, condition characterized by the walls of the nostrils adhering to each other. **N. exter′næ**, the anterior nares; anterior apertures of the nasal cavities. **N. inter′næ**, nasal fossæ. **Poste′rior n.**, the posterior apertures of the nasal cavities, which establish a communication between those cavities and the pharynx; they are bounded above by the body of the sphenoid bone; below, by the palate bone and the base of the velum pendulum; and on the outside by the internal ala of the pterygoid process. They are separated from each other by a septum of which the vomer is the bony part.

**Na′rial.** Nasal.

**Nar′iform.** Resembling a nostril in shape.

**Narifuso′ria** (*nares*, nostrils, *fundo*, to pour). Medicines which are dropped or put into the nostrils.

**Naringin′.** $C_{23}H_{26}O_{12}$. Glucoside from Citrus decumana.

**Na′ris.** Nostril; nose.

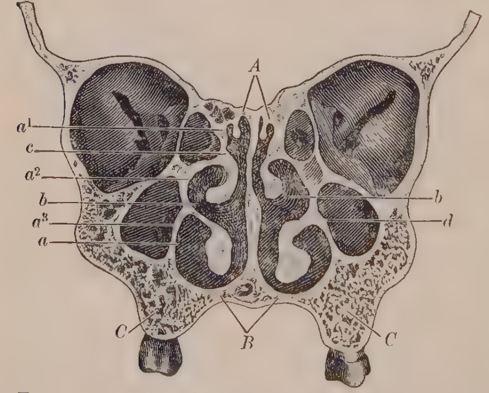
**Nar′ium ad′itus** (entrance of the nostrils). Nares. **N. sic′citas**, mycteroxerotes.

**Nar′row chest.** See *Lordosis*.

**Nar′ry.** Mongolian term for alcoholic gastritis.

**Na′sa.** Nacra; nata. **N. fe′ver**, a form of remittent fever of the East Indies, with headache and pain in the spine, and a non-sensitive, soft tumefaction on the nasal septum; treatment of the latter generally relieves the symptoms.

**Na′sal** (*nasus*, nose). That which relates to the nose. **N. an′gle** is formed by the lower ends of the nasal bones. **N. arch**, transverse venous trunk uniting the frontal veins of opposite sides at the root of the nose. **N. ar′tery**, largest of the two branches in which the ophthalmic artery terminates. Issues from the orbit, above the tendon of the orbicularis palpebrarum, passes above the side of the root of the nose, and anastomoses with the terminal branch of the facial. The facial artery gives off the artery of the septum. The internal maxillary gives off the posterior nasal artery. The anterior nasal artery is a small branch from the ethmoidal to the upper meatus. Haller gave the name *nasal* to the sphenopalatine. He also called the dorsales nasi, furnished by the external maxillary, *nasales laterales*. **N. bones** are situated beneath the nasal notch of the os frontis, and occupy the space between the nasal or angular processes of the superior maxillary bone. Their shape is nearly quadrilateral. They have an external or cutaneous surface, an internal or nasal, and four margins. Each is articulated with its fellow, with the os frontis, ethmoid, and superior maxillary bones. They ossify from a single point. **N. cap′sule,** cartilaginous embryonic structure which forms the nasal fossæ. **N. car′tilage,** cartilage formed of three portions, which unite at the dorsum nasi, and are distinguished into the *cartilage of the septum* (*cartilago septi* or *quadrangularis, septum narium cartilagineum, septal cartilage*) and the *lateral cartilages.* The lateral cartilages are divided into *upper lateral* (*cartilagines superiores laterales* or *triangulares*), situated immediately below the free margin of the nasal bones; and the *lower lateral* or *alar* (*cartilagines inferiores* or *alares* or *pinnales* or *minores inferiores*), which are chiefly characterized by the curve they form. Several loose nodules or plates exist in the posterior border of the alæ, *cartilagines quadratæ, c. alarum minores* or *posteriores* or *minores posteriores;* and some small, flat, irregularly shaped bodies, from two to five in number, which are seen on the upper margin of the lateral cartilage in the neighborhood of the angle, are called *cartilagines epactiles, sesamoideæ,* or *accessoriæ.* The nasal cartilage is continuous, above, with the ossa nasi, and, inferiorly, with the membranous fibrocartilages which form the supple and movable part of the nostrils. **N. catarrh′,** coryza, rhinitis. **N. cav′ity,** n. fossæ. **N. crest,** crista nasalis. **N. douche,** apparatus for cleansing the nasal fossæ with water or for applying medicated liquids. **N. duct,** lacrymal duct. **N. em′inence,** mesophryon. **N. fos′sæ,** two large, anfractuous cavities, situated between the orbits below the cranium, and lined by the pituitary or Schneiderian membrane. These cavities have no communication with each other, but the various sinuses, in the neighboring bones—the ethmoidal, sphenoidal, superior maxillary, etc.—all communicate with them. The general cavity of each nostril is divided by the spongy bones into three *meatuses* or *passages,* which run from before backward: 1. The *meatus narium superior,* placed at the upper, inner, and back part of the superior spongy bone. 2. The *meatus medius,* situated between the superior and inferior spongy bones. 3. The *meatus inferior,* situated between the inferior spongy bone and the bottom of the nose. The Schneiderian membrane receives the first pair of nerves and various branches from the fifth pair. Arteries are furnished by the branches of the internal maxillary, known under the names of sphenopalatine, infraorbital, superior alveolar, palatine, pterygopalatine; by the supraorbital and ethmoidal branches of the ophthalmic artery; by the internal carotid, superior labial, and dorsales nasi. The nasal fossæ are the seat of smell; they aid also in respiration and phonation. **N. fur′row,** groove which divides the embryonic external and internal processes. **N. gan′glion,** sphenopalatine ganglion. **N. gleet,** ozæna in the horse. **N. in′dex,** the ratio of the greatest breadth of one anterior naris to one hundred times the distance from the nasal to the subnasal point. **N. line,** Jadelot's abdominal furrow, a line running from the ala nasi around the angle of the mouth, indicative of abdominal disease. **N. mea′tus,** see *Nasal fossæ.* **N. mu′cus,** mucus secreted by the Schneiderian membrane. **N. nerve,** one of the three branches of the ophthalmic nerve of Willis. It enters the orbit by the sphenoidal fissure, passes along the inner wall of that cavity, and divides opposite the internal and anterior orbital foramen into two branches: 1. The *internal* and *posterior,* which passes into the foramen orbitale internum anterius, enters the cranium near the dura mater, and passes into the nasal fossæ through an aperture at the side of the crista galli. Afterward it divides into several filaments: one of them—the *nasolobar* of Chaussier—is very small, and descends on the posterior surface of the os nasi and ramifies on the integuments of the ala nasi; a second terminates near the septum; others descend along the outer paries of the nasal fossæ. 2. The other, *external* and *anterior,* is called the *external nasal nerve,* and is distributed to the outside of the orbit. Before dividing, the nasal nerve communicates with the ophthalmic ganglion and gives off two or three ciliary nerves. Sommering has given the name *posterior nasal nerves* to the nerves which arise from the internal part of the sphenopalatine ganglion. **N. notch,** semicircular notch situated between the nasal prominences of the frontal bone, and articulated with the nasal bones and the nasal processes of the superior maxillary bones. **N. pas′sages,** meatus narium. **N. pits,** primary embryonic nasal fossæ which appear as depressions on the cerebrovesical surface. **N. point,** nasion. **Infe′rior n. p.,** subnasal point, inferior end of the nasomaxillary suture. **Supe′rior n. p.,** point at which the nasomaxillary and nasofrontal sutures unite. **N. pol′ypi,** see *Polypus.* **N. pro′cess,** maxillary process of the palate-bone; lacrymal process; nasal spine. **N. prom′inence,** prominence situated on the median line at the anterior surface of the os frontis, between the two superciliary arches. **N. re′gion,** regio nasalis, region of the nose. **N. sep′tum,** septum narium. **N. spines,** these are three in number: 1. *Superior nasal spine* of the os frontis, occupying the middle of its nasal notch, and articulated before with the nasal bones, behind with the ethmoid. 2. *Inferior* and *anterior nasal spine,* situated at the inferior part of the anterior opening of the nasal fossæ; it is formed by the two superior maxillary bones. 3. *Inferior* and *posterior nasal spine,* process formed on the mesial line by the two palate-bones at the posterior part of the palatine arch. **N. sur′face,** portion of the superior maxillary bone which forms the external wall of the nasal fossæ. **N. veins,** these veins collect blood from the side and dorsum of nose and conduct it to the angular vein.



Transverse section of the head, showing the relation of the structures within the nasal fossæ. (Zuckerkandl.) *A*, roof of nose; *B*, floor of nose; *C*, superior maxilla; $a^1$, superior meatus; $a^2$, middle meatus; $a^3$, inferior meatus; *a*, inferior turbinate; *b*, middle turbinate; *c*, olfactory region; *d*, respiratory region.

**Nasa′le** (*nasus,* nose). Errhine; also nasal bone.

**Nasa′lis.** Compressor naris. **N. la′bii superio′ris,** small muscular slip running up from the middle of the orbicularis and the lip to the tip of the nose; it lies exactly in the furrow, and is occasionally a levator of the upper lip or a depressor of the tip of the nose. **N. or′bitæ,** nasal duct.

**Nasa′rium.** Mucus secreted from the nose.

**Na′sas.** Nata.

**Nasa′tus** (long-nosed, the size of the nose having been supposed to be an index of that of the male organ). Having a long penis.

**Nas′cent.** Being born. **N. state,** in chemistry, the state of gases at the instant they are liberated from a combination.

**Nas′da.** Nata.

**Nase′berry.** Achras sapota.

**Na′sen.** Relating to the nose or nasal aspect.

**Nasilabia′lis.** Levator labii superioris alæque nasi.

**Nasio-in′icus.** Relating to both nasion and inion.

**Na′sion.** In craniometry, median point of nasofrontal suture.

**Nasi′tis.** Inflammation of the nose. **N. posti′ca,** angina nasalis.

**Nas′myth's mem′brane.** Cuticula dentis.

**Na′so.** One having a large nose.

**Naso-** (*nasus*, nose). In composition, the nose.

**Nasoalve′olar.** Relating to the nasal and alveolar points.

**Nasoan′tral.** Relating to the cavity of the nose and the antrum of Highmore.

**Nasoantri′tis.** Rhinitis with extension of the inflammation to the antrum of Highmore.

**Nasoau′ral.** Relating to the nose and ear.

**Nasobas′ilar.** Relating to nasion or nasal point and basion.

**Nasobregmat′ic.** Relating to nasion and bregma.

**Nasobuc′cal.** Relating to nose and cheek.

**Nasobuccopharyn′geal.** Relating to nose, cheek, and pharynx.

**Nasocilia′ris.** Nasal nerve.

**Nasoethmoid′al.** Relating to nasal and ethmoidal regions of skull.

**Nasofron′tal.** Relating to nasal and frontal bones.

**Nasola′bial.** Relating to the nose and lip. **N. line,** line or furrow separating the lip from the cheek, commencing at the ala nasi.

**Nasolabia′lis.** Muscular fasciculus which arises from the anterior extremity of the septum nasi and terminates in the orbicularis oris.

**Nasolac′rymal.** Relating to the nose and the tear glands and ducts. **N. duct,** duct which conveys the tears from the eye to the nose.

**Nasol′ogy.** An incorrect term for rhinology.

**Nasoma′lar.** Pertaining to nose and malar bone, as the nasomalar angle.

**Na′somanom′eter.** A manometer with tubes arranged for introducing liquid into the nostril to determine its permeability

**Nasomax′illary.** Relating to nasal and superior maxillary bones, as the nasomaxillary suture.

**Naso-occip′ital.** Relating to nose and occiput.

**Naso-oc′ular.** Relating to nose and eye.

**Nasopal′atine.** Belonging to the nose and velum palati. **N. ar′tery,** branch given off by sphenopalatine artery and going to septum of nose. **N. gan′glion** is situated in the foramen palatinum anterius. Its greater extremity receives the two nasopalatine branches, while the smaller gives off two or three filaments, which reach the palatine vault, where they ramify on the membrane of the same name, anastomosing with filaments of the great palatine nerve. **N. groove,** sulcus nasopalatinus on the vomer, which conducts the nasopalatine nerve. **N. nerve,** nerve of Cotunnius, is furnished by the sphenopalatine, which proceeds from the ganglion of Meckel, traverses the vault of the nasal fossæ, and proceeds upon the septum between the two layers of the pituitary membrane. It enters the anterior palatine canal, and terminates at the superior angle of the nasopalatine ganglion, without attaining the mouth.

**Nasopal′pebral.** Relating to nose and eyelids.

**Nasopharyn′geal.** Relating to the nose and pharynx, as nasopharyngeal polypus.

**Nasopharyngi′tis.** Inflammation of the nasopharynx.

**Nasophar′ynx.** The upper portion of the pharynx. opposite the posterior nares.

**Nasosepti′tis.** Inflammation of septum of nose.

**Nasosubna′sal line.** Distance from nasion to subnasal point.

**Nasotransversa′lis.** Transversalis nasi muscle.

**Nasotur′binal.** Relating to nose and turbinated bones.

**Nas′rol.** Sodium caffeine-sulphonate or sulphocaffeate; symphoral; a diuretic.

**Nas′ta.** Nata.

**Nastur′tium amphib′ium.** See *Sisymbrium*. **N. aquat′icum,** Cardamine pratensis, Sisymbrium nasturtium. **N. bur′sa pasto′ris,** Thlaspi bursa. **N. hispan′icum,** Tropæolum majus. **N. horten′se,** Lepidium sativum. **N. in′dicum,** Tropæolum majus. **N. in′dicum mi′nus,** Tropæolum minus. **N. lacus′tre,** Armoracia americana. **N. officina′le,** Sisymbrium nasturtium. **N. palus′tre,** see *Sisymbrium*. **N. peruvia′num,** Tropæolum majus. **N. praten′se,** Cardamine pratensis. **N. sati′vum,** Lepidium sativum. **N. silves′tre,** Sisymbrium sophia. **N. supi′num,** Nasturtium officinale.

**Na′sum dila′tans** (dilating the nose). Pyramidalis nasi.

**Na′sus.** Nose. A pyramidal eminence, situated above the anterior apertures of the nasal fossæ, which it covers, and occupying the middle and upper part of the face, between the forehead and upper lip, the orbits and the cheeks. Its lateral surfaces form, by uniting angularly, a more or less prominent line, called *dorsum* or *rhachis* or *spina nasi*. This line terminates anteriorly by the lobe—*lobulus*. The sides are called *alæ nasi*, *pinnæ naris*. The columna is the inferior part of the partition. Its apex or tip has been called *globulus nasi*. The portion of the nose formed of bone is the nasus osseus; that of cartilage, the nasus cartilagineus. The chief varieties of the nose are the aquiline, the flat nose, and the snub nose. The nose is formed, besides its bones, of fibrocartilage, cartilage, muscles, vessels, and nerves, and its use seems to be to direct odors to the upper part of the nasal fossæ. **N. cartilagin′eus,** see *Nasus*. **N. exter′nus,** that part of the nose consisting of osseous, cartilaginous, muscular, and cutaneous tissues. **N. inter′nus,** nasal fossæ. **N. os′seus,** see *Nasus*.

**Nasu′tus** or **Nas′ute.** Naso.

**Na′tal** (*natus*, born). Relating to one's birth; native. Relating to the nates (*natis*, buttock).

**Natal′ ar′rowroot.** Arrowroot obtained from East India. **N. boil** or **sore,** variety of painful ulcer occurring in South Africa, situated on the hands, feet, or legs.

**Natal′ity.** Ratio of number of births in a certain time to the total number of population; birth-rate.

**Nataloïn′.** $C_{25}H_{28}O_{11}$. Aloin from Natal aloes.

**Na′tant** (*nato*, to swim). Floating or swimming on the surface of a liquid.

**Nata′tion.** Swimming. Action of swimming or of supporting one's self or moving upon the water. Swimming resembles the horizontal leap in its physiology—the medium being water instead of air. The difference between the specific gravity of the human body and that of water is not great, so that but little exertion is required to keep a part of the body above water.

**Na′tes** (pl. of natis). Breech, buttocks. Two round projections at the inferior and posterior part of the trunk, on which we sit; the seat. Among the mammalia man alone has the nates prominent and round. They are formed chiefly by the skin and a thick layer of areolar tissue, covering the three glutæi muscles. The cleft between the nates is the rima clunium. **N. cer′ebri,** corpora quadrigemina. **N. and tes′tes,** corpora quadrigemina.

**Nat′iform.** Having the shape of the buttocks.

**Na′tis.** Buttock.

**Na′tive.** Relating to one's birth, natal, indigenous. **N. albu′mins,** animal proteids existing in animal solids and fluids; soluble in water, not precipitated by alkaline carbonates or very dilute acids. Serum and egg albumin constitute the chief varieties of native albumins.

**Na′tivism.** Theory of innate ideas; the doctrine that knowledge is not entirely dependent on sensation, but that the mind has innate power of thought and perception.

**Nativis′tic.** Pertaining to nativism.

**Nat′ricus.** Containing sodium; sodic.

**Na′trium.** Sodium.

**Na′tron.** Native sodium carbonate; a saline compound, very abundant in Egypt, almost wholly formed of subcarbonate of sodium.

**Natrope′gæ** (*pege*, spring). Soda springs.

**Nat′ulæ** (dim. of nates). Quadrigemina tubercula.

**Natu′ra.** Nature. **N. mor′bi,** essence or condition of a disease.

**Nat′ural.** According to nature. Ordinary. An idiot. **N. or′der,** an order belonging to a natural system of classification of animals and plants. **N. parts,** genital organs. **N. philos′ophy,** physics. **N. sys′tem,** a system of classification of plants and animals based upon the resemblance of all the organs or parts; the Jussieuan, as opposed to the Linnæan or artificial system.

**Nat′uralism.** Naturism.

**Nat′uralized.** Growing in but not indigenous to a country; said of plants or animals. The term *naturalization* is thus applied.

**Na′tus mor′tuus.** Stillborn.

**Nau′clea gam′bir.** Plant, ord. *Rubiaceæ,* native of the Malayan Peninsula and Indian Archipelago; it yields large quantities of catechu, known by the names terra japonica and square catechu, and which in Indian commerce is called *gambier* or *gambir.* Powerful astringent, much used in tanning and in medicine. See *Catechu.*

**Naucle′ic acid.** Catechin.

**Nau′heim treat′ment.** A method of treatment of cardiac disease (advocated by the brothers Schott, of Bad Nauheim, Germany), consisting in baths in carbonic-acid water and the use of systematically graded exercises.

**Naupath′ia** (*naus,* ship, *pathos,* affection). Seasickness; nausea marina.

**Nau′sea** (*naus,* a ship). Sickness at the stomach; inclination to vomit. **N. gravida′rum,** nausea occurring during pregnancy, especially in the early months; usually more troublesome in the morning, hence the synonymous term, morning sickness. **Kreat′ic n.,** sickness and vomiting excited in some nervous patients by the smallest portion of animal food. **N. mari′na** or **nava′lis,** seasickness; sickness, vomiting, etc., experienced at sea by those unaccustomed to sea-life, and from which even those accustomed to it are not always exempt.

**Nauseabun′dus** (*nausea*). Nauseant.

**Nau′seant.** Agent exciting nausea, which accompanies a state of depression and relaxation; nauseants are hence valuable remedies in erethistic conditions.

**Nau′seating.** Exciting nausea.

**Nau′seous.** Nauseating; affected with nausea.

**Nausio′sis.** This word, besides being synonymous with nausea, has been used to denote a venous hemorrhage when blood is discharged by jets.

**Nau′ticus** (*nautes,* sailor). Tibialis posticus muscle.

**Na′vel.** Umbilicus. **N. cord,** funiculus umbilicalis, the twisted artery and veins connecting the fœtus with the placenta. **N. her′nia,** exomphalocele. **N. ill,** inflammation of the navel, septic in character, occurring among infants. **N. string.** n. cord. **Vas′cular n.,** condition characterized by a cicatrix in the middle of the navel, occurring sometimes after the cord has entirely fallen off. **N.-wort,** Cotyledon umbilicus. **Ve′nus's n.-w.,** Cotyledon umbilicus.

**Nav′ew.** Brassica campestris.

**Navic′ula** (dim. of *navis,* a ship). Fourchette.

**Navic′ular** (*navicula,* little ship). Boat-shaped; scaphoid. **N. bone,** scaphoid bone; sesamoid bone of the second interphalangeal joint in the horse. **N. disease′,** chronic inflammation of the navicular joint in the horse. **N. fos′sa,** this name has been given: 1. To a small depression between the entrance of the vagina and the posterior commissure of the labia majora or fourchette; 2, to a perceptible dilatation presented by the urethra in man near the base of the glans; 3, to the superficial depression separating the two roots of the helix; 4, to a small cavity at the upper part of the internal wing of the pterygoid process of the sphenoid bone. **N. joint,** the second interphalangeal joint in the horse.

**Navicula′re.** Scaphoid bone.

**Navicularthri′tis.** Navicular disease.

**Naviculocu′boid articula′tion.** Joint occasionally existing between scaphoid and cuboid bones. **N. lig′aments,** bands of ligament between the scaphoid and cuboid bones of the foot.

**Naviculocu′neiform articula′tion.** Joint situated between the scaphoid and three cuneiform bones of the foot.

**Na′viform** (*navis,* a ship, *forma,* form). Navicular.

**Na′vis** (a ship). Vulva.

**Neapol′itan fe′ver.** Malta fever.

**Near-point.** See *Point.*

**Nearsight′ed.** Myopic.

**Nearsight′edness.** Myopia.

**Nearthro′sis** (*neos,* new, *arthron,* a joint). New or false joint.

**Neat's-foot oil.** Oil made from the feet of neat cattle (bovidæ) by boiling.

**Neb′ula.** Slight speck or opacity of the cornea; called leucoma when still more cloudy. Mist or cloud suspended in the urine. See *Caligo;* also *Leucoma.*

**Nebuliza′tion.** See *Pulverization.*

**Neb′ulized** (*nebula,* a cloud). Made nebulous or cloudy, as a nebulized liquid. See *Pulverization.*

**Neb′ulizer.** See *Pulverization.* **Eusta′chian n.,** apparatus for spraying the Eustachian tube.

**Neb′ulous** or **Neb′ulose.** Cloudy.

**Neck.** Collum, cervix. The part which connects the head with the trunk; also a constricted part near the extremity of an organ or bone. **Anatom′ical n. of hu′merus,** constricted portion of humerus which separates the head of the bone from the two tuberosities (see cut under *Humerus*). **N. of blad′der,** see *Collum vesicæ.* **N. of calca′neum,** constricted part of calcaneum anterior to the tuberosity. **Der′byshire n.,** goitre. **N. of fe′mur,** collum femoris. **N. of fib′ula,** cervix fibulæ; that part of the fibula situated below the head. **N. of the foot,** instep. **N. of the gall-blad′der,** the superior constricted part. **N. of a hair fol′licle,** narrowest part of a hair follicle opposite opening of sebaceous gland. **N. of hu′merus,** see *Anatomical n.* and *Surgical n.* **N. of low′er jaw,** that part or portion of the inferior maxillary bone situated immediately below the condyle. **Mad′elung's n.,** lipoma of the n. **N. of mal′leus,** narrow part below its head. **Niths′dale n.,** goitre. **N. of rib,** see *Collum costæ.* **N. of scap′ula,** collum scapulæ. **N. of sta′pes,** narrow part of stapes where it divides into crura. **Stiff n.,** torticollis. **Sur′gical n. of hu′merus,** narrow part immediately below the tuberosities; name given to it because fractures of the humerus are apt to occur there. **Swelled n.,** bronchocele. **N. of tooth,** cervix dentis. **N. of urinif′erous tu′bule,** that part of uriniferous tubule situated between the capsule of Bowman and the convoluted tubule. **N. of u′terus,** cervix uteri. **Wry n.,** torticollis.

**Neck′weed.** Veronica beccabunga, V. peregrina.

**Necræ′mia** (*necros,* dead, *haima,* blood). Destruction of the blood corpuscles.

**Necrec′tomy.** Excision of a necrosed part.

**Necrenceph′alus.** Mollities cerebri.

**Necrobio′sis** (*nekros,* dead, *bios,* life). Name given by Virchow to degeneration occurring near the close of the life of any part of the organism; spontaneous death of a living part.

**Necrobiot′ic.** Relating to necrobiosis.

**Necrogen′ic** or **Necrog′enous,** nek-roj′en-us (*nekros,* dead body, *gennao,* to engender). Existing or living in dead matter.

**Necrol′ogy.** Death statistics.

**Necroma′nia.** Insane longing for death. Impulse to mutilate a dead body.

**Necrom′eter** (*nekros*, dead body, *metron*, measure). Apparatus for determining weight, volume, and specific gravity of parts of the body at autopsies.

**Necromime′sis** (*nekros*, dead body, *mimesis*, imitation). Delusion in which a person imagines himself to be dead.

**Necronarce′ma** (*nekros*, dead body, *narkema*, stiffness). Rigor mortis.

**Necro′nium.** Substance originating in cadavers during process of saponification.

**Necrop′athy.** Pathological condition in which a tendency to necrosis of the bones exists.

**Necroph′agous** (*nekros*, dead body, *phago*, to eat). Feeding on carrion.

**Nec′rophile.** One affected with necrophilism.

**Necroph′ilism** or **Necrophil′ia** (*nekros*, corpse, *phileo*, to love). Insane desire for sexual intercourse with a corpse.

**Necropho′bia** (*nekros*, dead body, *phobos*, fear). Exaggerated fear of death. It occurs in patients in whom the disease is not mortal, as in hypochondriasis. In fevers it is a bad symptom.

**Necropneumo′nia.** Gangrenous inflammation of the lungs. This may be diffused or circumscribed. The only pathognomonic symptom is the extraordinary and repulsive odor of the breath and expectoration.

**Necrop′sia** or **Ne′cropsy** (*necros*, corpse, *opsis*, seeing). Post-mortem examination.

**Necrosco′pia** (*necros*, corpse, *skopeo*, to examine). Post-mortem examination.

**Necroscop′ic.** Relating to necroscopy or examination after death.

**Necros′copy.** Post-mortem examination.

**Necrose′.** To undergo necrosis.

**Necrosed′.** Affected with necrosis.

**Necrosemeiot′ic** (*nekros*, dead body, *semeion*, sign). Relating to the signs of death.

**Necro′sial.** Necrotic; relating to necrosis, as necrosial fever, that accompanies necrosis.

**Necro′sis** (*nekroo*, to kill). Death; mortification; especially the state of a bone or of a portion of a bone deprived of vitality. Necrosis may take place without the surrounding soft parts being affected with gangrene. It is to the bones what gangrene is to the soft parts: the part of the bone affected with necrosis becomes a foreign body, similar to the gangrenous eschar, and its separation must be accomplished by the efforts of nature or by art. When necrosis occurs in the centre of long bones it never extends to their articular extremities. The exterior layers of bone form a canal around the dead portion or *sequestrum;* between these layers and the sequestrum suppuration takes place; the matter presses against the bony canal, perforates it, and is discharged by apertures which become fistulous. The treatment consists in opening into the bone cavity and removing the sequestrum. **Anæ′mic n.,** necrosis caused by deficient blood supply. **Ca′seous n.,** cheesy n. **Cen′tral n.,** n. affecting the central portion of a bone. **N. cerea′lis,** ergotism. **Chees′y n.,** n. with caseation or formation of cheesy material. **Cir′culatory n.,** anæmic necrosis. **Coag′ulative n.,** when the cells of a tissue die from atrophy, fibrin may be precipitated, and the part become indurated and swollen. **Colliq′uative n.,** n. accompanied with exudation of fluid. **Decu′bital n.,** bed-sores. **N. den′tium,** dental gangrene. **Direct′ n.,** gangrene. **N. dissemina′ta,** necrosis in which a bone is involved in its whole thickness. **Dry n.,** n. occurring in compact bone, the necrosed part being dry and brittle. **Embol′ic n.,** necrosis due to embolism. **Fat n.,** see *Fat necrosis*. **Indirect′ n.,** necrobiosis. **N. infanti′lis,** gangrenous stomatitis. **Mercu′rial n.,** necrosis due to effects of mercury. **Moist n.,** mephitic gangrene; necrosis of the cancellated structure of bone especially, which becomes moist and softened, with an offensive odor. It involves the whole thickness of the bone, and is met with in compound fractures, gunshot contusions, etc. **Molec′ular n.,** death of a tissue cell by cell; caries. **Phos′phorus n.,** see *Phosphorus*. **Somat′ic n.,** death of the individual; or necrosis of large areas of tissue. **Superfi′cial n.,** n. involving the layer of bone immediately beneath the periosteum. **N. of teeth,** caries dentium. **To′tal n.,** n. affecting the whole thickness of a bone. **N. ustilagin′ea,** ergotism.

**Necrosozo′ic** (*necros*, corpse, *sozo*, to preserve). Fluids have been so called which are injected into dead bodies in order to preserve them.

**Necros′teon.** Necrosis of bone.

**Necrot′ic.** Necrosial.

**Necroto′cion** (*nekros*, corpse, *tokos*, child). Stillborn child.

**Necrotom′ic.** Relating to necrotomy.

**Necrot′omy** (*tome*, section). Dissection. Operation for necrosis of bone.

**Nectan′dra.** See *Bebeeru*. **N. cinnamomoi′des,** ord. *Lauraceæ;* native of New Granada, where it is called *canela;* has the odor and taste of cinnamon, and is used as such. **N. cymba′rum,** ocotea cymbarum or amara, grows in the Orinoco region, where it is called *sassafras;* bark is aromatic, bitter, and stomachic, and is thought to be an ingredient in the curare poison. **N. mol′lis,** species of Brazil; bark has diuretic, emmenagogue, and carminative properties. **N. puchu′ry,** see *Pichurim beans*. **N. rodiæ′i,** see *Bebeeru*.

**Nectandrine′.** Alkaloid derived from the wood of Nectandra rodiæi.

**Nectarine′.** Amygdalus persica lævis, variety of peach.

**Necta′rium.** Inula helenium.

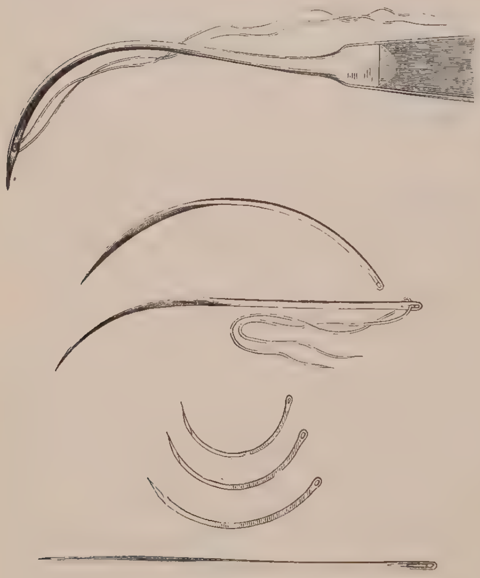
**Necusin′** (*necus*, corpse). Term proposed by Dr. Wm. Farr for the specific principle by which infection of the system takes place from a dissecting wound.

**Ned′ys.** Belly, abdomen, stomach; uterus.

**Nedyu′sa.** Aggravated thirst.

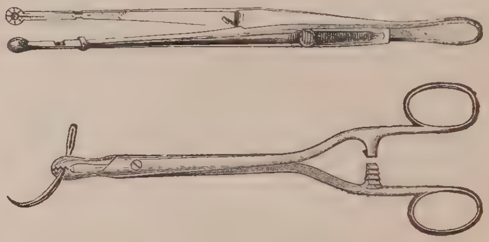
**Need′ham's fil′ament.** Spermatophore.

**Nee′dle.** Sharp instrument used in sewing or to make punctures for various purposes. In *surgery*, a sharp steel, gold, silver, or platinum instrument, round, flat, or triangular, straight or curved, supported or not by a handle, and having, either near the point, or, more commonly, near the other extremity, an aperture or eye for the reception of a thread or tape, which it introduces into the parts. Any slender pointed object resembling a needle, as the needle of a compass, a pine-needle, a needle-shaped crystal, etc. **Ac′upuncture n.,** inflexible gold or silver needle, conical, very delicate, four inches long, furnished with a handle, and at times with a cannula shorter than it by about half an inch; an ordinary needle, waxed at the head, will answer as a substitute for this; see *Acupuncture*. **An′eurysm n.,** n. attached to a handle, of such a shape as will allow a ligature to be passed around an artery. **As′pirating n.,** hollow needle for withdrawing fluid from a cavity by suction. **Cat′aract n.,** needles of gold, silver, and steel have been used, the latter alone at the present day; the cataract needle is employed to depress or tear the crystalline lens when opaque. This needle is usually made from 15 to 24 lines long, and is attached to a fine handle; the extremity may be, as in Scarpa's and Langenbeck's, pointed, prismatic, triangular, and curved; in Dupuytren's and Walther's flat, curved, and sharp-edged; in Hey's flat, with a semicircular and sharp end; or, as in Beer's, Siebold's, Schmidt's, Himly's, von Graefe's, etc., straight and spear-pointed. A mark is generally placed upon the handle to inform the operator, when the instrument is engaged in the eye, which side corresponds to the crystalline. **N. for a countero′pening,** long, narrow instrument of steel, the point of which is fine and sharp on both sides, the heel having an aperture to receive a thread, tape, etc., provided with a flat silver sheath, shorter than the blade, the point of which it covers when passing through parts that have to be respected. **N. cul′ture,** see *Culture.* **Deschamps's′ n.,** Paupe's needle; the eye is placed near the point; it is employed in the ligature of deep-seated arteries. **Discis′sion n.,** n. employed in operating on the eye; it is inserted through the cornea and is used to break the lens-capsule and substance. **Electrolyt′ic n.,** n. for insertion into tissues that are to be electrolyzed. **Explor′ing n.,** needle grooved at its extremity, which when passed into a tumor, abscess, etc., brings away a few drops of the fluid contents, and thus facilitates the diagnosis. **Extrac′tion n.,** see *Cataract extraction.* **Fis′tula n.,** a long, flat, flexible silver instrument having an aperture near one extremity, blunt at the other; formerly used for passing a seton into fistulous ulcers. On one of its sides is a groove for guiding a bistoury in case of necessity. Also a long steel instrument, terminated by a point like that of a trocar, which Desault employed for penetrating the rectum when operating for fistula that had no internal aperture. **Gru′ber's curved paracente′sis n.,** n. employed in division of the tendon of the tensor tympani. **Hag′edorn's n.,** n. provided with curved edge and sharp side on the convex surface. **Hare′lip n.,** a small silver cannula to which is attached a spear-point that can be readily withdrawn. This needle, armed with the point, is introduced at one side of the fissure in the lip and through the other. The twisted suture is then applied and the pin withdrawn. **Hays's n.,** n. used in operating for scleronyxis. **Hutch′inson's n.,** n. provided with a handle and an eye, employed in ligating hemorrhoids subcutaneously. **Hypoder′mic n.,** n. with a canal extending through its entire length and so arranged as to be attachable to a hypodermic syringe. **Ja′cob's cat′aract n.,** n. provided with a curved point, employed in operations for cataract. **Knife n.,** n. with a cutting edge like a knife. **Lig′ature n.,** a long steel instrument, sharp toward one extremity, with an eye near the other, which was formerly used for suspending the circulation of blood prior to amputation by being passed through the limb so as to include the principal artery and a part of the muscles and integuments. Also a steel instrument of various dimensions, curved toward one of its extremities, used to pass ligatures around vessels. Also a steel instrument of various dimensions, flat, regularly curved in the form of a semicircle, with a sharp or lance point and a long eye, used with advantage in place of the last. **Næ′vus n.,** n. with a sharp point which is heated and introduced into the nævi. **Paracente′sis n.,** n. used in paracentesis. **Paupe's n.,** Deschamps's needle. **Se′ton n.,** a long, narrow steel blade, pointed and sharp at one extremity, pierced at the other by an aperture. **Stop-discis′sion n.,** discission n. provided with a shoulder to prevent it being carried too far. **Su′ture n.,** for the twisted suture the harelip needle is used; for the others the straight or curved needle; the straight needle is preferable for stitching up the abdomen, etc., in dissection. In suturing tendons a curved needle has been used, flat on both sides and cutting only at the concave edge, in order that it may pass between the tendinous fibres without dividing them.



Surgical needles.

**Nee′dle-bear′er, Needle-car′rier, Needle-hold′er.** Instrument of steel or silver for accurately laying hold of a needle, so that it may be readily introduced into the tissues, when it is so fine and small that it cannot be firmly held by the fingers.



Needle-holders.

**Nee′dles and pins.** See *Pins.*

**Need′ling.** Use of needle for discission in cataract.

**Neef's ham′mer.** Contrivance which works automatically, intended to regulate the current in a magneto-induction apparatus.

**Neel′sen's meth′od.** Method of staining tubercle bacilli with hot solution of fuchsin, and then treating with watery solution of sulphuric acid for the purpose of decolorizing. **N.'s solu′tion,** solution for staining in microscopic examinations of microorganisms; composed of fuchsin, 1 gm.; absolute alcohol, 10 c.c.; 5 per cent. sol. acidi carbolici, 100 c.c.

**Neem.** See *Melia azedarach.*

**Nee′ria.** Dracunculus.

**Nefren′des** (pl. of nefrens). Properly, sucking pigs. Persons devoid of teeth; young children, for instance, who have not cut them, or aged persons who have lost them. This state is called *nefrendis, odontia edentula.*

**Neftel's′ disease′.** Atremia.

**Neg′ative.** Expressing a denial; opposed to positive; not bearing results; also the same as *n. plate.* **N. aberra′tion,** see *Aberration.* **N. blood pres′sure,** pressure so diminished as to cease to be propellent. **N. electric′ity,** see *Electricity.* **N. elec′trode,** e. connected with electropositive plate of a battery, generating negative electricity. **N. el′ement,** collecting plate of battery. **N. examina′tion,** an examination of the various organs which has failed to disclose evidences of disease. **N. eye-piece,** see *Eye-piece.* **N. his′tory,** the history of a person's past condition of health in which no disease is mentioned nor any fact which would have a bearing upon the present disease. **N. plate,** in photography, a plate in which the lights and shades are exactly the reverse of those in the finished picture; in electricity, the n. element. **N. pole,** n. electrode.

**Negre′tia cachex′ia.** Chthonophagia. **N. pru′riens,** dolichos pruriens.

**Ne′gro** (*niger,* black). One of the Æthiopian race. See *Homo* and *Mulatto.* **N. cachex′y,** pica, or depraved appetite; n. lethargy. **N. leth′argy,** nelavan, sleeping sickness, disease among negroes in Africa, in which the symptoms are headache, somnolence, and loss of flesh; generally terminates fatally. It is possibly due to the presence in the nerve centres of a protozoan parasite, Trypanosoma castellanii. **N. mouth,** peculiar appearance of the mouth, dependent on projection of the canine and incisor teeth. **Pied n.,** see *Achroma.* **N. vine,** Gonolobus hirsutus; the root has cathartic and the juice narcotic properties; it is poisonous.

**Neiæ'ra.** Abdomen.

**Neir'a.** Abdomen.

**Neisse'ria** (after Neisser, the discoverer of the gonococcus). Genus of *Diploccocci* in the shape of two hemispheres with flat surfaces apposed. **N. al'bicans,** species in vaginal secretions, like diplococci. **N. babe'sii,** Babesia bovis. **N. cit'rea,** Micrococcus citreus conglomeratus, in gonorrhœal pus and in dust of the air. **N. conglomerat'a,** on endocardial vegetations. **N. decip'iens,** in atmospheric air. **N. edingto'nii,** in blood and scales of scarlet fever. **N. franklandio'rum,** Bacillus aërogenes. **N. gonorrhœ'æ,** gonococcus. **N. lac'tea,** in vaginal and uterine secretions, etc. **N. lys'sæ,** micrococcus in various organs in rabies. **N. michel'i,** in Egyptian conjunctivitis. **N. petechia'lis,** in typhus fever. **N. rebel'lis,** micrococcus of trachoma. **N. rosa'cea,** species of micrococcus in the air. **N. ro'sea,** Micrococcus roseus, found in the atmosphere. **N. subfla'va,** in urine of vesical catarrh, the lochial discharge, discharges of simple vaginitis, etc. **N. tardis'sima,** in urethral pus. **N. weichselbaum'ii,** Micrococcus intercellularis meningitidis, in effusion attending cerebrospinal meningitis. **N. wink'leri,** in beriberi.

**Neis'ser's diplococ'cus.** Gonococcus, Micrococcus gonorrhœæ. **N.'s stain,** brown staining of bacilli of diphtheria, with 0.1 per cent. solution of methylene blue and afterward with 0.2 per cent, solution of Bismarck brown.

**Nekrosozo'ic.** Necrosozoic.

**Nelanrin'gu.** Narogamia.

**Nélaton's' cath'eter.** C. of soft rubber. **N.'s disloca'tion,** subluxation of the ankle upward, so that the astragalus becomes wedged between the two bones of the leg. **N.'s fi'bres,** muscular fibres of the rectum, circular in shape. **N.'s fold,** fold of mucous membrane in the rectum, about one-third the length of that bowel above the anus. **N.'s gas caut'ery,** see *Cautery.* **N.'s hæmat'ocele,** hæmatoma of the Fallopian tube. **N.'s line,** line drawn from anterior superior spinal process of ilium to tuber ischii. **N.'s meth'od,** method employed in which the patient's head is held downward when the tendency to failure of respiration or of the heart, as the result of anæsthesia, threatens life. **N.'s opera'tion,** enterotomy. **N.'s probe,** sound with porcelain tip; used formerly in searching for a bullet in the tissues, the lead, if touched with the probe, making a black mark on the porcelain end. **N.'s sphinc'ter,** circular band of muscular fibres occasionally seen in the rectum on a level with the prostate gland. **N.'s tu'mor,** desmoid or hard, fibrous tumor of the wall of the abdomen.

**Nel'avan** or **Nel'evan.** Negro lethargy.

**Nelum'bium lu'teum.** Yellow nelumbo, yellow water-lily, pond-lily, water shield, water nuts, water chincapin, rattle nut, sacred bean. Water plant common in the United States, ord. *Nymphaceæ;* leaves are cooling and emollient when applied to the surface; the roots, leaves, and nuts are eaten. The last are called by the Indians and others *water chincapins.*

**Nelum'bo.** Nelumbium.

**Nematachom'eter** (*nema,* thread, *tachos,* rapidity, *metron,* measure). Instrument for measuring the rapidity of nervous impulses.

**Nematel'mia** or **Nematelmin'tha** (*nema,* thread, *helmins,* worm). Class of nematoid or round threadworms embracing numerous varieties, as the Ascaris lumbricoides, Trichina spiralis, Trichocephalus dispar, etc.

**Nemathelmin'tha.** Nematelmintha.

**Ne'matoblast** (*nema,* thread, *blastos,* germ). Spermatoblast.

**Nemato'da.** An order of intestinal worms, which includes trichina, oxyuris, and ascaris.

**Nem'atode** (*nema,* a thread). Nematoid or thread-like. **N. worms,** see *Nematelmintha* and *Nematoda.*

**Nem'atoid** (*nema,* thread, *eidos,* resemblance). Thread-like. **N. worms,** nematelmintha.

**Nematoid'ea.** Nematelmintha.

**Nematoid'eum.** See *Pentastoma.*

**Nemom'ena.** Corroding ulcers.

**Nen'do.** Angelica lucida.

**Nen'uphar.** Nymphæa alba. **N. lu'tea,** Nymphæa lutea.

**Neo-** (*neos,* new). In composition, new.

**Neoarthro'sis** (*neos,* new, *arthron,* joint). New joint; artificial or false joint.

**Ne'oblast.** Parablast. **Inflam'matory fun'goid n.,** mycosis fungoides.

**Neoblas'tic** (*neos,* new, *blastos,* germ). Possessing the character of a new-growth.

**Neoforma'tion.** Neoplasm.

**Neogenes,** ne-oj'en-ees (*neos,* new, *genesis,* birth). Newly born.

**Neolep'ra.** Pellagra.

**Neomem'brane.** Pseudomembrane.

**Ne'omorph** (*neos,* new, *morphe,* shape). A new form of an organism.

**Neomor'phism.** Development of a new form.

**Ne'on.** A monatomic gas present in minute quantity in the atmosphere; its spectrum is one of the most brilliant known, and the gas when illuminated by electric light appears of a bright red color.

**Neona'tal.** Relating to the new-born.

**Neona'tus** (*neos,* new, *natus,* born). Newly born.

**Neopla'sia** (*neos,* new, *plasso,* to form). Formation of neoplasms or new-growths.

**Ne'oplasm** (*neos,* new, *plasso,* to form). New formation or tissue, the product of morbid action, new-growth, tumor. Neoplasms may be classified as follows, based on the derivation of the different tissues (Gibbes):

Classification of Neoplasms.

*Mesoblastic or connective-tissue growths:*

Fibromata.
Myxomata.
Lipomata.
Chondromata.
Osteomata.
Myomata.
Angiomata.
Neuromata.
Sarcomata.

*Epiblastic and hypoblastic growths:*

Papillomata.
Adenomata.
Carcinomata.

According to Virchow, the connective tissue and its equivalents are the general source of development of new-growths, which arise either from simple division or from endogenous changes set up in the interior of pre-existing cells. **His'toid n.,** a new-growth the structure of which is similar to that of the tissue in which it is found. **Inflam'matory fun'goid n.,** mycosis fungoides. **Or'ganoid n.,** a new-growth the structure of which is similar to that of one of the organs.

**Neoplas'tic.** Relating to neoplasms or new-growths, or to neoplasty.

**Ne'oplasty.** General term denoting an operative process for the formation of new parts, including autoplasty, cicatrization of wounds, and the formation of adhesions.

**Ne'osot.** Product derived from furnace-tar. Antiseptic and disinfectant.

**Neoter'ic** (*neoterikos,* youthful). Relating to youth.

**Neotocic'terus** (*neos,* new, *tokos,* one born + *icterus*). Icterus infantum; jaundice occurring in the new-born.

**Neotocogalactoze'mia** (*neos,* new, *tokos,* birth, *gala,* milk, *zemia,* loss). Condition in which milky fluid exists in the breast of a new-born child.

**Neotocophthal'mia** (*neos*, new, *tokos*, birth, *ophthalmos*, eye). Ophthalmia neonatorum.

**Neot'tia.** Goodyera pubescens.

**Nep.** Nepeta.

**Nepaline'.** Pseudoaconitine.

**Ne'paul ac'onite.** See *Aconite.* **N. tu'mor,** pendulous tumor from the external ear, containing a thick, whitish fluid; it is met with in Nepaul especially.

**Nepen'tha destillato'ria.** Ceylonese plant, the root of which is astringent.

**Nepen'the** (*ne*, neg., *penthos*, grief). Remedy much extolled by the ancients against sadness and melancholy. The women of Thebes, according to Diodorus Siceliotes, alone possessed the secret of its composition; and, according to Homer, Helen introduced it from Egypt. Supposed to have been opium or cannabis indica. The name has been given to a disguised opium preparation.

**Nep'eta.** Nep, catnep, catmint, ord. *Labiatæ.* The leaves, *cataria,* have a smell and taste like those of an admixture of spearmint and pennyroyal. It has been recommended in uterine disorders, dyspepsia, flatulency, etc., like pennyroyal, and is much used in domestic medicine, in flatulence, etc., of children. **N. agres'tis,** Melissa nepeta. **N. glecho'ma,** Glechoma hederacea. **N. vulga'ris,** nepeta.

**Nephablep'sia** (*nephos*, cloud, *blepo*, to see). Snow-blindness.

**Neph'alism** (*nephalios*, sober). Total abstinence from alcoholic beverages.

**Nephe'lium.** Kambutan tree; grows in China and Asia; fruit is edible and is employed in fevers.

**Neph'eloid** (*nephele*, cloud, *eidos*, resemblance). Nebulous; cloudy. Epithet applied to urine when it is cloudy.

**Nephelo'pia** (*nephele*, cloud, *opsis*, sight). Indistinct or cloudy sight.

**Nephræmorrha'gia** (*nephros*, kidney + *hæmorrhagia*). Hemorrhage from the kidney. See *Hæmaturia.*

**Nephral'gia** (*nephros*, kidney, *algos*, pain). Pain in the kidney. **N. areno'sa,** see *Gravel.* **N. arthrit'ica,** lumbago of a gouty character. **N. calculo'sa,** see *Gravel.* **N. plethor'ica,** nephralgia from congestion of the kidney. **N. rheumat'ica,** lumbago.

**Nephral'gic.** Relating to or characterized by pain in the region of the kidney. **N. cri'ses,** violent pain in the region of the kidney or ureter, usually occurring in locomotor ataxia.

**Nephranu'ria** (*nephros*, kidney, *a*, priv., *ouron*, urine). Ischuria renalis.

**Nephrapos'tasis** (*apostasis*, abscess). Renal abscess.

**Nephrapragmo'nia.** Renal inactivity.

**Nephrarc'tia.** Contracted condition of the kidney.

**Nephrat'ony** (*nephros*, kidney, *atonia*, want of tone). Atony of the kidney, sometimes eventuating in renal paralysis.

**Nephraux'e** or **Nephraux'is** (*nephros*, kidney, *auxo*, to increase). Enlargement of the kidney.

**Nephrecta'sia** (*nephros*, kidney, *ektasis*, dilatation). Dilatation of the kidney.

**Nephrec'tomy.** Excision of the kidney. **Abdom'inal n.,** excision of the kidney through an incision in the abdominal wall. **Ante'rior n.,** abdominal nephrectomy. **Lum'bar n.,** excision of the kidney through an incision in the loin. **Poste'rior n.,** lumbar nephrectomy.

**Nephrelco'sis** (*helkosis*, ulceration). Ulceration of the kidney.

**Nephrelmin'tic** (*nephros*, kidney, *helmins*, worm). That which is owing to the presence of worms in the kidney.

**Nephremphrax'is** (*nephros*, kidney, *emphrasso*, to obstruct). Obstruction of the kidneys.

**Nephret'ic.** Relating to the kidney; applied especially to pain, etc., seated in the kidney.

**Nephret'icum.** Medicine employed for the cure of kidney disease. **N. lig'num,** Guilandina moringa.

**Neph'ria.** Bright's disease of the kidney.

**Neph'ric.** Relating to the kidney.

**Nephrid'ion** (*nephridios*, pertaining to the kidney). Fat surrounding the kidney.

**Nephrid'ium.** Renal capsule. Embryonic organ of excretion corresponding with the kidney in after-life; a Wolffian tubule.

**Nephrine'** (*nephros*, kidney). Cystic oxide; urea.

**Neph'rism.** State in which patients are suffering from serious affections of the kidneys.

**Nephrit'ic.** Relating to nephritis.

**Nephritides,** nef-rit'id-ees (pl. of nephritis). Diseases of the kidney.

**Nephritidocol'ica.** Renal colic.

**Nephrit'ids.** Disorders of the skin dependent upon morbid conditions of the kidneys.

**Nephri'tis** (*nephros*, kidney). Inflammation of the kidney. Several varieties have been described, according to the seat of the inflammation, its progress, etc., which have already been referred to as different stages of acute and chronic Bright's disease. (See *Kidney, Bright's disease of.*) When the mucous membrane of the pelvis of the kidney is inflamed the affection is called *pyelitis. Acute nephritis*—or, as it is sometimes called, from its tendency to suppuration, *suppurative nephritis*—is characterized by acute pain; burning heat and a sensation of weight in the region of one or both kidneys; suppression or diminution of urine; fever; dysuria; ischuria; constipation, more or less obstinate; retraction of the testicle, and numbness of the thigh of the same side. In *calculous nephritis*—*lithonephritis*—the urine often contains small particles of uric acid or of urate of ammonia. The most common causes of nephritis are excess in irritating and alcoholic drinks; abuse of diuretics; blows or falls on the region of the kidneys; the presence of renal calculi, etc. It may be distinguished from lumbago by the pain which attends the latter on the slightest motion, etc. It usually terminates by resolution in from one week to two or three; it may, however, end in suppuration, when it is called *pyonephritis;* or it may become chronic, *chronic nephritis. Lymphomatous nephritis* may occur in typhoid fever, numerous small areas being infiltrated with round cells, having the appearance of lymphomata. See *Kidney, Bright's disease of.* Nephri is occurring in the childbed state has been called *puerperal nephritis.* **Acute' diffuse' n.,** n. characterized by enlargement and softening of the kidney, with albumin, casts, and blood in the urine, fever, dropsy, and aching in the loins. **A. exu'dative n.,** a form of acute Bright's disease; see *Kidney, Bright's disease of the.* **A. produc'tive n.,** form of acute Bright's disease in which there is proliferation of the stroma of the connective tissue and of the cells of the Malpighian tufts. **N. albuminen'sis, N. albumino'sa,** or **Albu'minous n.,** n. marked by albuminuria as a symptom. **Am'yloid n.,** amyloid degeneration of the kidneys. **Arte'rial n.,** n. due to arterial atheroma. **N. arthrit'ica,** gouty nephritis. **Ascend'ing n.,** n. caused by a diseased condition of the inferior urinary organs, or introduction of a catheter, or operative interference on the urethra and bladder. **Blennorrhag'ic n.,** n. due to gonorrhœa. **Cal'culous n.,** n. excited by the presence of uric-acid crystals or accretions in the kidney. **Cas'eous n.,** n. associated with cheesy degeneration of the renal tissues. **N. chirur'gica,** surgical nephritis. **Chron'ic degen'erative n.,** chronic Bright's disease of the kidney. **C. diffuse' n., with exuda'tion,** chronic Bright's disease of the kidney. **C. intersti'tial n.,** contracted or granular or gouty kidney; see *Kidney, Bright's disease of the.* **C. parenchy'matous n.,** chronic Bright's disease of the kidney. **C. tu'bal n.,** chronic Bright's disease of the kidney. **Consec'utive n.,** inflammation of the pelvis of the kidney. **Croup'ous n.,** Bright's disease of the kidney. **Desquam'ative n.,** condition of Bright's disease in which epithelial cells are seen under the microscope in the urine. **Diffuse' hemorrhag'ic n.,** acute parenchymatous nephritis in which the urine contains blood corpuscles. **Diphtherit'ic n.,** parenchymatous or glomerular nephritis caused by diphtheritic microorganisms. **Epithe′lial n.**, parenchymatous nephritis. **Glomer′ular n.**, glomerulonephritis; n. with inflammation of the glomeruli especially. **Gout′y n.**, interstitial or parenchymatous nephritis in which deposits of sodium urate are found in the renal pyramids. **N. gravida′rum**, puerperal nephritis. **Hemorrhag′ic n.**, acute parenchymatous nephritis. **In′durative n.**, chronic interstitial nephritis. **Metastat′ic n.**, n. associated with disease of other organs, as of the heart. **Non-desquam′ative n.**, see *Kidney, Bright's disease of the.* **Parasit′ic n.**, n. due to the presence of microorganisms. **Parenchy′matous n.**, see *Kidney, Bright's disease of the.* **Pu′rulent n.**, suppurative nephritis. **N. rheumat′ica**, n. caused by rheumatism. **N. saturni′na**, n. due to chronic plumbism. **Scarlati′nal n.**, n. occurring during an attack of or following scarlet fever. **Sup′purative n.**, acute n. attended with pus formation. **Sur′gical n.**, surgical kidney; chronic inflammation of the kidney, the result of local lesions, as calculus in the kidney or bladder, stricture of the urethra, etc. **Tu′bal n.**, Bright's disease of the kidney. **Tuber′culous n.**, renal tuberculosis. **N. urat′ica**, gouty nephritis.

**Neph′ro-abdom′inal.** Commencing at the kidney and terminating at the wall of the abdomen; a term applied to fistulas so constituted.

**Neph′rocele** (*kele*, tumor). Hernia of the kidney.

**Nephrochalazo′sis** (*chalaza*, hail). Granular kidney.

**Nephrocol′ica.** Renal colic.

**Nephrocysti′tis** (*nephros*, kidney, *kystis*, bladder). Inflammation of the kidney and bladder.

**Nephrocysto′sis.** Formation of cysts in the bladder.

**Nephro′dium fi′lix mas.** Polypodium filix mas. **N. margina′le**, Aspidium marginale.

**Nephrodysenu′ria.** Condition in which the nerves of the kidney are diseased.

**Nephrœde′ma.** Œdema symptomatic of renal disease.

**Nephrogen′ic** or **Nephrog′enous** (*nephros*, kidney, *gennao*, to beget). Of renal origin.

**Nephrohæ′mia.** Congestion of the kidney.

**Neph′roid** (*nephros*, kidney, *eidos*, resemblance). Reniform; having a resemblance to a kidney, as nephroid cancer, so called because the morbid growth resembles the kidney in structure.

**Neph′rolith** (*lithos*, stone). Renal calculus.

**Nephrolithi′asis** (*nephros*, kidney, *lithos*, stone). Formation of calculi in the kidney; lithia renalis, lithiasis nephritica, l. renalis. See *Gravel.*

**Nephrolith′ic.** Belonging to renal calculi; applied to ischuria occasioned by calculi in the kidneys.

**Nephrolithocol′ica.** Renal colic from gravel.

**Nephrolithot′omy.** Nephrotomy. Operation for removal of calculus in the kidney.

**Nephrol′ithus.** Renal calculus.

**Nephrol′ogist.** One skilled in nephrology.

**Nephrol′ogy** (*nephros*, kidney, *logos*, treatise). Science in relation to the kidneys and their functions and diseases.

**Nephrolysin′.** A cytotoxin having a specific destructive action on the cells of the kidney.

**Nephrolyt′ic** (*lysis*, solution). Destructive to the renal cells.

**Nephromala′cia** (*malakia*, softness). Softening of the kidney.

**Nephromeg′aly** (*megas*, great). Enlargement of the kidney.

**Neph′romere** (*nephros*, kidney, *meros*, a part). Part of mesoblast from which the kidney is formed.

**Nephromet′ræ.** Muscles of the loins.

**Nephromio′sis.** Atrophy of the kidneys.

**Nephron′cus** (*nephros*, kidney, *onkos*, tumor). Tumor of the kidney or in that region.

**Nephroparal′ysis.** Paralysis of the kidneys.

**Nephropar′esis.** Nephroparalysis.

**Nephrop′athy** (*pathos*, disease). Disease of the kidneys.

**Nephropex′ia** or **Neph′ropexy** (*pexis*, fixation). Fixation of a movable kidney

**Nephrophlegma′sia.** Nephritis.

**Nephrophlegmat′ic** (*phlegma*, phlegm). Name given by some authors to ischuria produced by mucus contained in the urine.

**Nephrophleg′monous** (*phlegmone*, inflammation). Nephritic.

**Nephrophthi′sis.** Renal tuberculosis.

**Nephrople′gia** (*plege*, stroke). Nephroparalysis.

**Nephropleth′oric.** Belonging to plethora of the kidneys; epithet given to ischuria so caused.

**Nephropto′sis** (*ptosis*). Condition in which the kidney is prolapsed, or has slipped away from its natural position.

**Nephropyeli′tis** (*pyelos*, pelvis). Inflammation of parenchyma and pelvis of the kidney.

**Nephropy′ic.** Relating to suppuration of the kidney.

**Nephropyo′sis** (*nephros*, kidney, *pyon*, pus). Suppuration of the kidney.

**Nephrorrha′gia.** Hemorrhage from the kidney.

**Nephror′rhaphy** (*rhaphe*, suture). Nephropexia by suture of the kidney.

**Nephroscle′ria** or **Nephrosclero′sis.** Induration of the kidneys.

**Nephro′sis.** General term for kidney disease.

**Nephros′pasis** (*nephros*, kidney, *spasis*, a drag or strain). Extreme degree of movable kidney in which the organ hangs by its pedicle, thus exercising an injurious strain upon the vessels and nerves contained therein.

**Nephrospas′tic** (*spao*, to draw). Relating to spasm of the kidney; epithet given to a variety of ischuria.

**Nephrostegno′sis** (*stegnosis*, occlusion). Condition of the kidney associated with induration.

**Nephros′toma** or **Neph′rostome** (*nephros*, kidney, *stoma*, mouth). Infundibular opening of a primitive kidney.

**Nephros′tomy.** Establishment of a fistula leading to the pelvis of the kidney.

**Nephrothrom′boid.** Relating to clots of blood in the kidneys or their ducts; term applied to ischuria.

**Nephrot′omy** (*nephros*, kidney, *tome*, section). Dissection of the kidney. Also operation for extracting calculi or a tumor from the kidney or for relieving congestion, by incision into the tissue of that organ.

**Nephrotoxin′.** A cytotoxin acting specifically upon the renal cells.

**Nephrotuberculo′sis.** Renal tuberculosis.

**Nephroty′phoid.** Nephritis due to the presence of typhoid bacilli.

**Nephroty′phus.** Typhus fever associated with hemorrhagic nephritis.

**Neph′ro-ureterec′tomy.** Excision of a kidney with its ureter.

**Nephrozy′mose.** Diastatic ferment found in urine.

**Nephydro′sis.** Hydronephrosis.

**Nep′ios.** Infant.

**Nep′tune's gir′dle.** Name given to a bandage used in applying cold to the upper part of the abdomen.

**Nerianthin′** or **Neriatin′.** Active principle of Nerium odorum and Nerium oleander; employed as a cardiac tonic.

**Neriin′.** A glucoside from Nerium oleander.

**Ne′rium.** A genus of plants of the order *Apocynaceæ.* **N. antidysenter′icum**, tree which affords the codagapala bark. Bark, koorchee, of this Malabar tree has been recommended as an astringent in diarrhœa, dysentery, etc. The seeds, semina indagee, indrojolare, are used as a vermifuge by the natives. **N. odo′rum**, kunaree, of India, is a well-known poison, and extensively used as such. **N. olean′der**, leaves are narcotic. Infusion is employed internally in herpetic affections, and the powder, incorporated with lard, in itch.

**Ner′oli.** See *Citrus aurantium.*

**Neronia′na** or **Neron′ica phlebotomi′a.** An old term for bleeding *coup sur coup* (termed *neroniana* because Seneca was bled to death under Nero).

**Ner'uah.** Dracunculus.

**Nerve** (*neuron, nervus*). (*Neuron* and *nervus* meant also, with the ancients, a tendon and a ligament, *partes nervosæ;* and hence the different acceptations of "nervous"—a man of nerve—a strong, *nervous* man; and a weak, *nervous* woman.) Nerves are tubular cords of the same substance as that composing the brain and spinal cord, the function of which is to convey impulses and sensations to and from the nerves centres. They extend from the nervous centres to every part of the body, communicating frequently with each other; forming *plexuses* and occasionally *ganglions;* and being at length lost in the parenchyma of organs. According to their origin they are termed *cranial* or *encephalic* and *spinal.* Each nerve is composed of several filaments, separated from each other by a connective-tissue membrane, the *endoneurium,* bound together in a funiculus surrounded by a sheath, the *perineurium;* a collection of these funiculi or cords, bound together by an enveloping sheath, the *epineurium,* forming the nerve. Two forms of nerve-fibre exist, the medullated and non-medullated. In the minute fibrils or tubules, which constitue the former, there is a difference between the central and peripheral portion; the former is the *axis-cylinder* or *band of Remak;* the latter, the *white substance of Schwann, medullary sheath* or *myelin;* it is enclosed in a sheath, the *neurilemma* or Schwann's sheath, and to it the peculiarly white aspect of cerebrospinal nerves is principally due. The myelin is divided by constricting rings, called the *nodes of Ranvier,* into numerous segments, each of the segments containing a nucleus, *Schwann's corpuscle.* There is also an inner neurilemma between the axis cylinder and sheath of Schwann; this is called Mauthner's sheath. Some believe that the sheath of Schwann is a continuous membrane; others hold that it is interrupted at the nodes of Ranvier, being folded back and becoming continuous with the sheath of Mauthner. At irregular intervals the medullary sheath is marked by oblique lines, called *incisures* or *lines of Lantermann* or *of Schmidt-Lantermann.* In the non-medullated fibre no tubular envelope can be distinguished, and the white substance of Schwann seems to be wanting. It contains numerous cell-nuclei. The white substance of Schwann and the tubular sheath or neurilemma generally disappear as the nerve approaches its terminal distribution, the axis-cylinder invested by its basement-membrane (*axilemma*) being left; see *Neurine.* Encephalic nerves, in general, have only one root in the brain, while the spinal arise from the cord by two roots: the one from an anterior fasciculus of filaments, the other from a posterior, separated from each other by the ligamentum denticulatum, uniting outside this ligament and presenting near the intervertebral foramen a ganglion formed only by the posterior root. The two roots make, afterward, but one nerve, which anastomoses with the sympathetic nerve, and then, like the encephalic nerves, proceeds to its destination, subdividing into rami and ramusculi, which are finally lost in the tissues. Trunks first formed are commonly round, and proceed alone or accompany the great vessels, being placed in the areolar spaces which separate the organs, and are thus protected from injury. Their manner of termination is varied. See *Corpuscles, Pacinian, Corpuscula tactûs, End-plate,* etc. Some organs have numerous nerves; others seem to have none—a circumstance influencing considerably the sensibility of parts. Observation has shown that certain motor fibres cross the median line and affect muscles on the side opposite to that from which they originate, but the influence is very limited. The *encephalic nerves* arise from the encephalon or are inserted into it (according as we consider the brain the origin or termination of the nerves), and make their exit by foramina at the base of the skull. They are 12 in number. The *spinal nerves* are 31—8 *cervical,* 12 *dorsal,* 5 *lumbar,* and 6 *sacral,* the four inferior cervical being larger than the superior, because they furnish the nerves of the upper extremities. The table on the following page gives a synoptical arrangement of the principal nerves and their distribution.

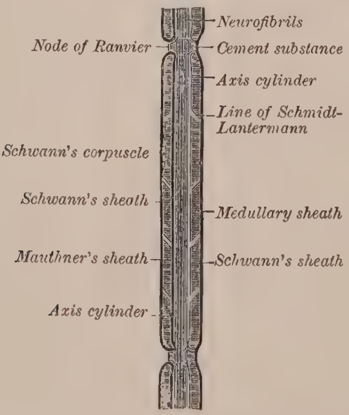


Diagram of the structure of a medullated nerve-fibre, showing two different views concerning the relations of the sheaths of Mauthner and of Schwann. Compare the right and left sides. (Szymonowicz.)

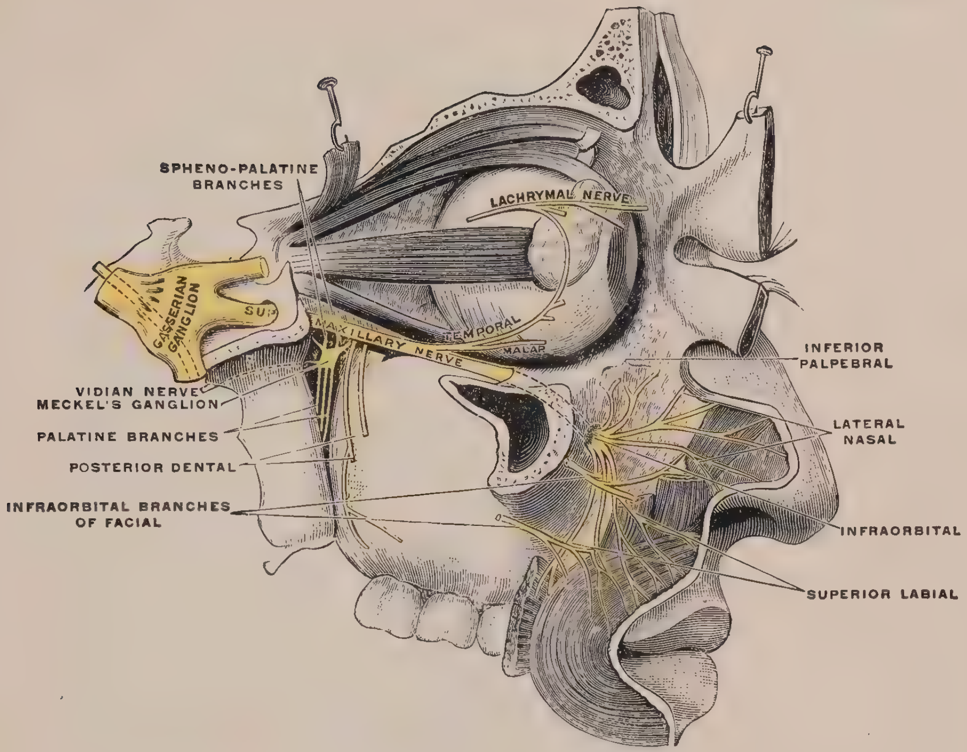
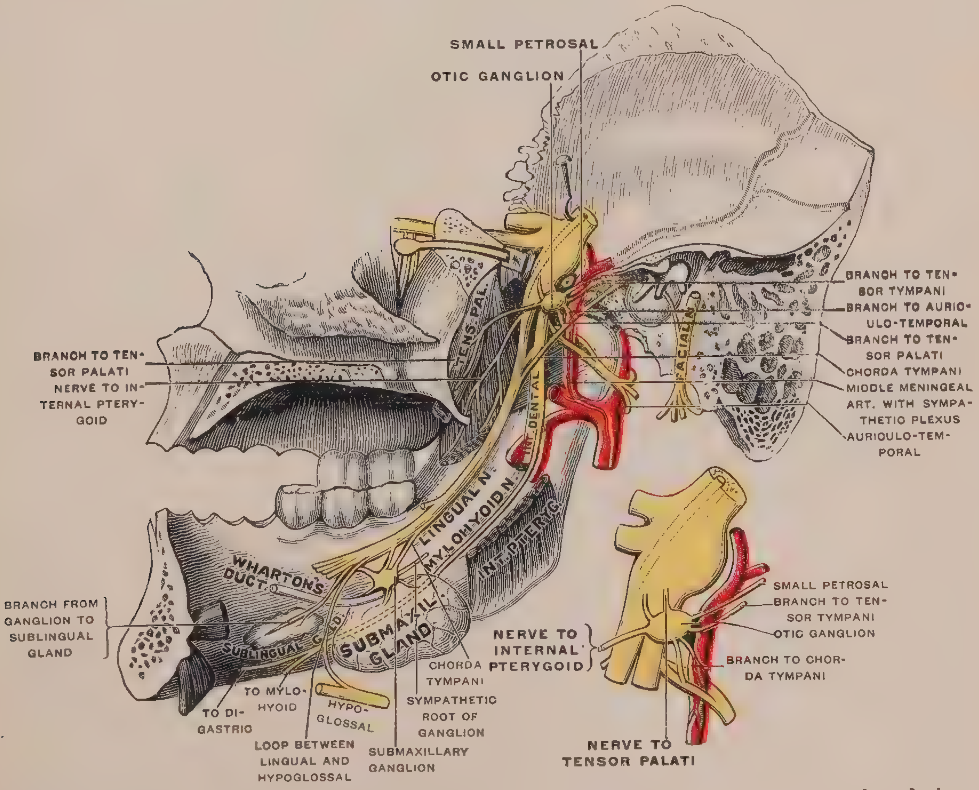
Classifications of the nerves have been recommended according to their uses, in preference to the ordinary anatomical arrangement. It has been remarked that the encephalic nerves have generally one root; the spinal two. Experiments and pathological facts have proved that the anterior column of the spinal cord and the anterior roots of the spinal nerves are inservient to volition or voluntary motion; and that the posterior column and roots are destined for sensibility. Hence the spinal nerves, which have two roots, must be the conductors both of motion and feeling, while the encephalic, which, with but few exceptions, have but one, can possess but one of these properties: they must be either *sensitive* or *motor* according as they arise from the posterior or anterior column of the medulla, and, consequently, three classes of nerves may be distinguished:

| | |
|---|---|
| 1. *Sensory.* | Arising, by a single root, from the posterior column of the medulla oblongata or spinal marrow. |
| 2. *Motor.* | Arising, by a single root, from the anterior column of the same parts. |
| 3. *Sensory and motor.* | Which have two roots: one from the anterior and one from the posterior column. |

Nerves are sheathed and are united to the neighboring parts by an abundant layer of fatty areolar texture, which sends inward prolongations that separate the nervous cords and filaments from each other. The arterial trunks distributed to them transmit branches into their interior. The veins follow the same course as the arteries. Absorbents are not easily traced even on the greatest trunks. (For nerves not receiving distinct mention under *Nerve, Nervi,* or *Nervus,* see the table or refer to them by name under the alphabetical head. Optic nerve, for example, will be found described under *Optic;* genitocrural nerve, under *Genitocrural,* etc.) **Abdu'cent n.,** motor oculi externus. **Acces'sory n. of Wil'lis,** spinal nerve. **Af'ferent n.,** a nerve which conveys impressions from the periphery to the nervous centres. **Anabol'ic n.,** one assisting in the causation of chemical changes of a constructive character in the body. **N. of**



Maxillary division of trifacial nerve and Meckel's ganglion. (Gerrish, after Testut.)



Mandibular division of trifacial nerve, seen from the middle line. The small figure is an enlarged view of the otic ganglion. (Gerrish, after Testut.)

## Synoptical Table of the Nerves.

### I. *Cranial* or *Encephalic Nerves.*

| | |
|---|---|
| 1. *Olfactory.* (1st pair.) | Divided into internal, external, and middle branches, which are distributed on the Schneiderian membrane. |
| 2. *Optic.* (2d pair.) | Terminate in the retina. |
| 3. *Motores oculorum.* (3d pair.) | *Superior Branch.* To the rectus superior oculi and levator palpebræ superioris.<br>*Inferior Branch.* To the rectus internus, rectus inferior, and lesser oblique muscles; a filament which goes to the ophthalmic ganglion. |
| 4. *Pathetici.* (4th pair.) | To the greater oblique muscle of the eye. |
| 5. *Par trigeminum.* (5th pair.) | *Ophthalmic Branch.* Divided into three branches: 1. *Lacrymal branch,* to the lacrymal gland and upper eyelid. 2. *Frontal branch,* to the forehead and upper eyelid. 3. *Nasal branch,* to the eyelids, nasal fossæ, and nose.<br>*Superior Maxillary Branch.* 1. *Orbital branch,* to the orbit. 2. *Posterior* and *superior dental,* to the last three molar teeth and gums. 3. *Anterior dental,* to the incisor, canine, and two lesser molares. 4. *Infra-orbitar,* to the upper lip, cheek, and nose.<br>*Inferior Maxillary Branch.* 1. *Temporal* profound branches, to the temporal muscle. 2. *Masseterine* branch, to the masseter muscle. 3. *Buccal,* to the inner surface of the cheek. 4. *Pterygoid,* to the internal pterygoid muscle. 5. *Lingual,* to the mucous membrane of the tongue. 6. *Inferior dental,* to the teeth of the lower jaw and to the lower lip. 7. *Auricular branch,* to the pavilion of the ear and forehead. |
| 6. *Abducentes.* (6th pair.) | To the rectus externus oculi. |
| 7. *Facial.* (Portio dura of the 7th pair.) | 1. At its exit from the cranium, the *posterior auricular, stylohyoid,* and *inframastoid,* to the pavilion of the ear, the mastoid process, the digastricus, and the muscles attached to the styloid process.<br>2. Near the parotid gland, the *temporal, malar, buccal, supramaxillary,* and *inframaxillary* to the whole superficies of the face. |
| 8. *Auditory.* (Portio mollis of the 7th pair.) | To the vestibule, semicircular canals, and cochlea. |
| 9. *Glossopharyngeal.* (Portion of the 8th pair.) | To the base of the tongue and pharynx. |
| 10. *Par vagum.* (8th pair.) | 1. In the Neck—*pharyngeal* branch to the pharynx; *superior laryngeal* branch to the larynx, and to some of the muscles of the inferior hyoid region. *Cardiac* branches to the cardiac plexus.<br>2. In the Chest—*inferior laryngeal* branch to the larynx, *pulmonary* branches, which form the plexus of the same name; *œsophageal* branches to the œsophagus.<br>3. In the Abdomen—*gastric* branches to the parietes of the stomach; filaments which go to the neighboring plexuses. |
| 11. *Spinal* or *Accessory of Willis.* | At its exit from the cranium—the *accessory of the pneumogastric nerve* anastomosing with this nerve. In the neck, filaments to the trapezius muscles. |
| 12. *Hypoglossal.* (9th pair.) | *Cervicalis descendens,* to the muscles of the inferior hyoid region and to the cervical nerves. Filaments to the muscles of the tongue. |

### II. *Spinal* or *Vertebral Nerves.*

#### 1. *Cervical Nerves.*

| | |
|---|---|
| *1st Cervical Pair.* | *Anterior Branch.* Anastomosing *par arcade* with the second pair. |
| *2d Cervical Pair.* | *Anterior Branch.* Branch anastomosing with the first pair; a branch which goes to the cervical plexus. |
| *3d* and *4th Cervical Pairs.* | *Anterior Branch.* Concurring in the cervical plexus. |

*Posterior Branch* of these four pairs ramifies on the occiput and muscles of the superficial and deep-seated cervico-occipital regions.

| | |
|---|---|
| *Cervical Plexus.* | Descending Branches.—1. *Internal descending,* anastomosing with a branch of the hypoglossus. 2. *Phrenic branch,* to the diaphragm. 3. *External descending branches,* dividing into supraclavicular, supra-acromial, infraclavicular, and cervicales profundi, to the muscles and integuments of the upper part of the chest and shoulder, to the trapezius, levator scapulæ, rhomboideus, etc.<br>Ascending Branches.—1. *Mastoid,* to the posterior and lateral part of the head and the inner surface of the pavilion of the ear. 2. *Auricular,* to the parotid gland and pavilion of the ear.<br>*Superficial Cervical Branches.* (2.) To the platysma myoides, diagastricus, the integuments of the neck, etc. |
| *5th, 6th,* and *7th Cervical Pairs.* | *Anterior Branches.* Assisting in the formation of the brachial plexus.<br>*Posterior Branches.* To the muscles and integuments of the posterior part of the neck and upper part of the back. |
| *Brachial Plexus.* | 1. *Thoracic Branches.* To the anterior and lateral parts of the chest. 2. *Suprascapulary* branch to the muscles of the posterior scapular region. 3. *Infrascapulary* branches (3) to the subscapularis, teres major, teres minor, and latissimus dorsi. 4. *Brachial internal cutaneous,* to the integuments of the palmar and dorsal surfaces of the forearm, near the ulnar margin. 5. *Brachial external cutaneous,* principally to the integuments of the palmar and dorsal surfaces of the forearm, near the radial margin. 6. *Median nerve,* to the forearm, hand, and palmar surface of all the fingers. 7. *Cubital nerve,* to the last two fingers. 8. *Radial,* to the first three. 9. *Axillary,* around the shoulder-joint, and to the neighboring muscles. |

#### 2. *Dorsal Nerves* (*Nervi dorsales*).

| | |
|---|---|
| *1st Dorsal Pair.* | *Anterior Branch.* To the brachial plexus. |
| *2d* and *3d Dorsal Pairs.* | *Anterior Branches.* Intercostal and brachial branch. |
| *4th, 5th, 6th,* and *7th Dorsal Pairs.* | *Anterior Branches. Internal* branches to the intercostals, triangularis sterni, pectoralis major, and to the skin. *External* branches to the integuments of the chest, the obliquus externus abdominis, and the skin of the abdomen. |
| *8th, 9th, 10th,* and *11th Dorsal Pairs.* | *Anterior Branches. Internal* branches to the transversalis, obliquus internus, and rectus muscles, and to the skin of the abdomen. *External* branches to the integuments of the chest and to the muscles and skin of the abdomen. |
| *12th Dorsal Pair.* | *Anterior Branch.* To the first lumbar nerve, and to the muscles and skin of the abdomen as far as the iliac crest. |

*Posterior Branches* of the dorsal nerves are distributed to the muscles and integuments of the back and loins.

#### 3. *Lumbar Nerves.*

| | |
|---|---|
| *1st, 2d. 3d,* and *4th Lumbar Pairs.* | *Anterior Branches.* Concurring to form the lumbar plexus. |
| *5th Pair.* | *Anterior Branch.* Aiding in forming the sciatic plexus. |

*Posterior Branches* of the lumbar nerves are distributed to the loins, sacrum, and nates.

| | |
|---|---|
| *Lumbar Plexus.* | 1. *Musculo-cutaneous Branches* number three. One, *superior*, to the muscles of the abdomen, to the fold of the groin, and the scrotum; a *middle*, to the integuments and muscles of the abdomen; and an *inferior*, to the skin of the thigh. 2. *Genitocrural* branch to the integuments of the scrotum, the groin, and the thigh. 3. *Crural* nerve, to the integuments and muscles of the thigh, skin of the leg, and foot. 4. *Obturator* nerve, to the muscles at the inner part of the thigh. 5. *Lumbosacral*, to the sciatic plexus. Gives off the *gluteal* nerve to the glutæi muscles. |

4. *Sacral Nerves.*

| | |
|---|---|
| *1st, 2d, 3d,* and *4th Sacral Pairs.* | *Anterior Branches.* Form by their union the sciatic plexus. |
| *5th* and *6th Pairs.* | *Anterior Branches.* To the parts in the vicinity of the coccyx. |

*Posterior Branches* ramify on the muscles and integuments of the nates.

| | |
|---|---|
| *Sciatic Plexus.* | 1. *Hemorrhoidal nerves*, to the rectum. 2. *Vesical*, to the bladder. 3. *Uterine* and *vaginal*, to the vagina and uterus. 4. *Inferior gluteal*, to the gluteal muscles, perineum, and integuments of the posterior part of the thigh. 5. *Pudic*, to the perineum, penis, or vulva. 6. *Sciatic*, divided into the *external popliteal*, which ramifies on the integuments and muscles of the external side of the leg, on the dorsum of the foot, and the dorsal surface of the toes; and into the *internal popliteal*, distributed on the dorsal surface of the last two toes, to the muscles of the foot, and on the plantar surface of all the toes. |

---

**Ar′nold**, Arnold's nerve. **Artic′ular n.**, branches so called are given off to various joints from the axillary, ulnar, obturator, great sciatic, and other nerves. **Articulotem′poral n.**, see *Auricular*. **Augmen′tor n.**, cardiac sympathetic nerves. **Buccina′tor n.**, buccal nerve. **N. bulb**, see *End-bulbs*. **Calorif′ic n.**, a nerve which when stimulated raises the temperature of the part to which it is distributed. **Catabol′ic n.**, n. assisting in causing chemical changes of a destructive character. **N. cells**, see *Neuron*. **N. cen′tres**, organs whence the nerves originate, as the brain, spinal cord, and ganglia; also aggregations of cells in the gray substance having similar functions; see *Centre*. **Centrif′ugal n.**, efferent nerve. **Centrip′etal n.**, afferent nerve. **Cerebrospi′nal n.**, nerve connected with the cerebrospinal centre. **Com′pound n.**, mixed nerve. **N. cor′puscles**, nucleated corpuscles between the sheath of the nerve and the myelin of the nerve-fibres. **N. of Cotun′nius**, nasopalatine nerve. **Cra′nial n.**, one taking its origin from the brain. **Depres′sor n.**, one which when stimulated depresses a vasomotor centre. **Ef′ferent n.**, a nerve which conveys impressions from the centre to the periphery. **N. em′inence**, elevation of the sarcolemma over the seat of the end-plate, and of the end-plate itself; see *End-plate*. **N.-end′ing**, the termination of a nerve in the periphery; see *End-plate, Corpuscles, Pacinian, Corpuscula tactus*. **Esod′ic n.**, efferent nerve. **Exod′ic n.**, afferent nerve. **Fa′cial n.**, see *Facial nerve*. **Fem′oral cuta′neous n.**, see *Genitocrural nerve*. **Femoropoplit′eal n.**, sciatic nerve. **N.-fi′bres**, the ultimate fibrils making up the funiculi. **Frigorif′ic n.**, a nerve of the sympathetic system, which when stimulated produces a reduction of temperature. **Fur′cal n.**, the fourth lumbar nerve. **Gen′ital n.**, see *Genitocrural*. **Genitocru′ral n.**, see *Genitocrural*. **N. glands**, name given by Remak to the suprarenal bodies. **Glu′teal n. of the sa′cral plex′us**, lesser sciatic nerve. **N. graft′ing**, neuroplasty, operative replacement of a missing portion of a nerve by a sound section of another nerve. **Gus′tatory n.**, hypoglossal nerve. **Hypoglos′sal n.**, see *Hypoglossal*. **N. im′pulse**, impulse sent along the course of a nerve by stimulation. **Inhib′itory n.**, n. which when stimulated diminishes the energy of the part or organ it supplies. **Inter′nal in′guinal n.**, genitocrural nerve. **N. of Ja′cobson**, see *Petrosal ganglion*. **N. of Lanci′si**, see *Corpus callosum*. **Lat′eral na′sal n.**, sphenopalatine nerve. **Lin′gual n.**, hypoglossal nerve. **N. medul′la**, see *Nerve*. **Med′ullated nerve-fi′bre**, fibre of cerebrospinal system, the axis-cylinder of which is contained in a myelin-sheath. **Mixed n.**, n. composed of both afferent and efferent fibres. **Mo′tor n.**, n. composed entirely or mainly of motor fibres. **Musculospi′ral n.**, a branch of the brachial plexus, supplying the back of the arm, forearm, and hand. **Na′so-ocula′ris n.**, nasal nerve. **Nasopal′atine n.**, see *Nasopalatine*. **Nasopal′pebral n.**, nasal nerve. **Non-med′ullated nerve-fi′bre**, fibre of sympathetic system, not contained in a myelin-sheath. **Oc′ular n.**, optic nerve. **Op′tic n.**, see *Optic*. **Orbitofron′tal n.**, ophthalmic nerve. **N. of organ′ic life**, trisplanchnic or sympathetic nerve. **Palpebrofron′tal n.**, frontal nerve. **N. pang**, neuralgia. **N. paral′ysis**, paralysis due to loss of conductivity in the nerve supplying the affected part. **N. paste**, arsenical paste. **N. plex′us**, a network of nerve filaments. **Phren′ic n.**, diaphragmatic nerve. **Poplit′eal n., inter′nal**, posterior tibial nerve. **N. pow′er**, nervous power. **Re′nal n.**, see *Splanchnic nerve*. **Respi′ratory n.**, see *Thoracic nerves*. **R. n. of the face**, facial nerve. **Scapulohu′meral n.**, axillary nerve. **Secre′tory n.**, an efferent nerve which when stimulated increases the process of secretion in the gland to which it passes. **Sens′ory n.**, afferent nerve. **Scro′tal n.**, see *Genitocrural nerve*. **N.-sheath**, neurilemma; epineurium. **Spi′nal n.**, a nerve arising from the spinal cord and emerging through an intervertebral foramen. **Spi′ral n.**, radial nerve. **N. storm**, paroxysmal attack of nervous disturbance; hypomania. **N. stretch′ing**, operation consisting in cutting down on and forcibly stretching a nerve for the purpose of relieving neuralgic affections, spasmodic contraction, etc.; or, simply, by more flexion of the part, massage, etc. **Subocci′pital n.**, occipital nerve. **Subpu′bian n.**, genitocrural nerve. **Superfic′ial tem′poral n.**, auricular nerve. **N.-su′ture**, neurorrhaphy. **Sympathet′ic n.**, trisplanchnic nerve. **Tem′poral cuta′neous n.**, auricular nerve. **Ther′mic n.**, calorific nerve. **N. tire**, neurasthenia. **N. track**, path along which nerve-fibres convey nervous impulses. **Trigem′inal n.**, see *Trigemini*. **Trisplanch′nic n.**, sympathetic nervous system. **Troph′ic n.**, a nerve controlling nutrition. **N. tu′mor**, neuroma. **Ul′nar n.**, cubital nerve. **Vasoconstric′tor n.**, n. which when stimulated produces contraction of the vessels. **Vasodila′tor n.**, n. which when stimulated produces dilatation of the vessels. **Vasomo′tor n.**, n. influencing the changes in calibre of the blood-vessels; see *Vasomotor*. **Vid′ian n.**, pterygoid nerve. **Vo′cal n.**, see *Spinal nerve*. **N. wounds**, see *Wounds of nerves*. **N. of Wris′berg**, see *Cutaneous nerves*. **Zygo′matoauric′ular n.**, auricular nerve.

**Ner′vi** (pl. of nervus). Nerves. **N. alveola′res superio′res**, superior dental nerves. **N. ampulla′res**, branches of the vestibular nerve distributed to ampullæ of the semicircular canals. **N. anococcyge′i**, branches from the coccygeal plexus supplying the skin about the tip of the coccyx. **N. anon′ymi**, innominate nerves. **N. articula′res ge′nu, supe′rior** and **infe′rior**, branches from the peroneal nerve distributed to the knee-joint. **N. carot′ici exter′ni** or **carot′ici mol′les**, branches from the superior cervical ganglion supplying the walls of the external carotid artery. **N. caverno′si**, branches from the cavernous plexus distributed to the posterior part of the penis or clitoris.

**N. clavicula′res,** clavicular nerves. **N. clu′nium posterio′res,** lateral branches from the posterior part of the three upper sacral nerves distributed to the posterior and upper gluteal region. **N. cuta′nei abdomina′les latera′les,** lateral branches of the five lower intercostal nerves. **N. c. abdom′inis anterio′res,** branches from the lower six anterior branches of the intercostal nerves. **N. c. anterio′res fem′oris,** middle cutaneous nerves of the thigh. **N. c. clu′nium inferio′res,** see *Sciatic nerve, lesser*. **N. c. c. lumba′les,** nervi cutanei clunium superiores. **N. c. c. posterio′res,** nervi clunium posteriores. **N. c. c. sacra′les,** n. clunium posteriores. **N. c. c. superio′res,** lateral branches from the posterior branches of the three superior lumbar nerves; they perforate the lumbar fascia, and are distributed to the skin over the crest of the ilium and upper gluteal region. **N. c. cox′æ posterio′res,** nervi cutanei clunium superiores. **N. c. cru′ris media′les,** branches of the long saphenous nerve, supplying the inner side of the leg. **N. c. inferio′res posterio′res,** nervi clunium posteriores. **N. c. media′les fem′oris,** internal cutaneous nerves of the thigh. **N. c. pec′toris anterio′res,** superior six anterior branches of the intercostal nerves. **N. c. p. latera′les,** lateral branches of the intercostal nerves from the second to the sixth or seventh. **N. divi′si,** trigemini. **N. entobænon′tes,** afferent nerves. **N. erigen′tes,** nerves concerned in erection, which proceed from the sacral nerves and enter the hypogastric plexus, branches from which are distributed to the prostate, bladder, urethra, etc. **N. facia′les inferio′res,** branches from the facial nerve to the lower jaw and chin. **N. f. me′dii,** buccal nerves from facial. **N. f. superio′res,** zygomatic nerves. **N. f. tempora′les,** branches from the facial nerve to the temporal region. **N. gustato′rii,** trigemini. **N. hepat′ici posterio′res,** plexus venæ portæ. **N. labia′les anterio′res,** branches from the ilioinguinal nerve to the labia pudendi. **N. l. posterio′res,** superficial internal perineal nerves. **N. latera′les abdom′inis,** nervi cutanei abdominales laterales. **N. mea′tus audito′rii exter′ni,** branches from the auriculotemporal nerve to the auditory canal. **N. mol′les** (soft nerves), anterior branches of the superior cervical ganglion of the great sympathetic, which accompany the carotid artery and its branches, around which they form intricate plexuses, with here and there small ganglia. They are called *molles* from their softness, and *subrufi* from their reddish hue. **N. nasa′les exter′ni,** external nasal nerves. **N. n. latera′les,** branches of the infraorbital nerve supplying the side of the nose. **N. nervo′rum,** nervous filaments in the neurilemma, which are thought to be in the same relation to the nerves as the vasa vasorum to the vessels. **N. odorato′rii,** olfactory nerves. **N. pectora′les anterio′res,** anterior thoracic nerves. **N. p. exter′ni,** anterior intercostal nerves. **N. p. latera′les,** nervi cutanei pectoris laterales. **N. p. profun′di,** anterior intercostal nerves. **N. perforan′tes anterio′res,** anterior cutaneous nerves of the thorax and abdomen. **N. p. latera′les,** lateral cutaneous nerves of the thorax and abdomen. **N. phren′ici intercosta′les,** branches from the intercostal nerves to the diaphragm. **N. phren′ico-abdomina′les,** branches of the phrenic nerve passing through the diaphragm and supplying the crura. **N. pterygopalati′ni,** palatine nerves. **N. pulmona′les,** bronchial nerves. **N. reversi′vi,** recurrent laryngeal nerves. **N. scrota′les anterio′res,** branches from the ilioinguinal nerve to the scrotum. **N. sinuvertebra′les,** nerves given off by a spinal nerve which pass through the intervertebral foramina to the spinal canal and its walls. **N. spina′les thorac′ici,** dorsal nerves. **N. subcosta′les,** intercostal nerves. **N. subcuta′nei glute′i,** nervi cutanei clunium superiores. **N. s. g. inferio′res,** gluteal cutaneous nerves. **N. s. maxil′læ inferio′res,** nervi faciales inferiores. **N. s. na′si,** nervi nasales laterales. **N. subru′fi,** nervi molles. **N. superficia′les na′si,** nervi nasales laterales. **N. vaso′rum,** nerves distributed to blood-vessels or their sheaths.

**Ner′viduct.** Aperture in a bone through which a nerve passes. **Fallo′pian n.,** aquæductus Fallopii.

**Nervimo′tion.** Movement which is caused in the organs of the senses by external agents, and transmitted to the muscles by the nerves.

**Nervimo′tor.** Epithet given to external agents capable of causing nervimotion.

**Ner′vine.** Neurotic, neuritic, antineurotic, antineuropathic; medicine which acts on the nervous system. Also nerve-substance. Cypripedium pubescens.

**Nervocidine′** (*nervus*, nerve, *cædo*, to kill). The hydrochlorate of an alkaloid extracted from an Indian plant called gasu-basu, which is said to possess very marked local anæsthetic action.

**Nervopath′ic.** Neuropathic.

**Nervosan′guine.** Possessing an excitable and sanguine disposition.

**Ner′vosism.** Neurasthenia.

**Nervos′ity.** Extreme nervousness.

**Ner′vous.** Relating or belonging to the nerves. Strong; also weak, irritable, excitable. See *Nerve* (etymology). **N. attack′,** affection accompanied with spasm, pain, and different nervous symptoms to which impressible individuals are liable. **N. cen′tres,** see *Centres*. **N. deaf′ness,** deafness due to diseased condition of the auditory nerve or brain-centres. **N. debil′ity,** neurasthenia. **N. diath′esis,** nervousness; medically, nervousness means unusual impressibility of the nervous system; formerly it signified strength, force, and vigor; recently it has been applied to a hypochondriacal condition verging upon insanity, occasionally occurring in those in whom the brain has been unduly tasked—a condition termed by some cerebropathy; by others, brain fag. **N. diseas′es,** affections seated in the nervous system; to purely functional disease of the nerves the name neuræmia has been given, and to the class of diseases the epithet neuræmic. **N. exhaus′tion,** neurasthenia. **N. fe′ver,** typhoid fever. **N. flu′id,** nervous principle; supposed fluid circulating through the nerves, and which was regarded as the agent of sensation and motion. It was formerly called animal spirits, spiritus animales. **N. head′ache,** megrim. **N. in′fluence,** nervous power. **N. pain,** neuralgia. **N. pow′er,** nerve power, nervous influence; power of the nerves as exhibited in the living organism. **N. prin′ciple,** nervous fluid. **N. sys′tem,** nerves and nervous centres considered collectively. **N. sys′tem of the automat′ic func′tions,** trisplanchnic nerve. **N. sys′tem, ganglion′ic,** see *Trisplanchnic nerve*. **N. sys′tem, organ′ic,** see *Trisplanchnic nerve*. **N. sys′tem of the sen′ses,** medulla oblongata. **N. sys′tem, sympathet′ic,** trisplanchnic nerve. **N. sys′tem of vol′untary mo′tion,** etc., medulla spinalis. **N. tem′perament,** constitution possessed by those prone to suffer from various functional and organic nervous diseases; they are small of stature and features, mentally and physically active, light sleepers, and prone to dyspepsia. **N. tu′mor,** neuroma. **N. weak′ness,** neurasthenia.

**Ner′vousness.** Nervous diathesis.

**Ner′vule.** Small nerve.

**Ner′vuli gingiva′les.** Small branches given off by alveolar nerves to the gums.

**Ner′vus.** Nerve. **N. abdom′inogenita′lis supe′rior,** iliohypogastric nerve. **N. abdu′cens,** motor oculi externus. **N. accesso′rius cuta′nei inter′ni,** lesser internal cutaneous nerve. **N. accesso′rius saphe′ni exter′ni,** communicans peronei. **N. acus′ticus,** auditory nerve. **N. adscen′dens,** recurrent laryngeal nerve. **N. alveola′ris ante′rior ma′jor,** anterior superior dental nerve. **N. alveola′ris ante′rior mi′nor,** middle superior dental nerve. **N. alveola′ris infe′rior,** inferior dental nerve. **N. alveola′ris maxil′læ inferio′ris,** inferior dental nerve. **N. alveola′ris poste′rior ma′jor** and **mi′nor,** posterior superior dental nerves. **N. ambulato′rius**, pneumogastric nerve. **N. anastomot′icus**, Vidian nerve. **N. Andersch′ii**, tympanic nerve. **N. anon′ymus**, trigemini. **N. ante′rior sep′ti na′rium**, branch of ethmoidal nerve to mucous membrane of septum of nose. **N. ap′icis na′si**, nervus nasalis externus. **N. arte′riæ femora′lis pro′prius**, nerve of the femoral artery. **N. articula′ris**, circumflex nerve. **N. aschia′nus**, first cervical nerve. **N. audito′rius**, auditory nerve. **N. auricula′ris cervica′lis**, great auricular nerve. **N. auricula′ris mag′nus** great auricular nerve. **N. auricula′ris poste rior**, nervus auricularis magnus. **N. auricula′ris profun′dus**, posterior auricular nerve. **N. auricula′ris va′gi**, auricular branch of the pneumogastric nerve. **N. auric′ulo-occipita′lis**, posterior auricular nerve. **N. axilla′ris**, circumflex nerve. **N. bigem′inus**, nervus biradiatus. **N. biradia′tus**, second sacral nerve, giving off the sciatic and the pudic nerve. **N. biven′tricus**, digastric nerve. **N. buccinatoriolabia′lis**, buccal nerve. **N. buccinato′rius**, buccal nerve. **N. buccolabia′lis**, buccal nerve. **N. bul′bo-urethra′lis**, deep branch of the perineal nerve. **N. calcaneoplanta′ris cuta′neus**, plantar cutaneous nerve. **N. cardi′acus mag′nus** or **profun′dus**, see *Cardiac nerves.* **N. cardi′acus mi′nor** or **par′vus**, see *Cardiac nerves.* **N. cardi′acus quar′tus**, fourth cardiac nerve; branch of superior thoracic ganglion. **N. cardi′acus superficia′lis**, see *Cardiac nerves.* **N. cardi′acus ter′tius**, inferior cardiac nerve. **N. caroticotympan′icus**, nervus caroticotympanicus inferior. **N. caroticotympan′icus infe′rior**, branch from the tympanic plexus to the carotid plexus. **N. caroticotympan′icus supe′rior**, small deep petrosal nerve. **N. carot′icus**, carotid nerve. **N. carot′icus ascen′dens**, or **cerebra′lis**, or **inter′nus**, carotid nerve. **N. carot′icus Vidia′ni**, great deep petrosal nerve. **N. cerebra′lis**, carotid nerve. **N. cervica′lis descen′dens infe′rior**, communicans noni. **N. cervica′lis descen′dens supe′rior**, descendens noni. **N. cervicofacia′lis**, cervicofacial nerve. **N. clitor′idis**, dorsal nerve of clitoris. **N. coccyge′us infe′rior**, second coccygeal nerve, sometimes existing. **N. commu′nicans facia′lis**, branch from auriculotemporal to facial nerve. **N. commu′nicans facie′i**, facial nerve. **N. commu′nicans fibula′ris** or **perone′i**, communicans peronei. **N. commu′nicans tibia′lis**, external saphenous nerve. **N. coracobrachia′lis**, musculocutaneous nerve. **N. crotaphiticobuccinato′rius**, ramus superior nervi inframaxillaris. **N. crura′lis**, anterior crural nerve. **N. crura′lis inter′nus**, obturator nerve. **N. crura′lis poste′rior**, obturator nerve. **N. cubita′lis**, ulnar nerve. **N. cuta′neus ante′rior**, musculocutaneous nerve of leg. **N. cuta′neus bra′chii exter′nus**, musculocutaneous nerve. **N. cuta′neus bra′chii latera′lis**, musculocutaneous nerve. **N. cuta′neus bra′chii poste′rior**, cutaneous branch of circumflex nerve. **N. cuta′neus cal′cis**, calcaneoplantar cutaneous nerve. **N. cuta′neus clu′nium inter′nus supe′rior**, nervus perforans ligamenti tuberososacri. **N. cuta′neus cru′ris poste′rior latera′lis**, communicans peronei. **N. cuta′neus cru′ris poste′rior me′dius**, branch from sciatic or external popliteal distributed to the skin over the calf. **N. cuta′neus dor′si pe′dis commu′nis**, musculocutaneous nerve of the leg. **N. cuta′neus dor′si pe′dis latera′lis**, formed by external saphenous nerve uniting with peroneal communicating. **N. cuta′neus dor′si pe′dis media′lis**, internal branch of musculocutaneous nerve of leg, supplying inner side of great toe and second interdigital space. **N. cuta′neus dor′si pe′dis me′dius**, external branch of musculocutaneous nerve of leg, distributed to third and fourth interdigital spaces. **N. cuta′neus fem′oris circumflex′us**, inferior pudendal nerve. **N. cuta′neus fem′oris inter′nus ma′jor**, internal saphenous nerve. **N. cuta′neus fem′oris inter′nus mi′nor**, internal cutaneous nerve of thigh. **N. cuta′neus fem′oris latera′lis**, external cutaneous nerve of thigh. **N. cuta′neus fem′oris poste′rior**, small sciatic nerve. **N. cuta′neus glute′us infe′rior**, small sciatic nerve. **N. cuta′neus hu′meri**, cutaneous branch of circumflex nerve. **N. cuta′neus inter′nus**, internal cutaneous nerve; see *Saphenous nerves.* **N. cuta′neus inter′nus lon′gus**, see *Saphenous nerves.* **N. cuta′neus inter′nus ma′jor**, internal cutaneous nerve. **N. cuta′neus inter′nus mi′nor**, lesser internal cutaneous nerve. **N. cuta′neus lon′gus cru′ris et pe′dis**, external saphenous nerve. **N. cuta′neus media′lis**, lesser internal cutaneous nerve. **N. cuta′neus me′dius**, internal cutaneous nerve. **N. cuta′neus palma′ris**, palmar cutaneous nerve. **N. cuta′neus perine′i**, inferior pudendal nerve. **N. cuta′neus perone′i**, musculocutaneous nerve of leg. **N. cuta′neus planta′ris pro′prius**, calcaneoplantar cutaneous nerve. **N. cuta′neus poste′rior exter′nus**, communicans peronei. **N. cuta′neus poste′rior, infe′rior**, and **supe′rior**, inferior and superior external cutaneous nerves. **N. cuta′neus poste′rior mag′nus**, small sciatic nerve. **N. cuta′neus poste′rior me′dius**, small sciatic nerve. **N. cuta′neus supe′rior**, cutaneous branch of circumflex nerve. **N. dec′imus**, pneumogastric. **N. diaphragmat′icus**, phrenic nerve. **N. digita′lis planta′ris inter′nus**, internal terminal branch of the internal plantar nerve. **N. digita′lis planta′ris me′dius**, external terminal branch of internal popliteal nerve. **N. divi′sus**, trigeminus nerve. **N. dorsa′lis pol′licis radia′lis**, branch from radial nerve to back of thumb. **N. dorsa′lis scap′ulæ**, branch from brachial plexus (fifth cervical nerve) distributed to rhomboid muscle. **N. ethmoida′lis posti′cus**, sphenoethmoidal nerve. **N. femora′lis**, anterior crural nerve. **N. femorocuta′neus**, external cutaneous nerve of thigh. **N. femoroperinea′lis**, superficial external perineal nerve. **N. fibula′ris**, external popliteal nerve. **N. fos′sæ jugula′ris**, Arnold's nerve. **N. frontonasa′lis**, supratrochlear nerve. **N. fusca′lis**, nervus triradiatus. **N. ganglion′icus**, trisplanchnic nerve. **N. ganglio′sus**, sympathetic nerve. **N. genitocrura′lis**, genitocrural nerve. **N. hypoglos′sus**, hypoglossus. **N. im′par**, prolongation of the neurilemma below the lower extremity of the spinal cord, as a fibrous filament, inserted into the base of the coccyx; formerly regarded as a nerve; hence its name. **N. incisi′vus**, incisive nerve. **N. inframaxilla′ris**, inferior maxillary nerve. **N. infraoccipita′lis**, first cervical nerve. **N. inguina′lis exter′nus**, external cutaneous nerve of thigh. **N. inguina′lis inter′nus** or **inguinocuta′neus inter′nus**, genitocrural nerve. **N. innomina′tus**, trigemini. **N. intercosta′lis**, intercostal nerve; sympathetic nerve. **N. intercosta′lis mag′nus** or **intercosta′lis max′imus**, sympathetic nerve. **N. intercosta′lis Willis′ii**, sympathetic nerve. **N. intercostobrachia′lis**, intercostohumeral nerve. **N. interme′dius Wrisberg′ii**, intermediary nerve. **N. interos′seus ante′rior** or **inter′nus**, anterior interosseous nerve of arm. **N. interos′seus cru′ris**, interosseous nerve of leg. **N. interos′seus exter′nus**, posterior interosseous nerve of arm. **N. ischiad′icus**, sciatic nerve. **N. jugula′ris**, branch connecting superior cervical ganglion with jugular ganglion. **N. juveni′lis**, penis. **N. larynge′us ascen′dens**, inferior laryngeal nerve. **N. larynge′us recur′rens**, inferior laryngeal nerve. **N. latis′simi dor′si**, long subscapular nerve. **N. la′tus**, Achillis tendo. **N. ligamen′ti interos′sei cru′ris**, interosseous nerve of leg. **N. lingua′lis latera′lis**, pharyngoglossal nerve. **N. lingua′lis me′dius**, hypoglossal nerve. **N. lingua′lis par′is octa′vi**, glossopharyngeal nerve. **N. lo′quens**, hypoglossal nerve. **N. lumbodorsa′lis**, trunk of anterior branch of first lumbar nerve, dividing into iliohypogastric and ilioinguinal. **N. lumbo-inguina′lis**, genitocrural nerve. **N. lumbosacra′lis**, lumbosacral cord. **N. malleola′ris exter′nus**, branch of musculocutaneous nerve of leg to external malleolus. **N. mandibula′ris**, inferior dental nerve. **N. margina′lis scap′ulæ**, long subscapular nerve. **N. masticato′rius**, superior branch of the inframaxillary nerve. **N. mastoide′us poste′rior**, digastric nerve. **N. membra′næ interos′seæ antibra′chii**, branch from anterior interosseous nerve distributed to interosseous membrane and bones of forearm. **N. membra′næ tym′pani**, branch from the auricular nerve that extends to the auditory canal and membrana tympani. **N. meninge′us poste′rior**, meningeal nerve; branch from hypoglossal and superior cervical ganglion distributed to the blood-vessels around the anterior condyloid foramen. **N. mix′tus**, trigemini. **N. mo′tor oc′uli exter′nus**, motor oculi externus. **N. moto′rius lin′guæ**, hypoglossal nerve. **N. moto′rius oc′uli**, see *Motores oculorum*. **N. mus′culi mal′lei exter′ni**, small branch from otic ganglion extending to laxator tympani. **N. mus′culi mal′lei inter′ni**, branch from otic ganglion or from internal pterygoid nerve to tensor tympani. **N. mus′culi pterygoide′i**, pterygoid nerve. **N. mus′culi tenso′ris ve′li palati′ni**, branch from otic ganglion to the tensor tympani. **N. musculocuta′neus pe′dis**, musculocutaneous nerve of leg. **N. mus′culo-urethra′lis**, deep perineal nerve. **N. nasa′lis ante′rior**, nasal nerve. **N. nasa′lis exter′nus**, branch of ethmoidal nerve passing down on posterior surface of nasal bone; pierces wall of nose between nasal bone and triangular cartilage, and supplies skin of apex. **N. nasocilia′ris**, nasal nerve. **N. nasodenta′lis**, anterior one of the superior dental nerves. **N. nasopalati′nus**, nasopalatine nerve. **N. nasopharynge′us**, pharyngeal nerve. **N. obturato′rius accesso′rius**, accessory obturator nerve. **N. occipita′lis ante′rior**, small occipital nerve. **N. occipita′lis exter′nus**, small occipital nerve. **N. occipita′lis inter′nus**, great occipital nerve. **N. occipita′lis mag′nus**, or **ma′jor**, or **max′imus**, great occipital nerve. **N. occipita′lis mi′nor** or **par′vus**, small occipital nerve. **N. occipita′lis mi′nor secun′dus**, second small occipital nerve. **N. occipita′lis ter′tius**, third occipital nerve. **N. oculomoto′rius commu′nis**, oculomotor nerve. **N. oculomuscula′ris commu′nis**, oculomotor nerve. **N. oculomuscula′ris exter′nus**, abducent nerve. **N. oculomuscula′ris supe′rior**, trochlear nerve. **N. oculonasa′lis**, nasal nerve. **N. op′ticus**, optic nerve. **N. orbita′lis**, ophthalmic nerve. **N. pathet′icus**, pathetic nerve. **N. pectora′lis poste′rior**, dorsalis scapulæ nerve. **N. peda′lis ante′rior**, nervus cutaneus dorsi pedis medialis. **N. pe′nis**, dorsal nerve of penis. **N. per′forans bra′chii**, musculocutaneous nerve. **N. per′forans Casse′rii**, musculocutaneous nerve. **N. per′forans ligamen′ti tuberososa′cri**, perforating cutaneous nerve. **N. perine′i**, perineal nerve. **N. perine′i latera′lis**, superficial external perineal nerve. **N. perine′i media′lis**, superficial internal perineal nerve. **N. perone′us**, external popliteal nerve. **N. perone′us inter′nus**, nervus cutaneus dorsi pedis medialis. **N. perone′us profun′dus**, anterior tibial nerve. **N. perone′us superficia′lis**, musculocutaneous nerve of leg. **N. petro′sus**, petrosal nerve. **N. petro′sus in′fimus**, small superficial petrosal nerve. **N. petro′sus profun′dus ma′jor**, great deep petrosal nerve. **N. petro′sus profun′dus mi′nor**, small deep petrosal nerve. **N. petro′sus superficia′lis in′fimus**, external superficial petrosal nerve. **N. petro′sus superficia′lis ma′jor**, great superficial petrosal nerve. **N. petro′sus superficia′lis me′dius**, small superficial petrosal nerve. **N. petro′sus superficia′lis mi′nor**, small superficial petrosal nerve. **N. petro′sus superficia′lis ter′tius**, external superficial petrosal nerve. **N. petro′sus superficia′lis vascula′ris**, small superficial petrosal nerve. **N. phren′icus accesso′rius**, filament from phrenic nerve occasionally detached from third cervical nerve, and running separate for some distance. **N. phren′icus secunda′rius**, accessory phrenic nerve. **N. planta′ris digita′lis commu′nis quar′tus**, branch of external plantar supplying fourth digital interspace. **N. planta′ris hallu′cis media′lis**, branch of internal plantar to inner side of great toe. **N. planta′ris latera′lis**, external plantar nerve. **N. planta′ris latera′lis dig′iti min′imi**, branch of external plantar to outer side of little toe. **N. planta′ris media′lis**, internal plantar nerve. **N. pneumogas′tricus**, pneumogastric. **N. poplite′us inter′nus**, internal popliteal nerve. **N. poste′rior commu′nis**, small sciatic nerve. **N. pro′prius dec′imi ner′vi**, separated filament of the vagus which leaves the trunk below the jugular foramen, sends twigs to the spinal accessory and hypoglossal, and rejoins the parent stem near the transverse process of the third cervical vertebra. **N. pudendohæmorrhoida′lis**, common trunk which gives off pudic and inferior hemorrhoidal nerves. **N. puden′dus**, pudic nerve. **N. puden′dus commu′nis**, nervus pudendohæmorrhoidalis. **N. puden′dus exter′nus**, see *Genitocrural nerve*. **N. puden′dus infe′rior** or **inter′nus**, perineal nerve. **N. puden′dus inguina′lis**, genitocrural nerve. **N. puden′dus lon′gus infe′rior**, inferior pudendal nerve. **N. puden′dus supe′rior**, dorsal nerve of penis. **N. quin′ti recur′rens**, Vidian nerve. **N. quin′tus**, trigemini. **N. radia′lis**, musculospiral nerve. **N. radia′lis profun′dus**, posterior interosseous nerve of arm; see *Interosseous nerves*. **N. radia′lis superficia′lis**, radial nerve. **N. recur′rens**, spinal accessory nerve. **N. recurrens inframaxilla′ris**, recurrent branch of inferior maxillary. **N. recur′rens inter′nus**, Vidian nerve. **N. recur′rens ra′mi pri′mi**, nervus tentorii. **N. recur′rens ra′mi secun′di**, recurrent branch of superior maxillary. **N. recur′rens ra′mi ter′tii**, recurrent branch of inferior maxillary. **N. recur′rens supramaxilla′ris**, recurrent branch of superior maxillary. **N. respirato′rius inter′nus**, phrenic nerve. **N. saccula′ris ma′jor**, branch from vestigial nerve to the saccule. **N. saccula′ris mi′nor**, branch from cochlear nerve to the saccule. **N. saphe′nus bre′vis** or **infe′rior**, external saphenous nerve. **N. saphe′nus ma′jor**, internal saphenous nerve. **N. saphe′nus mi′nor**, internal cutaneous nerve of thigh; external saphenous nerve. **N. saphe′nus perone′us**, communicans peronei. **N. saphe′nus supe′rior**, internal cutaneous nerve of thigh. **N. scapula′ris** or **supe′rior**, suprascapular nerve. **N. scrota′lis infe′rior**, inferior pudendal nerve. **N. scrota′lis poste′rior**, superficial internal perineal nerve. **N. sep′ti na′rium**, nasopalatine nerve. **N. sinua′lis**, nervus tentorii. **N. spermat′icus**, see *Genitocrural nerve*. **N. spermat′icus commu′nis**, pudic nerve. **N. spermat′icus exter′nus**, genital branch of genitocrural nerve. **N. sphenoethmoida′lis**, posterior ethmoidal nerve. **N. spino′sus**, recurrent branch of inferior maxillary. **N. splanch′nicus i′mus**, smallest splanchnic nerve. **N. splanch′nicus infe′rior**, or **me′dius**, or **secun′dus**, small splanchnic nerve. **N. splanch′nicus sup′erior**, great splanchnic nerve. **N. splanch′nicus supre′mus**, great splanchnic nerve. **N. splanch′nicus ter′tius**, smallest splanchnic nerve. **N. stape′dii**, branch from facial to stapedius muscle. **N. styloide′us**, branch of facial which divides into stylohyoid, digastric, and communicating nerves. **N. subcuta′neus col′li**, superficial cervical nerve. **N. subcuta′neus col′li facia′lis**, superior superficial cervical nerve. **N. subcuta′neus col′li infe′rior**, inferior branch of superficial cervical nerve. **N. subcuta′neus col′li me′dius** or **supe′rior**, superior superficial cervical nerve. **N. subcuta′neus ma′læ**, orbital nerve. **N. subcuta′neus mandib′ulæ**, branch of facial running along border of lower jaw. **N. subcuta′neus maxil′læ inferio′ris**, nervus subcutaneus mandibulæ. **N. sublingua′lis**, sublingual nerve. **N. superficia′lis col′li**, superficial cervical nerve. **N. superficia′lis scap′ulæ**, one of the supra-acromial nerves. **N. supramaxilla′ris**, superior maxillary nerve. **N. sura′lis** or **s. mag′nus**, external saphenous nerve. **N. sympathet′icus mag′nus**, trisplanchnic nerve. **N. sympathet′icus me′dius**, trigemini; pneumogastric nerve. **N. sympathet′icus mi′nor**, facial nerve. **N. sympath′icus**, trisplanchnic nerve. **N. sympath′icus me′dius**, trigemini. **N. tempora′lis cuta′neus** or **superficia′lis**, auriculotemporal nerve. **N. temporofacia′lis**, temporofacial nerve. **N. tenso′ris tym′pani**, formed by branch from internal pterygoid nerve and one from otic ganglion; supplies tensor tympani muscle. **N. tenso′ris ve′li palati′ni**, formed by branch from internal pterygoid nerve and one from otic ganglion; supplies tensor palati muscle. **N. tento′rii**, recurrent branch from ophthalmic nerve, supplying tentorium. **N. thoracicobrachia′lis**, intercostohumeral nerve. **N. thoracicodorsa′lis**, nervus dorsalis scapulæ. **N. thorac′icus ante′rior** or **ma′jor**, external anterior thoracic nerve; see *Thoracic nerves*. **N. thorac′icus ante′rior mi′nor**, internal anterior thoracic nerve. **N. thorac′icus ante′rior pri′mus** or **exter′nus**, external anterior thoracic nerve; see *Thoracic nerves*. **N. thorac′icus inter′nus**, internal anterior thoracic nerve. **N. thorac′icus poste′rior**, see *Thoracic nerve, posterior*. **N. thorac′icus secun′dus**, internal anterior thoracic nerve. **N. thyrohyoide′us**, thyrohyoid nerve. **N. tibia′lis**, internal popliteal nerve. **N. tibia′lis anti′cus**, anterior tibial nerve. **N. tibia′lis exter′nus**, calcaneoplantar cutaneous nerve. **N. tim′idus**, motor oculi externus. **N. tremel′lus**, trigemini. **N. trigem′inus**, see *Trigemini*. **N. trira-dia′tus**, fourth lumbar nerve. **N. trisplanch′nicus**, trisplanchnic nerve. **N. trochlea′ris**, pathetic nerve. **N. tu′bæ eustachia′næ**, branch from tympanic plexus to mucous lining of Eustachian tube. **N. tym′pani**, Jacobson's nerve; branch from facial, or from one of the branches supplying the external auditory meatus, which is distributed to the membrana tympani. **N. tympan′icolingua′lis**, chorda tympani nerve. **N. tympan′icus supe′rior**, tympanic nerve. **N. ulna′ris dorsa′lis**, dorsal branch of ulnar nerve. **N. ulna′ris vola′ris**, ulnar nerve before it divides into deep and superficial palmar branches. **N. ulna′ris vola′ris profun′dus**, branch of ulnar nerve distributed to deep muscles of the palm. **N. va′gus**, pneumogastric nerve. **N. va′gus cum accesso′rio**, spinal nerve. **N. vasomoto′rius**, trisplanchnic nerve. **N. voca′lis**, pneumogastric nerve. **N. zygomat′icus**, orbital nerve.

**Nes′pite.** Melissa calamintha.

**Ness′ler's rea′gent.** Very delicate test for ammonia. It consists of an alkaline solution of potassium iodide and mercuric chloride. If ammonia is present even in only a very small quantity in water, a slight reddish-yellow tinge ensues upon addition of the test.

**Nest.** A collection; a set of objects fitting one within the other. **Brunn's n.**, a cell-nest in the ureter. **Can′cer-n.**, a nest of cancer-cells in healthy tissue. **Cell-n.**, a clump of cells occurring in the midst of tissue of a different structure. **Epithe′lial n.**, cell-nest.

**Nestiat′ria** (*nestis*, fasting, *iatreia*, treatment). Hunger-cure; cure by fasting.

**Nes′tis** (fasting). Jejunum.

**Nestither′apy.** Hunger-cure; cure by fasting.

**Nest′root.** Monotropa uniflora.

**Net′leaf.** Goodyera pubescens.

**Netraneurys′ma** (*netron*, spindle). Fusiform aneurysm.

**Net′ting.** Urine.

**Net′tle.** Urtica. **Archan′gel n.**, Lamium album. **Day n.**, Lamium album. **Dead n.**, Lamium album or amplexicaule. **Dwarf n.**, Urtica urens. **Hedge n.**, galeopsis. **Horse n.**, Solanum carolinense. **Lich′en n.**, see *Lichen*. **Pill′-bearing n.**, Urticaria pilulifera. **Sting′ing n.**, urtica. **N. tree**, Celtis occidentalis.

**Net′tlerash.** Urticaria.

**Net′tleship's dots.** Small white dots on the retina indicating pigment changes and sometimes associated with nyctalopia or night-blindness.

**Net′wort.** Goodyera pubescens.

**Neu′bauer's ar′tery.** Deep thyroid artery, sometimes given off by the innominate. **N.'s gan′glion**, combination of inferior cervical and first thoracic ganglion. **N.'s test**, test for sugar, solution of indigo-carmine alkalized by sodium carbonate; if a drop of saccharine urine is added to a hot solution the color changes to purple, red, and pale yellow.

**Neu′ber's tubes.** Drainage-tubes of bone.

**Neu′mann's cor′puscles.** Nucleated red corpuscles noticed in the blood when processes of repair are going on. **N.'s crys′tals**, Charcot's crystals. **N.'s disease′**, pemphigus vegetans, in which the papillary growths follow the bullar eruption. **N.'s sheaths**, dentinal sheaths constituting the wall of the dentinal tubules.

**Neu′ra.** Nerve-cell.

**Neu′rad.** Toward the cerebrospinal axis.

**Neuradynam′ia** (*neuron*, nerve, *a*, priv., *dynamis*, power). Neurasthenia.

**Neuræ′mia.** An old term for functional nervous disease.

**Neurag′mia.** Separation of a nerve and its ganglion.

**Neu′ral** (*neuron*, nerve). Relating to a nerve or to the nervous system or centres. **N. a′læ**, see *Neural arch*. **N. arch**, formed by the posterior projections connected with the body of the vertebra, which protect the spinal cord; each arch, with the pedicle—*neural pedicle*—and body, forms a segment of the *neural tube;* the alæ of the arches are the *neural alæ*. **N. ax′is**, spinal cord, see *Encephalon*. **N. canal′**, spinal canal. **N. cav′ity**, one of the two great cavities which may be said to be enclosed in the arrangement of the segments of the skeleton, including the cranium and the vertebral canal. **N. crest**, projection of ectodermal cells on the superior margin of the medullary groove, from which the dorsal nerves in embryo originate. **N. fora′men**, foramen vertebrale. **N. fur′row** or **groove**, longitudinal groove in the embryo, which by its folding inward forms the neural canal. **N. paral′ysis**, paralysis due to loss of nerve conductivity. **N. ped′icle**, see *Neural arch*. **N. plate**, plate of epiblast in which the neural groove is developed. **N. seg′ment**, neuromere. **N. sep′tum**, row of processes of deep fascia existing on the median line posteriorly. **N. spines**, spinous processes. **N. tube**, tube formed by closure of the medullary groove of the epiblast; see *Neural arch*.

**Neural′gia** (*neuron*, nerve, *algos*, pain). Generic name for a very acute, exacerbating or intermitting, throbbing pain, which follows the course of a nerve, extends to its ramifications, and seems, therefore, to be seated in the nerve. It may be due to a variety of causes, local (pressure), central (brain or cord disease), or systemic (diabetes, malaria, syphilis, etc.). According to their seat the principal neuralgiæ have been distinguished by various names. **Anom′alous n.**, a neurosis, sometimes characterized by acute pains circumscribed within short compass or extending by irradiations, but not having their seat in the course of a nerve, and at other times occasioned by tumors in the course of a nerve or following contusions or incomplete divisions of nerves. **Artic′ular n.**, arthralgia. **N. brachia′lis**, brachialgia. **N. brachiothorac′ica**, angina pectoris. **N. cardi′aca**, angina pectoris. **N. cerebra′lis**, hemicrania. **N. cœli′aca**, n. of the solar plexus. **N. cor′dis**, angina pectoris. **N. crura′lis**, n. femorotibialis. **N. cubitodigita′lis**, in this variety the pain extends from the part where the nerve passes under the inner condyle to the back of the hand and to its cubital edge. **Degen′erative n.**, n. due to degenerative changes in the nervous centres. **N. denta′lis**, odontalgia nervosa. **Epilep′tiform n.**, variety of neuralgia characterized by very sudden and exceedingly painful attacks of pain following the course of the fifth nerve. **Fa′cial n.**, tic douloureux, face-ague, Fothergill's face-ache, is characterized by acute lancinating pains, returning at intervals, and by twinges in certain parts of the face, producing twitches in the corresponding muscles; it may be seated in the frontal nerve, in the infraorbital, or in the maxillary branch of the fifth pair. Metopodynia, brow-ague, brow-pang, commences at the superciliary foramen and extends along the ramifications of the frontal nerve that are distributed on the forehead, upper eyelid, caruncula lacrymalis, and nasal angle of the eyelids. Neuralgia infraorbitalis, infraorbital neuralgia, is chiefly felt in the infraorbital foramen, whence it passes to the cheeks, upper lip, ala nasi, lower eyelid, etc. In neuralgia maxillaris the pain usually sets out from the mental foramen and passes to the chin, lips, temple, teeth, and tongue. **False n.**, term assigned to pains along a nerve or its ramifications produced by some body compressing it—those pains terminating with the removal of the compressing cause. **Femoropoplit′eal n.**, hip-gout, sciatica, pain following the great sciatic nerve from the ischiatic notch to the ham, and along the peroneal surface of the leg to the sole of the foot. **N. femoroprætibia′lis**, crural neuralgia; the pain, setting out from the groin, spreads along the forepart of the thigh, and passes down, chiefly on the inner side of the leg, to the inner ankle and back of the foot. **N. fronta′lis**, facial neuralgia. **Gen′eral n.**, form of neuralgia in which pain is experienced in various parts of the body. **N. of the heart**, angina pectoris. **N. hepat′ica**, hepatalgia. **Hyster′ical n.**, n. coexisting with hysteria. **Idiopath′ic n.**, n. for which no cause, local or general, can be found. **Ilioscro′tal n.** is rare; it is characterized by a very acute pain in the course of the branches of the first lumbar pair; pain follows the crista ilia and accompanies the spermatic vessels to the testicle, which is often painfully retracted. **Infraor′bital n.**, facial neuralgia. **N. ischiad′ica**, femoropopliteal neuralgia, sciatica. **Lead n.**, n. caused by poisonous effects of lead. **N. lie′nis**, splenalgia. **N. mam′mæ**, irritable breast; exceedingly painful affection of the female mamma, unaccompanied by inflammation. **N. maxilla′ris**, facial neuralgia. **Mor′ton's n.**, metatarsalgia, see *Morton*. **N. planta′ris**, erythromelalgia; neuritis of the plantar nerves; a rare disease, in which pain is confined chiefly to the course of the plantar nerves; it is more frequently met with in the male. **N. re′num**, nephralgia. **Sciat′ic n.**, femoropopliteal neuralgia. **N. spina′lis**, spinal irritation. **Stump n.**, pain in the stump after amputation, caused by engagement of nerve twigs in the cicatrix. **Symptomat′ic n.**, n. due to systemic causes. **N. tes′tis**, orchidalgia. **N. tympan′ica**, otalgia caused by an inflamed condition of the tympanic plexus. **N. u′teri**, hysteralgia. **N. ventric′uli**, cardialgia.

**Neural′gic.** Pertaining to neuralgia.

**Neural′giform.** Resembling neuralgia.

**Neu′ralward.** Neurad.

**Neuramebim′eter** (*neuramœba*, nerve-cell, *metron*, measure). Apparatus for taking a record of the interval of time elapsing between stimulation of a nerve and the result that follows.

**Neuramœ′ba.** Neuron.

**Neuranagen′esis** or **Neuranagene′ma** (*neuron*, nerve, *anagennao*, to regenerate). Regeneration or renewal of a nerve.

**Neuranaph′ysis** (*neuron*, nerve, *ana*, again, *phyo*, to grow). Neuranagenesis.

**Neurapoph′ysis.** See *Vertebra*.

**Neurasthe′nia** (*neuron*, nerve, *astheneia*, debility). Debility or impaired activity of the nerves or of the nervous system generally; nervous exhaustion. **Acous′tic n.**, n. with symptoms of deafness. **Angiopath′ic n.**, n. with vascular disturbances. **N. gas′trica**, weak digestive action from nervous debility or exhaustion. **N. gra′vis**, n. characterized by great exhaustion and fatigue from even trifling causes. **Op′tic n.**, n. accompanied with a considerable amount of disturbance of the field or function of vision. **N. ret′inæ**, asthenopia. **Traumat′ic n.**, an accident neurosis, caused by external injury.

**Neurasthen′ic.** Related to or affected with neurasthenia.

**Neuratax′ia.** Cerebrospinal ataxia.

**Neuratroph′ia** or **Neurat′rophy** (*neuron*, nerve, *atrophia*, wasting). Atrophy of nerves or of the nervous system.

**Neuratroph′ic.** Relating to imperfect supply of nerve-food.

**Neurax′is.** Axis-cylinder of a nerve. See also *Axis, cerebrospinal*.

**Neurax′on.** Efferent neural cell-process; axis-cylinder process of a nerve-cell.

**Neure.** Nerve-cell; neuron.

**Neurecta′sia, Neurec′tasis**, or **Neurec′tasy** (*neuron*, nerve, *ekteino*, to stretch). Nerve stretching.

**Neurec′tomy** (*neuron*, nerve, *ektome*, excision). Excision of a section of a nerve.

**Neurecto′pia** or **Neurec′topy** (*neuron*, nerve, *ektopos*, out of place). Displacement of a nerve.

**Neurem′podism.** Hindrance to nervous action.

**Neurenter′ic** (*neuron*, nerve, *enteron*, intestine). Relating to the neural canal and intestine of the embryo. **N. canal′**, temporary passageway existing between the neural and enteric tubes in the embryo.

**Neu′ria.** Delicate nervous tissue.

**Neuri′asis.** Condition in which hysteria and hypochondriasis coexist.

**Neuriat′ria** or **Neuri′atry** (*neuron*, nerve, *iatreia*, treatment). Neurotherapeutics; treatment of nervous diseases.

**Neu′ric.** Nervous.

**Neuricity**, nu-ris′it-e. Nerve-force.

**Neuridin′.** $C_5H_{14}N_2$. Ptomain produced in the putrefaction of albuminous substances, as horse-flesh, beef, human muscle, cheese, etc,; non-poisonous. It is usually associated with cholin; it is isomeric with cadaverin.

**Neurilem′ma** (*neuron*, nerve, *lemma*, coat). Sheath of a nerve-fibre; also the fine, transparent, and apparently fibrous membrane surrounding the nerves, consisting of connective tissue having a distinctly lamellar arrangement. The pia mater of the spinal cord forms its neurilemma.

**Neurilemmati′tis** or **Neurilemmi′tis.** Inflammation of the neurilemma.

**Neuril′ity.** Property possessed by nerve-fibre of exciting contraction in a muscle, secretion in a gland, and sensation in a ganglionic centre.

**Neurin′.** A poisonous ptomain. Cholin.

**Neurine′** (*neuron*, nerve). Formerly used to denote the substance of which the nervous system is composed, consisting chiefly of albumin and a peculiar fatty matter, associated with phosphorus. An extract of nerve tissue used in therapeutics.

**Neuris′chias.** Sciatica.

**Neu′rism.** Nervosism.

**Neuris′tos.** Nervous tissue.

**Neu′rite.** Neuraxon.

**Neurit′ic.** Relating to neuritis.

**Neuri′tis.** Inflammation of a nerve. **Alcohol′ic n.**, n. due to excessive indulgence in alcoholic drinks. **Ascend′ing n.**, a form of neuritis in which the inflammation passes upward along the course of the nerve to the centre. **Ax′ial n.**, inflammation of the middle portion of a nerve. **Degen′erative n.**, inflammation of nerve with degeneration of structure. **Descend′ing n.**, a form of neuritis in which the inflammation passes downward along the course of the nerve to the periphery. **Diabet′ic n.**, form of neuritis met with in diabetes. **Diphther′ic n.**, n. coming on after an attack of diphtheria. **Eich′horst's n.**, see *Eichhorst*. **Endem′ic n.**, beriberi. **Fa′cial n.**, n. with paralysis of the facial nerve. **N. fas′cians**, Eichhorst's neuritis. **Intersti′tial n.**, n. with infiltration of the interstitial septa of the nerve. **Lep′rous n.**, a form of interstitial neuritis produced by the Bacillus lepræ. **Lipo′matous n.**, form of neuritis in which there are deposits of fat in the degenerated nerves. **Lymphat′ic n.**, mesoneuritis; inflammation of the substance of a nerve or of its lymphatics. **N. mi′grans**, a form of ascending neuritis in which the inflammation may travel to a nerve-centre and thence to other nerves. **Mult′iple n.**, inflammation of several nerves, due to systemic causes; polyneuritis. **Op′tic n.**, neuroretinitis. **N. nodo′sa**, n. accompanied with nodular inflammation of the trunk of the nerve. **Parenchy′matous n.**, n. with lesion of the axis-cylinder. **Periph′eral n.**, inflammation of the terminal extremities of the nerves on the surface of the body. **Postfe′brile n.**, n. following an infectious fever, such as typhoid. **Postglob′ular n.**, retrobulbar neuritis. **Pres′sure n.**, n. caused by compression. **Retrobul′bar** or **Retro-oc′ular n.**, optic neuritis occurring back of the globe of the eye. **Sciat′ic n.**, sciatica. **Segmen′tal** or **Seg′mentary n.**, inflammation of the segment of a nerve. **Se′nile n.**, inflammation of a nerve met with in advanced life. **Tabet′ic n.**, n. symptomatic of or accompanying tabes dorsalis. **Tox′ic n.**, n. caused by poisoning, as by alcohol, arsenic, etc. **Traumat′ic n.**, n. caused by injury or external causes, pressure, for example, or a blow.

**Neu′ro-anat′omy.** Anatomy of the nervous system.

**Neurobla′cia** (*neuron*, nerve, *blakeia*, stupor). Insensibility of the nerves.

**Neu′roblasts.** Embryonic oval or pear-shaped cells without processes, from which are developed the neurons. Component elements of the nervous system.

**Neurocanal′.** Myelocœle.

**Neu′rocele.** Neurocœle.

**Neurochitin**, nu-ro-ki′tin. A chitinous substance affording support to the nerve-fibres.

**Neurochon′drous** or **Neurochon′droid.** Fibrocartilaginous.

**Neurochoroidi′tis.** Simultaneous inflammation of the choroid body and the ciliary nerves.

**Neu′rocœle** (*koilia*, cavity). Central cavity of the cerebrospinal axis.

**Neu′rocyte** (*neuron*, nerve, *kytos*, cell). Nerve-cell.

**Neurodeal′gia** (*neurodes*, retina, *algos*, pain). Pains occuring in the retina.

**Neurodeat′rophy** (*neurodes*, retina). Atrophy of the retina.

**Neuroden′drite** (*neuron*, nerve, *dendron*, tree). Ramifying process from a nerve-cell.

**Neuroden′dron.** Neurodendrite.

**Neurodermati′tis.** Neurodermitis.

**Neurodermato′sis.** Cutaneous neurosis.

**Neurodermatro′phia** or **Neurodermat′rophy.** Condition due to perverted innervation, in which the skin is thin in spots, generally very white, and atrophy and anæsthesia are present.

**Neuroder′mia** or **Neurodermi′tis** (*neuron*, nerve, *derma*, skin). Cutaneous neuropathic disease, attended with itching, papular eruptions, etc.

**Neuro′des.** Nervous. Retina.

**Neurodias′tasis.** Stretching of a nerve.

**Neurodictyi′tis.** Neuroretinitis.

**Neurodin′.** Acetylparaoxyphenylurethane. $C_{11}H_{12}NO_4$. Used as a nervine and as a remedy for neuralgia; also as an antipyretic; dose, gr. viij–xv (0.5–1.0).

**Neurodynam′ia** (*neuron*, nerve, *dynamis*, power). Nervous power.

**Neurodyn′ia** (*neuron*, nerve, *odyne*, pain). Neuralgia.

**Neurodys′entery.** Typhoid dysentery.

**Neuroepider′mal.** Developing into nervous system and epidermis, as *n. layer* or epiblast.

**Neuroepithe′lial.** Relating to the neuroepithelium, as *n. layer of the retina.*

**Neuroepithelio′ma.** A tumor made up of or having its origin in the neuroepithelium.

**Neuroepithe′lium.** Epithelium the cells of which communicate directly with the filaments of the nerves. Epiblastic epithelium forming the cells of the cerebrospinal axis. Layer of rods and cones in the retina.

**Neurofi′bril.** Conducting fibril or filament of a nerve.

**Neurofibro′ma.** Condition in which the nerve tissue is in a hyperplastic stage, but the nerve-fibres are not increased.

**Neurofibromato′sis.** Fibrosis or overgrowth of fibroid tissue on the peripheral nerves; believed to be a vice of development. See *Recklinghausen's disease.*

**Neu′rofil.** Plexus of processes of primitive organic cell-matter having their origin at the commencement of the axis-cylinder.

**Neurofron′tal.** Relating to the brain and frontal bone.

**Neuroganglii′tis** (*neuron*, nerve, *ganglion*, tumor). Inflammation of a nervous ganglion.

**Neurogastral′gia.** Gastralgia of nervous origin and not dependent on organic disease of the stomach.

**Neurogen′esis** (*genesis*, formation). The formation of nervous substance or tissue.

**Neurogenous**, nu-roj′en-us. Having an origin in nerves or nervous matter.

**Neurogeny**, nu-roj′en-e. Neurogenesis.

**Neurog′lia** (*neuron*, nerve, *glia*, glue). Perineurium of the brain. Delicate stroma of the retiform tissue in the brain and spinal cord, constituting an investing and supporting framework.

**Neurog′liar** or **Neurog′lic.** Relating to the neuroglia.

**Neuroglio′ma.** Tumor containing nervous and gliomatous elements. **N. gangliona′re**, tumor of the central nervous system, the contents of which include hyperplastic neuroglia, ganglion cells, and nerve-fibres.

**Neurog′raphy** (*neuron*, nerve, *graphe*, description). The part of anatomy describing the nerves.

**Neurohypnol′ogy.** The science of hypnotism.

**Neurohyp′notism.** Hypnotism.

**Neu′roid** (*neuron*, nerve, *eidos*, form). Resembling a nerve or nerve-substance.

**Neurokeratin′** (*neuron*, nerve, *keras*, horn). Substance entering into the composition of gray brain-matter.

**Neurokine′sis** (*neuron*, nerve, *kinesis*, movement). Stretching of a nerve.

**Neurolemmati′tis.** Neurilemmitis.

**Neurological**, nu-ro-loj′i-kal. Relating to neurology.

**Neurol′ogist.** One versed in neurology and nervous affections.

**Neurol′ogy** (*neuron*, nerve, *logos*, discourse). The specialty in medicine dealing with the nervous system.

**Neu′rolymph.** Cerebrospinal fluid.

**Neurolysin′.** A cytolysin having a specific action on nerve-cells.

**Neurol′ysis** (*neuron*, nerve, *lysis*, solution). Exhausted condition of a nerve, due to excessive stimulation.

**Neurolyt′ic.** Destructive to nerve substance.

**Neuro′ma** (*neuron*, nerve). Nerve-tumor; morbid enlargement of a nerve. Applied to subcutaneous, circumscribed, and highly painful tumors formed on the tissue of the nerves; and likewise to a small, hard, grayish tumor, neuromation, nervous ganglion, painful tubercle, tubercula dolorosa, the size of a pea, observed in the course of nerves and formed from the neurilemma. As a general rule, a neuroma is a small fibrous tumor embedded in the nerve or enveloped in the neurilemma; growth of nerve-fibres mixed with connective-tissue formation; *true neuroma.* When the end of a divided nerve becomes enlarged from fibrinous effusion, and consequently bulbous, a *traumatic neuroma* is formed. Such a neuroma—*amputation neuroma*, as it is then called—may occur after amputation. **Amputa′tion n.**, see *Neuroma.* **N. amyelin′icum**, in this form of neuroma the fibres are non-medullated. **N. cu′tis**, cutaneous tumor of connective tissue originating from the neurilemma. **N. cys′ticum**, myxoma in nerves containing cysts. **False n.**, form of tumor in which there is no formation of nerve-fibres, as fibroma, myxoma, glioma, sarcoma, carcinoma, etc., when occurring in nerves. **Gan′glionated** or **ganglion′ic n.**, a nerve tumor composed of nerve-cells. **N. myelin′icum**, n. in which the fibres are medullated. **Plex′iform n.**, formation of several fibromatous tumors along the course of one or two nerves, with hypertrophy of the nerve-fibres. **N. telangiecto′des**, a form of neuroma in which there is an excessive distribution of blood-vessels. **True n.**, see *Neuroma.*

**Neuromala′cia** or **Neuromalax′is** (*neuron*, nerve, *malakia*, softening). Softening of nerves.

**Neuromation**, nu-ro-mat′e-on. A small neuroma.

**Neuro′matoid** (*neuroma+eidos*, resemblance). Resembling neuroma.

**Neuromato′sis.** A condition in which many neuromata are coexistent.

**Neuro′matous.** Resembling neuroma; having the character of neuroma.

**Neu′romere** (*meros*, part). One of the segments in embryonic life from which the cerebrospinal axis is formed.

**Neurometas′tasis.** Metastasis to the nervous system.

**Neurome′træ** or **Neuromet′ores.** Psoæ.

**Neuromime′sis.** Simulation of disease occurring in neurotic persons.

**Neuromimet′ic.** Relating to neuromimesis.

**Neuromus′cular.** Relating to nerve and muscle. **N. spin′dle**, spindle-shaped corpuscle in muscular structure, the termination of a nerve fibril.

**Neuromyal′gia** (*neuron*, nerve, *mys*, muscle, *algos*, pain). Muscular rheumatism.

**Neuromyeli′tis** (*neuron*, nerve, *myelos*, marrow). Inflammation of the medullary matter of the nerves.

**Neuromy′elous.** Resembling nerve or medullary tissue.

**Neuromyol′ogy.** System of classifying and naming muscles with reference to the nerves; myology based upon neurology.

**Neuromyopath′ic.** Relating to disease involving nerves and muscles.

**Neuromyosi′tis.** Combination of myositis and neuritis.

**Neuromyxo′ma** (*neuron*, nerve, *myxa*, mucus). Myxoneuroma.

**Neu′ron** or **Neu′rone.** Unit of structure of the nervous system, consisting of the neural cell-body, with all its processes.

**Neurona′sal arch.** Rhinencephalic arch.

**Neuroneoplas′ma** (*neuron*, nerve, *neos*, new, *plasma*, formation). Neuroma.

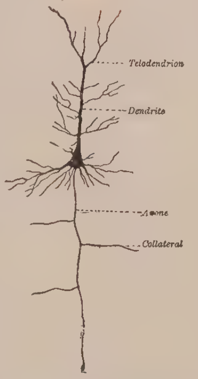
**Neuroneph′ric** (*neuron*, nerve, *nephros*, kidney). Relating to the nerves and kidneys.

**Neuron′ic.** Relating to the neuron or nerve-cell unit.

**Neuron′osus** (*nosos*, disease). Nervous disease.

**Neuronyg′me, Neuronyg′mus,** or **Neuronyx′is** (*neuron*, nerve, *nygme*, puncture). Puncture of a nerve.

**Neu′ro-occip′ital arch.** Epencephalic arch.



Neuron. Pyramidal cell from the cerebral cortex of the human adult. (Bockenek.)

**Neuroparal′ysis.** Paralysis due to loss of conductivity in the nerve supply.

**Neuroparalyt′ic.** Relating to or connected with paralysis of a nerve, as *n. ophthalmia* or *n. keratitis.*

**Neuropari′etal.** Relating to the neural arch and the parietal bone. **N. arch**, mesencephalic arch.

**Neu′ropath** (*neuron*, nerve, *pathos*, disease). A person of nervous organization liable to or exhibiting nerve diseases.

**Neuropath′ic** (*neuron*, nerve, *pathos*, affection). Belonging to disease of the nerves, neuropathy.

**Neuropatholog′ical** (*neuron*, nerve, *pathos*, disease, *logos*, description). Belonging or related to neuropathology.

**Neuropathol′ogy.** Pathology of the nervous system.

**Neurop′athy.** Disease of the nervous system. **Cerebrocar′diac n.**, nervous cardiac disease due to the pathological condition of the medulla oblongata and the cortex cerebri.

**Neurophleg′mone** (*neuron*, nerve, *phlegmone*, inflammation). Neuritis.

**Neurophlogo′sis** (*neuron*, nerve, *phlogosis*, inflammation). Neuritis.

**Neuropho′nia.** Form of hysteria in which patients utter various inarticulate sounds.

**Neurophysiol′ogy.** Physiology of the nervous system.

**Neuropi′lem** (*pilos*, felt). An interwoven mass or plexus of terminal nerve fibrils.

**Neuropla′sia** (*neuron*, nerve, *plasso*, to mould). Neuromatous diathesis.

**Neu′roplasm** (*plasso*, to form). A natural cement which holds together nervous filaments or fibrillæ; axoplasm. Protoplasm of nerve-cells.

**Neuroplas′tic.** Relating to neuroplasty.

**Neu′roplasty** (*neuron*, nerve, *plastikos*, forming). Ganglionary alteration of the peripheral nerves. Also plastic surgery of nerves.

**Neuropo′dia.** Terminal fibril of the dendrite or dendron process, telodendrite or telodendron.

**Neu′ropore.** An orifice of communication between the neural canal and the exterior in embryos of some animals.

**Neuroprosopal′gia** (*neuron*, nerve, *prosopon*, face, *algos*, pain). Trigeminal neuralgia.

**Neuropsychol′ogy.** Neurology and psychology combined.

**Neuropsychopath′ic.** Pertaining to diseases of the nervous system, especially those parts of it subserving psychic functions. **N. constitu′tion**, permanent condition of irritable weakness of the nerve-centres, especially the higher psychical ones.

**Neuropsycho′sis.** A combination of nervous and mental disease.

**Neuropur′puric fe′ver.** Cerebrospinal fever.

**Neurop′yra** or **Neuropyr′etus** (*neuron*, nerve, *pur*, fire, fever). Nervous fever; typhus mitior.

**Neuropyret′ic.** Pertaining to fever of nervous origin.

**Neuroretini′tis** (*neuron*, nerve + *retina*). Optic neuritis. Inflammation of the optic nerve and retina. Two forms are described: *ascending*, sometimes called *engorged papilla*, the inflammation commencing in the papilla or optic disk, and extending upward along the trunk of the nerve; and *descending*, in which the inflammation commences externally and travels downward to the optic disk. In *retro-ocular neuritis* the structural changes do not extend to the papilla, and do not implicate the whole trunk of the optic nerve continuously.

**Neuror′rhaphy** (*neuron*, nerve, *rhaphe*, suture). Suture of a nerve that has been divided.

**Neuro′sal.** Of the nature of or pertaining to a neurosis; originating in the nervous system.

**Neurosarco′ma.** Combination of neuroma and sarcoma. Sarcoma associated with or containing nervous tissue.

**Neurosclero′sis** (*neuron*, nerve, *skleros*, hard). Sclerosis affecting the tissue of nerves.

**Neu′rosin.** Generic name of a number of preparations containing calcium glycerophosphate.

**Neuro′sis** (*neuron*, nerve). Generic name for diseases of the nervous system, indicated by disordered sensation, volition, or mental manifestation, without any evident lesion in the structure of the parts, and without any material agent producing them. **Ac′cident n.**, n. following a severe injury; the so-called railway spine is a type. **Alcohol′ic n.**, neurosis caused by overindulgence in alcohol. **Cy′clists′ n.**, nervous affection resulting from too long continued and too rapid bicycle exercise. **Epilep′tic n.**, neurosis associated with epilepsy. **Occupa′tion n.**, see *Occupation*. **Profes′sional n.**, occupation n. **Re′flex n.**, a functional disease originating in a part or organ distinct from that to which it is referred. **Restraint′ n.**, see *Inhibitory*. **Traumat′ic n.**, accident n. **Vas′cular n.**, angioneurosis.

**Neuroskel′eton.** The skeleton of vertebrates, as contrasted with the dermoskeleton.

**Neu′rosomes** (*soma*, body). Small particles in the stroma of nerve-cell protoplasm.

**Neurospasm′.** Muscular twitching, associated with nervous disease.

**Neurospon′gium.** Inner granular layer of retina.

**Neurostear′ic acid.** A glycerophosphoric acid in which the hydrogen of the alcoholic hydroxyl is replaced by a radical of stearic acid, and one atom of phosphoric acid by the base, neurine. Acid procured from the brain, isomeric with stearic acid. **N. e′ther,** derived from phrenosin by the action of sulphuric acid and alcohol.

**Neurosthe′nia** (*neuron*, nerve, *sthene͡ia*, strength). Excess of nervous irritation; nervous irritability.

**Neurostrem′ma** (*stremma*, twist). Nerve-ganglion.

**Neurosu′ture.** Suture of a divided nerve.

**Neurota′bes.** Condition in which symptoms suggesting tabes dorsalis are caused by polyneuritis.

**Neuroten′dinous spin′dle.** Golgi's corpuscle.

**Neuroten′sion.** Nerve-stretching.

**Neurothe′le** (*neuron*, nerve, *thele*, nipple). Nervous papilla.

**Neurothelei′tis.** Inflammation of nerve-papillæ.

**Neurothe′lic appara′tus.** Corpus papillare.

**Neurothe′lion.** Small nerve papilla.

**Neurotherapeu′tics** or **Neurother′apy.** Therapeutics of nervous diseases.

**Neurothlip′sis** (*thlipsis*, irritation). Irritation of a nerve.

**Neurot′ic.** Relating to a neurosis or to the nervous system.

**Neurot′ica.** Functional nervous diseases.

**Neurot′ics.** Remedies, drugs, or poisons especially affecting the nervous system. Three classes—*cerebral neurotics*, as morphine, *spinal neurotics*, as strychnine, and *cerebrospinal neurotics*, as aconitine—are described.

**Neurotiza′tion.** Regeneration of a nerve after division.

**Neu′rotome** (*neuron*, nerve, *tome*, cutting). An instrument used by anatomists to dissect the nerves; a long, very narrow scalpel, having two edges. Also applied by Goodsir to a section of the embryonal neurospinal axis, or neuromere.

**Neurotom′ical.** Pertaining to neurotomy.

**Neurot′omy** (*neuron*, nerve, *tome*, incision). Dissection of nerves. An incised wound including a nerve.

**Neuroton′ic.** Tending to strengthen the nervous system. **N. reac′tion,** enduring contraction of a muscle after removal of the electrical excitation.

**Neurotox′ic.** Destructive to nerve substance.

**Neurotoxin′.** A cytotoxin acting specifically upon the neurons.

**Neurot′rasis.** Wound of a nerve.

**Neurotraumat′ic** (*neuron*, nerve, *trauma*, wound). Relating to or connected with injuries of nerves, as neurotraumatic eruptions.

**Neu′rotripsy** (*tribo*, to crush). Nerve-crushing.

**Neurotrophasthe′nia** (*neuron*, nerve, *trophe*, nourishment, *astheneia*, loss of strength). Malnutrition of the nervous system.

**Neurotroph′ic.** Relating to nutrition of the nervous system. Pertaining to or dependent upon trophic influence coming through the nerves.

**Neurot′ropism** (*trepo*, to turn). The attraction or the reverse condition exerted in a substance toward nerve-fibres that are in a state of regeneration.

**Neurovarico′sis.** Formation of varicose swellings on nerve-fibres. It is termed filovaricosis when affecting the axis-cylinder only; myelovaricosis when affecting the myelin sheath.

**Neu′rymen** (*neuron*, nerve, *hymen*, membrane). Neurilemma.

**Neurymeni′tis.** Neurilemmitis.

**Neurypnol′ogy.** Hypnotism.

**Neu′ta** or **Neu′tha.** A membrane which was supposed by Paracelsus to cover the eyes and ears of the fœtus in utero.

**Neu′ter.** Hermaphrodite.

**Neu′tral** (*neuter*, neither). Belonging to neither in particular. **N. mix′ture,** liquor potassii citratis. **N. reac′tion,** condition of being neither acid or alkaline. **N. salts,** secondary salts; salts exhibiting neither acid nor alkaline characters. **N. zone,** central portion of a magnet in which polarity is absent.

**Neutraliza′tion.** The rendering inactive of peculiar properties; complete counteraction of the effect of any drug; destruction of acidity or alkalinity of a solution.

**Neu′trophile.** Readily stained by neutral reagents.

**Neutrophil′ic** (*neuter*, neither, *phileo*, to love). A term applied especially to leucocytes which are readily stained by neutral reagents.

**Ne′vus.** Nævus.

**Newbould′ia læ′ris.** Tree, native of Africa, possessing astringent, tonic, and oxytocic properties.

**New-forma′tion.** Neoplasm.

**New Grana′da bark.** Variety of cinchona.

**New-growth.** Neoplasm.

**New Jer′sey tea.** Red root; small, indigenous shrub, ord. *Rhamnaceæ*, found in most parts of U. S. Root astringent, imparts red color to water. During the Revolutionary War the leaves were used as a substitute for tea. Infusion of dried leaves and seeds has been recommended in aphthous stomatitis and scarlatinous angina.

**New Zea′land flax.** Phormium tenax; used in place of sarsaparilla.

**Nex′us nervo′rum optico′rum.** Chiasm. **N. stamin′eus oc′uli,** ciliary body.

**Ngai cam′phor.** $C_{10}H_{13}O$. Variety obtained in China and Burmah by distillation of Blumea balsamifera; same composition as Sumatran.

**Ngerenger′e.** Lepra gangrænosa. Disease in New Zealand, a variety of such diseases as elephantiasis Græcorum, lepra of the Cossacks, etc. Similar affection in Jamaica is called *cacubay*.

**Ni.** Chemical symbol of nickel.

**Nican′dra anom′ala** (after Nicander, a physician of Colophon). Anisodus luridus. **N. physaloi′des,** Peruvian apple, naturalized in U. S.; berries are diuretic.

**Nicara′gua wood.** See *Cæsalpina.*

**Nic′colate.** Compound of niccolic oxide.

**Niccol′ic.** Relating to nickel.

**Nic′colite.** A mineral compound of arsenic and nickel, containing 44 per cent. of the latter.

**Nic′colum.** Nickel.

**Nick′ar tree.** Gymnoclaudus canadensis.

**Nick′el.** A white, malleable metal, symbol Ni, sp. gr. 8.8; less oxidizable than iron. Several preparations of nickel have been employed medicinally. The salts of nickel are gentle tonics, and have been given with advantage in periodic headache and neuralgia, chlorosis and amenorrhœa. **N. bro′mide,** $NiBr_2$; green, odorless crystals of acrid, burning taste, sparingly soluble in water, alcohol, or ether; obtained by action of bromine upon heated metallic nickel; used in epilepsy, melancholia, and hysteria. **N. chlo′ride,** $NiCl_3$; yellow, crystalline, unctuous salt, formed by heating nickel in a current of dry chlorine; the hydrated salt is green and very deliquescent; recommended as a tonic in anæmia. **N. carb′onyl,** volatile liquid obtained by passing a stream of carbonic oxide over finely divided nickel; its vapor causes intense headache. **N. sul′phate,** $NiSO_4 7H_2O$; green, crystalline, efflorescent; sweet, styptic taste; readily soluble in water, insoluble in alcohol; prepared by dissolving the carbonate in dilute sulphuric acid, concentrating, and crystallizing; recommended by Simpson (1852) as a tonic and antiperiodic; dose, gr. ss–j (0.032–0.065).

**Nick′er-seed oil.** Derived from bonduc seed; used as embrocation.

**Nick′ing.** Myotomy of caudal depressor muscles in horses.

**Nic′ol prism.** Prism of Iceland spar, used for polarizing light.

**Nicolai′er's bacil′lus.** B. tetani.

**Nicotia'na** (after Jean Nicot, who first introduced it into Europe about 1560). A genus of plants of the order *Solanaceæ;* tobacco. **N. a'qua,** preparation of tobacco made by adding alcohol and water to the cut fresh green leaves, and distilling; said to be sedative and diaphoretic without possessing the dangerous qualities of other preparations of tobacco. **N. mexica'na, N. mi'nor, N. pilo'ra, N, pusil'la, N. rus'tica,** or **N. trigonophyl'la,** English or wild tobacco; leaves possess the properties of tobacco, but are milder. **N. tab'acum,** *tabacum* (Ph. U. S.), *Tabaci folia* (Ph. Br.), tobacco, drunkwort. Tobacco is a violent acronarcotic, its properties seeming to depend upon the volatile alkaloid, nicotine. It is narcotic, sedative, diuretic, emetic, cathartic, and errhine. In cases of incarcerated hernia it was formerly injected into the rectum in the form of smoke or infusion. The crude oil is supposed to be the juice of "the cursed *hebenon*" described by Shakespeare as "the lep'rous distilment" poured into the ear of Hamlet's father.

**Nicotianin'.** Tobacco camphor; white, neutral, crystalline compound which separates from aqueous distillate of tobacco.

**Nicotianis'mus.** Nicotinism.

**Nicotianoma'nia.** Inordinate craving for tobacco.

**Nicotine'.** An active, colorless, volatile, strongly alkaline, very soluble alkaloid; a depressant, neurotic, and rapidly fatal poison, producing symptoms known as nicotinism or nicotism. **N. bitar'trate,** white, soluble salt, from nicotine; a convenient form of administering it in tetanus, poisoning by strychnine, etc. **N. sal'icylate,** endermal.

**Nicotin'ic.** Relating to or caused by nicotine, as *nicotinic amblyopia.* **N. acid,** $C_6H_5NO_2$, acid produced by oxidation of nicotine.

**Nic'otinism.** Condition arising from excessive use of tobacco; in addition to profound depression of the nervomuscular system there are at times severe organic disturbances, expressed by the terms "tobacco heart," "tobacco amblyopia," etc.

**Nicta'tio.** Hippus; nictation.

**Nicta'tion** or **Nictita'tion** (*nicto,* to wink). Winking; rapid motion of the eyelids, which open and shut alternately. It seems to be under the influence chiefly of the motor seventh pair of nerves, but the excitor fifth pair must likewise be in a state of integrity.

**Nic'titating.** Winking. **N. mem'brane,** see *Membrana nictitans.* **N. spasm,** a tic consisting in continuous and uncontrollable winking.

**Ni'dal.** Relating to nidus or nest; focal.

**Nidamen'tum** (*nidus,* nest). Decidua.

**Nida'tion** (*nidus,* nest). Periodical development of the epithelial lining of the body of the uterus during the intermenstrual period.

**Nidular'ion.** Mycelium of fungi.

**Nid'ulus** (dim. of nidus). The deep origin of a nerve.

**Ni'dus** (nest). Focus or point of infection; nucleus; collection of nerve-cells; nerve-centre. **N. hirun'dinis,** swallow's nest; deep fossa in the cerebellum—so called from its fancied resemblance—situated between the velum medullare posterius in front and the nodulus and uvula behind.

**Nie'meyer's pill.** A pill containing quinine, digitalis, and opium.

**Nie'pa bark.** See *Samadera indica.*

**Niewenglowski** (ne-ven-glov'ske) **rays.** See *Ray.*

**Nigel'la** (*nigre,* black, in allusion to seed). Coptis. **N. arven'sis,** wild fennel flower, has properties like those of Nigella sativa. **N. sati'va,** ord. *Ranunculaceæ;* fennel flower, nutmeg flower, devil in a bush. This small European and Syrian plant was formerly used medicinally as an expectorant and deobstruent, errhine, sialagogue, etc.

**Nigellin'.** Extract from seeds of Nigella sativa.

**Níght-blind'ness.** Nyctalopia, day-sight.

**Night-bloom'ing ce'reus.** Cactus grandiflora; flowers are used in functional cardiac troubles, angina pectoris, etc.

**Night'eyes.** Crusta genu equinæ.

**Night'mare.** Incubus.

**Night-pal'sy.** A nocturnal numbness of the extremities occurring usually in women about the climacteric.

**Night'shade, Amer'ican.** Phytolacca decandra. **Bit'tersweet n.,** Solanum dulcamara. **Com'mon n.,** solanum. **Dead'ly n.,** Atropa belladonna. **Enchant'er's n.,** Circæa lutetiana. **Gar'den n.,** solanum. **Pal'estine n.,** Solanum sanctum. **Red n.** Phytolacca decandra. **Stink'ing n.,** Hyoscyamus niger. **Vine n.,** Solanum dulcamara. **Wood'y n.** Solanum dulcamara.

**Night'-sight.** Hemeralopia, day-blindness.

**Night'-soil.** Contents of privy vaults. **N.-s. fe'ver,** typhoid fever.

**Night'-sweat.** Nocturnal hyperidrosis, especially in phthisis and hectic fever.

**Night'-terrors.** An affection of childhood in which the child awakes screaming in a great fright, as if it had dreamed of some impending danger; a kind of nightmare.

**Nigranilin'.** Anilin black, blue-black. A stain having especial affinity for ganglion-cells; used in study of central nervous system.

**Nigre'do acquisi'ta universa'lis.** Melasma universal. **N. cu'tis,** melasma. **N. scorbu'tica,** melasma caused by scurvy. **N. a so'le,** ephelides; melasma.

**Nigres'cent** or **Nig'ricans.** Becoming blackish.

**Ni'grism** or **Nigris'mus.** Pigment accumulation; chloasma; melanoderma; the reverse of albinismus; see *Melanopathy.*

**Nigrities,** ni-grish'e-eze (blackness). Melanopathy. **N. cu'tis,** melanopathy. **N. os'sium,** caries.

**Ni'gritism.** Melanopathy.

**Nigritu'do** (blackness). Melanosis. **N. pulmo'num,** melanosis pulmonum.

**Ni'gror** (blackness). Melasma.

**Nigrosin'.** $C_{36}H_{27}N_3$. Bengalin, indulin, anilin, blue-black, artificial indigo. A peculiar stain, never affecting nuclei.

**Ni'grum oc'uli** (black of eye). Pupil.

**Nig'ua.** Chigue or chigoe.

**Ni'hil al'bum.** Zinci oxidum. **N. gris'eum,** zinci oxidum.

**Ni'hilism** (*nihil,* nothing). Medical pessimism; disbelief in the efficacy of drugs.

**Nil'gue.** Plant found in Chile, employed as a febrifuge.

**Nim** or **Nrem bark.** Bark of Azadirachta indica; astringent, tonic, antiperiodic. **N. leaves,** stimulant, used locally in ulcers and obstinate skin diseases.

**Ni'ma quassioi'des.** Simaba quassioides, a native of Nepal and the Himalaya mountains; as bitter as quassia and used for the same purposes.

**Nind'sin, Nin'si,** or **Nin'zin.** Sium ninsi.

**Nine'bark.** Spiræa opulifolia; astringent, tonic, vulnerary.

**Nine-day fits.** Trismus nascentium.

**Nin'sing.** Panax quinquefolium.

**Ninth nerve.** Glossopharyngeal nerve. Hypoglossal of Willis.

**Nio'po tree.** Piptadenia peregrina of tropical America. The natives prepare an intoxicating snuff from the seeds.

**Nio'ta bark.** Bark of Samadera indica.

**Niphablep'sia** (*niphas,* snow, *ablepsia,* blindness). Snow-blindness. As a preventive Esquimaux wear goggles, "snow-eyes."

**Niphatyphlo'sis** (*typhloo,* to make blind). Production of niphablepsia.

**Nip'pers, bone.** Nippers used for removing particles of bone.

**Nip'ple.** The conical tubercle situated at the centre of the breast where the galactophorous ducts open. It is capable of erection on being excited, and is rudimentary in males. **Artific'ial n.,** an arrangement of rubber or ivory to place over the nipple when the infant sucks, employed as a protection when the nipple is tender or is in a morbid condition. **Cracked n.,** fissure of the nipple. **Cra'-**

**ter n.**, condition in which there is a depression in the breast instead of a projecting nipple. **N. line,** reference line drawn vertically through the nipple; used in physical diagnosis. **Pag′et's disease′ of the n.**, see *Paget.*

**Nip′plewort.** Lapsana, plant used for sore nipples.

**Nir′les.** Herpes phlyctænodes.

**Nir′lus.** Papular eruption sometimes following measles or scarlet fever.

**Nirvanine′** (*nirvana*, annihilation). $C_{14}H_{20}N_2O_4HCl$. Hydrochlorate of diethyl-glycoll-p.-amidooxybenzoic-methylester. Local anæsthetic; employed hypodermically in 1 to 5 per cent. solutions. It may be employed regionally or by the infiltration process. Dose, gr. iij–vijss (0.2–0.5).

**Nis′beth's chan′cre.** A form of chancre in which there are small buboes or swellings and abscesses following lymphangitis.

**Nis′bium.** A metal, symbol Nb, of a lustrous, steel-gray color, similar in its chemical action to antimony and bismuth.

**Nissl's bod′ies.** Fine chromophilic corpuscles in the nervous cell protoplasm, developed by staining.

**Ni′sus** (*nitor*, to endeavor). Straining. A voluntary retention of the breath so as to force down the diaphragm, the abdominal muscles being at the same time contracted forcibly; in this manner the contents of the abdomen are compressed and the evacuation of the fæces, urine, etc., is effected. Also vernal generative impulse in birds, etc. **N. formati′vus,** plastic force. **N. parturien′tium,** efforts or forcing during parturition.

**Nit.** The egg of a pediculus.

**Ni′ter.** Nitre.

**Niths′dale neck.** Goitre.

**Nitra′ria.** A genus of shrubs, ord. *Zygophylleæ.* **N. tridenta′ta,** supposed to be lotus tree of ancients; native of Central Asia and Northern Africa.

**Ni′tras.** Nitrate.

**Nitrata′tion.** Staining of tissues with silver nitrate.

**Ni′trate.** Azotate. A salt formed of a base and nitric acid. **N. of so′dium,** cubic nitre or nitratine; salt found in immense quantities in Chile, extensively used in the manufacture of nitric acid, and commended as a remedy in dysentery.

**Ni′trated.** Combined with nitric acid or with nitre.

**Nitra′tion.** Process or act of introducing into a compound, by substitution, the radical $NO_2$.

**Ni′tre.** Potassii nitras. **Ammoni′acal n.,** ammonium nitrate. **N. pa′per,** paper impregnated with nitrate of potassium, fumes of which afford relief to asthmatics. **Sweet spir′it of n.,** spiritus ætheris nitrosi.

**Ni′tric.** Relating to nitre and its compounds. **N. acid,** azotic acid, nitric hydrate, $HNO_3$. Nitric acid is obtained from nitre—nitrate of potassium or sodium. Its odor is suffocating; taste very acid and caustic; the acid is fuming, corrosive, liquid, colorless, and transparent; sp. gr. 1.42. Strong nitric acid is rarely used except as an application to foul, indolent ulcers or to warts. When given internally it is in the form of the *acidum nitricum dilutum.* **N.-a. test,** Heller's test, contact method of determining the presence of albumin in urine. **N. anhy′dride,** $N_2O_5$, colorless, shining, deliquescent, prismatic crystals, obtained by decomposing pure silver nitrate by absolutely dry chlorine. **N. e′ther,** erroneously used for nitrous ether. **N. magne′sian rea′gent,** Robert's reagent. **N. ox′ide,** nitrogen pentoxide.

**Nitrifi′able.** Capable of nitrification or nitration.

**Nitrifica′tion.** Decomposition of organic matters with the formation of nitrites and nitrates, a process taken advantage of in water analysis.

**Ni′trifying.** Changing ammonia into nitrous and nitric acids. **N. bacte′ria,** nitrobacteria.

**Ni′tril.** A tertiary amide, composed of ammonia in which 3 atoms of hydrogen are replaced by acid radical. Compound in which nitrogen is united to a trivalent radical.

**Ni′trite.** Salt of nitrous acid, $HNO_2$. **N. of am′yl,** see *Amyl nitrite.* **N. of eth′yl,** volatile liquid characteristic of sweet spirit of nitre.

**Nitroan′isol.** $C_7H_7NO_3$. Substance derived from anisol.

**Nitrobac′ter.** Bacillus nitrobacter.

**Nitrobacte′ria** (Winogradsky). Bacteria that have the property of changing ammonia into nitrogen acids.

**Nitroben′zene.** Nitrobenzol.

**Nitrobenzoin′ic acid.** Benzoinitric acid, formed by the action of strong nitric acid upon benzoic acid.

**Nitroben′zol.** Nitrobenzide; a substitute for oil of bitter almonds, from which it differs in containing no prussic acid. Used as a perfume and flavor, and in the manufacture of anilin; active poison.

**Nitroben′zole.** See *Oleum amygdalæ amaræ.*

**Nitrocel′lulose.** A cellulose ether, compound of nitric acid and cellulose. Name given to both guncotton and the substance from which collodion is made.

**Nitrochlo′roform.** Same as chloropicrin.

**Nitrocom′pound.** Compound of carbon by the substitution of monatomic radical $NO_2$ for H.

**Nitrodex′trose.** Nitrate of dextrose; having properties similar to those of nitroglycerin.

**Nitroer′ythrol.** Nitrate of erythrol; having properties of nitroglycerin, but less active.

**Ni′troform.** $CH(NO_2)_3$. A compound of nitrogen that is very inflammable.

**Ni′trogen** (*nitrum* + *gennao*, to generate). Azote. Colorless, tasteless, inodorous gas, incombustible and a non-supporter of combustion. Exists free in the atmosphere, forming four-fifths of its bulk. **N. monox′ide,** nitrous monoxide, nitrous oxide, protoxide of nitrogen or of azote, laughing gas, dephlogisticated nitrous gas; when respired it produces sometimes so much exhilaration as to render the appellation "laughing gas" by no means inappropriate. A safe and reliable anæsthetic in dental and minor surgical operations; action very fugacious. **N. perox′ide,** liquid of variable color, having marked antiseptic properties. **N. protox′ide,** n. monoxide.

**Nitrogenized,** ni-troj′en-ized. Azotized. Containing nitrogen or azote, as a nitrogenized aliment—animal food, for example—in contradistinction to the non-nitrogenized, or those not containing nitrogen—saccharine and oleaginous food, for example.

**Nitrogenous,** ni-troj′en-us. Containing nitrogen.

**Nitroglu′cose.** Substance obtained by the action of nitric and sulphuric acids on glucose; a vascular stimulant.

**Nitroglycerin,** ni-tro-glis′er-in. Trinitroglycerin, trinitrin, glonoin. Colorless or yellowish, oily, odorless, highly explosive liquid, having a sweet, aromatic, pungent taste, slightly soluble in water, freely so in alcohol and ether; a powerful poison, causing vasodilatation. Used in angina pectoris, Bright's disease, etc., in gradually increasing doses, beginning with one minim (0.065) of a one per cent. solution.

**Nitroglyceri′num.** Nitroglycerin.

**Nitrohydrochlor′ic acid.** Nitromuriatic acid.

**Nitro′leum.** Nitroglycerin.

**Nitrolev′ulose.** Nitrate of levulose; resembles nitroglycerin in action.

**Nitroman′nite** or **Nitroman′nitol.** $C_6H_8(NO_3)_6$. Nitrate of mannitol; resembles nitroglycerin in action.

**Nitrom′eter.** Apparatus for measuring nitrous oxide gas during the process of nitrification.

**Nitrometh′ane.** Liquid compound of methane, possessing analgesic properties.

**Nitromuriat′ic acid.** Nitrohydrochloric or hydrochloronitric acid, aqua regia. Mixture of nitric and muriatic acids in proportion of four parts to fifteen. Freshly prepared, a reddish-yellow, fuming, corrosive, poisonous liquid, having a strong odor of chlorine. Upon standing and when exposed to the light it becomes golden-yellow, then lemon-yellow, when it is therapeutically almost inert. Used as a tonic, astringent, and digestant; of special service in hepatic torpor, both internally and in the form of a bath. See *Acidum nitrohydrochloricum dilutum.*

**Nitronaph'thalene.** Compound of nitric acid and naphthalene.

**Nitropen'tane.** $C_5H_{11}NO_2$. Liquid isomeric with amyl nitrite, formed by the action of amyl iodide upon silver nitrate.

**Nitrophenis'ic acid.** Picric or carbazotic acid. Three substances have been obtained by the action of nitric acid on carbolic acid, but nitrophenisic acid is the only one having any therapeutic value.

**Nitropic'ric acid.** Carbazotic acid.

**Nitroprus'sic acid.** Nitroprusside of hydrogen, formed by the action of nitric acid on ferrocyanide of potassium. Its therapeutic value is undetermined.

**Nitrosac'charose.** Nitrate of saccharose. Explosive substance; acts like nitroglycerin, but less powerfully.

**Nitrosal'ol.** A yellow, crystalline powder used in the manufacture of salophen.

**Ni'trose.** Term including nitrous and nitric acids.

**Nitrosobacte'ria.** Bacteria which produce nitric acid by oxidation of ammonia.

**Nitrosococ'cus.** Micrococcus with nitrifying properties.

**Nitro'so-in'dol reac'tion.** See *Indol reaction.*

**Nitrosom'onas.** Bacillus nitrosomonas.

**Nitrosoni'tric acid.** Fuming nitric acid.

**Ni'trosyl.** Nitrogen dioxide acting as a univalent radical.

**Ni'trous.** Belonging to nitre. **N. acid,** unstable acid derived from nitrogen trioxide. **N. e'ther,** ethyl trioxide nitrite. **N. ox'ide,** gaseous oxide of nitrogen. **N. pow'der,** see *Potassii nitras.*

**Nitrox'yl.** Nitryl.

**Ni'trum** (*nitron*). Natron; nitre. **N. antiquo'rum,** soda. **N. cu'bicum,** sodium nitrate. **N. factit'ium,** borax. **N. flam'mans,** ammonii nitras. **N. luna're,** argenti nitras. **N. prismat'icum,** potassii nitras. **N. rhomboida'le,** sodium nitrate. **N. saturni'num,** plumbi nitras. **N. tabula'tum,** potassii nitras fusus sulphatis paucillo mixtus. **N. vitriola'tum,** potassii sulphas. **N. vitriola'tum Schroed'eri,** potassii sulphas.

**Ni'tryl.** Nitric peroxide, $NO_2$. Univalent radical assumed to exist in nitric acid and so-called nitro-compounds.

**Nit'ta tree.** Parkia biglandulosa, African locust. Clustered pods contain an edible mealy pulp.

**Nix.** Snow. **N. fu'mans,** calx viva. **N. zin'ci,** zinci oxidum.

**Nix'us.** Nisus.

**No'ah's ark.** Cypripedium luteum.

**Noasthe'nia** (*noos,* mind, *astheneia,* weakness). Mental weakness.

**No'ble.** Principal, essential. **N. cells** or **el'ements,** elements derived from the ectoderm, constituting the essential or functionating parts of the organs. **N. parts,** parts without which life cannot exist, such as the heart, liver, lungs, brain, etc.

**No'car** (*nokar*). Lethargic tumor.

**Nocar'dia farcin'ica.** Streptothrix farcinica.

**Noctambula'tion** or **Noctam'bulism** (*nox,* night, *ambulo,* to walk). Somnambulism.

**Noctur'nal** (*nox,* night). Relating to or occurring during the night. **N. blind'ness,** nyctalopia. **N. emis'sion** or **pollu'tion,** ejaculation of semen during sleep. **N. ver'tigo,** sensation of falling on dropping off to sleep.

**No'dal.** Relating to a node. **N. points,** two points on the principal axis of a refracting system, so situated that every ray that before refraction is directed to the first nodal point is after refraction directed to the second, and the incident and refracted rays are parallel. The points of intersection of convergent rays of light with the visual axis of the eye. In optics, two points in the visual axis at which converging rays meet after passing through a refracting medium. Conjugate foci.

**Nod'ding.** Forward and downward movement or dropping of the head, as from somnolency; nutatio. **N. spasm,** spasmus nutans.

**Nod'dlepox.** Syphilomania.

**Node.** A protuberance. A knuckle. Gumma. A hard concretion or incrustation which forms around joints attacked with rheumatism or gout; exostosis, articular calculus, ganglion. See also *Nodus.* **Bouchard's' n.,** Legendre's n., see *Bouchard's nodosities.* **Féréol's' n.,** see *Féréol's nodosities.* **Hay'garth's n.,** see *Haygarth.* **Heb'erden's n.,** deposit of hard nodules at the phalanges of the fingers, occurring in advanced life, due to gout, etc., or to senile changes in the articular cartilage and bone. **Hen'sen's n.,** see *Hensen.* **Legen'dre's n.,** Bouchard's n., see *Legendre's nodosities.* **Lymphat'ic n.,** lymphatic gland. **Par'rot's n.,** syphilitic osteophyte on the skull. **Ranvier's' n.,** see *Ranvier* and *Nerve.* **Schmidt's n.,** Ranvier's n. **Syphilit'ic n.,** an oblong swelling on a bone due to syphilitic periostitis.

**No'dose.** Characterized by nodes or nodosities.

**Nodo'sis.** Formation or existence of nodes.

**Nodos'ity.** Small knot-like swelling; node.

**No'dous.** Nodose.

**Nod'ular.** Pertaining to or having nodes.

**Nod'ule.** Nodulus. See *Noduli.* **N. enam'el,** see *Tooth.* **N. pulp,** outlined deposit of dentinal substance in the tissue of the dental pulp.

**Nod'uli Albi'ni.** Nodules of connective tissue found on the free edge of the auriculoventricular valves. **N. Aran'tii,** noduli Morgagnii, corpora Arantii; small sesamoid bodies situated on the periphery of the semilunar valves of the aorta and pulmonary artery for the better occlusion of the artery. **N. Morgagn'ii,** noduli Arantii. **N. nervo'rum,** nervous ganglions.

**Nodulif'erous.** Having nodules.

**Nod'ulous.** Relating to nodules.

**Nod'ulus** (dim. of *nodus,* a knot). Nodule. A small prominence or lobule in the portion of the cerebellum which forms the posterior boundary of the fourth ventricle; the nodulus is on the median line and before the uvula.

**No'dus** (a knot or tie). Node. **N. cer'ebri,** pons Varolii. **N. chirur'gicus,** surgeon's knot. **N. curso'rius,** the running centre in certain animals, situated in the corpus striatum. **N. enceph'ali,** pons Varolii. **N. extenso'rius** or **exter'nus hu'meri,** epicondyle. **N. flexo'rius,** epitrochlea. **N. guttura'lis,** Adam's apple. **N. hyster'icus,** angone. **N. inter'nus hu'meri,** epitrochlea. **N. val'vulæ at'rioventricula'ris,** a cartilaginous thickening in the wall of the heart at either side of the anterior segment of the mitral valve; also called *n. valvulæ mitralis.* **N. vi'tæ,** centrum vitale.

**Noëmatachometer,** no-e-mah-tak-om'et-er (*metron,* measure). An instrument devised by Donders to define the shortest possible time for a simple sensation or idea to be recorded.

**Noëmatachygraph,** no-e-mah-tak'e-graf (*noema,* thought, *tachys,* quick, *grapho,* to write). An instrument devised by Donders to determine the duration of more or less complex operations of the mind; consisting of a cylinder on which the time is registered by a vibrating tuning-fork.

**No'li me tan'gere** (do not touch me). Applied to various eroding ulcers, such as lupus, epithelioma, etc., of the face.

**No'ma** (*nome,* an ulcer). Cancer aquaticus, cancrum oris, gangrenous stomatitis. **N. puden'di, pudendo'rum,** or **vul'væ,** gangrene of the vagina and genitals in young children.

**Nomad'ic.** Spreading; applied to ulcers or gangrene.

**No'me.** Cancer aquaticus; phagedenic ulcer.

**No'menclature** (*nomen,* name, *calo,* to call). Terminology, glossology. A collection of terms or words peculiar to a science or art. In all sciences nomenclature is an object of importance, and each term should convey to the student a definite meaning. The Lavoisierian nomenclature was a valuable gift to chemistry, and anatomy has derived advantage from the labors of Barclay, Dumas, and Chaussier, who have given names to parts indicative of their situation. See *Muscle*. The nomenclature of pathology has required the greatest attention; and although repeated attempts have been made to improve it, the barbarous terms that disgrace it are still frequently adopted. It consists of Hebrew and Arabic terms, Greek and Latin, French, Italian, Spanish, German, English, and even Indian, African, and Mexican, often barbarously and illegitimately compounded. A want of principle in forming the technical terms of medicine is everywhere observable. They have been formed, for example: 1. From *color;* as melæna, chlorosis, scarlatina, purpura, etc. 2. From *duration;* as ephemeral, quotidian, intermittent, etc. 3. From *birds, beasts, fishes, insects,* and *plants;* as rabies canina, cynanche, urticaria, ichthyosis, etc. 4. From *persons* or *places;* as morbus herculeus, facies hippocritica, plica polonica, sudor anglicus, Bright's disease, Friedreich's ataxia, etc.

**No′mus.** Cancer aquaticus.

**Non-** (not). A prefix denoting negative, as *non-adherent,* not adherent; *non-conductor,* not a conductor of electricity or heat; *non-nitrogenous,* not nitrogenous; *non-viable,* not viable, etc.

**No′nan.** Said of malarial fever in which an exacerbation occurs every ninth day.

**Nonate′lia officina′lis.** Asthma plant growing in Cayenne; leaves are employed in asthmatic attacks.

**Non com′pos men′tis.** Not sound of mind; lunatic.

**Nonip′ara.** A woman who has had nine labors.

**No′nus** (ninth). Hypoglossal nerve of Willis. **N. hu′meri placenti′ni,** teres minor. **N. lin′guæ mus′culus,** genioglossus. **N. Vesa′lii,** peronæus tertius.

**Noostere′sis** (*noos,* intellect, *steresis,* privation). Dementia.

**No′pal.** Opuntia vulgaris.

**Nor′dau's disease.** Moral degeneracy.

**Nord′hausen acid.** N. oil of vitriol. Fuming sulphuric acid, sp. gr. 1.860 to 1.900.

**Nor′i.** Japanese gelatin used as a bacterial culture medium.

**Norm** (*norma,* a rule). Type; model; pattern; rule.

**Nor′ma.** Rule, model, line. **N. facia′lis** or **N. fronta′lis,** line drawn from in front perpendicular to the frontal plane of skull. **N. infe′rior,** line from below to vertical plane of skull. **N. latera′lis,** line perpendicular to sagittal plane of skull. **N. occipita′lis,** line from behind perpendicular to frontal plane of skull. **N. parieta′lis,** n. verticalis. **N. poste′rior,** n. occipitalis. **N. sagitta′lis,** aspect of skull seen on a mesial sagittal section. **N. tempora′lis,** n. lateralis. **N. vertica′lis,** line from above vertical to horizontal plane of skull. All these terms are used in the comparative study of crania. See *Normal.*

**Nor′mal** (*norma,* measurement, a rule). According to rule; perpendicular. **N. con′jugate diam′eter,** see *Pelvic diameters.* **N. histol′ogy,** see *Histology.* **N. ovariot′omy,** removal of a healthy ovary. **N. se′rum,** an antitoxic serum of which 0.1 c.c. neutralizes ten times the smallest fatal dose of a bacterial toxin. **N. solu′tion,** one containing in 100 c.c. sufficient of the active constituent to combine with or replace 1 gramme of hydrogen. The term *normal salt solution* is often employed incorrectly to denote a solution of sodium chloride of one-tenth this strength—a *decinormal salt solution.*

**Norm′oblast.** An erythroblast, neither larger nor smaller than the average.

**Nor′mocyte.** A non-nucleated red blood corpuscle of average size.

**Nor′ris's col′orless cor′puscles.** Red blood corpuscles from which the pigment has been dissolved out.

**Nor′ton's drops.** Liquor hydrargyri oxymuriatis.

**Nor′way** or **Norwe′gian itch.** Radzyge.

**Nose.** The organ of the sense of smell, and also the first or uppermost of the organs of respiration. See *Nares* and *Nasus.* **N. bleed,** epistaxis; Achillea millefolium. **N.-piece,** the end of the microscope tube to which the objective is attached; it is often in the shape of a pivot and carries several objectives which can be substituted one for the other by simply turning them on this pivot. **Sad′dle n.,** depression of the bridge of the nose consequent upon loss of the septum. **Tench's n.,** external os uteri.

**Nose′gay of Ri′olan.** Name given to muscles extending from the styloid process of the temporal bone.

**Nose′ma.** Disease. **N. bom′bycis,** parasite of pebrine.

**Nosemat′ic.** Pertaining to disease.

**Nosenceph′alus** (*nosos,* disease, *enkephalos,* brain). A monster whose skull is defective, the brain being more or less replaced by vascular tissue.

**Nosocar′ya.** Secale cornutum; ergot of rye.

**Nosochthonog′raphy** (*nosos,* disease, *chthon,* the earth, *grapho,* to describe). Medical topography in relation to endemic disease.

**Nosochthonol′ogy** (*nosos,* disease, *chthon,* the earth, *logos,* a description). Geographical nosology.

**Nosoco′mial** (*nosocomium,* hospital). Relating to a hospital, as nosocomial or hospital fever. **N. at′mosphere,** see *Hospitalism.*

**Nosoco′mium** (*nosos,* disease, *komeo,* to care for). Hospital. **N. psychiat′ricum,** hospital for the insane.

**Nosocrat′ic** (*nosos,* disease, *kratos,* power). Specific.

**No′sode.** Isopathic remedy; see *Isopathy.*

**Nosogen′esis, Nosogen′ia,** or **Nosog′eny** (*nosos,* disease, *genesis,* generation). Generation of disease; pathogeny.

**Nosogeog′raphy.** Medical geography.

**Nosog′raphy** (*nosos,* disease, *grapho,* to describe). A description of diseases.

**Nosohæ′mia** (*nosos,* disease, *haima,* blood). Disease of the blood.

**Nosolog′ical.** Pertaining to nosology.

**Nosol′ogist.** One skilled in nosology.

**Nosol′ogy** (*nosos,* disease, *logos,* a discourse). The classification of diseases. Pathology.

**Nosoma′nia.** Mania in regard to disease; a species of hypochondriasis.

**Nosomyco′sis.** Disease produced by fungi.

**Noson′omy** (*onoma,* name). Nomenclature of diseases.

**Nosopar′asite.** A microorganism which is not the specific cause of a disease, but which accompanies it and exerts an influence upon it.

**Nos′ophen.** Iodophen. Tetra-iodophenol-phthalein. Obtained by the action of iodine on solution of phenol-phthalein. Yellow, insoluble powder, used as a dusting-powder, and internally in gastro-intestinal catarrh. Antiseptic and bactericide. **N. so′dium,** antinosin.

**Nosopho′bia** (*nosos,* disease, *phobos,* fear). Intense dread of disease.

**Nos′ophyte** (*nosos,* disease, *phyton,* vegetable). A pathogenic microorganism.

**Nosophytoder′mata** (*derma,* skin). Phytoparasitic skin diseases, as favus, mentagra, and chloasma.

**Nosopoiet′ic** or **Nosopoet′ic** (*nosos,* disease, *poieo,* to make). That which causes disease.

**Nos′os.** Disease.

**Nosotax′y** (*nosos,* disease, *taxis,* arrangement). Distribution and classification of diseases.

**Nosotox′ic.** Relating to nosotoxin.

**Nosotoxico′sis.** The effect of a nosotoxin as distinguished from autointoxication.

**Nosotoxin′.** A toxin elaborated by a pathogenic microorganism, as distinguished from a poisonous product of metabolism in the animal body, or autotoxin.

**Nosotroph′ic** (*nosos,* disease, *trophe,* nourishment). Supplying material for disease. Nourishing to the sick.

**Nosot′rophy.** Proper care of the sick.

**Nostal′gia** or **Nostal′gy** (*nosteo,* to go home, *algos,* pain). Homesickness; an affection produced by desire to return to one's country, characterized by melancholia and wasting, sometimes followed by death. **N. complica′ta,** nostalgia accompanied by fever.

**Nostal′gic.** Pertaining to or affected with nostalgia.

**Nostol′ogy** (*nostos*, return home, *logos*, description). The science of the tissue changes, diseases, etc., of old age; geratology; gerontology.

**Nostoma′nia.** Extreme nostalgia.

**Nos′trate.** Endemic.

**Nos′trils.** Nares.

**Nos′trum** (*noster*, our own). Arcanum; a secret or quack medicine.

**No′tal** (*notos*, the back). Dorsal.

**Notal′gia** (*notos*, back, *algos*, pain). Notialgia; pain in the back; spinal irritation.

**Notanencepha′lia** (*notos*, back, *a*, priv., *enkephalos*, brain). Monstrosity marked by absence of the back of the cranium. See *Notencephalus*.

**Notch.** A depression or indentation of varying shape and size, observed on the circumference or edges of certain bones, as the sacrosciatic, sphenopalatine, and pterygoid notches. Notches in soft parts are generally called fissures. **Acetab′ular n.,** situated in boder of the acetabulum near the obturator foramen. **Ante′rior n. of cerebel′lum,** see *Incisura cerebelli*. **Aor′tic n.,** an undulation, as indicated by the sphygmograph, synchronous with the reflux of blood closing the aortic valves. **Cerebel′lar n.,** one of the two intervals separating the hemispheres, anterior and posterior. **Clavic′ular n.,** depressed part at superior end of sternum, articulating with clavicle. **N. of the con′cha,** incisura intertragica. **Cot′yloid n.,** see *Cotyloid cavity*. **Ethmoid′al n.** is situated on the frontal bone and joins the ethmoid. **Great sciat′ic n.,** see *Incisura ischiadica major*. **Interclavic′ular n.,** semilunar notch of the sternum. **Intercon′dylar n.,** intercondylar fossa. **Interver′tebral n.,** indentation or depression on each pedicle of the vertebræ, which, with the corresponding notch of the adjoining vertebra, forms one of the intervertebral foramina. **Ischiat′ic n.,** indentation on the ischium which becomes a foramen by the insertion of ligaments; also one of two: the greater, situated at inferior part of the pelvis, is formed by the sacrum and ilium, and gives passage to the sciatic nerve, pyramidalis muscle, and superior gluteal vessels and nerves; the lesser is much the smaller, and is separated from the greater by the sciatic spine; it gives passage to the tendon of the obturator internus and internal pudic vessels and nerves. **Ju′gular n.,** posterior boundary of jugular foramen. **Na′sal n.,** cavity at internal edge of facial portion of the upper maxillary bone. **Parot′id n.,** the triangular space comprised between the parotid edge of the inferior maxillary bone and the mastoid process, so called because it lodges the parotid gland. **Poplit′eal n.,** indentation on the head of the tibia. **N. of Rivi′nus,** small gap in bony ring to which the membrana tympani is attached. **Sacrosciat′ic n.,** ischiatic n. **Scap′ular n.,** the notch on the superior edge or costa of the scapula, which is converted into a foramen by means of a ligament, and gives passage to the suprascapular nerve. **Semilu′nar n.,** indentation in the scapula for the suprascapular nerve; fourchette of the sternum. **Sib′son's n.,** see *Sibson*. **Sig′moid n.,** notch situated between the coronoid and condyloid processes. **Supraor′bital n.,** supraorbital foramen. **Suprascap′ular n.,** notch in the upper border of the scapula. **Supraster′nal n.,** interclavicular n. **Ver′tebral n.,** intervertebral n.

**Note-blind′ness.** Amusia.

**Notencepha′lia.** See *Notencephalus*.

**Notenceph′alocele.** Congenital encephalocele at the back of the head; congenital absence of the back part of the cranium.

**Notenceph′alus** (*notos*, back, *enkephalos*, brain). Form of exencephalus in which the encephalic mass projects through a fissure in the occipital bone; usually the contents being fluid or semifluid, the tumor is a hydrencephalocele. The condition is termed *notencephalia* or *notanencephalia*.

**Noth′nagle's symp′tom.** Paralysis of the facial muscles associated with tumor of the optic thalamus.

**No′throus.** Torpid.

**No′thus.** False.

**Notial′gia.** Notalgia.

**No′tochord** (*notos*, back, *chorde*, a string). Chorda dorsalis, embryonic spinal cord.

**Notoglos′sus** (*notos*, a ridge, *glossa*, tongue). Longitudinal muscular fibres on the upper surface of the tongue, immediately beneath the mucous membrane—*lingualis superficialis*.

**Notom′elus.** Monster with supernumerary limbs attached to the back.

**Notomyeli′tis.** Myelitis.

**Notomy′elus** (*notos*, back, *myelos*, marrow). Spinal cord.

**Noto′nia corymbo′sa.** Shrub growing in south of India; fresh juice has been employed in rabies.

**No′tophore.** Monster with spina bifida.

**No′tos** or **No′tus.** Dorsum or back; vertebral column.

**Nour′ishment.** Aliment.

**Nous.** Intellect.

**Nox′ious** (*noceo*, to injure). Deleterious.

**Nubec′ula.** A slight cloudiness, as in urine, or of the cornea.

**Nu′bile.** Marriageable; of an age to marry. Generally, the period of puberty is considered to be the age at which both sexes are nubile. They are truly nubile, however, only when fitted to procreate healthy and vigorous children, and competent to discharge their duties as parents. See *Puberty*.

**Nubil′ity.** State of being nubile or marriageable.

**Nucha,** nu′kah. The nuke, hinder part, or nape of the neck. Part where the spinal marrow begins. The *ligamentum nuchæ* is a strong ligament in the neck, proceeding from one spinous process to another, and inserted into the occipital bone. It is very strong in quadrupeds. It is called in them *paxywaxy*, *paxwax*, *packwax;* formerly, *faxwax* and *taxwax*.

**Nuchal,** nu′kal. Relating or appertaining to the nucha or nape of the neck. **N. fas′cia,** cervical fascia enveloping the trapezius. **N. fos′sa,** triangular depression on the median line at the back of the neck just below the occipital bone. **N. re′gion,** region of the nucha or nape of the neck. **N. tu′bercle,** prominence caused by the spine of the seventh cervical vertebra.

**Nucin′.** A crystalline substance in the pericarp and leaves of Juglans regia.

**Nucis′ta** (*nux*, a nut). See *Myristica moschata*.

**Nu′cit.** A crystallizable, non-fermentable sugar found in the leaves of Juglans regia, probably identical with inosit.

**Nuck's canal′.** See *Canal of Nuck*. **N.'s diver-tic′ulum,** serous or peritoneal covering of round ligament of uterus. **N.'s gland,** Blandin's gland.

**Nu′clear.** Pertaining to a nucleus, or to a central group of nerve-cells. **N. cell,** nucleated nerve-cell; made up of nucleus, with a thin layer of protoplasm, seen particularly in the sensory area of the cortex of the cerebrum. **N. fis′sion,** increase of nuclei by fission or division of the original solitary nucleus. **N. lay′ers,** strata of central layers of retina. **N. lay′ers, in′ner,** layers between inner and outer molecular layers, subdivided into layer of spongioblasts and layer of ganglion retinæ. **N. lay′ers, out′er,** inner portion of visual cell-layer, composed of cone-granules and rod-granules. **N. paral′ysis,** paralysis caused by injuries or affections of nuclei of origin of nerves in the brain. **N. spin′dle,** spindle-shaped arrangement of fibres and chromatin fragments into which the nucleus is transformed during karyokinesis. **N. zone,** uniform arrangement of nuclei or superficial fibres formed around the crystalline lens.

**Nu′cleated.** Having a nucleus or central particle. Applied to the elementary cells of organized tissues, the vital properties of which are seated in the nucleus. See *Cytoblast*. **N. cell,** see *Cytoblast*.

**Nu′cleic** or **Nuclein′ic acid.** $C_{30}H_{52}N_9P_3O_{17}$. Organic acid obtained from nuclein and from spermatozoa. Combined with proteids the nucleic acids form nucleins.

**Nuclein,** nu′kle-in (*nucleus,* kernel). A phosphorized proteid, compound of nucleinic acid and a base; which last, when decomposed, sets free adenin, guanin, sarkin, and xanthin, all or singly. Nuclein is obtainable from spermatozoa, pus corpuscles, internal organs, as the spleen, thyroid and thymus glands, the liver, testicles, marrow of bone, brain substance, yolk of egg, yeast-cells, etc. Nuclein derived from the blood, through the agency of the white corpuscles, passes through the system of lymphatics and blood-vessels, exerting a nutritive, stimulant, and antiseptic effect throughout the system. Nuclein, artificially prepared, is stimulant, nutritive, and antiseptic; it is given in anæmia, malarial diseases, affections of the digestive organs, cutaneous affections dependent on insufficient elimination or faulty oxidation, nervous derangements, diphtheria, etc.; dose, gr. xv–xxx (1.0–2.0). **N. ba′ses,** bases, such as adenin, xanthin, etc., derived from ultimate decomposition of nuclein. **N. ther′apy,** treatment of various nutritional and zymotic disorders by means of nuclein. **Yeast n.,** $C_{40}H_{59}N_{16}O_{22}(P_2O_5)_2$, nuclein from yeast; microbicide.

**Nuclein′ic acid.** Nucleic acid.

**Nu′cleo-albu′min.** Nuclein procured from protoplasmic cells; containing phosphorus, and nucleic acid in slight quantity. It is noticed in the urine in leucocythæmia, diphtheria, some forms of renal inflammation, etc., and is found in caseinogen (of milk), mucin of biliary secretion, and in mucus of urine.

**Nucleo-albuminu′ria.** A rare condition in which nucleo-albumin is found in the urine, in diseases which involve the integrity of the epithelial lining of the uriniferous tubules or of the bladder.

**Nucleochyle′ma.** Substance occupying meshes of reticulum of nucleus.

**Nu′cleochyme.** Fluid-like hyaline substance contained in a cell-nucleus.

**Nucleohis′ton.** Nucleoproteid or albuminous body existing in leucocytes in combination with the acid leuconuclein; it has also been obtained from the thymus gland. Also albuminous extract obtained from the spleen; used as a bactericide and antitoxin.

**Nucleohy′aloplasm.** Nucleoplasm; karyoplasm. See *Chromatin.*

**Nucleo-idioplas′ma** (*nucleus,* kernel, *idios,* special+*plasma*). Idioplasm of a nucleus.

**Nucle′olar.** Resembling a nucleolus.

**Nucleoli′nus** or **Nucleol′ulus.** Small particle within a cell-nucleolus.

**Nu′cleoloid.** Body resembling a nucleolus.

**Nucle′olus** (dim. of nucleus). A nucleus within a nucleus; see *Cytoblast.* **N. prick′le,** nucleolus attached to nucleus, which surrounds it, by delicate fibrils.

**Nucleomi′crosome.** Small segment of chromatin-fibre.

**Nu′cleon.** Phosphocarnic acid.

**Nu′cleoplasm** (*nucleus*+*plasso,* to form). Substance from which the fibrils of germinal vesicles are formed. Also substance from which nuclear reticulum and envelope are formed.

**Nucleoplasmat′ic** or **Nucleoplas′mic.** Relating to nucleoplasm.

**Nucleoplas′tic.** Nucleoplasmatic.

**Nucleopro′teid.** Native compound of nuclein and a proteid. A nuclein having a proportionately large amount of albumin. Casein, vitellin, and cell-nuclein are nucleoproteids.

**Nucleother′apy.** Nuclein therapy.

**Nucleotoxins′** (*nucleus,* kernel, *toxikon,* poison). Poisonous ptomains present in and derived from the pathological products of one disease, which may be employed to counteract or destroy the morbific agencies causative of other diseases. Such is the treatment of cancer by the nucleotoxins of erysipelas.

**Nu′cleus** (kernel, stone of a fruit). Central differentiated part. Differentiated body in protoplasm of a cell containing chromatin; it may or may not be separated from protoplasm by a membrane. Group of cells forming central termination or origin of a nerve or bundle of nerve-fibres. Motor centre of a muscle. Centre of functional activity of an organ. **N. abducen′tis,** abducens nucleus. **N. accesso′rii,** spinal accessory nucleus. **N. accesso′rius acus′tici,** see *Auditory nuclei.* **N. ambig′uus,** in medulla oblongata a nuclear mass in form of a gray cord directed dorsoventrally along fibres of origin of vagus and glossopharyngeal nerves. **N. amyg′dalæ,** amygdaloid tubercle. **N. amygdalifor′mis,** nucleus of Luys. **N. angula′ris,** see *Auditory nuclei.* **N. ante′rior,** n. ambiguus. **N. of ante′rior root-zone,** detached group of nerve-cells found in medulla oblongata, ventrally and radially from lowest fibres of origin of hypoglossal nerves. **N. ante′rior thal′ami,** see *Thalamic nuclei.* **N. anterolatera′lis,** nucleus funiculi lateralis. **N. arcifor′mis,** small mass of gray matter among superficial arcuate fibres of medulla. **N. arcua′tus triangula′ris,** a nucleus within the thalamus. **Au′ditory n.,** nucleus in the medulla oblongata from which the auditory nerve proceeds; see *Auditory nerve.* **Balbia′ni's n.,** yolk nucleus of the ovum. **N. basa′lis,** olivary nucleus. **N. of Bechter′ew,** see *Bechterew.* **Béclard's′ n.,** see *Béclard.* **N. blastoder′matis,** germinal spot. **Blu′menau's n.,** external cuneate n. **Bur′dach's n.,** cuneate n. **N. bul′bi for′nicis,** gray matter within the corpora mammillaria. **Cau′dal n.,** origin of the oculomotor nerve under the aqueduct of Sylvius. **N. cauda′tus,** caudate nucleus. **N. centra′lis infe′rior,** mass of gray cells in pons, rather diffusely scattered, situated near raphe and posterior border. **N. centra′lis supe′rior,** similar mass near dorsal and anterior surface. **N. cerebel′li,** dentate nucleus of cerebellum. **N. cine′reus,** posterior gray commissure; see *Spinal commissures.* **Clav′ate n.,** nucleus of gray matter in funiculus gracilis in medulla oblongata. **Cleav′age n.,** nucleus following fusion of the two sexual pronuclei. **N. cochlea′ris,** see *Auditory nuclei.* **Cu′neate n.,** mass of gray nervous matter in the funiculus cuneatus. **Exter′nal c. n.,** small, detached nucleus of gray mtter lying superficially to nucleus cuneatus. **N. cursa′rius,** portion of gray matter in head of corpus striatum, irritation of which in animals produces an irresistible tendency to run or jump. **N. of Darksche′witsch,** see *Darkschewitsch.* **N. denta′tus cerebel′li,** dentate nucleus of cerebellum. **N. denta′tus oli′væ,** olivary nucleus. **N. denta′tus par′tis commissura′lis,** nucleus olivaris superior. **N. denticula′tus,** dentate nucleus of cerebellum. **N. den′tis,** pulp of tooth. **N. of Die′ters,** outer or superior auditory nucleus; see *Auditory nuclei.* **Duval's′ n.,** see *Duval.* **Ed′inger's n.,** see *Edinger.* **N. embolifor′mis,** nucleus of gray matter in cerebellum lying close to corpus dentatum, toward median line. **N. exter′nus thal′ami,** see *Thalamic nuclei.* **N. fas′ciæ denta′tæ,** irregularly arranged pyramidal cells in centre of fascia dentata. **N. fascia′lis,** fascial nucleus. **N. fastig′ii,** roof nucleus. **N. fibro′sus lin′guæ,** septum fibrosum linguæ. **N. fimbria′tus,** dentate nucleus of cerebellum. **N. funic′uli anterio′ris,** nucleus of anterior root-zone. **N. funic′uli cunea′ti,** cuneate nucleus. **N. funic′uli grac′ilis,** clavate nucleus. **N. funic′uli latera′lis,** in medulla oblongata, portion of continuation of anterior horn of spinal cord, which has become separated by fibres crossing from lateral column to opposite anterior pyramid. **N. funic′uli ter′etis,** a nucleus lying in funiculus teres, floor of fourth ventricle, mesially and dorsally from hypoglossal nucleus. **N. gelatino′socartilagin′eus** or **N. gelatino′sus,** nucleus pulposus. **Ger′minal n.,** cleavage n. **N. globo′sus,** nucleus of gray matter in cerebellum, near corpus dentatum, to median and under side of nucleus emboliformis. **N. glossopharynge′i,** glossopharyngeal nucleus. **Goll's n.**, clavate n. **N. grac′ilis**, tract of cineritious matter in the funiculus gracilis. **Gray n.**, gray or cineritious matter of the spinal cord. **N. hypoglos′si**, hypoglossal nucleus. **N. hypoglos′si accesso′rius** or **anteroexter′nus**, nucleus funiculi lateralis. **Hypothal′amic n.**, n. of Luys. **N. infe′rior acus′tici**, accessory auditory nucleus; see *Auditory nuclei*. **N. inter′nus thal′ami**, see *Thalamic nuclei*. **Intraventric′ular n.**, corpus caudatum. **N. jux′ta-oliva′ris**, nucleus of pyramid. **Köl′liker's n.**, see *Kölliker*. **Laryn′geal n.**, nucleus from which laryngeal nerves originate. **N. latera′lis**, claustrum. **N. latera′lis ante′rior**, anterior division of nuclei funiculi lateralis. **N. latera′lis me′dius**, nucleus ambiguus. **N. latera′lis poste′rior**, posterior division of nucleus funiculi lateralis. **N. latera′lis thal′ami**, see *Thalamic nuclei*. **Lau′ra's n.**, Dieters's n. **N. lemnis′ci latera′lis**, collection of cells in lateral lemniscus tract, about on level of upper termination of fourth ventricle. **N. lenticula′ris**, lenticular nucleus; gray centre of the extraventricular portion of the corpus striatum. **N. lenticula′tus** dentate nucleus of cerebellum. **N. lentifor′mis**, nucleus lenticularis. **N. len′tis**, inner harder portion of crystalline lens. **N. of Luys**, lens-shaped collection of nerve-cells, of a clear brown color, under optic thalamus, extending from red nucleus behind nearly to corpus albicans. **N. media′lis thal′ami**, see *Thalamic nuclei*. **N. medulla′ris** or **N. medulla′ris cerebel′li**, medullary nucleus. **Mo′tor n.**, collection or mass of motor nerve-cells from which passes a motor nerve. **N. oculomoto′rii**, oculomotor nucleus. **N. oli′væ**, olivary nucleus. **N. oli′væ accesso′rius**, accessory olivary nucleus. **N. oli′væ accesso′rius exter′nus** or **N. oli′væ accesso′rius latera′lis**, collection of gray matter in medulla, dorsally from olive. **N. oli′væ accesso′rius media′lis**, pyramidal nucleus. **N. oli′væ accesso′rius supe′rior** and **N. oliva′ris supe′rior**, gray nucleus in pons behind trapezium and between roots of sixth and seventh nerves; also applied by Luys to red nucleus. **N. of Pan′der**, upper enlarged extremity of the white part of yolk of the hen's egg. **N. pedun′culi cer′ebri**, nucleus of Luys. **N. pedun′culi cona′rii**, ganglion habenulæ. **N. of Per′lia**, see *Spitzka's nucleus*. **Pon′tile n.** or **N. pon′tis**, scattered multipolar cells of gray matter in the pons. **Postpyram′idal n.**, nucleus gracilis. **N. pulpo′sus**, jelly-like mass at centre of intervertebral disks—vestige of notochord. **N. of pyr′amid** or **pyram′idal n.**, collection of gray matter found in anterior area of medulla, just behind pyramid and ventrally from olive; lesser n. of pyramid is nucleus arciformis. **N. quadrigem′ini**, masses of gray matter occupying central portions of corpora quadrigemini, anterior and posterior. **N. quin′tus**, n. of the trigeminus or fifth pair of cranial nerves. **N. reticula′ris**, situated dorsally in pons, widest about region of root of trigeminus. **Rol′ler's n.**, see *Roller*. **N. ru′ber**, n. tegmenti. **Segmenta′tion n.**, cleavage n. **Sie′merling's n.**, see *Siemerling*. **Sperm n.**, n. of a spermatozoon. **Spher′ical n.**, n. of gray matter where the hemisphere joins the middle lobe of the cerebellum. **Spitz′ka's n.**, see *Spitzka*. **Stil′ling's n.**, see *Stilling*. **N. supe′rior thal′ami**, see *Thalamic nuclei*. **N. tænifor′mis**, claustrum. **N. tec′ti**, roof nucleus. **N. tegmen′ti**, reddish-gray nerve-cells in the tegmentum cerebri. **N. trape′zius**, collection of cells in pons among fibres of trapezius. **N. va′gi**, vagus nucleus. **N. vestibula′ris**, auditory n. **Vitel′line n.**, product of fusion of the two sexual pronuclei in the vitellus. **Voit's n.**, see *Voit*. **West′phal's n.**, see *Westphal*. **White n.**, white nervous matter of the corpus dentatum.

**Nu′cula terres′tris.** Bunium bulbocastanum.

**Nu′dipes.** Having naked feet, as in some animals.

**Nu′el's space.** Intercellular space between outer rods of Corti and outer hair cells.

**Nuhn's glands.** Glands of Blandin. Two glands at the apex of the tongue, beneath the mucous membrane and the longitudinal muscular fibres, formed by the styloglossus and longitudinalis inferior muscles.

**Nuisance**, nu′sanse. In common law, that which causes hurt, inconvenience, or damage to any one; in public health legislation, that which is injurious to health.

**Nuke.** Nucha.

**Nule′kneed.** Knock-kneed.

**Nullip′ara** (*nullus*, none, *pario*, to bring forth). A woman who has not given birth to a child, though not a virgin.

**Nullipar′ity.** State or condition of a nullipara.

**Nullip′arous.** Relating to a nullipara.

**Numb.** Torpid.

**Numb′ness.** State of being torpid.

**Numer′ical meth′od.** See *Method*.

**Num′miform.** Coin-shaped; nummular.

**Num′mular** (*nummus*, money). Nummulated. Coin-shaped, as the sputa in phthisis, when they flatten at the bottom of the vessel, like a piece of money; applied also to the mode of aggregation of the red corpuscles of the blood—nummular rolls.

**Nummula′ria.** Lysimachia nummularia.

**Num′mulated.** Nummular.

**Nummula′tion.** Aggregation of red blood corpuscles into rolls, resembling rolls of money.

**Nunn's cor′puscles.** Bennett's corpuscles.

**Nu′phar ad′vena.** Yellow pond-lily, spatterdock, ord. *Nympheaceæ;* indigenous in Canada and the United States. The root is a popular tonic, and the fresh root bruised is applied as a cataplasm. **N. lu′teum**, Nymphæa lutea.

**Nuptial′ity.** Proportion of number of marriages to number of people in a given locality.

**Nurse.** One who suckles her own child or another's. One that has the care of a sick person. A *dry nurse* is one who gives every care to a child, but does not suckle it; a *monthly nurse* is one who attends a woman during the month of her parturient state; a *wet nurse* is a woman who suckles the child of another. A *hospital nurse* is one whose field of occupation is in a hospital; a *trained nurse*, one who has received systematic instruction and discipline to fit him or her for duty in the sick-room; a *professional nurse* is one whose sole occupation is the care of the sick, in contradistinction to the voluntary nursing of family or friends. As a verb, to care for the sick or for an infant; to *nurse artificially* is to bring up a child on artificial food.

**Nurses' contrac′ture.** Tetany.

**Nurs′ing.** Lactation. Also care of the sick.

**Nurs′ling.** An infant that is fed at the breast.

**Nuss′baum's cell.** One of the four forms of epithelial cells constituting the peptic glands. **N.'s narco′sis**, condition produced by a full dose of morphine, followed by inhalation of chloroform.

**Nut.** The seed of a fruit enclosed in a hard, thick envelope. Glans. **Barba′does n.**, see *Jatropha curcas, Ben, Betel, Bonduc*. **Brazil′ n.**, see *Pichurim beans*. **But′ter n.**, Juglans cinerea. **Cem′bros n.**, see *Pinus cembra*. **Clear′ing n.**, Strychnos potatorum. **French n.**, Juglans regia. **Ground n.**, Apios tuberosa, Arachis hypogea. **N.-oil**, a drying fluid oil obtained from kernels of English walnuts. **Para′ n.**, see *Pichurim beans*. **Phys′ic n.**, Jatropha curcas. **Pine n.**, Pinus sabiniana; see *Pinus picea*. **Pistach′io n.**, see *Pistacia vera*. **Poi′son n.**, see *Strychnos nux vomica*. **Purg′ing n.**, see *Jatropha* and *Croton tiglium*. **Rat′tle n.**, Nelumbium luteum. **Sas′safras n.**, see *Pichurim beans*. **Soap n.**, see *Sapindus saponaria*. **Mal′abar n. tree**, adhatoda. **Vom′ic n.**, nux vomica. **Wa′ter n.**, Nelumbium luteum. **Zir′bel n.**, see *Pinus picea*.

**Nuta′tion** (*nuto*, to nod). Nodding. Also a constant oscillation of the head, by which it moves involuntarily in one or more directions.

**Nuta′tor cap′itis.** Sternocleidomastoideus.

**Nut′gall.** See *Quercus infectoria*. **N. oint′ment**, powdered nutgalls 1, benzoinated lard 9 (U. S. Ph.). **Tinc′ture of n.**, see *Tinctura gallarum*.

**Nut′grass.** Indigenous; root aromatic; used in cholera.

**Nut′meg.** See *Myristica moschata.* **N. but′ter,** see *Myristica.* **N. ce′rate,** yellow wax 1, olive oil 2, expressed oil of nutmeg 6; melt together. **N. flow′er,** nigella. **N. liv′er,** cirrhosis of the liver, or condition of that organ dependent on imperfect circulation, from local obstruction or from heart trouble. **Oil of n.,** see *Myristica.* **N. tree,** Myristica fragrans.

**Nu′trient** (*nutrio,* to nourish). Giving nourishment. Food or other nourishing material. **N. ar′tery,** medullary artery. **N. canal′,** passage by which medullary artery enters a bone. **N. fora′mina,** openings by which nutrient arteries penetrate bones. **N. ves′sel,** a blood-vessel supplying the marrow of a bone.

**Nutril′ity.** Metabolism. Ability to perform a nutritive function.

**Nutri′men.** Aliment.

**Nu′triment.** Aliment. Anything that nourishes.

**Nutriment′al.** Alimental, alimentary; having qualities of food or nutriment.

**Nutrimen′tum.** Aliment; pabulum.

**Nutri′tion** (*nutrio,* to nourish). Nutrition is that function by which the alimentary matter already elaborated by the various organic actions loses its own nature and assumes that of the different living tissues, to repair their losses and maintain their strength. Sometimes used in a more extended signification to express the whole series of actions by which the two constant movements of composition and decomposition are accomplished in organized bodies. Nutrition would then comprehend digestion, absorption, respiration, circulation, and assimilation; the latter being nutrition properly so called. **Anor′mal n.,** term proposed as a substitute for inflammation. **N. treat′ment,** restorative treatment in pneumonia, etc., consisting in judicious stimulation and nourishing diet.

**Nutri′tional.** Relating to nutrition.

**Nutri′tious.** Nutritive; having the quality of nourishing, as nutritious food, nutritious lymph, etc.

**Nu′tritive.** Nutritious; also relating to nutrition; hence the nutritive functions, or those concerned in nutrition. **N. ar′teries,** arterial branches which enter the *foramina nutricia* of long bones and penetrate to the medullary membrane. **N. yolk,** portion of ovum containing most yolk-granules, and serving principally as a food reservoir in distinction from the formative yolk.

**Nutrito′rium.** The apparatus for nutrition, considered as a whole.

**Nu′trose.** Soluble albumin, a dietetic article for the sick; a tasteless combination of casein and sodium.

**Nux** (a nut) **aromat′ica.** See *Myristica moschata.* **N. avella′na,** Corylus avellana (nut). **N. barbaden′sis,** Jatropha curcas. **N. becui′ba,** ibicuiba. **N. castan′ea brasilien′sis,** Brazil nut. **N. cathar′tica america′na,** Jatropha curcas. **N. gal′læ,** see *Quercus cerris.* **N. jug′lans,** Juglans regia. **N. med′ica,** coco of the Maldives. **N. metel′la,** Strychnos nux vomica. **N. meth′el,** Datura stramonium. **N. moscha′ta,** see *Myristica moschata.* **N. myris′tica,** see *Myristica moschata.* **N. pista′cia,** see *Pistacia vera.* **N. unguenta′ria,** see *Myristica moschata.* **N. vom′ica** (Ph. U. S. and Br.), the official name of the seeds of *Strychnos nux vomica* (which see); dose, gr. j–v (0.065–0.32). The official preparations are: *Extrac′tum nu′cis vom′icæ;* dose, ⅙–½ (0.01–0.032). *E. n. v. flu′idum* (U. S.) or *liq′uidum* (Br.); dose, ♏j–iij (0.065–0.2). *Tinctu′ra n. v.;* dose, ♏v–xv (0.32–1.0).

**Nyade′lia.** Tree growing in Malabar, where it is used in pulmonary affections; seeds have purgative properties.

**Nyctal′gia** (*nyx,* night, *algos,* pain). Pain occurring at night chiefly, as the oseteocopic pains of syphilis.

**Nyc′talope.** One who suffers from nyctalopia.

**Nyctalo′pia** (*nyx,* night, *alaos,* blind, *ops,* eye). Night-blindness; see *Hemeralopia.*

**Nyc′talopy.** Nyctalopia.

**Nyctamblyo′pia.** Night-blindness.

**Nyctan′thes.** Arbor tritis; Indian mourner. Plant growing in India, where the seeds and flowers are employed as a cardiac tonic.

**Nyc′terine.** Nocturnal.

**Nyctob′asis** or **Nyctoba′tia.** Somnambulism.

**Nyctopho′bia** (*phobos,* fear). Morbid fear of night.

**Nyctopho′nia.** Ability to speak only at night.

**Nyctu′ria.** Incontinence of urine manifesting itself at night.

**Nyg′ma** (*nygma,* a prick). Punctured wound.

**Nygmat′icus.** Pertaining to a puncture or stab.

**Nym′pha.** Labium minus. See *Nymphæ.*

**Nym′phæ.** Labia minora or interna; pudenda minora. Two membranous folds arising from the lateral parts of the prepuce of the clitoris and descending on the inner surface of the labia majora; terminating by becoming gradually thinner about the middle of the circumference of the vaginal orifice; formed each of two folds of mucous membrane of the vulva, and containing in their substance a thin layer of spongy erectile tissue. Their use seems to be—not, as was once supposed, to direct the course of the urine, which notion gave rise to their name (after the fabulous water nymphs), but to favor the elongation and dilatation of the vagina in pregnancy and labor. The word *nymphe* has also been used synonymously with clitoris. **N. pen′dulæ,** pendulous labia.

**Nymphæ′a ad′vena.** Nuphar advena. **N. al′ba,** white water lily, ord. *Ranunculaceæ.* Demulcent, antaphrodisiac, emollient, and slightly anodyne remedy. **N. in′dica,** N. nelumbo. **N. lu′tea,** yellow water lily, used for the same purposes as *Nymphæa alba.* **N. nelum′bo,** Egyptian bean; the fruit is eaten raw in Egypt and some neighboring countries; considered to be tonic and astringent. **N. ma′jor lu′tea,** N. lutea. **N. odora′ta,** sweet-scented water lily, sweet water, or white pond, or toad lily, cow or water cabbage. An indigenous plant, growing in most parts of the United States in fresh-water ponds and along streams, having large, white, beautiful, sweet-scented flowers. Root is very astringent and bitter. Sometimes made into a poultice and used as a discutient. **N. umbilica′lis,** N. lutea.

**Nym′phar.** Nymphæa alba.

**Nym′phe.** Clitoris. See *Nymphæ.*

**Nymphi′tis.** Inflammation of the nymphæ.

**Nympholep′sy.** State of one rapt or entranced. Also nymphotomy.

**Nymphoma′nia** (*nymphe,* a bride, *mania,* fury). An irresistible and insatiable desire in women for the venereal act. It occurs in those particularly who possess a nervous temperament and vivid imagination, especially if excited by improper language, masturbation, etc. In the commencement the sufferer is a prey to perpetual contests between feelings of modesty and impetuous desires. At an after period she abandons herself to the latter, seeking no longer to restrain them. In the last stage the obscenity is disgusting, and the mental alienation, for such it is, becomes complete.

**Nymphoma′niac.** One suffering from nymphomania.

**Nymphomani′acal.** Affected with nymphomania.

**Nymphon′cus** (*onkos,* tumor). A morbid tumefaction of the nymphæ.

**Nymphot′omy** (*tome,* section). Excision of the nymphæ. The operation is had recourse to when they are the seat of cancer or gangrene, or when they are so large as to interfere with walking or coition. Nymphotomy is the circumcision of the female. Some authors have used the term for amputation of the clitoris.

**Nys′sa.** Tupelo. A genus of plants of the order *Cornaceæ.* **N. can′dicans,** Ogeechee lime, grows in swamps of Georgia and Florida; also **N. capita′ta**

**N. grandidenta′ta,** or **N. uniflo′ra,** large tupelo, cotton gum, grows in Southern United States. The spongy roots of these species are used for corks and surgical tents.

**Nystag′miform.** Resembling nystagmus.

**Nystag′mus** or **Nystax′is** (*nystagmos*, nodding). A partial, involuntary, rotatory, or oscillatory movement of the eyeball. *Nystagmus rotatorius* (rotatory nystagmus) or *oscillatorius* is a spasmodic affection of the muscles of the eye, generally appearing in infancy; sometimes in conjunction with congenital cataract. **Lat′eral n.,** oscillation of the eye from side to side. **Mi′ners′ n.,** variety of nystagmus occurring among coal miners. **N. mis′tus,** coexistence of oscillatory and rotatory nystagmus. **Ro′tatory n.,** n. in which the movements occur as a rotation around the visual axis. **Ver′tical n.,** upward and downward oscillations of the eyeball.

**Nysta′leus.** Somnolent, sleepy.

**Nys′ten′s law.** Rigor mortis begins in the masticatory muscles and passes downward, involving all the muscles successively, the lower extremities last.

**Nyx′is** (*nysso*, to pierce). Puncture; paracentesis.

# O.

**O.** Symbol for oxygen. Abbreviation for pint.

**Oak.** Quercus. **O. bark,** dried bark of smaller branches and young stems of *Quercus robur;* astringent. **Black o.,** Quercus tinctoria. **Com′mon o.,** Quercus robur. **Dy′er′s o.,** Quercus infectoria. **O. galls,** nutgalls, obtained from Quercus lusitanica. **Jeru′salem o.,** Chenopodium botrys. **O. lungs,** Lichen pulmonarius. **O. man′na,** Diabekir and Armenian manna, obtained from leaves of Quercus vallonea and Q. persica; consists chiefly of grape sugar. **Poi′son o.,** Rhus toxicodendron. **Red o.,** Quercus rubra montana. **Sea o.,** Fucus vesiculosus. **Span′ish o.,** Quercus rubra montana. **White o.,** Quercus alba.

**Oak′um.** The untwistings of rope, especially tarred rope, formerly used in surgical dressings.

**Oäm′ma.** Audition; also the ear.

**Oärial′gia.** Ovarian neuralgia.

**Oär′ic** (*oarion,* ovary). Relating to the ovary.

**Oär′icele.** Ovarian hernia.

**Oärio-** (*oarion,* ovary). See *Ovario-.*

**Oäri′tis.** Ovaritis; oöphoritis.

**Oär′iule** (*oarion,* ovary, *ule,* cicatrix). Corpus luteum.

**Oär′ium.** Ovary.

**Oats.** Avena. **Wa′ter o.,** Zizania aquatica.

**Ob-** (L.). In composition, on, before, over, against, toward; at times only intensive; at other times it means inversely. Before *c* and *f* it is often changed into *oc, of,* and before *p* always into *op.*

**Obaudi′tion** (*audio,* to hear). Hardness of hearing; incomplete deafness.

**Obdormi′tion** (*dormio,* to sleep). The state of being asleep; also numbness and prickling in the extremities from pressure on the nerve trunk, the limb being said to be "asleep."

**Obduc′tio lega′lis.** Legal post-mortem examination.

**Obduc′tion.** A medicolegal autopsy.

**O′Beirne′s sphinc′ter.** Thick fasciculus of muscular fibres in the rectum just below its connection with the descending colon. **O′B.′s tube,** a long, flexible tube for high injection in cases of obstinate constipation.

**Obelæ′a raph′e** (*obelos,* a spit). Sagittal suture.

**Obe′liac.** Relating to the obelion.

**Obe′liad.** Toward the obelion.

**Obe′lion.** Point on median line in sagittal suture between the two parietal foramina, used in craniometry.

**Obese′.** Excessively corpulent.

**Obe′sitas** (fatness). Obesity. **O. col′li,** prominence of the neck from obesity. **O. cor′dis,** fatty degeneration of the heart. **O. nim′ia,** conversion into or formation of fat. **O. vis′cerum,** accumulation of fat in the intestines.

**Obe′sity.** Polysarcia. Excessive corpulence. The principal systems of treatment for reduction of obesity or for its prevention are those of Banting, Ebstein, and Oertel, all of whom enjoin exercise and abstention from carbodydrates. Ebstein advises the use of fats. Oertel restricts the quantity of fluids used.

**O′bex.** Thin layer of white matter crossing the posterior median fissure of the medulla at calamus scriptorius.

**Obfusca′tio** (*obfusco,* to make dark). Amaurosis.

**Ob′itus** (*obeo,* to die). Death; dead.

**Ob′ject.** The end or aim toward which an action is directed. **O. blind′ness,** condition in which objects are distinctly seen, but do not have any significance in the mind of the observer; mind-blindness; apraxia. **O. glass,** objective of a microscope.

**Objec′tive.** An object glass; combination of lenses used next to the object in a compound microscope. Also applied to symptoms, as objective symptoms, or symptoms which are apparent to the examiner, in contradistinction to subjective symptoms or those perceived only by the patient. **O. cone,** cone of light proceeding from an object, the apex of which is on the object and the base on the cornea. **O. lig′ament,** thin, fibrous band, apparently a detached portion of interosseous membrane, extending from the coronoid process of the ulna to the radius just below the tubercle. **O. line of clav′icle,** trapezoid line. **O. line of fib′ula,** postero-internal border, from the inner side of the head to interosseous crest at the lower fourth, giving attachment to the fascia separating the tibialis posticus from superficial muscles. **O. line of lower jaw, exter′nal,** impression for depressor muscles, extending downward and forward from anterior border of ramus. **O. line of lower jaw, inter′nal,** mylohyoid ridge. **O. line of ra′dius,** upper part of the anterior border, downward and outward from the tuberosity, affording attachment to supinator brevis, flexor sublimis digitorum, and flexor longus pollicis muscles. **O. line of thy′roid,** line for insertion of the sternothyroid and thyrohyoid muscles on the great wing of the thyroid cartilage. **O. line of tib′ia,** popliteal line. **O. line of ul′na,** ridge from the posterior extremity of the lesser sigmoid cavity to the posterior border, giving attachment to the supinator brevis. **O. sensa′tions,** see *Sensations.*

**Oble′sion.** Absence or deficiency of some functions.

**Ob′ligate** (*obligo,* to tie). Under restraint; bound; existing in a certain limit, as *obligate parasite,* which exists in no other way than as a parasite. Obligate is the antithesis of facultative. **O. a′erobe,** a microorganism that must have oxygen in order to develop. **O. an′aerobe,** a microorganism that cannot adapt itself to growth in an atmosphere containing oxygen.

**Oblini′tion** (*lino,* to besmear). Inunction.

**Oblique′.** Anything inclined or which deviates from the vertical line. Anatomists have given this name to certain muscles which have a unique direction as regards the plane that divides the body into two equal and symmetrical halves. **O. mus′cles of the abdo′men,** two in number: 1. *Obliquus externus abdominis, grand* or *external oblique.* One of the broadest muscles of the body, situated at the lateral and anterior part of the abdomen, flat and quadrilateral. Attached above to the outer surface and lower edge of the last seven or eight ribs; below, to the anterior third of the external lip of the crista ilii; before, it terminates at the linea alba, a broad and strong aponeurosis which covers the rectus and presents toward the inferior parts two very solid fibrous fasciculi, which are inserted—the one at the symphysis, the other at the spine of the pubis—under the name of *pillars of the abdominal ring.* These pillars leave between them an opening which forms the inferior orifice of the inguinal canal. The obliquus externus abdominis depresses the ribs and carries them backward during a strong expiration. It impresses on the chest a movement of rotation, and bends the thorax upon the pelvis, and conversely. It also contracts the abdominal cavity. 2. *Obliquus internus abdominis, internal oblique,* is broad, especially anteriorly, thin, and irregularly quadrilateral, like the preceding, beneath which it is situated. Attached, above, to the inferior edge of the cartilages of the fifth, fourth, third, and second ribs; below, to the anterior two-thirds of the interstices of the crista ilii, to the posterior part of the crural arch, and to the pubis; behind, to the spinous processes of the last two lumbar vertebræ, and to those of the first two portions of the sacrum; before, to the linea alba. Its upper fibres run obliquely upward and forward; the middle are horizontal; and the lower pass obliquely downward and forward. These last, in the male, are dragged down through the inguinal ring when the testicle descends, and form the two fasciculi of the cremaster. The *obliquus internus* resembles the o. externus in function. **O. mus′cles of the eye** are two in number: 1. *Obliquus superior oculi, trochlearis,* situated at the inner and upper part of the orbit, is small, round, fusiform, and reflected upon itself in the middle of its course. Behind, it is attached to the inside of the foramen opticum; opposite the internal orbital process it becomes a small, round tendon, which slides in a cartilaginous pulley fixed to the os frontis, and is reflected at an acute angle to proceed downward and outward, to attach itself to the outer and back part of the globe. This muscle carries the globe forward and inward, producing a movement of rotation, which directs the pupil downward and inward. This is conceived to be an involuntary muscle, as well as the next. In sleep, when power over the straight or voluntary muscles of the organ is nearly lost, the eye is given up to the oblique muscles, which lodge the transparent cornea under the upper eyelid. At the approach of death the same thing is observable; hence the turning up of the eye at such time is not an evidence of agony or suffering, but of insensibility. 2. *Obliquus inferior,* situated at the anterior and inferior part of the orbit. It is flat and attached to the inner and anterior part of the orbital surface of the superior maxillary bone, on the outside of the lacrymal gutter; from thence it passes outward and backward, and terminates by an aponeurosis at the posterior and inner part of the globe of the eye. It carries the globe of the eye inward and forward, and directs the pupil upward and outward. **O. mus′cles of the head,** two in number: 1. *Obliquus superior,* situated at the sides of and behind the articulation of the head; it is flat and attached, on the one hand, to the top of the transverse process of the atlas, and on the other terminates at the occipital bone beneath the inferior curved line, and sometimes also at the mastoid region of the temporal bone. It extends the head, inclining it to one side. 2. *Obliquus inferior capitis,* situated at the posterior part of the neck and head. It is round, fusiform, attached to the spinous processes of the axis, and proceeds to terminate behind and below the summit of the transverse process of the atlas. It impresses on the first vertebra and the head a movement of rotation, which turns the face to one side. **O. pro′cesses,** articular process. **O. ridge of mo′lar tooth,** thick ridge of enamel connecting the anterior internal cusp with the posterior external cusp in the upper molars. **O. ridge of trape′zium,** eminence on the palmar surface of the trapezium, giving attachment to the ligamentum carpi volare proprium. **O. vein of heart,** Marshall's vein, small vein in vestigial fold of the pericardium, remains of fetal left superior cava.

**Obliq′uity.** State of being oblique, as o. of the fetal head, o. of the pelvis, o. of the uterus, etc.

**Obli′quus.** Oblique. **O. abdom′inis exter′nus mi′nor** or **O. abdom′inis secun′dus,** rare muscle arising from the tenth or eleventh rib, and passing to Poupart's ligament, sheath of rectus, or middle of crest of ilium (rectus lateralis abdominis). **O. acceso′rius oc′uli,** gracillimus oculi. **O. ascen′dens,** o. internus abdominis. **O. auric′ulæ,** a few muscular fibres on the median surface of the external ear, from eminentia conchæ to eminentia fossæ triangularis. **O. au′ris,** laxator tympani. **O. cap′itis infe′rior** or **ma′jor,** small muscle arising from spinous process of axis, inserted into transverse process of the atlas. **O. cap′itis supe′rior** or **mi′nor,** small muscle arising from transverse process of the atlas, passing up and back to be inserted between the curved lines of the occipital bone. **O. col′li supe′rior,** see *Longus colli.* **O. descen′dens exter′nus,** see *Oblique muscles of abdomen.* **O. inter′nus abdom′inis,** see *Oblique muscles of abdomen.* **O. ma′jor,** o. externus abdominis, o. inferior capitis, o. superior oculi. **O. mi′nor,** o. internus abdominis. **O. mi′nor cap′itis,** o. superior capitis. **O. mi′nor oc′uli,** o. inferior oculi; see *Oblique muscles of the eye.* **O. supe′rior cap′itis,** see *Oblique muscles of the head.* **O. supe′rior oc′uli,** see *Oblique muscles of the eye.*

**Obli′terated** (*oblitero,* to efface). A vessel or duct is said to be obliterated when its walls have approximated and contracted such an adhesion to each other that the cavity has completely disappeared.

**Oblitera′tion.** Matting or growing together of organic parts, as the walls of a duct. Complete extirpation or extinction.

**Obliv′ion.** Forgetfulness; amnesia. **Inert′o.,** lethargy.

**Oblo′bium.** Antilobium; antitragus.

**Oblonga′ta.** Medulla oblongata.

**Oblonga′tal.** Relating to the medulla oblongata.

**Obmutes′cence.** Aphonia.

**Obnubila′tion** (*obnubilo,* to cover with clouds). Giddiness. Obscurity. Beclouding.

**Obrang′.** Plant of Guinea, employed in decoction in orchitis.

**Observa′tion.** Act of examining a thing by means of the external senses. Employed in several acceptations. It expresses: 1. The action of observing. 2. The aggregate of knowledge afforded by observation. In French it means the case or history of the phenomena presented by a patient in the course of a disease. **Meth′od of o.,** numerical method; see *Method.*

**Obses′sion.** Disordered condition of intellect, in which the patient imagines himself possessed of demons.

**Obsoles′cence.** State of becoming old and useless; cessation of normal growth and action.

**Ob′solete.** Out of use; also deficient in development.

**Obstet′ric** or **Obstet′rical** (*obsto,* to stand before). Relating or appertaining to obstetrics, as obstetric auscultation, obstetric exploration, etc. **O. chair,** labor chair. **O. con′jugate,** see *Pelvic diameters.* **O. hand,** special position of the hand and fingers in making an obstetric examination. **O. paral′ysis,** birth-palsy.

**Obstetri′cian.** One who practises obstetrics.

**Obstet′rics.** Tocology, tokology. Art of midwifery. The medical specialty which has to do with pregnancy, childbirth, and the puerperium.

**Obstet′rist.** Accoucheur.

**Obstet′rix.** Midwife.

**Obstipa′tion** (*obstipo,* to cram close). Obstinate constipation. Lateral curvature of the spine. **Al′vine o.,** constipation. **O. tenes′mus,** tenesmus.

**Obstip′itas cap′itis** or **col′li.** Torticollis.

**Obstruc′tion.** Clogging, closing of a passage. In pathology, applied to various forms of obstruction, such as the valvular, mitral, and aortic, to obstruction of the bowels, pancreatic duct, etc.

**Obstruct′ive.** Causing or caused by obstruction.

**Ob′struent.** A medicine which closes the orifices of ducts or vessels.

**Obstupefa′cient** (*stupefacio,* to benumb). Narcotic.

**Obstupes′cence.** Stupefied condition resulting from mental or physical shock.

**Obsu′tural.** Situated against or opposed to a suture.

**Obtrunca′tion** (*obtrunco,* to cut off). Decollation.

**Obtund′** (*obtundo,* to beat against, and therefore to blunt the edge). To dull, to diminish the acuteness, as of pain.

**Obtun′dent.** Benumbing tactile sensibility or lessening pain.

**Ob′turate fora′men.** Obturator foramen.

**Obtura′tion.** Infarction; obstruction; detention in canals or cavities of any substance that is morbid either from quantity or quality. Plugging.

**Obturatococcyge′us.** Portion of the levator ani muscle arising from the spine of the ischium.

**Ob′turator.** An instrument adapted for closing an opening caused by a wound or disease, as *obturator of the palate.* Also a name given in anatomy to several parts connected with the obturator foramen. **O. ar′tery** arises most commonly from the hypogastric. It is, however, frequently given off from the epigastric; a matter of importance to be determined in cases of femoral hernia. Of 500 obturator arteries examined by M. J. Cloquet, 340 were furnished by the hypogastric and 152 by the epigastric or crural. When it arises from the hypogastric it passes forward and outward, and then turns horizontally into the cavity of the pelvis, to issue from this cavity by the opening left at the upper part of the obturator membrane. When, on the contrary, the obturator artery arises from the epigastric or the crural, it descends obliquely inward behind the os pubis to the obturator foramen. At its exit from the pelvis the artery divides into two branches, a posterior and an anterior, which are distributed to the muscles of the anterior and superior part of the thigh. **O. bur′sa,** a bursa beneath the tendon of the internal obturator muscle. **O. canal′,** passage for obturator vessels and nerves through upper part of obturator foramen. **O. exter′nus,** muscle of hip arising from outer surface of obturator membrane and rami of ischium and pubes, inserted into digital fossa of great trochanter. **O. fas′cia** covers deep surface of o. internus, constituting its perimysium; its upper part forms a portion of pelvic fascia. **O. fora′men,** thyroid foramen, a large opening of oval or triangular form in the anterior part of the os innominatum, on the outside of the symphysis pubis and beneath the horizontal ramus of the os pubis. This foramen is closed by a membranous ligament. **O. groove,** deep oblique furrow on under surface of horizontal ramus of pubis for o. vessels and nerves. **O. her′nia,** hernia through o. foramen. **O. lig′ament** or **mem′brane,** *subpubic membrane,* a fibrous membrane fixed to the whole circumference of the obturator foramen, except above, where an opening remains for the passage of the vessels and nerves of the same name. **O. mus′cles,** two in number: 1. *O. externus,* situated at the anterior and inner part of the thigh. It is broad, flat, and triangular; attached on the one hand to the anterior surface of the os pubis, to that of the ischium and to the anterior surface of the obturator ligament; its fleshy fibres converge to the tendon inserted at the inferior part of the cavity of the great trochanter; it rotates the thigh outward. 2. *O. internus,* situated almost entirely in the pelvis, arises from the inner surface of the obturator ligament, and from the posterior part of the circumference of the obturator foramen, inserted by means of a strong tendon running between the two portions of the gemini into the cavity at the root of the great trochanter, after having turned upon the ischium, which forms for it a kind of pulley; it also rotates the thigh outward. **O. nerve,** proceeds principally from the second and third lumbar nerves, descends into the pelvis, gains the obturator foramen, gives branches to the obturator muscles, and divides, behind the abductor primus and pectinalis, into two branches: *anterior,* whose branches are distributed to the first two adductors, gracilis, and integuments; *posterior,* distributing its ramifications to the obturator externus and third adductor. **Acces′sory o. n.,** an occasional branch to the hip-joint and pectineus muscle. **O. plex′us,** formed by veins surrounding o. foramen; discharges through o. vein. **O. tu′bercles,** eminences on either side of the obturator groove where the o. membrane expands over it. The posterior or superior is where the edge of the acetabulum meets the o. foramen; the anterior or inferior is on the descending ramus of the pubis. **O. vein** has, ordinarily, the same arrangement as the artery; it is common, however, to find it emptying into the epigastric, while the corresponding artery proceeds from the hypogastric, and conversely.

**Obtuse′.** Dull, said of an angle or the edge of a physical object, and also of the mind; slow of comprehension.

**Obtu′sion** (*obtundo,* to blunt). Blunting of sensation.

**O′ca.** Oxalis tuberosa.

**O′cab.** Sal ammoniac.

**Occa′sional cuta′neous nerve.** An occasional branch of obturator nerve, descending along border of sartorius to inner side of knee, communicating with internal saphenous nerve. Many other nerves, arteries, and veins are *occasional,* but do not receive that distinctive name.

**Occip′ital.** Belonging to the occiput. **O. ang′le,** one indicating inclination of plane of foramen magnum, with reference to line from opisthion to lower border of orbit (Daubenton), or from opisthion to nasion or basion to nasion (Broca), or with reference to basicranial axis. Angle between lines drawn from inion to lambda and to opisthion (Lissauer). Also posterosuperior angle of parietal bone. **O. arc,** arc measured on the surface from lambda to opisthion. **O. a′rea,** see *Areas of skull.* **O. ar′tery** arises from the posterior part of the external carotid, beneath the parotid; proceeds backward, passes between the mastoid process and the transverse process of the atlas; reaches the occipital bone and divides into two branches, ascending posterior and interior, distributed to the neighboring mucles and ligaments. **O. ar′tery of the brain,** branch of posterior cerebral supplying occipital lobe. **O. bone,** situated at the posterior and inferior part of the cranium, which it assists in forming. It is flat, symmetrical, and curved upon itself. It presents: 1. An *occipital* or *posterior surface,* which is convex, and has, upon the median line, the basilar surface, the foramen magnum—through which passes the spinal cord with its membranes and vessels—the external occipital crest, the external occipital protuberance; and, at the sides, the upper curved line, large, rough arched ridge, or transverse arch, lower curved line, the posterior condyloid fossæ, the condyles for the articulation of this bone with the atlas, and the anterior condyloid fossæ, pierced by a foramen for the passage of the ninth pair of nerves. 2. A *cerebral* or *anterior surface.* On the median line are the basilar fossæ, the inner orifice of the foramen magnum, the internal occipital crest, the internal occipital protuberance, the cruciform spine, a channel which lodges the termination of the straight sinus, and, on each side, the occipital fossæ—superior or cerebral and inferior or cerebellous, and separated by a groove which lodges the lateral sinus. 3. The surfaces of the occipital bone are separated by four ridges and four angles. Two superior edges articulate with the parietal bones; the two lower join the temporal; and the anterior angle, the basilar process, is united to the sphenoid. In extremely rare cases Hyrtl found a flat eminence, about the size of a hazelnut, at the occipital insertion of the rectus capitis lateralis, containing cells which communicated with those of the mastoid process; he termed it *pneumatic occipital bone.* **O. con′dyles,** the two condyles of the occipital bone which articulate with the atlas. **O. convolu′tions,** situated upon occipital lobe of brain. On the convex surface are three, the superior, the middle, and inferior, or first, second, and third. The *cuneate lobule,* a triangular lobule seen on median aspect, belongs to the first. These connect, by small annectant convolutions, with convolutions of the frontal and temporosphenoidal lobes; they are united posteriorly by the *descending* convolution, which is C-shaped and embraces the forked extremity of the calcarine fissure. Upon the tentorial surface the following convolutions pass without notable change into those of the lobes lying in front: *Superior occipitotemporal*, lying between the calcarine and collateral fissures, and continuous in front with the uncinate convolution; the *inferior occipitotemporal* lies between the collateral fissure and inferior temporal sulcus, and extends from posterior extremity of the hemisphere to near the anterior extremity of the temporosphenoidal lobe. **O. diam′eter, max′imum,** diameter of skull from asterion to asterion. **O. em′issary vein,** small branch occasionally originating from torcular Herophili, passing through a foramen in occipital protuberance to one of the occipital veins. **O. fontanelle′,** see *Fontanelle*. **O. fora′men,** foramen magnum. **O. fos′sæ,** concavities on cerebral surface of o. bone; superior or cerebral and inferior or cerebellar. **O. glands,** suboccipital glands. **O. groove,** depression on mastoid portion of temporal bone for o. artery. **O. line of Daubenton′,** see *Daubenton's line*. **O. lobe,** postero-inferior portion of hemispheres; pyramidal in shape, with convex, median, and tentorial surfaces; upon the median surface, bounded by the parieto-occipital sulcus; on the convex surface, less distinctly by the transverse occipital, or, according to some, anterior occipital sulcus; upon the tentorial surface it passes into the temporal lobe. **O. lob′ule,** cuneate lobule. **O. mus′cle,** many anatomists have given this name to the posterior fasciculus of the *occipitofrontalis*, which see. **O. nerve,** the great occipital nerve, internal branch of the posterior division of the second cervical, supplies complexus and skin of o. region. The small occipital nerve, branch of cervical plexus, derived from second and third cervicals, ascends along posterior border of sternomastoid to region behind the ear, supplying the integument. A portion sometimes arises separately from the plexus, and is distributed to the region of the mastoid process; this is called the second small occipital nerve. The internal branch of the posterior division of the third cervical sometimes pierces the trapezius and ramifies in the integument over the occipital protuberance, and is then known as the third small occipital nerve. **O. point,** point on occipital bone and in mesial plane farthest removed from the glabella. Also point of spherical field of regard behind the head, diametrically opposed to the principal fixation point. **O. pole,** rounded end of occipital lobe of cerebrum. **O. protu′berances,** two prominent elevations on o. bone: *external*, at junction of superior curved lines and o. crest, gives attachment to ligamentum nuchæ; *internal*, on inner surface in nearly corresponding situation, at intersection of the internal o. crest with the transverse ridge, to which the tentorium is attached. **O. re′gion,** occiput. **O. sec′tion,** transverse section vertically through the centre of the occipital lobe. **O. sec′tor,** area in median plane of skull between lines drawn from hormion to lambda and inion (Lissauer). **O. si′nus,** passage for venous blood within falx cerebelli, extending from posterior spinal veins to torcular Herophili; sometimes double. **O. sul′ci,** furrows on convex surface of o. lobes of brain. *Anterior o. s.*, running obliquely upward and backward from præoccipital notch; placed by some in parietal lobe. *Inferior o. s.*, near lateral edge of o. lobe. *Middle o. s.*, slight and inconstant, about midway between the other two. *Transverse o. s.*, directed outwardly from a little behind parieto-occipital fissure; believed to be homologous with external perpendicular fissure of ape's brain. **O. tri′angles,** measurements of o. region proposed by Welcker. *Superior o. t.*, base, biparietal diameter, apex at inion. *Inferior o. t.*, base, bimastoid diameter, apex at inion. Lateral o. triangles are triangles between these. **O. vein,** its roots follow exactly the course of the branches of the artery, and unite into a single trunk which opens into the internal jugular vein, and sometimes into the external. **O. ver′tebra,** o. bone, so called with reference to vertebral theory of the skull. See *Vertebræ*.

**Occipita′lis.** Subcutaneous muscle of occipital region, rising from superior curved line of o. bone, inserted into the epicranial aponeurosis. **O. ma′jor nerve,** see *Occipital nerves*. **O. mi′nor, O. transver′sus,** muscle frequently found arising from inner portion of superior curved line of o. bone, proceeding outward to be inserted upon tendon of the sternomastoid muscle or upon the bone.

**Occipit′ium.** Occiput.

**Occip′ito-an′gular.** Relating to occipital lobe and angular gyrus.

**Occip′ito-ante′rior.** Having the occiput directed forward; said of the fœtus in relation to the abdomen of the mother; see *Presentation*.

**Occip′ito-atlan′tal.** Occipito-atloid.

**Occip′ito-at′loid.** Having reference to the occiput and atlas. **O.-a. articula′tion** is the articulation of the condyles of the occipital bone with the superior articular cavities of the atlas. It is strengthened by two ligaments, the one anterior, the other posterior, called occipito-atloid or occipito-atlantal ligaments; the one extends from the anterior, the other from the posterior arch of the atlas to the corresponding portion of the circumference of the foramen magnum.

**Occip′ito-ax′ial.** Occipito-axoid.

**Occip′ito-ax′oid.** Relating to the occipital bone and the axis or second vertebra. **O.-a. articula′tion,** the connection of the occipital bone with the axis or second vertebra, although these bones are not really articulated, but are merely retained in apposition by three strong ligaments, the posterior of which is called occipito-axoid or occipito-axial, and the two others odontoid. Some describe two layers—superficial or posterior common ligament; deep, occipito-cervical, or cervicobasilar.

**Occipitobregmat′ic.** Relating to the occiput and bregma.

**Occipitocal′carine.** Relating to both occiput and calcar. **O. fis′sure,** postcalcarine fissure, see under *Fissure*.

**Occipitocen′tral.** Relating to the occipital lobe and central convolutions, as *o. tract*.

**Occipitocer′vical.** Relating to the occiput and neck.

**Occipitocot′yloid.** With the occiput (of the fœtus) directed toward the acetabulum of the mother; said of a fetal presentation.

**Occip′itodex′tro-ante′rior, Occip′itodex′tro-poste′rior.** First and fourth positions of the fœtus; see *Presentation*.

**Occipitofron′tal.** Relating to occipital and frontal regions. **O. aponeuro′sis,** epicranial aponeurosis. **O. diam′eter,** distance between the occipital and frontal protuberances; about 4½ inches in fœtus at term.

**Occipitofronta′lis.** Occipital muscle. The majority of anatomists call by this name the whole of the fleshy plane, with the epicranial or coronal aponeurosis which covers the head from the occiput to the forehead; attached by its posterior fasciculus to the two outer thirds of the upper curved line of the occipital bone, and to the outer surface of the mastoid portion of the temporal; and by its anterior fasciculus terminates at the eyebrow, where it becomes confounded with the superciliaris, pyramidalis nasi, and orbicularis palpebrarum. By the contraction of its anterior fasciculus it draws forward a part of the integuments of the cranium. It wrinkles the skin of the forehead transversely, and may also contribute to open the eye by its decussation with the orbicularis palebrarum. The posterior fasciculus draws backward a part of the skin of the cranium, and assists in stretching the common aponeurosis.

**Occipitohæ′mal arch.** Pectoral arch.

**Occipitohy′oid mus′cle.** An anomalous muscle, apparently an appendage to the digastric and stylohyoid, arising from the o. bone, and passing over the sternocleidomastoid to its insertion upon the hyoid bone.

**Occip′itolæ′vo-ante′rior, Occip′itolævo-poste′rior.** Second and fifth positions of the fœtus.

**Occipitolat′eral.** Occipitocotyloid.

**Occipitomas′toid.** Relating to the occipital bone and the mastoid process. **O. su′ture,** suture between the occipital bone and the mastoid process of the temporal bone.

**Occipitomenin′geal.** Belonging to the occipital bone and to the dura mater. **O. ar′tery,** a branch of the vertebral given off to the dura mater at its entrance into the cranium.

**Occipitomen′tal.** Relating to both occiput and chin. **O. diam′eter,** distance from the posterior fontanelle to the chin; about 5¼ inches in the fœtus at term. **O. sling,** device for the correction of prognathism, consisting of a cup for the chin and a cap for the occiput, connected by straps.

**Occipito-odon′toid.** Relating to the occipital bone and odontoid process of atlas.

**Occipitopari′etal.** Relating to the occipital and parietal bones.

**Occipitopetro′sal.** Relating to the occipital bone and petrous portion of the temporal bone.

**Occipitopharynge′us.** Supernumerary muscle arising from the basilar process of o. bone, inserted into the pharyngeal wall.

**Occipitoposte′rior.** With the occiput directed toward the sacrum of the mother; said of position assumed by the fœtus; see *Presentation.*

**Occipitoscapula′ris.** Rhombo-occipitalis.

**Occipitostaphyli′nus.** Portion of superior constrictor of pharynx arising from pterygoid process, palate bone, or soft palate, passing backward to be inserted upon the occipital bone.

**Occipitotem′poral.** Relating to the occipital and temporal regions. **O. convolu′tions,** those common to occipital and temporal lobes. **O. sul′cus,** collateral fissure.

**Oc′ciput** (*ob,* against, *caput,* head). Back part of the head, formed by the occipital bone. **Soft o.,** softening and thinness of the occipital bone; occipital craniotabes.

**Occlu′dent.** Term applied to the parts of teeth which meet in occlusion.

**Occlu′sal.** Relating to occlusion, as *occlusal surface;* see *Surfaces of teeth.*

**Occlu′sion** (*occludo,* to shut up). Sometimes signifies simply the transient approximation of the edges of a natural opening, *occlusion of the eyelids,* for example; at others, imperforation, as *occlusion of the pupil, vagina,* etc. The manner in which the upper teeth close upon the lower. **O. of the intes′tines,** any modification in the calibre of the intestinal canal which may be sufficient to arrest the progress of the fæces. **Plane of o.,** a flat surface touching the most prominent points of each tooth of a denture.

**Occult′ diseas′es.** Latent diseases.

**Occupa′tion diseas′es or neuro′ses.** Nervous disorders characterized by spasmodic symptoms upon attempting the movements peculiar to an habitual occupation; such are milkers′, telegraphers′, writers′ cramp, etc. **O. neural′gia,** neuralgic pain accompanying a neurosis caused by the nature of the occupation of the individual. **O. spasm or tic,** spasmodic neurosis caused by the occupation of the individual.

**Ocel′lus** (dim. of *oculus,* eye). Minute eye, one of the large number making up the organ of vision in the fly, for example.

**Ocheteu′mata** (*ocheteuma,* canal). Nares.

**Ochle′sis** (*ochlos,* a crowd). Crowd poisoning. A morbid condition induced by the crowding together of persons under one roof or in the same apartment.

**Ochlo′des.** Keratoconus.

**Ochre,** o′ker. See *Hæmatites.*

**Och′rea** (*ochros,* pale). Ochre; also Abelmoschus esculentus. **O. ru′bra,** red ochre; hæmatites.

**Ochri′asis.** Paleness.

**Ochro′ma.** Paleness. **O. lago′pus,** plant of tropical America, possessing antisyphilitic properties.

**Ochrono′sis.** Yellow staining of tissues.

**Ochron′osus.** A disease in which there is jaundice or ochronosis. Yellow fever.

**Ochrop′yra** (*ochros,* pale yellow, *pyr,* fever). Yellow fever.

**Ochroty′phus.** Yellow fever.

**Ochro′zia bourbon′ica.** Isle of Bourbon yellow wood; tree whose wood is extremely bitter; leaves possess tonic and febrifuge properties.

**Ochthi′asis** (*ochthos,* a protuberance). Molluscum.

**O′cimum.** A genus of shrubs, ord. *Labiatæ.* **O. adscen′dens,** O. basilicum. **O. basil′icum,** common or citron basil, has a fragrant odor and aromatic taste; used as a condiment; supposed to possess nervine properties. **O. caryophylla′tum,** small or bush basil; possesses properties similar to the former; sometimes used as snuff. **O. citra′tum,** O. basilicum. **O. pilo′sum,** O. basilicum. **O. racemo′sum,** O. basilicum. **O. vir′ide,** fever plant; employed in Sierra Leone as a febrifuge in malaria.

**Oco′tea ama′ra.** Nectandra cymbarum. **O. cym′barum,** Nectandra cymbarum. **O. pichu′rim,** Pichurim beans. **O. precio′sa,** plant of Brazil used in neurasthenia. **O. puchu′ry,** see *Pichurim beans.*

**O′crea.** Hippocampus minor. Shin.

**Oc′tad.** Octavalent element.

**Oc′tan** (*okto,* eight). Occurring every eighth day, said of fevers.

**Octa′rius** (*okto,* eight). A pint, the eighth part of a wine gallon; contains sixteen fluidounces (Ph. U. S.), twenty fluidounces imperial measure. See *Weights.* The symbol of a pint is O.

**Octav′alent.** Eight-valent; having a quantivalence of eight.

**Oc′tene** or **Oc′tylen.** Caprylen.

**Octigrav′ida.** One who is pregnant for the eighth time.

**Octip′ara** (*okto,* eight, *pario,* to bring forth). One who has had eight labors.

**Oc′topus** (*okto,* eight, *pous,* foot). Monster with eight extremities. **O. synapheoceph′alus,** hemipages.

**Octoroon′.** Offspring of the white and quadroon. See *Mulatto.*

**Ocu′ba wax.** Vegetable wax obtained by boiling the berries of myristica.

**Oc′ular** (*oculus,* eye). Of or belonging to the eye. **O. cone,** cone formed within the eye by a pencil of rays proceeding from an object, the base of the cone being on the cornea, the apex on the retina. **O. mus′cles,** see *Oblique muscles of the eye, Recti muscles of the eye,* etc. **O. sheath,** loose tissue from apex of orbit to diameter of eyeball. **O. spec′trum,** see *Spectrum.*

**Ocula′res commu′nes.** Motores oculorum. **O. den′tes,** canine teeth.

**Ocula′ria.** Euphrasia officinalis.

**Ocula′ris.** Ocular. **O. commu′nis,** motor oculi communis.

**Oc′uli cancro′rum.** Crabs′ eyes.

**Oculine′.** Extract from the ciliary body of the ox; has been used in therapeutics. Coral.

**Oc′ulist.** One who devotes himself to the treatment of diseases of the eyes; ophthalmologist.

**Oculofron′tal ru′gæ.** Wrinkles above the root of the nose, caused by the corrugator supercilii, said to be expressive of internal pain or mental anguish.

**Oculomo′tor.** Effecting movement of the eye. **O. mus′cle,** motor oculi. **O. nerve,** third cranial; motor nerve for all muscles of the eye save the superior oblique and external rectus. It arises from nucleus under the floor of the Sylvian aqueduct, emerging on the inner side of the crus cerebri just in front of the pons, and leaves the cranium through the sphenoidal fissure. **Exter′nal o. n.,** abducent nerve. **O. nu′cleus,** origin of o. nerve, extends from nucleus of the fourth nerve, with which it is continuous, to the posterior cerebral commissure. **O. sul′cus,** see *Peduncular sulci.*

**Oculomoto′rius.** Motor oculi muscle.

**Oculomus′cular nerves.** Motores oculorum.

**Oculona′sal.** Relating to both eyes and nose. **O. nerve,** nasal nerve.

**Oculopu′pillary.** Relating to the pupil of the eye.

**Oculospi′nal.** Belonging to the eye and the spine, as the oculospinal axis, ciliospinal axis, a portion of the spinal cord—probably from the fifth cervical to the twelfth dorsal vertebræ—partial division of which affects the size of the pupils, the vascularization of the eyes, etc.

**Oculozygomat′ic.** Relating to the eye and the zygomatic process. **O. line,** furrow extending from internal angle of the eye to below the malar eminence. See *Jadelot's lines.*

**Oc′ulum mo′vens pri′mus.** Rectus internus oculi. **O. mo′vens quar′tus,** rectus inferior oculi. **O. mo′vens secun′dus,** rectus externus oculi. **O. mo′vens ter′tius,** rectus superior oculi.

**Oc′ulus.** Eye. **O. bovi′nus,** hydrophthalmia. **O. bo′vis,** Chrysanthemum leucanthemum. **O. bu′bulus,** O. bovinus. **O. cæ′sius,** glaucoma. **O. du′plex,** binoculus. **O. elephanti′nus,** hydrophthalmia. **O. ge′nu,** patella. **O. lac′rymans,** epiphora. **O. lepori′nus,** lagophthalmia. **O. o′vi,** cicatricula. **O. purulen′tus,** hypopyon. **O. sim′plex,** see *Monoculus.* **O. typho′nis,** scilla.

**O′cymum.** See *Ocimum.*

**Ocyodyn′ic** (*okys,* quick, *odyne,* pain). Oxytocic.

**Ocyto′cic** (*okys,* quick, *tokos,* labor). Anything that expedites parturition.

**O. D.** Abbv. for oculus dexter, right eye. Also abbv. for optic disk.

**Od.** A term applied by Reichenbach to designate an effective force which, according to him, not only manifests itself in contact with man, as in the case of magnets, crystals, the hands, etc., but also at distances, as from the sun, moon, and stars; indeed, from all matter. Such a force he termed *odic.*

**O. D. A.** Abbv. for occipito-dexter-anterior—*i. e.,* right occipito-anterior position of fœtus in labor.

**Odaxis′mus** (*odaxo,* to bite). A sensation of biting or pricking, as that in the gums preceding the appearance of the teeth. Biting of the tongue during an attack of epilepsy.

**Od′ic.** See *Od.*

**Odontag′ma.** Odontoclasis.

**Odontag′ra** (*odontes,* teeth, *agra,* a seizure). A rheumatic or gouty pain in the teeth.

**Odontal′gia** (*odontes,* teeth, *algos,* pain). Toothache, odontia. The most common cause is caries, which exposes the pulp cavity to the action of the air and to extraneous matters in general. The pain may also be neuralgic, of central origin, or it may be reflex in character. **O. cario′sa,** dental gangrene. **O. dentitio′nis,** dentition. **O. hæmo′dia,** great sensibility of the teeth; toothedge. **O. nervo′sa,** neuralgia of the teeth, characterized by periodical pain, shooting with the utmost violence along the branches of the fifth pair distributed to the affected jaw. **Phan′tom o.,** pain referred to a space whence a tooth has been extracted. **O. remit′tens et intermit′tens,** infraorbital neuralgia.

**Odontal′gic.** Relating to toothache.

**Odontapotrip′sis.** Condition in which teeth are worn superficially.

**Odontat′rophy.** Atrophy of the teeth.

**Odontel′ephas.** Dentine.

**Odonteris′mus.** Chattering of the teeth.

**Odonteu′ros.** Caries of the teeth.

**Odonthæmo′dia.** Great sensibility of the teeth; toothedge.

**Odonther′cos.** Set of teeth.

**Odonthyalophtho′ra** (*hyalos,* enamel, *phthora,* corruption). Destruction of the enamel of the teeth.

**Odonthyperæsthe′sia.** Odonthæmodia.

**Odon′tia.** Odontalgia. Dentition. **O. defor′mis,** deformity of the teeth from error of shape, position, or number. **O. dentitio′nis lactan′tium,** see *Dentition (first).* **O. dentitio′nis pueri′lis,** see *Dentition (second).* **O. edent′ula,** toothless state of either infants or the aged. **O. excres′cens,** epulis. **O. incrus′tans,** tartar of the teeth.

**Odonti′asis.** Dentition, or disease associated with it.

**Odontiat′er** (*iatros,* physician). Dentist.

**Odontiat′ria.** Dentistry.

**Odon′tinoid.** Tumor composed of dental tissues.

**Odonti′tis.** Inflammation of the teeth. **O. infan′tum,** inflammatory condition of the teeth and gums attending the first appearance of teeth in the young child.

**Ondonto-** (*odous,* tooth). In composition, tooth.

**Odon′to-atlan′tal articula′tion.** Pivot-joint between odontoid process of axis and anterior arch of atlas.

**Odontoblas′tic.** Relating to odontoblasts.

**Odon′toblasts** (*odous,* tooth, *blastos,* germ). Large cells, of elongated form, constituting the external layer of the dental pulp, membrana eboris, and forming a kind of columnar epithelium; by calcification the cells form the dentine.

**Odontobothri′tis.** Inflammation of the alveoli.

**Odontoboth′rium** (*bothrion,* a small pit). Alveolus.

**Odontoceram′ic** (*keramos,* potter's earth). Relating to porcelain teeth, as the odontoceramic art.

**Odontoceramotech′ny.** The art of making porcelain teeth.

**Odontochalix,** o-don-tok′al-iks. Dental cement.

**Odontochirur′gical.** Relating to dentistry.

**Odontocla′sis** (*klasis,* fracture). Fracture of a tooth.

**Odon′toclasts.** Cells which assist in the absorption of the roots of the milk teeth.

**Odontocne′sis** (*knesis,* itching). Sensation preceding cutting of teeth. Odaxismus.

**Odontodyn′ia** (*odyne,* pain). Odontalgia.

**Odon′togen.** Layer of odontoblasts from which the dentine is developed.

**Odontog′eny** (*genesis,* generation). Generation or mode of development of the teeth.

**Odon′toglyph** (*glypho,* to carve). Gum lancet; tooth scraper.

**Odontog′raphy.** Description of the teeth.

**Odon′toid** (*odous,* tooth, *eidos,* resemblance). Having the shape or appearance of a tooth. An epithet given to the processus dentatus of the second vertebra or axis, a separate bone in amphibia. **O. lig′aments,** check ligaments, two strong and short conical fasciculi whose truncated summits embrace the sides of the odontoid process, and whose bases are fixed in the fossæ at the inner side of the condyles of the occipital bone. Their direction is obliquely outward and slightly upward. They enter into the composition of the occipito-axoid articulation, strengthen the junction of the head with the vertebral column, and limit the movement of rotation of the atlas on the axis. Other ligamentous fibres pass from the highest portion of the processus dentatus to the anterior margin of the foramen magnum of the occipital bone, constituting the *ligamentum suspensorium dentis.* **O. pro′cess,** see *Axis.*

**Odon′tolith** (*lithos,* a stone). A sort of incrustation of a yellowish color which forms at the coronæ of the teeth, and is called *tartar.* It consists of phosphate of lime, mucus, a particular salivary matter, and an animal substance, soluble in chlorohydric acid; a species of infusoria, *Denticoli hominis,* has been found in it. Pulp nodule or calculus.

**Odontolo′gia** or **Odontol′ogy.** The science of the teeth.

**Odontol′ogist.** One versed in odontology; dentist.

**Odontolox′ia** or **Odontol′oxy** (*loxos,* oblique). Irregularity and obliquity of the teeth.

**Odonto′ma** or **Odon′tome.** Ivory exostosis of the teeth, the molars especially, composed of hypertrophied dentine, and resulting from morbid conditions of the pulp. Broca divides the odontomata into *o. embryoplastica, o. odontoplastica, o. coronaria,* and *o. radicularia.* Also a tumor connected with the teeth, or composed of the same tissue as the teeth.

**Odontome′rion.** Tænia dentata.

**Odont′omys.** Tooth pulp.

**Odontonecro′sis.** Death of a large part of a tooth.

**Odontonosol′ogy.** Treatise on diseases of the teeth.

**Odontoparallax′is** (*odontes*, teeth, *parallaxis*, deviation). Irregularity and obliquity of the teeth.

**Odontop′athy.** Abnormal condition of the teeth.

**Odontoperios′teum.** Pericodontium.

**Odontophat′ne** (*phatne*, a crib, a stall). Alveolus.

**Odontophatni′tis.** Odontobothritis.

**Odontophleg′mone.** Odontitis.

**Odon′tophore.** A process bearing tooth-like bodies, such as the raspatory of mollusks.

**Odontophy′ia** (*phyo*, to grow). Dentition.

**Odontoplero′sis** (*pleroo*, to fill). Filling of the teeth.

**Odontopri′sis** (*prisis*, gnashing of teeth). Grinding of the teeth, noticed especially in children.

**Odontorrha′gia.** Hemorrhage from the tooth-sockets.

**Odontorrheumal′gia.** Rheumatic toothache.

**Odontorrhi′za** (*rhiza*, root). Root of a tooth.

**Odontortho′sis** (*orthos*, straight). Action of making crooked or irregular teeth straight. Orthodontia.

**Odontos′chisis.** Splitting of a tooth.

**Odontoschis′ma.** Fissured condition of a tooth.

**Odonto′sis.** Dentition; odontogeny.

**Odontosmeg′ma** (*smegma*, a detersive). Dentifrice.

**Odon′tospasm** (*odous*, tooth, *spasmos*, spasm). Convulsions caused by difficult dentition.

**Odontosphacelis′mus** (*sphakelos*, gangrene). Death of a large part of a tooth.

**Odontos′teophyte** (*odous*, tooth, *osteon*, bone, *phyo*, to grow). Excrescence on a tooth of an osseous character.

**Odontostere′sis** (*steresis*, privation). Loss of the teeth.

**Odontotech′ny** (*techne*, art). Dentistry.

**Odontothe′ca** (*theke*, a sheath). Dental follicle.

**Odontother′apy** (*therapeia*, healing). Dentistry; care and treatment of the teeth.

**Odontotrim′ma.** Dentifrice.

**Odontotrip′sis** (*tripsis*, friction). Abrasion or wearing away of the teeth.

**Odon′totrypy** (*trypao*, to perforate). Odontotrypia, odontrypy; operation of perforating a tooth to evacuate purulent matter confined in the cavity of the pulp.

**O′dor.** A smell. Odors are subtle particles constantly escaping from the surface of certain bodies, hence called odorous. They act in some manner by actual contact with the nerves of the Schneiderian membrane, and give occasion to the sense of smell or olfaction.

**Odora′tus.** Olfaction. **O. deper′ditus**, anosmia. **O. perver′tus**, parosmia.

**Odorif′erous.** Carrying or bearing an odor. **O. glands**, see *Sebaceous glands.*

**O′doroscope** or **O′dorscope** (*odor*+*skopeo*, to view). Device for testing odors.

**O′dorous.** See *Odor.*

**O′dos.** Way.

**O. D. P.** Abbv. for occipito-dexter-posterior—*i. e.*, right occipitoposterior position of the fœtus in labor.

**O′Dwy′er′s meth′od.** Intubation of the larynx.

**O′dyle.** See *Od.*

**Odynacou′sis** or **Odynacu′sis** (*odyne*, pain, *akousis*, hearing). Pain caused by loud noises.

**Odyn′agogue** (*odyne*, pain, *ago*, to drive). Oxytocic.

**Odyneph′orous.** Giving rise to pain.

**Odynol′ysis.** Mitigation of pain, especially labor pains.

**Odynopœ′ia** (*poieo*, to make). Oxytocic.

**Odynpha′gia** (*odyne*, pain, *phago*, to eat). Dysphagia.

**Odynpho′bia** (*odyne*, pain, *phobos*, fear). Fear or dread of pain.

**Œcioma′nia** (*oikeios*, belonging to a household or family, and *mania*). Oikeiomania; a form of moral insanity characterized by domestic perversity; shrewishness.

**Œ′coid.** Term applied to red blood-corpuscles the hæmoglobin of which has been lost.

**Œcol′ogy.** Ecology.

**Œcono′mia** (*oikos*, a house, *nomos*, law). Economy.

**Œcopho′bia** Oikophobia.

**Œdal′icus** (*oideo*, to swell). Œdematous.

**Œde′ma** (*oidema*, a swelling). Swelling produced by the accumulation of serous fluid in the interstices of the areolar texture. This swelling is soft, yields under the finger, preserves the impression for some time, and is pale and without pain. It presents the same character as anascarca, which is general œdema. See *Anasarca.* **Œ. acu′tum**, see *Anasarca.* **Œ. al′gidum**, sclerema neonatorum. **Angeioneurot′ic** or **Angioneurot′ic œ.**, a form of acute circumscribed, non-inflammatory œdema, due to a neurosis of the cutaneous vessels, analogous to or the same as giant urticaria. **Œ. arsenica′le**, swelling of the eyelids and face, induced by continued use of the preparations of arsenic. **Œ. articula′re**, hydrarthrosis. **Blue œ.**, a bluish puffiness of the skin in hysteria. **Brown œ.**, brown induration. **Œ. cal′idum**, see *Anasarca.* **Œ. cap′itis**, hydrocephalus externus. **Œ. carbunculo′sum**, œdema malignum. **Œ. cer′ebri**, œdema of the brain; a condition of the cerebral pulp in which there is an infiltration of serous fluid into it, so that it appears more moist or watery than common, and, when sliced or pressed, small drops of water are seen to ooze out. **Collat′eral œ.**, œdema of one part resulting from inaction due to disease in another, as œdema of the unaffected portion of the lung sometimes accompanying pneumonia or tuberculosis. **Œ. compac′tum**, induration of the cellular tissue. **Cre′tinoid œ.**, myxœdema. **Œ. cruen′tum**, suggillation. **Œ. febri′le**, see *Anasarca.* **Œ. frig′idum**, œdema, chronic in character, devoid of pain and redness, and cold to the touch. **Œ. fu′gax**, transient swelling or inflation, as in some nervous and hysterical cases. **Œ. glot′tidis**, œdematous laryngitis or angina, a disease consisting of serous or seropurulent infiltration into the submucous tissue of the glottis. The symptoms resemble those of croup, but the disease attacks the adult rather than the child. Age is, indeed, a principal means of diagnosis between the two affections. **Hypostat′ic œ.**, œdema due to hypostasis: **Œ. hyster′icum**, transient swelling or inflation occurring in hysteria. **Œ. indurati′vum**, œdema accompanied by induration. **Infec′tious œ.**, œdema malignum. **Inflam′matory œ.**, exudation of a serous character into inflamed tissue. **Œ. of the lar′ynx**, œ. glottidis. **Œ. of the lungs**, infiltration of serum into the tissue of the lung, carried to such an extent as to diminish its permeability to air. Not an uncommon sequela of pneumonia and the major exanthemata. Respiration is laborious; the respiratory murmur scarcely perceptible, although the thorax is largely expanded, and there is a slight crepitant râle, particularly at the base and inferior part of the lung. Percussion note is clear, and on both sides equally so. Cough is attended with a frothy expectoration. In some cases the respiration becomes puerile in a small portion of the summit of the lung. **Lymphat′ic œ.**, condition resulting from effusion of watery liquid from the lymph-vessels. **Malig′nant œ.**, a dangerous form of gangrenous inflammation, usually described as *gangrenous septicæmia*, and due to the action of the bacillus of malignant œdema, vibrion septique of Pasteur. **Mu′cous œ.**, myxœdema. **Œ. neonato′rum**, induration of the subcutaneous cellular tissue occurring within a few days after birth, and always fatal. **Œ. oc′uli**, hydrophthalmia. **Œ. œdemato′des**, œdema frigidum. **Œ. palpebra′rum**, hydroblepharon. **Œ. puerpera′rum**, phlegmasia dolens. **Œ. pulmo′num chron′icum**, hydropneumonia. **Pu′rulent œ.**, purulent infiltration. **Ret′inal œ.**, presence of liquid in the periphery of the retina, occurring in old people. **Œ. rheumat′ica**, œdema caused by rheumatism. **Œ. scro′ti aquo′sum**, watery œdema of the scrotum. **Œ. scro′ti cruen′tum**, effusion of blood into the scrotum. **Œ. scro′ti purulen′tum,** purulent tumefaction of the scrotum. **Œ. scro′ti urino′sum,** extravasation of urine into the scrotal tissues. **Œ. sim′plex du′rius,** phlegmasia alba dolens. **Sol′id œ.,** myxœdema. **Œ. spasticum,** spasmodic transient swelling or inflation. **Œ. of trichini′asis,** œdema of different parts of the body due to presence in the muscles of trichinæ, which destroy the capillaries. **Œ. u′vulæ,** staphylœdema. **Ve′nous œ.,** œdema due to venous obstruction. **Œ. of the womb,** œdematous infiltration of the cervix, occurring in pregnancy.

**Œdematos′cheocele.** Hydrocele with scrotal œdema.

**Œdem′atous.** Affected with œdema; of the nature of œdema.

**Œdemosar′ca** (*oidema*, swelling, *sarx*, flesh). Œdematosarca. Species of tumor holding a middle place between œdema and sarcoma.

**Œdemosarco′ma** (*oidema*, swelling, *sarx*, flesh). Tumor of an œdematous and sarcomatous character.

**Oehl's lay′er.** Stratum lucidum of the epidermis.

**Œnanthal′dehyde.** Œnanthol.

**Œnan′the.** Hemlock dropwort, hemlock water dropwort, ord. *Umbelliferæ*. A violent poison of the acronarcotic class. Its juice has been recommended in certain cutaneous diseases, but it is rarely used. Employed in fomentations. **Œ. aquat′ica,** Phellandrium aquaticum. **Œ. chærophyl′li fo′liis,** œnanthe. **Œ. croca′ta,** œnanthe. **Œ. phellan′drium,** Phellandrium aquaticum. **Œ. stria′ta rig′ida,** Seseli tortuosum.

**Œnan′thic acid.** Œnanthilic acid. **Œ. al′dehyde,** œnanthol. **Œ. e′ther,** ethereal liquid, odorous principle of wine.

**Œnanthil′ic** or **Œnanthyl′ic acid.** Oily, acrid, fishy acid, found in rice and corn spirits, product of oxidation of œnanthol.

**Œnanthin′.** Acrid emetic principle obtained from Œnanthe fistulosa.

**Œnan′thol.** Volatile liquid product of distillation of castor oil.

**Œnanthotoxin′.** $C_{17}H_{22}O_5$. Poisonous resin from Œnanthe crocata, similar in action to picrotoxin.

**Œ′nas o′fer.** Insect belonging to the oil-beetles, said to possess vesicant properties similar to cantharis.

**Œnocar′pus.** Bacaba. Tree of South America from which an oil having a sweet taste is obtained. It is mixed with olive oil for purposes of adulteration.

**Œnoflavin′.** Matter which gives white wines their color.

**Œnolin′.** Substance which constitutes coloring-matter of grapes and red wine.

**Œnoma′nia** (*oinos*, wine). Oinomania. Delirium tremens. Properly, wine-mania. An insatiable desire for intoxicating liquors; dipsomania, methomania.

**Œnotan′nin.** Tannin in red wine.

**Œnothe′ra bien′nis.** Evening primrose, tree primrose, primrose tree, cureall, scabish. An indigenous plant common on the borders of fields and in natural hedges, ord. *Onograceæ*. Mucilaginous and slightly acrid. A decoction has been used in cases of infantile and other eruptions. **Œ. guaroi′des,** Œ. biennis. **Œ. murica′ta,** Œ. biennis. **Œ. pu′mila,** dwarf evening primrose of Mexico; resolvent.

**Œ′nyl i′odide.** Methyl iodide.

**Oer′tel's meth′od.** A system of graduated hill-climbing exercises designed to strengthen the heart. Also these exercises, combined with some restriction of the starches and fats in the diet, and especially of liquids, designed to reduce obesity.

**Œ′sipus.** Old name for lanolin.

**Œsophagal′gia.** Pain in the œsophagus.

**Œsophageal,** e-sof-aj′e-al. Relating or belonging to the œsophagus. **Œ. ap′erture of the di′aphragm,** foramen œsophageum; an opening in the diaphragm for the passage of the œsophagus. **Œ. ap′erture of the stom′ach,** a name given to the superior or cardiac orifice of the stomach, to distinguish it from the inferior or pyloric; see *Cardia*. **Œ. ar′teries,** branches of thoracic to œsophagus, from three to six in number. **Œ. cords,** pneumogastric nerves, so called from their position at the side of the œsophagus. **Œ. fora′men,** hiatus œsophageus. **Œ. glands,** compound racemose glands in mucous and submucous tissue of the œsophagus, especially at its lower end. **Œ. lymphat′ic glands,** few in number and on the outer side. **Œ. mus′cle,** the transverse muscular fibres which surround the œsophagus at its upper extremity. **Œ. nerves,** branches of the pneumogastric lying in front of and behind the œsophagus. **Œ. o′pening,** hiatus œsophageus. **Œ. or′ifice,** cardiac orifice of the stomach. **Œ. plex′us,** formed by branches of œ. nerves from pneumogastric. **Œ. tube,** stomach tube. **Œ. veins,** number of veins returning blood from the œsophagus to the azygos veins.

**Œsophagec′tomy** (*ektome*, cutting out). Excision of a portion of the œsophagus.

**Œsophagec′topy.** Condition in which the œsophagus is displaced.

**Œsophageme′sis** (*emesis*, vomiting). Condition in which food regurgitates from the œsophagus.

**Œsophageurys′ma** (*eurysma*, dilatation). Dilatation of the œsophagus.

**Œsophage′us.** Œsophageal muscle.

**Œsophagiarc′tia** (*arcto*, to make narrow). Dysphagia constricta; stricture of the œsophagus.

**Œsoph′agism** or **Œsophagis′mus.** Spasm of the œsophagus. By some used synonymously with œsophagitis, dysphagia, and contraction of the œsophagus. Globus hystericus. **Œ. arthrit′icus,** œsophagismus due to arthritic œsophagitis.

**Œsophagi′tis.** Inflammation of the œsophagus.

**Œsoph′agocele.** Hernia of the mucous membrane of the œsophagus through an opening in its muscular coat.

**Œsophagodyn′ia** (*odyne*, pain). Pain in the œsophagus.

**Œsoph′ago-enteros′tomy.** Operation for production of direct communication between the œsophagus and the intestines.

**Œsophagomala′cia.** Softening of the œsophagus.

**Œsophagomyco′sis.** Disease of a mycotic character affecting the œsophagus. **Œ. oïd′ica,** affection of the œsophagus caused by fungus of thrush.

**Œsophagop′athy** (*pathos*, affection). Any morbid condition of the œsophagus.

**Œsophagople′gia.** Paralysis of the œsophagus.

**Œsophagopto′sis** (*ptosis*, falling). Prolapse of the œsophagus.

**Œsophagorrha′gia.** Hemorrhage from the œsophagus.

**Œsophagorrhœ′a** (*rheo*, to flow). Discharge of blood or mucus from the œsophagus.

**Œsoph′agoscope** (*skopeo*, to view). An endoscopic instrument for viewing the interior of the œsophagus throughout its whole extent.

**Œsophagos′copy.** Exploration with the œsophagoscope.

**Œsoph′agospasm.** Spasm of the œsophagus.

**Œsophagosteno′ma** or **Œsophagosteno′sis** (*stenos*, narrow). Stricture of the œsophagus.

**Œsophagos′tomy.** Operation for establishing a fistula or artificial opening in the œsophagus.

**Œsoph′agotome** (*tome*, section). An instrument devised for the performance of œsophagotomy.

**Œsophagot′omy.** An incision made into the œsophagus, external, when the incision is made from the exterior, usually for the removal of a foreign body; internal, when a stricture of the œsophagus is divided by a knife introduced through the mouth.

**Œsoph′agotra′cheal.** Relating to both œsophagus and trachea.

**Œsoph′agus.** The gullet. A musculomembranous canal, cylindrical, and flattened from before backward, which extends from the inferior extremity of the pharynx to the upper orifice of the stomach. At its origin it is situated in the median line, but below the larynx it deviates to the left, and in the chest experiences different reflections. The cervical portion corresponds, behind, with the spine; before, with the larynx and trachea; and at the sides it is close to the carotid arteries, internal jugular veins, par vagum, recurrent nerves, etc. The inferior or thoracic portion is entirely contained in the posterior mediastinum, and enters the abdomen through the œsophageal aperture, *foramen œsophageum*, of the diaphragm. The œsophagus is composed of a very strong muscular layer, sometimes called *tunica vaginalis gulæ*, formed, itself, of two sets of fibres—the external, generally longitudinal; the internal, transverse or annular—and of the mucous membrane, which is soft, fine, thin, and white, especially at its lower part, continuous above with the mucous membrane of the pharynx. The mucous follicles found beneath it are not numerous, and have been called *œsophageal glands*. The arteries of the œsophagus proceed in the neck from the thyroid; in the chest, from the bronchial arteries and directly from the aorta; in the abdomen, from the inferior phrenic and coronaria ventriculi. Its veins empty into the inferior thyroid, the vena cava superior, the internal mammary, azygos, bronchial, phrenic, and coronaria ventriculi. Its lymphatics pass into the ganglia surrounding it. Its nerves are afforded by the pharyngeal and pulmonary plexuses, by the cardiac nerves, the thoracic ganglia, and especially by the pneumogastrics and recurrent branches. The following statistical facts concerning the œsophagus are of interest (Vierordt):

| | | | |
|---|---|---|---|
| Length, 216–244 ...... (in round figures), | | 250 mm. | |
| of which the neck part amounts to ... | | 50 | 2 ind |
| the chest part to .................. | | 170 | 7 |
| the abdominal part to .............. | | 30 | |
| Distance from the teeth to the cardia ... | | 400 | 16 |
| " " margin of the gums to the stomach in newborn children | | 170 | |
| Commencement of the œsophagus distant from the incisor teeth in the adult .... | | 150 | 6 |
| Breadth .......................... | | 18 | 1 |
| Depth, anteroposteriorly .............. | | 9 | |
| (when stretched, up to 25). | | | |

**Œstri′asis.** Effects produced by larvæ of œstrus.

**Œs′tridæ** (*oistros*, gadfly). Genus of dipterous insects, including the botfly.

**Œstroma′nia** (*oistros*, imperious erotic impulse). Nymphomania.

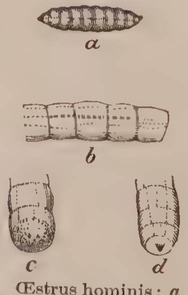
**Œstromenstrua′tion.** Menstruation considered as analogous to the rut of animals.

**Œs′trual.** Relating to œstruation; also to the venereal orgasm.

**Œstura′tion.** Rut or heat in animals.

**Œs′trum.** Frenzy; orgasm. **Œ. ven′eris,** imperious erotic impulse.

**Œs′trus.** Œstrum, œstruation. Gadfly. **Œ. bo′vis,** commonest species of *Œstridæ*, affecting cattle. **Œ. e′qui,** Gastrophilus equi. **Œ. hom′inis,** bot-fly, dipterous insect depositing its eggs in the skin.



Œstrus hominis; *a*, the larva, natural size; *b*, some of the segments seen under a lens, and showing the lines of minute projection; *c* and *d*, the terminal ends of the insect. (Abraham.)

**Œ. o′vis,** bot-fly of sheep. **Œ. vene′reus,** œstrum veneris.

**Œ′sypum** or **Œ′sypus.** Greasy matter of unwashed wool; lanolin.

**Offic′ial.** An epithet for medicines found in the apothecary shop ready prepared, in opposition to *magistral* or *extemporaneous*—those prepared after the prescription of the physician. Those recognized as authoritative by the National Pharmacopœia.

**Offici′na** (for **Opificina**) (*opifex*, a workman, a shop). Workshop; office; apothecary's shop.

**Offic′inal.** Official. The pharmacopœial preparations were formerly called officinal, but now more commonly official.

**Off′spring.** Progeny, descendants, epigone.

**Offusca′tio.** Obfuscation.

**Oga′ta's meth′od of resuscita′tion.** 1. For asphyxia during anæsthesia: light strokes are made over the anterior inferior portion of the thorax, with the palmar surface of the extended fingers, at intervals of four to six seconds; by this means it is claimed respiration is stimulated and the heart's action is strengthened; called also stroke resuscitation. 2. For asphyxia of the newborn: the feet of the infant are grasped with one hand, the shoulders being supported by the other; the body is then flexed, the head being approximated to the feet, and after a couple of seconds the body is returned to its former position, when the hand supporting the shoulders is suddenly withdrawn, letting the body of the child fall, so as to hang by its feet; this procedure is repeated at intervals of six or eight seconds; this is also called shaking resuscitation.

**Ogee′chee lime.** Nyssa candicans.

**Og′la.** Oogala.

**Og′ston's line.** Hypothetical line drawn from the femoral tubercle to the intercondyloid notch. **O.'s opera′tion,** for flat foot, excision of wedged-shaped portions of tarsal bones to restore the arch; for knock-knee, sawing or chiselling off obliquely the inner condyle of the femur and forcible straightening of the limb.

**Ohi′o buck′eye.** Æsculus glabra. **O. scratch′es,** pruritus; scabies or eczema; prairie itch.

**Ohm.** Practical electromagnetic unit of resistance. The legal ohm (Paris Congress of 1884) is the resistance offered by a column of mercury 106 centimetres high and one square millimetre in cross-section, at 0° C.; about the resistance of 100 metres of telegraph wire.

**Ohm's law.** The strength of the current varies directly as the electromotive force, and inversely as the resistance of the circuit; or the current, expressed in ampères, equals the electromotive force, in volts, divided by the resistance, in ohms.

**Oicoid.** Œcoid.

**Oïd′ium** (dim. of *oon*, egg). A genus of parasitic fungi. **O. abortifa′ciens,** Claviceps purpurea; see *Ergot*. **O. al′bicans,** Saccharomyces albicans, the thrush fungus. **O. lac′tis,** a fungus forming a white mold on milk, etc. **O. schoenlein′i,** see *Porrigo favosa*. **O. tuck′eri,** a fungus causing grape mildew.

Oïdium albicans.

**Oi′koid.** Œcoid.

**Oikopho′bia** (*oikos*, house, *phobos*, fear). Morbid dislike or dread of one's home.

**Oi′kosite.** Animal parasite attached to its host.

**Oil.** A collective name under which two classes of fluids are included, very different from each other: those belonging to the one class are viscid, mawkish, or almost insipid; those of the other are nearly devoid of viscidity, and are caustic and very volatile. The former are called *fatty* or *fixed oils;* the latter *volatile* or *essential oils* or *essences*. They are all compounds of carbon and hydrogen, principally or exclusively, are readily inflammable, and mostly insoluble in water. See also *Olea* and *Oleum*. **O. of ab′sinthe,** limpid oil consisting mainly of absinthinol; obtained by distillation. **O. of aj′wain,** oil of omum; volatile; obtained by distillation from fruit of *Carum ajowan;* has the odor of thyme and contains thymol. **O. of all′spice,** o. of pimenta. **O. of al′mond,** oleum amygdalæ. **O. of am′ber,** volatile oil obtained by destructive distillation of amber, purified by subsequent rectification; rubefacient, stimulant, antispasmodic. **O. of Amer′ican worm′seed,** oil of chenopodium. **O. of an′da,** fixed oil expressed from seeds of Anda gomesii, said to resemble castor oil in physiological action; nearly free from taste or odor. **O. of angel′ica,** volatile oil from Archangelica officinalis; tonic. **An′imal o.,** distilled oil from bones of animals. **O. of an′ise,** volatile oil distilled from anise (Ph. G.), from anise and from illicium (Ph. U. S. and Br.); represents the medicinal properties of anise. **O. of ar′bor vi′tæ,** oil of thuja. **O. of ar′nica flow′ers,** essential oil from Arnica montana; diuretic, emmenagogue; externally used in liniments for rheumatism, etc. **O. of artemis′ia,** from flowers of Artemisia maritima or Roman wormwood; astringent and antiseptic. **O. of as′phalt,** distilled from asphaltum; rubefacient and antiseptic in skin diseases. **O. of balm,** essential oil from leaves of Melissa officinalis; antispasmodic. **O. of bas′il,** essential oil from leaves of Ocimum basilicum; antiseptic. **O. of bay,** oil of myrcia. **O. of behen′** or **of ben,** a fixed oil from Moringa pterygosperma, or *Guilandina moringa*, which see. **O. of ben′ne,** o. of sesame. **O. of ber′gamot,** volatile oil extracted by mechanical means from rind of fresh fruit of Citrus bergamia vulgaris; used as perfume. **O. of birch,** oleum betulæ, volatile oil from bark and leaves of Betula lenta; sweet or cherry birch. **O. of bit′ter al′monds,** volatile oil, distillate from bitter almonds after maceration in water; colorless or yellowish, limpid; peculiar aromatic odor and bitter, burning taste; contains nearly 13 per cent. hydrocyanic acid, to which its medicinal properties are due; 20 drops have proved fatal. A few drops on porcelain, with addition of a drop of strong sulphuric acid, become deep crimson (distinguishing it from nitrobenzole). **O. of bit′ter al′monds, artific′ial,** see *Benzaldehyde*; see also *Poisons and Antidotes*. **O. of bol′dus,** volatile oil from Peumus fragrans; employed in genito-urinary diseases. **O. of cade,** juniper tar, obtained by destructive distillation of wood of Juniperus oxycedrus; used in treatment of skin diseases. **O. of caj′eput** or **caj′uput,** pale bluish-green, transparent, volatile; strong, agreeable odor, warm, aromatic taste; distilled from leaves of Melaleuca cajuputi; stimulant antispasmodic. **O. of cal′amus,** volatile distillate from calamus rhizome. **O. of cam′phor,** volatile; see *Camphor*. **O. of Can′ada snake′root,** aromatic oil from Asarum canadense; antiseptic. **O. of canel′la,** volatile oil from Canella alba; stimulant. **O. of canthar′ides,** prepared by digesting cantharides in rape oil or in olive oil. **O. of car′away,** volatile distillate from fruit of Carum carui. **O. of card′amom,** volatile oil from cardamomum; aromatic and stimulant. **Car′ron o.,** linseed oil and lime-water; used for burns. **O. of cascaril′la,** volatile oil from bark of Croton eleuteria. **O. of cas′sia,** distillate from Chinese cinnamon; less delicate in odor and taste, and of higher sp. gr. than that of Ceylon. **Cas′tor o.,** see *Ricinus communis*. **O. of ce′dar,** volatile oil from Cupressus thyoides, formerly oil of Lebanon cedar; there is an oil of the leaves, and another of the wood; also of Juniperus virginiana, o. of red cedar. **O. of ced′rat,** volatile oil from rind of fruit of Citrus medica; aromatic. **O. of cel′ery,** volatile oil from seeds of Apium graveolens; nerve tonic. **O. of cham′omile,** volatile distillate from flowers of Anthemis nobilis; stimulant, antispasmodic. **O. of Ger′man cham′omile,** volatile oil from the flowers of Matricaria chamomilla. **O. of champa′ca,** volatile oil from flowers of Michelia champaca. **Chaulmoo′gra** or **chaulmu′gra o.,** from seeds of Gynocardia odorata; used in elephantiasis. **O. of chenopo′dium,** oil of American wormseed; volatile distillate from chenopodium; anthelmintic. **O. of cher′ry lau′rel,** volatile oil from leaves of Prunus laurocerasus; sedative. **O. of cin′namon,** volatile distillate from cinnamon bark. **O. of Ceylon′ cin′namon,** volatile oil from Cinnamomum zeylanicum; stimulant. **O. of Chinese′ cin′namon,** volatile oil from Cassia cinnamon. **O. of cit′ron,** from outer rind of citron. **O. of citronel′la,** commercial name of volatile oil of Andropogon nardus; resembles oil of lemon-grass in character and properties. **O. of cloves,** volatile distillate from cloves, consists of light and heavy oil, latter principally eugenol. **O. of co′coanut,** oil of the fruit of the palm, Cocos nucifera. **O. of copai′ba,** volatile distillate from copaiba. **O. of corian′der,** volatile distillate from coriander. **Cot′ton-seed o.,** fixed oil from seeds of Gossypium herbaceum; used as a substitute for and adulterant of olive oil. **Cro′ton o.,** see *Croton*. **O. of cu′bebs,** volatile distillate from cubebs. **O. of cu′min,** volatile distillate from fruit of Cuminum cyminum. **Cy′press o.,** volatile oil from Cupressus sempervirens; antispasmodic. **O. of dill,** volatile distillate from fruit of Anethum graveolens. **Dip′pel's o.,** animal oil, distilled oil from bones. **Doeg′ling o.,** from Norwegian whale Balæna rostrata. **Du′gong o.,** from Halicore dugong. **Dutch o.,** Haarlem oil. **O. of egg,** obtained by expressing between warm iron plates coagulated yolk of eggs. **O. of er′got,** fixed oil in ergot, forming 30 per cent. or more of its weight. **O. of erig′eron,** volatile distillate from fresh flowering herb of Erigeron canadense. **Essen′tial o.,** a volatile oil obtained from one of the aromatic plants, soluble in alcohol and ether, but very sparingly in water, having the pungent odor of the plant; the essential oils are obtained from plants by pressure or distillation; they are usually hydrocarbons of the aromatic series, some are aldehydes, some compound ethers; see *Olea volatilia*. **Ethe′real o.,** volatile, oily liquid, made up of ether and heavy oil of wine. **O. of eucalyp′tus,** aromatic, volatile distillate from fresh leaves of Eucalyptus globulus and other species; powerful antiseptic. **O. of eu′lachon,** fixed oil from blubber of candle-fish. **Expressed′ o.,** see *Olea fixa*. **Fat′ty o.,** fixed oil, a fatty acid combined with an alcohol or base; see *Olea fixa*. **O. of fen′nel,** volatile distillate from fruit of Fœniculum vulgare. **O. of fir cones,** volatile oil from cones of Pinea excelsa; antiseptic. **O. of Scotch fir,** volatile oil from leaves of Pinus sylvestris; used in chronic rheumatism. **O. of fire-weed,** volatile oil from Erechtites præalta; tonic. **Fixed o.,** see *Olea fixa*. **O. of flax′seed,** fixed oil, expressed without heat; solidifies on exposure; used as application to burns. **Fuga′cious o.,** see *Olea fugacia*. **Fu′sel o.,** amylic alcohol. **O. of gar′lic,** volatile distillate, principally sulphide of allyl. **O. of gaulthe′ria,** oil of wintergreen, volatile distillate from leaves of Gaultheria procumbens, consists principally of methylsalicylic acid. **O. of gera′nium, Turk′ish,** roslé or rosé oil, distilled from Andropogon schœnanthus; used in Turkey as hair-oil and adulterant of oil of rose. **O. of gin′ger,** volatile oil from ginger; stomachic. **O. of gin′gili,** oil of sesame. **Haar′lem o.,** a mixture of sulphurated linseed oil and oil of turpentine; antiseptic. **O. of hedeo′ma,** oil of pennyroyal, distilled from fresh herb, Hedeoma pulegioides. **O. of hem′lock,** oil of spruce; volatile aqueous distillate of branches of Abies canadensis. **O. of hops**, volatile oil from Humulus lupulus, or hops; nervous tonic. **O. of horse-mint**, volatile distillate of fresh herb, Monarda punctata. **O. of hyoscy′amus**, obtained from the leaves moistened with alcohol, boiled or digested in olive oil, expressed and filtered; for external use. **O. of jas′mine**, fragrant, volatile, from flowers of Jasminum officinale and other species. **O. of jat′ropha**, fixed oil from Jatropha curcas; cathartic. **O. of ju′niper**, volatile distillate from juniper berries. **O. of ju′niper wood**, volatile oil from wood of Juniperus communis. **O. of lard**, oil from hog's lard. **O. of lau′rel**, concrete aromatic fixed oil, expressed from fruit of Laurus nobilis; also volatile distillate from leaves or fruit. **O. of lav′ender**, volatile distillate from flowering tops or whole herb of Lavandula vera; less agreeable odor than **O. of lav′ender flow′ers**, volatile distillate from fresh flowers; possesses medicinal properties of lavender. **O. of lem′on**, very volatile, pungent, and aromatic; extracted by mechanical means from fresh lemon-peel; used for flavoring. **O. of lem′on balm**, o. of balm. **O. of lem′on-grass**, volatile distillate from Andropogon citratum; carminative, diaphoretic, rubefacient, stimulant. **O. of Levant′ worm′seed**, volatile, from santonica. **O. of linal′oe**, volatile oil of a Mexican tree. **O. of lin′seed**, oil of flaxseed. **O. of mace**, volatile distillate, active principle of mace. **O. of male-fern**, volatile oil from Dryopteris filix mas. **Margo′sa o.**, oil from seeds of Melia azedarach; anthelmintic; externally used in rheumatism. **O. of mar′joram (sweet)**, volatile oil from Origanum majorana. **O. of m. (wild)**, volatile oil from Origanum vulgare; tonic and emmenagogue. **O. of mati′co**, volatile oil from Piper angustifolium; antiseptic. **Medic′inal o.**, see *Olea medicinalia*. **O. of menha′den**, fixed oil from the blubber of the bony fish. **O. of mil′foil**, from flowers of Achillea millefolium; carminative. **O. of mint**, volatile oil from Mentha aquatica. **O. of mir′bane**, nitrobenzole. **O. of mus′tard**, bland fixed oil, expressed from seeds; consists of glycerin compounds of oleic, stearic, and erucic or brassic acids. Oleum sinapis of Ph. Br. is the volatile oil; see *Volatile oil of mustard*. **O. of myr′cia**, oil of bay, volatile distillate from leaves of Myrcia acris. **O. of myr′tle**, volatile oil from leaves of Myrtus communis; antiseptic and rubefacient. **O. of nagkas′sar**, oil from seeds of Mesua ferrea; employed externally in rheumatism. **Nahor′ o.**, o. of nagkassar. **Neats′foot o.**, see *Neatsfoot*. **O. of ner′oli**, o. of orange-flowers. **O. of niaou′li**, volatile oil from leaves of Melaleuca leucadendron; employed in tuberculosis of the lungs. **O. of nut′meg**, oleum myristicæ, volatile aqueous distillate. **Ol′ive o.**, o. from the fruit of Olea europæa; see *Olive*. **O. of o′mum**, oil of agwain. **O. of or′ange-flow′ers**, oil of neroli, volatile distillate from fresh flowers; a perfume. **O. of or′ange-peel**, volatile, mechanically extracted from fresh peel. **O. of orig′anum**, volatile distillate from wild marjoram, Origanum vulgare; in commerce, oil of thyme is said to be often substituted. **O. of or′ris root**, solid, crystallizable substance obtained by distillation with steam; consists of myristic acid with a little volatile oil. **Palm o.**, oil from fruit of Elæis guineensis. **Par′affin o.**, hydrocarbon distilled from petroleum. **O. of pars′ley**, volatile, from fruit of Petroselinum sativum. **O. of patchou′li**, volatile oil from leaves of Pogostemon patchouli. **Pea′nut o.**, oil from the groundnut, oleum arachis. **O. of pennyroy′al**, oil of hedeoma. **O. of pep′permint**, volatile distillate from Mentha piperita; carminative and anodyne; see also *Chinese o. of p.* **O. of pep′per**, volatile oil from fruit of Piper nigrum; carminative. **Phos′phorated o.**, see *Phosphorated*. **O. of pimen′ta**, volatile distillate from fruit of Eugenia pimenta; resembles, in taste and clinical properties, oil of cloves. **O. of pine need′les**, oil of fir (Scotch). **O. of pi′nus pumil′io**, oil of mountain pine; volatile oil from leaves of P. pumilio; expectorant, and alterative in diseases of the skin, furuncles, and swollen glands. **O. of pi′nus sylves′tris**, oil of fir (Scotch). **O. of po′ho**, Japanese oil of peppermint. **O. of pop′py**, fixed oil from seeds of papaver or poppy. **Por′poise o.**, fixed oil from porpoise blubber. **Pota′to o.**, amylic alcohol obtained from potatoes. **O. of pump′kin-seed**, oil from seeds of Cucurbita pepo; anthelmintic. **O. of red ce′dar**, volatile, from leaves of Juniperus virginiana; perfume. **O. of rho′dium**, volatile distillate from root of Convolvulus scoparius and C. floridus; sometimes used as adulterant of o. of rose. **Rock o.**, petroleum. **O. of rose**, volatile distillate from fresh flowers of Rosa damascena, and probably other species; perfume. **O. of rose-gera′nium**, volatile distillate from cultivated rose-geranium, Pelargonium roseum. **O. of rose′mary**, volatile distillate from Rosmarinus officinalis. **O. of rose′wood**, o. of rhodium. **O. of rue**, volatile distillate from Ruta graveolens. **O. of san′dal-wood** or **O. of san′tal**, volatile distillate from wood of Santalum album; used as perfume, and in gonorrhœa and bronchitis. **O. of santon′ica**, pale yellow, volatile distillate. **O. of sas′safras**, volatile distillate from root of Sassafras officinalis. **O. of sav′ine**, volatile distillate from tops of Juniperus sabina; active principle. **O. of scur′vy grass**, volatile oil from Cochlearia officinalis; employed in scorbutus and rheumatism, **O. of ses′amum**, benné, gingelly or gingli, or tael oil; bland, fixed, non-drying, expressed from seeds of Sesamum indicum; substitute for olive oil. **O. of spear′mint**, volatile distillate from Mentha viridis. **Sperm o.**, fixed oil from sperm-whale, Physeter macrocephalus. **O. of spike**, volatile oil from Lavandula spica; carminative; externally, rubefacient. **O. of spruce**, oil of hemlock. **O. of star-an′ise**, volatile distillate from fruit of Illicium anisatum. **O. of sum′bul**, volatile oil from Ferula sumbul; tonic and antispasmodic. **Sweet o.**, olive oil. **O. of sweet-bay**, oil of laurel. **O. of tan′sy**, volatile distillate from leaves and tops of Tanacetum vulgare; active principle. **O. of tar**, volatile distillate. **O. of tea′berry**, oil of gaultheria. **Teel o.**, oil of sesame. **O. of theobro′ma**, cacao butter; concrete fixed oil expressed from seeds of Theobroma cacao; yellowish-white, bland, neutral, agreeable odor and taste; melts between 30° and 35° C.; used in making suppositories and ointments. **O. of thu′ja**, oil of Arbor vitæ or white cedar, from Thuya occidentalis. **O. of thyme**, volatile distillate from Thymus vulgaris; source of thymol. **O. of tobac′co**, black, tarry product of dry distillation; virulent poison. **O. of tu′menol**, a thick, syrupy mineral oil, related to ichthyol; see *Tumenol*. **O. of tur′pentine**, thin, colorless, volatile distillate, with strong odor and taste; very slightly soluble in water, soluble in alcohol and ether; anthelmintic, diuretic, rubefacient, and stimulant. **O. of vale′rian**, volatile distillate; active principle. **O. of verbe′na**, oil of lemon-grass. **O. of vit′riol**, sulphuric acid. **Vol′atile o.**, essential oil; see also *Olea volatilia*. **O. of wax**, volatile oil produced when wax is distilled. **O. of wheat**, fixed oil expressed from the grain between hot iron plates. **O. of wine**, ethereal oil. **O. of wine, heavy**, result of distillation of wine with sulphuric acid in excess. **O. of win′tergreen**, o. of gaultheria. **Wood o.**, East India resinous oil from Dipterocarpus turbinatus; used in leprosy; oil of Aleurites corata; used in skin diseases. **O. of worm′seed, Amer′ican**, oil of chenopodium. **O. of w., Levant′**, volatile oil from flowers of Artemisia cina; anthelmintic. **O. of worm′wood**, volatile oil from Artemisia absinthium. **O. of w., Ro′man**, oil of artemisia. **O. of yar′row**, oil of milfoil. **O. of Ylang-Ylang′**, volatile distilled oil from Cananga odorata, antiseptic.

**Oil-emul′sion.** Ol. amygdalæ expressum, 15 p.; acaciæ, 15; syr. acaciæ, 20; aquæ aurantii flor., 15; aquæ, 100; make an emulsion.

**Oil-nut.** See *Juglans cinerea.*

**Oil-plant.** See *Sesamum indicum.*

**Oil-su′gar.** Elæosaccharum; pharmaceutical preparation of a volatile oil triturated with sugar, in the proportion of one part to thirty.

**Oil′y.** Oleaginous. **O. cysts**, cysts containing oil or fatty matter, a result of degeneration occurring in the breast, skin, etc. **O. grain,** Sesamum orientale.

**Oinoma′nia.** Addition to alcohol; œnomania.

**Oint′ment.** Medicinal preparation of such consistence that it may be easily rubbed on the skin, becoming gradually liquefied lard, 80; yellow wax, 20 parts; mixed with the aid of heat (Ph. U. S.); white wax, 2; benzoinated lard, 3; expressed oil of almonds, 3 parts (Ph. Br.); see *Unguentum* for the official ointments. **Bang′er's o.,** an ointment containing calomel, alum, lead carbonate, and Venice turpentine. **Basil′icon o.,** ceratum resinæ. **Blue o.,** unguentum hydrargyri. **Cit′rine o.,** unguentum hydrargyri nitratis. **Credé's′ o.,** an ointment containing 15 per cent. soluble (colloidal) silver. **Cyril′lo's o.,** an ointment of corrosive sublimate. **Diach′ylon o.,** an ointment containing 50 per cent. lead plaster. **Ken′tish's o.,** turpentine liniment. **Mau′ry's o.,** o. containing nitrate of mercury, rhubarb, and opium. **Mus′lin o.,** a strip of muslin having its meshes filled with any kind of ointment. **Pagenstech′er's o.,** unguentum hydrargyri oxidi flavi. **Re′gent's o.,** see *Regent.* **Sim′ple o.,** unguentum.

**Oint′ment-pos′itor.** Instrument for applying ointments to the vagina and rectum, consisting of tube and piston.

**Oïocalym′ma** (*oeon*, egg, *kalypto*, to cover). Properly oëocalymma, membrane of the egg-shell.

**O′ken's bod′y.** Corpus Wolffianum.

**O′kra** or **O′kro.** Hibiscus esculentus.

**Ol.** Abbv. for *oleum*, oil.

**O. L. A.** Abbv. for occipitolævo-anterior, left occipito-anterior position of the fœtus; see *Presentation.*

**Olanine′.** Base derived from bone oil.

**O′lax zeylan′ica.** Malla tree of Ceylon; the leaves are eaten by the natives, and the wood, which has an odor resembling human excrement, is employed in fevers.

**Old age.** See *Senectus.* **O. field pine,** Pinus tæda. **O. man,** Artemisia abrotanum; southernwood. **O. man's beard,** fringe tree; Chiananthus virginica. **O. sight,** presbyopia. **O. wife's shirt,** liriodendron.

**O′lea.** Olive tree; see *Olea europæa.* Also plural of *oleum*, oil. **O. anima′lia,** animal oils, fixed oils holding in solution the mucilaginous and gelatinous principles of certain animals, as the oil of frogs, oil of scorpions, oil of spiders, etc.; also empyreumatic oils produced during the decomposition of animal substances by heat. **O. coc′ta,** medicinal oils. **O. destilla′ta,** o. volatilia. **O. dioi′ca,** Indian olive. **O. empyreumat′ica,** empyreumatic oils, oils having an empyreumatic or burnt smell, obtained by treating vegetable or animal matters by heat in closed vessels. They do not exist in organized bodies, but are formed during their decomposition by great heat. The animal oil of Dippel is an empyreumatic oil. **O. ethe′rea,** volatile oils. **O. europæ′a,** olive tree, ord. *Jasmineæ.* Leaves are bitter; extract prepared from them, and a substance called *olivina,* the bitter principle of the leaves, have been given in Italy as antiperiodics. Olives, as met with in the shops, are prepared from the green, unripe fruit, repeatedly steeped in water. To this some quicklime or alkaline salt is added, and afterward they are washed and preserved in a pickle of common salt and water. From the natural olive is prepared the *olive oil* or *salad oil* of the pharmacopœias, obtained by grinding and pressing the olives when thoroughly ripe. The finer and purer oil issues first by gentle pressure, and the inferior sort on heating what is left and pressing it more strongly. See *Oleum olivæ.* In Calabria an odorous resin exudes from its trunk, which is employed as a perfume by the Neapolitans. A gum flows from certain wild olives in warm countries, which consists, according to Pelletier, of a resin, a little benzoic acid, and a peculiar substance called *olivile.* It is in yellow masses, of a slightly acrid taste, and of a vanilla smell. It is astringent and detersive. **O. fix′a,** expressed, fixed, or fatty oils. Oils obtained from the seeds or pericarps of vegetables without distillation, and which are viscid, but slightly odorous and sapid; lighter than water and insoluble in alcohol. The rancidity of oils depends on the absorption of oxygen, and therefore they should be kept in bulk as much as possible, and in narrow-necked bottles. All the fixed oils are emollient, and in a certain dose they act as purgatives and emetics. They are prepared by expressing the fruit or seed containing them. **O. fra′grans,** Osmanthus fragrans, fragrant olive, Chinese shrub; the leaves are added to tea for purposes of adulteration. **O. fuga′cia,** fugacious oils, oils which are so volatile that in order to obtain them recourse must be had to a different process from that employed for other essential oils. Such are the oils of jessamine, lily, violet, etc. **O. gal′lica,** O. europæa. **O. infu′sa,** medicinal oils. **O. lancifo′lia,** O. europæa. **O. latifo′lia,** broad-leaved olive, variety of Olea europæa growing in Spain; yields an inferior sort of olive oil. **O. malabar′ica,** species growing in Malabar; the juice of the leaves is emetic. **O. medicina′lia,** medicinal oils, oils prepared by macerating, infusing, or boiling medicinal substances in olive or any other fixed oil. These oils may then be regarded as oily solutions of certain medicinal substances, whence they can never be simple. They have, however, been divided into simple and compound medicinal oils. To the former belong the *oils of St. John's wort,* of the *Solanum nigrum,* etc.; to the other—which have often been called *oily balsams*—the *balsams of Fioraventi, Metz,* etc. Medicinal oils are almost always employed externally. **O. microcar′pa,** species growing in Cochin China; leaves have diuretic and discutient properties. **O. oleas′ter,** oleaster; wild olive. **O. pin′guia,** fixed oils. **O. polymor′pha,** O. europæa. **O. sati′va,** O. europæa. **O. volatil′ia,** volatile, ethereal, essential, or distilled oils; essences; oils found in aromatic vegetables, and in every part of them except in the interior of the seeds. The majority are obtained by distillation, but some by expression. Most of them are prepared by putting the substance from which the oil is to be extracted into a retort or other vessel suitable for distillation, and adding enough water to cover it; then distilling by a regulated heat into a large refrigeratory, and separating the distilled oil from the water which comes over with it. They possess unctuosity, inflammability, and viscidity, like the fixed oils, but are generally odoriferous, pungent, and acrid. The greater part are lighter than water; some are heavier, and congeal at a moderate temperature. They dissolve in small quantity in distilled water by simple agitation. Almost all are soluble in alcohol. The odor and taste are the usual tests of their goodness. To preserve them they should be kept in a cool place in small bottles, quite full and well corked. Volatile oils are possessed of the aromatic properties of the plants whence they are obtained. All, when applied externally, are stimulant and rubefacient. Pharmaceutical preparations in which the substances are dissolved in volatile oils are termed by the French *myrolés.*

**Olea′ceous.** Relating to the olive.

**Oleaginous,** o-le-aj′in-us. Oily; containing oil.

**Olea′men.** Any soft ointment prepared of oil.

**Olean′der.** Nerium oleander.

**Oleandresin′.** Obtained from decomposition of oleandrin; produces same symptoms as picrotoxin.

**Oleandrin′.** A glucoside from oleander, resembling digitalin.

**Oleandrine′.** Poisonous alkaloid from oleander.

**O′leas.** Oleate.

**Oleas′ter.** Wild olive; Olea oleaster. **Bohe′mian o.,** Elæagnus angustifolia.

**Olea′ta.** Oleates.

**O′leate.** Combinations of oleic acid with oxides of zinc, mercury, lead, etc., and with aconitine, atropine, morphine, etc., have been employed externally;

the medical properties, of course, depend on those of the base. For the official oleates, see *Oleatum*. The chief oleates thus far used (generally diluted) are *aconite oleate*, in neuralgia; *atropine oleate*, not often used; *aluminum oleate*, in intertrigo, dermatitis, bromidrosis, burns, foul ulcers, etc.; *arsenic oleate*, used in lupus, scrofulous ulcers, seborrhœa, chronic eczema, warts, corns, etc.; *bismuth oleate*, in pustular eruptions, erysipelas, acne, eczema, etc.; *cadmium oleate*, in chronic eczema, hypertrophied glands, etc.; *cocaine oleate*, in some forms of eczema and pruritus; *copper oleate*, antiseptic and astringent, in ringworm, chronic ulcers, freckles, tinea, etc., in various degrees of dilution of the oleate; *iron oleate*, astringent and styptic, in some forms of eczema, sycosis, scrofulous ulcers, acne rosacea, etc.; *lead oleate*, in eczema, indurated acne, etc.; *mercuric oleate*, glandular resolvent, not easily absorbed so as to affect the general system; useful in chronic indurated eczema, papular and tuberculous eruptions, sycosis, scrofulous cutaneous diseases, phtheiriasis, etc.; *mercurous oleate*, in syphilis, chronic psoriasis, chronic eczema, etc.; *morphine oleate*, not much employed; *nickel oleate*, in chronic ulcerations and abrasions, chronic eczema, etc.; *quinine oleate*, antiseptic, but not a desirable method of getting either the local or constitutional effects of the drug; *silver oleate*, as an antiseptic stimulant to granulating surfaces in erysipelas, lupus, boils, carbuncles, etc.; *strychnine oleate*, seldom used; *tin oleate*, astringent and tonic; *veratrine oleate*, much diluted, in localized neuralgia; *zinc oleate*, astringent, in various forms of abnormal sweating, cancer of the cervix uteri, etc.

**Olea′tum.** Oleate. **O. hydrar′gyri** (Ph. U. S.), mercury oleate: yellow oxide of mercury, 20 per cent., oleic acid, 80 per cent.; used as a substitute for mercurial ointment; also in arthritis, indurations, syphilis, skin diseases, etc. **O. veratri′næ** (Ph. U. S.), oleate of veratrine: veratrine, 2 per cent., oleic acid, 98 per cent.; used as a substitute for veratrine ointment. **O. zin′ci** (Ph. U. S.), zinc oleate: zinc oxide, 5 per cent., oleic acid, 95 per cent.

**Olec′ranal.** Relating to the olecranon.

**Olecranarthri′tis** (*olecranon* + *arthron*, joint). Inflammation of the elbow-joint.

**Olecra′nial.** Relating to the olecranon.

**Olec′ranoid.** Resembling or relating to the olecranon. **O. cav′ity,** see *Ulna*.

**Olec′ranon** (*olene*, elbow, *kranion*, head). Anconal process. Large curved process at the upper extremity of the ulna. When fractured it is apt to be drawn up by the triceps, and much care is required to keep the parts in apposition. **O. fos′sa,** depression on the posterior surface of the lower end of the humerus for the reception of the olecranon. **O. pro′cess,** olecranon.

**O′lefiant gas.** Ethylene, ethene; chief illuminating constituent of coal-gas; heavy carbureted hydrogen. **Chlo′ride of o. g.,** Dutch liquid, bichloride of ethylene; this liquid has been exhibited as an anæsthetic.

**Ol′efines.** Members of series of hydrocarbons having the formula $C_nH_{4n}$.

**Ole′ic.** Relating to, obtained from, or existing in oil. **O. acid,** $C_{18}H_{34}O_2$, odorless, tasteless, neutral, yellowish, oily liquid, becoming brown, rancid, and acid on exposure to air; crystallizing at 4° C.; product of saponification of olein; used in the preparation of oleates; official in Ph. U. S. and Br., see *Acidum oleicum*.

**Oleif′erous.** Yielding oil.

**O′lein** (*oleum*, oil). Trioleate of glyceryl, triolein; fluid portion of non-drying oils or fats.

**Oleobalsam′ic mix′ture.** Alcohol combination of several volatile oils and balsam of Peru.

**Oleocer′atum.** Cerate. **O. a′qua subace′tum,** ceratum Galeni.

**Oleocre′osote.** Neutral combination of creosote, 33 per cent., with oleic acid; a yellow, oily liquid employed in chronic bronchial catarrhs, respiratory affections, tuberculosis, influenza, etc., in doses of 10 to 15 minims.

**Oleoguai′acol.** Combination of guaiacol and oleic acid.

**O′leo-infu′sions.** Medicinal oils; oleols.

**Oleomar′garin.** Artificial butter made from beef fat by melting at a temperature not exceeding 110°; on cooling, excess of stearin crystallizes out.

**Oleopal′mitate.** Combination of oleate and palmitate of the same base.

**Oleophosphor′ic acid.** Phosphoreted fatty substance contained in the brain.

**Oleores′in.** A resin dissolved in volatile oil. Oleoresins are made by passing ether through the powdered drug by displacement and evaporating the ether until the liquid is of an oily consistence, an ethereal extract. They not only contain resin, but the essential oil of the drug. **O. of aspid′ium,** thick, liquid, ethereal extract of male fern. **O. of cap′sicum,** liquid oleoresin extracted from capsicum. **O. of cu′beb,** percolation of cubeb with ether (Ph. U. S.); maceration in equal parts of ether and alcohol (Ph. G.). **O. of fern,** o. of aspidium. **O. of gin′ger,** concentrated ethereal tincture of ginger. **O. of lu′pulin,** semifluid, possesses all the medicinal properties of lupulin. **O. of male fern,** see *O. of aspidium*. **O. of pep′per,** an ethereal extract from which crystals of piperine have been removed.

**Oleores′ina.** Oleoresin. The following are official in the Ph. U. S.: **O. aspid′ii,** dose, ʒss–j (2.0–4.0). **O. cap′sici,** dose, ♏¼–j (0.016–0.065) in strangury and irritation of the bladder; externally, diluted, a rubefacient. **O. cube′bæ,** dose, ♏v–xxx (0.32–2.0) in water or with powdered sugar. **O. lupuli′ni,** dose, gr. ij–v (0.13–0.32). **O. pip′eris,** dose, ♏¼–j (0.016–0.065). **O. zingib′eris,** oleoresin or piperoid of ginger; dose, ♏ss–j (0.032–0.065).

**Oleosac′charose.** Saccharose combined with a volatile oil.

**Oleosac′charum.** Elæosaccharum; oil-sugar.

**O′leose.** Oily.

**Oleoste′arate.** A combination of an oleate and a stearate of the same base.

**Oleo′sus.** Oleaginous.

**O′leous.** Oily.

**Ol′era** (*olus*, potherb). See *Lachanon*.

**O′leum.** Oil. The following are the official (Ph. U. S. and Br.) olea: **O. ad′ipis** (U. S.), lard oil; used for pharmaceutical purposes. **O. æthe′reum** (U. S.), formed in the distillation of ether; etherol, oil of wine, heavy oil of wine, sweet oil of vitriol, a peculiar oleaginous matter obtained by continuing the distillation after the whole of the sulphuric ether has passed over in the process for the preparation of the latter; used only as an ingredient in the compound spirit of ether. Its sp. gr. is 0.910. **O. aj′owan** (Br.), ptychotis oil, distilled from Carum copticum; carminative, aromatic; contains thymol; dose, ♏ss–iij (0.032–0.2). **O. amyg′dalæ ama′ræ** (U. S.), volatile oil of bitter almond; dose, ♏¼–½ (0.016–0.032). **O. a. expres′sum** (U. S.), expressed oil of almond, a fixed oil, poisonous in large doses; dose, ʒj–℥j (4.0–32.0). **O. ane′thi** (Br.), oil of dill; dose, ♏ss–iij (0.032–0.2). **O. an′isi** (U. S. and Br.), a volatile oil of anise; dose, ♏j–v (0.065–0.32). **O. anthem′idis** (Br.), oil of chamomile; dose, ♏ss–iij (0.032–0.2). **O. ar′achis** (Br.), peanut or groundnut oil, used as a substitute for olive oil. **O. auran′tii cor′ticis** (U. S.), oil of orange-peel, volatile oil from the fresh peel of the bitter or sweet orange; dose, ♏j–v (0.065–0.32). **O. a. flo′rum** (U. S.), oil of orange-flowers, volatile oil from the flowers of the bitter orange; dose, ♏j–v (0.065–0.32). **O. bergamot′tæ** (U. S.), oil of bergamot, volatile oil expressed from the rind of Citrus bergamia; used chiefly as a perfume; dose, ♏j–v (0.065–0.32). **O. bet′ulæ volat′ile** (U. S.), volatile oil distilled from sweet birch, Betula lenta; dose, ♏x–xxx (0.65–2.0). **O. cadi′num** (U. S. and Br.), oil of cade, oleum juniperi empyreumaticum, obtained by dry distillation of the wood of Juniperus oxycedrus; chiefly employed as an external application in skin diseases. **O. cajapu′ti** (U. S.), **cajupu′ti** (Br.), volatile oil of cajaput, distilled from the leaves of Melaleuca leucadendron; chiefly employed externally in skin diseases. **O. ca′ri** (U. S.) or **ca′rui** (Br.), volatile oil of caraway; dose, ♏j–v (0.065–0.32). **O. caryophyl′li** (U. S. and Br.), volatile oil of cloves; dose, ♏j–v (0.065–0.32). **O. chenopo′dii** (U. S.), volatile oil of American wormseed. **O. cinnamo′mi** (U. S. and Br.), volatile oil of cinnamon or of cassia; dose, ♏j–iij (0.065–0.2). **O. copai′bæ** (U. S. and Br.), volatile oil of copaiba; dose, ♏v–xv (0.32–1.0). **O. corian′dri** (U. S. and Br.), volatile oil of coriander; dose, ♏j–iij (0.065–0.2). **O. croto′nis** (Br.), croton oil, o. tiglii. **O. cube′bæ** (U. S. and Br.), volatile oil of cubeb; dose, ♏v–xv (0.32–1.0). **O. dipterocar′pi** (not official), Gurjun balsam, or wood oil; dose, ♏x–ʒj (0.65–4.0); see *Oil, wood*. **O. erigeron′tis** (U. S.), volatile oil of fleabane, distilled from the flowering Erigeron canadense; dose, ♏v–xxx (0.32–2.0). **O. eucalyp′ti** (U. S. and Br.), volatile oil from eucalyptus leaves; dose, ♏j–v (0.065–0.32). **O. fœnic′uli** (U. S.), volatile oil of fennel; dose, ♏j–v (0.065–0.32). **O. gaulthe′riæ** (U. S.), volatile oil of wintergreen; dose, ♏x–xxx (0.65–2.0). **O. gossyp′ii sem′inis**, expressed cotton-seed oil; used as a substitute for olive oil and in liniments. **O. gram′inis citra′ti** (Br.), Indian oil of verbena or lemon-grass, distilled from Andropogon citratus; carminative; dose, ♏j–iij (0.065–0.2). **O. gynocar′diæ** (Br.), chaulmoogra oil, expressed from the seeds of Gynocardia odorata; used in leprosy and various skin diseases, externally and internally; dose, ♏v–xxx (0.32–2.0). **O. hedeo′mæ** (U. S.), volatile oil of hedeoma or pennyroyal; dose, ♏j–x (0.065–0.65). **O. jec′oris asel′li**, o. morrhuæ. **O. junip′eri** (U. S. and Br.), volatile oil of juniper; dose, ♏j–iij (0.065–0.2). **O. j. empyreumat′icum**, o. cadinum. **O. lavan′dulæ** (Br.), **O. l. flo′rum** (U. S.), volatile oil of lavender flowers; dose, ♏j–v (0.065–0.32). **O. limo′nis** (U. S. and Br.), oil of lemon, volatile oil expressed from fresh lemon-peel; dose, ♏j–v (0.065–0.32). **O. li′ni** (U. S.), linseed or flaxseed oil, expressed from the seeds. **O. men′thæ piperi′tæ** (U. S. and Br.), volatile oil of peppermint; dose, ♏j–iij (0.065–0.2). **O. m. vir′idis** (U. S. and Br.), volatile oil of spearmint; dose, ♏j–iij (0.065–0.2). **O. mor′rhuæ** (U. S. and Br.), o. jecoris aselli, cod-liver oil, fixed oil from the liver of Gadus morrhua and other species of codfish; dose, ʒj–iv (4.0–16.0). **O. myr′ciæ** (U. S.), volatile oil from the leaves of Myrcia acris; used in the manufacture of bay rum. **O. myris′ticæ** (U. S. and Br.), volatile oil of nutmeg; dose, ♏j–iij (0.065–0.2). **O. oli′væ** (U. S. and Br.), olive oil, see *Olea europæa*. **O. phosphora′tum** (U. S. and Br.), phosphorated oil, solution of phosphorus in almond oil, one minim containing $\frac{1}{100}$ grain; dose, ♏j–iij (0.065–0.2). **O. pi′cis liq′uidæ** (U. S.), volatile oil of tar; dose, ♏j–v (0.065–0.32). **O. pimen′tæ** (U. S. and Br.), volatile oil of allspice, distilled from pimenta; dose, ♏j–iij (0.065–0.2). **O. pi′ni** or **O. p. pumilio′nis** (Br.), volatile oil of pine, distilled from the leaves; dose, ♏ss–iij (0.032–2.0). **O. ric′ini** (U. S. and Br.), castor oil, expressed from the seed of Ricinus communis; dose, ʒj–℥j (4.0–32.0). **O. ro′sæ** (U. S. and Br.), oil, attar, or otto of roses, distilled from the flowers of Rosa damascena. **O. rosmari′ni** (U. S. and Br.), volatile oil of rosemary, from the leaves of Rosmarinus officinalis; dose, ♏j–v (0.065–0.32). **O. sabi′næ** (U. S.), volatile oil of savine; dose, ♏v–x (0.32–0.65). **O. san′tali** (U. S. and Br.), volatile oil of sandal wood, distilled from Santalum album. **O. sas′safras** (U. S.), volatile oil of sassafras; dose, ♏j–iij (0.065–0.2). **O. ses′ami** (U. S. and Br), oil. of sesame, or of teel, or of benne; expressed oil from seeds of Sesamum indicum. **O. sina′pis volat′ile** (U. S.), volatile oil of black mustard, used for blistering. **O. terebin′thinæ** (U. S. and Br.), volatile oil of turpentine. **O. t. rectifica′tum** (U. S.), rectified oil of turpentine; dose, ♏ij–v (0.13–0.32); as an anthelmintic, ℥ss (16.0). **O. theobro′matis** (U. S.), cacao butter or cocoa butter, a solid oil from the seeds of Theobroma cacao; used for suppositories. **O. thy′mi** (U. S.), volatile oil of thyme, from the leaves and flowering tops of Thymus vulgaris; dose, ♏j–v (0.065–0.32). **O. tig′lii** (U. S.), **O. croto′nis** (Br.), croton oil, expressed from the seeds of Croton tiglium; dose, ♏j (0.065).

**Olfac′tion** (*oleo*, to smell, *facio*, to make). Sense of smell; smelling; sense by which we perceive the impressions made on the olfactory nerves by the odorous particles suspended in the atmosphere. The olfactory nerve, or first pair, has usually been considered the great nerve of smell, and it is probably the nerve of special sensibility, general sensibility being communicated by the branches of the fifth pair distributed on the pituitary membrane of the nose and accessory sinuses.

**Olfac′tive.** Olfactory.

**Olfactom′eter.** Apparatus designed to estimate the degree of sensitiveness to odors; osmometer.

**Olfac′tory.** That which belongs or relates to the sense of smell, as olfactory cells, olfactory nerves, etc. **O. an′gle,** ethnocranial angle. **O. bulb**, an extension from each cerebral hemisphere, gray oval matter lying upon the cribriform plate of the ethmoid, sending down through its foramina filaments constituting the end-organs of the olfactory nerve. **O. cells**, filamentous moruliform cells, connected with nerve-fibres in the olfactory region. **O cen′tre,** part of the cerebral cortex that appreciates smell; located by Ferrier in the subiculum cornu ammonis; by Munk in the hippocampal gyrus. **O. chi′asm,** term applied by Meynert to connection believed to exist between the olfactory lobe of one side and the gyrus uncinatus of the other, through the anterior commissure of the brain. **O. fil′aments**, fibres of the olfactory nerve proper—those arising from the bulb. **O. fis′sure**, fissure in the frontal lobe. **O. foram′ina,** in the cribriform plate of the ethmoid, through which pass the filaments of the olfactory nerve. **O. gan′glion,** olfactory bulb. **O. glom′erules**, rounded ganglionic masses near the surface of the olfactory bulb, from which the olfactory filaments arise; considered by Krause homologous with the spinal ganglia. **O. groove**, see *Olfactory sulcus*. **O. lobe**, o. tubercle, tract, and bulb, considered together as an outgrowth from the hemispheres. **O. mem′brane**, portion of the Schneiderian membrane covering the olfactory region. **O. nerve,** special nerve of smell; often applied to the olfactory tract and bulb, more properly to the collection of filaments passing down from the bulb through the cribriform plate of the ethmoid, and distributed to the Schneiderian membrane of the nose. The nerves of both sides constitute the first cranial pair. **O. pit**, primitive invagination of the ectoderm to form the cavity of the nose. **O. re′gion,** area of distribution of olfactory nerve, embracing upper part of septum and upper part of middle turbinated bone. **O. roots** connect the olfactory tract with the hemispheres. A *lateral* or *outer root* (stria lateralis) passes to the uncinate convolution; a *median* or *inner* (stria medialis) to the convolution of the corpus callosum. A *dorsal root* is also described (Broca), connecting with the frontal lobe. The *middle* or *gray root* of older authors appears to be merely gray substance intercepted between the lateral and median roots. **O. sul′cus**, furrow for the olfactory tract and bulb on the orbital surface of the hemispheres; also groove for the same on the cribriform plate of the ethmoid. One of the grooves in which the filaments of the olfactory nerve lie on the perpendicular plate of the ethmoid. **O. tract**, nerve-like process joining the olefactory tubercle with the bulb. **O. tri′gone**, triangular area of gray matter between the outer and inner roots of the tract and forming the base of the tubercle. **O. tu′bercle**, small, pyramidal lobule at the apparent origin of the tract, in front of the anterior perforated space. **O. ven′tricle**, prolongation of the cavity of the lateral ventricle into the olfactory lobe, constant in the fœtus and many lower animals; sometimes found in adults. **O. ves′icle,** embryonic vesicle, a gemmation from the cerebral vesicle; from it are developed the olfactory bulb and the olfactory tract.

**Olfac′tus.** Olfaction. **O. acu′tus,** hyperosphresia. **O. amis′sio,** defective sense of smell; loss of smell; anosmia. **O. defic′iens,** defect of sense of smell; anosmia. **O. deprava′tus,** depraved sense of smell; parosmia.

**Olib′anum.** Frankincense; see *Juniperus lycia.* **O. arab′icum,** see *Juniperus lycia.* **O. in′dicum,** see *Juniperus lycia.* **O. sylves′tre,** see *Pinus abies.* **O. vulga′re,** see *Pinus abies.*

**Ol′ibene.** Hydrocarbon, chief constituent of volatile oil of olibanum.

**Oligæmia,** ol-ig-e′me-ah (*oligos,* little, *haima,* blood). Poverty of the blood; paucity of red globules; anæmia, hypæmia. **O. sero′sa,** watery or thin condition of the blood; hydræmia. **O. sic′ca,** oligæmia caused by a thickened condition of the blood.

**Olighy′dria** (*oligos,* little, *hydor,* water). Deficiency of fluids in the body.

**Oligidria,** ol-ig-id′re-ah (*oligos,* little, *hidros,* sweat). Ischidrosis. Diminution in quantity of sweat. Suppression of perspiration.

**Oligo-** (*oligos,* few, little). In composition has one of these significations.

**Oligoblen′nia** (*blenna,* mucus). Deficiency of mucus.

**Oligocar′dia.** Slow beating of the heart.

**Oligocatan′tes** (*oligos,* little, *katantes,* down hill). Applied to skulls in which the line joining the hormion and staphylion makes an angle of 20° to 23° with the radius fixus (Lissauer).

**Oligocho′lia** (*chole,* bile). Paucity of bile.

**Oligochromæ′mia** (*chroma,* color, *haima,* blood). Deficiency of hæmoglobin in red blood corpuscles; achroiocythæmia.

**Oligochro′sis** (*chrosis,* coloring). Deficiency of hæmoglobin in red blood corpuscles.

**Oligochy′lia** (*chylos,* chyle). Deficiency of chyle.

**Oligochy′lus.** An epithet for food which is but little nutritive, furnishing but little chyle.

**Oligochy′mia** (*chyma,* chyme). Deficiency of chyme.

**Oligocop′ria** (*kopros,* excrement). Scantiness of alvine evacuations.

**Oligocys′tic.** Term applied to cystic tumors which contain a few cysts, a monocystic tumor including one cyst.

**Oligocythæ′mia** (*kytos,* a cell). Paucity of red corpuscles.

**Oligodac′rya** (*dakry,* a tear). Paucity of the lacrymal secretion.

**Oligodactyl′ia** (*oligos,* few, *daktylos,* finger). Condition in which the number of fingers is less than normal.

**Oligogalac′tia** or **Oligogal′ia** (*oligos,* few, *gala,* milk). Deficient lactation; agalactia.

**Oligohæ′mia.** Oligæmia.

**Oligohydram′nios** (*oligos,* few, *hydor,* water *amnion*). Deficiency of amniotic fluid.

**Oligohy′dria.** Deficiency of fluids in the body.

**Oligoma′nia.** Proposed as a substitute for monomania, to signify a form of insanity affecting only a part of the mental faculties, having well-defined and systematic manifestations.

**Oligomenorrhœ′a.** Deficient menstrual flow.

**Oligopep′sia** (*oligos,* few, *pepto,* to digest). Weak digestion.

**Oligophosphatu′ria.** Diminution of amount of phosphates in the urine.

**Oligophren′ia** (*phren,* mind). Imbecility.

**Oligopio′nia** (*oligos,* few, *pion,* fat). Loss of flesh.

**Oligoplas′mia.** Diminution in the quantity of blood plasma.

**Oligopo′sia** (*posis,* drink). Diminution in the quantity of fluid ingested.

**Oligopsych′ia** (*oligos,* few, *psyche,* mind). Imbecility.

**Oligo′ria.** Condition, characterized by apathy, occurring in some varieties of mental afflictions, in which the patients lose interest in their surroundings.

**Oligosial′ia** (*sialon,* saliva). Paucity of saliva.

**Oligospermat′ic.** Relating to oligospermia.

**Oligosper′mia.** Paucity of spermatic secretion.

**Oligospon′dylous.** Possessing few vertebræ.

**Oligospon′dylus** (*spondylos,* a vertebra). Monster with defective number of vertebræ.

**Oligosteato′sis.** Defective secretion of sebum.

**Oligotrichia,** ol-ig-o-trik′e-ah (*thrix,* hair). Want of hair; paucity of hair; poorly developed hair.

**Oligotrop′hia** or **Oligot′rophy** (*trophe,* nourishment). Scanty or insufficient nourishment.

**Oligot′rophous** (*trepho,* to nourish). Deficient in nourishment.

**Oligozoösper′mia.** Sterility existing in the male because the spermatozoa are few in number and inactive.

**Oligure′sis** or **Oligu′ria.** Morbidly diminished urinary secretion.

**Oligyd′ria** (*hydor,* water). Deficiency of fluids in the body, or of sweat.

**Olin′ic acid.** Acid contained in the form of a glyceride in oils when drying.

**Olisthe′ma** (*olisthaino,* to slip). Luxation.

**Oli′va.** See *Olea.* Olive; olivary body. **O. infe′rior,** olivary body. **O. supe′rior,** nucleus olivaris superior.

**Oli′væ.** Corpora olivaria.

**Oliva′ris.** Olive-shaped.

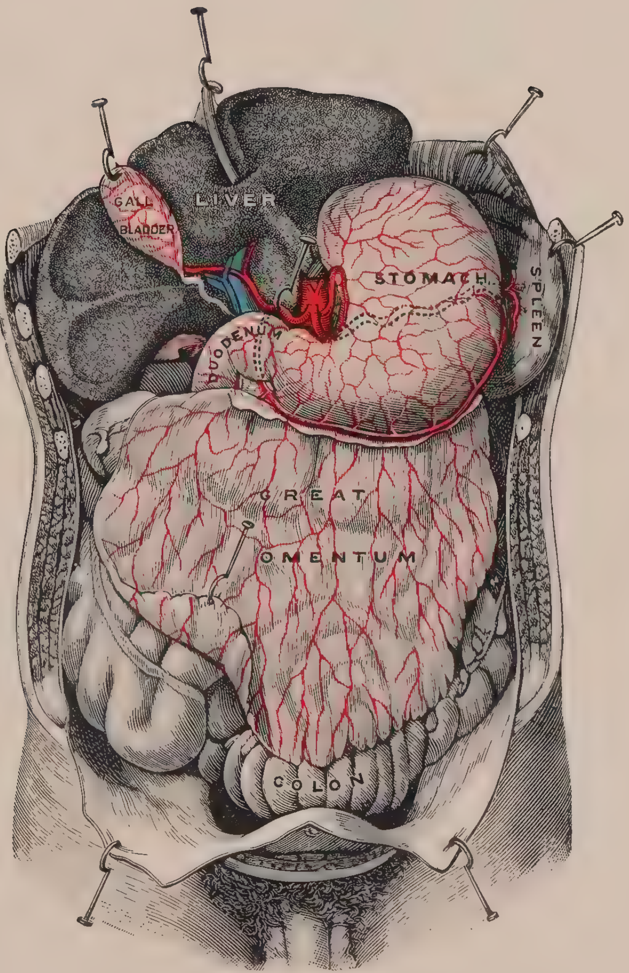
**Ol′ivary.** Olive-shaped. Relating to the olive. **O. body,** oval protuberance containing a large nucleus on the lateral surface of the medulla just below the pons. **Supe′rior o. b.,** nucleus olivaris superior. **O. em′inence,** olivary process. **O. fascic′ulus,** lateral column of medulla. **O. nu′cleus,** collection of gray matter folded like an empty pocket within the olivary body. **O. pedunc′le,** fibres which after surrounding the gray nucleus of the olivary body are collected into a bundle; they end in the deep arcuate fibres. **O. pro′cess,** rounded prominence on upper surface of body of sphenoid in front of pituitary fossa. **O. sul′ci,** grooves which separate the olive from the neighboring portions of the medulla; the lateral (sulcus olivæ lateralis) separates it from the lateral tract; the medial (sulcus olivæ medialis) is a continuation upward of the posterior lateral sulcus of the medulla.

**Ol′ive.** Fruit of *Olea europœa;* also olivary body. **Infe′rior o.,** olivary body. **O. oil,** fixed oil expressed from the ripe fruit; bland, nearly odorless, pale yellow or greenish-yellow, oily liquid, sp. gr. 0.915 to 0.918; sparingly soluble in alcohol, freely so in ether; nutritious and mildly laxative; principally used in pharmacy as a constituent of liniments, ointments, cerates, and plasters. **Supe′rior o.,** nucleus olivaris superior.

**Olivel′la.** Cneorum tricoccum.

**Oliverin′.** Product obtained from bark of Olea europæa; has been employed in place of quinine.

**Ol′iver's symp′tom** (in aneurysm of aortic arch and in some tumors of the mediastinum). Pulsation of the larynx when this organ is held between the thumb and index-finger and pressed upward. **O.'s tests,** *for albumin in the urine:* Sodium-tungstate test; take equal parts of a sodium-tungstate solution (1:4) and of a saturated citric-acid solution, mix, and introduce to the bottom of the suspected urine; at the line of contact a precipitate of albumin and other matter will occur, but heat will clear up all except albumin and mucin. *For bile:* Pulverized peptone, gr. xxx; salicylic acid, gr. iv; acetic acid, ♏xxx; enough distilled water to make ℥viij; filtered until perfectly transparent; ♏xx of urine added to ʒj of this solution will cause an opalescence proportionate to the amount of bile present. *For sugar:* If the suspected urine is boiled with



Great omentum as seen from the front. (Testut.)

indigo-carmine the presence of sugar will color the mixture yellow or reddish-yellow.

**Ol′iver-Cardarel′li symp′tom.** See *Oliver's symptom.*

**Ol′ive-shaped.** Olivary. Resembling an olive. See *Corpora olivaria.*

**Olivifor′mis** (*oliva*+*forma*, shape). Olive-shaped.

**Ol′ivile.** Crystalline principle obtained from exudation from bark of olive tree.

**Olivin′.** See *Rutilin.*

**Olivi′na.** See *Olea europæa.*

**Ol′ivite.** Product derived from leaves or green fruit of olive tree.

**Ol′la** (*olla*, a pot) **cap′itis.** Cranium.

**Ol′lier's lay′er.** Internal layer of periosteum. **O.'s meth′od** or **opera′tion,** a rhinoplastic operation in which an inverted flap, including periosteum, is taken from the forehead, and side flaps by preference from the stump of the nose.

**Olophlyc′tis** (*oloos*, destructive, *phlyktis*, a vesicle). Herpes. **O. hydro′ica,** miliaria rubra and miliaria crystallina. **O. labia′lis,** herpes facialis. **O. progenita′lis,** herpes progenitalis. **O. prolabia′lis,** herpes facialis. **O. volat′ica,** strophulus volaticus.

**Olopho′nia** (*oloos*, destroyed, *phone*, voice). Congenital misconstruction of the vocal organs, resulting in defective speech.

**O. L. P.** Abbv. for occipitolævo-posterior, left occipitoposterior position of the fœtus; see *Presentation.*

**Olshau′sen's opera′tion.** Ventrofixation of uterus for retroflexion.

**Olsnit′ium.** Peucedanum palustre.

**Olulano′sis.** Disease of cats due to presence of *Olulanus tricuspis* in the lungs and stomach.

**Olula′nus tricus′pis.** Nematode worm found in the stomach and lungs of cats.

**O′lus** (a potherb). Lachanon.

**Ol′ut kumbool.** A remedy used in India in cases of neuralgic and congestive dysmenorrhœa.

**-oma** (Gr.). In the termination of many pathological words signifies tumor or other morbid new-growth.

**Omacephal′ia.** State of being an omacephalus.

**Omaceph′alus** (*omos*, shoulder, *akephalos*, devoid of head). A genus of paracephalous monsters without any neck—a slight depression indicating the junction of the head and body. The organs of special sense are rudimentary, and thoracic extremities absent.

**Omag′ra** (*omos*, shoulder, *agra*, seizure). Gout in the shoulder.

**O′mal.** Chlorophenol.

**Omal′gia** (*omos*, shoulder, *algos*, pain). Pain in the shoulder.

**Omarthri′tis.** Inflammation of the shoulder-joint.

**Omarthrocace,** o-mar-throk′a-se (*omos*, shoulder, *arthron*, joint, *kakos*, bad). Caries or suppuration of the shoulder-joint.

**Oma′sum** or **Oma′sus.** Manyplies. Third stomach of ruminant animals.

**Omato′cia** (*omos*, shoulder, *tokos*, birth). Shoulder presentation; premature birth.

**Omei′re.** A vinous and acetous fermented milk used in Africa.

**Omen′ta** (pl. of omentum). Meninges.

**Omen′tal.** Relating to the omentum.

**Omenta′sis** or **Omenti′tis.** Epiploitis.

**Omen′tocele.** Epiplocele.

**Omen′topexy** (*omentum*+*pexis*, fixation). Fixation of the omentum to the parietal peritoneum, with the object of causing an anastomosis of the portal with the systemic veins in order to drain away the fluid of ascites; Talma's operation.

**Omen′tula** (dim. of omentum). Appendiculæ pinguedinosæ.

**Omen′tulum.** Lesser omentum.

**Omen′tum.** Epiploon. **O. col′icum,** epiploon of the colon. **Gas′tric o.,** o. majus. **O. gastrocol′icum,** gastrocolic epiploon. **Gastrohepat′ic o.,** o. minus. **Gastrosplen′ic o.,** gastrocolic epiploon. **Great o.,** gastrocolic epiploon. **O. hepatogas′tricum,** gastrohepatic epiploon. **Less′er o.,** gastrohepatic epiploon. **O. ma′jus,** gastrocolic epiploon. **O. mi′nus,** gastrohepatic epiploon. **O. os′sium,** periosteum. **Third o.,** colic epiploon.

**Omichesis,** o-mik-e′sis (*omicheo*, to pass urine). Micturition.

**Omichol′ic acid.** Acid of red color in decomposing urine.

**Omicholin′.** Matter of a red color contained in decomposing urine.

**Omi′tis.** Inflammation of the shoulder-joint.

**Om′ma.** Eye; vision.

**Om′ne an′imal** or **vi′vum ex o′vo** (every animal, or living thing, from an egg). The maxim that every living body must proceed from some other living body; opposed to the theory of spontaneous generation.

**Om′nis cel′lula e cel′lulâ** (every cell from a cell). An expression of the doctrine that every living cell originates from a parent cell.

**Omniv′orous** (*omnis*, all, *voro*, to eat). Pantophagous. An epithet for animals (as man) which eat both animal and vegetable food.

**Omnubila′tion.** Making or becoming obscure.

**Omo-** (*omos*, shoulder). In the composition of anatomical terms, the scapula or the shoulder.

**O′mo-ancone′us.** Dorsoepitrochlearis.

**O′mo-atlan′ticus.** Levator claviculæ.

**Omobrachia′lis.** Coracobrachialis.

**Omocace,** o-mok′a-se. Disease of the shoulder.

**Omoceph′alus.** Omacephalus; one of a class of simple monsters not capable of existing when the placental circulation is cut off. The thoracic limbs are absent.

**Omocervica′lis.** Levator anguli scapulæ.

**Omoclavic′ular.** Coracoclavicular.

**Omocleidohyoide′us.** Accessory head of the omohyoid, arising from the clavicle, apparently an extension of muscular fibres into a process of the cervical fascia, confining the posterior belly and the intermuscular tendon.

**Omocotyle,** o-mo-kot′i-le. Glenoid fossa of the scapula.

**Omodyn′ia** (*odyne*, pain). Pain in the shoulder. **O. rheumat′ica,** rheumatism of the back, particularly of the shoulders.

**Omohy′oid.** Relating or attached to the hyoid bone and the scapula. **O. mus′cle,** omohyoideus; this slender, long, and flat muscle is situated obliquely at the sides and front of the neck; it arises from the superior costa of the scapula, near the semilunar notch, and from the ligament that runs across it, and is inserted at the sides of the inferior margin of the body of the os hyoides. It consists of two fasciculi united by a common tendon, and is a true digastric muscle. Depresses the os hyoides, carrying it a little backward and to one side, except when it acts with its fellow, when the bone is depressed and drawn obliquely backward.

**Omoli′ta.** Suprascapular bone.

**Omopha′gia** (*omos*, raw, *phago*, to eat). Fondness for raw food; eating of raw food.

**Omoph′agus.** One who eats raw flesh.

**Omopla′ta** (*platys*, flat). Scapula.

**Omoplatohyoide′us.** Omohyoideus.

**Omosit′ia** (*omos*, raw, *sitos*, food). Omophagia.

**Omoster′nal.** Relating to the omosternum.

**Omoster′num.** Interarticular fibrocartilage of the sternoclavicular joint.

**Omostropho′sis** (*omos*, raw, *strepho*, to wrest). Dislocation of the shoulder.

**Omothy′roid.** Aberrant form of the omohyoid muscle, in which it sends fasciculi to be inserted upon the superior horn of the thyroid cartilage.

**Omotrap′ezal.** Relating to trapezius and omohyoideus.

**Omphale′a corda′ta.** Ouabe oil-plant, growing in Guiana and the West Indies. The seeds can be eaten and have purgative properties; leaves are employed in dressing wounds; plant furnishes caoutchouc.

**Omphalec′tomy** (*omphalos*, navel, *ektome*, excision). Excision of the umbilicus.

**Omphalel′cosis** (*omphalos*, navel, *helkos*, an ulcer). Ulceration of the navel of the umbilical cord.

**Omphal′ic.** Umbilical.

**Omphali′tis.** Inflammation of the umbilicus.

**Omphalo-** (*omphalos*, navel). In composition, navel.

**Omphalo′bium pinna′tum.** Tree of the East Indies; fruit and leaves have resolvent properties.

**Omphalocar′pus.** Galium aparine.

**Om′phalocele.** Umbilical hernia; exomphalos.

**Omphalocraniodid′ymus** (*omphalos*, umbilicus, *kranion*, cranium, *didymos*, twin). Double monster in which the umbilical cord or the rudiment of one fœtus is rooted in the cranium of another.

**Om′phaloenter′ic.** Belonging to the umbilicus and intestine, as the *omphaloenteric canal*. See *Vesicula umbilicalis*.

**Om′phaloid.** Navel-like; umbilicated.

**Omphalol′ysis** (*lysis*, separation). Omphalotomy.

**Omphalomesenter′ic** or **Omphalomesera′ic.** Relating to the umbilicus and mesentery. **O. duct,** passage in the fœtus connecting the small intestine with the umbilical vesicle; vestige often found in the adult as a small diverticulum. **O. vein,** main venous stem returning the blood from the yolk-sac to the embryo. **O. ves′sels,** two very fine vessels on the walls of the umbilical vesicle.

**Omphalomonodid′ymi** (*omphalos*, navel, *monos*, alone, *didymos*, twin). Twins united at the navel only.

**Omphalon′cus** (*onkos*, swelling). Umbilical tumor.

**Omphaloneu′ron** (*omphalos*, navel, *neuron*, sinew). Funiculus umbilicalis; umbilical cord.

**Omphalop′agus** (*omphalos*, navel, *pegnymi*, to fasten together). Double monster united by the anterior aspects of the bodies, having a single umbilicus at the lower point of fusion. For species, see *Gastrodidymus*, *Prosopodidymus*, *Sternodidymus*, *Xiphodidymus*.

**Omphalophlebi′tis** (*omphalos*, navel, *phleps*, vein). Inflammation of the umbilical vein.

**Omphalophleg′mone.** Omphalitis.

**Omphalophy′ma** (*phyma*, tumor). Umbilical tumor.

**Omphalopropto′sis** (*proptosis*, falling forward). Exomphalus; protrusion of the navel.

**Omphalorrha′gia.** Hemorrhage from the umbilicus.

**Omphalorrhex′is** (*rhexis*, rupture). Tearing of the funis.

**Omphalorrhœ′a** (*rheo*, to flow). Serous discharge from the umbilicus.

**Om′phalos.** Umbilicus.

**Om′phalosite** (*omphalos*, navel, *sitos*, nourishment). Monster possessing an imperfect kind of life, which ceases when the umbilical cord is divided.

**Om′phalosoter** (*soter*, preserver). Instrument devised for the reduction of a prolapsed umbilical cord.

**Om′phalotacter.** Instrument for placing the umbilical cord in position.

**Omphalotax′is.** Manipulation of replacing the umbilical cord when prolapsed.

**Omphalot′omy** (*omphalos*, navel, *tome*, section). Division of the funis or umbilical cord.

**Om′phalotripsy** (*tribo*, to bruise). Division of the umbilical cord by a crushing instrument.

**Om′phalus.** Umbilicus.

**O′mum oil.** Ajowan oil; derived from fruit of Carum ajowan, containing thymol.

**Omuno′no.** A West African name for yaws.

**On′age.** Poison contained in strophanthus seeds; used by natives of Africa for poisoning arrows.

**Ona′gra.** Œnothera biennis.

**Ona′nia.** See *Onanism*.

**O′nanism** (after *Onan*, Gen. xxxviii. 9). Incomplete coitus, when the male organ is withdrawn in time to prevent the semen from entering the female organs of generation; generally but improperly confounded with masturbation.

**Onanis′tic.** Relating or appertaining to onanism.

**O′nar.** Somnium.

**Onco′ba spino′sa.** Tree of the order *Flacourtiaceæ* or *Tiliaceæ*, native of Egypt and Senegal; fruit is edible.

**Oncocar′pus fitien′sis.** Itch-tree growing in the Fiji Islands; so called because any part of the tree gives rise to severe cutaneous irritation. Caustic juice of the fruit is employed by the islanders in leprosy.

**On′cograph** (*onkos*, tumor, *grapho*, to write). Instrument for recording variations in the volume of a body, such as the spleen, of tumors, etc.

**Oncol′ogy** (*onkos*, tumor, *logos*, discourse). Science in relation to tumors.

**Onco′ma** (*onkos*, swelling). Tumor.

**On′come.** Scotch term, according to Sir Walter Scott, for "mysterious diseases which baffle the regular physician."

**Oncom′eter** (*onkos*, tumor, *metron*, measure). Oncograph.

**Onco′ses.** Tumors, considered as diseases.

**Onco′sis.** Intumescence.

**On′cosphere** (*onkos*, tumor, *sphaira*, ball). Embryo of the tapeworm.

**Oncothlip′sis** (*onkos*, tumor, *thlipsis*, pressure). Pressure due to the presence of a tumor.

**Oncot′omy** (*onkos*, tumor, *tome*, incision). Cutting into a tumor. Opening of an abscess with a knife.

**One′berry.** Paris.

**Oneirodyn′ia** (*oneiron*, dream, *odyne*, pain). Painful dream. Incubus.

**Oneirog′mus** (*oneiron*, dream). A lascivious dream; nocturnal pollution.

**Oneirog′onos** (*gonos*, seed). Oneirogmus.

**Oneirogyne,** on-i-roj′in-e (*oneiron*, a dream, *gyne*, woman). Lascivious dream.

**Oneiron′osus** (*oneiron*, dream, *nosos*, a disease). Morbid, uneasy dreaming.

**On′era al′vi** (load of the bowels) or **O. ven′tris** (load of the belly). Excrement.

**On′ion** (Lat., *unio*). Bulb of Allium cepa; diuretic expectorant, rubefacient, stimulant. Old English term for *bunion*. **O. bog,** Asmunda regalis. **Sea o.,** Scilla maritima.

**Onis′cus** (dim. of *onos*, an ass). A genus of insects, class *Crustaceæ*, very common in cellars and dark and moist places. **O. asel′li,** hoglouse, sowbug; formerly used as a stimulant and diuretic, especially in jaundice.

**Oni′tis.** Origanum dictamnus.

**On′kinocele.** Swelling accompanying inflammation of the tendon sheaths.

**Onko-.** For words beginning thus see *Onco-*.

**Onobai′o.** Arrow poison used by the natives of Obock.

**Onomatol′ogy** (*onoma*, a name, *logos*, a discourse). Nomenclature.

**Onomatoma′nia.** Irresistible impulse to repeat, or fixation of the mind, sleeping or waking, upon some particular word.

**Ononin′.** $C_{18}H_{22}O_8$. Crystallizable, tasteless glucoside obtained from the root of *Ononis spinosa*.

**Ono′nis.** A plant, ord. *Leguminosæ*. **O. antiquo′rum,** O. spinosa. **O. arven′sis** has properties like those of O. spinosa. **O. spino′sa,** root is used as a diuretic.

**Onopor′don** or **Onopor′dum acan′thium.** Cotton thistle, ord. *Compositæ;* expressed juice has been recommended as a cure for cancer, applied externally.

**Onosmo′dium virginia′num.** False gromwell, ord. *Boragineæ;* indigenous; root and seeds are diuretic and tonic; said to dissolve calculi.

**On′thus.** Excrement.

**Ontogen′esis** or **Ontog′eny** (*on*, a being, *gennao*, to produce). Development of the individual. Embryology.

**Ontogenet'ic.** Relating to ontogeny.

**Ontol'ogy** (*on, ontos,* a being, *logos,* a discourse). Term used sometimes for metaphysics generally, but more frequently for that portion of it which deals in generalities, and which embraces, therefore, the speculative and chimerical. Medical ontology treats of diseases of distinct entities, without reference to the part or parts affected.

**On'ycha.** See *Bdellium* and *Cistus creticus.*

**Onychatro'phia** (*onyx,* nail). Atrophy of the nails.

**Onychauxe** (on-ik-aux'e) or **Onychaux'is** (*auxe,* increase). Great size and thickness of the nails.

**Onychexallaxis,** on-ik-ex-al-laks'is (*onyx,* nail, *exallaxis,* change). Degeneration of the nails.

**Onychia,** o-nik'e-ah. Paronychia. Inflammation and suppuration at the side or root of the nail. **O. malig'na,** severe form of onychia, generally due to traumatism, characterized by the presence of ulceration and granulation and foul discharge. **O. parasit'ica,** onychomycosis. **O. periungua'lis,** perionychia.

**Onychisterion,** on-ik-ist-e're-on. Instrument employed for trimming the nails.

**Onychitis,** on-ik-e'tis. Inflammation of a nail.

**Onycho-** (*onyx,* nail). In composition, a nail.

**Onychocam'pe** (*kampe,* curvature). Onychogryposis.

**Onychocla'sis** (*klasis,* fracture). Fracture of a nail.

**Onychocli'ne** (*kline,* bed). The nail-bed.

**Onychocrypto'sis** (*kryptos,* concealed). Disease of the nail follicles.

**Onych'ogram.** Record made by an onychograph.

**Onychograph,** o-nik'o-graf (*onyx,* nail, *grapho,* to write). A form of sphygmograph connected with the finger-nail, recording the capillary pulse.

**Onychogrypo'sis** (*gryposis,* crookedness). Hypertrophy with curvature of the nails, such as occurs in hectic individuals; Hippocratic nails. Also growing-in of the nails.

**Onychohelco'sis.** Ulcerated condition of nail.

**On'ychoid.** Resembling a nail.

**Onycholep'ra.** Leprosy involving the nails.

**Onychol'ysis.** Atrophy or loosening of the nails.

**Onychomyco'sis** (*mycosis,* fungous growth). Onychia parasitica, favus of the nail; a parasitic disease, tinea trichophytina, of the substance of the nail, commencing at the root and extending downward, the nail becoming claw-shaped, thickened, rough, and fissured. It attacks also the hoofs of the horse, mule, etc. **O. circina'ta,** onychomycosis trichophytina. **O. favo'sa,** same as onychomycosis. **O. ton'surans** or **trichophyti'na,** ringworm affecting the nails, due to Trichophyton tonsurans.

**Onychon'osus** (*nosos,* disease). Disease of the nails.

**Onychopath'ic** (*pathos,* disease). Relating to affections of the nails.

**Onychoph'agist.** One addicted to onychophagy.

**Onychoph'agy** (*onyx,* nail, *phago,* to eat). Nail-biting.

**Onychopho'sis.** Disease of the toe-nails, consisting of induration of the corneous layers of epidermis beneath the nail.

**Onychoph'thora** or **Onychophtho'ria** (*phthora,* degeneration). Degeneration or destruction of the nails.

**Onychophy'ma** (*phyma,* tumor). A painful degeneration of the nails, which become thick, rough, and crooked; occurring as a symptom of syphilis and lepra.

**Onychoph'yton** (*phyton,* plant). Onychomycosis.

**Onychopto'sis** (*ptosis,* falling). Falling off of the nails.

**Onychorrhex'is.** Onychoptosis.

**Onychorrhi'za** (*rhiza,* root). Root of the nail.

**Onychosarco'ma** (*sarx,* flesh). Fleshy outgrowth on a nail.

**Onycho'sis.** Disease of the nail. **O. arctu'ra,** ingrowing nail. **O. grypo'sis,** onychogryposis. **O. lap'sus,** onycholysis. **O. molli'ties,** soft condition of nails. **O. tin'ea,** onychomycosis.

**Onychostro'ma** (*stroma,* bed). The nail-bed.

**Onychostromelco'sis.** Ulceration of the nail-bed.

**Onychoth'lasis.** Crusting of the nails.

**Onyclein'.** Brownish granules found in matrix of nails, resembling keratohyalin.

**O'nyx.** Hook (blunt). Nail. Pterygion. Collection of purulent matter between the laminæ of the cornea having the shape of a nail.

**Onyx'is.** Ingrowing nail; onychogryposis. **Re'tro-un'gual o.,** onychia commencing at root of nail. **O. syphilit'ica,** onychia syphilitica.

**Onyxi'tis.** Paronychia.

**O'öblast** (*oon,* egg, *blastos,* germ.) Cell which develops into an ovule; primordial ovule.

**Oöboo-wai'oo.** Beriberi.

**Oöcalym'ma.** Egg-shell membrane.

**Oöcye'sis** (*oon,* egg, *kyesis,* pregnancy). Ovarian pregnancy.

**O'öcyst** (*oon,* egg, *kystis,* bladder). The later, non-motile, form of the ookinete which contains sporozoites.

**O'öcyte** (*oon,* egg, *kytos,* cell). The one-celled mammalian ovum, before maturation; by the process of gemmation the two polar bodies are successively thrown off, leaving the matrix ovum ready for fecundation.

**Oöd'eocele.** Hernia foraminis ovalis.

**Oög'amous** (*oon,* egg, *gamos,* marriage). Applied to beings reproduced through an ovum.

**Oögen'esis.** Origin and development of ova.

**O'öid** (*oon,* egg, *eidos,* resemblance). Oval. Aqueous humor.

**Oökine'sis** (*oon,* egg, *kinesis,* movement). Series of movements and form-changes of the ovum during maturation, fecundation, and first segmentation.

**Oök'inete** (*oon,* egg, *kineo,* to move). Motile fertilized macrogamete of the malarial parasite.

**Oölecith'ymen.** Vitelline membrane.

**Oölem'ma pellu'cidum** (*lemma,* sheath). Zona pellucida.

**Oöleu'con** (*oon,* egg, *leukos,* white). Albumin ovi.

**Oöl'ogy** (*oon,* egg, *logos,* discourse). Ovology. Description of the ovum.

**Oömyce'tes** (*oon,* egg, *mykes,* fungus). Subdivision of fungi.

**O'ön.** Ovum.

**O'önine.** Albumin ovi, white of egg.

**Oöph'agous** (*oon,* egg, *phago,* to eat). Feeding on eggs.

**Oöphoral'gia** (*oophoron,* ovary, *algos,* pain). Neuralgia of the ovary; ovarian irritation.

**Oöphoraux'e** or **Oöphoraux'is** (*oophoron,* ovary, *auxe,* increase). Enlargement of the ovary.

**Oöphorec'tomy** (*oophoron,* ovary, *ektome,* excision). Ovariotomy.

**Oöphor'ia** (*oophoron,* ovary). Hysteria.

**Oöphorin'.** Preparation from ovaries of cow and sow, used in some forms of ovarian disease, sterility, chlorosis, etc.

**Oöphori'tis.** Oaritis; ovaritis. **Follic'ular o.,** inflamed condition of Graafian follicles. **Peritone'al o.,** inflammation of the peritoneum around the ovary.

**Oöphorocysto'sis.** Development of cysts in the ovary.

**Oöph'oroep'ilepsy.** Hysteroepilepsy; also epilepsy associated with ovarian disease.

**Oöphorohysterec'tomy.** Removal of uterus and ovaries.

**Oöphoro'ma.** Ovarian tumor.

**Oöphoromala'cia** (*oophoron,* ovary, *malakia,* softening). Softened condition of the ovary.

**Oöphoroma'nia.** Insanity resulting from ovarian disease.

**Oöph'oron** (*oon,* egg, *phero,* to bear). Ovary. Region of the ovary in which the ova are developed.

**Oöphoropath'ia** (*pathos,* affection). Ovarian disease.

**Oöph'orosalpingec'tomy** (*oophoron,* ovary, *salpinx,* tube). Excision of the ovary and Fallopian tube.

**Oöphoros'tomy** (*stoma*, mouth). Formation of an opening for drainage of an ovarian cyst.

**Oöphor'rhaphy** (*oophoron*, ovary, *raphe*, suture). Operation for displaced ovary; suture of the hilus of the ovary to the relaxed infundibulopelvic ligament.

**Oöph'orum.** Oophoron, ovary.

**Oöplas'ma.** Vitellus.

**Oöri'tis.** Inflammation of the ovary.

**O'öskope** (*oon*, egg, *skopeo*, to observe). Apparatus for observing the development of the egg.

**O'ösperm** (*sperma*, germ). Fertilized ovum.

**O'öspore** (*sporos*, seed). Ovum; egg-cell.

**Oöthecot'omy** (*oon*, egg, *theke*, case, *tome*, incision). Ovariotomy.

**Oöto'cia** (*ootokeo*, to lay eggs). Ovulation.

**Opacity,** o-pas'it-e (*opacus*, obscure). Opaqueness. Incapability of transmitting light; reverse of transparency. **O. of the cor'nea,** albugo, leucoma; see *Keratitis suppurans*. **O. of the lens,** see *Cataract*.

**Opales'cent** or **O'paline.** Milky in appearance; having a somewhat changeable bluish-white color, like the opal. **O. patch,** see *Patch, opaline*, and *Condyloma*. **O. plaques of the mouth,** leucoplasia buccalis.

**Opalisin'.** Proteid in human milk.

**Opaque'.** An epithet given to bodies which do not permit the passage of rays of light. The opaque cornea is the sclerotica, in contradistinction to the transparent cornea or true cornea. **O. nerve-fi'bres,** continuance of medullary sheaths of the fibres of the optic nerves beyond the lamina cribrosa, exhibiting bright white patches upon the retina.

**Opaque'ness.** Opacity.

**O'pen.** Not enclosed or covered. **O. cir'cuit,** broken circuit, not permitting the passage of the electric current. **O. opera'tion,** an operation with wide incision through the skin, opposed to subcutaneous operation. **O. wound,** a wound exposed to the air.

**O'pening.** Orificium; os; ostium; apertura. **Abdom'inal o. of o'viduct,** ostium abdominale tubæ Fallopii. **Aor'tic o.,** o. in the diaphragm for the passage of the aorta. **O. contrac'tions,** contractions caused in a muscle at the anode or cathode when the circuit is broken; the contractions are either clonic, *o. clonus*, or tetanic, *o. tetanus*. **Œsophag'eal o.,** o. in the diaphragm through which the aorta passes. **Saphe'nous o.,** foramen saphenæ, opening below Poupart's ligament, through which the saphenous vein passes.

**O'peocele** (*ope*, foramen, *kele*, rupture). Obturator hernia.

**Op'erable.** Admitting of operation; allowing an operation to be performed, said of tumors, etc.

**Opera'tion.** The application of instruments to the human body with the view of removing diseases. The object of an operation is generally to divide or reunite parts, to extract extraneous or noxious bodies, or to replace organs that are wanting by different instruments or artificial means. These principal operative methods were formerly called *diæresis*, *synthesis*, *exæresis*, and *prothesis*. Frequently the most difficult subject connected with an operation is to decide when it is absolutely called for or advisable, and when improper. Many surgical operations have been named after their proposers; these will be found under their respective alphabetical heads, as *Adams's operation*, *Buchanan's operation*, etc. **Bilat'eral o.,** see *Lithotomy*. **Cap'ital o.,** a major operation attended with danger to life, as ovariotomy. **Chem'ical** or **pharmaceu'tical o.** is any process whose object is the preparation of medicines, their combinations with each other, analysis, and decomposition; such are solution, distillation, sublimation, evaporation, digestion, maceration, infusion, decoction, calcination, etc.; some of these operations are mechanical; others, really chemical. **High o.,** see *Lithotomy*. **Lat'eral o.,** see *Lithotomy*. **Ma'jor o.,** an important operation requiring a high degree of surgical skill and efficiency, as amputation at the hip-joint, etc. **Mi'nor o.,** one in which there is little danger to the patient and which is of but slight extent, as the lancing of a boil. **Plas'tic o.,** see *Surgery*. **Sigaul'tian o.,** symphyseotomy.

**Op'erative.** Effective; relating to operations, as operative surgery.

**Op'erator.** A surgeon who is in the habit of practising the greater operations.

**Oper'cular.** Relating to an operculum. Of the nature of a lid or cover.

**Oper'culum** (*operio*, to cover). A cover or lid. In fishes, the gill-cover. One of the small, membranous processes from the margins of the dental follicles, which unite and form a lid to the follicles after they are closed. **Ar'nold's o.,** o. insulæ. **O. as'peræ arte'riæ,** larynx. **Bur'dach's o.,** o. insulæ. **O. cu'tis,** epidermis. **O. il'ei,** ileocæcal valve; valve of Bauhin. **O. in'sulæ,** triangular eminence between the ascending and posterior branches of the Sylvian fissure, formed by a portion of the inferior frontal and of the precentral convolutions, and covering a considerable portion of the island of Reil. **O. laryn'gis,** epiglottis. **O. oc'uli,** eyelid. **O. papilla'rum,** a nipple-shield. **O. sel'læ,** sheet of the dura mater passing over the pituitary fossa of the sphenoid, binding down the pituitary body.

**Operimen'tum** (*operio*, to cover). Operculum.

**Opertor'ium.** Operculum.

**Ophe'lia chira'ta.** Gentiana chirayta. See *Chirata*.

**Ophel'ic acid.** Bitter acid principle isolated from chirata.

**Ophi'asis** (*ophis*, a serpent). Porrigo decalvans. Lepra. **O. sor'dida,** see *Lepra nigricans*.

**Ophid'ia.** Order of reptiles including snakes.

**Ophid'ian.** Belonging to or resembling serpents.

**Ophidom'onas** (*ophis*, serpent, *monos*, single). Genus of *Schizomycetes*. **O. jenen'sis** or **O. sanguin'ea** (Ehrenberg), Beggiatoa roseopersicina.

**Ophioglos'sum luna'ria.** Moonwort; leaves are astringent, and have been used in domestic practice in fluxes. **O. vulga'tum,** adder's tongue, ord. *Filices;* this plant was formerly considered to be vulnerary.

**Ophiog'raphy.** See *Herpetography*.

**Ophioph'agous** (*ophis*, a serpent, *phago*, to eat). Epithet for animals which feed on serpents. Certain African tribes have been called by this name.

**Ophiorrhi'za.** O. mungos, fam. *Gentianaceæ*. Root has been called *radix serpentum, mungos radix*. The bitter root is much esteemed in Java, Sumatra, etc., for preventing the effects that usually follow the bite of the naja, a venomous serpent; with which view it it eaten by the natives. It is also a reputed anthelmintic.

**Ophio'sis.** Ophiasis.

**Ophiostaph'ylon.** Bryonia alba.

**Ophioxyline'.** Alkaloid from ophioxylon.

**Ophiox'ylon** or **Ophiox'ylum.** Acaweria, ord. *Apocynaceæ*. Has been recommended in the bites of serpents and in intermittents; said to be very bitter.

**O'phis.** Serpent.

**Ophlyc'tis.** Aphthæ.

**Ophri'tis.** Inflammation of the eyebrow.

**Oph'rya.** Eyebrow.

**Oph'ryo-alve'olo-auric'ular angle.** Facial angle measured by two lines drawn from ophryon and auricular point which meet at alveolar point.

**Oph'ryo-in'iac arc.** Arc measured on cranial surface from ophryon to inion.

**Oph'ryon.** In craniometry, point where the supra-orbital line cuts the medial line; the glabella.

**Oph'ryo-opis'thiac arc.** Arc measured on cranial surface from ophryon to opisthion.

**Ophryo'sis.** Spasm of the eyebrow.

**Ophryospi'nal angle.** Jacquart's angle.

**Ophryptheiri'asis.** Phtheiriasis of eyebrows.

**Oph'rys.** Eyebrow.

**Ophryt'ic.** Pertaining to the eyebrow.

**Ophthalmag′ra** (*ophthalmos*, eye, *agra*, a seizure). Gouty conjunctivitis; sudden pain of the eye.

**Ophthalmal′gia** (*ophthalmos*, eye, *algos*, pain). Pain in the eye; neuralgia of the eye.

**Ophthalmatro′phia.** Atrophy of the eyeball.

**Ophthalmec′tomy.** Excision of the eyeball.

**Ophthalmenceph′alon** (*enkephalos*, brain). Portion of the eye developed from the brain.

**Ophthalmentozo′on.** Parasite existing in the eye.

**Ophthal′mia.** Ophthalmitis; conjunctivitis. Three varieties of ophthalmia, independent of the acute and chronic, may be reckoned, called, formerly, *o. membranarum*, *o. purulenta*, and *o. tarsi*. The first, or simple or *catarrhal conjunctivitis*, is characterized by the general symptoms of ophthalmia—pain and redness of the eye or its appendages, with intolerance of light and unusual flow of tears, the inflammation being seated chiefly in the coats of the eyeball; there is hyperæmia with catarrhal or mucopurulent secretion. In *purulent ophthalmia* the internal surface of the palpebræ associates in the inflammation of the eyeball, and there is a copious secretion of a purulent fluid. An epidemic and contagious variety of this is the *Egyptian ophthalmia*, *military ophthalmia*, *suppurative* or *granular ophthalmia*, *epidemic contagious ophthalmia*. Inflammation is rapid and destructive; granulations shoot from the conjunctiva, and occasionally there is intolerable pain. There is a contagious form, probably due to microorganisms, tending to become chronic, with granular lids; see *Trachoma*. In newborn children a species of purulent ophthalmia, usually gonorrhœal, *o. neonatorum*, in which the palpebræ are florid and peculiarly tumid, is by no means uncommon. It is caused by gonorrhœal discharges from the mother coming in contact with the eye of the infant during its exit. The *third* variety, *tarsal ophthalmia*, is seated chiefly in the tarsus or eyelid; the sebaceous crypts secreting a viscid and acrid fluid that glues and ulcerates its edges and irritates the eye. When accompanied with ulceration and much itching it constitutes *psorophthalmia*, *tinea of the eyelids*.

Another form of ophthalmia is met with, *diphtheritic* or *pseudomembranous conjunctivitis*, in which the discharge often assumes the form of thin, yellowish patches, sometimes of thick, opaque membrane. It is complicated with corneal affections, and the prognosis is unfavorable. In *phlyctenular ophthalmia*, *scrofulous keratitis*, *herpes of the conjunctiva and cornea*, there is generally seen a triangular bundle of conjunctival vessels, especially at the outer side of the cornea, at the apex of which one or more small herpetic vesicles or pustules appear; when the pustules are very numerous it has been termed *pannus herpecticus*.

*Exanthematous* or *exanthematic ophthalmia* is called *o. morbillosa*, *o. scarlatinosa*, *o. variolosa*, *o. erysipelatosa*, according to the disease with which it is associated, whether measles, scarlatina, smallpox, or erysipelas.

Conjunctivitis, when slight, requires little treatment, mild astringent and antiseptic applications, etc., and particularly avoiding exposure to light, being all that is necessary. When more severe the treatment must be more vigorous and adapted to the special circumstances of the case. In purulent ophthalmia measures must be employed to prevent disorganization. In ophthalmia tarsi the eyelids must be prevented from being glued together during the night, and the irritation caused by attempts at separating them in the morning thus avoided. Ophthalmia neonatorum is prevented by Credé's method, or the application to the conjunctiva of the newborn child of a solution of nitrate of silver. **Asiat′ic o.**, see *Ophthalmia*. **Catar′rhal o.**, see *Ophthalmia*. **O. chron′ica**, lippitudo. **Conta′gious o.**, see *Ophthalmia*. **Egyp′tian o.**, see *Ophthalmia*. **O. epidem′ica**, see *Ophthalmia*. **O. erysipelato′sa**, see *Ophthalmia*. **Exanthem′atous o.**, see *Ophthalmia*. **O. glutino′sa**, see *Ophthalmia*. **Gonorrhœ′al o.**, severe o. caused by infection with the urethral discharge in cases of gonorrhœa. **Gran′ular o.**, trachoma. **O. hu′mida**, see *Ophthalmia*. **Jequir′ity o.**, purulent conjunctivitis resulting from the instillation of jequirity solution for the cure of trachoma. **Metastat′ic o.**, choroiditis occurring in pyæmia. **Mil′itary o.**, see *Ophthalmia*. **O. morbillo′sa**, see *Ophthalmia*. **O. neonato′rum**, see *Ophthalmia*. **Neuroparalyt′ic o.**, occurring in paralysis of sensation of the cornea, resulting from perforation. **O. nodo′sa**, a chronic o. marked by the occurrence of minute tubercles on the conjunctiva; one form is said to be caused by the presence in the eye of the irritating hairs of the caterpillar. **Phlycten′ular o.**, characterized by formation of blebs, phlyctenulæ, or pustules upon the bulbar conjunctiva. **O. psor′ica**, o. tarsi. **O. puromuco′sa**, Egyptian o. **O. purulen′ta**, o. characterized by purulent discharge; see *Ophthalmia*. **Pus′tular o.**, phlyctenular o. **Rheumat′ic o.**, sclerotitis. **O. scarlatino′sa**, see *Ophthalmia*. **Scrof′ulous** or **stru′mous o.**, phlyctenular conjunctivitis and keratitis. **O. sic′ca**, inflammation of the eye without discharge. **Sup′purative o.**, see *Ophthalmia*. **Sympathet′ic o.**, inflammation of one eye caused by disease or injury of the other. **O. tarax′is**, mild conjunctivitis. **O. tar′si**, blepharitis; see *Ophthalmia*. **O. ulcero′sa**, ophthalmia with ulceration. **Var′icose o.**, cirsophthalmia. **O. variolo′sa**, see *Ophthalmia*. **O. ve′ra**, see *Ophthalmia*. **O. virulen′ta**, purulent conjunctivitis.

**Ophthalmiat′ric.** Relating to the treatment of diseases of the eye.

**Ophthalmiat′rics** (*iatrike*, surgery). Ophthalmology.

**Ophthal′mic.** Relating or belonging to the eye. **O. ar′tery** arises from the internal carotid, and issues from the cranium by the foramen opticum. At first it is situated at the outer and lower side of the optic nerve, but ascends above the nerve and passes toward the inner angle of the orbit. It furnishes in its course the lacrymal, centralis retinæ, infraorbital, anterior ciliary, inferior and superior muscular, anterior and posterior ethmoidal, and superior and inferior palpebral. After having given off these it divides into two branches, the frontal and nasal, which furnish a number of ramifications, some superficial, others deep-seated. **O. gan′glion**, lenticular or ciliary ganglion, one of the smallest ganglions of the body, formed by the fifth and third pairs of the cranial nerves. It is situated at the outer side of the optic nerve near the bottom of the orbit; is irregularly quadrilateral and flat; its color is a reddish-gray. It is supplied by three roots—motor from oculomotor, sensory from nasal, and sympathetic (trophic) from carotid plexus. **O. migraine′**, see *Migraine*. **O. nerve**, orbitofrontal nerve, is the smallest and first of the three branches given off by the fifth pair; it is purely sensory. It proceeds along the external wall of the cavernous sinus, enters the orbit by the sphenoidal fissure, and divides into three branches: external—the lacrymal nerve; superior—the frontal nerve; internal—the nasal nerve. **O. plex′us**, filaments of the cavernous plexus, extending to the ophthalmic artery. **O. si′nus**, see *Cavernous sinus*. **O. stone**, lapis divinus, aluminated copper, used in collyria. **O. veins**, usually two, superior and inferior; they collect blood from the orbit, communicating with the angular and supraorbital veins, and discharge into the cavernous sinus. The name *facial ophthalmic* has been given to the branch by which the facial vein communicates with the ophthalmic.

**Ophthal′mica.** Emphrasia officinalis.

**Ophthal′micus exter′nus.** Motor oculi muscle.

**Ophthalmid′ium.** Smallness of an eye or of the eyes.

**Ophthalmine′.** A term proposed by Dr. William Farr for the supposed specific virus of ophthalmia.

**Ophthalmit′ic.** Pertaining to ophthalmitis.

**Ophthalmi′tis.** Ophthalmia. Latterly restricted to inflammation of the globe of the eye, in which both the external and internal structures are involved; see *Panophthalmitis.* By some it is restricted to sympathetic ophthalmia.

**Ophthal′mium.** Smallness of an eye or of the eyes.

**Ophthalmo-** (*ophthalmos,* eye). In composition, eye.

**Ophthalmobiot′ic.** Relating to the development and physiology of the eye.

**Ophthalmoblennorrhœ′a.** Gonorrhœal ophthalmia. **O. neonato′rum,** ophthalmia neonatorum.

**Ophthalmobrachytes,** of-thal-mo-brak′i-teze (*ophthalmos,* eye, *brachytes,* shortness). Condition in which the eye axis is short.

**Ophthalmocace,** of-thal-mok′a-se. Gangrene of the eye.

**Ophthalmocarcino′ma.** Cancer of the eye.

**Ophthal′mocele** (*kele,* rupture). Exophthalmia.

**Ophthalmocente′sis** (*kentesis,* piercing). Paracentesis or puncture of the eyeball.

**Ophthalmoconjunctivi′tis.** Conjunctivitis.

**Ophthalmoco′pia** (*kopos,* fatigue). Fatigue of vision.

**Ophthalmodesmi′tis** (*desmos,* band). Conjunctivitis.

**Ophthalmodes′mum** (*desmos,* band). Conjunctiva.

**Ophthalmodynamom′eter** (*dynamis,* power, *metron,* measure). Instrument for measuring the power of convergence.

**Ophthalmodyn′ia** (*odyne,* pain). Pain, and especially rheumatic pain, of the eye. Plenck has given this name to neuralgia of the frontal nerve, in which the pain radiates particularly toward the back of the orbit. **O. period′ica,** facial neuralgia.

**Ophthalmœde′ma.** Œdema of the conjunctiva.

**Ophthalmog′raphy** (*graphe,* description). An anatomical description of the eye.

**Ophthalmohydrorrhœ′a.** Watery discharge from the eyes.

**Ophthalmoleu′coscope** (*leukos,* white). Apparatus for testing the color-sense, the colors resulting from polarizing light.

**Ophthal′molith** (*lithos,* stone). Calculus of the eye.

**Ophthalmological,** of-thal-mo-loj′ik-al. Relating to ophthalmology.

**Ophthalmol′ogist.** One who devotes special attention to the eye and its care and treatment.

**Ophthalmol′ogy** (*ophthalmos,* eye, *logos,* discourse). Science of affections of the eye and their treatment.

**Ophthalmol′yma** (*lyme,* destruction). Destruction of the eyeball.

**Ophthalmomala′cia** (*malakia,* softness). Softness and shrivelling of the eye.

**Ophthalmomelano′ma** or **Ophthalmomelano′sis.** Melanoma of the eyeball.

**Ophthalmom′eter** (*ophthalmos,* eye, *metron,* measure). Instrument for measuring the eye, more particularly the radius of curvature of the cornea.

**Ophthalmomet′ric.** Relating to ophthalmometry.

**Ophthalmom′etry.** Measurement of the eye, usually limited in application to the radius of the corneal curvature.

**Ophthalmomi′croscope.** A magnifying device for appreciating exactly the condition of the cornea, crystalline lens, etc.

**Ophthalmomyï′tis** or **Ophthalmomyosi′tis** (*mys,* muscle). Inflammation of the eye-muscles.

**Ophthalmomyot′omy** (*mys,* muscle, *tome,* incision). Operation of dividing the eye-muscles.

**Ophthalmon′cus.** Tumor of the eye.

**Ophthalmoneuri′tis.** Neuritis of the ophthalmic nerve, a branch of the fifth pair. Herpes zoster ophthalmicus is a form of ophthalmoneuritis.

**Ophthalmoneuromen′inx** or **Ophthalmoneury′men** (*ophthalmos,* eye, *neuron,* nerve, *meninx* or *hymen,* membrane). Retina.

**Ophthalmonosol′ogy** (*nosos,* disease, *logos,* discourse). The science of diseases of the eye.

**Ophthalmoparacente′sis.** Paracentesis of the cornea or sclera; also incision of the conjunctiva.

**Ophthalmoparal′ysis.** Ophthalmoplegia.

**Ophthalmop′athy** (*pathos,* disease). Generic name for any morbid condition of the eye; if of the external parts of the eye, as the conjunctiva, cornea, etc., it is *external o.;* if of the deep parts of the eye, *internal o.*

**Ophthalmoperipheri′tis.** Inflammation of the parts about the eye.

**Ophthalmophakom′eter** (*phakos,* lens, *metron,* measure). Instrument for measuring the curvature of the crystalline lens.

**Ophthalmophan′tom.** Mask in which the eyes of animals may be inserted on which to practise ophthalmic operations; also a model upon which the student can practise ophthalmoscopic examinations.

**Ophthalmophlebot′omy** (*phleps,* vein, *tome,* incision). Blood-letting from the vessels of the conjunctiva.

**Ophthalmophthisis,** of-thal-mo-te′sis (*phthisis,* wasting). Destruction or atrophy of the eyeball.

**Ophthalmophy′ma** (*phyma,* growth). Tumor of the eyeball.

**Ophthal′moplasty** (*ophthalmos,* eye, *plasso,* to form). Plastic operation on the eye or in its immediate vicinity.

**Ophthalmople′gia** (*plege,* stroke). Ophthalmoparalysis; paralysis of one or more of the muscles of the eye. **Ba′sal o.,** o. symptomatic of a lesion at the base of the brain. **O. exter′na,** progressive paralysis of the extrinsic muscles of the eyeball. **Fascic′ular o.,** o. sympathetic of a lesion in the pons Varolii. **O. inter′na,** paralysis of the iris and ciliary muscle. **Nu′clear o.,** o. symptomatic of a lesion of the motor eye centre. **Or′bital o.,** o. due to a lesion within the orbit. **O. partia′lis,** o. in which one or two of the muscles of the eye are involved. **Periph′eral o.,** orbital ophthalmoplegia. **O. progressi′va,** form of ophthalmoplegia in which several or all of the muscles of both eyes are liable to be involved. **To′tal o.,** combined external and internal ophthalmoplegia.

**Ophthalmople′gic.** Relating to paralysis of the eye-muscles.

**Ophthalmopon′ia** (*ponos,* suffering). Neuralgia of the eye.

**Ophthalmoprosop′sis** (*prosopsis,* a beholding). Power of the eye to adjust itself so as to distinguish near and far objects; accommodation.

**Ophthalmopto′sis** (*ptosis,* prolapse). Employed by some authors in the sense of exophthalmia, by others in that of hydrophthalmia.

**Ophthalmopyorrhœ′a** (*pyon,* pus, *rheo,* to flow). Purulent conjunctivitis.

**Ophthalmop′yra** (*ophthalmos,* eye, *pyr,* fever). Conjunctivitis occurring in epidemic form.

**Ophthalmorrha′gia.** Hemorrhage from the eye.

**Ophthalmorrhex′is** (*rhexis,* rupture). Rupture of the eyeball.

**Ophthalmorrhœ′a** (*rheo,* to flow). Discharge from the eyeball, especially oozing of bloody fluid. **O. exter′na,** extravasation of blood beneath the eyelids. **O. inter′na,** extravasation within the eyeball.

**Ophthal′moscope** (*skopeo,* to see). Instrument invented by Helmholtz, in 1851, for examining the interior of the eye, consisting essentially of a mirror with a hole in it, through which the observer looks at the artificially illuminated fundus. An *auto-ophthalmoscope* is so constructed that the observer may examine details of his own eye-ground. *Refraction o.* is used in testing the degree of ametropia; especially fitted with lenses, revolving in front of the observer's eye, by which the ametropia, whether on the part of the observer or on that of the observed, is neutralized. (See cut on opposite page.)

**Ophthalmoscop′ic.** Relating to ophthalmoscopy.

**Ophthalmos′copist.** One skilled in ophthalmoscopy.

**Ophthalmoscoptom′eter.** Modified ophthalmoscope for determining the amount of refraction of the eye.

**Ophthalmos′copy.** Use of the ophthalmoscope. **Direct′ o.,** examination of the fundus with the ophthalmoscope held close to the eye. **Indirect′ o.,** examination of the fundus by means of a supplementary lens held between the eye and the ophthalmoscope, the image being then inverted. **Med′ical o.,** o. employed as an aid to diagnosis of diseases other than those of the eye, such as Bright's disease, or various intracranial affections.

**Ophthal′mospasm** (*ophthalmos*, eye, *spasmos*, spasm). Ocular spasm.

**Ophthalmospin′therism** (*spinther*, spark). Ocular condition in which shining spots or sparks seem to appear before the eyes.

**Ophthalmos′tasis.** See *Ophthalmostat*.

**Ophthal′mostat** (*stasis*, station). Instrument for holding the eye immovable during operation. The action is termed *ophthalmostasis*.

**Ophthalmostatom′eter.** Apparatus for measuring the position of the eyes.

**Ophthalmostatom′etry.** Measurement of position of the eyes.

**Ophthalmostere′sis** (*steresis*, loss). Absence or loss of the eye.

**Ophthalmosynchysis,** of-thal-mo-sin′ki-sis (*synchysis*, a mixing). Condition in which an effusion into the interior of the eye occurs.

**Ophthalmotherapeu′tics** or **Ophthalmother′apy.** Treatment of diseases of the eye.

**Ophthalmothermom′eter.** Apparatus for determining the temperature of diseased parts of the eye.

**Ophthalmot′omy.** Incision into the eye.

**Ophthalmotonom′eter** (*tonos*, tension). Instrument for determining the tension of the eyeball.

**Ophthalmotonom′etry.** Measurement of tension of the eyeball.

**Ophthal′motrope** (*trepo*, to turn). A movable ball, attached to which are elastic cords representing the various muscles of the eyeball; used for demonstrating the different movements of the eyes.

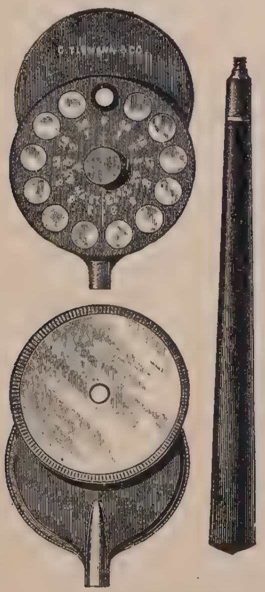
**Ophthalmotropom′eter.** Instrument for measuring movements of the eyeballs. This procedure is termed *ophthalmotropometry*.

**Ophthalmoty′phus.** Contagious ophthalmia occurring in epidemic form.

**Ophthalmoxero′sis** (*xerosis*, dryness). Xerophthalmia; dryness of the conjunctiva. Also termed *ophthalmoxenosis*.

**Ophthalmox′ysis** (*xyo*, to scrape). Scarification of the conjunctiva in cases of ophthalmia.

**Ophthalmoxys′ter.** Instrument for scraping the eye. Name given to a small brush, with barbs like an ear of barley, for scarifying the eyelids in trachoma.



Ophthalmoscope.

**Ophthalmozo′a** (*zoon*, animal). Entozoa or parasites in the globe of the eye and its appendages.

**Ophthalmozygomatog′ramma** (*gramma*, mark). Line extending from the eye to the zygoma.

**Ophthal′mula.** Cicatrix of the eye.

**Ophthal′mus.** Eye.

**Ophthalmydrorrhœ′a** (*hydor*, water, *rheo*, to flow). Watery flux from the eyes.

**Ophthalmymeni′tis** (*hymen*, membrane). Conjunctivitis.

**O′piane.** Narcotine.

**Opian′ic acid.** Oxidation product from narcotine; bitter, prismatic crystals, soluble in boiling water, alcohol, and ether.

**Opianine′.** $C_{66}H_{72}N_3O_2$. Alkaloid discovered in opium, resembling morphine in its properties and doses; insoluble in water, sparingly so in alcohol.

**Opia′num.** Narcotine.

**O′pianyl.** $C_{10}H_{10}O_4$. Meconin.

**O′piate.** Medicine containing opium.

**O′piated.** Impregnated with opium or laudanum. Affected by opium or laudanum.

**O′pifex circumductio′nis.** Obliquus acutus superior. See *Oblique muscles of the eye*.

**O′pii pul′vis.** (Ph. U. S.). Powdered opium; opium dried at a temperature not exceeding 185° F., and reduced to a moderately fine powder.

**Opiokap′nism** (*kapnos*, smoke). Opium-smoking habit.

**Opiolo′gia.** Treatise on or description of opium.

**Opioma′nia.** Irresistible addiction to opium. Mental disease due to abuse of opium.

**Opioma′niac.** A victim of the opium habit.

**Opionine′.** Product derived from opium, occurring in colorless crystals, readily soluble in alcohol and ether, nearly insoluble in boiling water.

**Opioph′agism** or **Opioph′agy** (*phago*, to eat). Opium-eating habit.

**Opiophagis′tic.** Relating to opiophagism; addicted to opium.

**Opis′ma.** Juice.

**Opisthan′trus** (*opisthen*, behind, *antron*, cavern). Applied to skulls in which a vertical line let fall upon the radius fixus from the most projecting point of the torus frontalis falls behind that drawn from nasion by from 1 to 6 mm. (Lissauer).

**Opis′thenar** (*opisthen*, behind, *thenar*, the palm of the hand). Back of the head.

**Opisthioba′sal.** Relating to both opisthion and basion.

**Opis′thion.** Point where median line meets posterior border of foramen magnum (Broca). The lambda or posterior end of the sagittal suture (Lissauer).

**Opisthiona′sal.** Relating to both opisthion and nasion.

**Opistho-** (*opisthen*, behind). In composition, behind, backward.

**Opisthobreg′mus** (*bregma*, top of head). Applied to skulls in which line drawn from hormion to bregma makes, with radius fixus, an angle of from 55.5° to 68° (Lissauer).

**Opisthoceph′alon** (*kephale*, the head). Occiput.

**Opisthochasmus,** op-is-tho-kaz′mus. Applied to skulls in which line forming the staphylion and basion looks forward when referred to the radius fixus as a horizontal, making with it an angle of from 13° to 26°.

**Opisthocœ′lus** (*koilos*, hollow). Concave posteriorly and convex anteriorly. Applied to the middle of a vertebra.

**Opisthocra′nium.** Occiput.

**Opisthogas′tric** (*gaster*, stomach). Behind the stomach.

**Opisthog′nathism** (*opisthen*, behind, *gnathos*, jaw). State of being opisthognathous.

**Opisthog′nathous.** Having teeth sloping backward or a retreating jaw.

**Opisthomeloph′orus** (*melos*, limb, *phero*, to bear). Monster with superfluous flesh on the back.

**Opisthophalacro′sis** (*phalakros*, bald). Baldness of the occipital region.

**Opisthopo'ria** (*poreia*, walking). Involuntary going backward in attempting to walk.

**Opisthosynechia,** op-is-tho-sin-ek'e-ah (*opisthen*, behind + *synecheia*). Posterior synechia.

**Opisthot'enar** (*teino*, to stretch). Erector spinæ.

**Opisthot'ic** (*ous*, ear). Behind the ear. **O. bone,** posterior part of petrous portion of temporal bone. **O. cen'tre,** separate ossific centre for temporal bone, orming part of petrosal seen at base of skull (Huxley).

**Opisthot'onoid.** Resembling or relating to opisthotonos.

**Opisthot'onos** or **Opisthot'onus** (*opisthen*, behind, *teino*, to stretch). Species of tetanus in which the body is bent backward. **Hyster'ical o.,** see *Crucifixion attitude.*

**O'pium** (*opion*, juice). Concrete, milky exudate obtained by incising the unripe capsules of the poppy, *Papaver somniferum* (Ph. U. S. and Br.). In normal moist condition it should contain not less than 9 per cent. of morphine. The principal commercial varieties are from Smyrna and Constantinople. A large number of alkaloids and other substances have been derived from opium, in addition to water, resin, fatty matter, gum, extractive matter, etc. The important constituents may be tabulated as follows, so as to exhibit their chemical composition and characteristics (after J. Mitchell Bruce):

| | Parts in 100 parts. | Constitution. | Reaction. | Characters. |
|---|---|---|---|---|
| 1. Morphine | 5 to 12 | $C_{17}H_{19}NO_3$ | Alkaline. | White needles. |
| 2. Codeine | up to 0.6 | $C_{18}H_{21}NO_3$ | Alkaline. | Nearly colorless octahedra. |
| 3. Thebaine or Paramorphine. | up to 0.3 | $C_{19}H_{21}NO_3$ | Alkaline. | White plates, with acrid styptic taste. |
| 4. Opianine | 0.5 to 1 | | | |
| 5. Cryptopine | | $C_{23}H_{25}NO_5$ | Alkaline. | |
| 6. Metamorphine | | | | |
| 7. Papaverine | | $C_{20}H_{21}NO_4$ | Alkaline. | White needles. |
| 8. Narcotine | 4 to 6 | $C_{22}H_{23}NO_7$ | Alkaline. | Shining prisms; tasteless, odorless. |
| 9. Narcein | up to 0.02 | $C_{23}H_{29}NO_9$ | Neutral. | Fine white needles; odorless, bitter. |
| 10. Porphyroxin | | | | |
| 11. Laudanin | .... | $C_{20}H_{25}NO_4$ | | |
| 12. Meconin | 0.08 to 0.3 | $C_{10}H_{10}O_4$ | Neutral. | White needles; odorless, acrid. |
| 13. Meconic acid | 4 to 8 | $C_7H_4O_7$ | Acid. | Nearly colorless micaceous crystals. |
| 14. Theobolactic acid | .... | Lactic acid. | Acid. | |

Opium is a stimulant in small doses; in larger doses a sedative narcotic, acting almost exclusively on the central nervous system; locally it is anodyne; a powerful narcotic poison; its effects are characterized especially by contraction of the pupils. Two grains have proved fatal. Children are particularly susceptible. It is a valuable drug to allay many forms of irritation or inflammation and to produce sleep. Dose, gr. ¼–j (0.016–0.065), according to the effect desired. The following are the official preparations of opium (for the alkaloids, see the respective headings): *Ace'tum o'pii* (U. S.), vinegar of opium, black drop; about 10 per cent. strength; dose, ♏v–xv (0.32–1.0). *O'pium deodora'tum* (U. S.), deodorized opium of the same strength as the powder; dose, gr. ¼–j (0.016–0.065). *Emplas'trum o'pii* (Br.), one part in ten of resin plaster. *Extrac'tum o'pii* (U. S. and Br.) contains 18 (U. S.) or 20 (Br.) per cent. morphine; dose, gr. ¼–j (0.016–0.065). *E. o. liq'uidum* (Br.), of the same strength as the tincture; dose, ♏v–xxx (0.32–2.0). *Linimen'tum o'pii* (Br.), laudanum and soap liniment. *Pil'ulæ o'pii* (U. S.), opium pills, contain each 1·grain opium. *Pul'vis ipecacuan'hæ compos'itus* (Br.), *p. i. et o'pii* (U. S.), Dover's powder; dose, gr. v–xx (0.32–1.3). *Pul'vis o'pii* (U. S.), powdered opium should contain between 13 and 15 per cent. morphine; dose, gr. ss-ij (0.032–0.13). *Tinctu'ra ipecacuan'hæ et o'pii* (U. S.), liquid Dover's powder; dose, ♏v–xv (0.32–1.0). *Tinctu'ra o'pii* (U. S. and Br.), tincture of opium, laudanum; dose, ♏v–xx (0.32–1.3). *T. o. ammonia'ta* (Br), Scotch paregoric, contains tincture of opium, benzoic acid, oil of anise, and ammonia; dose, ʒss-j (2.0–4.0). *T. o. camphora'ta* (U. S.), *t. cam'phoræ compos'ita* (Br.), paregoric; dose, ʒss–j (2.0–4.0).

**O'pium-hab'it** or **addic'tion.** The habitual daily use of opium.

**O'pium-habit'ué.** One addicted to opium.

**O'piumism.** The habitual use of opium and its morbid consequences.

**Opobal'samum.** Balm of Gilead or Mecca balsam; see *Amyris opobalsamum.*

**Opoceph'alus** (*ops*, the face, *kephale*, head). Monster having two ears approximated or united under the head, the jaws atrophied, and no mouth or nose. Synotus.

**Opocerebri'num** (*opos*, juice). Remedy employed in chorea and hysteria, prepared from gray matter of brain.

**Opodel'doc** or **Opodel'doch.** A soft, solid composition resembling in its properties the linimentum saponis of the Ph. U. S. and Br. Formerly a plaster for all external injuries, and generically, like *saponula*, union of soap with volatile oils. See *Liquid opodeldoc* and *linimentum saponis compositum.*

**Opod'eocele** (*ope*, foramen, *odos*, way, *kele*, a rupture). Subpubic or obturator hernia.

**Opodid'ymus** or **Opod'ymus** (*ops*, eye, *didymos*, double). Diprosopus.

**Opohepatoidi'num.** Preparation of the liver used in cirrhosis, jaundice, and hemorrhage from the nose.

**Opohypophysi'num** (*opos*, juice, *hypophysis*, pituitary gland). Preparation of the pituitary gland, employed in acromegaly.

**Opoïd'ia galbanif'era.** See *Bubon galbanum.*

**Opolieni'num.** Preparation of the spleen, employed in leucocythæmia.

**Opomammi'num.** Preparation of the mammary gland, employed in menorrhagia.

**Opomedulli'num.** Preparation of red bone-marrow, employed in pernicious anæmia.

**Opoörchidi'num.** Preparation of the testicles, employed in spinal diseases.

**Opoösii'num.** Preparation of bone-marrow, employed in rachitis and softening of the bones.

**Opoövari'num.** Preparation of ovaries, employed in chlorosis and hysteria.

**Opopana'cum.** Pastinaca opopanax.

**Opop'anax.** Gum resin formerly esteemed as antispasmodic and emmenagogue. **O. chiro'nium,** Pastinaca opopanax.

**Opop'anaxwort.** Pastinaca opopanax.

**Opopancreati'num.** Preparation of the pancreas, employed in diabetes.

**Opo'pios.** Optic.

**Opoprostati'num.** Preparation of the prostate, employed in enlargement of that organ.

**Oporenii'num.** Preparation of the kidneys, employed in several affections of those organs.

**O'pos.** Expressed juice. **O. sil'phion,** laserpitium.

**Opos'sum tree.** Sweet gum. See *Liquidambar.*

**Oposuprarenali'num.** Preparation of suprarenal capsule, employed in Addison's disease.

**Opotherapeu'tic.** Organotherapeutic.

**Opother'apy** (*opos*, juice, *therapeuo*, to treat). Organotherapy.

**Opothymii'num.** Preparation of the thymus gland, employed in anæmia, chlorosis, etc.

**Opothyroidi′num.** Preparation of the thyroid gland, employed in myxœdema, obesity, etc.

**Op′penheim's gait.** Oscillatory form of the spasmodic locomotion of disseminated sclerosis, the head, trunk, and extremities being irregularly rotated.

**Oppila′tion.** Obstruction; constipation.

**Op′pilative.** Closing an orifice. Constipating.

**Op′polzer's sign.** In pericarditis of a serofibrinous form the location of the pulsation of the heart at the apex changes with the position of the patient.

**Oppo′nens** (*oppono*, to place opposite). That which faces or is in opposition to something; a name given to several muscles. **O. hallu′cis,** supernumerary muscle associated with the adductor hallucis, but inserted into the first metatarsal bone. **O. min′imi dig′iti,** situated in the hypothenar eminence; its fibres arise from the anterior annular ligament of the carpus, and termihate along the whole inner edge of the fifth metacarpal; it carries the fifth metacarpal forward and outward, and thus augments the concavity of the palm. **O. m. d. pe′dis,** supernumerary muscle associated with the flexor brevis minimi digiti pedis, but inserted separately into the fifth metatarsal. **O. pol′licis,** small, flat, triangular muscle, situated in the thenar eminence; attached to the anterior annular ligament of the carpus and to the trapezium, and to the whole outer margin of the first metacarpal. It rotates the first bone of the metacarpus, opposing the thumb to the fingers.

**Opposi′tion.** Angular motion.

**Oppres′sio** (*opprimo, oppressum*, to press against). Catalepsy; oppression. **O. noctur′na,** incubus.

**Oppres′sion.** Sensation of weight in the part affected, as the stomach, chest, etc. When employed abstractly it means, particularly, oppression of the chest. Condition, at commencement of fevers, etc., in which the system is overburdened rather than debilitated.

**Opsial′gia** (*opsis*, face, *algos*, pain). Facial neuralgia.

**Opsig′onus (dens)** (*opsigonos*, born late). Wisdom tooth; see *Dentition.*

**Opsiom′eter** (*opsis*, vision, *metron*, measure). Instrument for measuring the distance of distinct vision.

**Opsioto′cia** (*opse*, late, *tokos*, birth). Parturition after the usual period.

**Op′sis** (countenance). Pupil; vision.

**Opsoma′nia** (*opson*, aliment). Morbid craving for any particular article of diet.

**Opsoma′niac.** A subject of opsomania.

**Optac′tin** (*optomai*, to see). Axis of vision.

**Op′tic** or **Op′tical** (*optomai*, to see). Relating to vision or to the eye. **O. an′gle,** see *Visual angles.* **O. ar′teries,** small branches supplying the optic thalamus: external, from striate arteries; inferior, twigs from posterior cerebral, passing through the posterior perforated space. **O. at′rophy,** atrophy of the optic nerve. **O. ax′is,** line passing through the centre of the cornea and posterior pole of the eye. **O. cap′sule** cartilaginous or bony structure in certain of the lower animals corresponding to the sclerotic in man. **O. cen′tre,** point situated on the principal axis of an optical system characterized by the property that every incident ray which, after refraction by the first surface, passes through it, and emerges in a parallel direction after refraction by the second surface; the optic centre of the crystalline is the point at which various rays proceeding from an object cross on their way to the retina. **O. chi′asm** or **com′missure,** junction and decussation of the optic nerves at the base of the brain upon the body of the sphenoid. **O. cup,** formed by involution of the distal extremity of the primary optic vesicle. **O. disk,** nearly circular pinkish area at the back of the retina where the optic nerve pierces it and expands to form its inner layer; see *O. papilla.* **O. fora′men,** a round opening in the sphenoid bone, near the base of its lesser ala, through which the optic nerve passes. **O. gan′glia,** corpora quadrigemina. **O. gan′glion,** basal collection of cells in the tuber cinereum, near the optic tract, with which it is said to communicate. **O. groove,** transverse groove on the superior surface of the sphenoid, in front of the olivary eminence, on which the optic commissure rests; continuous on each side with the optic foramen. **O. lobes,** corpora quadrigemina. **O. nerve,** nerve of the second pair, ocular nerve. The optic nerve is remarkable for its size, for running a longer course within than without the cranium, and for furnishing no branch from its origin to termination. It arises through the optic tract from the optic thalami and corpora quadrigemina. The fibres are believed to be traceable to the occipital lobe of the cerebrum and upper portion of the cord. Immediately after their origin the optic tracts proceed forward; at first broad and flat, but afterward narrower and round. In front of the fossa pituitaria they unite and decussate, each nerve proceeding through the optic foramen of the sphenoid bone with the ophthalmic artery, and through the foramen opticum choroideæ to form the retina. The nerve passes to the back part of the globe of the eye, becomes narrower, and enters that organ at a flattened circular papilla—the optic papilla—to give rise to the nervous expansion called the retina. The circle which surrounds the point of entrance, and which, seen by the ophthalmoscope, is of a lighter hue than the rest of the retina, is called the *optic disk,* but the term is usually employed synonymously with *optic papilla.* See *Optic papilla.* Between the colliculus and the yellow spot of Sömmering a small projection or fold of the retina passes —plica centralis retinæ. Besides its neurilemma, the optic nerve is surrounded by a sheath, furnished by the dura mater. This accompanies it as far as the eye. It is the nerve of special sensibility of the eye. In the centre of the nerve there is a *punctum cœcum, macula,* where the central artery enters the eye and the corresponding vein passes out. If a ray of light falls on this spot it is not appreciated. **O. neuri′tis,** neuroretinitis. **O. neurot′omy,** division of the optic nerve. **O. papil′la,** optic disk, papilla of the optic nerve; a yellowish-white spot situated about one-tenth of an inch internal to the anteroposterior axis of the eye, through which the optic nerve enters that organ, the central artery and vein of the retina being either at or near the middle of this spot. Its color, which varies in different individuals, is due to the reflected light from the vessels, nerve-tubercles, etc., which compose the papilla. The optic disk may become excavated, as in glaucoma—the glaucomatous cup—or as a result of congenital malformation, or from atrophy and retraction of the optic nerve. The papilla is also liable to venous congestion, ischæmia, hyperæmia of its capillaries, apoplexy, inflammation, atrophy, anæmia, etc. **O. radia′tions,** portion of the corona radiata of the optic thalamus passing to the occipital lobes. **O. thal′amus,** one of the principal collections of gray matter at the base of the brain; appears on either side of the third ventricle as a club-shaped mass, bent from before backward, and continuous from behind downward and forward with the optic tract; see *Tract.* **O. tu′bercles,** corpora quadrigemina.

**Op′tici.** Anterior pair of corpora quadrigemina.

**Opti′cian.** Maker of optical instruments.

**Op′ticist.** One skilled in the theory and practice of optics.

**Opticocil′iary.** Relating to optic and ciliary nerves. **O. neurot′omy,** division of the nerves, leaving the globe intact.

**Opticocine′rea** (*cinereus*, resembling ashes). Gray matter of optic tract.

**Opticopu′pillary.** Relating to the optic nerve or tract and the pupil.

**Op′tics.** The branch of physics which treats of light and of its perception. **Physiolog′ical o.,** part of optical science treating of optical properties of the eye, comprehending various phenomena of vision, color-perception, single vision with two eyes, visual field, etc.

**Op′ticus.** Optic; optic nerve. **Ellip′soid o.,** strongly refracting ellipsoidal body found in basal portion of retinal cones.

**Op′togram** (*optomai,* to see, *gramma,* drawing). Image formed on the retina by the blanching action of light on the retinal purple.

**Op′tograph** (*optomai,* to see, *grapho,* to write). Optogram reproduced in a photograph.

**Optog′raphy** (*optomai,* to see, *grapho,* to write). Fixation of images on the retina.

**Optomen′inx** (*optomai,* to see, *meninx,* membrane). Retina.

**Optom′eter** (*optomai,* to see, *metron,* measure). Instrument for measuring the distance of distinct vision.

**Optomyom′eter** (*optomai,* to see, *mys,* muscle, *metron,* measure). An instrument designed to measure the ocular muscles, to determine their strength, etc.

**Op′toscope** (*optomai,* to see, *skopeo,* to observe). Instrument for testing unilateral amblyopia.

**Optostri′ate.** Relating to the optic thalamus and corpus striatum, as *optostriate arteries.*

**Op′totypes.** Test letters for determining visual acuteness.

**Opun′tia.** Cactus opuntia. **O. cochinillif′era,** cultivated in Mexico and Central America as food for cochineal insects. **O. vulga′ris,** Cactus opuntia; prickly pear; native of tropical and subtropical America; fruit edible, leaves mucilaginous and demulcent; the powdered leaves are used for poultices.

**O′ra.** An edge or seam (pl. of *os,* mouth). **Dog's o.,** Chenopodium vulvaria. **O. fenes′tra ova′lis,** slight raised process surrounding oval window. **O. serra′ta** (serrated edge), wavy edge indicating sensitive nerve portion of the retina a little behind the outer edge of the ciliary processes.

**Or′ach, spread′ing.** Atriplex patula. **Stink′ing o.,** Chenopodium vulvaria.

**O′ral** (*os,* mouth). Vocal. Buccal. Relating to the mouth or to speech. **O. cen′tre,** nervous centre in ascending frontal convolution regulating movements of the mouth and tongue. **O. whiff,** Drummond's whiff; an intermittent sound on expiration, supposed to be a symptom of intrathoracic aneurysm.

**Or′ange.** Fruit of several species of citrus, ord. *Aurantiaceæ.* **O. ber′ries,** small, unripe fruit of bitter orange, *Citrus vulgaris;* the volatile oil obtained by aqueous distillation is called *essence de petit grain.* **O. flow′ers,** partially expanded, fresh flowers of *Citrus vulgaris* and *C. aurantium;* in infusion, a gentle nerve stimulant. **O.-flower water,** aqueous distillate of fresh flowers; a fragrant vehicle for other medicines. **O.-grass,** Hypericum sarothra; the tops are used for the same purpose as St. John's wort. **O.-juice,** expressed from sweet orange; agreeable beverage, used in febrile and scorbutic affections. **Meth′yl o.,** tropæolum. **O.-peel,** see *Bitter-orange peel.* **Poirrer's′ o.,** tropæolum. **O.-root,** golden seal; see *Hydrastis canadensis.* **O. wine,** made by fermentation of saccharine solution to which has been added fresh peel of bitter orange (Ph. Br.); used for flavoring and as an excipient.

**Orbic′ular** (*orbis,* circle). Spherical; circular. **O. bone,** the smallest of the four bones of the ear; scarcely perceptible, round, convex on two surfaces, and situated between the long ramus of the incus and the head of the stapes; it is really not a separate bone, but is the lenticular process of the incus. **O. lig′ament,** annular ligament of radius. **O. mus′cle,** see *Orbicularis.*

**Orbicula′ris.** Orbicular muscle; a term applied to a number of purse-string muscles surrounding openings in the body. **O. a′ni,** sphincter ani externus. **O. exter′nus,** orbicular part of o. palpebrarum. **O. inter′nus,** palpebral part of o. palpebrarum. **O. la′tus,** orbital part of o. palpebrarum. **O. mala′ris,** malaris muscle, constituting part of the orbicularis palpebrarum. **O. oc′uli,** orbicularis palpebrarum; according to Henle, o. palpebrarum, corrugator supercilii, and tensor tarsi, all taken as one muscle. **O. orbita′lis,** orbital part of o. palbebrarum. **O. o′ris,** muscle situated in the substance of the lips, and extending from one commissure to the other; formed of two very distinct portions, of a semi-oval shape—one belonging to the upper lip, the other to the lower; their extremities cross at the commissures, and are confounded with the other muscles of the parts; they bring the lips together and close the aperture of the mouth like purse-strings. An antagonist to every other muscle of the lips. **O. palpebra′rum,** sphincter muscle of the eyelids. It consists of a palpebral portion, thin and pale, situated upon the lids, and an orbital portion, surrounding the orbit, arising from the internal tarsal ligament and adjacent portions of frontal and superior maxillary bones; a slip arises from the lacrymal crest; see *Tensor tarsi.*

**Orbiculostape′dial.** Relating to the orbicular process of the incus and to the stapes.

**Orbic′ulus** (*orbis,* circle). Small circle or disk. **O. capsulocilia′ris,** zonule of Zinn; see *Ciliary zone.* **O. cilia′ris,** region of choroid coat of eye, between ora serrata and ciliary processes. **O. ganglio′sus,** deeper, softer layer of ciliary body of choroid, containing many nerves. **O. ligamento′sus,** external stronger layer of the ciliary body of the choroid.

**Or′bis ge′nu.** Patella.

**Or′bit** (*orbis,* circle). Eye-socket. The circular cavities are so called which lodge the organs of sight; situated at the upper part of the face, and composed of seven bones—viz., the frontal, above; the palate and superior maxillary, below; the sphenoid and malar, externally; the ethmoid and lacrymal, internally. The orbit is filled by the globe of the eye, with its different accessory parts—muscles, nerves, vessels, the lacrymal gland, etc. Its margin is termed *margo orbitalis.*

**Or′bita.** Orbit. **O. oc′uli,** orbit.

**Or′bital** or **Or′bitar.** Relating to or belonging to the orbit. **O. an′gle,** biorbital angle. **O. apoph′yses** or **pro′cesses** terminate the two extremities of the orbital arch. The external is much more prominent, and is articulated with the cheek-bone; the internal is thinner, and joins the os unguis. **O. arch,** the projecting round margin separating the frontal and orbital surfaces of the os frontis, and forming a part of the circumference of the orbit. **O. ar′tery,** branch of the middle temporal, running above the zygoma to the external angle of the eye. **O. canals′, inter′nal,** ethmoidal foramina. **O. convolu′tions,** situated on the orbital surface of the frontal lobe of the brain; usually considered as a continuation of the frontal convolutions, and distinguished as *inner* (straight, medial, gyrus rectus), *middle* (intermediate), *external* (lateral). Since the last two are frequently cut by a cross-furrow, the portions in front and behind are sometimes called *anterior* and *posterior* orbital convolutions; a *pre-Sylvian* or *transverse* convolution sometimes runs in front of the Sylvian fissure. **O. fas′cia,** capsule of Tenon; sheaths of ocular muscles with their dependencies and the palpebral fascia. **O. fis′sures,** situated in the orbit, two in number: one superior, the sphenoidal; the other inferior, the sphenomaxillary. **O. foram′ina,** there are several: 1. Foramen orbitarium superius, situated at the junction of the inner third of the orbital arch with its two outer thirds, and giving passage to the frontal nerve. 2. Foramina orbitaria interiora, situated at the upper part of the internal wall of the orbit, formed by the union of the two notches of the os frontis with two similar ones of the ethmoid, and distinguished into anterior and posterior; the former gives passage to the ethmoidal filament of the nasal nerve and to a small artery. **O. fos′sa,** excavation in the orbital plate of the frontal bone, forming the upper part of the frontal cavity. **O. frontoma′lar diam′eter,** distance between the opposite external orbital points. **O. in′dex,** in craniometry, ratio of vertical height of the orbit to its transverse width, taken as 100. **O. nerve,** a branch of the superior maxillary. It enters the orbit by the sphenomaxillary fissure, and divides into two filaments: malar, which passes over the cheek-bone, distributed to the orbicularis palpebrarum, and anastomosing with the facial nerve; temporal, which passes to the temporal fossæ, and anastomoses with the inferior maxillary and facial, to become afterward subcutaneous. **O. plane,** visual plane of Broca. **O. plate,** thin, bony partition, part of the ethmoid, contributing to the inner wall of the orbit; also part of the frontal bone roofing the orbit. **O. point,** lowest point of the inferior border of the orbit. **O. p., exter′nal,** point at which the outer edge of the orbit meets the frontozygomatic suture. **O. pro′cess,** pyramidal portion of the palate bone contributing, by one of its surfaces, to form the orbit; also orbital portion of the malar bone. **O. sul′ci,** furrows on the orbital surface of the frontal lobe of the brain. Three are usually described: *medial* or *internal,* usually called the *olfactory sulcus; intermediate,* beginning behind at the side of the olfactory tubercle, running forward with a slight outward convexity; *lateral* or *external,* commencing a little to the median side of the Sylvian fissure, running forward with slight convexity inward; the last two are connected by a cross-furrow; see also *Triradiate sulcus.* **O. sur′face,** part of the superior maxilla forming the floor of the orbit. **O. vein** gathers blood from the eyelids, accompanies o. artery, and discharges into the middle temporal.

**Orbita′lis.** Orbital; used specifically for the orbital portion of the orbicularis palpebrarum muscle.

**Or′bito-alve′olo-con′dylar an′gle.** Angle between the orbital axis and the alveolocondylar plane.

**Orbitobas′ilar an′gle.** Angle between the line of the lower border of the inferior maxilla extended and the orbital axis.

**Or′bitocele.** Exophthalmus.

**Orbitoma′lar in′dex.** Ratio of the superior facial and bizygomatic diameters of the skull, the latter being taken as 100.

**Or′bito-occip′ital an′gle.** In craniometry expresses the inclination of the plane of the foramen magnum to the axis of vision.

**Or′bito-oc′ular.** Relating to the orbit and the eye.

**Orbitopalpebra′lis.** Middle sheet of expansion by which the levator palpebræ muscle is inserted, composed of smooth muscular fibres.

**Orbitosphe′noid.** One of the lesser wings of the sphenoid considered as a separate ossific integer; it constitutes a separate bone in many animals.

**Orcein′.** $C_7H_7NO_3$. Red pigment from orcin.

**Orchalgia,** or-kal′je-ah. Orchialgia.

**Or′chanet.** Anchusa tinctoria.

**Orchectomy,** or-kek′to-me. Castration.

**Orchella,** or-kel′lah. See *Orchilla weed.*

**Orchellin′.** Coloring-matter of purple; red color derived from Roccella tinctoria.

**Orchemphraxis,** or-kem-fraks′is. Obstruction of the vessels of the testicles.

**Orcheocatab′asis.** Descent of the testes into the scrotum.

**Or′cheocele.** Orchiocele.

**Orcheoplasty,** or′ke-o-plas-te (*orchea,* scrotum, *plasso,* to form). Reparative surgery of the scrotum effected by procuring flaps of normal tissue from some adjacent part.

**Orcheot′omy** (*orchis,* testicle, *tome,* incision). Castration.

**Orchestroma′nia** (*orchester,* dancer). Chorea.

**Orchial′gia** (*orchis,* testicle, *algos,* pain). Pain in the testicle. Neuralgia of the testicle.

**Orchiato′nia** (*orchis,* testicle, *atonia,* want of tone). Softening of the testicles.

**Orchiatro′phia.** Atrophy of the testicle.

**Orchiaux′e** (*orchis,* testicle, *auxe,* growth). Pathological increase in the size of the testicles.

**Orch′ic.** Relating to the testicles.

**Orchichore′a** (*orchis,* testicle, *chorea*). An alternate rising and falling of one or both of the testicles.

**Or′chida** (*orchis,* testicle). Spirocolon.

**Orchidal′gia.** Orchialgia.

**Orchidec′tomy.** Orchiectomy; castration.

**Orchidemphrax′is** (*emphraxis,* obstruction). Condition in which the vessels of the testicles are obstructed.

**Orchidencephalo′ma.** Fungoid cancer of the testis.

**Orchidi′tis.** Orchitis.

**Orchidocar′pum arieti′num.** Carica papaya.

**Orchidocatab′asis** (*orchis,* testicle, *katabasis,* descent). The descent of the testes into the scrotum.

**Or′chidocele.** Tumor of the testicle.

**Orchidodyn′ia** (*orchis,* testicle, *odyne,* pain). Orchidalgia.

**Orchidomyelo′ma.** Medullary fungus of the testicle.

**Orchidon′cus** (*onkos,* swelling). Tumor of the testis.

**Orchidopex′ia** or **Or′chidopexy** (*pegnymi,* to adjust). Anchorage of the testicle.

**Orchidor′rhaphy** (*rhaphe,* suture). Orchidopexia.

**Orchidos′cheocele.** Hernia of the scrotum coexisting with hernia humoralis.

**Orchidoscir′rhus.** Cancer of the testis.

**Orchidospongio′ma.** Tuberculosis of the testis.

**Orchidot′omy** (*orchis,* testicle, *tome,* incision). Castration.

**Orchidotuber′cula.** Orchidospongiomata.

**Orchidotylo′ma** (*tylos,* callus). Fibrosis of the testis.

**Orchiec′tomy** (*ektome,* excision). Castration.

**Orchiepididymi′tis.** Orchitis with epididymitis.

**Orchil,** or′kil. Deep reddish-purple semiliquid coloring-matter obtained from different species of rocella and other lichens.

**Orchil′la weed.** Species of rocella yielding orchil.

**Or′chiocele.** Tumor of the testicle. Scrotal hernia. Hernia humoralis. A name given to several affections of the testicles and their coverings, essentially differing from each other. **Scir′rhous o.,** scirrhous tumor of the testis.

**Orchiococ′cus.** Diplococcus found in orchitis.

**Orchiodyn′ia** (*orchis,* testicle, *odyne,* pain). Orchialgia.

**Orchiomyelo′ma.** Medullary fungus of the testicle.

**Orchioneural′gia.** Orchialgia.

**Or′chioplasty.** Plastic surgery of the testis.

**Orchior′rhaphy** (*orchis,* testicle, *rhaphe,* suture). Operation of fastening the testicle to a neighboring part by suture or stitching; orchidopexy.

**Orchios′cheocele** (*orchis,* testicle, *osche,* scrotum, *kele,* tumor). Hernia of scrotum coexisting with orchidoncus.

**Orchioscir′rhus.** Scirrhous tumor of the testicle.

**Orchiostosis,** or-ke-os-to′sis (*orchis,* testicle, *osteon,* bone). Bony, indurated condition of testicle.

**Orchiot′omy** (*orchis,* testicle, *tome,* section). Castration.

**Orchipeda** (or-kip′ed-ah) **fœ′tida.** Javanese tree; juice is employed in some cutaneous affections.

**Orchirrhaphy,** or-kir′raf-e. Orchiorrhaphy.

**Orchis,** or′kis. Testicle. A genus of plants, ord. *Orchideæ.* **O. bifo′lia,** see *Salep.* **But′terfly o.,** Orchis bifolia. **O. latifo′lia,** see *Salep.* **O. macula′ta,** see *Salep.* **O. mas′cula,** dogs' stones, male orchis, ballockgrass, male fools' stones, twin-root. This root had a place in some pharmacopœias on account of the glutinous, slimy juice it contains. Root of the *Orchis bifolia* or *butterfly orchis* has been used as a demulcent. The former belief in its aphrodisiac virtues seemed to be owing to its resemblance to a testicle, whence its name. *Salep* is obtained from this and other varieties of orchis. See *Salep.* **O. milita′ris,** see *Salep.* **Round-leaved o.,** Platanthera orbiculata.

**Orchit′ic.** Relating to or caused by orchitis.

**Orchitidocol′ica.** Colic due to orchitis.

**Orchi′tis.** Inflammation of the testicle, hernia humoralis. **O. acu′ta urethra′lis,** acute orchitis following inflammation of the urethra. **O. apostemato′sa,** suppurative orchitis. **Blennorrhag′ic**

o. or **O. blennorrhag′ica urethra′lis,** epididymitis. **O. caseo′sa,** tuberculous orchitis. **Dissem′inated tuber′culous o.,** orchitis occurring in diffuse miliary tuberculosis. **O. epidem′ica,** parotitic orchitis, a form associated with mumps. **Gonorrhœ′al o.,** see *Hernia humoralis.* **Gout′y o.,** orchitis preceding a gouty attack. **O. gummato′sa,** gummatous orchitis, a variety of syphilitic orchitis. **Interstit′ial o.,** orchitis in which the interstitial connective tissue is in a hyperplastic condition and the testicle atrophied. **Mala′rial o.,** orchitis occurring in individuals suffering from malaria. **O. parotit′ica,** orchitis associated with mumps. **O. rheumat′ica,** orchitis caused by rheumatism. **O. syphilit′ica,** orchitis due to syphilis attacking both testicles, either at the same time or consecutively; this disease is characterized by almost entire absence of pain and marked insensibility to pressure. **Tuber′culous o.,** disease of a scrofulous character, in which caseation and suppuration are apt to occur and the spermatic cord and seminal vesicles to increase in size. **O. urethra′lis,** orchitis following urethritis.

**Orchito′mia** or **Orchit′omy** (*orchis,* testicle, *tome,* incision). Incision into a testis. Castration.

**Or′chocele.** Orchiocele.

**Orchoto′mia** or **Orchot′omy.** Incision into a testicle. Castration. Also removal of the tarsi.

**Or′chus** or **Or′chos** (*orchos,* a row). See *Tarsus.*

**Orcin′.** A dihydroxyltoluol found in lichens; local anæsthetic; used externally in skin diseases.

**Or′deal bark.** The bark of Erythrophlæum judiciale or guineensis, sassy-bark; used by certain African tribes as an ordeal poison in the trial of suspected criminals. **O. bean** or **nut,** Calabar bean, called *esere* by the natives of Calabar; official under the name *physostigma.* **O. root,** the root of certain species of strychnos. **O. tree,** Erythrophlæum guinense; Acokanthera thumbergii; Cerbera tanghin.

**Orde′olum.** Hordeolum.

**Or′deum.** Hordeum.

**Orec′tic** (*oregomai,* to desire). Exciting appetite.

**Or′egon grape.** Berberis aquifolium and other species. **O. tobac′co,** used as food by the Indians.

**Ore′lia grandiflo′ra.** Allamanda.

**Orella′na.** See *Terra orleana.* Anotta.

**Orellin′.** Yellow coloring-matter in anotta.

**Oreoselin′.** Crystalline principle from partial decomposition of imperatorin or peucedanin.

**Oreoseli′num.** Mountain parsley; Athamanta aureoselinum. **O. africa′num,** Bubon galbanum. **O. legit′imum,** Athamanta aureoselinum. **O. ni′grum,** Athamanta aureoselinum.

**O′resol.** A guaiacol-ester recommended in the treatment of tuberculosis.

**Orexin′.** $C_{14}H_{12}N_2$. A derivative of chinolin; a tasteless white powder; stomachic, tonic, and appetizer. **O. hydrochlo′ride,** a salt of orexin occurring in colorless, odorless, bitter crystals, and **O. tan′nate,** a yellowish-white powder, possess properties similar to those of the uncombined drug, and are used medicinally as a stomachic and digestive tonic in doses of gr. ij–viij (0.13–0.5); they are given in cases of loss of appetite, anæmia, tuberculosis, chronic gastric catarrh, etc.

**Orex′is** (*oregomai,* to desire). Appetite. **O. cyno′des,** boulimia.

**Or′gan** (*ergon,* work, instrument). Part of an organized being, destined to exercise a particular function; as the eyes are organs of sight, etc. The collection of organs which concur in any function is called an *apparatus.* Mentha pulegium. **Acces′sory o.,** a supernumerary or supplementary organ whose functions are usually less vital than those of the main organ. **O. albu′min,** albumin forming the integral part of the tissues. **O. of Cor′ti,** see *Corti.* **Enam′el o.,** see *Tooth.* **End o.,** apparatus for the termination of nerve-fibres at the surface of the body; see *End.* **O. of Giraldès′,** paradidymis or parepididymis; a small linear body at the upper end of the testicle in the spermatic cord, regarded by Giraldès as the remains of the Wolffian body, and analogous to the "appendage to the ovary" of the female. **Gus′tatory o.,** that part of the mouth and tongue which instructs us as to the savors of bodies. **Ja′cobson's o.,** accessory olfactory organ; see *Jacobson.* **O. of Köl′liker,** cylindrical epithelium lining the sulcus spiralis internus. **Olfac′tory o.,** the olfactory membrane and its contained nerve terminations. **O. of Ro′senmüller,** parovarium. **O. of Ruffi′ni,** see *Ruffini.* **Vomerona′sal o.,** Jacobson's organ. **O. of We′ber,** the sinus pocularis in the male urethra.

**Organ′ic.** Relating to an organ or organs and to beings possessed of organs; to structure as opposed to function; to the animal or vegetable kingdom, as opposed to the mineral. The word organic, as well as *teleorganic,* is also used synonymously with *vital,* in contradistinction to *physical.* **O. bod′ies,** the various proximate principles of the body, nitrogenous and non-nitrogenous; the former, occurring in all the tissues and fluids, and active in the formation of solid constituents of the body, being chemically CHO and N; the non-nitrogenous being fats and carbohydrates. **O. chem′istry,** that part of chemistry which deals with any of the substances containing carbon. **O. com′pound,** product of vital action (sometimes of synthetic chemistry) possessing definite composition, often exhibiting a crystalline structure; thus distinguished from an organized body, which exhibits no tendency to crystalline arrangement and is not invariable in composition. **O. diseas′es** or **le′sions,** such as concern the actual substance of the organ itself, in contradistinction to functional diseases, which merely concern the function. **O. func′tions** are those possessed by both animals and vegetables. **O. life,** Bichat's term for some of the functions common to living animals and vegetables, as opposed to those he supposed peculiar to animals. **O. ner′vous sys′tem,** see *Trisplanchnic nerve.* **O. re′flexes,** those connected with organic actions, as defecation, erection, digestion, etc.

**Organ′icism.** Doctrine of the localization of disease, which refers it always to a material lesion of an organ. It is the antithesis of *vitalism.* The great principle of the supporters of the former doctrine is that life is the result of organization.

**Organisa′tion.** Organization.

**Or′ganism.** The living economy. Many physiologists have used this word synonymously with organization; but it more especially designates the aggregate of vital actions in organized beings, animal as well as vegetable. The collection of parts composing an organized body and the laws governing it.

**Or′ganite.** An elementary organ—a blood corpuscle, for example.

**Organizabil′ity.** Capability of organization or of being formed into living tissue. Substances believed to be possessed of such capability, as fibrin, are said to be *organizable.*

**Organiza′tion.** The manner of structure proper to different beings. Also employed in the sense of the structure of a part; as the organization of the heart, etc. An organism.

**Or′ganized.** That which is composed of organs. **O. bod′ies,** those endowed with life—*i. e.,* animals and vegetables—in contradistinction to inorganic bodies, which comprise the mineral kingdom.

**Organochem′ia.** Organic chemistry.

**Organogen′esis** (*genesis,* generation). The formation and growth of organs.

**Organogenet′ic** or **Organogen′ic.** Relating to organogenesis.

**Organogeny,** or-gan-oj′en-e. Organogenesis.

**Organogno′sia** (*gnosis,* knowledge). Knowledge and discrimination of organized bodies.

**Organog′raphy** (*graphe,* description). A description of the organs of the living body.

**Or′ganoid.** Virchow's term for tumors consisting of a number of tissues.

**Organolep′tic** (*lepsis,* action of receiving). Making an impression on an organ of special sense, or capable of receiving such impression.

**Organol'ogy** (*logos*, description). Description of the organs.

**Or'ganon.** Organ. Rules for scientific study. Instrument.

**Organon'omy** (*nomos*, law). Doctrine of the laws of organic life.

**Organop'athy.** Morbid condition in which a structural change in the affected part exists, as opposed to functional diseases. Also organotherapy.

**Organopex'is** or **Or'ganopexy** (*pegnymai*, to fix). The fixation of any displaced or wandering organ; see *Hysteropexy, Nephropexy*, etc.

**Or'ganoplasty.** The formation and development of organic tissues.

**Organos'copy** (*skopeo*, to examine). See *Craniology*.

**Organotherapeu'tic.** Relating to organotherapy.

**Organother'apy** (*organon*, organ, *therapeuo*, to cure). Opotherapy; employment internally of the organs of animals or of extracts of such organs, in the treatment of disease; as of testicular juice, suggested by Brown-Séquard, in senile debility, locomotor ataxia, paralysis, etc., or of the thyroid gland in the treatment of myxœdema and cretinism.

**Organotroph'ic** (*trepho*, to feed). Relating to the organization or nutrition of living parts.

**Or'ganum.** Instrument; organ.

**Or'gany.** Origanum vulgare.

**Or'gasm** (*orgao*, to be excited). State of excitement and turgescence of any organ, erethism; applied particularly to the spasm of venereal excitement in sexual intercourse.

**Or'geat.** Syrupus amygdalæ.

**Orgo'sis.** Orgasm.

**Orien'tal.** Pertaining to or coming from the Orient. **O. boil**, see *Furunculus orientalis*. **O. cashew' nut**, marking-nut, Malacca bean, marsh nut; fruit of Semicarpus anacardium; the hard shell contains a corrosive juice; the kernel is used for food. **O. el'emi**, see *African elemi*. **O. ring'worm**, tinea circinata tropica. **O. salep'**, tubers of various species of eulophia growing in India. **O. sore**, see *Ulcers, endemic*. **O. ty'phus**, bubonic plague.

**Orienta'tion.** Recognition of points of the compass. Optical recognition of horizontal and vertical lines as such, and of stability of objects when their images shift on the retina through the motion of the eye. The determination of one's relation, physical or mental, to the outside world. Getting one's bearings; putting into order a mass of facts; assigning objects seen to their true place.

**Orifa'cial.** Relating to the face and mouth. **O. an'gle**, in craniometry, angle between the facial line of Camper and a plane drawn through the masticating surfaces of the upper teeth.

**Or'ifice** (*os*, mouth, *facio*, to make). Entrance to a canal or cavity; variously called opening, aperture, foramen, meatus, ostium, mouth, etc.

**Orificial**, or-if-ish'al. Relating to an orifice. **O. sur'gery**, surgery applied to any orifice, as the anus, vulva, etc., with a view to the suppression of reflex disturbances supposed to originate there.

**Orifi'cium.** Orifice, ostium, opening, mouth. **O. cuta'neum**, external opening of the urethra. **O. dex'trum ventric'uli**, pylorus. **O. epiplo'icum**, foramen of Monro. **O. hyme'nis**, see *Vagina*. **O. infundib'uli**, helicotrema. **O. supe'rius laryn'gis**, see *Larynx*. **O. u'teri**, os uteri. **O. vagi'næ**, see *Vagina*. **O. vagina'le**, os uteri. **O. vagina'le cana'lis cervi'cis**, os uteri. **O. ventric'uli sinis'trum**, cardiac extremity of stomach. **O. vesica'le**, vesical opening of the urethra.

**Orig'anum.** Wild or common marjoram, mancurana, ord. *Labiatæ*. Resembles marjoram in smell, and has a pungent taste much like thyme. It is aromatic and stimulant, diaphoretic and emmenagogue, and its oil possesses the properties of the essential oils in general. The *oil of origanum* is very pungent; it is rarely given internally, but is used locally in toothache. **O. aquat'icum**, Eupatorium cannabinum. **O. cre'ticum**, O. dictamnus. **O. dictam'nus**, the leaves of this variety have been recommended as emmenagogue and alexipharmic. **O. heracleot'icum**, origanum. **O. majora'na**, sweet marjoram; odor is strong and fragrant, taste aromatic and bitterish; properties those of a stomachic and errhine; chiefly used, however, for culinary purposes and as a snuff in headache. **O. syri'acum**, Teucrium marum. **O. vulga're**, origanum.

**Or'igin.** Beginning or source. More fixed or central termination of a muscle. Connection of a nerve with the cerebrospinal axis. **Appar'ent o.**, superficial o. **Deep o.**, nucleus of cells in brain or cord to which the fibres of a nerve penetrate. **Ec'tal o.**, superficial o. **En'tal o.**, deep o. **Superfic'ial o.**, point on the surface of the brain or cord where a nerve emerges.

**Orina'sal.** Relating to mouth and nose.

**Orismol'ogy** (*orismos*, definition, *logos*, discourse). Terminology; nomenclature.

**Or'istry.** Stomatology; surgery of the teeth and mouth.

**Oriza'ba root.** Male jalap.

**Orizabin'.** Jalapin.

**Orlea'na.** Annotta. See *Terra orleana*.

**Or'me.** Appetite.

**Ormocar'pum lennoi'des.** Plant of East India. Root possesses tonic and stimulant properties; bark of the root is employed externally in rheumatism.

**Ormosine'.** Crystalline alkaloid from seed of Ormosia dasycarpa; a white substance resembling opium in its action.

**Ornithog'alum altis'simum.** A South African plant, ord. *Asphodeleæ*, the fleshy bulb of which is diuretic. An oxymel is prepared from it, which is given in catarrh, asthma, phthisis, and hydrothorax. It resembles squill in its medical properties. **O. marit'imum** or **O. squil'la**, scilla.

**Ornithoglos'sa.** Fraxinus excelsior.

**Ornithog'raphy** (*ornis*, bird, *grapho*, to write). Description of birds.

**Ornithol'ogy.** Science relating to birds.

**Or'nus europæ'a.** Fraxinus ornus. **O. mannif'era**, Fraxinus ornus. **O. rotundifo'lia**, Fraxinus ornus. **O. sylves'tris**, Fraxinus excelsior.

**Oroban'che america'na** and **O. uniflo'ra.** Cancer-root, earthclub, and clapwort, possessing properties similar to those of O. virginiana. **O. virginia'na**, Virginia broomrape, beechdrops, cancer-root; fam. *Orobanchoideæ*. This parasitic plant is astringent, and a peculiar and extremely nauseous bitter. It is most powerful when fresh; has been used in dysentery, and, externally, to obstinate ulcers.

**Or'obus.** Ervum ervilia. **O. fa'ba**, Vicia faba.

**Orolin'gual.** Relating to the mouth and tongue. **O. cen'tre**, nervous centre for movements of the mouth and tongue. **O. hemipar'esis**, aphasia.

**Orona'sal.** Relating to the mouth and nose.

**Oron'osus** (*oros*, mountain, *nosos*, a disease). Puna; mountain fever; mountain sickness.

**Orophal'lus** (*oros*, rump, *phallos*, the male organ). Monster having a second male organ originating from the region of the nates.

**Orophar'ynx.** Lower portion of the pharynx, continuous with the mouth.

**Oros'copy** (*os*, mouth, *skopeo*, to see). Inspection of the mouth.

**Orother'apy** (*oros*, serum). Orrhotherapy.

**Orox'ylum in'dicum.** A plant of the order *Bignoniaceæ*. Root is employed externally and in the form of a bath in acute articular rheumatism. Dose, internally, gr. iij–xv (0.2–1.0); its diaphoretic action is more energetic than that of ipecac. In dysentery its action is that of a tonic astringent.

**Oro'ya fe'ver.** A severe, usually fatal form of verruca peruana.

**Or'phol.** Bismuth beta-naphthol.

**Or'piment.** Native yellow trisulphide of arsenic.

Poisonous, but less so than the oxide. It is also called king's yellow, adarigo, adarnech, ahusal, althanacha, azarnet. The Turks prepare a depilatory with it which they call *rusma*.

**Or′pine.** Sedum telephium.

**Or′rhagogue** (*orrhos*, serum, *ago*, to lead). Hydragogue.

**Orrhoche′zia** (*orrhos*, serum, *chezo*, to go to stool). Serous diarrhœa.

**Orrhocys′tis** (*orrhos*, serum, *kystis*, a bladder). An encysted tumor containing a serous fluid.

**Orrhodiagno′sis** (*orrhos*, serum). Serum-diagnosis. Diagnosis based upon the agglutinating action of the blood serum of the sick, as in Widal's test; or on the effect of the injection into the sick of certain therapeutic sera, as tuberculin.

**Orrhohy′menes** (*orrhos*, serum, *hymen*, membrane). Serous membranes.

**Orrhohymeni′tis** (*orrhos*, serum, *hymen*, membrane). Inflammation of a serous membrane.

**Or′rhoid.** Serous.

**Orrhopygion**, or-ro-pij′e-on (*orrhos*, extremity, *pyge*, nates). Inferior extremity of the vertebral column; os coccygis. Also the raphe extending from the penis to the anus, and separating the scrotum into two parts.

**Orrhorrha′gia** (*orrhos*, serum, *rhegnymi*, to burst forth). Sudden discharge of serum, as from the bowels in Asiatic cholera.

**Orrhorrhœ′a** (*orrhos*, serum, *rheo*, to flow). Flow of serum; watery discharge.

**Orrho′sis** (*orrhos*, serum). Formation of serum.

**Orrhoso′len** (*orrhos*, serum, *solen*, pipe or tube). Lymphatic vessel.

**Orrhosoleni′tis.** Inflammation of lymphatic vessel.

**Orrhother′apy** (*orrhos*, serum, *therapeuo*, to cure). Serum-therapy. The treatment of a specific disease by means of an immune serum obtained from an animal which has received repeated graduated injections of the virus of that disease. Also whey-cure.

**Orrhymeni′tis.** Orrhohymenitis.

**Or′ris.** Iris florentina. **Com′mon o.**, Iris germanica.

**Ortharthrag′ra** (*orthos*, true, *arthron*, joint, *agra*, seizure). True gout.

**Orthiauchenous**, or-the-au′ken-us (*orthos*, upright, *auchen*, neck). A term applied to skulls in which the line joining the inion and basion makes an angle of from 38° to 49° with the radius fixus (Lissauer).

**Orthin′.** $C_7H_8N_2O_3$. Orthohydrazin-paraoxybenzoate. A derivative of phenylhydrazin, administered in the form of *hydrochlorate* as an antipyretic.

**Orthio-** (*orthios*, straight). In composition, straight.

**Orthiochor′dous** (*chorde*, chord). A term applied to skulls in which the line joining the hormion and basion makes an angle of from 33° to 52° with the radius fixus (Lissauer).

**Orthiocor′yphous** (*koryphe*, peak). A term applied to skulls in which the line connecting the bregma and lambda makes an angle of from 29° to 41° with the radius fixus (Lissauer).

**Orthiodon′tous** (*odous*, tooth). A term applied to skulls in which the line joining the subnasal and alveolar points makes an angle of from 88° to 121° with the radius fixus (Lissauer).

**Orthiodoxyben′zene** or **Orthiodoxyben′zol.** Pyrocatechin.

**Orthiometo′pous** (*metopon*, forehead). A term applied to skulls in which the line joining the bregma and the nasal point makes an angle of from 47° to 60° with the radius fixus (Lissauer).

**Orthiopis′thious** (*opisthios*, hinder). A term applied to skulls in which the line joining the lambda and inion makes an angle of from 84° to 95° with the radius fixus (Lissauer).

**Orthiopisthocra′nious** (*kranion*, cranium). A term applied to skulls in which the line joining the lambda and opisthion makes an angle of from 107° to 119° with the radius fixus (Lissauer).

**Orthioproso′pous** (*prosopon*, face). A term applied to skulls in which the line drawn from the nasion to the alveolar point makes an angle of from 89.5° to 100° with the radius fixus (Lissauer).

**Orthiopy′lous** (*pyle*, inlet). A term applied to skulls in which the foramen magnum looks markedly forward (15.5° to 24°) when referred to the radius fixus as a horizontal (Lissauer).

**Orthiorrhi′nous** (*rhis*, nose). A term applied to skulls in which the line joining the nasion and subnasal point makes an angle of from 87.5° to 98° (Lissauer).

**Orthiuranis′cous** (*ouraniskos*, palatal). A term applied to skulls in which the line connecting the posterior border of the incisive foramen and the alveolar point looks backward when referred to the radius fixus as a horizontal, making an angle of from 40° to 60° (Lissauer).

**Ortho-** (*orthos*). In composition, straight, right, upright.

**Orthoamidosalicyl′ic acid.** A grayish-white insoluble powder obtained by the reduction of orthonitrosalicylic acid; it is used in chronic rheumatism in doses of gr. iij–vj (0.2–0.4).

**Orthoarsen′ic acid.** $H_3AsO_4$. Arsenic acid.

**Orthobromophe′nol.** See *Bromophenol*.

**Orthocephal′ic** or **Orthoceph′alous.** Having a head with a vertical index of 70.1° to 75° (Frankfort agreement).

**Orthochlorphe′nol.** Chlorophenol. Antiseptic. Employed in tuberculous ulcerations, lupus, etc.

**Orthochore′a.** Chorea in which the patient assumes a straight attitude.

**Orthocre′sol.** One of the three cresols from crude carbolic acid; the least active antiseptic of the three. The two others are metacresol and paracresol, the former being the strongest. See *Kresol*.

**Orthodinitrocre′sol.** Antinonnine. A preparation of orthodinitrocresol-potassium. A preservative, disinfectant surgical antiseptic and insecticide, used in the form of soap or solution.

**Orthodon′tia** (*orthos*, straight, *odous*, tooth). Part of dentistry concerned in the treatment of irregularity of the teeth.

**Orth′oform.** Methyl-ester of amido-oxybenzoic acid. Local anæsthetic; applied as a dusting-powder to abrasions, ulcers, burns, cancer, etc.

**Orthognath′ic** or **Orthog′nathous** (*orthos*, straight, *gnathos*, jaw). Having a gnathic index less than 98°. Having the profile line inclined to the auriculoinfraorbital plane from 63° to 90° (Frankfort agreement).

**Orthog′nathism.** State of being orthognathous; distinguished from prognathism and opisthognathism.

**Orthohydrazin-paraoxyben′zoate.** See *Orthin*.

**Orthom′eter** (*orthos*, straight, *metron*, measure). Instrument for measuring the degree of ocular protrusion.

**Orthomonochlorphe′nol.** See *Chlorphenol*.

**Orthomor′phia** (*orthos*, straight, *morphe*, shape). Orthopedics; plastic surgery for the correction of faulty shape or conformation.

**Orthomorpho′sis.** Orthopædia.

**Orthomyx′ia** (*orthos*, straight, right, *myxa*, mucus). A term expressive of a normal condition of the mucous membranes and of their secretions.

**Orthoöxybenzo′ic acid.** Salicylic acid.

**Orthoöxydiphenylcarboxyl′ic acid.** See *Phenylsalicylic acid*.

**Orthoöxyquinolinemetasulphon′ic acid.** Diaphthol.

**Orthopæ′dia** (*orthos*, straight, *pais*, a child). Orthopedics.

**Orthope′dic.** Relating to the treatment of deformities.

**Orthope′dics.** Orthopædia. The part of medicine whose object is to prevent and correct deformities. **Den′tal o.**, correction of dental irregularities *en masse*.

**Orthope′dist.** One who practises orthopedics.

**Orthophe′nolsulphon′ic acid.** Aseptol.

**Orthophenolsulphu′ric acid.** Aseptol.

**Orthoph′ony** (*phone*, voice). Normal voice.

**Orthopho′ria** (*orthos*, straight, *phero*, to carry). Normal tendency to parallelism of the visual axes.

**Orthophospho′ric acid.** Common phosphoric acid as distinguished from pyrophosphoric and metaphosphoric acids.

**Orthophren′ic** (*orthos*, right, *phren*, mind). Relating to a sound mind or to the cure of insanity.

**Or′thophreny** (*orthos*, right, *phren*, mind). Treatment of insanity.

**Orthophthal′mic** (*ophthalmos*, eye). Relating to the correction of deviations of the eyeball, as of strabismus.

**Orthopne′ic.** Orthopnœic.

**Orthopneumat′ic.** Relating to orthopnœa.

**Orthopnœ′a** (*orthos*, straight, *pneo*, to respire). Necessity of being in the erect posture in order to breathe. **O. cardi′aca**, angina pectoris. **O. convulsi′va**, asthma. **O. cynanch′ica**, cynanche trachealis. **O. hydrothorac′ica**, hydrothorax. **O. hyster′ica**, angona. **O. pituito′sa**, orthopnæa from excessive secretion of mucus in the air-passages. **O. tussiculo′sa**, whooping-cough.

**Orthopnœ′ic.** Relating to or affected with orthopnœa.

**Orthoprax′is** or **Or′thopraxy** (*orthos*, straight, *praxis*, action). Treatment of deformities by mechanical apparatus.

**Orthop′tic** (*orthos*, straight, *optomai*, to see). Relating to normal vision with both eyes. **O. train′ing**, mode of correction of defective vision by special exercise of the eyes.

**Orthopygium**, orth-o-pij′e-um. Coccyx.

**Or′thoscope** (*orthos*, straight, *skopeo*, to see). An instrument devised by Czermak to exhibit, on application to the eye, the condition of the superficial portions of that organ.

**Orthoscop′ic.** Relating to orthoscopy.

**Orthos′copy.** Examination of the eye by means of an orthoscope.

**Orthosi′phon.** Stamineus. Plant growing in Japan and the East Indies. The leaves when dried are employed in gout and urinary affections.

**Ortho′sis.** Process of making or becoming straight.

**Orthospo′rum anthelmin′ticum.** Chenopodium ambrosioides, var. *Anthelminticum.*

**Orthostat′ic** (*orthos*, erect, *histemi*, to stand). Erect; relating to the erect posture. **O. albuminu′ria**, the excretion of albumin in the urine after the maintenance for a certain period of the erect posture; the albuminuria is not influenced by alimentation or fatigue; the affection is temporary and occurs usually as a sequel of scarlet fever or some other infectious disease.

**Orthosulphamidobenzo′ic anhy′dride.** Saccharin.

**Orthosulph′aminebenzo′ic anhy′dride.** Saccharin.

**Orthosulphocarbol′ic acid.** Aseptol.

**Orthos′yne.** Capability of erection.

**Or′thotast** (*orthos*, straight, *tasso*, to order). Apparatus for overcoming faulty conformation of the long bones; also one employed for compression of the aorta.

**Orthote′rion.** Apparatus used to straighten deformed limbs.

**Orthotol′yl acet′amide.** See *Acetoörthotoluine.* **O. dimeth′yl-pyraz′olon.** See *Tolypyrine.*

**Orthot′onos** or **Orthot′onus** (*tonos*, stretching). Rigid extension of the trunk and neck in a straight line.

**Orthrine′.** Product from phenylhydrazin.

**Ortil′lus** (*articulus*, joint). Digitus pedis.

**Or′tyx.** Tetrao coturnix.

**O′rus.** Crupion; serum.
